At six o'clock in the morning the Borgstorm began to toll. The Borgstorm is the thundering peal that is tolled by Roelant, which is the heaviest bell in St. John's tower. It is rung only when the country is in danger. Other, lighter bells, ring out when there is a fire or a ship in distress on the river in a winter tempest. None of the living had ever heard the Borgstorm toll before. It had not rung since the Belgian uprising in 1830.

The Borgstorm tolled, dolefully, with heavy basso voice, which woke up the little children and brought the entire population into the streets. The burgomaster spoke from the steps of the town

hall at seven. "Burgers," he said, "the Germans have crossed the frontiers of our country. . . . They are streaming into the provinces of Groningen, Overijssel, Drenthe, Gelderland, Brabant and Limburg. . . . Two days ago they gave us a solemn assurance that they would respect the neutrality of these Netherlands. . . . This morning they broke that pledge. . . . Fighting has started. . . . But our men are resisting heroically. . . . The government will keep us informed by radio. . . . The English are surely coming to our help. . . . May God protect Holland. . . ."

Some truck farmers left the town in the early morning to go to their accustomed task in the fields outside the walls, but for the rest all business in Gorcum came to an abrupt standstill. The schools were open, but very few of the children turned up. Most of the families who owned a radio receiving set remained indoors, clustered around their instruments, listening to the government's news broadcasts which came at half-hour intervals. At the town hall the council had gone into permanent session.

### Germans—and in Gorcum!

Burgomaster Verwey was expecting word from The Hague before giving the order for the town's evacuation. Ever since the war of 1914-1918, a plan lay ready in the secret archives whereby the inhabitants of Gorcum were to be evacuated en masse to the province of Zeeland. For Gorcum, with its antiquated earthen walls and moats and with the outlying circle of forts, was one of the key positions in the so-called water-line defense.

At ten o'clock that morning of the tenth, the people of Gorcum knew that their country's air force no longer existed. The first concern of the Germans had been to destroy the airdromes and to blast the machines on the ground. The first blow had been successfully carried out in the first hours after dawn. Even so, the Dutch army was still intact and it was now, so the government radio announced, resisting every inch of the ground.

By eleven o'clock the town of Gorcum, itself still a few hundred kilometers distant from the nearest fighting, was thrown into confusion. A boy, by the name of Hendrik Wats, walking along the canal that bisects the city, had remained frozen in his tracks when he saw the hatches of two of the flat-bottomed river ships tied up there open and saw several helmeted figures emerge. At first he took the men to be Dutch soldiers, but as he listened to the commands of an officer who, revolver in hand, took up a position near the gangplank, the boy realized that they were Germans.

Hendrik Wats started to run away, but the officer called him back. Hendrik turned around, taking cover behind one of the thick oak trees that line the quay. The officer called again and then fired his revolver. Then Hendrik Wats ran for all he was worth. He ran the length of two or three blocks when he bumped into old man Hootse, a retired cake baker, who was leisurely pacing up and down before his house taking the morning air.

"Mynheer Hootse," the boy cried, out of breath, "I have seen the Germans. They are over there." He pointed backward. "Coming out of those ships."

"Don't be silly, boy," said Hootse, "the Germans are still fa

"But Mynheer Hootse, talk and one of them fi me. . . ."

# LAST LOVE

**By Richard English**

ILLUSTRATED BY JON WHITCOMB

So there she was, sitting between her old life and her new, watching herself becoming a star and not caring, aware only of the men beside her

**Success turned her head, but an old acquaintance reminded her of a few things she thought she'd succeeded in forgetting**

THE night was stark and cold, with a gray rain slashing against the tenements. Somewhere along that long row of shabby houses a door had opened softly but no light showed from within. The door closed behind her and Julie Bruce pressed herself against the wall, holding her breath, feeling the rain on her cheeks. When there was no sound she forced herself on to the street, keeping to the shadows. A street light's haze revealed the pale blur of her face, fragile and terror-ridden. She reached the corner, hesitated, looking fearfully behind her. A police whistle cut shrilly through the night and she darted from sight.

Charles was waiting for her around the corner.

"We can go home now." She smiled, grateful for his presence and for the lights flaring up on the sodden street behind her; relieved by the bustling sounds that meant they were already striking the set. "And no more rain sets, Charles. That was the last take."

She was tired all the way through but she hid it, slipping her arm through his, making him accompany her toward her portable dressing room. It had not been the long hours nor the director's demands that had tired her but the set itself. Stealing her strength, taking her back too fast and too suddenly to other streets like that—the same shabby tenements and the elevated and the hopelessness of the people in those houses.

When she remembered those other streets there was no happiness or even pleasure in her own escape and brand-new stardom. Not even in the knowledge that this time tomorrow night her first première would be over and the verdict in. The verdict had been in for weeks anyway. Hollywood only premières pictures they are certain will be hits: calls premières what they rightfully are, "prestige shots."

"Perhaps I had better wait outside," Charles said. "If someone saw me . . ."

She smiled, thinking how different he was from the men in show business. No angles and nothing to remind her of those night-club wolves when she had been just another kid dancing her heart out, hoping for a break. Nor was he like those smooth products you met all day at the studio. He was simply an attorney and a good one, a junior partner in his father's firm. One of those nice, quiet people who had been born on the right side of the tracks and who showed it in the nice little things they did. Things that made you wish you could have finished school and had something to remember besides a drunken mother and a sweaty little flat on Tenth Avenue.

"It will be all right, Charles," she said. "I'll only be a minute."

He looked big and out of place, sitting there in her dressing room while she removed her make-up. His clean, blond ruggedness seemed to crowd everything else out of that tiny room, and maybe it would be that way with her memories too. Charles, pushing them away, helping her forget all the yesterdays. With Charles a love should last and for that security she would try and make him as happy and as proud of her as if she were one of those cool, gay girls that he had always known.

"You look tired," he said. "You've been working too hard."

With her make-up off she looked even younger and the blue eyes were enormous petals in the pale pool of her face. She had tawny-colored hair and a wide, sweet mouth but she could never like her face because those shadows in her eyes told too much. Her heart had put them there and only time would take them away. Stardom and a career lasted only so long and then you were finally free and had the money to see and do all those fine things you had always wanted to. The sort of things she could never tell a fan writer for fear they would make her sound a Cinderella, all ga-ga and chiffon.

"I feel fine, Charles," she said, knowing that she would, once they had left the studio and that tenement set behind them. "I feel like driving somewhere and having a nutburger."

She smiled, slipping on her camel's-hair coat. The coat hid her in its great, soft warmth, making her look more like a college girl than most of those who went there. Charles' car was parked outside the studio gate and as they made their way past the bulky shadows of the sound stages he smiled, his teeth white and even in the soft darkness.

"I have a surprise for you. I had some good news today."

It was a new car, a roadster, smart and black and expensive. But it was the sight of it and not its beauty that took her breath away. She had liked his modest coupé because it had seemed so solid and dependable, so much like himself, but it had reflected a shadow that held them both back. He had wanted that new car a long time but couldn't buy it as long as there was that shadow on his future.

"You found out?" she asked breathlessly. "For sure, Charles?"

He smiled. "They deferred me. Occupational necessity."

His father's firm was one of the attorneys for a big aircraft factory and so the board must have decided that he was more valuable in that capacity than as a soldier. They were right, too. No matter what anyone might think, they had been right. There were so many they could get for soldiers—men who weren't just getting started in their careers. It wouldn't have been right to ask him to give that up, any more than it would have been to ask her to wait, too.

"I'm glad," she said, trying to keep her voice steady. "So glad!"

"I know," he said, and kissed her. It wasn't like Jeff, but then nothing was like a first love. Nor did you want any more of those soaring moments that could only end in aching despair. You wanted happiness and security, something that lasted all of your life. Something you could count on. You wanted Charles' arms holding you, to be able to rest your head against the rough tweed of his shoulders.

IT WAS almost three when the new car stopped before her little white house so high in the hills, looking down on the Strip and the narrow ribbon of light that was Sunset Boulevard making its way to the beach. Charles was taking her to the première, and they sat there a while, talking about it. It would be best, he decided, to pick her up about eight-thirty.

"By the way," he said, making it casual and as if it were of no real importance, "my father and mother have been wanting to meet you. They can't make the première because they have an opera date, but they're having a few friends in for a little supper afterward and they thought we might like to join them." He smiled. "Sound too stuffy, Julie?"

"It doesn't sound stuffy at all," Julie said, and all her hopes and all her hurts were in her eyes. "I want to meet them, too." . . .

Pat had left the light on in the living room for her, and Julie hesitated before turning it off, wanting to wake her up and tell her everything that had happened. All the things that had been holding them back were disappearing now and she could finally see the pattern of her life fitting into one smooth surface. Charles and being able to forget things that had hurt her too long.

*But I won't tell Pat tonight,* she thought. *She doesn't like Charles. She only likes show people, people she can understand. If I tell her about the deferment she'll look at me and light a cigarette and say it must be nice to have an important father. It will be the same as when I asked her if I should tell him about Jeff.*

Pat had been answering Julie's fan mail when she had asked her. She hadn't said anything for a minute, hadn't even looked at her. She kept slipping the autographed pictures into their manila envelopes and when she did speak her voice had been too casual: "That's up to you, baby. I imagine even Charles has known a woman."

Remembering that, Julie shut off the light and went toward her room. It was a small house with only two bedrooms and Pat's was next to her own. Pat's door was open and her bed lamp on, and Julie stopped in the hallway. Pat was on the phone, looking as if she had just waked up, and Julie stood there, smiling a little. For the last four years Pat had been her whole family.

SHE was older than Julie but she was still stage-struck. She had been a good hoofer, knocking herself out at every show as if she were never going to get to do another. She had worked in every chorus around New York, one of those girls who are always in the back line. A tall, plain girl with hair that needed touching up and with hazel eyes, though no one ever noticed them. When Julie had shown up, trembling and shy, at her first tryout, Pat had taken her under her wing. She had kept her there ever since; as long as she couldn't have a career of her own Julie's was the next best thing.

"Okay," she said patiently into the phone. "I got it, operator."

Julie was waiting, but Pat lit a cigarette before she looked at her.

"How's Charles?" she asked. "Still on the upbeat?"

She couldn't turn Julie that easily. "Who was it, Pat?"

Pat took her time, as if she were making up her mind how much to tell her. "It was the telegraph company," she said, finally. "You got a wire from Jeff. He's getting in in the morning and he wants to see you."

Julie swayed, closing her eyes as if she could shut out the words and her memories too. She hadn't seen him in a year, not since her last flying trip to New York, and they had been like strangers then. He had ribbed her a little about her success, but all that old casualness was gone from him. He wasn't Jeff Tyler, who had been the biggest musical-comedy star on Broadway.

It was another Jeff Tyler, one who was beginning to slip, whose last show had been a turkey from the opening night. She hadn't even heard of him in the last six months nor had anyone else. He had dropped out of sight.

"He's only coming out for one thing," she said, her voice so tired that it might have been an old woman's. "He's looking for a rain check. He's washed up, Pat."

"I wouldn't be too sure," Pat said. "There's nothing wrong with him that one good show won't cure. He might be coming out just to see you, baby."

"Sure," Julie said wearily, "sure, Pat. I don't hear from him for six months and then he gets here just in time for the première. He'll expect me to take

# FUR MIRACLE

## By Mona Gardner

**For expensive-looking furs at bargain prices, consider mouton or American broadtail, which is nothing but the lowly lamb after a few magic touches**

THE young secretary saw the two women in the elevator stare quickly at her coat and then engage each other in a silent argument of head-shaking. Out on the street the two strangers followed her, a little grim, more than a little intent. The girl grew uneasy. When a red traffic light stopped her, she heard one stranger pant: "Now ask her!"

The other leaned close and demanded: "Is your coat beaver or lamb?"

"Lamb!" the secretary gasped, and fled into the traffic.

"*However* does a lamb do it?" the woman on the curb puzzled loudly.

Obviously the lamb doesn't. Man does. It is one of his newest miracles. With shears and chemicals he has so adroitly transformed Mary's little lamb that it is going everywhere this winter—confidently and elegantly—an eye-fooling duplicate of beaver, nutria, and broadtail.

Fashion has chosen this kind of lamb as its newest favorite. More coats, jackets, muffs, and hats will be made of it this year than ever before. You'll see them on the campus, in aviators' cockpits, at parties, along ski trails, in submarines, and at the theater.

None of these will be a woolly, awkward, bulky lamb, the kind you saw ten years ago and even year before last. This year's lamb is sleek and lustrous. It's been shaved closer, the pelts made thinner, more supple, its dyes solid and even. All this at lowly lamb prices—dressy coats that begin at $75 and go to $100 and $145. Draped, full-length evening lovelies that stop at $500.

There are two types of this new lamb—mouton and processed broadtail. Mouton, which is the French word for sheep, means the shaved pelt of the wool-bearing merino processed with chemicals and dyes until it resembles beaver or nutria. Broadtail is the distinctive ripple-waved pelt of a Lincoln lamb, also shaved, also dyed, until it is a close duplicate of the scarce and expensive Russian broadtail.

Heretofore the wool lamb has been the ugly duckling of the fur trade. Most furriers wouldn't admit it was a fur. A matted fleece, they hissed, all right for bedroom slippers, ear-muffs, and the like. But certainly not to be mentioned in the same respectful breath with its glossy, hard-haired cousins, the broadtailed karakuls of Persia and southern Russia.

The hisses have stopped abruptly. About 60,000 broadtail type coats are on racks all over the country. More than 70,000 of the beaver and nutria-type have been sold already. Another 30,000 are in the stores now.

The United States defense program calls for $10,000,000 in sheepskins for 1941-42. The skins used by the United States Army Air Corps are not mouton but beige-dyed sheepskins having a special backing.

Mouton supply is in come from enormou thriving in our own the Argentine, Urugu Chile in South Americ and from the Union Additional thousands cago and Kansas City

For years chemists and Europe tried to u corkscrews. Nothing trick. Chemicals eithe odor, washed off in strong light, or peele there was collagen being a gelatinlike pr vertebrates. With an gen content in these la nary hot dye simply into jelly.

*The Story Thus Far:*

IT IS ten-thirty o'clock in London, and German bombs are hurtling down upon the city. Two men, seated in the smoking room of their club, are carrying on a desultory conversation. They have never before met; they know virtually nothing of each other. They have declined to seek safety in the club's air-raid shelter.

One of the men is John Sidney Howard, a retired barrister. He is old—perhaps seventy. Like his companion, who is much younger, he has ordered a glass of Marsala. When the wine comes, the old man, encouraged by his companion, begins a strange story:

Shortly before the Germans had driven into France, he had found himself restless, lonely and, for certain reasons, very much depressed. His daughter, married to an American, had returned to the States; life in England had somehow lost its savor.

Obeying a sudden impulse, he had left England and gone to Cidoton, a French village in the Jura, where he had spent many happy days. There, at the little hotel presided over by Madame Lucard, an old friend, he had received a rousing welcome. Madame had chattered of this and that; she had told the old man that her husband was with the *Chasseurs Alpins*—fighting for France. Then she had asked about Howard's son.

Simply, quietly, with an attempt to show no emotion, the old man had told her that his son—John, whom he had idolized—had been killed in an R.A.F. plane over Heligoland Bight. . . .

Howard—fishing, fraternizing with the simple folk around him—is at peace. Life in the village moves along serenely. Then, on the 28th of May, 1940, King Leopold of the Belgians surrenders. After that comes Dunkirk. And Howard, although he feels sure that France is in no real peril, decides to return to England. Learning of this, a Mr. Cavanagh—an Englishman who is an official of the League of Nations in Geneva—asks him if he will take his two children (Ronald and Sheila) to England with him.

Unable to say no, but full of trepidation, the old man promises to escort the children across the Channel. Then, early the following morning, he bundles the young people (who are overjoyed at the prospect of taking a long trip) into a car; and, following the leave-takings (short and awkward, for Cavanagh and his wife are on the verge of tears), they start in the direction of their first stop: Saint-Claude.

### II

THREE hours after leaving Morez, Howard had to rouse Sheila from a heavy slumber as they drew into a little country station where they had to change. She woke up hot and fretful and began to cry a little for no reason at all. The old man wiped her eyes, got out of the carriage, lifted the children down onto the platform, and then got back into the carriage for the hand luggage. There were no porters on the platform, but it seemed that that was inevitable in France in wartime.

He walked along the platform carrying the hand luggage, with the two children beside him; he modified his pace to suit their rate of walking. At the Bureau, he found a stout, black-haired stationmaster.

Howard inquired if the *Rapide* from Switzerland was likely to be late.

The man said that the *Rapide* would not arrive. No trains from Switzerland would arrive.

Dumfounded, Howard expostulated. It was intolerable that one had not been told that at Saint-Claude. How, then, could one proceed to Dijon?

The stationmaster said that Monsieur might rest tranquil. A train would run from the frontier at Vallorbes to Dijon. It was incessantly expected. It had been incessantly expected for two hours.

Howard returned to the children and his luggage, annoyed and worried. Sheila, he observed, was peevish and fretful. The old man tried a variety of ways to rouse her interest, without a great deal of success.

An hour and forty minutes later, when he was thoroughly worn out, the train for Dijon pulled into the station. It was very full, but he managed to find one seat in a first-class carriage and took Sheila on his knee, where she fell asleep again before so very long. Ronnie stood by the door looking out of the window, chattering in French to a fat old woman in a corner.

**He was forced to leave everything in a corner of the station platform and thrust his way with the two children through the crowd to the exit**

The station at Dijon was a seething mass of soldiers. With the utmost difficulty Howard got the children and his bags out of the train. He had an attaché case and a suitcase and a tin tube that held his rods with him in the carriage; the rest of his luggage with the little portmanteau that held the children's clothes was registered through to Paris. Carrying Sheila in his arms and leading Ronnie by the hand, he could not carry any of his luggage; he was forced to leave everything in a corner of the station platform and thrust his way with the two children through the crowd toward the exit.

The square before the station was a mass of lorries and troops. He threaded his way through and across the road to the hotel he had stayed at before, startled and bewildered by the confusion of the town. He forced his way through to the hotel with the children; at the desk the girl recognized him, but told him that all the rooms were taken b

"But, mademoiselle," he said, "I ha to look after," he explained.

The girl said, "It is difficult for you what can I do?"

He smiled slowly. "You can go dame, and perhaps it will be possibl range something."

Twenty minutes later he was in room with one large double bed, and an indignant French subaltern whose ordered him to double up with anothe

The maid, a stout, untidy woman her clothes, bustled about and made "The poor little one," she said. "She tranquil, monsieur. Without doubt, chill, or she has eaten something ba well, two days, three days, *(Continu*

ing the bobbing feather.
ain—a small, slim figure,
y, walking a little un-
steadily. She was near the gates. He saw her sway and fall.

He hesitated. The crowd at the gates backed up and surrounded her.

He hurried forward. He reached the edge of the ring of people, heard someone cry, "Give her air, she's fainted," and looked over the bent shoulders.

One arm was across her face. Her shining black hair was powdered gray from the dust of the floor. Her skirt had slipped above the rolled top of one stocking and an elderly woman in furs stooped and reached to pull it down.

From the corner of his vision Huck saw the middle-aged man in the old raincoat ranging around the crowd, looking into it.

Huck turned away. Not too quickly. No one remained near the gates. He went through them, down the stairs and along the shadowy railway platform. He began to whistle, slapping his leg idly with the rolled-up newspaper in his hand.

His train was waiting. A porter pointed out his car and he went aboard. Three minutes later the train pulled out.

HILDA smiled weakly and said over and over, "Thank you, I'll be all right. Please. I'll be all right. Thank you." Two redcaps helped her away. Ranks of faces stared at her. Again she wanted to run. But that was it—you couldn't.

The redcaps wanted to put her in a cab, but she wouldn't let them. She couldn't spare the money and, besides, if Johnny should happen to be at home and see her arrive in a cab he would notice it. I'm sick, she thought; my nerves have made me sick; I might really faint. But not sick enough to take a cab. To take any chances. The worst of it was almost over.

She found a quarter in her purse for the redcaps and, walking slowly, leaning against the handrail on the stairs, she returned to the subway level, shuttled over to Times Square and took an uptown local.

She leaned back in the corner of her

# Nothing But Everything

**By Lucian Cary**

ILLUSTRATED BY WALTER C. KLETT

A SHORT SHORT STORY COMPLETE ON THIS PAGE

**It was after he'd gone to sleep that she found the pawn ticket. The ticket told the whole story. He'd hocked the cigarette case for twenty-five dollars that day**

MARY knew, without his saying so, that he was pleasantly jingled when he came in. He said somebody had insisted on buying drinks.

He took off his coat and it was then she saw that the cigarette case was gone. It was a gold case and he'd carried it in that special vest pocket for years—ever since they'd given it to him.

"What happened?" she asked.

He shook his head sadly. "I hoped you wouldn't notice," he said. "It's been gone for two days. I can't believe I lost it. And I can't believe anybody stole it. Who would have a chance to steal it?"

"It meant so much to you," she said.

He treasured the case because it was a reward for the things he'd done as production manager during the depression. He had nothing else to show for those years. He'd pulled the company out of the hole and now they were in it again because they could no longer buy brass or steel and they hadn't succeeded in getting a government order.

He'd been drawing twenty-five dollars a week and they'd been living on it. They'd rented the house for almost enough to carry it and put the car in dead storage and taken this furnished room and made a game of getting their dinners at a cafeteria for thirty-seven cents apiece. And when things were worst he always reminded her of the cigarette case. The gold in it was worth sixty or seventy dollars. It was their safety fund.

It was after he'd gone to sleep that she found the pawn ticket. She was mending a slight rip in the pocket of his old suit. The ticket told the whole story. He'd hocked the cigarette case for twenty-five dollars—not two days before but that day.

She stayed awake almost all night. They had been close and completely trusting. And when she'd felt that somehow he ought to make a better living, as other men did, she'd been ashamed. She knew how he felt about sticking with the company. He always said, "We're all in this together—Jim and Bob and I."

To pawn the cigarette case and lie about it was treason. He had walked to work to save bus fare. She'd been saving money for months to buy a winter coat. She had twenty-three dollars and forty cents in a child's bank.

It was plain enough to her when he kissed her goodby the next morning that he was afraid he had failed to deceive her. He was like a small boy who had been in mischief. Only a small boy afraid of being found out was funny. This wasn't funny. This was the end of everything.

SHE broke the bank open when he had gone. She had nearly three dollars more in her purse. She walked all the way downtown to the pawn shop and redeemed the cigarette case. She hid it in some stockings that she'd saved in spite of the fact they were full of runs. She wasn't ever going to let him know. No, she'd act the same as before. She knew how to act.

And then she knew what hurt most. She had known it all the time. She could stand his failing. What if he had got tired of never having any money to spend and used the cigarette case to get a few dollars? It was like him to want money so he could pay for a lunch or a drink. But he wouldn't have done it if he still loved her. She hadn't complained about giving up the things they'd always had because she wanted to please him. She cared more about pleasing him than anything else. Now she had to face the fa[ct] the power to please hi[m].

She went over and c[ounted] day. For three days [anyway] fourth day was her b[irthday] agreed to forget birth[days]. to. And he didn't say [anything] its being her birthday [when he] her goodby.

SHE found the env[elope] gone. It was addre[ssed] found two ten-dollar [bills] one five-dollar bill. T[here]

"Honey—I know y[ou've got] enough money in that [kitty's bank] winter coat. For he[aven's sake] some shoes to go wi[th it—and] stockings. You have [a pretty] in town—you've got t[o have] And couldn't we go t[o the movies] night—or something?"

She dressed and ma[de up her face] that no one would kno[w] he'd been ing and went downt[own] shoes and stockings. [She took] she looked over her ol[d coat. PHOTOGRAPHED FOR COLLIER'S BY LAWRENCE A. MONAHAN

**The engine class works in a shop that is equipped with every type of naval aircraft power. Planes as well as engines are torn down and reassembled under instruction**

**Show place of the Jacksonville station is the superb welding shop, where the budding naval metalsmiths regard their daily stint as recreation rather than labor**

**Meals are served in cafeteria style. Students are restricted to a single serving of meat and one dessert for the sake of a balanced diet. There are no restrictions on other foods**

The graduate will re-enter civil life after his Navy stint a thoroughly trained craftsman, for there are so many supervisors, Navy and civilian, that the student receives the equivalent of individual instruction. He works six days weekly from early morning until 4 P. M. and is required to devote four nights each week to textbook study. There's release from textbook work Wednesday and Saturday nights but the Wednesday-night recess is for something else—he must scrub his gear and write the folks at home.

Navy is hand-picking its student craftsmen—they average twenty years of age—and that it may have plenty of timber from which to make its selections it recently began to admit to the school lads who enlist in the Naval Reserve for four years which, of course, includes active service for the duration, and boys of seventeen who sign up for active service until their twenty-first

# Murder in Retrospect

## By Agatha Christie

ILLUSTRATED BY MARIO COOPER

*The Story Thus Far:*

CAROLINE CRALE learns that her husband—Amyas Crale, an artist—is infatuated with Elsa Greer, a beautiful girl whose portrait he is painting while she is his house guest. A short time later, Crale is found dead in his garden. An investigation reveals that he has been poisoned with coniine, *apparently* administered in a glass of beer by his wife!

Mrs. Crale is arrested, charged with the crime, tried, convicted and sentenced to penal servitude for life. One year later, she dies—leaving behind a letter, to be read by her daughter, "Carla," when the girl reaches the age of twenty-one. In the letter, she asserts her innocence. . . . Sixteen years later, Carla reads the letter; after which, she employs Hercule Poirot, brilliant Belgian criminal investigator who is living in London, to dig up what he can about the case.

Setting to work, the little Belgian unearths this interesting fact. On the day before the murder, someone had stolen a bottle of coniine from Meredith Blake, a neighbor of the Crales; and that "someone" might have been any one of the following persons: Mrs. Crale: Blake's brother, Philip; Elsa Greer; and Angela Warren, Mrs. Crale's half sister.

The Blakes are still living. Poirot interviews them. Both promise to set down, in writing, all that they can remember of the celebrated affair. Among others whom the detective questions is Elsa Greer (who, after several marriages, has become Lady Dittisham). The woman, still beautiful at thirty-six, has little of value to offer; but she insists that Caroline Crale had poisoned her husband. . . .

The Blakes give Poirot their "narratives." In Philip's, he states that, on one occasion, he had overheard Caroline Crale say to her husband: "You and your women! I'd like to kill you. Some day I *will* kill you—I mean it, Amyas!"

But Meredith Blake, in his account of what had happened, states that, having given much thought to the matter, he is inclined to the belief that Amyas Crale had committed suicide (as Caroline had claimed at her trial). Nevertheless, he admits that; in the course of a talk with Caroline—a talk devoted to the relationship between Amyas and Elsa Greer—Caroline had exclaimed to him: "I'm a very primitive woman, Merry. I'd like to take a hatchet to that girl!"

### VIII

I TOLD her that the child probably didn't understand in the least what she was doing. She had a great admiration and hero worship for Amyas and she probably didn't realize at all that Amyas was falling in love with her.

Caroline just said to me, "Dear Merry!" and began to talk about the garden. I hoped that she was not going to worry any more about the matter.

Shortly afterward Elsa went back to London. Amyas was away too for several weeks. I had really forgotten all about the business. In fact, I thought there wasn't anything to worry about. And then I heard that Elsa was back again at Alderbury in order that Amyas might finish the picture.

I was a little disturbed by the news. But Caroline, when I saw her, was not in a communicative mood. She seemed quite her usual self—not worried or upset in any way. I imagined that everything was all right.

That's why it was such a shock to me to learn how far the thing had gone.

I have told you of my conversations with Crale and with Elsa. I had no opportunity of talking to Caroline. We were only able to exchange those few words about which I have already told you.

I can see her face now—the wide, dark eyes and the restrained emotion.

ermans? Why, the Ger- iles and miles away," shouted the mayor. "You are the victims of optical illusion, or of drink, citizens."

"The Germans are in Gorcum!" screamed Hootse.

"The Germans don't drop from the sky!" roared the mayor.

But here was Cornelius Meurs, the policeman. He saluted the burgomaster humbly. "It's true, Mynheer the Burgomaster," he said. "They are here. They are in the streets. My colleague Van Pelt has been killed. Others have fallen. There is severe fighting going on at the prison. The fishermen of the Visschersdyk (one of the slum quarters of Gorcum) went at the Germans with knives. . . ."

"Telephone the military," exclaimed the burgomaster.

"The lines are cut all over town," the policeman said. "There are Germans at the town gates."

"But how did they get there?" asked the mayor.

"They are dropping from the sky with parachutes," said the policeman. "The sky is full of floating parachutes above the road to Dort. . . ."

Another citizen came in. "Burgomaster," he said calmly, "two German airplanes have landed on the parade ground."

"On the parade ground, right between the army barracks?" asked the mayor in amazement.

"Right there!"

"But, but . . ." faltered the mayor, "the troops, our soldiers, what?"

"Our soldiers rushed the airplanes, but were cut down by machine-gun fire. . . ."

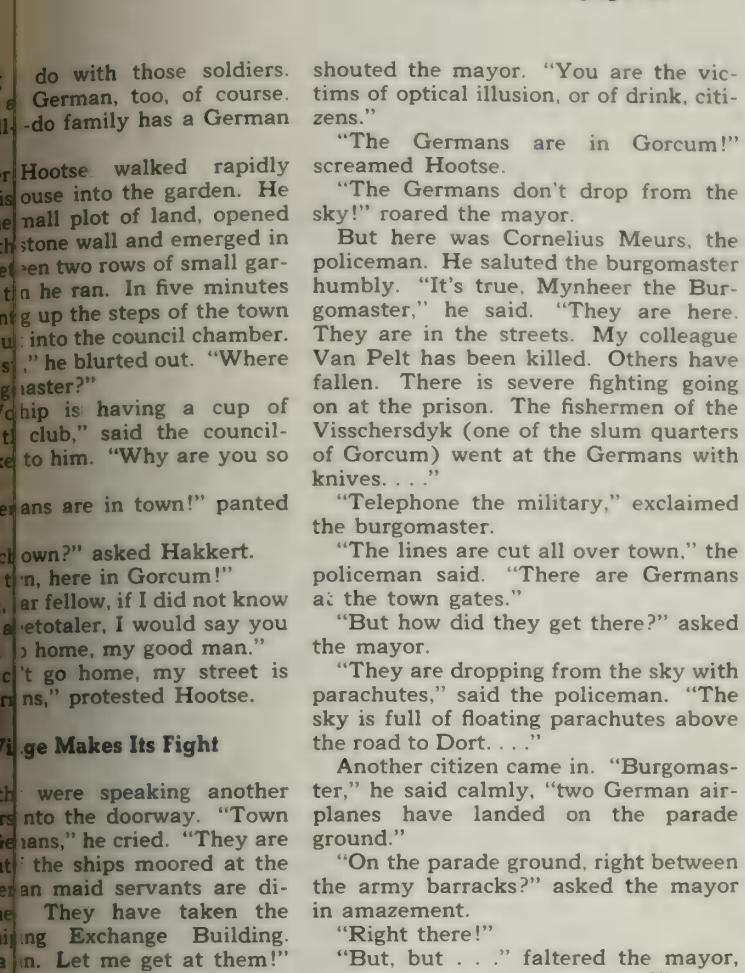
Dutch soldiers interrupted the councilors and citizens. They had entered the town hall by the rear door. One of their officers requested the burgomaster to evacuate his chambers and all the rooms with windows looking on the square at once.

"They are in the guardhouse," he said curtly, referring to a medieval building which stood opposite the town hall. "And," added the soldier, "we are going to blast them out!" Infantrymen were now pouring into all the rooms. The clatter of breaking glass was heard and soon every window had its machine-gun nozzle pointed in the direction of the guardhouse.

The firing lasted all afternoon and through the night. In the morning the Dutch troops stormed the guardhouse and took it at the point of the bayonet. Good news came also from near-by villages. The squads of parachutists who had dropped at Hardinxveld and Werkendam in the proximity of the great railway bridge of Sliedrecht had been rounded up or destroyed. Those who had landed by airplane in Gorcum's barracks square had been annihilated, while the enemy detachment which had seized the prison had, too, been overpowered.

### The Devil Declares War

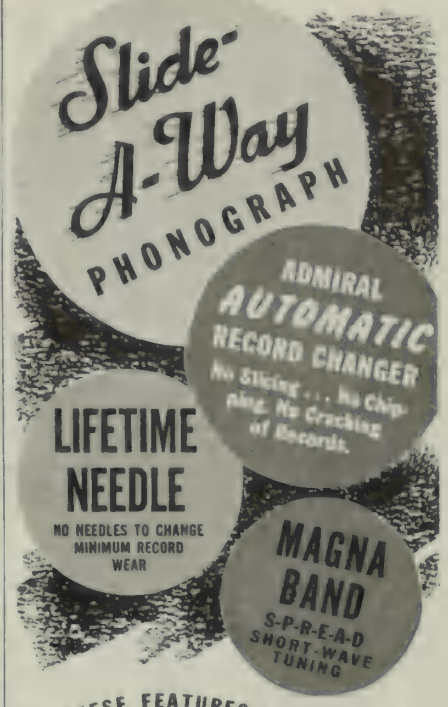
The first night passed without an incident in Gorcum itself, but the news from the front and from The Hague and Rotterdam continued to grow steadily worse. Through the radio it was learned that while a battalion of marines and a company of sappers had been drawn up in one of the city's parks, located on the shore of one of Rotterdam's many inner waterways, and just when the men were receiving final instructions from their officers, they had been raked by a burst of machine-gun fire from a Swedish steamer, which was quietly riding at anchor a short way from the shore. Suddenly the portholes of this ship had opened and from a dozen apertures the rattlers had started to spew death.



When news of this treacherous incident reached Gorcum, the indignation of the citizens knew no bounds. "This is not war they are waging on us," said Ary Stam, a giant fisherman, sometimes called Ary the Devil by his neighbors when on a drinking bout he terrorized the whole neighborhood. "This is not war, this is vile trickery! Who will guarantee us that there are no German sharpshooters hidden in those fine houses on High Street?"

"Ary," called out his wife, who stood in the crowd that had gathered around the fisherman. "Ary, shut your big mouth! Don't you dare to say anything more. We know whom you mean when you talk about the Germans in The Hague. Shut up, I tell you."

But Ary would not listen. "I have my knife," he said, drawing a wicked-looking curved blade from his pocket. "I have sliced open thousands of salmons and sturgeons in my day. I'd just like to try it on one German. I just want to see if their blood is red, that's all."



With those words he walked off, followed by a crowd of his cronies, the gang that always stood by his side in street battles with fishers from another street and with the police.

On the way to Baron von Krass' residence, those men must have forgotten the errand upon which they set out. They must have stopped in one of the numerous drinking dives in the neighborhood and changed their plans, for they were found half an hour later battering in the door of a man named Otto Glatzker, a barber, who had settled in Gorcum at the time of the inflation in Germany. After entering the house, they found Glatzker crouched in a cup-

board, alternately weeping and whimpering that he had been naturalized, that he was a loyal subject of the queen.

But Ary Stam cut him short: "Where were you the day before yesterday when those umbrella men dropped into Gorcum to murder us? I did not see you with us when we butchered them at the prison! Come on, where were you, Glatzker?" While he spoke Ary was caressing that ugly knife of his. Others held the frightened barber. Then Ary gave the order to take Glatzker to the Dalem Gate, a structure dilapidated and half-ruined from the Middle Ages, the upstairs chambers of which the fishers used for drying their nets.

"We are going to round them all up," Ary said, "and at the sight of the first umbrella man coming down into our streets, it's going to be the night of the long knife for you, Glatzker."

But on the way to the Dalem Gate the crowd of fishermen and their prisoner ran into Kees Boon and Jan Trouw. Kees Boon was a smith, a giant as big as Ary Stam, who walked with a springing step and an inner fortitude. He always went bareheaded. He was in fact a most singular person: although the son of extremely poor parents—his father had been employed at a livery stable—he had acquired a liberal education by omnivorous reading. He wrote pieces for radical newspapers. Jan Trouw was his friend. Trouw was a lay preacher for a sect known as the Darbists, but he was a follower of Tolstoy and a proponent of nonviolence as well. Trouw exercised the trade of house painter on week days. On Saturday nights and on Sundays he preached in a hall in the worst part of town.

Boon and Trouw seemed to have learned that day what was up, for they met the crowd of fishers, most of them staggering drunk, and with Ary Stam at their head, near the Dalem Gate.

"Stop!" cried Kees Boon. "What do you men intend to do?"

"If you must know, Poet," said Ary in a whining voice, "we are going to string him up in the Dalem Gate and when he hangs I am going to cut his . . ."

"Coward!" said Boon. "You are all cowards," he turned to the fishers, "you are not worthy of the name of men."

"We are Dutchmen," screamed back Ary Stam. "We are defending our country against these German traitors."

"You are Dutch cowards then," came back Boon. "You are not men!"

"If you say that again I will stick my knife into you!"

### Jan Trouw Saves a Life

For answer the smith knocked the fisher down with one blow of his iron fist. Ary's knife went flying onto the cobblestones. Boon picked it up. But the infuriated fisher, taking off his wooden shoes, rose quickly and came for the smith with a shoe held over each fist like a pair of awkward, clumsy boxing gloves.

But now it was the turn of Jan Trouw to intervene. "Brothers, brothers," he called out. "Let us not fight each other. We do not know what hangs over our heads. . . . Rotterdam has just been bombed. Thirty thousand men and women and children of our people have died this afternoon in one terrible half-hour. Shall we do the same? To kill is so easy, Ary! To make men live and love and laugh in the sun, that is what Jesus wanted. To see little children grow up . . ."

"Shut up about your Jesus!" cried out Piet de Bot, who was one of the men holding the captive Glatzker, "we have heard enough of Him."

"Shut up yourself." Ary turned around in sudden anger. "Jesus is one of us. Leave Jesus out of this. . . ."

"That's right, Ary, He is one of us," said Trouw. "He is our [illegible] of fishers and . . ."

"But these German[s] our kind," Ary interru[pted].

"Does that mean th[at] the same to them? L[et] that we are Christians [and] of Jesus. Would Jesus we hanged this man? [Go] to his wife and childr[en] go home to his childre[n] others will not go hon[e]. Let us not stain our h[ands]."

The fishers let Gla[tzker] the barber scampere[d] back: "I vill make y[ou] plaint for all of you [The] whole crowd laughed [heartily].

### Curiosity Overc[omes Hate]

In the night that [followed] was occupied.

Although the Germa[n authorities] appealed to the peopl[e in the] areas to co-operate w[ith them] to restore order as qu[ickly as] not a single one of [the] tants had ventured ou[t] first forty-eight hours [after the] investment.

and Gyse holding on to Cornelius' coat, the two would walk the rest of the way home together.

On the afternoon of the invasion, some neighbors brought the body of Cornelius Meurs back on a pushcart to the place he had always called home. The dwarf brother was not in at the time, so the neighbors placed the body in the bed, a sort of cupboard in the wall that served the two men as a sleeping place. I do not think it was anyone's intention that Gyse should go in there unwarned of the death of his brother. But that is the way it happened. He came home, stumbled into the front room of the cottage but was back in the alley in a minute, screaming his grief in a frightened and pitiful voice. The neighbors tried to quiet him by patting him on the head and speaking kind and reassuring words to him, but nobody could really make it clear to the dwarf what had happened to his brother. He wailed like a possessed soul and kept it up for days. Only after the body had been removed and the funeral had taken place did he grow quiet again. He sat on the doorstep staring straight ahead or sauntered to and fro in front of the cottage, his hands clasped behind his back and his head bent on his chest, as if immersed in deep thought. By and by he walked out into the streets again, too, and he made his appearance again at the back doors of the homes where he had formerly been given small jobs to do.

As he resumed his wanderings through the town and he saw the changes that had occurred—the blackened ruins of the arsenal were not far from his alley—and he saw above all the many strangers in uniform, it must have slowly dawned upon him that there was some connection between these newcomers and the death of his brother.

I have a letter from Gorcum written since the German occupation, wherein the writer remarks that the only person to be unmistakably annoyed by the presence of the Germans was Gyse Meurs. He would, in fact, (I learned) walk up to a German soldier or officer, stand boldly in his path, shake his huge fists and bark those strange, incomprehensible growls at the man until he was frothing at the mouth.

### A Dwarf Makes a Plan

At one end of Gyse's alley, separated from the rows of humble cottages that made up the neighborhood and towering over it like some mighty castle, stood an old windmill. In my youth, I recall, the wings of this mill had become unsafe and had been removed. But it had still been in use thereafter. When the doors of the mill stood open you could see how it was operated by a blindfolded horse. The horse walked around in a circle of sawdust on the outside of a complicated system of creaking beams and crossbeams. These beams met prismlike in the center of the ground floor and there turned on a thick metal point as in the old-fashioned merry-go-rounds that were to be seen until a few years ago at the fairs of Flanders and Holland. But the millstones, which ground the corn, were invisible. They were on the story above. You could hear them rolling about with thunderous rumble on the oaken floor above.

For some reason, probably because the mill's outside gallery projected above the city walls and could be used as a military observation post, the Germans a day or so after the occupation of Gorcum requisitioned the building. Troops were quartered in it and some of the men even slept between the giant millstones.

For days on end Gyse Meurs could be seen sitting on the grass of the earthen wall watching the goings on at the mill,

## How's your "Pep Appeal"? —by Williamson

**Barbara:** Who are *you* to say I haven't any *pep appeal!*
**Auntie:** Dear! Dear! A little job for me.

**Auntie:** *Good* morning, children. Did I hear some one mention PEP? I was just thinking how *delicious* a bowl of KELLOGG'S PEP would taste for breakfast. And, you know, it's rich in two important vitamins. Vitamins for pep! Let's have some!

**Auntie:** Yes, my dears, there would be no pep in any of us—no what you call "oomph"—without vitamins. We need them all. And that delicious cereal, KELLOGG'S PEP, is extra rich in *two of the most important ones*—vitamins $B_1$ and D.
**Bob:** Saay! This PEP *tastes* swell!

**Barbara:** Now that we've learned about vitamins and KELLOGG'S PEP, just watch me become your "pep appeal" girl.
**Bob:** *Sweetie, I can hardly wait!*

## Vitamins for pep! *Kellogg's Pep* for vitamins!

*Pep contains per serving: 4/5 to 1/5 the minimum daily need of vitamin $B_1$, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.*

**THE FIRST RADIO** time signal ever broadcast was read from the face of a Longines Chronometer by an announcer on N.B.C.'s Station WJZ in February, 1927. That Longines Chronometer was an important instrument in broadcast station operation. To switch programs from one studio to another or to join several stations in a hook-up—in 15 seconds or so—the watches in each place had to agree to the second with all other watches in the system. This was a major time problem. The problem was solved through the use of Longines Navigational Chronometers, hundreds of which went into broadcast station service. Then, the broadcast stations bought hundreds of Longines 1/5 second timing watches to measure radio programs bit by bit, so that they would fit to-the-second into the time allotted for them. Truly, in radio broadcasting also—Longines is the most honored watch.

Longines
THE WORLD'S MOST HONORED WATCH

For seventy-five years Longines has concentrated on the single problem of making fine watches, better and better; watches for radio broadcasting, watches for the navigation of airplanes and battleships; and millions of watches for the service of discriminating men and women throughout the world.

Longines Watches have won 10 world's fair grand prizes, 28 gold medals, and more honors for accuracy than any other timepiece.

Longines jewelers now show the 75th Anniversary Longines Watches representing the peak of Longines perfection, priced $44.* upward; also Wittnauer Watches from $27.50,* products of—Longines Wittnauer Watch Co., Inc., New York, N. Y. and Montreal, Canada.

the soldiers coming and going, the bread and supplies being delivered and all that. Nobody disturbed the half-witted dwarf, who did not come near enough to be in anybody's way, and the Germans soon grew accustomed to seeing him there with his knees drawn up level with his chin, staring at them as if he were mesmerized. For three weeks, night and day, Gyse Meurs never left his observation post and thoroughly familiarized himself with the habits of the soldiers quartered in the place.

### The Vengeance of Gyse

On the night of June 12th he struck and his vengeance was something like Samson's last performance in the temple of Dagon of the Philistines. Around ten o'clock of that day he noticed the soldiers returning from the taverns in town and that they were accompanied by women. He could hear their subdued, secret laughter as they walked up the cobblestoned pathway leading up to the mill. No sooner did he hear the heavy oaken door slam shut than he crawled out of his hiding place. He then approached the mill with a long ladder which he placed against the gallery. He climbed the ladder, scaled the railing of the gallery and, moving stealthily forward, lifted himself to one of those narrow slits that served to let in the daylight in the upper story. What he saw inside apparently steeled him with resolution to carry out the rest of his design. Like a cat he slid down the ladder once more and raced for the door. He tried the latch and it opened. Gyse Meurs was inside the mill. It seemed that his eyes could penetrate the Stygian darkness of the wide room, for he ran with unfailing step around the machinery toward the small door that gave access to the narrow stairway leading upstairs. Noiselessly he slipped the heavy iron bolts into their locks—the German soldiers were locked in, except for the door upstairs that opened on the gallery. Again Gyse ran through the darkened mill room, came outside and raced up the ladder.

On the gallery he took hold of the great metal wheel which had formerly, in the times when the mill was still equipped with wings, been used to set the hood or roof of the mill to the wind. With an effort that made him gasp, Gyse lifted the wheel and carried it to the side where the door was located and then wedged it tightly between the door and the railing of the narrow gallery. The wood creaked, but the dwarf worked on as if he had not heard anything. When he had the wheel in place, he lifted himself once more to one of the windows and looked inside. Almost at once he dropped back. One of the soldiers had seen something move against the glass of the ten-inch-wide aperture in the wall and had walked over to look out. But Gyse was gone. He slid down the ladder and entered the dark mill room once more. For a moment he stood still to listen. He could hear footsteps upstairs and voices. One man was coming down the stairs; his feet could be heard stumbling uncertainly on the narrow wooden stairway.

Then Gyse seized hold of the wooden beams at the place where the horse used to be harnessed to the machinery and, planting his feet in the sawdust, he heaved with all his might. It was as if the whole structure were about to crack. The machinery grated and creaked, but slowly it came into motion. Gyse kept on walking and pushing. Above his head he could hear the millstones go into motion and above their rumble the cries and shouts of the trapped soldiers. Faster and faster he walked, knowing perhaps that if he could come to a trot, that is exceed the normal pace of a horse, the millstones would be torn loose from their moorings and go careening over the floor above. Whether he knew that this would happen or not, this did as a matter of fact occur. But what he could not see was that an oil lamp was upset upstairs and that the burning oil was spreading over the floor, which was as dry as tinder. In five minutes the mill was a huge flaming torch that threw a ruddy glare on the water of the river and that could be seen for miles around. But then also the alarm had been given and the volunteer fire department of Gorcum was on the way. Soldiers were hacking at the door with axes and picks but could not break it down. Burning timbers were falling from the gallery and from there on the firefighters below. Finally a hole was chopped into the door large enough to let in one man. As this man pushed through the opening Gyse saw him by the light of the burning woodwork of the ceiling and he rushed forward. Before the impact of the dwarf the German soldier went down like a sack with Gyse on top of him, throttling the life out of him with his strong fingers. Then the building crashed.

The bodies of thirteen German soldiers were removed from the ruins the next day. But also the charred remains of two unrecognizable females. The German high command, after a thorough examination of the building, reached the conclusion that the dwarf who was found with his fingers buried deep in the throat of the dead German soldier was responsible, but that he must have acted with the connivance of others and the announcement was made that unless the citizens of Gorcum would come forward voluntarily and denounce the accomplices of Gyse Meurs, thirteen citizens, chosen by lot, would have to pay with their lives for the crime committed against the German army.

The selection of the persons to be executed in retaliation for the dwarf's insensate action of revenge had been left to the discretion of the Gestapo's representative in Gor
nosse Erich Schwartz.

...E are five illustrated questions about Pullman service a... the modern Pullman car. Whether you're a seasoned ...l, or whether you have yet to board a Pullman for the ...e, you'll find it entertaining to see how well you "know o...s". And you'll find, incidentally, that "knowing the ...ill help you get more enjoyment out of that most enjoy... w... to travel . . . by Pullman.

...pproximately how wide and how long is your bed in a Pullman lower ...3 ...n. wide by 5 ft. 10 in. long . . . (2) 33 in. wide by 6 ft. long . . . (3) 35 ...y ft. 2 in. long . . .

...n. wide by 6 ft. 2 in. long. For, in every way, the Pullman berth ...ed give you *home* comfort. The mattress is soft and restful; the sheets ...a clean; the pillows—*two* of them—are full size. Within easy reach ...ec lamps, coat hangers, and a shelf for your belongings.

...hen you have a Pullman ticket, how much extra does it cost to enjoy ...th luxurious lounge car? (1) $1.00 extra . . . (2) Nothing . . . (3) 50% ...r Pullman space . . .

...No ...ing. The use of the lounge . . . with its deep-cushioned chairs, con... ...ri... ...g desk, racks of magazines . . . is a free privilege when you travel

**QUESTION:** *All Pullman porters are carefully trained in the duties of: (1) A bed maker . . . (2) A valet . . . (3) A night watchman . . .*

**ANSWER:** All three. Your Pullman porter is expert at making up your bed so it's smooth and comfortable. He brushes your clothes, shines your shoes, performs a host of helpful personal services. At night, there's always a porter on call . . . to bring you, for example, a drink of water or an extra blanket.

**QUESTION:** *What one of these 14 things is not found in a Pullman washroom?*

1. *Washbowls*
2. *Tooth-scrubbing bowl*
3. *Mirrors*
4. *Soap*
5. *Hamper for used towels*
6. *Individual towels*
7. *Hot water*
8. *Slot for used razor blades*
9. *Outlet for electric razor*
10. *Comb and brush*
11. *Toilet*
12. *Shelf for toilet articles*
13. *Coat hangers*
14. *Lounge seats*

**ANSWER:** No comb and brush, for obvious sanitary reasons. But there's little else you could ask for that isn't in the spic-and-span Pullman washroom.

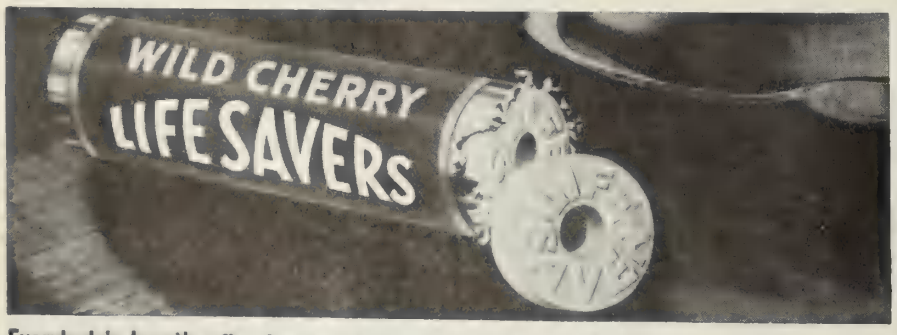
**QUESTION:** *What is the charge for a lower berth in a Pullman for a 300-mile trip? (1) $10.95 . . . (2) $7.50 . . . (3) $2.65 . . .*

**ANSWER:** $2.65. This is the Pullman charge for your space. Your first class rail fare cost is additional.

COPR. 1941, THE PULLMAN CO.

...OE These questions and answers give you some idea of the comforts and conveniences that are yours when you travel by Pullman. Is there *any* other way to travel that offers you quite so much for so little? And that offers—in addition—peace of mind and the knowledge that you'll speed safely and surely to your journey's end.

FOR COMFORT, SAFETY AND DEPENDABILITY—GO PULLMAN



**"Have a Life Saver?"**—a great way to start conversations. Keeps them pleasant, too, by keeping unpleasant breath in check. So have a package of friendly Wild Cherry Life Savers handy.

was the remnant of a huge castle and where the Gestapo had established its headquarters, were told that they would soon have their loved ones back. They had merely been sent away to receive instruction in the duties of the new European citizenship along with intellectuals and radicals from other countries occupied by the German armies.

What the relatives were not told, however, was the fact that their husbands, fathers and brothers were chained up to the walls of the old dungeons of the Toll Barracks and that day after day they were subjected to the brutality and mistreatment of the Gestapo men. It was curious, too, that in rounding up the so-called "dangerous" elements, Parteigenosse Schwartz had not paid attention to the types who might have been expected to fear a fascist conquest most.

So it was, for instance, that the only Communist member of the Town Council of Gorcum, who had also been the organizer of the local ironworkers' union, not only had not been molested, but had been placed in charge of the newly established section of the Arbeits-front.

The men who had been arrested were persons like Kees Boon, the smith and local poet, and his friend Jan Trouw, the house painter who preached on Sunday in the chapel of the Darbists. These two men, on whom even the most conservative and reactionary Gorcumers had looked in the past as harmless idealists, incapable of the least act or thought of violence, had been among the first to be taken into custody by the Gestapo. This leads one to think that the Germans entertained different notions on the subject of their innocence and harmlessness. As a matter of fact not the most vociferously patriotic citizens, those who had called for a fight to the death against the invader and who had always been in the forefront of nationalistic and patriotic endeavor, were regarded by the Germans as their most determined opponents, but rather, and strange it may seem, the men of peace at any price, the conscientious objectors, the followers of Tolstoy, the believers in nonviolence.

### Tragedy for Three

The first to join Boon and Trouw in the dungeon of the Toll Barracks had been the president and officers of the district organization of "Kerk en Vrede" (Church and Peace), a young pastor from a near-by village and his colleagues from a small fortified town across the Merwede River. These men, whose fundamental idea had been the preaching of spiritual defense alone, who would have had Holland disarm completely, strip herself of army and navy, and face the world as naked as Isaiah of yore in an attitude of absolute defenselessness, they who were willing to face occupation of their country and subjugation of their people without offering the slightest opposition, in the belief that in so doing they carried out Christ's command not to resist evil, they were indicated as Germany's worst enemies. Their ideas had not had a wide following, but to the extent that their influence had made it felt, one may have expected that the Germans would have hailed them as comrades and collaborators in that they contributed something at least toward disrupting unanimity on the subject of national defense, on which Hitler's victory was partly conditioned. These were the men who had been thrown into jail. And it was out of their midst that Parteigenosse Schwartz selected the first three who were to pay with their lives for the burning of the mill and its soldier occupants.

At the last moment, the Gestapo agent changed his plans abou[t] cution take place in [t] not keep up the prete[nse] oners had been sent [to] political re-education [camp] them at so short a [notice] firing squad in the to[wn] the bowling green.

Howard. He took out his Without doubt," he said, ."

ed. The Frenchman folded n the breast pocket of his used for a moment. "You ?" he inquired.

Howard nodded. "I shall take them to Paris as soon as she can travel, and then to England by St. Malo."

There was a momentary silence. The officer stood for a moment staring at the child in the bed. At last he said, "It may be necessary that you should go to Brest. Always, there will be boats for England at Brest."

The old man stared at him. "But there is a service from St. Malo."

The doctor shrugged his shoulders. "It is very near the front. Perhaps there will be only military traffic there." He hesitated, and then said, "It seems that the Boches have crossed the Seine, near Rheims. Only a few, you understand. They will be easily thrown back."

He turned and went downstairs. Howard followed him, and got from the restaurant a jug of cold milk and a few little plain cakes for the children and, as an afterthought, a couple of feet of bread for his own supper. He carried these things through the crowded hall and up the stairs to his own room, afraid to leave the children very long.

He gave the children their supper of cakes, and milk out of a tooth glass; Sheila seemed cooler, and drank her milk with very little coaxing. Then it was time to put Ronnie to bed in the big bed beside his sister. The little boy asked, "Where are my pajamas?"

Howard said, "At the station. We'll put you into bed in your shirt for a start, just for fun. Then get your pajamas."

He made a game of it with them, and tucked them up carefully one at each side of the big bed, with a bolster down the middle. "Now you be good," he said. "I'm just going to get the luggage. I'll leave the light on."

He left them and went down to the hall. The restaurant and the café were more crowded than ever; in the throng there was no hope at all of getting anyone to help him with the luggage. He pushed his way to the door and went out into the street, bewildered at the atmosphere of the town, and more than a little worried.

The station, again, was thronged with troops. Howard crossed to the arrival platform and searched painstakingly for his luggage among the recumbent forms. He found the tin case with his rods and he found the small attaché case; the suitcase had vanished, nor could he discover any trace of the registered luggage.

He had not expected any more, but

SCHICK INCORPORATED — The New SCHICK SUPER SLICK SHAVER

HAVE ENOUGH OIL ALWAYS

but—

SEE THAT IT'S CLEAN, too!

DIRTY OIL
Costs You Money

Your service man will tell you that you invite expense if you drive with dirty oil. The reason is simply this,—dirt and sludge clog the oil passages, or slots, in the piston rings. When this occurs, those rings can no longer do their job. Then, oil and gas are wasted, carbon forms faster, and what's called an "engine overhaul" becomes necessary sooner.

Fortunately, it's easy to check the cleanness of your oil. Just—

1. Drive into your neighborhood AC Oil Filter Service Station, —there's one near you.
2. Tell the attendant to check your oil with an AC Oil Test Pad.
3. Look at the spot on the Oil Test Pad. If it's dirty, your oil needs changing, and you should either renew your oil filter or have a filter installed.

It's no bother—it costs nothing. Yet, checking your oil for dirt is a sure way to more economical motoring.

AC Oil Filters continuously remove all dust, dirt, and sludge from engine oil. So, they give complete filter protection,— second to none in its thoroughness, size for size.

AC Oil Filters also remove discoloration. This feature enables you to tell, readily, when the filtering element needs replacing. When the oil on the gauge stick becomes so dark that the markings can't be seen, easily,—a new element should be installed. *And that's all the attention an AC Filter requires.* Have one installed — or your present filter renewed — today.

P. S. Change your oil as your service man recommends.

AC SPARK PLUG DIVISION · *General Motors Corporation* · FLINT, MICHIGAN

the loss of the suitcase was a serious matter. He knew that when he got to Paris he would find the registered luggage waiting for him in the *consigne*, were it six months later. But the suitcase had apparently been stolen; either that, or it had been placed in safekeeping by some zealous railway official. Under the circumstances that did not seem probable. He would look for it in the morning; in the meantime they must all get on without pajamas for the night. He made his way back to the hotel and up to the bedroom again.

Both children were sleeping. Sheila was hot and restless and had thrown off most of her coverings. He spread them over her more lightly and stretched himself to sleep uneasily in the armchair, desperately worried over what the next day would bring. One fact consoled him: he had his rods quite safe.

DAWN came at five and found him still dozing uneasily. The children woke soon after that and began chattering and playing in the bed; the old man stirred and sat up stiffly in his chair. He rubbed a hand over his face; he was feeling very ill. Then the children claimed his attention and he got up to put them right.

There was no chance of any further sleep; already there was much tramping to and fro in the hotel. In the station yard outside his window, lorries, tanks and guns were on the move; the grinding of the caterpillar treads, the roar of exhausts, the chink of harness and the stamping of the teams made up a melody of war. He turned back to the children; Sheila was better, but still obviously unwell. He brought the basin to the bed and washed her face and arms; then he combed her hair with the small pocket comb that he had found in the attaché case, one of the few small toilet articles he had. He took her temperature, under the arm for fear that she might chew on the thermometer.

It came out a degree above normal; he tried vainly to recall how much he should add on for the arm. In any case it didn't matter much; she'd have to stay in bed. He got Ronnie up, washed him, and set him to dress himself; then he sponged over his own face and rang the bell for the *femme de chambre*. He was unshaven, but that could wait.

She came presently, and exclaimed when she saw the chair and coverlet. "Monsieur has slept so?" she said. "But there was room in bed for all of you!"

He felt a little foolish. "The little one is ill," he said. "When a child is ill, she should have room. I was quite comfortable."

Her eyes softened, and she clucked her tongue again. "Tonight I will find another mattress," she said. "Be assured, monsieur, I will arrange something."

He ordered coffee and rolls and jam; she went away and came back presently with a loaded tray. As she set it down upon the dressing table, he ventured, "I must go out this morning to look for my luggage, and to buy a few things. I will take the little boy with me; I shall not be very long. Would you listen for the little girl, in case she cries?"

The woman beamed at him. "Assuredly. But it will not be necessary for Monsieur to hurry. I will bring *la petite* Rose, and she can play with the little sick one."

Howard said, "Rose?"

He stood for ten minutes, listening to a torrent of family history. Little Rose was eight years old, the daughter of the woman's brother, who was in England. No doubt Monsieur had met her brother? Tenois was the name, Henri Tenois. He was in London, the wine waiter at the Hotel Dickens, in Russell Square. He was a widower, so the *femme de chambre* made a home for *la petite* Rose. And so o minute.

Howard had to exercis tact to get rid of her b cooled.

An hour later, spruce leading Ronnie by the h the station. For half searched the platforms with the tired troops, bu of the lost suitcase. No worked and worried ol help.

ready. I'm not being a sensationalist. It's true."

Howard stood staring up the street. "Where are you making for?"

"I'm going down into Savoy to see what the Italians are doing in that part. And then, we're getting out. Maybe Marseilles, perhaps across the frontier into Spain."

The old man smiled. "Good luck," he said. "Don't get too near the fighting."

The other said, "What are you going to do, yourself?"

"I don't quite know. I'll have to think about it."

He turned away toward the hotel, leading Ronnie by the hand.

Up in the bedroom things were very happy. *La petite* Rose was there, a shy little girl with long black hair and an advanced maternal instinct. Already Sheila was devoted to her. *La petite* Rose had made a rabbit from two of Howard's dirty handkerchiefs and three little bits of string, and this rabbit had a burrow in the bedclothes on Ronnie's side of the bed; when you said "Boo" he dived back into his burrow, manipulated ingeniously by *la petite* Rose. Sheila, bright-eyed, struggled to tell old Howard all about it in mixed French and English. In the middle of their chatter three airplanes passed very low over the station and the hotel.

Howard undid his parcels and gave Sheila the picture book about Babar the Elephant. Babar was an old friend of *la petite* Rose, and well known; she took the book and drew Ronnie to the bed, and began to read the story to them. The little boy soon tired of it; airplanes were more in his line, and he went and leaned out of the window hoping to see another one go by.

Howard left them there, and went down to the restaurant where he ordered lunch to be sent up to the bedroom, both for himself and for the children.

It came presently, brought by the *femme de chambre*. There was much excited French about the pictures of Babar and about the handkerchief rabbit. The woman beamed all over; it was the sort of party that she understood.

Howard said, "It has been very, very kind of you to let *la petite* Rose be with *la petite* Sheila. Already they are friends."

The woman spoke volubly: "It is nothing, monsieur—nothing at all. Rose likes more than anything to play with little children, or with kittens, or young dogs. Truly, she is a little mother, that one." She rubbed the child's head affectionately. "She will come back after luncheon, if monsieur desires."

Sheila said, "I want Rose to come back after luncheon, Monsieur Howard."

He said slowly, "You'd better go to sleep after luncheon." He turned to the woman. "If she could come back at four o'clock?" To Rose, "Would you like to come and have tea with us this afternoon—English tea?"

She said shyly, "*Oui, monsieur.*"

SHE went away, and Howard gave the children their dinner. Sheila was still hot with a slight temperature. He put the tray outside the door when they had finished, and made Ronnie lie down on the bed with his sister.

Later in the afternoon, when the children were asleep, he took a long walk.

When he returned, things were still happy in the bedroom. *La petite* Rose, it seemed, knew a game which involved the imitation of animals in endless repetition:

*"My great-aunt lives in Tours,*
*In a house with a cherry tree*
*With a little mouse (squeak, squeak)*
*And a big lion (roar, roar)*
*And a wood pigeon (coo, coo) . . ."*

and so on quite indefinitely. It was a game that made no great demand on the intelligence, and Sheila wanted nothing better. Presently they were all playing it; it was so that the *femme de chambre* found them.

She came in with tea, laughing all over her face. "In Touraine I learned that, as a little girl, myself," she said. "It is pretty, is it not? All children like 'My Great-Aunt Lives in Tours'—always, always. In England, monsieur, do the children play like that?"

"Much the same," he said. "Children in every country play the same games."

They played a little more after tea; then Howard washed the children as the *femme de chambre* remade the bed. She helped him to undress them and put them into their new pajamas; then she held Sheila on her capacious lap while the old man took her temperature carefully under the arm. It was still a degree or so above normal though the child was obviously better; whatever had been wrong with her was passing off. It would not be right, he decided, to travel on the next day; he had no wish to be held up with another illness in less comfortable surroundings. But on the day after that, he thought it should be possible to get away. If they started very early in the morning they would get through to St. Malo in the day. He would see about the car that night.

Presently both the children were in bed, and were kissed good night. He stood in the passage outside the room with the *femme de chambre* and her little girl. "Tonight, monsieur," she said, "presently, when they are asleep, I will bring a mattress and make up a bed for Monsieur on the floor. It will be better than the armchair, that."

"You are very kind," he said. "I don't know why you should be so very, very good to us. I am most grateful."

She said, "But, monsieur, it is you who are kind. . . ."

He went down to the lobby, wondering a little at the effusive nature of the French.

Again the hotel was full of officers. He pushed his way to the desk, and said to the girl, "I want to hire a car, not now, but the day after tomorrow—for a long journey. Can you tell me which garage would be the best?"

She said: "For a long journey, monsieur? How far?"

"To St. Malo, in Normandy. The little girl is still not very well. I think it will be easier to take her hom

# RST CHOICE *OF THE RAILROADS TODAY!*

ll streamliner pictured here is more than 't locomotive of tomorrow." It is the ocomotive of *today*.

ıority for this statement is the fact that e an railroads, for the past four years, e ought more GM locomotives than loco- ti s of any other kind.

\ in this achievement you see a typical ı le of the progressive benefits that n l Motors enterprise makes possible.

Γ Diesel engine that drives these swift ł ırifty locomotives was born of General ot s research in internal combustion en- ıe And from our practical experience in u facturing motors, generators, frames, bodies and hundreds of other parts—came the processes by which all such units are now made and assembled into complete locomotives in the largest self-contained locomotive factory in the world.

But equally important as the job of developing these locomotives, is the job they themselves have done in actual operation on the railroads. Many people know their record in passenger service. But railroad men can tell you also how more than 600 General Motors switchers have accelerated freight handling and pared down costs in railroad yards—that a new high-powered freight locomotive is beginning to extend these advantages to main-line freight operation.

And you can thank the alertness of railroad management for putting this new equipment to work at a record rate—to better still further the service of the finest railroads in the world.

Paris, not possible at all, monsieur!"

The old man was silent.

The Frenchman said, "If Monsieur wishes to get back to England he should go by train, and he should go very soon."

Howard thanked him for the advice, and went back to the hotel. In the lobby the girl said to him: "Monsieur has found a car?"

He shook his head. "I shall stay here till the day after tomorrow. Then, if the little girl is well, we will go on by train."

He paused. "One thing, mademoiselle: I shall only be able to take one little bag for the three of us, that I can carry myself. If I leave my fishing rods, would you look after them for me for a time?"

"But certainly, monsieur. They will be quite safe."

He went into the restaurant and found a seat for dinner. It was a great relief to him that he had found a means to place his rods in safety. Now that that little problem had been solved, he was amazed to find how greatly it had been distressing him; with that disposed of he could face the future with a calmer mind.

He went up to the bedroom shortly after dinner. The *femme de chambre* met him in the corridor, the yellow, dingy corridor of bedrooms, lit only by a low-power lamp without a shade. "I have made monsieur a bed upon the floor," she said in a low tone. "You will see." She turned away.

"That was very kind of you," he said. He paused, and looked curiously at her. In the dim light he could not see very clearly, but he had the impression that she was sobbing.

"Is anything the matter?" he asked gently.

She lifted the corner of her apron to her eyes. "It is nothing," she muttered. "Nothing at all."

He hesitated, irresolute. He could not leave her, could not just walk into his bedroom and shut the door, if she was in trouble. She had been too helpful with the children. "Is it madame?" he said. "Has she complained about your work? If so, I will speak to her. I will tell her how much you have helped me."

She shook her head, and wiped her eyes. "It is not that, monsieur," she said. "But—I am dismisse I am go tomorrow."

He was amazed. "But wh

d worked in a steel mill be- come to the city to go on still spoke of the hot mill kness in his voice. He had ler. He was ready at any trate the technique of pry- sheets of steel with tongs, sheets double, slinging them under the steam hammer, riding them up into the pack furnace. He had liked the work. But it hadn't been steady and he'd had a cousin on the cops and the cops had looked like steady work. "But I'll bet the old mill's running now. I'll bet it's running seven days now. I'll bet you could make money there now."

Alarm swept over her and she said, "Tell me what's the matter. You look dreadful." It struck her abruptly. She exclaimed: "Surely they're not blaming you!"

"Well, no." He fumbled with words. It was he who was evasive, not she. "Only, the hell of it is, he must have used my key. Some way, he must have got it off my ring."

"But it might have happened to anyone! They all said he was so—so slick! They can't—they couldn't blame you!"

"He used my key. I went out of the room when I shouldn't have. It damn' near looks as if I sprung him."

"Johnny. Johnny, have they said something to you?"

"No." He took a deep breath. "I quit." She stared at him without answering. He blurted: "I had to do it, honey. This case was too big. It meant too much to the D.A. And look at the sergeant. He'll be broke. Look at the black eye it gives the D.A.'s detail and the whole department. Look at those guys that'll beat the D.A.'s case now. It don't help to try to duck it. It's all my fault. The least I could do was turn in my badge." He breathed deeply. "So that's what I did."

She said at last, "Go wash. Don't talk about it any more. You're all worked up."

"Well, you're crying."

She held him longingly.

"Don't worry about the job. I can get another job tomorrow. Over in Jersey. Northeastern's got a rolling mill over there. It's a little outfit. Handmills. That's my job. I know how to do that. We'll be all right."

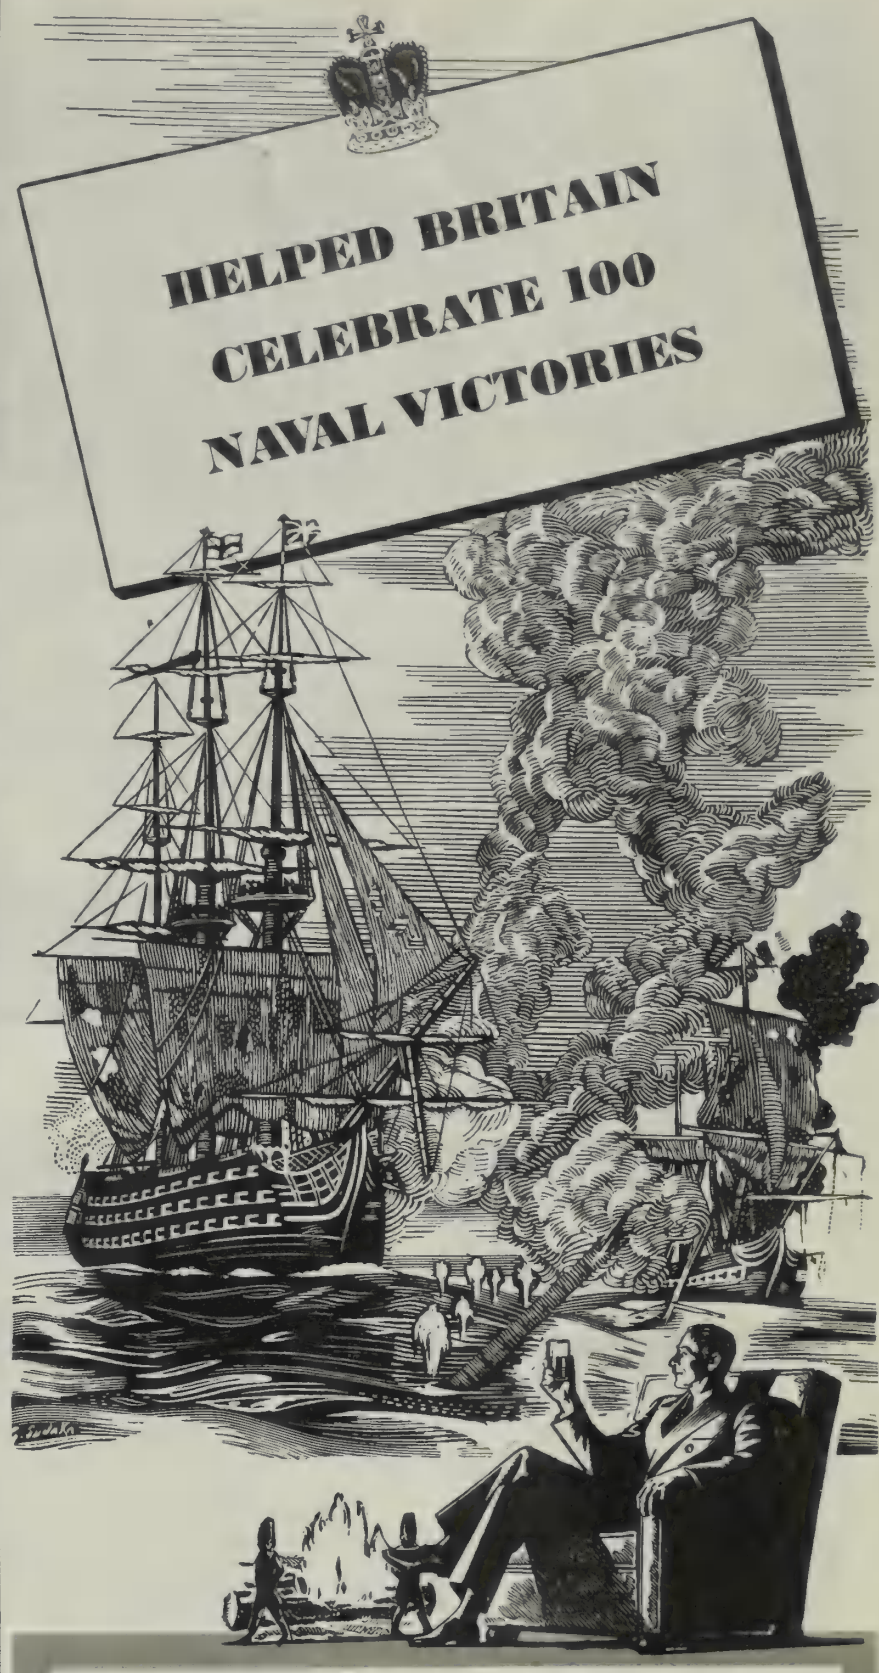
A steel mill. Johnny, she cried despairingly in her soul, a hot mill, whatever it is, a lusty, ugly belching hot mill, a lovely, smoking steel mill.

She said furiously through her sobs: "I'm not worried about the job. Can't I be sorry for you?"

"Well, it was my fault."

"Don't say that any more!"

HIS hands gripped her shoulders and his eyes beseeched her for understanding. "Look, sweetheart. It wasn't that I'd have had to stand charges. I don't think I would have. It was the way I felt. That was all, and I knew how the rest of the guys felt about it too. I had to do what I could to square it with myself, didn't I?"



At a wild thought she said, "But if they should catch him again—" and smothered her words immediately.

"That wouldn't cut much ice. The D.A. might not be so sore, but . . . Hell, they won't get him. But it's okay. We'll be all right."

She sniffled and caught her breath and smiled, her eyes wet with tears. "We'll be wonderfully all right. We don't care. We will be. Now come to supper."

Johnny tilted back his chair and hooked his feet around the table rungs and lit his pipe. His face in repose was gentle and young and honest, and it wrung her heart. Then he looked at her and a mask of good nature that he did not feel tonight concealed him, drawn on with an effort.

"I've got the best little cook in the

# What's it got you haven't got in your present automobi

HERE stands an automobile—*the* automobile, we believe, of 1942.

What's in it to make it that—and to lay fair claim on your attention? Well . . .

There's a *valve-in-head engine* in it. The same type of engine that's used in every modern airplane. The type of engine now celebrating forty solid years of unquestioned superiority.

There's FIREBALL *compression* in it. Specially contoured Domite pistons that wring more good out of every drop of gasoline.

There's *Compound Carburetion*† in it. A constant check and *double* check on gas usage to see that you get both power and range fro you buy.

There are *crankpins and journals* in oil-cushion finish that multiplies bea

There are *new connecting rods* that t heavier burden of present piston mat out adding a single mote of weight.

There are *new broadrim wheels* on only get maximum mileage from steady the ride, take heel-over ou corners, hold you on your track lik liner on its rails.

There is torque-tube drive such as America's fastest fighting planes.

re soft all-coil springs, forever gentle
, that never need any mothering care.

re six dozen different kinds of metals.
precision carried out in terms of
ns of an inch.

the brain work of men who, faced
need to conserve defense materials,
tter ways to use other things so that
ht still find those qualities you've
expect from a Buick.

ght extra cost on Buick SPECIAL models, standard on all other Series

What are those qualities?

Ruggedness, sturdiness, dependability, of course.

Frugal use of gasoline and oil—thriftiness in the form of low upkeep.

And with all that—*life,* and *action,* and *ability.*

How much?

We could tell you, with figures straight from the General Motors Proving Ground—but why strain your imagination?

Why not let you see for yourself how prompt its response, how smooth its ride, how light its handling, how roomy and comfortable and pleasant to drive this Buick is?

In short—why not try out this Buick and see why it is *the* automobile of 1942?

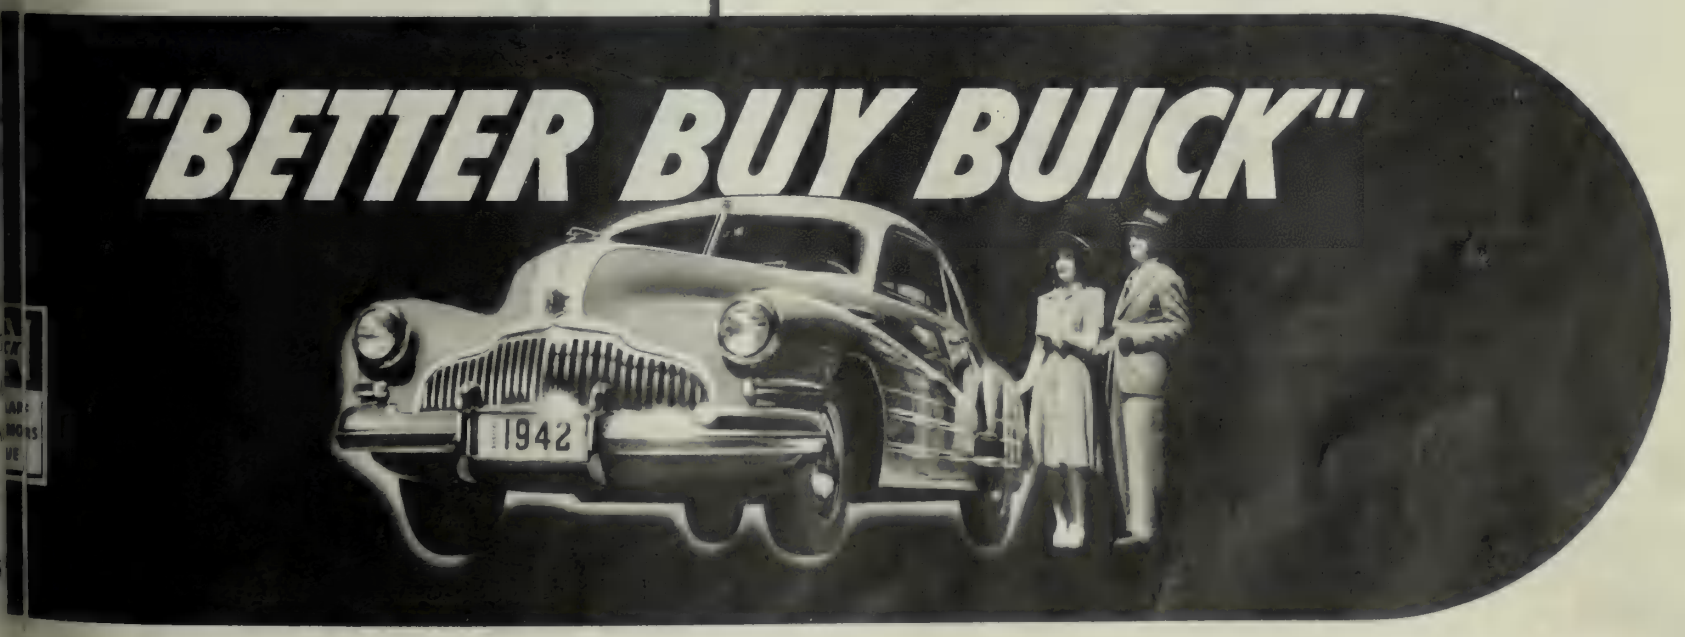
***No other car has*** **ALL THIS FOR YOU IN 'FORTY-TWO**

You get **FIREBALL STRAIGHT-EIGHT VALVE-IN-HEAD ENGINE** that gets more power and range out of every drop of gasoline.

You get **COMPOUND CARBURETION** (optional on SPECIAL models, standard on other Series) for top economy with extra power in reserve.

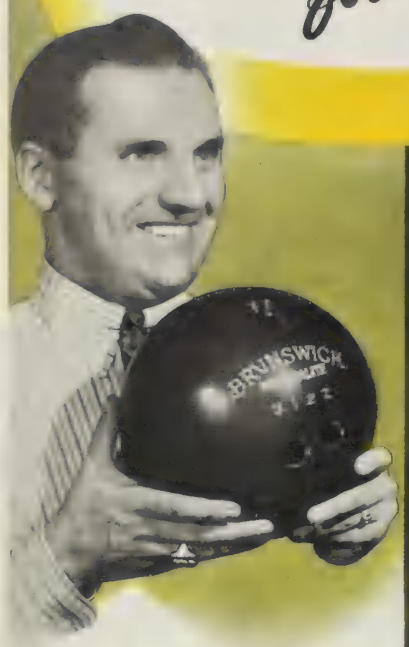
You get **OIL-CUSHIONED CRANKSHAFT PINS AND JOURNALS** that greatly lengthen the life of main bearings.

You get **STURDI-LITE CONNECTING RODS**—25% stronger for the same weight.



You get **STEPON PARKING BRAKE** that goes on with a touch of the toe, locks and releases from dash.

You get **BROADRIM WHEELS** that prevent heel-over on turns, greatly improve car handling.



You get **FULLY ADJUSTABLE STEERING POST** that permits wheel to be set higher or lower.

You get **BODY BY FISHER,** in daring new styling featuring back seats up to 52 inches wide.

You get **WEATHERWARDEN** ventiheater (accessory) which provides winter warmth, summer comfort, freedom from noise and fog-free outlook in all weather.

"BOWLING 298 beat my hole-in-one for thrills"

. . . says Fred W. Fisher, of Detroit *who toppled 298 pins in one game with his Custom-Fit Brunswick Mineralite Bowling Ball. "I've won a medal for a 253-yard hole in one. I've won awards for rifle shooting. But when I bowled a game just 2 pins short of perfect — that was a thrill of thrills! My bowling average was about 152 at the time I got my new Custom-fit Mineralite. I increased it to 171. The second half of last season I averaged right around 180. Ever since I've been bowling with my own Mineralite I've had either high single game record or high three game record in the various leagues I bowl in."*

To bowl your best, use the best ball that money can buy. Own your own Brunswick Mineralite, the choice of a majority of America's bowlers. Your nearest Authorized Brunswick Dealer is equipped to measure you for a ball with grip bored specially to fit *your* hand. The Mineralite you buy will be the same ball in every important detail, as the one Ned Day, National Match Game Champion, uses in championship matches. Your initials will be stamped in gold on your Mineralite free of charge.

world," he said, kidding her. "That was a swell supper, honey."

"I don't know why I got broccoli."

"Why, for me. I could live on it." He turned his head. "There's someone in the hall."

The buzzer sounded.

Hilda jumped up. "I'll see."

She opened the door at the end of the narrow hall. It was a middle-aged man in an old raincoat. He studied her with sharp and pleasant blue eyes. "Johnny home?"

"Yes. Will you—come in?"

"I'm Cap Thompson."

"Oh, yes! He's spoken of you."

He said flatly, "You're his new wife." He gave her another noncommittal appraisal and followed her to the living room. She felt vaguely afraid.

Johnny came out of his chair. "Hey, Cap!"

"H'are you, son?" They shook hands. "Nice place you've got here."

JOHNNY was deeply pleased. He introduced Cap Thompson again to Hilda. He said, "Sit down. Make yourself at home." He added with diffidence: "I didn't think I'd see any of you guys again."

Cap Thompson settled himself in the chair. He asked bluntly, "Why not?"

"Well, after—"

"Forget it. We're all human. The D.A.'s the only one that's down on you. And you've turned in your badge so there's not much he can do."

Johnny sat down, depressed. "I sure don't blame him."

"He'll get over it. It wasn't the only case in the world. There'll be others." Cap Thompson grinned dryly. "Although judging from the papers you'd think otherwise."

"Anything new on him?"

Cap Thompson pursed his lips and shook his head. "I'm afraid he's out and away. He's cute, that Barrow. Plenty cute. He's lucky, too." He glanced at Hilda and away again. "I just thought I'd drop around and tell you we're all sorry about the way it went."

"Thanks, Cap. . . . But stick around a while. I'll open some beer."

"There isn't any," Hilda told him. She wanted Cap Thompson to leave. His bright eyes returned briefly to her. They looked through her.

"I'll chase down and get a few cans," Johnny insisted. "Stick around, Cap. I'll let you talk to my wife while I'm gone."

"It'll be a pleasure."

Johnny's steps sounded in the hall and the door slammed behind him. Hilda put her hands together in her lap and looked at them.

"Too bad," Cap Thompson said.

She looked up.

"The break Johnny got." He held up a fist and looked at his fingernails while he talked. "I've been watching him. I was the one that had him assigned to the district attorney's office. He would have made a good cop. He's a serious boy about his work."

"Yes."

"You take this case. He was wound up in it. Well, it wasn't really much but the papers played it up. Because of the kind of people they were," he explained, "living in swell hotels. We don't get many racket guys like that any more."

"Yes," she said, "I read all about it. Johnny told me all about it."

"Of course, the whole thing was this guy Barrow. This Huck Barrow. The gambler. The D.A. had just enough to threaten him with to make him agree to turn state's evidence. But, of course, Hamlin's a killer. Barrow was naturally afraid his life wouldn't be worth a nickel if he went on the stand and convicted Hamlin. He was between the devil and the deep blue sea. But the point was, we had him and Hamlin had to play on our side.

"But we all knew he'd t of testifying if there was do it."

"Yes," Hilda said. "Joh all about it."

"Barrow kept complain safe in jail," Cap Thomps imperturbably. "So we p hotel and put a guard on and his sergeant. We knew to hold. We took every p knew how to take." He we did keep him for two other week and the trial been on."

"Yes," Hilda said. "I k was so glad it was almost

Cap Thompson stood u hands behind his back and to the false fireplace. He t and said irrelevantly, "L how long have you and married?"

She touched her lips wi "Almost a month."

His eyes explored her. S

"You didn't know eac long, did you?"

"No."

"Did you work in towr

She nodded. She was d afraid to speak.

"I keep thinking," Ca said, "that I've seen you keep thinking that it was

t last, "What's the idea of now?"

I . . . I have to."

She was silent.

"Did Cap Thompson accuse you of it? Did he scare you into it?"

"No. No! He did guess at it."

"I thought he might," Johnny said. "He thinks of everything."

It took a moment for her to understand him. "You thought he might?"

"I knew about it this afternoon," Johnny's voice said. "After Barrow got away. After I spent a couple of hours up in the Bronx making sure who you were."

She turned her head and looked at him. There was nothing accusing in his face. He seemed to be smiling. There was an expression deep in his eyes she had not seen there before.

"I missed my key this morning. You'd broken off one of your fingernails in my key ring and I noticed it, but I didn't understand what it meant until Barrow got away."

She pressed her back against the door, her hands behind her, her dark eyes searching his face unbelievingly. "You knew, you knew when you turned in your badge. When you came home tonight."

He was not judging her. He said simply, "Your brother thought Hamlin would have him killed if he testified. You were trying to save his life."

She shook her head, her lips parted. "But you didn't say anything. You weren't going to tell me. After I'd done that to you, you'd have gone on. You'd have gone on forever and kept still. You'd have let me believe you didn't know."

"Well, you just told me about it yourself. We had the same reason." He said soberly, "You don't hurt someone you love."

SHE spoke presently, her arms tight around him and her head resting against his chest, "But I've broken a law, Johnny. I'm an accomplice."

His hand stroked her hair. His voice was gentle: "They caught him upstate. Took him off a Chicago train. I brought a paper."

She moved to see his face, startled. But she felt no other emotion. Neither, she reflected, had Huck, when the arrest had come. He would have been startled, that was all. He was a great believer in luck, and accepted whatever it brought him, and didn't believe in anything else.

She smiled at that and said, "He'll laugh when he hears what it brought me."

**"Shall I wrap them up, or do you want to wear them?"** JAY IRVING

# OH, YEAH? COULD BE CAN DO

THE FIRST TIME somebody told me that Macmillan RING-FREE Motor Oil would remove carbon from my engine, I just said to myself:

"Oh, yeah?"

Then more and more of my friends kept telling me that it had cleansed the carbon out of their motors and pretty soon I was saying to myself:

"Could be."

* * *

And then I tried it myself. I saw my first fill come out black and I noticed that each fill after that was less and less discolored, because RING-FREE was keeping me on top of the formation of carbon. And then I said to myself:

"Can do."

Maybe you are still at the "Oh, yeah?" stage or perhaps you've gone as far as "Could be."

Well, mister, if you'll actually try Macmillan RING-FREE yourself in your own car, you'll join the rest of us who know that when it comes to removing carbon, RING-FREE CAN DO!

* * *

How can it?

Because a solvent is retained in the oil when it is refined by the Macmillan exclusive, patented process.

That solvent dissolves the binder, as chemists call it, holding carbon to the metal parts of your engine. Then the carbon particles are floated away and are carried away when the crankcase is drained at the time you get your next fill of RING-FREE.

As you continue to use RING-FREE, your motor is continuously cleansed of carbon.

* * *

In the operation of an automobile, partially burned fuels and oils are bound to create carbon. But you are not bound to let it get ahead of you until it has to be cracked out.

RING-FREE turns the tide in your favor. It cleanses your engine as it lubricates. It keeps you on top of carbon.

RING-FREE CAN DO!

MACMILLAN RING-FREE MOTOR OIL

Copyright, 1941
Macmillan Petroleum Corporation

**Try it at OUR risk!** Macmillan RING-FREE Motor Oil is *guaranteed* to remove carbon, cleanse your motor, save gasoline, reduce wear and repairs. It makes your motor run smoother, reduces friction by thorough lubrication and adds pep and zip. Try a fill and if you are not satisfied that RING-FREE is doing these things, your money will be refunded by your dealer immediately.

Ask your dealer for "What You Can Expect from Macmillan RING-FREE Motor Oil," our new circular, or write us for it direct.

# Murder in Retrospect

Continued from page 22

Philip was quicker than I was. He saw the seriousness of my discovery and urged me to come over at once and consult with him.

I went out, encountering Miss Williams, who was looking for a truant pupil. I assured her that I had not seen Angela and that she had not been to the house.

I think that Miss Williams noticed there was something amiss. She looked at me rather curiously. I had no intention, however, of telling her what had happened. I suggested she should try the kitchen garden—Angela had a favorite apple tree there—and I myself hurried down to the shore and rowed myself across to the Alderbury side.

My brother was already there waiting for me.

WE WALKED up to the house together by the way you and I went the other day. Having seen the topography, you can understand that in passing underneath the wall of the Battery Garden we were bound to overhear anything being said inside it.

Beyond the fact that Caroline and Amyas were engaged in a disagreement of some kind, I did not pay much attention to what was said.

Certainly I overheard no threat of any kind uttered by Caroline. The subject of discussion was Angela, and I presume Caroline was pleading for a respite from the fiat of school. Amyas, however, was adamant, shouting out irritably that it was all settled—he'd see to her packing.

The door of the Battery opened just as we drew abreast of it and Caroline came out. She looked disturbed, but not unduly so. She smiled rather absently at me, and said they had been discussing Angela. Elsa came down the path at that minute and, as Amyas clearly wanted to get on with the sitting without interruption from us, we went on up the path.

Philip blamed himself severely afterward for the fact that we did not take immediate action. But I myself cannot see it the same way. We had no earthly right to assume that such a thing as murder was being contemplated. (Moreover, I now believe that it was *not* contemplated.) It was clear that we should have to adopt *some* course of action, but I still maintain that we were right to talk the matter over carefully first. It was necessary to find the right thing to do, and once or twice I found myself wondering if I had not, after all, made a mistake. Had the bottle really been full the day before as I thought?

I am not one of these people (like my brother Philip) who can be cocksure of everything. One's memory does play tricks on one. How often, for instance, one is convinced one has put an article in a certain place, later to find that he has put it somewhere quite different. The more I tried to recall the state of the bottle on the preceding afternoon the more uncertain and doubtful I became. This was very annoying to Philip, who began completely to lose patience with me.

We were not able to continue our discussion at the time and tacitly agreed to postpone it until after lunch. (I may say that I was always free to drop in for lunch at Alderbury if I chose.)

Later, Angela and Caroline brought us beer. I asked Angela what she had been up to, playing truant, and told her Miss Williams was on the warpath, and she said she had been bathing, and added that she didn't see why she should have to mend her hor when she was going to things to go to school w

Since there seemed further talk with Philip a I was really anxious to t by myself, I wandered of toward the Battery. Just tery, as I showed you, t ing in the trees where th an old bench. I sat ther thinking, and watching posing for Amyas.

I shall always think of that day: Rigid in the yellow shirt and dark bl a red pull-over slung ro ders for warmth.

Her face was so alight health and radiance. An of hers reciting plans fo

This sounds as thoug dropping, but that is not fectly visible to Elsa. Amyas knew I was the her hand at me and Amyas was a perfect be —he wouldn't let her res and aching all over.

Amyas growled out as stiff as he was. He w —muscular rheumatis mockingly, "Poor old said she'd be taking on valid.

It shocked me, you kn hearted acquiescence in gether while they were suffering. And yet I against her. She was so fident, so very much in didn't really know what She didn't understand just assumed with the of a child that Caroline right," that "she'd soo She saw nothing, you and Amyas—happy tog ready told me my poi old-fashioned. I suppose she was ra mal herself—young an with nothing yet of m ence and doubtful wisc lieve Elsa had begun to *felt*. But she was ver more alive than any pe known. . . .

That was the last tim ant and assured—on t Fey is the word for it,

The bell sounded for up and went down the the Battery door, and It was dazzlingly brig in out of the shady tree see. Amyas was spraw seat, his arms flung ou ing at the picture. I'v him like that. How we already the poison was ing him as he sat?

He so hated and rese

away, that expresses it as well as anything can.

Immediately after that meeting I went to look at as many of his pictures as I could. He had a show on in Bond Street at the moment and there was one of his pictures in Manchester and one in Leeds and two in public galleries in London. I went to see them all. Then I met him again. I said, "I've been to see all your pictures. I think they're wonderful."

He just looked amused. He said: "Who said you were any judge of painting? I don't believe you know anything about it."

I said, "Perhaps not. But they are marvelous, all the same."

He grinned at me and said, "Don't be a gushing little fool."

I said, "I'm not; I want you to paint me."

Crale said, "If you've any sense at all, you'll realize that I don't paint portraits of pretty women."

I said, "It needn't be a portrait, and I'm not a pretty woman."

He looked at me then as though he'd begun to see me. He said, "No, perhaps you're not."

I said, "Will you paint me, then?"

He studied me for some time with his head on one side. Then he said, "You're a strange child, aren't you?"

I said, "I'm quite rich, you know; I can afford to pay well for it."

He said, "Why are you so anxious for me to paint you?"

I said, "Because I want it!"

He said, "Is that a reason?"

And I said, "Yes. I always get what I want."

He said then, "Oh, my poor child, how young you are!"

I said, "Will you paint me?"

He took me by the shoulders and turned me toward the light and looked me over. Then he stood away from me a little. I stood quite still, waiting.

He said, "I've sometimes wanted to paint a flight of impossibly colored Australian macaws alighting on St. Paul's Cathedral. If I painted you against a nice traditional bit of outdoor landscape I believe I'd get exactly the same result."

I said, "Then you will paint me?"

He said, "You're one of the loveliest, crudest, most flamboyant bits of exotic coloring I've ever seen. I'll paint you!"

I said, "Then that's settled."

HE WENT on, "But I'll warn you, Elsa Greer. If I do paint you, I shall probably make love to you."

I said, "I hope you will. . . ."

I said it quite steadily and quietly. I heard him catch his breath and I saw the look that came into his eyes.

You see, it was as sudden as all that.

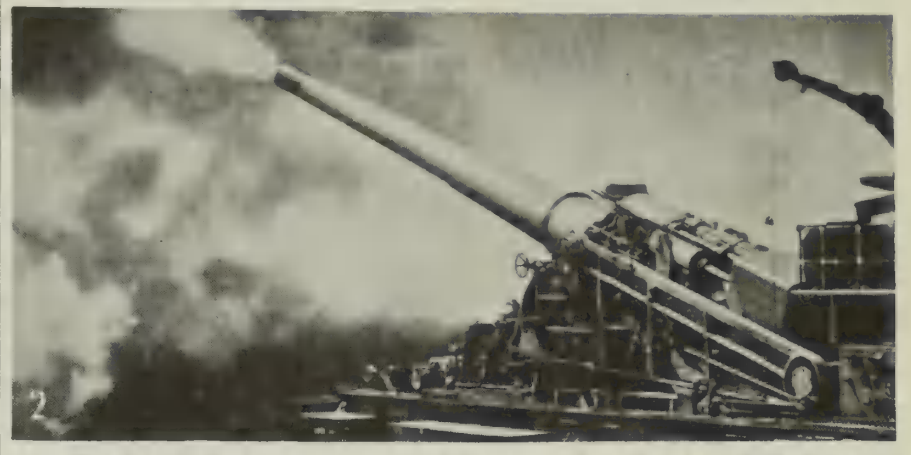
A day or two later we met again. He told me that he wanted me to come down to Devonshire—he'd got the very place there that he wanted for a background. He said, "I'm married, you know, and I'm very fond of my wife."

I said if he was fond of her she must be very nice.

He said she was extremely nice. "In fact," he said, "she's quite adorable—and I adore her. So put that in your pipe, young Elsa, and smoke it."

I told him that I quite understood.

He began the picture a week later. Caroline Crale welcomed me very pleasantly. She didn't like me much, but, after all, why should she? Amyas was very circumspect. He never said a word to me that his wife couldn't have overheard and I was polite and formal to him. Underneath, though, we both knew.



After ten days he told me I was to go back to London.

I said, "The picture isn't finished."

He said, "It's barely begun. The truth

of the matter is that I can't paint you, Elsa."

I said, "Why?"

He said, "You know well enough why, Elsa. And that's why you've got to clear out. I can't think about the painting—I can't think about anything but you."

I knew it would be no good my going back to London, but I said, "Very well, I'll go if you say so."

Amyas said, "Good girl."

So I went. I didn't write to him.

He held out for ten days and then he came. He was so thin and haggard and miserable that it shocked me.

He said, "I warned you, Elsa. Don't say I didn't warn you."

I said, "I've been waiting for you. I knew you'd come."

He gave a sort of groan and said, "There are things that are too strong for any man. I can't eat or sleep or rest for wanting you."

I said I knew that, and that it was the same with me and had been from the first moment I'd seen him.

We were made for each other and we'd found each other—and we both knew we had to be together always.

But something else happened, too. The unfinished picture began to haunt Amyas. He said to me, "Damned funny, I couldn't paint you before—you yourself got in the way of it. But I *want* to paint you, Elsa. I want to paint you so that that picture will be the finest thing I've ever done. I'm itching and aching now to get at my brushes and to see you sitting there on that hoary old chestnut of a battlement wall with the conventional blue sea and the decorous English trees—and you—you—sitting there like a discordant shriek of triumph."

He said, "And I've got to paint you that way! And I can't be fussed and bothered while I'm doing it. When the picture's finished I'll tell Caroline the truth and we'll get the whole messy business cleaned up."

I said, "Will Caroline make a fuss about divorcing you?"

He said he didn't think so. But you never knew with women.

I SAID I was sorry if she was going to be upset; but, after all, I said, these things did happen.

He said: "Very nice and reasonable, Elsa. But Caroline isn't reasonable, never has been reasonable, and certainly isn't going to feel reasonable. She loves me, you know."

I said I understood that, but if she loved him she'd put his happiness first, and, at any rate, she wouldn't want to keep him if he wanted to be free.

He said, "Life can't really be solved by admirable maxims out of modern literature. Nature's red in tooth and claw, remember."

I said, "Surely we are all civilized people nowadays!" and Amyas laughed. He said, "Civilized people my foot! Caroline would probably like to take a hatchet to you. She might do it, too."

I said, "Then don't tell her."

He said, "No. The break's got to come. You've got to belong to me properly, Elsa. Before all the world. Openly mine."

I said, "Suppose she won't divorce you?"

He said, "I'm not afraid of that."

I said, "What are you afraid of then?"

And he said slowly, "I don't know. . . ."

You see, he knew Caroline. While I didn't.

If I'd had any idea . . .

We went down again to Alderbury. Things were difficult this time. Caroline had got suspicious. I didn't like it; I didn't like it a bit. I've always hated deceit and concealment. I thought we ought to tell her. Amyas wouldn't hear of it.

The funny part of it was that he didn't really care at all. In spite of being fond of Caroline and not wanting to hurt her, he just didn't care about the honesty or dishonesty of it all. He was painting with a kind of frenzy, and nothing else mattered. I hadn't seen him in one of his working spells before. I realized now what a really great genius he was. It was natural for him to be so carried away that all the ordinary decencies didn't matter. But it was different for me. I was in a horrible position. Caroline resented me—and quite rightly. The only thing to put the position quite straight was to be honest and tell her the truth.

But all Amyas would say was that he wasn't going to be bothered with scenes and fusses until he'd finished the picture. I said there probably wouldn't be a scene. Caroline would have too much dignity and pride for that.

I said, "I want to be honest about it all. We've *got* to be honest!"

Amyas said, "To hell with honesty. I'm painting a picture!"

I did see his point of view, but he wouldn't see mine.

And in the end I broke down. Caroline had been talking of some plan she and Amyas were going to carry out next autumn. She talked about it quite confidently. And I suddenly felt it was too abominable what we were doing—letting her go on like this—and perhaps, too, I was angry, because she was really being very unpleasant to me in a clever sort of way that one couldn't take hold of.

And so I came out with the truth. In a way, I still think I was right. Though, of course, I wouldn't have done it if I'd had the faintest idea what was to come of it.

The clash came right away. Amyas was furious with me for telling Caroline, but he had to admit that what I had said was true.

I didn't understand Caroline at all. We all went over to Meredith Blake's to tea, and Caroline played up marvelously—talking and laughing. Like a fool, I thought she was taking it well. It was awkward, my not being able to leave the house, but Amyas would have gone up in smoke if I had. I thought perhaps Caroline would go. It would have made it much easier for us if she had.

I didn't see her take the coniine. I want to be honest, so I think that it's just possible that she may have taken it as she said she did—w suicide in her mind.

But I don't *really* thir she was one of those int and possessive women wi of anything that they th them. Amyas was her think she was quite prepa rather than to let him and finally, to another w she right away made u kill him. And I think t happening to discuss co just gave her the means t already made up her mi was a very bitter and reve —vindictive. Amyas k that she was dangerous.

The next morning sh showdown with Amyas. of it from outside on t was splendid—very pati He implored her to be r said he was very fond child, and always woul everything he could to a ture. Then he harden "But understand this: I' going to marry Elsa, an stop me. You and I alv leave each other free. happen."

Caroline said to him please. I've warned you

Her voice was very q was a queer note in it.

Amyas said, "What Caroline?"

She said, "You're mi *mean to let you go.* Soon go to that girl *I'll kill y*

JUST at that minute Phi along the terrace. I g to meet him. I didn't overhear.

Presently Amyas cam it was time to get on w We went down together He didn't say much. Just line was cutting up rou talk about it. He wan trate on what he was day, he said, would a picture.

He said, "And it'll be I've done, Elsa, even if blood and tears."

A little later I went up get a pull-over. There w blowing. When I cam Caroline was there. I s come down to make one

# FOR CHRISTMAS...AND A LIFETIME

THIS Christmas, give the best, the most treasured possession of all — the bright gift of knowledge.

Encyclopaedia Britannica, with its twenty-four handsomely bound volumes, prepared by the world's finest minds, is a gift that will bring pleasure to every member of your family. The most complete and authoritative reference set in the world, it will enrich the lives of those who own it for long years to come.

Encyclopaedia Britannica is easy to own; you will be particularly interested in the special purchase plan effective between now and Christmas. With it comes the Britannica Book of the Year, a graphic summary of the past year's achievements in every field of human endeavor. The Britannica Book of the Year keeps you constantly up to date on encyclopaedia material. If you wish, you may have the Britannica bookcase, specially built to hold the complete set.

As a Britannica owner you have immediate access to the Britannica Library Research Service, which answers all reasonable questions thoroughly and quickly.

This year, more than ever before, Encyclopaedia Britannica is a necessary part of the life of every thinking American family. Make this Christmas a time to remember for a lifetime.... The coupon below will bring you complete information, without obligation.

ONE FILLING LASTS ALL WINTER

IN THE INTEREST OF NATIONAL DEFENSE, conserve anti-freeze so there will be enough to go around. Don't buy or use more than you need. Stop leaks. Have your dealer tighten and clean the cooling system of your car, and use "Zerex" or "Zerone" in accordance with directions.

WON'T BOIL OUT!

▶ "Zerex" is the new Du Pont anti-freeze that is absolutely non-evaporating . . . gives you complete freedom from anti-freeze worries all winter long. Its exclusive anti-acid formula also protects metals in your car's cooling system from rust and corrosion. Be safe! Be satisfied! Get "Zerex" from your dealer today.

$2.65 a gal.

DU PONT "ZERONE," MADE BY THE MAKERS OF "ZEREX," IS AMERICA'S MOST POPULAR $1.00 ANTI-FREEZE

Amyas. Philip and Meredith Blake were there too.

It was then that Amyas said he was thirsty and wanted a drink. He said there was beer but it wasn't iced.

Caroline said she'd send him down some iced beer. She said it quite naturally, in an almost friendly tone. She was an actress, that woman. She must have known then what she meant to do.

She brought it down about ten minutes later. Amyas was painting. She poured it out and set the glass down beside him. Neither of us was watching her. Amyas was intent on what he was doing and I had to keep the pose.

Amyas drank it down the way he always drank beer—just pouring it down his throat in one draught. Then he made a face and said it tasted foul; but, at any rate, it was cold.

And even then, when he said that, no suspicion entered my head. I just laughed and said, "Liver."

When she'd seen him drink it Caroline went away.

It must have been about forty minutes later that Amyas complained of stiffness and pains. He said he thought he must have got a touch of muscular rheumatism. Amyas was always intolerant of any ailment, and he didn't like being fussed over. After saying that he turned it off with a light "Old age, I suppose. You've taken on a creaking old man, Elsa."

I PLAYED up to him. But I noticed that his legs moved stiffly and queerly and that he grimaced once or twice. I never dreamed that it wasn't rheumatism. Presently he drew the bench along and sat sprawled on that, occasionally stretching up to put a touch of paint here and there on the canvas. He used to do that sometimes when he was painting. Just sit staring at me and then at the canvas. Sometimes he'd do it for half an hour at a time. So I didn't think it specially queer.

We heard the bell go for lunch and he said he wasn't coming up. He'd stay where he was and he didn't want anything. That wasn't unusual either and it would be easier for him than facing Caroline at the table.

He was talking in rather a queer way—grunting out his words. But he sometimes did that when he was dissatisfied with the progress of the picture.

Meredith Blake came in to fetch me. He spoke to Amyas, but Amyas only grunted at him.

We went up to the house together and left him there. We left him there—to die alone. I'd never seen much illness, I didn't know much about it; I thought Amyas was just in a painter's mood. If I'd known—if I'd realized, perhaps a doctor could have saved him. . . . Oh, why didn't I— It's no good thinking of that now. I was a blind fool, a blind, stupid fool.

There isn't much more to tell.

Caroline and the governess went down there after lunch. Meredith followed them. Presently he came running up. He told us Amyas was dead.

Then I knew! Knew, I mean, that it was Caroline. I still didn't think of poison. I thought she'd gone down that minute and either shot or stabbed him.

I wanted to get at her—to kill her. . . .

How *could* she do it? How *could* she? He was so alive, so full of life and vigor. To put all that out—to make him limp and cold. Just so that I shouldn't have him.

Horrible woman! . . . Horrible, scornful, cruel, vindictive woman! . . . I hate her! I still hate her!

They didn't even hang her.

They ought to have hanged her. . . . Even hanging was too good for her. . . .

I hate her! . . . I hate her! . . . I hate her! . . .

ent back to London—at ll you, we were all very servants disliked her as much as I did. She was the kind of person who gives a lot of unnecessary trouble and forgets to say thank you.

Mr. Crale went away shortly afterward, and of course I knew that he had gone after the girl. I was very sorry for Mrs. Crale. She felt these things very keenly. I felt extremely bitter toward Mr. Crale. When a man has a charming, gracious, intelligent wife he has no business to treat her badly.

However, she and I both hoped the affair would soon be over. Not that we mentioned the subject to each other—we did not—but she knew quite well how I felt about it.

Unfortunately, after some weeks, the pair of them reappeared. It seemed the sittings were to be resumed.

Mr. Crale was now painting with absolute frenzy. He seemed less preoccupied with the girl than with his picture of her. Nevertheless, I realized that this was not the usual kind of thing we had gone through before. This girl had got her claws into him and she meant business. He was just like wax in her hands.

The thing came to a head on the day before he died—that is, on September 17th. Miss Greer's manner had been unbearably insolent the last few days. She was feeling sure of herself and she wanted to assert her importance. Mrs. Crale behaved like a true gentlewoman. She was icily polite but she showed the other clearly what she thought of her.

On this day, September 17th, as we were sitting in the drawing room after lunch, Miss Greer came out with an amazing remark as to how she was going to redecorate the room when she was living at Alderbury.

Naturally, Mrs. Crale couldn't let that pass. She challenged her and Miss Greer had the impudence to say, before us all, that she was going to marry Mr. Crale. She actually talked about marrying a married man—and she said it to his wife!

# Our New Army

IT'S about time we put in a word for the officers—especially the shavetails—who aren't as financially fortunate as most people, including privates, think. Take a second lieutenant, who gets $125 a month base pay, plus sixty cents a day for grub. First place, he spends about $1.25 daily—more than twice his allowance—for vittles, while the private gets his for nothing. Second, third and et cetera places, the shavetail has to get up $300 to $350 for his uniforms, spends $100 a year maintaining his wardrobe, and shells out four bucks a month for Officers Club dues and orderly fees. And although officers are quartered in separate rooms in Army barracks, the government provides only a cot, bedding and one chair. Unless he's satisfied with these meager furnishings the officer has to buy additional comfort out of his own pocket.

Our shavetail's daily life isn't so free and easy, either. He doesn't have to submit to nightly "bed check" but if he's wise he doesn't stay up all night just for the heck of it. If he wants to advance himself there's plenty of home study to get through, he has to plan the next day's activities for his men, and he has to rise and shine with them, preferably with a clear eye and an agile mind. A private's day ends at 4:30 P. M. (maneuvers excepted) but four afternoons a week, from 5 to 6 P. M., our shavetail attends officers' meetings. On top of that he serves on boards of investigation, courts-martial and other odds and ends. So there you are, men. You get sick of routine and tired of going broke a week before payday. The second looies do too.

# Our Ramparts are in the Sky

WHETHER you live in a large city or small, in the East or in the pursuing a trade or following a pursuit, your world has changed with the coming of the airplane.

Already seeing men, mail and merchandise moving not only by road and rail and water but also in the leisure of the universal sky.

Before the United States you have known that New York and Los Angeles required just overnight by air from one to the other. You have seen the Atlantic spanned in a single day in the history of many. You have seen whole streams of freight carried across the face of Europe and Africa . . . by air! The fixed points about which the World's affairs have eddied for so long have become suddenly mobile.

The change—so swift that not all have been able to heed it—comes to this:

Our ramparts, our frontiers, are in the sky. Here will our freedom be defended and made secure. And here will our commerce and our trade—the things we live by—become increasingly fluid, flexible, expansive.

This is your new world. It *starts from where you are* and reaches everywhere. You can be *swept along* with it, or you may choose to *advance* with it. But you are certain to *move* with it!

### e Spoils a Punt

period the Lions were y 5-to-0 lead by virtue field goal and a second- and nearly 48,000 paid riggs Stadium were bel- Lions to hold on for the that would have been deed. Midway in this Redskin Sammy Baugh's curate punts obediently ounds on the Lions' 12- ree plays gained nothing ouple of yards but with , one of the best kickers in pro ranks, ready to punt far into Redskin territory and comparative safety, the situation was not particularly precarious for the Lions. But Wee Willie popped up.

The ball was snapped perfectly and Huffman also handled it perfectly, took his two quick steps and swung his powerful right foot. At that moment the roof fell in on Huffman.

Wee Willie had, by the simple medium of charging straight ahead, blitzkrieg style, crashed his way through the tough Detroit line. Ace Gutowsky, ■ burly citizen whose duty on punts was to protect the kicker, saw Wilkin coming like a berserk bull and threw what ordinarily would have been ■ bone-crushing block straight at Wee Willie. Master Wilkin did not pause but threw up his hands and caught the full force of Gutowsky's 205 pounds as you would catch a medicine ball and with a mighty heave such as a two-handed shot putter would use, hurled Gutowsky *backward* through the air so that he came down *atop* Huffman with an impact that was terrifying to hear, just as Huffman's foot connected with the ball. Result: A blocked kick, untouched by Redskins but by a Detroit player who was an unwilling pawn of the tremendous strength that is Wee Willie's.

That was the pay-off. That the Redskins recovered the kick and, two plays later, scored from the 14-yard line is almost superfluous. They did just that and won the game, 7 to 5. But the touchdown was almost unnecessary. For when Wee Willie catapulted Gutowsky into Huffman, the play so stunned the Lions that right then and there they were a licked crew. Imagine a guy tossing 205 pounds a distance of eight or ten feet within a split second!

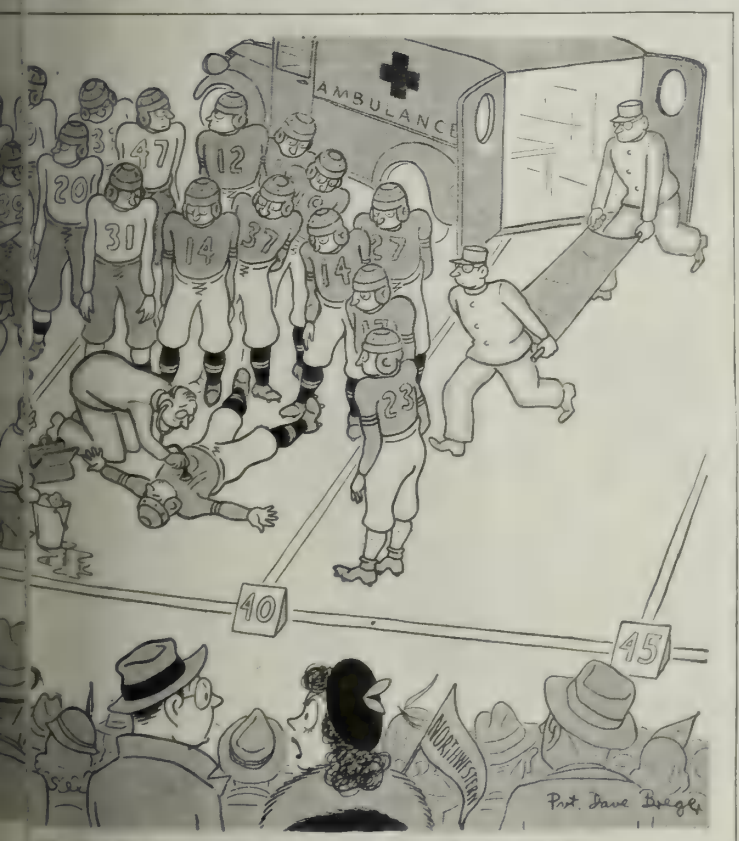
After the game, Coach Ray Flaherty, the old Gonzaga U. stand-by and former New York Giant end, grinned his delight at Wee Willie's feat. "I never saw anything like that before in my life," joyously exclaimed Flaherty, "and I have gone through twenty years of football. I still don't see how he did it and I still can hardly believe it, but doggonit, he did!"

Ask Flaherty about Wee Willie sometime. He will tell you Wee Willie is, unquestionably, just about the best tackle in the National Football League. "*But*," Flaherty will continue, "if Wee Willie concentrated and set his mind to it, he could become the *greatest* tackle the game of football ever saw. He has all the natural ability and a physique that is made to order for the job. And, instinctively, he is a great player who does the right thing at the right time without having to stop and think about it. It just comes natural, like Babe Ruth's habit of never throwing to the wrong base."

### Fighter Turns Footballer

Wilkin was Flaherty's personal discovery, which explains why Flaherty is so delighted with Wee Willie's development into one of the game's greatest tackles. If it hadn't been for the fact that Flaherty is a boxing fan, Wee Willie might have been fighting Joe Louis along about now for the heavyweight championship of the world instead of chasing ■ pigskin around the gridiron. For Flaherty first saw Wilkin in a boxing ring. And the way Flaherty finally got Wee Willie to put his signature on a Redskin contract also has its screwball side.

It happened in January, 1938. Only the month previously the Redskins had whipped the Chicago Bears, 28-21, for the National Football League championship and, as conquering heroes, were in the midst of a coast-to-coast exhibition jaunt hoping to pick up a few odd dollars. Games were booked in San Francisco, Los Angeles, Houston and Miami. Training at San Francisco before the trek started, the entire squad was invited to a boxing show.



When Wee Willie was introduced from the ring, Flaherty perked up as he watched the twenty-one-year-old giant strip from his bathrobe. He was further impressed with the easy grace with which the boxer moved about. He didn't see much of Wee Willie in action but what little he did see was impressive. Wee Willie merely stuck out his left, feinted with his right, shifted easily and let go a crashing one-two that laid out his foe colder than a hunk of dry ice in less than a minute!

Flaherty turned to Pat Frayne, one of the Pacific Coast's top sports writers and remarked, "Gee, if that guy could only play football, wouldn't he be a wow?"

Frayne smiled knowingly and replied, "Don't you know who he is? That's Wee Willie Wilkin, of St. Mary's. Slip Madigan (St. Mary's coach) says he is the greatest tackle he ever saw."

Flaherty almost broke a leg in getting down to the dressing room. Wee Willie had ■ manager who had signed him to a contract the year before. But the boy wasn't twenty-one when he signed and, of course, the paper was illegal. Nonetheless, Wee Willie is a square gent and wouldn't run out on his manager, refusing to join the Redskins, although he readily admitted he would rather play football than be a fighter.

All arguments failed and Flaherty went away empty-handed. That night after the fights, Flaherty and ■ small group of friends visited ■ small roadside café for ■ snack before retiring. There, as large as life and ■ good deal more jollicose, sat Wee Willie, the picture of a perfect host, lavishly entertaining ■

"Such a fuss over him! After all, it's only a game!"

Here's REAL Railroading . . . IN MINIATURE

Trains are twice as much fun when you operate them in a true-to-life setting like this. Costly? Far from it. With Skyline Model Buildings and Scenic Backgrounds you can transform your train set into a railroad empire in miniature—at surprisingly low cost. Here are authentic scale models of stations, interlocking towers, homes and a variety of other railroad and village buildings. These come in inexpensive kits—quick and easy to put together. And for the finishing touch you'll want our new Scenic Backgrounds. Four realistic scenes—village, farm, mountain and city—in color, each 2 by 6 feet. See Skyline at your favorite hardware or department store. Send 3c stamp for illustrated folder.

SKYLINE SCENERY 713 Spring Garden St. Dept. C1, Phila., Pa.

party of gaping admirers. Flaherty once again tried to talk Wee Willie into a football career, but no soap. Eventually came time to pay the check and Wee Willie glanced at the total and dejectedly drew eight crumpled one-dollar bills from his pants pocket. Needless to say, he was quite a bit short. The eight dollars represented his entire share of the $25 purse after his manager had deducted his "cut" and training expenses.

Flaherty seized the opportunity, graciously paid the check and started pouring words of wisdom into Wee Willie's attentive ear, telling him of the advantages of playing pro football, where there is no such thing as a manager's cut and training expenses. Wee Willie was impressed but still refused to abandon his ring career, although he again admitted the soundness of Flaherty's argument.

But the next day, however, Flaherty visited the boy's mother and, between the two, finally convinced the young giant that he would be better off on a gridiron than in a prize-fighting ring. The convincer was the fact that Mrs. Wilkin never wanted Wee Willie to become a fighter.

Three days later, just as the train bearing the Redskins to Los Angeles was pulling out of the station, Wee Willie reported, wearing a pair of moccasins, a pair of slacks and a sports shirt, open at the throat. He carried a toothbrush, no paste, and a razor holding a single blade. He was thus "packed" and ready for his coast-to-coast and return tour!

The Redskins have since found out quite a bit about Wee Willie. They never give the guy his entire pay check, but deduct such items as room, board, laundry, clothing bill and accessories, which is paid by the club via charge accounts. Then they give Wee Willie an allowance and send the remainder to his mother, who banks it for him. Mrs. Wilkin thus is business manager for her son.

During the off season he is a miner. When the club sent him a questionnaire asking what he mines and where, he filled in the blank thusly: "Anything and Anywhere."

### He Even Opens Train Windows

Wee Willie is really a holy terror. On a train he unconsciously demonstrated his almost unbelievable strength to the club for the first time. The cooling system went haywire and one by one the Redskins pulled and tugged trying, without luck, to open a window for a breath of fresh air. Just about the time when all seemed lost, Wee Willie strolled through the car, looking for the diner, where he also does good work. "Hey, Rookie," Captain Turk Edwards, whom Wee Willie adores in hero worship, barked at the startled lad, "come over here and raise this window." They settled back to watch the fun.

Wee Willie, strictly on his mettle in front of the whole team, braced himself, got a firm grip on the lifts, hunched his mighty shoulders and gave a gigantic heave. With a rending, ripping, tearing sound that startled everyone, the window shot up to its limit and nearly slammed its way through the roof of the car. Wee Willie calmly stepped back and renewed his search for the diner, unaware that he had done anything extraordinary.

The Redskins have also learned never to send Wee Willie the cash for transportation to and from training camp. Now they send the actual ticket, usually for busses, which method of transportation he honestly prefers. Once he was four days late in reporting to training camp, much to the consternation of George Marshall and Coach Flaherty. It developed that he couldn't keep the bus schedules straight and insisted on exploring each stopover town, missing connections frequently. As one bus looked like another to him he usually got on the first one that came along. Twice he triumphantly returned to San Francisco on wrong busses and had to start out all over again. When the Washington sports writers heard of this, they hopped on the episodes with great glee, calling Wee Willie the "Corrigan of the Bus Lines." Wee Willie paid not the slightest bit of attention to the stories and went into training just as if nothing had happened.

But the guy really can play football. And loves it.

In 1939 when the Redskins met the New York Giants for the Eastern Division championship and the right to play the Green Bay Packers for the title, Wee Willie duplicated his famous stunt of tossing the protector into the punter when he picked up Hank Soar and sailed him into the arms of the Giant punter, causing another blocked kick and setting up the Redskin touchdown which was scored on the very next play. That was the year the Giants beat the Redskins 9-7 after a near riot. So you can see how important that play was to the Redskins at the time.

Last year when the Chicago Bears whipped, or rather slaughtered, the Redskins by the prohibitive and unheard of score of 73-0, Wee Willie played virtually the entire game. When he left the field with only a few minutes of play remaining, he received the only ovation accorded a Redskin player that day by the 36,000 fanatics who jammed Griffith Stadium in Washington. The roar was thunderous and heart. Because every or 000 knew that if Wee V been in there, the Bea won by 173 to 0, or may instead of a mere 73 to good he was that day!

### A Tribute to Gr ness

As he left the field, one Bears walked over and o Wee Willie raised a w grinned. Two plays b tackled that same Bear s the Chicagoan had sever out! Yet the Bear coul recognize the greatness sensational play for su cause.

Is it any wonder, then skins will put up with V his antics six days in th have him around on the day afternoons?

## BENEATH ITS ARMORED HIDE... A HINT TO CAR OWNERS

IF these rolling forts are to do their job, their striking power must be matched by dependability.

To help them endure the grueling service that may lie ahead, many of the new tanks are equipped with Exide Batteries. If Exides can be depended upon for this and other vital services, surely you can rely on an Exide to start your car.

Remember that the battery you buy today must last you longer and give unfailing power. Batteries look pretty much alike. Avoid guesswork; see your Exide dealer. He is scientifically equipped to tell you the truth about your present battery. Is it worn out? Is it about to fail? Should it be re-charged? Or do you need a new Exide Hycap, with its greater cranking power and longer life?

Get this report from your Exide Dealer. It is free and without obligation, part of a vital effort to "keep America rolling."

him, too. Then the merry-go-round and the columnists start again and pretty soon someone puts him in a picture. That's what he wants, Pat. A free ride until someone says, 'How about giving Jeff Tyler a chance?' "

"How about it?" said Pat. "Who got you started, baby?"

She made it sound as simple as that. With Pat it was only the past that counted. It didn't matter to Pat that you had finally been able to make yourself forget Jeff and appreciate Charles and all the solid, lasting things he stood for. Pat never thought about the future. She was as loyal as she was plain and she went entirely by the record and nothing else.

"I—I can't help it, Pat," she said shakily. "I took my beating and I'm through. Nobody has to do it twice!" Her eyes were blue wounds in an ashen face. Jeff was responsible for everything good or bad that had ever happened to her. If it hadn't been for Jeff there wouldn't have been a screen career nor this house in the hills. If it hadn't been for Jeff and knowing that he was throwing her aside, she wouldn't have needed those things!

HE HAD been a famous musical-comedy star with five big shows to his legend when she met him. She had made the chorus call on his new show and Pat had sort of looked out for her during those four months when she saw him every night but never talked to him. He had been much younger than she had expected, with dark curly hair and smiling eyes, and it had been hard to believe he was Broadway's most famous man-with-the-ladies.

Julie had fallen in love with him, simply and completely, believing that it was for keeps. Believing that she was the one he would always want because she understood him so well and loved him so much. But he hadn't cared about that. Instead, he had tried to start her on a career of her own. Teaching her how to sell a song and her personality, putting just enough heart into it that it would touch people without embarrassing them. When he was finally able to talk the producer into giving her some business he had been as pleased as if it were his own first big chance on the stem.

She had realized then that he was so immersed in his own career that he thought everyone else was similarly driven. He would neither have suspected nor understood her being content at just being with him; wouldn't have believed that she had not been seeking a career when she answered that chorus call but only a way of earning a living. A chance to leave Tenth Avenue and everything on it far behind her.

His next show had slipped a little, as if he were growing stale, and he had come back in the spring with another and it too was off at the box office. They hadn't been turkeys but they hadn't been good, either. She herself had done all right in those shows and her freshness had attracted the talent scouts and Jeff began talking about her going out to Hollywood. The screen wasn't for him, he said, but that was no reason she should pass up a chance to cash in the easy way.

*It's wonderful,* he said. *You make faces at a camera and get a good tan and they pay you money for it. They see you in Oshkosh and Honolulu on the same night and yet you never have to make a sleeper jump. They roll out the rugs and "yes" you and take up your option every night at six o'clock.*

to do another show?"

"Soon, I mean?"

Pat, as if seeking her led and, after a luxuri- o her feet. "See you kids later," she said. "I want to make myself human."

Julie was still waiting and when Jeff looked at her she saw the indecision in his eyes, as if he didn't know just how to start. Jeff Tyler, who was always so smooth and so sure of himself.

"I'll be catching another show," he said. "Not right away though." A grin tugged at his lips. "I've got some other angles."

Like me, she thought. The première and a free ride until you light on your feet. There was no bitterness in that knowledge. He had a right to expect her to repay those old debts. But at least she could choose the best way to do it. It was still her life.

Her hands were steady as she put the cup and saucer on the coffee table. She raised her eyes and somehow she even smiled.

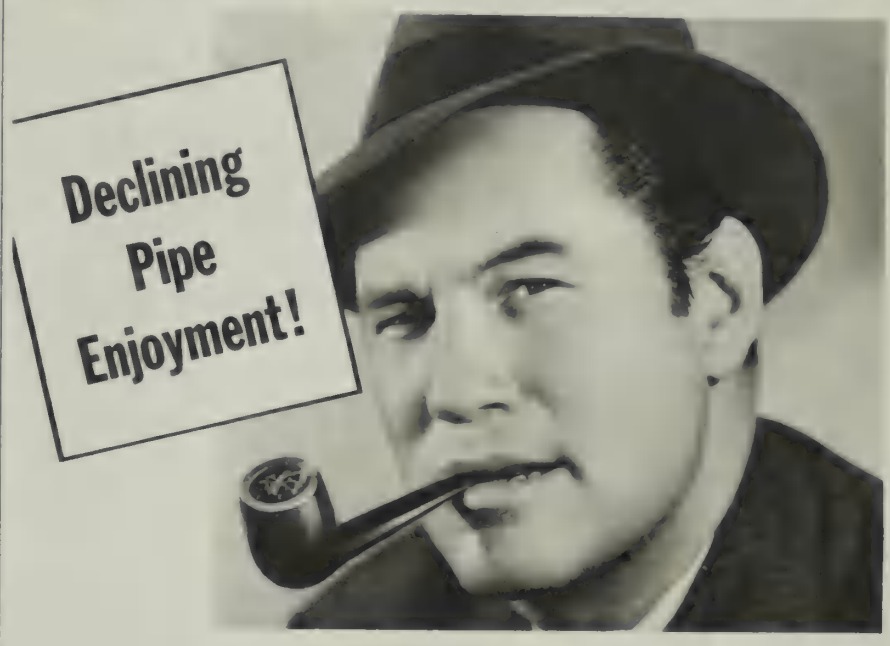
"I wanted to tell you about the première, Jeff."

"Première?"

He was going to make her do it the hard way. She realized that and it stiffened her will, bringing the color to her cheeks and relieving her of any guilt. So, as if he didn't already know quite as much about it as she did, she told him the details of the opening at Carthay Circle; about the radio broadcasts and the parties afterward. Telling him as if they both didn't know that it had been important enough to bring him all the way out to the coast.

But when she had finished he did something she wasn't prepared for. He played straight. He looked out the window for a long time and when his gaze did come back to her his eyes were those of a stranger.

"I'm sorry," he said slowly. "I wasn't trying to crash your party, Julie. I didn't know about the première. I—I just happened to have a few days and I wanted to see you."



Her will, only a moment ago so firm

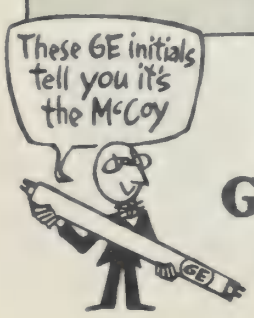
**1 Can I have fluorescent lighting planned and engineered for my particular business?**

Yes, if you see your G-E lamp supplier! He has behind him all the engineering resources of General Electric. He can call in local engineers averaging sixteen years' experience with General Electric, to make sure you get exactly the installation *you* want. Your electric company can also give you good advice.

**2 Am I getting a wide enough choice of fixtures?**

Yes, if you ask General Electric. We make no fixtures for MAZDA F (Fluorescent) lamps, but cooperate with experienced fixture manufacturers to assure fluorescent units geared to your requirements. More than 125 tested, certified, guaranteed fixtures are now available. Your G-E lamp distributor carries many of them. See his line!

**3 Will my fixtures start quickly, work efficiently, and stand up?**



Yes, if you get tested, certified, guaranteed fixtures such as RLM or Fleur-O-Lier. Fleur-O-Lier fixtures are tested and certified by Electrical Testing Laboratories to meet MAZDA lamp manufacturers' specifications. You get fixtures, ballasts, and starters that assure high power factor. You get a written Fleur-O-Lier manufacturer's guarantee.

**4 Am I getting lamps that give maximum light for current consumed?**

Yes, if you specify G-E MAZDA F lamps—fluorescent lamps of the same high quality that has made G-E MAZDA incandescent lamps a standard of performance. Today's G-E MAZDA F lamps give up to 40% more light—*yet cost as much as 52% less*—than when MAZDA Research produced its first practical fluorescent lamp a few years ago.

THESE questions and answers are the key to a new force in American business . . . a new, ultra-efficient light that when properly installed can step up sales, increase production, and improve morale almost overnight! Before you make this important investment, see your G-E lamp distributor.

**G-E MAZDA LAMPS**

**GENERAL ELECTRIC**

and sure, failed her then. To find he had so lost his pride that he would lie about the whole thing, pretending he had not even known about the picture, left her defenseless. She had never thought Jeff would need anything that badly. Jeff, who had always been so proud and gay, able to laugh even when the going wasn't to his liking. Now to find him so hopeless and beaten, seeking that pitiful handout of the profession, a last chance, banished everything else for the moment. For the first time in his life Jeff really needed her.

Sam would have been proud of her at that moment, and Pat, too, but for different reasons. For Julie smiled, erasing the years and their hurts, and taking them back to the time when she was just a chorus girl and not too good a one at that, and lucky to have Jeff Tyler notice her.

"You don't know how much I wanted you to be here, Jeff," she said gently. "It wouldn't have seemed like a real christening unless you were taking me to my first première. That isn't asking too much, is it?"

Some of the strain left his features but it still wasn't Jeff. He could smile like him, even look like him, but the eyes had lost their careless gaiety and were almost too quiet.

"If you really want me to go," he said, "why, you can count me in, Julie. But this is a big night for you. I wouldn't want to be spoiling your fun."

She laughed, and if it was unsteady he would still think it was just her excitement at seeing him again. "As if you could spoil it!" she said, wishing she could make herself believe that. "I do have a date, Jeff, but I'm sure he won't mind your coming along. Not when he knows how much I want you to be there."

WHENEVER she was to recall the première it was not the roped-off crowds and the lights, nor even the well-wishers clapping Sam on the back, telling him that he had done it again and assuring her that she was terrific, that she was to remember. It was not Charles' kindness, pretending that he had wanted Jeff along, as if it was as much his idea as hers. It wasn't anything like that. It was Jeff's dinner jacket. That, more than fame, more than Charles, reminded her how much her world had changed. When she thought of that even the whispers of the people remembering she had once been Jeff's girl faded, losing themselves in all the other little whispers.

Her eyes followed her image on the screen but her heart, less disciplined, could only remember taking Jeff to the studio and getting the wardrobe to give him a dinner jacket for the première. They had laughed it off, making a gag of it, as if Jeff Tyler being minus a dinner jacket was the funniest thing in the world. It was so funny that when she got home she had cried.

*We have to put up a front,* said Jeff. *We have to give it a production. Jeff Tyler and his one and only discovery. Can you imagine Columbus discovering America without a black tie to his name?*

He had liked Charles, too. Charles had been delayed at the door and while they waited for him Jeff had given a funny, crooked little grin. "He's the white folks," he said. "The boy who brings it home every Saturday night. He's a nice guy, Julie."

"He is," she said soberly. When she had told him about Jeff being in town it was Charles who had suggested his accompanying them before she could even mention it herself. She had been fumbling over the phone, trying to tell him just enough, and he had understood or thought he did. He was only sorry that they could the house later. But his parents' party the could do about that.

"That won't matt said. "I—I'm sure plans."

So there she was, s old life and her new become a star and only of the men be so blond and quiet a dark and smaller, laughter and fame stranded by it. Onc glanced at Charles went back to the Julie's image and try warmth and hopes trusted to a man who still didn't speak the

PROFESSIONAL APPLICATIONS AT YOUR BARBER

to take care of that number-one chance? Pat said almost the same thing and yet when she told them that she had a chance for happiness and was going to take it while she could, they would both think she had sold out. That she was playing it safe, turning her back on old loyalties, wanting happiness more than respect.

*If I do it's my own life. People are always telling you that and yet they don't like it when you take their advice. But when you've been hurt too much and want too much, their advice doesn't help anyhow. You have to take care of yourself, Julie. Nobody else will.*

PAT was finishing her breakfast when she came into the dining room. Pat looked up and then she went back to her copy of the Hollywood Reporter as if it were more important than anything Julie might have to say. She couldn't know what Julie had decided and yet it was as if she had already guessed and passed judgment.

Then Julie knew what was wrong. A dinner jacket had been placed on the chair where Pat always piled everything that she was taking to the studio, not trusting her own memory.

"Jeff's been here! Why didn't you wake me?"

Pat's gaze was cool and level. "You weren't home," she said. "He was here last night. After you dropped him at Chasen's."

It could have been an accusation. No matter what she had said it would have sounded like an accusation.

"But—but he didn't need to bring it back so soon. I'm going to see him today."

"Are you?" said Pat. "You better make it fast then. He's leaving this afternoon."

"This afternoon?" There was no reason for her to be so white and shaken. Everything was working out just right and yet she was filled with terror—as if everyone were pushing her into the very destiny she had been seeking. "But I was going to speak to Sam! I was going to make him give Jeff a chance! That's all he needs. Just a chance."

"Maybe he doesn't want a chance."

Julie could feel the color slipping from her face. Her terror was in her eyes now and there was bewilderment, too. She had to pay Jeff back somehow. She could never live with herself if she didn't. It shouldn't matter that much to her and yet it did.

"He doesn't want a chance?" she said. "Jeff? Why not?"

Pat's eyes softened. "Why don't you ask him, baby?"

HE WAS living in a hotel at the wrong end of Hollywood Boulevard. A small hotel with a tarnished lobby and a fat, soiled clerk behind the desk. The clerk peered at her through watery eyes when she asked Jeff's number and after rubbing a reflective hand across the stubble of his chin, shuffled over to the register. "Two-o-six," he mumbled, seating himself at the switchboard. Before he could put through the call Julie was running up the stairs.

She didn't want to talk to him over the phone, didn't want a painful scene in that shabby lobby. Some blind compulsion had driven her there, knowing she had to have it over once and for all, tearing the last pages of the past from her memory. There had been panic in her coming, too. If someone like Jeff could quit cold, putting his last dreams of fame and happiness behind him, then nothing made any sense, nothing was worth fighting for.

She was knocking, knocking, and Jeff opened the door. Whatever she had meant to say, all the things she had meant to ask him, were forgotten. She was too numb at the sudden sight of him to find words or to need them. Jeff could read her emotions so well that he colored, looking more embarrassed than proud, more like some guilty schoolboy than a soldier.

"Jeff!" she whispered. Jeff, standing there in khaki. Jeff in a service uniform, a private's stripe on his sleeve, his black tie tucked into his shirt between the first and second buttons. Trying to smile and only looking more uncomfortable. Jeff, who had always had top billing and ties from Bonder's. "How long have you been in, Jeff?"

"Six months." He managed a grin. "I had to fudge a little when I enlisted but no one asked any questions. I used my own name. You didn't know it was Murray, did you?"

Of course she had, but there was no answering smile. "You didn't tell me," she said. "You weren't going to tell me, were you?"

"Well," he said, and all the laughter had gone out of his eyes, "when I saw how things were . . ."

It wasn't a grandstand play. He had seen what was ahead of her and he had played it her way.

"Oh, Jeff! Why did you do it? You wouldn't have been drafted!"

He looked out the window, gazing at the wall of the neighboring apartment house as if he were hoping to find some answer to her question written on that bleak wall. It was a question he had often asked himself and even after growing accustomed to the uniform and sort of proud of it, he couldn't come up with any good flag-waving answer.

"I just did," he said. "There's a lot of trouble in the world and we don't want it coming over here, Julie. I'm no hero. I wasn't doing anything much and I was tired of it. So, as long as we seemed to need all the guys we could get, I thought I might as well be one of them."

Was it Jeff she had been thinking of only yesterday when she had been so glad Charles had managed to be deferred? It couldn't have been Jeff and yet she had said that there were so many others that they didn't really need Charles and had no right to take him away from his career. But what about Jeff? He had One he was proud meant more to him

"But what about What about all your

## Fur Miracle

Continued from page 16

come snow, come high water. Once the new finish grabs hold of the hair, it settles there as a permanent part. Steam ironing freshens the hair after two season's wear; there are few seams to rip, and no grain to crack.

The woolly lamb takes a hard beating, though, before becoming a coat. Revolving knives shave the fleece down to about a half inch. Then the pelt goes into the tanning and dyeing vats, where preservatives, oils, and chemicals give it pliability, strength, and new texture. Huge driers, holding dozens of the seven-square-foot skins, finish off the processing. No hospital thermometer is watched more anxiously than these drier indicators, for moisture, heat, and ventilation in ever so slightly unbalanced proportions can ruin the whole lot. Finished skins can be run up into a coat in two days—a vast saving over the twenty days it takes to match and fit and seam a Persian.

All merino pelts are not potential fur coats. Far from it. Out of a 1,000-pound bale, the mouton processor sometimes gets thirty soft, thick-haired, unblemished skins; sometimes thirty-five. The other one hundred and sixty-odd skins in the bale make blackboard erasers, mittens, ear muffs, bedroom slippers, etc.

Collegians looked skeptically at the first moutons that appeared four years ago. Too heavy, too bulky, they said. This year's softer, closer-shaved skins have changed their minds. A full two thirds of the moutons in shops are campus swaggers with plaid wool lining and leather frogs.

The flat moire-rippled broadtail coming up in large bales from the Argentine by each ship is not a new fur. Stores called the coats they made of it, ten and twelve years ago, American broadtail. Newly improved processing makes it fur news again this year.

When the pelts arrive in this country they are neither broadtail nor fur. They are the silky long-haired skins of Lincoln sheep—the largest, most massive of British breeds, now being raised in gigantic flocks in Argentina.

Under the wool nap of these sturdy black-faced, white-bodied Lincolns in Argentina is a natural flat curl close to the skin. The curl spreads and loses its character as the lamb grows in size, but in week-old lambs it is easily mistaken for Russian broadtail.

Some unknown quality in the South American climate or diet induces this coveted curl, since Lincolns in England haven't it. Many furriers rate this processed broadtail as superior now to the Russian version. Being coarser, it wears longer. It is one third the price.

New dyes, new chemical lusters, and new finishing turns out a pelt today as supple as a kid glove. Processing is a lengthy, intricate series of dressing operations, of shaving, dyeing, and shaving again, but *never* curling. If the characteristic broadtail pattern is not there naturally, the pelt never gets to first vat. In fact, it doesn't even get to this country. All through the spring and early summer lamb buyers from the big American fur houses went to Buenos Aires to make painstaking skin-by-skin selections to be sure of this curl.

Processed broadtail is graded by the size of the skin and character of the curl. Supers, with small-ridged curls and moire ripple, are the most expensive. They're taken from drop lambs one day to a week old. Twenty-five or thirty supers make a long coat. In white, kaffa, blue-gray, and black, prices start at $150 and go to $500. Deanna Durbin has a full-length white one. Luise Rainer has another; likewise Norma Shearer.

A medium-sized skin from a lamb a month or two months old is called a plushy. Its curl is broader, more open, something like karakul. Twelve to fifteen of these make a $125 coat.

The jumbo pelts come from full-grown sheep, and six are enough for a long coat. The curl has less character, less moire rippling, but its luster, softness and serviceability are appealing. So is its price of $75.

What was that? A "Baa"? Could it be the woolly lamb making snoots at fur bearers?

## Wing Talk

Continued from page 6

discourage careless and reckless disregard for the lives and safety of others by taking such violators out of the air. In one recent drive they lifted 13 licenses, eight from students and five from private pilots.

Too well do the inspectors know what they are up against, for in their own early flying careers they had the urge at least once to let the folks on the ground see what the old crate could do.

One of the Army's greatest airmen today, a seasoned pilot of 23 years in the cockpit and holder of the D.F.C., recalls only too vividly that, when he first got his wings his star show-off act was to roll his wheels along the slanting roofs of the line of hangars. The enlisted men cheered wildly. One day he hit a hangar. When he got out of the hospital two months later he resolved to become a good pilot. And he did.

LOST to general recollection is the fact that several hundred Americans kept flying alive during its early years in this country before an apathetic public that labeled them scatterbrained adventurers and outright fools.

For 13 years now, they have been united in one of the world's most exclusive organizations, the Early Birds. Only those who can submit positive proof that they soloed an airplane, glider or balloon before December 17, 1916, are eligible for membership. There are now 336 members.

Newly elected president of the Early Birds is Frank T. Coffyn of New York, who was taught to fly by Orville Wright in 1910 and was one of a four-man team organized to do exhibition flying for the first Wright Company. He was the only one to fulfill his two-year contract, the others all losing their lives in crashes. Other officers, names linked forever with the development of aviation, are Igor Sikorsky, first vice-president; Stanley Vaughan, second vice-president; Mrs. G. Floyd Smith, third vice-president; Ernest Jones, secretary and co-founder of the association with Mr. Coffyn and P. E. B. Morriss, a trustee, and Augustus Post, treasurer.

The insignia of the organization is an owl, formed by the two letters EB, with extended wings. Significant it is, for the owl says little, is of course very wise and, being up all night, is the earliest of all birds.

F. R. N.

# City of Courage

Continued from page 13

encouragement to the team of their choice; they groaned when Alexis or Ivan missed what seemed certain goals. Airplanes swooped lazily overhead on the alert against possible daylight raiders, for it was an overcast day, the kind the Nazis like for dive-bombing.

The football was not quite up to that displayed by the leading English professional teams, but it was spirited and hard-fought. Now and then Nikolai, star forward of the Dynamo team, was very wide with his poorly aimed shots at the goal. I'd been told to watch him, for Nikolai is considered to be the Red Grange, the Big Bertha, of Russian football. The reason for his poor timing was soon forthcoming.

"No wonder he is off today," a man from the British embassy said. "He only got back from the front yesterday. They gave him leave just for this game."

Nearly all of the players were in one service or another. Those who were not army or air-force men worked in factories and had been given the Sunday afternoon off to play. They made 15,000 citizens of Moscow (and this temporary citizen) forget the war for the afternoon, which made their temporary holiday well worth while.

### They're Our Kind of People

Then this afternoon there was the circus. The news had just been announced that Orel had fallen. The press room at the Narkomindel (the foreign office) was in a turmoil. My colleagues were grave and discouraged. It is impossible to live long here without coming to love the people of Russia. They are decent, home-loving people, and you could take a slice of them and drop them in our Midwest and within a few weeks you wouldn't be able to distinguish them from our own decent, law-abiding citizens. I haven't been in Russia long but I've been here long enough to learn that these are our kind of people. The other American and British correspondents feel as I do.

I was gloomy in the press room at the Narkomindel, where we bring our stories to be censored and where, while waiting for the process of censorship, we share gossip.

I went to the circus. It was a good circus, but then all circuses are good. Instead of three rings there was only one. There was the same provocative smell of sawdust and the exciting, vibrant atmosphere of the circus as we know it. The arena was crowded and the clowns were even funnier than our clowns. The bareback riders were just as good and the trapeze artists were just as thrilling and the ringmaster just as stentorian in his introduction to this death-defying act or that.

There was a magician who made everyone but the audience disappear and the shrieks of laughter which rang out from the crowded arena were the same shrieks one would hear in Stamford, Connecticut, or Orando, Florida, or Portland, Oregon, when the circus comes to town. There wasn't an empty seat in the huge stadium. For this afternoon laughter is a defensive weapon the Germans have never learned to combat. Hitler cannot kill laughter with bombs.

"And now," the urbane ringmaster said, "we come to the finale. I know you have enjoyed this performance, people of Moscow. I hear your laughter. That is good. Moscow does not wear a frown upon her face despite her trouble. Moscow laughs."

I am no nearer to being a Communist than are you who read this, but I defy anyone to remain objective and impersonal when he is with the people of this city. No matter what your political convictions, these are people who only want to go their own way; who only want to solve their own problems, and today they find the greatest, most horrible battle of the ages being fought. I find it impossible to be neutral in this struggle.

So far food rationing here in Moscow is not severe. One can get as good a meal in a factory kitchen today as one can get in a London West End hotel. There is no clothing rationing but most of the mills are busy making uniforms and the shops have not a great variety of goods in them. But the people of Moscow are not clothes-conscious. As long as clothes are warm they need serve no such frivolous subsidiary purpose as to be ornamental. One may still buy furs, and there are tailors who will make you fur coats or wraps at London and New York prices.

Except for the uniforms one sees on the streets during the day and some queues in front of food shops, one might forget that the most terrible war in history is being fought less than an hour's flying time away. Occasionally muddy uniforms and bandaged heads remind one that Moscow is at war. It is at night that the war comes to Moscow. Black-out is at six o'clock now. It is a more severe black-out than we know in England. The busses and tramcars keep going and their lights and the occasional flashes from their overhead charged electric wires, the headlights from automobile and the street lights make one accustomed to the London black-out a bit dubious as to what effect the Moscow black-out might have. But when the sirens scream even these lights fade. The busses and trams crawl back into their barns. Automobile headlights are extinguished. Traffic and street lighting die and Moscow prepares a black face to welcome her uninvited visitors. Once the raid commences one does not see a single light in the center of the city.

Although to date Moscow has not had one raid which would compare in severity to any one of fifty London raids, this city takes raids far more seriously and perhaps more intelligently than London does. When the sirens sound, the two best hotels in Moscow and the restaurants immediately stop serving food. Guests are orc[illegible] go into shelters. Th[illegible] that foolish courage [illegible] modity; people are [illegible] dangerous contempt [illegible] Soviet rulers are t[illegible] If citizens wish to ge[illegible] by their own foolishn[illegible] But the more people [illegible] the more work for ai[illegible] firemen. Men of the regiment hail from New York, Pennsylvania, Maryland, Ohio, Indiana, Georgia, Alabama and twenty other states from Maine to Texas, so it's a national problem. The only rule is, keep it simple.

### KENTUCKY

1ST ARMORED DIV.

FORT KNOX. It took the First Armored Division some time to decide on a tag, but now it's all settled: The oldest armored force division will henceforth be known as Old Ironsides. Hundreds of nicknames were double-checked by Maj. Gen. Bruce Magruder before the winner hit the spot. Among the runners-up were Hurricane, Cobra, Armadillo and Greased Lightning, which many a Collier's reader will recognize as his suggestion.

On the other hand, the newly activated Fifth Armored, also at Knox, wasted no time in adopting Victory as its sobriquet. The division's Pvt. Sidney Huttner thought that V for Fifth and Victory were pretty logical and Brig. Gen. Jack W. Heard, in charge of the division's organization, agreed with him. Pvt. Huttner got a week's furlough.

### GEORGIA

QUARTERMASTER DEPOT, Atlanta. While trying to equip a photographic studio, the public-relations officer here asked the supply officer for a daily fifty pounds of ice to cool chemicals. "I don't think I can raise the money," said the supply officer. "What?" yelled the P.R.O. "You buy thousands of pounds of ice every week for the water coolers around here. You mean to say you can't tack on another fifteen cents a day?" "That," said the supply officer, "is subsistence ice and it comes out of the subsistence fund. What you're talking about sounds suspiciously like industrial ice, or maybe chemical ice, and that's something else." The P.R.O. is still wondering what becomes of all the billions appropriated for defense needs.

### ALABAMA

GUNTER FIELD, Montgomery. About ten weeks from now class SE-42-A will graduate. It contains 183 men, 153 of which are Englishmen, who will be the first English cadets to graduate from an American training school. In uniform and temperament they're different from Americans but their faces are about the same. They weren't selected, as our men were, by physical standards and the amount of college work they had finished. They toss out any would-be American flier if he has a couple of bridges in his mouth, but the Englishmen with false teeth seem to learn just as fast. Most of them were picked on merit from the ranks and they are serious about, and grateful for, their twenty-five weeks of training. It's much longer than they'd have got at home and they think it'll pay big dividends. Some of the boys were at Dunkirk and all have seen some action, bombing and fighting. They think about it as a job to do and are in a hurry to get back home. That's their only objection to the long training period.

The Britishers like the Southern weather and American people. They think our girls really thought of some-

Night Photos Prove Power of Coleman FLOODLIGHT LANTERN!

Amazing Lantern Floodlights 100 Ft. Area —You Can Read A Newspaper At 50 Ft.!

*Sportsmen, Night Workers, Farmers!* This brilliant lantern turns "night into day" in a 100 ft. circle! So bright you can read a newspaper at 50 ft.! Instant-lighting! Wind-proof! Storm-proof! Safety-sealed fuel can't leak or spill. 30 hours of brilliant light for a dime. Choice of five powerful models. See them on display at your Coleman dealer *now!*

ONE COLEMAN FLOODLIGHT LANTERN!

Brilliantly-lighted outdoor photo (unretouched) taken on a pitch black night by the light from *one* Coleman Floodlight Lantern, single-mantle stock model! (C. P. A. Certified.)

TWENTY ORDINARY LANTERNS!

It took *twenty* ordinary lanterns to produce this same dimly lighted scene under identical photographic conditions and timing!.. Proof of Coleman's power! (C. P. A. Certified.)

Give Yourself the Chance to Grow

• READ HOW 15 MINUTES A DAY WILL BRING YOU THROUGH KNOWLEDGE YOUR GOAL OF LIFE'S RICH REWARDS

A FINE position, a beautiful home, motor cars, travel—sweet are the fruits of success. But how can I get them?—you eagerly ask. *By attaining, day by day, the knowledge that will unleash the latent power within you and bring you success without years of waiting.*

The *universal* knowledge that success demands—the ability to talk intelligently and confidently on a thousand and one different subjects that interest the alert, active people you meet.

This ability can only come from one source. An intimate acquaintance with the greatest minds of all ages—men who have made the world's history, written its wit and wisdom, phrased its philosophy. Knowing their thoughts, your own thoughts become freshened, inspired. You have greater power to impress and influence others. Acquire all this easily by following the simple plan outlined here.

15 MINUTES A DAY WORKS WONDERS

Thousands of men and women have paved the way to advancement by spending 15 minutes a day with Dr. Charles W. Eliot's famous Five-Foot Shelf of Books (*The Harvard Classics*).

Dr. Eliot, for forty years President of Harvard University, knew your problems—knew they could be solved by a *planned* reading of the imperishable masterpieces he selected from the great books of the world.

FASCINATING BOOK—FREE

A most interesting book, "Fifteen Minutes a Day," outlines this practical plan . . . tells about Dr. Eliot's fascinating Reading Courses . . . and how you may have this priceless library for little more than the average person spends for newspapers.

MAIL THE COUPON TODAY

Stop *wishing* for success, while better-read, better-prepared men are *getting* it. Take the first step now—by filling in and mailing the coupon before you read another page.

The Harvard Classics is now offered at the lowest price in its history. The cost per volume is actually ⅛ of that of the ordinary current novel.

Send for the famous book, FIFTEEN MINUTES A DAY. It is yours without obligation and without cost.

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS
(THE HARVARD CLASSICS)

THIS COUPON ENTITLES YOU TO FREE BOOKLET

P. F. Collier & Son Corporation
250 Park Avenue, New York City

I am interested in receiving by mail, free and without obligation, your valuable booklet, "Fifteen Minutes a Day" describing the famous library, Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics) and containing Dr. Eliot's own plan of constructive reading. HCW 656

Name Mr. Mrs. Miss .....

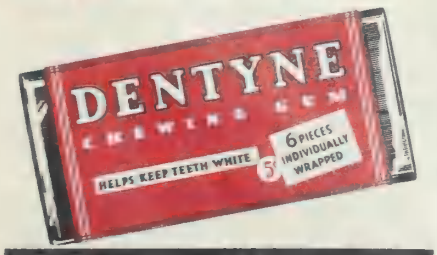
Address .....

# Mary's no longer contrary

Of course Mary's garden was beautiful—all silver bells and cockle shells—and pretty maidens in a row. But she still was glum and contrary.

You see Mary liked to chew gum. But she never could find one that was just right.

One day her dentist suggested she try Dentyne. He told her Dentyne's pleasant firmness would be good for her teeth.



So Mary got a handy, flat, flavor-tite package of Dentyne — and promptly tried one of the six individually wrapped sticks. When she tasted that temptingly different, uniquely warm and delicious Dentyne flavor she stopped being contrary in exactly one-tenth of a second. "This is *my* chewing gum," cried Mary. "I'll never chew anything else."

And now Mary sings as she gardens.

Moral: You, too, will feel like singing when you taste Dentyne. Get a package today.

6 INDIVIDUALLY WRAPPED STICKS IN EVERY PACKAGE

HELPS KEEP TEETH WHITE

thing when they thought of rolling their stocking tops to keep them from sliding down. The plenitude of ice amazes them and they wonder what would happen if one of them took an American bride back to England, where refrigerators are rich men's toys. They are beginning to like our hustle, which prevents their having tea, allowing them only enough time to drop a nickel into a machine for a soft drink. Our slang puzzled them, as their slang puzzled our own cadets, but they were the first to call canned milk "armored cow." Their original trouble—understanding a drawling inspector over the interplane phone—is gone; they can understand and be understood now. They all want to get back to England and are confident of the outcome.

### RECOIL

RELYING upon "usually reliable sources" we boldly announced in this column for October 11th that "there's no such place as Ragley, Louisiana." While that statement was rolling in great numbers from the Collier's presses we flew over, tramped upon and drove through most of the Pelican State's southwest territory, often having occasion to observe evidence that there is definitely a place called Ragley. It will undoubtedly interest the town's twenty-five inhabitants to know that readers from many other states gave us resounding tut-tuts for placing Ragley in the fiction department.

### GENERAL

SOME of the file clerks and others who handle official mail at the assorted posts are a couple of hops ahead of the congressmen advocating free postal privileges for soldiers. For example, a soldier on maneuvers who's onto the system and who wants to drop a newsy note to the boys back at the home camp simply slips his dispatch into the same envelope containing the postage-free official mail going that way.

INCIDENTALLY, Pvt. G. K. Page, Jr., 30th School Squadron, Scott Field, Ill., has an idea. "I think," suggests he, "that every civilian to a soldier, sailor enclose a postage sta we write fifteen o week. . . ."

# Dates for Defense

## By Jim Marshall

**Los Angeles' dancing debs ride five hundred miles to put on a party for soldiers—and hope other cities will follow suit**

FINALLY, Private Padgett had himself quite a party. When you can get 140 of southern California's prettiest debs, Junior Leaguers and young society matrons to ride 500 miles, pay their fares, dance five hours with 2,000 soldiers and sit up the rest of the night in day coaches—that's something.

It all started one evening at a Camp San Luis Obispo mess table. The camp is the home of the Fortieth (Sunburst) Division. It lies out in the hills, five miles from San Luis, halfway point between Los Angeles and San Francisco, five hours from either city. The distance makes it tough for the boys: Most of them can't afford city trips on $21 a month; city folks don't get to the camp much.

Anyway, after mess the boys were discussing the sad lack of feminine companionship when Private George B. Padgett spoke up: "Listen, fellows, how'd you like me to get a couple of hundred dancing debutantes up here from Los Angeles one Saturday night?" This offer got only laughs and nobody thought anything more about it. No doughboys dreamed that night of holding lovely social registerites in their khaki arms while the band played on . . . .

Private Padgett however, being a man of mettle, got himself a pass and went to Los Angeles. There, he called up Mrs. Dean Christy, a big shot in the Junior League, and told her about the Camp San Luis blues. Mrs. Christy said uh-huh, she understood, and called up Mrs. Howard Elliott, another "popular society matron," and told *her*. Mrs. Elliott said uh-huh, she understood. Then Mrs. Christy and Mrs. Elliott started calling up various socially eminent ladies known to society editors as dowagers—why, no one will ever know.

Finally, everybody in society was collecting girls and the thing became known as Dates for Defense, or the Christy-Elliott Expeditionary Force.

Society was raided for bluebloodedchaperones. Each chaperone was placed in command of ten debs, subdebs and postdebs. Finally 140 girls and fourteen chaperones were assembled, stowed away in three special cars of Southern Pacific's Daylight Limited and sped to San Luis one Saturday afternoon.

Captain Phil Wilson, the Fortieth Division's morale officer, in charge of the welcome, soon had the girls distributed into waiting trucks and the expedition rolled the five miles to camp. The boys took the girls around to see the sights and then set them up to swell dinners in various mess halls. This was strictly a rank-and-file affair; officers barred. After dinner, trucks and cars re-gathered the girls and concentrated them at the big recreation center. The Fortieth has a dance band made up of star musicians from half the name bands of the West, and from eight o'clock on the floor was jammed.

Here, at last—and in what a remote outpost of civilization!—was the woman who had persistently and intoxicatingly occupied all his dreams. He had believed her a fancy never to be achieved—and there she sat.

Her rose-colored lips were a little open. Her eyes gleamed as darkly as the sea at night; and the delicate configuration of her cheeks and her brow seemed wondrously akin to music.

Madame Beriot, the hostess, had introduced them. "Virginie," she had said, "this is the Chevalier de Beaupré. He is a newcomer to our colony; be nice to him"—and here she giggled—"but be cautious, my dear. The chevalier is said to be a poet."

She had swished on, clutching the hands of other guests. And Virginie had slipped into a chair beside a small mahogany table, and Jean Antoine, whose eyes were fixed upon her, had taken the chair opposite her.

After a while Jean Antoine broke their silence. "I have heard of you," he said, holding his voice low. "I have heard of you and also of madame your mother. I have been told that your mother's door is closed against me. A pity—" He paused. "And what the young men of Tortuga have been telling me about you is not exaggeration."

"What have you been told?" Virginie asked, meeting his eyes, speaking firmly and clearly.

"They said you were beautiful. I cannot dispute it."

"That's impertinent."

"It isn't meant to be," Jean Antoine said, slowly. "Nor is it quite reasonable of you to regard it so. I have my own thoughtful standards of beauty; I do not by any means always agree with the mass. It happens that I find you exquisite—is there something in the code of the Indies that requires me to keep my opinion darkly to myself?"

She did not answer.

The Chevalier de Beaupré was conscious of a wave of gallantry. A smile lay on his lips. "We men of Paris," he said, "are inclined to be impetuous—"

The girl stood up then. She looked at him coolly. "Nonsense," she said. "You're being silly; affected, and aware of it. I had better tell you here, at the beginning of your visit, that this is a frontier colony. We're rather primitive here. We don't place any particular value on the lacy phrases of the court. Paris is remote. We prefer it so."

She nodded curtly, and went to speak to the hostess. Jean Antoine's eyes followed her across the room. . . .

Love at first sight, though sometimes beautiful, is always flavored by absurdity. It bears no relation to the hard facts of living.

In her carriage, going home, Virginie Vilaire clasped her hands tightly before her and felt the uncommon warmth in them; her head was light and too warm. She forgot the sway of the carriage on the steep, flowered hill; in her mind she said again the words—all the words—that Jean Antoine had spoken to her. She saw again his brown face with the black hair and the intensely black eyes. She saw his quick, confident smile—

And when consciousness, trembling, returned from this retrospective assault, she knew that she had fallen in love with Jean Antoine, Chevalier de Beaupré.

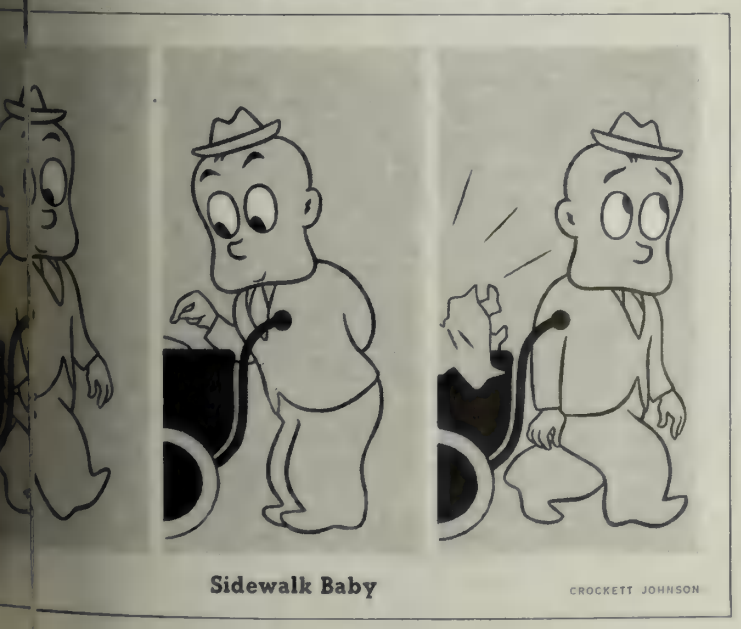
"But this is unreasonable!" she cried under her breath.

She was sharply provoked with herself. This was the behavior of a child, she said; this was the way one expected a kitchen maid to behave. And she reminded herself sternly that she was neither child nor kitchen maid.

Before she reached the lane of her mother's house she had come to a decision. This was not love, she said; this was but a sort of hypnotism. Jean Antoine de Beaupré had cast a spell upon her by the magnetism of—of his personality. Simply that. And it was utterly fraudulent.

Then, more calmly, she told herself—her face drawn tight with seriousness—that love began with admiration; and in the Chevalier de Beaupré there was little to admire. He was, if not exactly dissolute, at least loose, uncurbed. He trampled upon the people about him. Presumptuousness was written in his smile—the theatrical cocksureness of the boulevardier. And wasn't it true that he was a murderer?

The carriage stopped. She went quickly up the stairs to the veranda. "Mother," she said. Madame Vilaire was in her chair beside the lamp, a book in her lap. She looked up. "Mother," the girl said, "I think I had better tell you that I've met the Chevalier de Beaupré. At Madame Beriot's. You were quite right not to receive him."



"Yes?" said Madame Vilaire. Her eyes were searching. After a moment, without any change of expression, she looked down again at her book. "Yes," she said.

IN THE morning a Negro boy came bearing a brief letter from the Chevalier de Beaupré. It was addressed to Madame Vilaire.

The chevalier respectfully begged to inform Madame that he was now a visitor in the colony; and, in that he had known with some intimacy the Madame's cousin Marcel Hibbert in Paris, he ventured to request permission to call upon Madame and offer his compliments. Would five o'clock in the afternoon be convenient?

Madame Vilaire commanded the black boy to wait. She sat at her desk and wrote a reply. Madame Vilaire was forced by regrettable circumstances to inform the Chevalier de Beaupré that five o'clock would not be convenient. Further, while Madame Vilaire appreciated the chevalier's courtesy in offering his compliments, she found herself unable to receive him. Then or any time in the future. She signed the note with a hard stroke of the quill.

Within the hour the Negro boy was back. He carried a sealed letter for Mademoiselle Virginie Vilaire. But it was Madame Vilaire who tore open the seal. Would Mademoiselle condescend

to receive the Chevalier de Beaupré in her garden that afternoon at four o'clock?

Madame Vilaire's face was grim. She summoned her daughter. "You will please read this," she said. The girl took the letter in her fingers. Then she lifted her eyes. Madame Vilaire said, "Of course you will not receive him—"

"Of course not," the girl said.

To the Negro boy on the lower step of the veranda Madame Vilaire said, "You may tell the Chevalier de Beaupré that the response is 'No.' Do you understand?"

The boy said he understood, and went away.

"Insufferable effrontery," snapped Madame Vilaire.

Her daughter said, low, "Yes, *Maman*. I agree with you fully."

They stood on the veranda watching the retreating figure of the chevalier's messenger, and Madame Vilaire quivered with anger, but Virginie was as motionless as stone.

IT WAS then that the Chevalier de Beaupré went away. Then or very shortly thereafter. But Virginie Vilaire did not hear of the departure until a week had passed.

It developed—the story leaked out fast enough, and was a fortnight's sensation—that the newcomer to the colony had passed several evenings in the cabarets of Cayona with the young boar hunters, who for one reason or another found it expedient to live away from France. With Jean Antoine they discussed the great names of the Spanish Main—Ravenau de Lussan, Nau of Olonne, de Gramont, Laurent de Graff.

"Not one of these but made a fortune capturing the Spanish ships, sacking the Spanish towns," said Philippe Latouche, a violently bearded youth whose family was said to live in Provence. "I knew de Gramont personally, before he received his commission in the army and went away from here."

"I knew him too," another said; and, turning to Jean Antoine, "He took Maracaibo and Torilha, you know; collected the very deuce of a ransom. A really remarkable fellow—"

Philippe Latouche put in, "The great day of filibustering is over, I fear—"

"Is it?" Jean Antoine said. He closed his fingers about a bottle and filled his glass. "Why?"

They hastened to explain, those young men. The Spaniards were more alert in these times; their towns were without exception better garrisoned, better fortified. Almost invariably, now, their ships traveled in twos or threes across the Caribbean. It was no longer so easy a matter—

"If it were easy," Jean Antoine said, "I think I should not enjoy it." He looked slowly from face to face. "How many of you gentlemen have any money to invest?" he asked.

"Invest in what?" one asked.

"I have decided," Jean Antoine replied, bracing his elbows on the table, "—I have just now decided to attack Azua in Spanish Santo Domingo. It's a small place, but it will do for a beginning—"

The face of Philippe Latouche was screwed up in astonishment. "What," he asked, "do you know of the problems—"

"Very little," said Jean Antoine, cheerfully. "But I have a certain ability with the sword. I shall need a ship and a navigator and a few score of men under me. You've heard my question—how many of you have money to invest?"

That was the beginning of it. None of the gentlemen had money to invest. It was from his own pocket that the Chevalier de Beaupré bought the frigate Turtle, of forty guns—an old, rotten-bottomed ship. In the taverns on the water front he recruited, ance of a keg of rum, a five men—mostly Frenc a representation of th Dutch, the Portuguese.

Seven years before—in
air de Gramont had pil-
n on the Caribbean shore
rica; he had sailed from
a frigate, a few fly-boats,
seven hundred. He re-
easure. But of his seven hundred filibusters, only forty saw Tortuga again.

There was still an ugly terror in the sound of it—but for the Chevalier de Beaupré Maracaibo had become, almost overnight, a magic word. It seemed the logical development of his Azua conquest; he saw it as a test of spirit, he saw it as a citadel that, unassailed, would forever taunt him. He made no secret of his plans. Cayona knew his date of sailing, the governor honored him at dinner. There was some difficulty in raising a crew, but the chevalier went personally once again to the grogshops along the quay and paid for rounds of rum and spoke in glowing accents. He had a way with him; and there was the Azua adventure to endorse him. He sailed with three hundred men.

IT WAS a grand departure, an affair of pomp and pageantry. Fully half the people of Cayona, it seemed, were crowded along the water front, and a curvetting flock of shallops provided escort down Tortuga channel.

Then the shallops dropped astern, Cayona was hull down, and the chevalier's cannon shouted a deep-throated goodby.

But not quite all the citizens of Cayona thought it could be done—this sacking of Maracaibo.

"He'll not be back," said Madame Vilaire, concisely.

But she said it to herself. Her daughter was confined to her room suffering from headache. Her daughter had not been at all well during the past week, and Madame Vilaire was considering the advisability of sending the girl to France for a change of air, a change of scene. A young girl should not have headaches so constantly—

On the hill, however, Governor Ogeron confided to his friends, "Yes, yes; I've invested rather heavily—"

"I've put in a few thousands myself," said the Marquis de Labastille; and Jacques Forban, who owned a fleet of thirteen ships, revealed that he too had contributed to the outfitting of the Chevalier de Beaupré's expedition—but did not mention that he had done so largely at his wife's persistent urging.

"We should see young de Beaupré's sails in the channel within five weeks' time—"

The marquis agreed with the governor. "Oh, yes," he said. "In five weeks, I'm sure of it."

"In confidence," Governor Ogeron proceeded in his official manner, "I may tell you that I am preparing a citation for His Majesty's attention. I believe

"Would you care to play something for us?" PERRY BARLOW

# TWO SHIPS A DAY

WHEN 14 merchant ships were launched at United States yards on one recent day, we thought we began to foresee the end of the Battle of the Atlantic. The end of that battle is probably a long way off yet, despite the 66% cut in sinkings for the past summer and despite the spreading vigilance of the United States Navy. Nor have we reached, by a long shot, our goal of two merchant ships a day. But we shall in all probability complete our planned 1,400 merchant ships by the end of 1943—which is to say that seawise, at least, American defense production is doing well.

And American ship production is the first ingredient in an eventual Allied victory. If Hitler can shatter the bridge of ships to Britain, the British will have to quit, starve, or go down fighting. If he can't, it seems a better bet each day that the other essentials of an Allied victory can be produced in time.

That we are qualified to fight this part of the war is evidenced by our performance in this war up to now, and even more by our phenomenal shipbuilding in the other war. On one day in the 1914-18 struggle, after our shipyards had really got going, 95 vessels went thundering and smoking down American ways into the water.

The implications of all this excite your imagination. Particularly, how about after the war?

After the other war, we were mainly stuck with a lot of no-good hulks, most of them chargeable to the Hog Island[illegible] time, it looks as if that won't h[illegible] we hope nobody is relaxing in [illegible] that it can't happen. It looks [illegible] provided we don't have to tur[illegible] marine over to a conqueror, w[illegible] war years with enormous tonna[illegible] shipping on hand.

We hope it all foreshadov[illegible] American enterprise on the s[illegible] into a decline after the Civil [illegible] really recovered. While we b[illegible] in wartime and send them out [illegible] goods where needed, let's kee[illegible] huge potentialities for peaceti[illegible] round-the-world prestige after [illegible]

# STRIKES AGAINST GOVERNMENT

THE State, County and Municipal Workers of America, a C.I.O. "union" of civil servants, took an obviously Communist-inspired step at its 1941 convention. The group amended its constitution so as to make strikes part of its program—though its leaders were careful to say that they would use the strike weapon only in extreme situations.

And here may be the next big labor question which this country will have to settle. There are almost 5,000,000 persons working for various agencies of government in the United States. If this C.I.O. organization or any other outfit lines up a considerable percentage of these workers and insists on the right to strike, it will be pretty tough. Americans ought to be forewarned of the possibilities now.

No U. S. city as yet has signed a collective bargaining agreement with a "union" of its employees like the agreements continually signed between private employers and employees. The opinions of courts, city attorneys and state attorneys general to date are unanimous that cities have not the power to sign collective bargaining agreements.

Yet this C.I.O. organization's leaders now propose to arrogate to themselves the right to call strikes against government. We do not see how any government agency can recognize such a right, or back down an inch in its refusal to recognize it. President Roosevelt stated the case succinctly several years ago. "All government employees should realize that the process of collective bargaining, as usually understood, cannot be transplanted into the public service . . . militant tactics have no place in the functions of any organization of government employees."

The reason why they have no such place is that such tactics amount to organized rebellion against government itself. A[illegible] that admits a right of its ow[illegible] strike against it abdicates. It [illegible] 100% a government, and turn[illegible] mental power to labor leaders.

Congress may have to legis[illegible] ter. If so, we think stern me[illegible] justified.

But the wiser and more p[illegible] settle the argument would be [illegible] simply to stay away from this [illegible] union, and from all other org[illegible] claim the right of civil servants [illegible] the taxpayers who hire them [illegible] salaries. The leaders of these [illegible] beckoning their dupes to a sh[illegible] came out of the Boston police [illegible] That affair was a disaster to th[illegible] licemen and it came close to b[illegible] to the entire American labor [illegible]

COVER WALTER BOMAR

# ANY WEEK

A FOOTBALL referee with a passion for anonymity informs us that he has appealed to the OPM on behalf of brass and steel whistles. He admits that no whistle manufacturer has asked him to intercede but that he has "the best interests of lovers of football at heart." As we get it, OPM is about to decree that the brass and steel, to say nothing of the nickel, that go into whistles for football referees shall go to make tanks, battleships and guns, and for one we're glad of it. "Whistles not made of steel, brass and nickel," our referee says, "lack command, carrying power, authority. Unless the official is able to emit a shrill, piercing command the players are apt to pay no attention. Once when I was refereeing a bitter game between Fordham and St. Mary's something went wrong with my whistle—a plastic affair which I had to pick up at the last moment owing to theft by a souvenir-hunting lover of football. Before I could get the attention of the players, not one but twelve fouls and rule infractions had been committed by the boys in their youthful zeal." But we shall have nothing to do with his complaint. We hope he has to use a small tin whistle that can't be heard five feet away. We, too, have the best interests of lovers of football at heart. As far as we're concerned there's entirely too much whistling by football officials. Every time the going gets nice and criminal on the field one of those officials blows a whistle—and we're against it.

FRANK GERVASI, who has literally watched this war around the world—the North Atlantic, England, Africa, the Near East, India, Thailand, the Far East and back by way of Manila and San Francisco—has just about finished an article which we shall send to a young fellow from Philadelphia who is now in the Army—in Hawaii. We mentioned something along this line two weeks ago but the Philadelphian's letter spurs us to emphasis. This American soldier was picked up by the draft in the neighborhood of Twelfth and Tasker streets, Philadelphia. As we remember Twelfth and Tasker streets, it is the home grounds of quite a number of excellent citizens. But it isn't a semitropical paradise and we are casting no aspersions. His letter from Honolulu is bitter with recitation of the hardships of army life. So we promise him Mr. Gervasi's story wherein he may read of the army life of British, French, Italian and German lads of his own age dying slowly in sand that poisons, heat that maddens and loneliness that does unspeakable things. They have a tough time too, kid—almost as tough as you have amid the beauty of the lilies and the *dolce far niente* of Waikiki where the peace of the night is broken only by the plang of the ukulele and the thump of hula feet.

IN PURSUANCE of the policy of this department, we are paying no attention to such cracks as one just received from Mr. Jacob Blanquette of Detroit, Michigan. Mr. Blanquette says that "the Italian army in retreat is the Fascist army in the world." We are much more interested in domestic crises. We're advised, for example, by Mr. W. W. Tuttle of Worcester, Massachusetts, that there is a nation-wide scarcity of diapers because that particular kind of cloth is in great demand by our soldiers. They use it to clean their rifles with—when they get the rifles. Likewise, according to Mr. James Rayen of Pittsburgh, there's a road intersection in Jefferson County, Pennsylvania, with one finger-board advising you that you have but five miles to go to be in Paradise. However, another arrow directs the traveler to Panic, only three miles away.

IN THE meantime we shall concern ourselves with a problem of an education officer in one of our draftee camps. One of the lads, from the Virginia mountains, was having quite a little trouble with his studies. Presently the officer decided that the lad's eyes needed attention. The doctors gave the boy tests and discovered perfect eyesight. It wasn't until some time later that they turned up the real reason why the soldier wasn't doing so well in class. He couldn't read or write.

FOR this week's romantic episode, we offer you the idyl of Señor Dairo Ingeliste, a talented and handsome young fellow of Belo-Horizonte, the lovely capital of the state of Minas Geraes, Brazil. We have it from our Rio de Janeiro agent. Señor Ingeliste, a light in his eyes and a song in his heart, went to call upon his sweetheart. Now the parents of the young lady were going calling and, as it would be quite out of the question to leave the young people in the house alone, their integrity notwithstanding, the old folks assigned a trusted servant to chaperon the lovers. For a while a decorum of the first order obtained, Señor Ingeliste discoursing learnedly upon the situation at home and abroad, his young lady yessing him with maidenly demureness and trying gallantly not to fall asleep. The duenna sitting hugely near by had nothing to do but approve and take belts at mosquitoes. But presently, what with the moon, the fragrance of the

THEY MERIT THE NAME

# Swift's Premium

Swift's Premium Tender Frankfurts, buttered acorn squash, orange and cranberry relish, water cress garnish.

*Have you tried the new larger "DINNER" size?*

*Made of fine meats* . . . cuts of beef and pork so juicy and tender, you'd relish them *in any form*. Carefully blended, deftly seasoned, these better-flavored meats give Premium Frankfurts a quality that is extra delicious . . . fit for a king!

**Skin "tendered" in pineapple juice* All the savory, flavorful meat juices are retained, yet the skins are so delicately tender, they cut at the touch of your fork! An exclusive Swift process (patent pending) that leaves no trace of the pineapple flavor.

*Smoked over fragrant hardwood fires* until each Premium Frankfurt is filled with spicy, appetizing aroma; rich, juicy, "done to a turn." Simmer 5 to 8 minutes.

"They are delicious for dinner," *says* **MRS. LOWELL THOMAS**

• Mrs. Lowell Thomas is quick to notice her family's reactions to her menus. And she has noticed that Swift's Premium Frankfurts bring forth enthusiastic comments *every* time she serves them.

*IN 2 SIZES — Swift's Premium label on every 4th link*

STANDARD SIZE NEW DINNER SIZE

**Spic-and-span kitchens throughout the country also make many "SWIFT'S PREMIUM" Table-ready meats . . . Meat Loaf . . . Braunschweiger . . . Lunch Meat . . . Lunar Loaf . . . Bologna . . . Leona . . . Liver Cheese . . . Pot Roast of Beef . . . Ham, Delicatessen Style. Look for the "SWIFT'S PREMIUM" seal of quality!**

# WING TAIL

**Different and efficient: the tail of the Navy's big X[illegible]M-1**

SCHEDULED for first flight tests this month is the 70-ton Navy Martin XPB2M-1 long-range patrol bomber, the Navy's counterpart of the Army's mammoth Douglas B-19. Sitting alone on its beach gear and viewed from a distance, it appears conventional in design—a high-wing monoplane with the four engines in the leading edge, and a rugged hull for heavy sea operations. But the tail assembly is different. It is tacked onto the top side of the rear fuselage a few feet forward of the rear gunner's turret, and it looks as if a puff of wind would blow it off. But it was tried out in earlier Martin models—there's no guesswork here.

Instead of being perfectly horizontal, the stabilizer has a steep V-shaped angle, known as a dihedral in the trade. The rudder fins, instead of being vertical, are toed in. By designing them at these angles the Martin engineers not only have raised the horizontal surfaces above the turbulent air of the propellers and high out of the water, but the toe-in provides greater rudder-fin efficiency and in effect increases the size of this part of the tail. No use dragging along extra area if you don't have to.

BACK in the days when automobiles had to be cranked, a few people tried it with the brakes off. They found how easy it is to get run over by their own cars. And there are two pilots, one in South Carolina and one in Maryland who no longer have licenses to fly because they spun the props of their airplanes without someone in the cockpit and without blocks in front of the wheels. They didn't get a scratch, but people have been run over by their own airplanes (and chopped up by the props), so there's a regulation.

AIRPORTS rapidly are becoming self-contained communities with restaurants, barbershops, branches of downtown department stores and now banks and stockbrokers' offices. It is only natural that the latter two should be at the financial center of the universe, New York, and its La Guardia Field.

The bank at La Guardia is a branch of the Empire Trust Company. In the first week it banked $200,000 in deposits. The stockbrokers' b[illegible]ch of Lynch, Pierce, Fenner Beane elaborate setup. The rincipal stocks are automatica registe the board by means o telea system. Another boa[illegible]s so e that through a code s[illegible]m the ant dials the head off and in seconds the board sho the late of the stock desired an s high for the day.

**U MEASURE A MILLIONTH OF A VOLT?**

ount of power developed in your home ntenna by a signal from a distant station sured in millionths of a volt. Your lowest e electric lamp bulb uses billions of times ower. Yet, without moving parts to guide our radio service technician can trace this unseen electrical impulse through a maze of licated parts, coming quickly and unerringly e seat of any trouble which may interfere its transformation into sound.

# Your service man will make your old Radio

# ERFORM BETTER – LAST LONGER

n by a competent service man radio or phonograph perform ger. This means real economy nal enjoyment for you. Even t means keeping your radio in der during these critical times adio set forms an essential, and l, link in our national defense.

radio-phonographs, although ill be fewer this year due to in materials. Consequently, if btain one, the matter of service looms more important than

xcellence of modern radio con- et owners have come to expect way of continued performance. matter of service is neglected— stops operating entirely. Actually, it is no wiser to wait for this to happen than it is to wait for your automobile to break down completely before having it overhauled. Just normal usage over a period of time causes tubes and other parts to wear out, robbing you of the kind of efficient reception that makes listening a pleasure.

Every year or 18 months, depending upon how much your set is used, a routine service check-up by a competent technician is highly important. It is an inexpensive way of correcting minor troubles and finding out whether additional repairs are advisable. For example, your service man may be able to reduce noise by cleaning or replacing worn volume or tone controls, or by removing dust from variable condensers. He may make it easier to separate crowded stations by re-aligning highly sensitive tuned circuits. Often he can reduce noise and improve sensitivity, selectivity and fidelity of tone, simply by replacing weak or worn tubes. He may diminish interference from powerful nearby stations by repairing or replacing your antenna (which probably hasn't been inspected since it was put up). He may quiet noisy phonograph motors by oiling and adjustment... Quickly, efficiently and economically, he will make any changes or repairs that you desire — with a resulting improvement in radio performance that will often amaze you.

Regardless of the make or model of your old radio, it is his job to help you get the most out of it — to make it operate satisfactorily over a long period of time. Call him today. Keep your radios working — and keep them working well!

**RCA MANUFACTURING CO., Inc., Camden, N. J.**
*A Service of The Radio Corporation of America.*
*In Canada: RCA Victor Company, Limited, Montreal*

RCA Test Equipment enables radio service technicians to follow the same modern methods used in RCA radio manufacturing and in the RCA Laboratories. It paves the way for fast, accurate, more economical work. Look for RCA equipment in the shop of the dealer you patronize!

RCA

Probably half of all old radios now in use could be greatly improved, simply by replacement of tubes that have become weak or worn through long hours of use. When replacing yours, be sure and insist on genuine RCA Tubes—the choice of leading dealers and service technicians.

# IS ONE OF THESE HAIR PROBLEMS YOURS?

If your hair lacks lustre . . . if it's dry, hard-to-manage . . . or if loose dandruff sheds on your shoulders . . . here's good news: 'Vaseline' Hair Tonic treatments will make a glorious improvement.

## TWO STEPS TO LOVELIER HAIR AND RELIEF FROM *DRY SCALP*

NEVER . . . NEVER . . . just take it for granted that you don't have Dry Scalp. This nuisance often begins inoffensively—goes unnoticed until dull, dry hair and loose dandruff give real cause for concern.

No fear of this, though, if you'll let 'Vaseline' Hair Tonic be your guard. Its special properties make it ideal for keeping your scalp in condition . . . your hair looking its loveliest. Here's all you do:

**(1) BEFORE EACH SHAMPOO,** massage your scalp vigorously with plenty of 'Vaseline' Hair Tonic to stimulate scalp circulation.

**(2) AFTER EACH SHAMPOO**—and before each date—brush just a little 'Vaseline' Hair Tonic over the surface of your hair with your fingertips, and press the wave in place. Get a bottle of 'Vaseline' Hair Tonic today . . . for softer, more beautiful hair . . . for the good of your scalp and wave.

**'Vaseline' Hair Tonic is different, containing no drying ingredients.**

**By actually supplementing the natural scalp oils, 'Vaseline' Hair Tonic aids in keeping the scalp supple . . . the hair lustrous and well-groomed. Try it!**

...pleasant privilege to
...te Farm policyholders
... our remarkable new
... Policy called
'The Chief'..."

...under
... Board

# Now $2,000 protection for your loved ones costs only $10 a year!

*(FIRST YEAR PREMIUM IS $15)*

...y matter for young men
...ung men with families
...oney for life insurance.
...t because I was young
...went through, then, ex-
...re going through now.
...ly to keep postponing
...step. Far too few young
...ting their families with a sound life insurance program—even a minimum program.

"That is why State Farm Life Insurance Company, after years of building, is offering a new policy—called The Chief Policy—that makes protection so easy to buy that qualifying young men can own it *at once*.

"We call this policy The Chief Policy because it meets the *chief* need—protection.

"During the years the need is greatest, The Chief Policy gives your family $2,000 protection for only $10 a year after the first year. And the first year premium is only $15!

"To qualify, you must be in the insurable age group from 16 to 35, and in good health."

### *Why State Farm Can Make This Sensational Offer*

1. The Chief Policy is offered to a restricted group—only to *men*, ages 16 to 35. Experience shows that the cost of life insurance protection is *lowest* during these years.

2. Only men in this age group who are members of families owning a State Farm Policy will be solicited at the present time.

3. Many sound economies have been introduced. You pay toward the cost of putting the policy on State Farm's books with the extra $5 included in the first-year premium.

4. Up through the age of 35, The Chief Policy pays your family a benefit of $2,000. After this age, the benefit decreases slightly each year. But you may, if you wish, add the savings part to your State Farm Life Program by increasing the premium.

NOTE: The Chief Policy is guaranteed legal reserve life insurance. It is only one of State Farm Life's widely diversified plans for people of all ages, in all circumstances.

Applications for The Chief Policy will be accepted only through State Farm Agents licensed for life insurance underwriting and who have been specifically authorized to accept applications for The Chief Policy.

PUBLIC LIBRARY

**Embarrassing revelations from the past of a remorseful veteran who didn't raise his boy to be the kind of soldier Dad was**

OH, MILDRED, I'm so glad you could come right over—"

"Is it Reid—has he been—"

"No, no—not Reid. Not yet, thank God. Though it's a wonder—I mean Edgar—oh, I'm just worried *sick* about Edgar—"

"B-bad news—?"

"Not *medically*. Heaven knows I went through enough about that. But the clinic said his heart was organically sound. Just too much smoking—and he will eat cheese on pie. But it's the way Edgar—I mean his general attitude toward Reid. I haven't slept for two whole nights since we got back from camp!"

"Fathers and sons frequently disagree, Janey. Why, only last week—"

"Oh, if it was only a disagreement. A simple thing like that. You could bring it out in the open. I mean, I could make Edgar *talk*. That's fundamentally the whole trouble. Edgar won't talk to me. He won't talk to Reid. I mean—about the war. He never would. It's simply maddening to distraction—"

"Edgar never did have much to say on any subject, Janey. I remember telling Joe—"

"It isn't as if Edgar was sulking. For a long time I thought it might be that—you know, when I wanted to name Reid for my family. Men usually want a junior. But it simply isn't conceivable that he would sulk for twenty years about a little thing like *that*. Would you like a highball, Mildred?"

"No, thanks, dear. Just some sherry—in fact—"

"Yoo-hoo, Callie?"

"Yas'm?"

"Sherry! I'm too distracted to take anything myself. Couldn't keep it on my stomach. Imagine—a

whole day at camp with Reid, and that man acting like a human clam. I don't believe he spoke one whole sentence. Poor Reid—well, I thought he would simply sink through the floor—"

"Why? We've always thought Reid and his father were unusually close—"

"Not on *that* subject. The war, I mean. Reid wanted to quit Harvard last fall and go into the Navy flying—whatever they call it. I put my foot right down. I said, simply, 'Reid hasn't the proper temperament to fly those airplanes. He is an intellectual, scholarly type—why, he'd be killed in one week's time,' I said. What I went through with that boy. Merely because Sammy Clain and the Westerhout boy—Screwball, they call him—and a very pat description—well, I said, 'I don't care what those wild hooligans want to do, you are not going to fly airplanes.' Oh, we had it hot and heavy—"

"What did Edgar say?"

"Edgar? Why, that's just the point. He didn't say one single word. Instead of taking my side, he shut up like a human clam. I said, 'Look, Edgar, you were in the last war. You were in France. I want you to tell Reid from your own wealth of experience just how dangerous those airplanes are.' But do you think he would? Not one helpful word of advice could I get out of him. It was simply heart-rending. 'Listen!' I said. 'Reid is your son, as much as mine. Don't you love him?' And do you know what his very illuminating reply was?"

"What?"

"He said 'Let the kid decide for himself.' Just as though a twenty-year-old boy, who has always led a sheltered, scholarly type existence could decide such a matter of life or death."

"But I thought Reid—"

"He did. Oh, yes, he traipsed right off to Pensacola—without telling me a word. All the time, I thought he was safe in school. Edgar denies it, but I have my suspicion. Where did Reid get the money to go to

# Captains All

## By Will F. Jenkins

ILLUSTRATED BY RONALD McLEOD

**Captain Morgan, our favorite pirate, in an impressive demonstration of courage, cunning and cruelty**

**Captain Morgan's profanity grew impassioned once more as his frantic shouts and caperings went unregarded. Then his luck changed**

Spiritu Sanctu was out of sight heading south in the early ng to prey on the little coast- ls Captain Morgan had con- t worth the looting. He sat f driftwood and cursed his late his late crew, and the infinitely bean all about him, and even ew picturesque phrases for the Santa Lucia, which by failing p for capture and looting had ed the mutiny of Captain men. They had marooned him on this desolate sand cay stol bullet in his shoulder and their finest maledictions, to die as lingeringly as possible. And Captain Morgan swore because he could see no hope of disappointing them.

The islet was at most a half mile in one direction by a quarter mile in the other. There was one small indentation which was almost a bay. There was tussock-grass here and there. There was a sizable sand dune to windward which might provide shelter from the worst of a gale. But that summed up the sand cay.

The sea was infinitely blue. The sky was bluer. Long blue waves came foaming up over a sand bar and then on to the cay itself. Gulls flapped and squawked above the sea. A stiff breeze blew steadily in the wake of the waves. Now so soon after sunrise, it was cool and refreshing. Presently it would be hot. By midday the island would be a furnace. By nightfall—what with his wound—Captain Morgan should be half-mad with thirst. And in a certain indefinite number of days he should deteriorate into no more than a blackened, mummified corpse.

But the fates had not reserved this ending for Captain Morgan at this particular time. It may be that his future exploits with the Belle-Marie—that ship not yet diverted to his uses and the yet-unthought-of lootings and zestful treacheries she was to make possible—were part of some ironic scheme of things so far unfathomed. In any case, the sun was no more than three hours high when, quite improbably, the faintly jagged horizon to the westward was broken by a small and stationary speck. By that time Captain Morgan's throat was parched and his temper exhausted. The sun was blistering and the heat of

*The Story Thus Far:*

JOHN SIDNEY HOWARD, a retired English barrister, loses his only son when the boy, a member of the R.A.F., is killed. Restless, lonely, longing for peace and quiet, he leaves England and goes to Cidoton, a French village where, in days gone by, he had spent many a happy vacation.

There, in that tranquil spot, the old man (he is nearly seventy) tries to forget the war. . . . The Germans overrun Holland and Belgium; they drive on toward France. Not at all alarmed, Howard nevertheless feels that his place is at home; old though he is, he may be of some use to his country.

Before he leaves Cidoton, an Englishman—a man named Cavanagh, who, employed by the League of Nations in Geneva, feels that he should not leave his post, come what may—asks him if he will take his two children, Ronald and Sheila, back to England with him.

Howard is very fond of Cavanagh's wife, a guest at the hotel. He promises to take the children under his wing. . . . The journey toward the Channel is none too easy. In Dijon, where the trio share a small hotel room (the only one obtainable), Sheila becomes ill. It is then, when the old man is desperately in need of a friend, that he finds one: touched by his plight, a chambermaid takes the children in hand, and acts as nurse, maid, counselor.

The maid has her troubles, too. Her brother, Henri Tenois, a widower living in England, has entrusted her with the care of his daughter—Rose (whom she calls "*la petite* Rose"). She finds it difficult to make both ends meet for the two of them. . . . "*La petite* Rose" is a shy little girl with long black hair. Seeing much of her, in a short time, Howard realizes that she is a lovely little person. . . .

The French railway authorities take over the hotel. Howard is notified that he and the children must go elsewhere. The old man makes frantic efforts to hire an automobile; cars are available—but no "petrol"! Returning to the hotel, he encounters the maid. She is sobbing. "Is anything the matter?" Howard asks. "I am dismissed," the woman replies. "The hotel is closing. I do not know how we shall live."

Howard is deeply distressed. But what can he do? So, after a few words of meager comfort and of optimism, he goes to his room. The children are sleeping; Sheila is feverish. Anxious, worried, the old man undresses and goes to bed—on a mattress laid on the floor by the maid.

### III

WHEN Howard awoke, the dawn was bright. The children were awake and playing in the bed; he lay for a while simulating sleep, and then got up. Sheila was cool, and apparently quite well.

He dressed himself and took her temperature. It was very slightly above normal still; evidently whatever it was that had upset her was passing off. He washed them both and set Ronnie to dress himself, then went downstairs to order breakfast.

The hotel routine was already disarranged. Furniture was being taken from the restaurant; it was clear that no more meals would be served there. He found his way into the kitchen, where he discovered the *femme de chambre* in depressed consultation with the other servants, and arranged for a tray to be sent up to his room.

That was a worrying, trying sort of day. The news from the north was uniformly bad; in the town people stood about in little groups talking in low tones.

The girl from the desk met him as he went upstairs. He could keep his room for one more night, she said; after that he must get out. She would try and arrange for meals to be sent to the room but he would understand—it would not be as she would wish the service.

He thanked her, and went on upstairs. On the landing he met the *femme de chambre*. She hesitated, then stopped him.

"Monsieur is leaving tomorrow?" she said.

"I have to go away, because they want the room," he replied. "But I think the little girl is well enough to travel. I shall get her up for lunch, and then this afternoon she can come out for a little walk with us."

"Ah, that will be good for her. A little walk, in the sun." She hesitated again, and then she said, "Monsieur is traveling direct to England?"

He nodded. "I shall not stay in Paris. I shall take the first train to St. Malo."

She turned her face up to him, lined and prematurely old, beseeching: "Monsieur—it is terrible to ask. Would you take *la petite* Rose with you, to England?"

He was silent; he did not quite know what to say to that. She went on hurriedly: "I have the money for the fare, monsieur. And Rose is a good little girl—oh, she is so good, that one. She would not trouble Monsieur, no more than a little mouse."

Every instinct warned the old man that he must kill this thing stone dead—quick. Though he would not admit it to himself he knew that to win through to England would take all his energy, burdened as he was with two little children. In the background of his mind lurked fear, fear of impending, absolute disaster.

He stared down at the tear-stained, anxious face, and temporized. "But why do you want to send her to England?" he asked. "The war will never come to Dijon."

The woman said, "I have no money, monsieur. Her father is in England, but he cannot send money to us here. It is better that she should go to England, now. In England she would be safe. Here in Dijon, I am afraid." She began to cry again.

He patted her a shoulder. "There," think about it this a thing to be decided made his escape f down to the street.

Once out in the s got what he had mindedly he walked the town, wondering the charge of anoth he sat down in a caf self a *bock*.

From his chair up stared out upon the Bad times were com he and his children damn' quick. If the they would bring wi their trail of pilla gradually mounting they faced the ine must not let his ch that. Children in beaten down, would

miserably irresolute for In the end he got up and back to the hotel, des- d. In his appearance he ears.

He met the *femme de chambre* upon the landing. "I have made up my mind," he said heavily. "*La petite* Rose may come with us to England; I will take her to her father. She must be ready to start tomorrow morning, at seven o'clock."

THAT night Howard slept very little. He got up at about half past five, and shaved and dressed. Then he awoke the children; they were fretful at being roused and Sheila cried a little, so that he had to stop and take her on his lap and wipe her eyes and make a fuss over her. In spite of the tears she was cool and well, and after a time submitted to be washed and dressed.

Ronnie said sleepily, "Are we going in the motorcar?"

"No," said the old man, "not today. I couldn't get a car. We're going in a train."

"Is that the train we're going to sleep in?"

Howard shook his head patiently. "I couldn't manage that either. We may have to sleep in it, but I hope that we'll be on the sea tonight."

"On a ship?"

"Yes. Go on and clean your teeth; I've put the tooth paste on the brush for you."

Presently there was a tap upon the door, and the *femme de chambre* was there bearing a tray of coffee and rolls.

Behind her came *la petite* Rose, dressed in her Sunday best with a large black straw hat, a tight black overcoat and white socks. She looked very uncomfortable.

Howard said kindly in French, "Good morning, Rose. Are you coming with us to England?"

She said, "*Oui, monsieur.*"

The *femme de chambre* said, "All night she has been talking about going in the train, and going to England, and going to live with her father. She has hardly slept at all, that one." There was a twist in her smile as she spoke; it seemed to Howard that she was not far from tears again.

"That's fine," he said. He turned to the *femme de chambre*. "Sit down and have a cup of coffee with us. Rose will, won't you, Rose?"

The woman said, "*Merci, monsieur.* But I have the sandwiches to prepare, and I have had my coffee." She rubbed the little girl's shoulder. "Would you like another cup of coffee, *ma petite?*"

She left Rose with them, and went out. In the bedroom Howard sat the children down, each with a buttered roll to eat and a cup full of weak coffee to drink.

The children ate industriously. The *femme de chambre* came back with several large, badly wrapped parcels of food for the journey and a very large wine bottle full of milk. "There," she said unsteadily. "Nobody will starve today!"

The children laughed merrily at the poor joke. Rose had finished, and Ronnie was engulfing the last mouthful, but Sheila was still eating steadily. There was nothing now to wait for and the old man was anxious to get to the station for fear that they might miss a train. "You don't want that," he said to Sheila, indicating her half-eaten roll. "You'd better leave it. We've got to go now."

"I want it," she said mutinously.

"But we've got to go now."

"I want it."

He was not going to waste energy over that. "All right," he said, "you can bring it along with you." He picked up their bags and shepherded them all out into the corridor and down the stairs.

At the door of the hotel he turned to the *femme de chambre*. "If there is any difficulty I shall come back here," he said. "Otherwise, as I said, I will send a telegram when we reach England, and Rose is with her father."

She said quickly, "But Monsieur must not pay for that. Henri will send the telegram."

He was touched. "Anyway, it will be sent directly we arrive in London. *Au revoir, mademoiselle.*"

"*Au revoir, monsieur,* good luck." She stood and watched them as he guided the three children across the road in the thin morning sunlight, the tears running all unheeded down the furrows of her face.

In the station there was great confusion.

THE train they took went slowly, stopping at every station and occasionally in between. From Dijon to Tonnerre is seventy miles; they pulled out of that station at about half past eleven, three hours after leaving Dijon. The children had stood the journey pretty well so far; for the last hour they had been running up and down the corridor shouting, while the old man dozed uneasily in a corner of the compartment.

He roused after Tonnerre, and fetched them all back into the carriage for lunch of sandwiches and milk and oranges. They ate slowly, with frequent distractions to look out of the window. But presently they were full. He gave them each a cup of milk, and laid Sheila down to rest upon the seat, covered over with the blanket he had bought in Dijon. He made Rose and Ronnie sit down quietly and look at Babar; then he was able to rest quietly himself.

He was dozing a little when the train pulled in to Joigny soon after one

**The horses themselves are honest enough, but the crooked trainers and owners who dope them are ruining both the thoroughbreds and the sport. The government and honest racing commissions are doing their best to stop it**

QUIETLY sucking on a bottle of cola, a man walked into the stall of a thoroughbred race horse not long ago, at one of the many U. S. tracks where proprietors like to say they are in the business only to improve the breed.

The colt in the dim stall spotted the bottle in the man's hand and suddenly went as insane as a horse can go. It plunged to the far corner of the stall, kicking at the partitions and whinnying shrilly.

The man with the bottle walked out of there and later that day placed under arrest the trainer of that particular colt. The charge was violation of the Harrison Narcotic Act. The man with the bottle was known around the stables as an assistant trainer, but in truth he was a government dope sleuth running to ground a strong hunch that the trainer had been hopping up that colt with a narcotics formula mixed into bottles of that particular kind of cola drink.

The anguish of the colt, to whom the sight of such a bottle had come to mean postrace horrors, was enough evidence for the government man, who soon seized the stable's dope cache.

Thus the office of Harry Anslinger, chief of the Treasury Department's Narcotic Bureau, rid the turf temporarily of another criminally inhumane louse. One more defenseless thoroughbred was for the

I hoped, with all my heart, that Amyas Crale would be punished for the cruelty he had displayed and for the indignity he had put upon a long-suffering and noble woman.

For the first time I tried to say something of what I felt to Mrs. Crale, but she stopped me.

She said, "We must try and behave as usual. It's the best way. We're all going over to Meredith Blake's to tea."

I said to her then, "I think you are wonderful, Mrs. Crale."

She said, "You don't know. . . ."

Then, as she was going out of the room, she came back and kissed me. She said, "You're such a great comfort to me."

She went to her room then and I think she cried. I saw her when they all started off. She was wearing a big-brimmed hat that shaded her face—a hat she very seldom wore.

Mr. Crale was uneasy but was trying to brazen things out. Mr. Philip Blake was trying to behave as usual. That Miss Greer was looking like a cat who has got at the cream jug—all self-satisfaction and purrs!

They all started off. They got back about six. I did not see Mrs. Crale again alone that evening. She was very quiet and composed at dinner and she went to bed early. I don't think that anyone but I knew how she was suffering.

The evening was taken up with a kind of running quarrel between Mr. Crale and Angela. They brought up the old school question again. He was irritable and on edge and she was unusually trying. The whole matter was settled and her outfit had been bought and there was no sense in starting up an argument again, but she suddenly chose to make a grievance of it. I have no doubt she sensed the tension in the air and that it reacted on her as much as on everybody else. I am afraid I was too preoccupied with my own thoughts to try to check her, as I should have done. It all ended with her flinging a paperweight at Mr. Crale and dashing wildly out of the room.

I WENT after her and told her sharply that I was ashamed of her behaving like a baby, but she was still very uncontrolled and I thought it best to leave her alone.

I hesitated as to whether to go to Mrs. Crale's room, but I decided in the end that it would, perhaps, annoy her. I wish since that I had overcome my diffidence and insisted on her talking to me. If she had done so, it might possibly have made a difference. She had no one, you see, in whom she could confide. Although I admire self-control, I must regretfully admit that sometimes it can be carried too far. A natural outlet to the feelings is better.

I met Mr. Crale as I went along to my room. He said good night, but I did not answer.

The next morning was, I remember, a beautiful day. One felt when waking that surely with such peace all around even a man must come to his senses.

I went into Angela's room before going down to breakfast, but she was already up and out. I picked up a torn skirt which she had left lying on the floor and took it down with me for her to mend after breakfast.

She had, however, obtained bread and marmalade from the kitchen and gone out. After I had had my own breakfast I went in search of her. I mention this to explain why I was not more with Mrs. Crale on that morning as perhaps I should have been. At the time, however, I felt it was my duty to look for Angela. She was very naughty and obstinate about mending her clothes and I had no intention of allowing her to defy me in the matter.

Her bathing dress was missing and I accordingly went down to the beach. There was no sign of her in the water or on the rocks so I conceived it possible that she had gone over to Mr. Meredith Blake's. She and he were great friends. I accordingly rowed myself across and resumed my search. I did not find her and eventually returned. Mrs. Crale, Mr. Blake and Mr. Philip Blake were on the terrace.

# Willy's Place

## By William Fay

ILLUSTRATED BY WALTER BAUMHOFER

**The tides of football ebb and flow for Willy Kleeps. He's out of the game for good, but he's still just as happy in the restaurant business**

BIG WILLY KLEEPS, the former football star—the sand-lot boy who once made history with the Giants and the Green Bay Packers—rubbed the top of the bar with a damp cloth. He rubbed it slowly while he listened to the little man who said, "You never know your friends until you need a friend." The little man had reference to the obstacles involved in acquiring a beer without a dime.

"That's this town for you," said Willy. "You never know it in this town."

A lot of things you don't know in this town, he thought, until it comes to dollars and to cents. He looked about his premises—The Gridiron Bar and Grill—the whole ten thousand dollars' worth of it. Friends? He could recall Grand Opening Night, the year before, this time of year, with souvenirs in the form of little footballs, with "The Compliments of Willy Kleeps" upon them, and a Chinese kitchen in the back, with many items on the menu, such as Foo Goo Puy, and other fancy things, but not so much as twenty plates of Foo Goo Puy consumed in twelve months come and gone. It wasn't Willy's fault, of course. It was the fickle mob that persecuted him. They told one another day and night that "Willy Kleeps is a bum." It just was life, and the wretched joy that little men can find in tearing down the great. Meanwhile, they drank their beers and ate their food in Benny Palermo's place.

"You draw a nice glass of beer," the little man said, looking in his glass. The glass was empty. Willy filled it up again. I'm glad somebody likes it, Willy thought. He knocked the high, rich collar off it with a celluloid stick. "I seen your sign when I was coming down the road," the little man, whose name was Bertie, said. "I seen where it said Willy Kleeps." He grinned and sipped the beer. "It's like talkin' to Dempsey or Babe Ruth. You know? Except I didn't figure you would be behind the bar yourself."

"Well, it's a slow night," Willy said.

Bertie asked him, "Could you use a feller around the place?"

Willy shook his head. He pointed to the kitchen in the back. "I've got a Chinaman I want to fire," he said. "Except I owe 'im four weeks' pay. You like chow mein?"

The little man ate chow mein for a while and Willy rested with his legs stretched out behind the bar. He was a man made large, with heavy shoulders sloping into mammoth arms, with hands that were incredible and meant for throwing footballs, and his chest was as deep as the paunch beneath his chest and it all weighed heavily on his feet. He sat there looking at his Dartmouth ring. He had never been to any college as a student, but he liked his Dartmouth ring. He'd won it from a tackle on the Green Bay Packers, in a dice game played in 1933. He liked the way the ring looked against the pinched fat of his little finger. He rubbed it on his apron, made it shine.

WILLY was half asleep, but he thought he heard someone come in the door. He stood up and looked across the bar. George Felix and a girl had come into the place. The girl was seated at a table across the long, unpopulated room, her back to him. He guessed she wasn't George's friend, because he hadn't heard them speak. The girl wore an Oxford suit and summer furs and a little hat that was tight on her head, and she looked nice, what he could see of her. He turned to Bertie, who was simply standing there. "You take this towel and fold it across your arm," he said. "Then you ask the lady what she'll have."

George Felix said, "Hello, Willy."

"Hello, George."

George Felix was the owner and the coach, the trainer and the publicist for Central City's Bluejays. Central City's Bluejays weren't bad; they weren't

# RED SQUIRE

**By Patricia Strauss**

**About Sir Stafford Cripps, wealthy and aristocratic Socialist who became Great Britain's "Christian in the Kremlin"**

THE compulsion of the Honorable the Right Honorable Sir Stafford Cripps, K. C., M. P., British Ambassador in Moscow, to say what he thinks is right, and criticize what he thinks is wrong, has kept him in political hot water since he first entered the House of Commons as Solicitor-General in the Labor Government of 1929-31. It finally resulted in his expulsion from the Labor Party.

He was the despair of the party chiefs. They were delighted when lean, austere Cripps stood up in the House of Commons and, with invariable courtesy, made the most devastating attacks on the policy of the Conservative Government. But they were considerably disconcerted when he turned his serious, unsmiling attention to the Labor Party and subjected it to equally trenchant criticism. Not in whispers behind committee-room doors, but publicly. Labor chiefs urged him to be "loyal." But he did not understand party loyalty. "I am loyal to my principles," he said, "not to any party machine." When it expelled him the Conservative press said the Labor Party had "blown its brains out."

One of the first things Winston Churchill, "black sheep" of the Conservative Party, did when he became Prime Minister in May, 1940, was to send for Cripps, "red sheep" of the Labor Party, and ask him to go to Moscow. It was the most difficult job Churchill had to offer, and Cripps was the only man of ambassadorial caliber England the Russians would trust.

When fifty-two-year-old Cripps left to take up his bleak task in a lonely neutral capital, people whispered that it would be the end of him. It was even suggested that Churchill had sent him to Moscow to "get rid of him." Cripps himself was bewildered. He said to a friend soon after he arrived in Moscow, "Of all the various occupations I thought might follow, that of ambassador never was among them. When anyone here addresses me as 'Your Excellency' I involuntarily glance over my shoulder to see whether some excellency is standing behind me."

Conservatives in England have always regarded Cripps with a mixture of vexation and admiration. By birth, background and bank balance he should have been a "natural" for the Conservative Party. He is a well-tailored, well-poised, well-traveled aristocrat. Youngest son of the wealthy Lord Parmoor and a product of exclusive Winchester College, he violated class traditions and became a popular working-class leader.

Cripps did not suddenly become a Socialist by tripping over a hungry child in a dark doorway, nor from any personal grudge against the world. With his sister and three brothers he grew up at Parmoor, the beautiful family estate in Buckinghamshire, in an atmosphere of gracious affection and gentle culture. From their father the children inherited the old tradition that wealth carries with it responsibilities of public service. His brothers remember him as a rather lonely child. While they spent their school holidays hunting and shooting, he went off to remote corners of the grounds and spent whole days working alone.

Cripps' aunt, Beatrice, married Sidney Webb. They are now Lord and Lady Passfield, but they are internationally known as "the Webbs," father and mother of English Socialism. Their books have converted numerous earnest young students to Socialism, but they did not convert their nephew.

His father, Lord Parmoor, a leading lawyer and Conservative M. P., was also an eminent churchman. He made great efforts to live his life as a "practical Christian," and inculcated the ideal into his children. Young Cripps responded strongly. Now when he makes public statements which earn him the epithets "red," "dangerous revolutionary" and "heretic," he is merely translating into contemporary terms the Christian principles to which he firmly adheres. He no longer believes in institutional religion, does not go to church, and has a poor opinion of churchgoers whose daily conduct is not influenced by their Sunday worship. The word "Christian" has no terrors for him; he uses it without the slightest trace of embarrassment, even to an audience of hardened leftists. He says he can "sum up" his Socialism "by stating, as a principle, that human life and not property must be the first consideration of any wise

*(Continued on page 85)*

**Russian insistence played an important part in Britain's selection of Sir Stafford Cripps as ambassador to the Kremlin. One of England's best political minds, Sir Stafford has for many years advocated better relations between England and the U.S.S.R.**

HULTON

# Who's the Toughest?

## By Arthur "Bugs" Baer

ILLUSTRATED BY EARL BLOSSOM

**Eddie's ma got the prize but Little Nocky got the lumps. A story of justice administered with pleasure**

I KNOW you will wonder how I got in on all the angles of this thing, for I'm not Eddie Miller, I'm not the Dolly Sisters or Eddie's ma or one of the Out-of-Town Mob. The answer is I'm a newspaperman and like a baker's thumb I get into a lot of things. When a screwball thing happens the only thing about it that surprises a newspaperman is that it didn't happen sooner. He is an optimist like the old lady that didn't care what happened so long as it didn't happen to her.

A newspaperman is something like a duck. No matter how deep the ocean is it only comes up to his hips. That's a lot of preamble for no constitution so let's start.

This thing was actually an elimination contest to see who was the toughest. The Out-of-Town Mob ran second to the Dolly Sisters, who turned the loving cup over to Eddie's ma. I got into the middle of it because I like to plaster a small bet on baseball. And my share of the story starts in the middle and works both ways like a fellow getting paid on Wednesday.

It had been going on some time before I heard of it. I was sitting in the old Friars Club with Ring Lardner, Willie Collier, Harrison Fisher, Damon Runyon and other old-timers when the page boy whispered to me that Eddie Miller was in the reception room.

"Boys," I said, getting up, "the gravy train is at the depot. Eddie just got around with the golden cabbage."

Ten of us had each sunk two hundred and fifty in a pool against another twenty-five hundred smackers of Arnold Rothstein's. We bet on the last game and we won. That was five hundred for each of us and that ain't hay. At least I never saw it sticking out of barns. The series had been over ten days now and no Eddie, no money and no nothing. We figured that Eddie couldn't stand the strain and had bought himself a pair of new shoes. I didn't think that Eddie would lam with my dough. But, after all, trusting a betting agent with that kind of coconuts is something like sending a cabbage leaf by a rabbit. But now that Eddie was here everything was all right. That's what I thought.

Well, Eddie was in the reception room and he didn't have any new shoe for he was in his bare feet. That was little extra even for the old Friars Cl where they would tickle a raisin un it walked out of the rice pudding. O motto in the old days was anything f a laugh, but Eddie was two stops p that stage. Even when he was feeli good he had the pasty look of a pap hanger's brush. But this time he look as if he had been held over for autopsy. I pointed to his bare dogs a he fainted.

It's the third week in October s know his feet aren't sunburned. Th are plenty red and have a dozen blist on the bottoms. They're those big wa blisters. I don't know where Eddie w eating the last ten days but the wait were very careless because I see th or four hunks of toothpicks under big-toe nails. Now, I can put two two together without cement. Edd been snatched. He has been bund by a new mob that I have heard rum of for some time. They're foot doct and when they give you the full tre ment you don't walk for weeks. W I'm having Eddie carried up to my r he comes to, says, "Tell my mother in Hollywood" and faints again.

When he comes to the bat again ab sixteen hours later he has an antise turban of medical gauze on his head some bumps and cuts I hadn't noti But the doctor who worked on found bruises all over and he says tween the feet and the head Eddie be in bad shape for two weeks. The thing he does is to call his ma and it is long distance from California. T he says he will be home about the of November.

THEN he hangs up, turns to me says, "I was snatched."

"That's what the Dolly Sisters ured," I said.

Well, Eddie turns a double white time like a tube of toothpaste co out both ends.

"You wouldn't do that to me, w you?" he wants to know.

"Do what?" I asked. "It's alr been done to you."

"I mean my mother," Eddie w pered. "They say if I turn on the ph graph they will grab her."

"How about our money, Eddie ask.

"You'll have to wait until I ge other stake. They took that five g eighteen grand more of mine an note for twenty-seven grand more."

"What?" I yelled. "A snatch taking notes?"

"They're the toughest mob I saw." Eddie shivered all over like a Model T on a hill. "They took th grand I was holding, found my books for the eighteen and ma me in the General Trust in broad light in my bare feet. They mad close out the account. Say, the could have looked over and see bare feet but he never tumbled. they ask where I want to be set and I say here because I know you Little Nocky."

"Little Nocky has been lookin this mob himself," I said, "because upset the status quo and put the on the home-town boys. So they Little Nocky's brother and hold for one hundred grand and settl half. All Little Nocky knows i an out-of-town mob. Too toug him."

"So you told the Dolly Sisters?' Eddie. "That mob's too toug them. If I don't get twenty-seven on the line in two weeks, what's to happen to my mother?"

"Nothing's going to happen t Eddie," I told him, "but you're to be snatched again. By the

# PROVED ALL WAYS for *Come what may!*

THE BROAD HIGHWAY of business-as-usual is temporarily closed—Americans have taken to the *great detour* of National Defense. It is a hard new way, and no man can say what wilderness we may traverse before we emerge again upon the open road.

Men and their machines face new endurances, new sacrifices. And as we go forth to meet this challenge that is not of our choosing, we shall find also *new accomplishments, new victories.* We travel into wilderness, but our route is the right-of-way to America's destiny.

Americans are proud of the American character. They believe it to be sound and deep beyond the needs of this emergency. And may it be remembered that it is not on life's four-lane highways that character is molded.

Since the days of the pioneers the heart and sinew, the spirit and the soul, of this nation have been nourished *on the detours.* Hard work has made its people strong. As we judge by the past, we may know that *we shall gain again* by setting wheels off beaten paths to sterner ground.

As with men, so with machines! In the scene above, one of the Army's 6-wheel-drive 2½-ton INTERNATIONAL TRUCKS rides the twist course at the International proving ground. Brawn and character are bred into a truck—not on the broad and finished highway but on such a "detour" as this, where a routine hour of torture packs more punishment than many trucks meet in a working lifetime. *For the military and civilian needs of the nation, Internationals, now as always, are proved all ways for COME WHAT MAY!*

# Where the R.A.F. Failed

Continued from page 17

added up to the major British mistake of the war. I believe that the mistake lies in the fact that it is an independent unit.

We who oppose creation of a separate Air Force have always argued that the split command would intensify the inevitable confusion of war. Without the maximum collaboration between armies and navies and their supporting air forces, we have long been convinced modern fighting would be disjointed and costly. And naval pilots, we have argued, must have a good supply of Navy background, Army pilots of Army background. If trained independently, we have been certain they would have too little knowledge of either of the other services. Planes are as much a part of the land or sea unit with which they fight as are the big guns. What magnificent chaos we would have if the artillery, whether on shipboard or battlefield, were controlled by a separate organization! The R.A.F. and the Italian air force are completely independent, their pilots trained on the theory that excellence in flying is about all a flier needs to serve with credit over water or land; a high percentage even of the aviators now with the British fleet were so trained.

In July, 1940, Italian planes dumped several sticks of explosives on the warships Cavour and Cesare, of the Italian fleet. Thanks to poor marksmanship, the two ships escaped with scarcely a scratch. But on February 9, 1941, the Italian heavy cruiser Pola was badly damaged by its own air force. Purely cases of mistaken identity, which no trained seamen would commit. But they were not reserved for the Italians alone. Forty-eight hours before the Germans actually invaded Norway, R.A.F. scout planes saw transport ships churning through the North Sea. Only mildly interested in the phenomenon, they reported it through routine channels, and it finally reached the admiralty after the invasion was under way. Had the pilots been wise in naval matters, wise enough to understand what they saw, England would have known two days earlier of the German movement, and she might conceivably have changed the entire course of the Nazi invasion of Norway.

### The Help That Came Too Late

Haphazard R.A.F. participation contributed in an all-out fashion to the grimness of the battle of Crete. The handful of British planes available to defend Crete was tragically inadequate. All R.A.F. aircraft assigned to the Middle East, commanded by Air Marshall Sir Arthur Longmore, were concentrated some 300 miles away, at Mersa Matruh in Egypt. During the Nazi attack on Crete, few R.A.F. planes appeared, despite frantic appeals by both the army and navy to Mersa Matruh. Army headquarters for the area, under General Wavell, and navy headquarters under Admiral Cunningham, were at Alexandria—almost 200 miles from Mersa Matruh.

Whether the appeals were lost while being relayed hundreds of miles in all directions, or whether the R.A.F. was unable for other reasons to heed them, the fact remains that the army and navy were unable to get help, and consequently met head-on the full pulverizing force of the Nazis. Finally, when the British began evacuating the island, R.A.F. planes appeared. But most of them might almost as well never have come, because the pilots could not recognize the British ships they were s posed to escort to Alexandria.

Further disruption came when group of ships loaded with evacuees supposed to pick up its R.A.F. esco few miles off Crete. Just as it about to sail, a destroyer was pedoed and its load of battered sold had to be transferred to other sh delaying the entire group. The R. escort arrived at its rendezvous on t but the ships weren't there and it turned to Egypt. The navy tried ously to get the air group back, bu was futile and the ships, completely posed, were bombed two thirds of way to Alexandria—hours of pure

After the whole terrible affair done, three fourths of the British n craft in the engagement were dama and a few sunk—and resentment an the evacuated soldiers was so st that R.A.F. enlisted men were forbi to be on the streets of Alexandria the rescued soldiers were disemba

### A Lucky Miss

When the Ark Royal was pursuin Bismarck in one of the epochal sea tles of the war, it carried only pilots who had any experience in operations, and three others pressed into action who had neve fore even taken off from or lande an aircraft carrier. The inexper showed up vividly at one point. Royal scouting planes picked up sound of a ship. They dropped through the clouds and let fly w torpedo. Fortunately, they missed ship was the Sheffield, a British c assigned to shadow the Bismarck.

Similarly, in a sea battle sou Sardinia, R.A.F. observation ai were constantly roaring back and in the battle area, seeing most of went on, and a Sunderland flying was in direct touch with the E flagship. But reports from the were so confusing and incomplet at no time did the naval comm know the extent to which the It were damaged, nor could he est accurately the composition, dispo speeds and courses of the Italian As a consequence, he lost a magn chance to separate the enemy fr base and destroy it—the Italian clean away, making a minor e ment of what might well have b major victory.

Time after time the R.A.F., wh trolling the coast of England, s submarines but refused to attack, taining it was the navy's duty. while, the Admiralty one day plaintive wireless from a Britis marine commander saying he in to dock "if friendly aircraft cea tacking us."

North Sea naval reconnai planes frequently found Germa sels nicely exposed to attack, b had to ask the R.A.F. bomber co to wage the fight. One high nav cial testified that such request usually futile, because the bom lots seldom could find or identi gets at sea.

Nor was all of the pathetic flou confined to naval matters. In th ern desert, the R.A.F. attacked van of vehicles, destroying consi supplies of gasoline. Too late, tackers learned they fought th troops. For want of gasoline, a of valuable tanks were stalled, the expedition. And near Ba Iraq, the R.A.F. actually attack ish ground forces. Such episod

ed to the flat statement by one anking British officer in the Mid- ast campaign: "I will not go into again unless I am able to give orders to the air squadrons allo- to my support."

final demonstrations of how in- etely co-ordinated training can air performance, let us return mo- rily to the Italian air force. On er 11, 1940, Italian planes sighted ish naval force near Sicily, head- est. The observers reported the consisted of one aircraft carrier everal destroyers. A small con- t of warships came out to attack eak force—and discovered that in there were two cruisers in the . Before the Italians could get heads from the lion's mouth, they st three ships. In another engage- Italian destroyers had painted red hite stripes running fore and aft e forecastles, and the battleships, ding to observers, flew banners "of stic dimensions" so their own fliers l be able to recognize them.

question is sure to be brought up "Why don't you talk about the ans? They too have an independ- ir force." The answer is simply he Germans do not have a separate rce. Every part of the entire Nazi achine is controlled by a central l, or military staff, of men experi- l in land, sea and air operations. general rule, naval fliers are trained rk with the navy, army fliers with rmy.

ly by ardent practice in co-ordina- with army troops can such precision ttained as that which the Nazi as show when they move forward ground troops, using bombs ed from low altitudes in place of artillery barrages of conventional methods. And similarly with the schel 126, a hedge-hopping plane d "the eyes of the Panzer divisions." Heuschel flies very close to the nd, observing and photographing y territory, occasionally bombing machine-gunning enemy positions. oth cases the planes are part of troops, just as in naval operations a carrier the planes are part of leet.

e British have profited from their akes to the extent that they have ed two major branches of their air e back to the navy. In 1938, the onsibility for operating aircraft di- y attached to the fleet was with- n from the Air Ministry and given e Admiralty. Two years later, the tal Command—charged with pa- ing and defending areas off the coast ngland—was likewise switched. But rge number of the pilots were trained inally with the R.A.F., and their rance of naval tactics and strategy caused the mistakes to continue.

### The Lesson of Matapan

ven so, the British have fared far er when the air strength worked er—and with—the branch of the ice mainly involved in any particu- engagement. The battle of Cape tapan has been publicized far and e as an example of what planes can when they click into action with great strength. But the R.A.F. had no t in Matapan. The excellent per- nance was put on solely by planes of Fleet Air Arm, taking orders from fleet commanders.

he attack on the Italian ships in harbor of Taranto was another sterly performance. In one night, the tish damaged severely two enemy tleships and two cruisers, with vir- lly no hardship to themselves. Here in, the R.A.F. had no part. The et Air Arm, with pilots trained for navy, was decisive.

A comparable situation arose on land when General Wavell made his successful offensive from Sidi Barrani to Benghazi. The planes he used were R.A.F. ships—but for the expedition they were under Wavell's command. There was no bombing of their own men and supplies on that trip.

We often hear that a unified air force would mean greater stimulation for military aviation, and would insure better equipment. Yet certainly the condition of the R.A.F. at the beginning of the war is weak testimony on both counts. We all know now the lamentable lack of British planes when the Nazis started out. Particularly scarce were flying boats and bombers, both precious to the defense of Britain.

### They Paid with Lives

Nor were there sufficient fighters for aircraft carriers. In the Mediterranean, the lack of properly controlled reconnaissance planes interfered badly with the work of British submarines. Through it all, the Fleet Air Arm complained strongly that it was getting improper supplies from the Air Ministry. Admiral of the Fleet Sir Roger Keyes summed it up when he wrote last year, "It cannot be denied today that men have paid with their lives because the government failed to provide the navy with an air service which those best qualified to judge insisted it should have."

Because of all these things, and more, not a single one of the reports I have read from our observers abroad has favored an independent air force.

There are other fundamental truths we can get from the war if we open our eyes to them. One school of aviation authorities has long been set on the idea that bombing attacks far in the rear of enemy lines could by themselves be decisive in a war. Yet for four years the Japanese have bombed China's cities promiscuously, killing thousands upon thousands of people, and the principal result has been a strengthening of Chinese morale and resistance. Likewise, the German's fierce bombing of London has united the people. Even the damage to English industrial plants, while often severe, has been far less crippling than most of us suppose.

The spectacular aspects of these wild bombing forays have been partly responsible for the suggested compromise by which the Army and Navy would retain their air arms, while another independent organization was built up. The main purpose of the new unit would be operations in which bombing and aerial fighting were done without the help of the other two services.

But it seems illogical, because we would have virtually no place to use the organization. Certainly if our mainland were attacked outright, as England's has been, the defense would be a joint proposition, with Fleet, Army and Air Force participating. If we were forced to fight in some other part of the hemisphere, it would be even more obviously a partnership. And as things stand now, it will be many years indeed before we can intelligently dispatch bombing missions to any distant point abroad.

I can speak with true authority only of the Navy, but I think it is indisputable that our fleet has the finest naval Air Force in the world. In any conceivable war we might be dragged into, it would be helpful beyond all reckoning. The British have, after a tragic series of mishaps, moved to restore naval aviation to the navy, attempting to reach a degree of our own efficiency. Why, then, should we ignore the bitter lessons learned by the British, and deliberately—under guise of "progress"—put ourselves into the position they have had to vacate?

## Two Trains of Thought

Sometimes we think Diesel-Liners are better for a certain purpose. Sometimes we think Steam-Liners are better. We play no favorites. We have no preferences. We make no snap judgments. We study each problem separately, and come up with our answer. Sometimes it's a Diesel-Liner. Sometimes it's a Steam-Liner. Whichever it is, we build it. It will do the job it was intended to do. And it will be one of the world's finest, most modern locomotives.

ell's ball—fourth down!" he shouted.

devil you say," Lou Young, Dartmouth's captain, have cried in some heat.

devil I don't," is the reported Friesell answer.

ll scored on the next pass and walked off with a ry.

the motion pictures of the game were run, it n that Cornell had scored on the fifth down and th was finally awarded the game by telegraph, andsome apology by Mr. Friesell and national ex- that was entered into by everybody but Presi- sevelt himself. The point isn't that Dartmouth tually accorded justice but that the fiasco could en avoided if the four officials had huddled on and thrashed it out. *(Continued on page 82)*

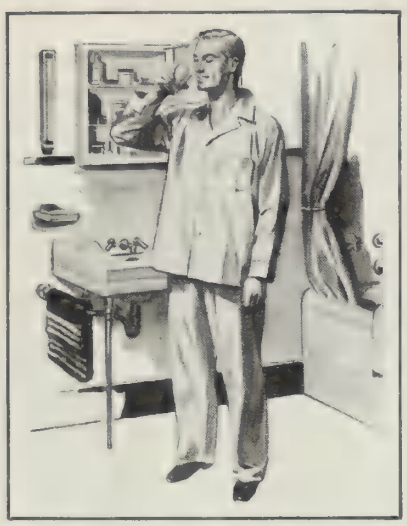
**The camera catches a referee's honest error in the Dodgers-Eagles game. Parker, Dodgers, has snagged an Eagle quick kick, but Krieger, Eagles, has run past defensive Dodger back Condit and is set to make the tackle**

**Condit, who had been caught flat-footed on the play, comes up and clips Krieger from behind. Referee Friesell, away from the play, noted clipping**

**falling, lands with his legs atop Condit. Ref- esell, apparently basing his decision on that fact, Krieger and not Condit had committed the clip- d penalizes the Eagles. When Coach Neale pro- e ruling, he drew an additional 15-yard penalty**

## Frank loses his law case

**FRANK NEEDS A LAXATIVE;** but he's got to try a case in court this morning; he doesn't know about quick-acting Sal Hepatica.



He postpones taking anything, postpones badly needed relief.

**FRANK IS SO TROUBLED** by constipation symptoms that he loses his temper—and loses the case.

Head aching, thoroughly uncomfortable, he hears the unfavorable verdict.

## Bert wins his plea

**BERT NEEDS A LAXATIVE;** he's got to go to court this morning, too.

But he doesn't put off till tonight the laxative he should take this morning. He takes gentle, speedy Sal Hepatica.

**RELIEVED AND FEELING** more like himself—Bert wins his case.

Sal Hepatica worked quickly, gently, thoroughly; helped turn his sour stomach sweet again, too.

## Whenever you need a laxative —take *speedy* Sal Hepatica

WHEN YOU FEEL the need of a laxative, don't delay: take speedy Sal Hepatica. It usually acts within an hour. Acts in a natural way, without discomfort or griping; acts gently by attracting needed liquid bulk to the intestinal tract.

No wonder 3 out of 5 physicians, recently interviewed, recommend Sal Hepatica. Try this speedy, sparkling saline the very next time you need a laxative!

Sal Hepatica—keep in mind—does something more. It is decidedly helpful in counteracting excess gastric acidity. Helps turn a sour stomach sweet again.

## SAL HEPATICA

# Murder in Retrospect

**Continued from page 21**

It was very hot that morning if one was out of the wind, and the house and terrace were sheltered. Mrs. Crale suggested they might like some iced beer.

There was a little conservatory which had been built onto the house in Victorian days. Mrs. Crale disliked it, and it was not used for plants, but it had been made into a kind of bar, with various bottles of gin, vermouth, lemonade, ginger beer, etc., on shelves, and a small refrigerator which was filled with ice every morning and in which some beer and ginger beer were always kept.

Mrs. Crale went there to get the beer and I went with her. Angela was at the refrigerator and was just taking out a bottle of beer.

Mrs. Crale went in ahead of me. She said, "I want a bottle of beer to take down to Amyas."

It is so difficult now to know whether I ought to have suspected anything. Her voice, I feel almost convinced, was perfectly normal. But I must admit that at that moment I was intent, not on her, but on Angela. Angela was by the refrigerator and I was glad to see that she looked red and rather guilty.

I was rather sharp with her, and to my surprise she was quite meek. I asked her where she had been and she said she had been bathing. I said, "I didn't see you on the beach." And she laughed. Then I asked her where her jersey was, and she said she must have left it down on the beach.

I mention these details to explain why I let Mrs. Crale take the beer down to the Battery Garden.

The rest of the morning is quite blank in my mind. Angela fetched her needle book and mended her skirt without any more fuss. I rather think that I mended some of the household linen. Mr. Crale did not come up for lunch. I was glad that he had at least *that* much decency.

After lunch, Mrs. Crale said she was going down to the Battery. I wanted to retrieve Angela's jersey from the beach. We started down together. She went into the Battery; I was going on when her cry called me back. As I told when you came to see me, she aske to go up and telephone. On the wa I met Mr. Meredith Blake and I back to Mrs. Crale.

That was my story as I told it a inquest and later at the trial.

What I am about to write down I never told to any living soul. I wa asked any question to which I ret an untrue answer. Nevertheless, guilty of withholding certain facts. not repent of that. I would do it ag am fully aware that in revealin I may be laying myself open to ce but I do not think that after this of time anyone will take the matte seriously, especially since Ca Crale was convicted without m dence.

THIS, then, is what happened: I met Mr. Meredith Blake as and I ran down the path again as q as I could. I was wearing sand and I have always been light on m I came to the open Battery do this is what I saw:

Mrs. Crale was busily polishi beer bottle on the table with her kerchief. Having done so, she to dead husband's hand and press fingers of it on the beer bottle. time she was listening and on th It was the fear I saw on her fa told me the truth.

I knew then, beyond any p doubt, that Caroline Crale had p her husband. And I, for one, blame her. He drove her to a p yond human endurance, and he his fate upon himself.

I never mentioned the incident Crale and she never knew that seen it take place. I would nev mentioned it to anybody, but one person who I think has to know.

Caroline Crale's daughter m bolster up her life with a lie. H much it may pain her to know t truth is the only thing that matt

Tell her, from me, that her m not to be judged. She was dri

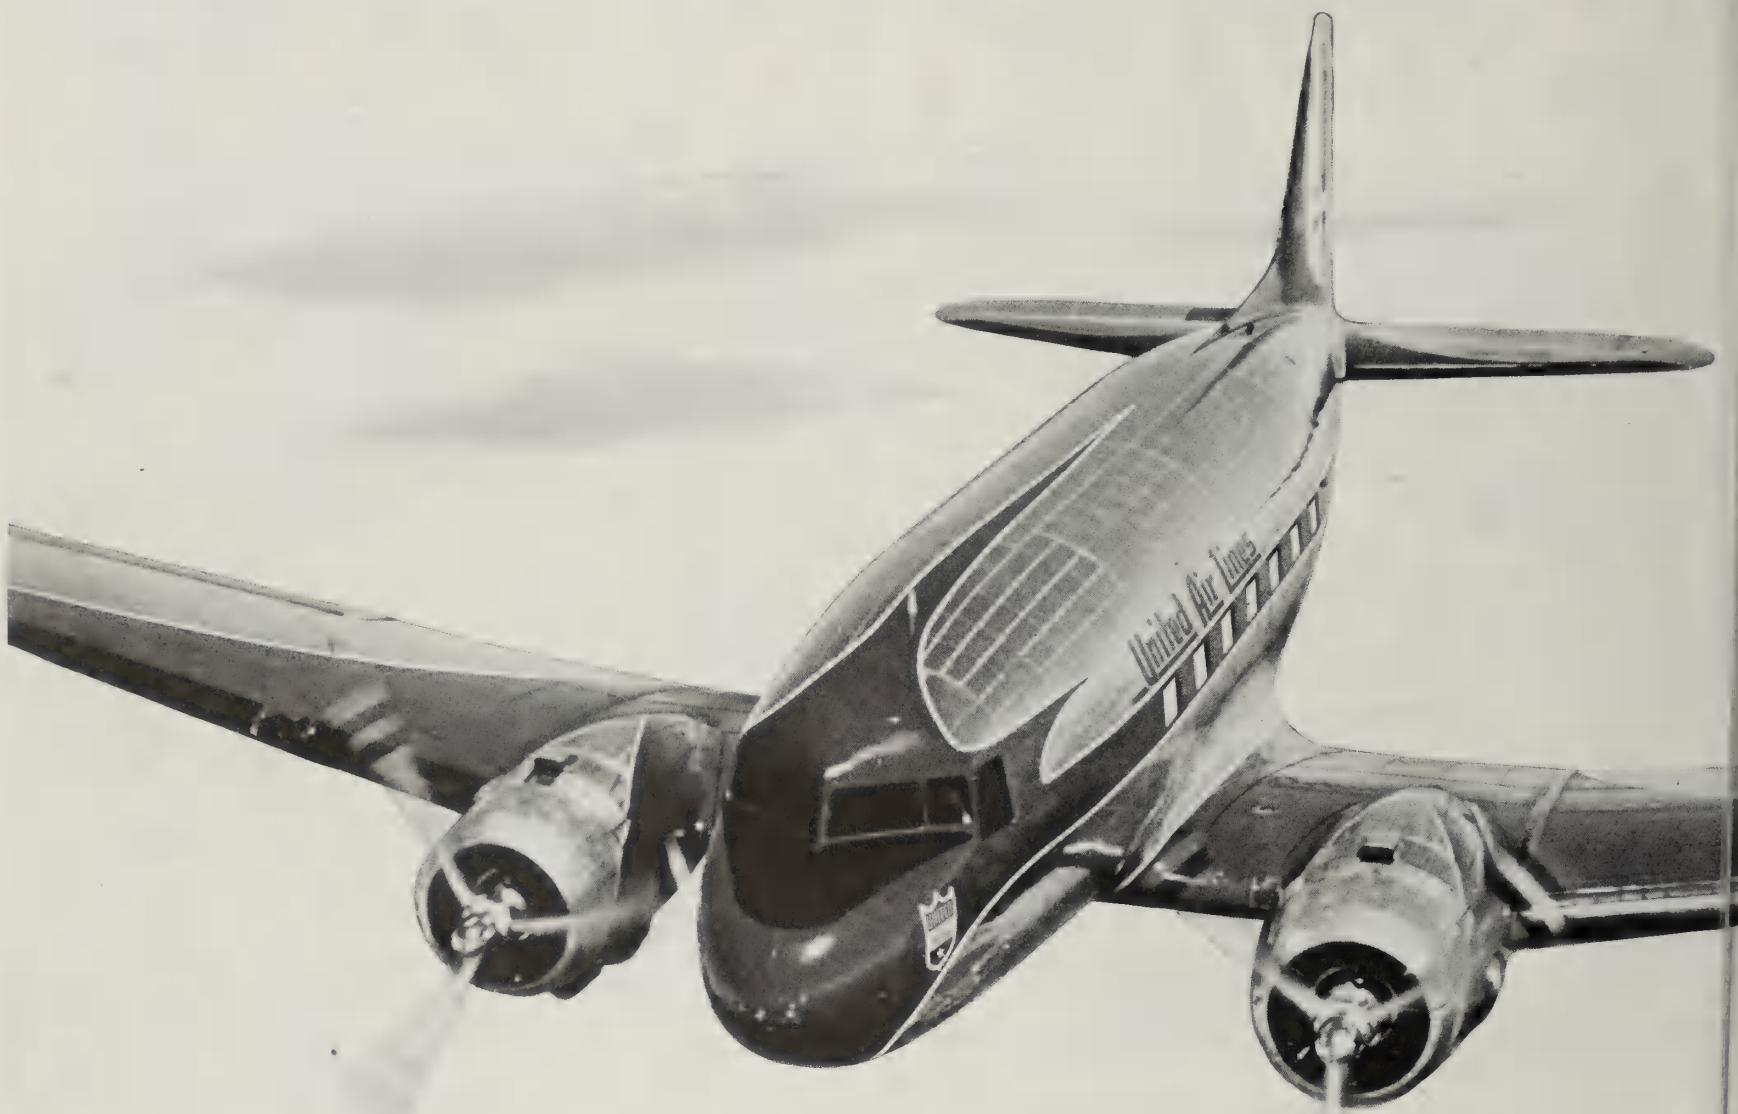
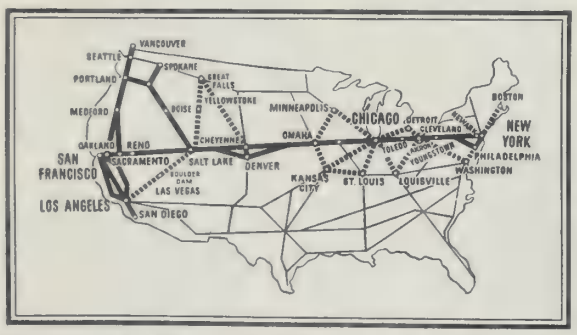
# Defense Flight—over the Business Route of the Nation

STREAKING across the sunlit sky a giant plane of commerce is uniting *in record time* the busiest markets of the nation.

Over a route that once heard the creak of prairie wagons and the clickety-clack of the first transcontinental train, the reassuring drone of the airplane now sounds by day and by night.



For the Overland Trail, the straight, central way across the continent, now more than ever is the nation's life-line of trade—the Business Route!



Passenger, mail and express volume moving over United's Main Line Airway is the greatest in the history of any long-distance air route. Men and women, traveling on the nation's business, must count every hour—and are riding the skyways to save time.

These men and women cut corners by going *direct*. The Main Line Airway serves the heart of the industrial East; sleepless factories of the Great Lakes region; the Mid-West market-basket; every major production center on the Pacific Coast.

So strategically planned is the year-round Line Airway that every important city in the U States is within 24 hours of your home. Be the East and Mid-West and the Pacific Coa can go one way, return another, at rates th lower than you think.

Take your business to the Main Line skies Business Route of the nation. By sunlit d under the midnight stars, United's 40,000 c coast flights ride with you!

**Year round,** the natural way east and west. Straight across the continent runs United's Main Line Airway, the historic coast-to-coast route. This strategic airway connects the country's important cities by fast schedules.

**Chief population centers** of the country are bridged by United Air Line's all-year air routes. A great proportion of all defense orders is placed in cities within two hundred miles either side of United's Main Line Airway.

…d what a loving woman can endure. …is for her daughter to understand …d forgive.

*(End of Cecilia Williams' Narrative)*

NARRATIVE OF ANGELA WARREN

…EAR M. Poirot

I am keeping my promise to you and …ve written down all I can remember that terrible time sixteen years ago. …t it was not until I started that I real…d how very little I *did* remember. …til the thing actually happened, you …, there is nothing to fix anything by. The very first intimation I had of the …ole thing was what I overheard from … terrace where I had escaped after …ch one day. Elsa said she was going … marry Amyas! It struck me as just …iculous. I remember tackling Amyas …out it. In the garden at Handcross it …s. I said to him:

"Why does Elsa say she's going to …rry you? She couldn't. People can't …ve two wives—it's bigamy and they … to prison."

Amyas got very angry and said, "How … devil did you hear that?"

I said I'd heard it through the library …ndow.

He was angrier than ever then and …d it was high time I went to school …d got out of the habit of eavesdrop…ng.

I still remember the resentment I felt …en he said that. Because it was so *…fair.* Absolutely and utterly unfair. I stammered out angrily that I hadn't …en listening—and, anyhow, I said, why …d Elsa say a silly thing like that?

Amyas said it was just a joke.

That ought to have satisfied me. It …d—almost, but not quite.

I said to Elsa when we were on the …ay back, "I asked Amyas what you …eant when you said you were going to …arry him and he said it was just a …ke."

I felt that ought to snub her. But she …ly smiled.

I didn't like that smile of hers. I went … to Caroline's room. It was when she …as dressing for dinner. I asked her …en outright if it were possible for Am…as to marry Elsa.

I remember Caroline's answer as …ough I heard it now. She must have …oken with great emphasis. "Amyas …ill marry Elsa only after I am dead," …e said.

That reassured me completely. Death …emed ages away from us all.

I don't remember much about the …fternoon at Meredith Blake's, although … *do* remember his reading aloud the …assage from the Phaedo, describing …ocrates' death. I had never heard it be…ore. I thought it was the loveliest, most …eautiful thing I had ever heard.

I don't remember much that hap…ened the next morning either, though I …ave thought and thought. I've a vague …eeling that I must have bathed, and I …hink I remember being made to mend …omething.

But it's all very vague and dim till the …me when Meredith came panting up …he path from the terrace and his face …as all gray and queer. I remember a …offee cup falling off the table and being …roken—Elsa did that. And I remember …er running—suddenly running for all …he was worth down the path—and the …wful look there was on her face.

I kept saying to myself, "Amyas is …ead." But it just didn't seem real.

I remember Dr. Faussett coming and … is grave face. Miss Williams was busy …ooking after Caroline. I wandered …bout rather forlornly, getting in peo…le's way. I had a nasty, sick feeling.

Miss Williams took me into Caroline's …oom later. Caroline was on the sofa. …he looked very white and ill.

She kissed me and said she wanted …e to go away as soon as I could, and it was all horrible, but I wasn't to worry or think about it any more than I could help. I was to join Carla at Lady Tressilian's, because this house was to be kept as empty as possible.

I clung to Caroline and said I didn't want to go away. I wanted to stay with her. She said she knew I did, but it was better for me to go away and would take a lot of worry off her mind. And Miss Williams chipped in and said, "The best way you can help your sister, Angela, is to do what she wants you to do without making a fuss about it."

So I said I would do whatever Caroline wished. And Caroline said, "That's my darling Angela." And she hugged me and said there was nothing to worry about.

I had to go down and talk to a police superintendent. He was very kind, asked me when I had last seen Amyas, and … lot of other questions which seemed to me quite pointless at the time, but which, of course, I see the point of now. He satisfied himself that there was nothing that I could tell him which he hadn't already heard from the others. So he told Miss Williams that he saw no objection to my going over to Ferrilby Grange to Lady Tressilian's.

I went there and Lady Tressilian was very kind to me. But, of course, I soon had to know the truth. They arrested Caroline almost at once. I was so horrified and dumfounded that I became quite ill.

I heard afterward that Caroline was terribly worried about me. It was at her insistence that I was sent out of England before the trial came on. But that I have told you already.

As you see, what I have to put down is pitiably meager. Since talking to you I have gone over the little I remember painstakingly, racking my memory for details of this or that person's expression or reaction. I can remember nothing consistent with guilt. Elsa's frenzy, Meredith's gray worried face, Philip's grief and fury—they all seem natural enough. I suppose, though, someone *could* have been playing a part.

I only know this, *Caroline did not do it.*

I am quite certain on this point and always shall be, but I have no evidence to offer except my own intimate knowledge of her character.

*(End of Angela Warren's Narrative)*

CARLA LEMARCHANT looked up. Her eyes were full of fatigue and pain. She pushed back the hair from her forehead in a tired gesture.

She said, "It's so bewildering, all this." She touched the pile of manuscripts. "Because the angle's different every time! Everybody sees my mother differently. But the facts are the same. Everyone agrees on the facts."

"It has discouraged you, reading them?"

"Yes. Hasn't it discouraged you?"

"No, I have found those documents very valuable—very informative." He spoke slowly and reflectively.

Carla said, "I wish I'd never read them!"

Poirot looked across at her. "Ah—so it makes you feel that way?"

Carla said bitterly, "They all think she did it—all of them except Aunt Angela, and what she thinks doesn't count. She hasn't got any reason for it. She's just one of those loyal people who'll stick to … thing through thick and thin. She just goes on saying, 'Caroline couldn't have done it.'"

"It strikes you like that?"

"How else should it strike me? I've realized, you know, that if my mother didn't do it, then one of these five people must have done it. I've even had theories as to why?"

"Ah? That is interesting. Tell me."

"Oh, they were only theories. Philip

## Pilots Are Push-overs!

**LADIES AND GENTLEMEN,** this is Test Pilot Rufus Harechest, as audacious an airman as you can ever hope to meet. And this is his adoring wife named Anne. The scene of our little drama is the Harechest home in the early morning. Curtain!

**"MY DEAR,"** says our hero, assuming his most determined look, "never take halfway measures with life's little difficulties. The tougher the remedy the surer the cure." And he praises the merits of a good strong *purge.*

**"WONDERFUL MALE LOGIC!"** says Anne. "Blast away at trouble with both fists, eh? Why don't you use the same finesse on the ground you're supposed to have in the air? Did it ever occur to you to find and correct the *cause* of the matter?"

**"NOW WHAT** does teacher suggest?"

"Just a crisp, toasted breakfast cereal, KELLOGG'S ALL-BRAN. It has just what it takes to *get at the cause* of constipation due to lack of proper 'bulk' in the diet."

**"HEY!" SAYS THE HERO.** "This tastes like a million! If ALL-BRAN can make me join the 'regulars,' I'm enlisting right now!"

"But remember," says Anne. "Eat it every day and drink plenty of water."

## Join the "Regulars" with Kellogg's All-Bran

KEEP THE HOME FIRES BURNING...
BUT NOT THE *Toast*

When the lads come home from camp or cruise, they'll fetch man-size appetites with them. So be prepared for home defense! Surprise them with a *Toastmaster* Toast 'n Jam* Set—watch faces light up and toast go down! There's nothing like *Toastmaster* toast—toasted *automatically,* timed to a split second, and popped up, piping hot and perfect. No watching, no turning—no burnt, wasted slices, no wasted current!

Dietitians declare that toast is bread in its most digestible and appetite-stimulating form. And *Toastmaster* toast, buttered and spread with jam or marmalade from the gay-colored Franciscan ware jars, is almost a breakfast in itself!

Let this Toast 'n Jam Set be your joy and comfort! With 2-slice automatic toaster, jam jars, toast plate, and walnut tray, it's forever useful—morning, noon, and night. See it, and other *Toastmaster** products, wherever fine appliances are sold.

TWO GOOD INVESTMENTS!

United States Defense Savings Bonds and Stamps—for safety and freedom in the years ahead.

Quality merchandise, like a *Toastmaster* toaster—for economy and performance in the years to come.

TOASTMASTER *Toast 'n Jam Set*

*"TOASTMASTER" and "TOAST 'N JAM" are registered trademarks of MCGRAW ELECTRIC COMPANY, Toastmaster Products Division, Elgin, Illinois • Copyright 1941, McGraw Electric Company • Prices and specifications subject to change without notice.

Blake, for instance. He's a stockbroker, he was my father's best friend—probably my father trusted him. And artists are usually careless about money matters. Perhaps Philip Blake was in a jam and used my father's money. He may have got my father to sign something. Then the whole thing may have been on the point of coming out—and only my father's death could have saved him. That's one of the things I thought of."

"Not badly imagined at all. What else?"

"Well, there's Elsa. Philip Blake says here she had her head screwed on too well to meddle with poison, but I don't think that's true at all. Supposing my mother had gone to her and told her that she wouldn't divorce my father—that nothing would induce her to divorce him. You may say what you like but I think Elsa had a bourgeois mind—she wanted to be respectably married. I think that then Elsa would have been perfectly capable of pinching the stuff—she had just as good a chance that afternoon—and might have tried to get my mother out of the way by poisoning her. I think that would be quite *like* Elsa. And then, possibly, by some awful accident, Amyas got the stuff instead of Caroline."

"Again it is not badly imagined. What else?"

Carla said slowly, "Well, I thought—perhaps—*Meredith!*"

"Ah! Meredith Blake?"

"Yes. You see, he sounds to me just the sort of person who would do a murder. I mean, he was the slow, dithering one the others laughed at, and underneath, perhaps, he resented that. Then my father married the girl he wanted to marry. And my father was successful and rich. And Meredith did make all those poisons! Perhaps he really made them because he liked the idea of being able to kill someone one day. He had to call attention to the stuff being taken so as to divert suspicion from himself. But he himself was far the most likely person to have taken it. He might, even, have liked getting Caroline hanged—because she turned him down long ago. I think, you know, it's rather fishy what he says in his account of it all—how people do things that aren't characteristic of them. Supposing he meant *himself* when he wrote that?"

Hercule Poirot said: "You are at least right in this—not to take what has been written down as necessarily a true narrative. What has been written may have been written deliberately to mislead."

"Oh, I know. I've kept that in

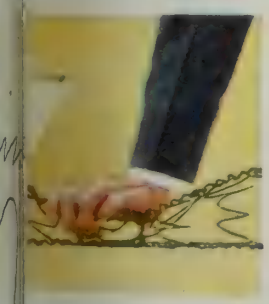
**"Oh, by the way, you don't mind going without bread do you, darling? The stupid grocer sent the unsliced kind!"**

**HEAD ACHES AND PAINS DRIFT AWAY?** When, at the end of a hard day, you lay your tired ...wn on a Beautyrest . . . there comes over you a feeling of rest and relaxation so complete that your legs and arms and elbows and fingers no longer seem part of you. Like magic, your bodily cares seem to dissolve into thin air. This is *luxury* comfort. Only Beautyrest gives it.



# *Better read this before you buy a mattress*

### 1. Are you an uphill sleeper?

If you're the lighter partner in a double bed, you know what we mean by "uphill" sleeping. The heavier person often forms a "valley" in the bed, and you spend your nights on its slope. The mattress that gives you this rest-robbing experience may *look* comfortable, but looks tell you *nothing*.

For mattress comfort comes from the inside. And there are two main types of mattress "insides" —the ordinary type and the Beautyrest.

### 2. Springs are joined in other mattresses

Tear back the cover and padding of the *ordinary* mattress and here's what you find—the springs are all joined together. When you push one down, the others around it must go down, too. Since the springs are not free to yield separately, the whole mattress must slope toward the spot where your greatest weight lies.

In contrast to the "sag" support this kind of mattress gives, see how the *Beautyrest* operates...

### 3. But Beautyrest's 837 coils are separate!

The "heart" of the *Beautyrest* is 837 resilient coils, each in its own muslin pocket. They are *not* joined together! When you push one down, its neighbors stand erect and even—as when you walk through a field of grain. The Beautyrest *cradles* every tired inch of you. However you lie or turn, it conforms exactly to the natural contours of your body.

That's *buoyant* support. It's the secret of Beautyrest's *luxury* comfort.

### 4. Can a 10-year guarantee be conservative?

Beautyrest's can! Listen to this. That famous independent laboratory, the United States Testing Co., chose 17 leading makes for their Certified Test #11760. Each was subjected to the same grueling treatment on Mattress Endurance Machines.

The Beautyrest lasted *three times longer* than even the next best make! No wonder we promise to rebuild your Beautyrest free of charge, if any structural defect occurs within ten full years.

### 5. Beautyrest stays "fresh" inside, neat outside

The Beautyrest has eight *working* ventilators around its deep sides! Put your hand over one as you sit on a Beautyrest. Feel the air come breathing out, to be drawn back in again as you rise. This keeps the Beautyrest fresh and sanitary inside.

Lumps and hollows just won't form on a Beautyrest. And a patented "sag-proof" border keeps the edges firm and even, always. So, you have to turn your Beautyrest only 4 or 5 times a year!

THE NEW
**Beautyrest**
REG. U.S. PAT. OFF.

e say, was not entirely frank."
e hardened. "I have been in-
Mr. Blake, that on at least one
ring the summer Mrs. Crale was
ning out of your room at a some-
mpromising hour."
was a silence broken only by
Blake's heavy breathing. He said
"Who told you that?"
ule Poirot shook his head. "It is
ter who told me. That I *know,*
the point."
there was a silence, then Philip
nade up his mind. He said, "By
t, it seems, you have stumbled
purely private matter. I admit
does not square with what I have
down. Nevertheless, it squares
than you might think. I am
now to tell you the truth.

"I *did* entertain a feeling of animosity toward Caroline Crale. At the same time I was always strongly attracted by her. Perhaps the latter fact induced the former. I resented the power she had over me and tried to stifle the attraction she had for me by constantly dwelling on her worst points. I never *liked* her, if you understand. But it would have been easy at any moment for me to make love to her. I had been in love with her as a boy and she had taken no notice of me. I did not find that easy to forgive.

"My opportunity came when Amyas lost his head so completely over the Greer girl. Quite without meaning to, I found myself telling Caroline I loved her. She said quite calmly, 'Yes, I have always known that.' The insolence of the woman!

"Of course, I knew that she didn't love me, but I saw that she was disturbed and disillusioned by Amyas' present infatuation. That is a mood when a woman can very easily be won. She agreed to come to me that night. And she came."

Blake paused. He found now a difficulty in getting the words out. "She came to my room. And then, with my arms around her, she told me quite coolly that it was no good! After all, she said, she was a one-man woman. She was Amyas Crale's, for better or worse. She agreed that she had treated me very badly, but she said she couldn't help it. She asked me to forgive her.

"And she left me. *She left me!* Do you wonder, M. Poirot, that my hatred of her was heightened a hundredfold? Do you wonder that I have never forgiven her? For the insult she did me, as well as for the fact that she killed the friend I loved better than anyone in the world!"

Trembling violently, Philip Blake exclaimed:

"*I don't want to speak of it,* do you hear. You've got your answer. Now go! And never mention the matter to me again!"

"I want to know, Mr. Blake, the order in which your guests left the laboratory that day."

Meredith Blake protested: "But, my dear M. Poirot—after sixteen years! How can I possibly remember? I've told you that Caroline came out last."

"You are *sure* of that?"

"Yes—at least—I think so. . . ."

"Let us go there now. We must be *quite* sure, you see."

Still protesting, Meredith Blake led the way. He unlocked the door and swung back the shutters. Poirot spoke to him authoritatively: "Now then, my friend. You have showed your visitors your interesting preparations of herbs. Shut your eyes and think."

Meredith Blake did so obediently. Poirot drew a handkerchief from his pocket and gently passed it to and fro. Blake murmured, his nostrils twitching slightly: "Yes, yes—extraordinary how things come back to one! Caroline, I remember, had on a pale coffee-colored dress. Phil was looking bored. . . . He always thought my hobby was quite idiotic."

"Reflect now," Poirot said. "You are about to leave the room. You are going to the library, where you are going to read the passage about the death of Socrates. Who leaves the room first—do you?"

"Elsa and I—yes. She passed through the door first. I was close behind her. We were talking. I stood there waiting for the others to come, so that I could lock the door again. Philip—yes, Philip came out next. And Angela—she was asking him what bulls and bears were. They went on through the hall. Amyas followed them. I stood there waiting still—for Caroline, of course."

"So you are quite sure Caroline stayed behind. Did you see what she was doing?"

Blake shook his head. "No, I had my back to the room, you see. I was talking to Elsa—boring her, I expect—telling her how certain plants must be gathered at the full of the moon, according to old superstition. And then Caroline came out—hurrying a little—and I locked the door."

He stopped and looked at Poirot, who was replacing a handkerchief in his pocket. Meredith Blake sniffed disgustedly and thought, "Why, the fellow actually uses *scent!*" Aloud he said: "I am quite sure of it. That was the order: Elsa, myself, Philip, Angela and Caroline. Does that help you at all?"

Poirot said: "It all fits in. Listen: I want to arrange a meeting here. It will not, I think, be difficult. . . ."

"WELL?"

Elsa Dittisham said it almost eagerly—like a child.

Poirot said, "I want to ask you a question, madame."

"Yes?"

Poirot said, "After it was all over—the trial, I mean—did Meredith Blake ask you to marry him?"

Elsa stared. She looked contemptuous, almost bored. "Yes—he did. Why?"

"Were you surprised?"

"Was I? I don't remember."

"What did you say?"

Elsa laughed. She said, "What do you think I said? After *Amyas*—Meredith? It would have been ridiculous! It was stupid of him. He always was rather stupid."

She smiled suddenly.

"He wanted, you know, to protect me—to 'look after me,' that's how he put it! He thought, like everybody else, that the assizes had been a terrible ordeal for me. And the reporters! And the booing crowds! And all the mud that was slung at me."

She brooded a minute. Then she said, "Poor old Meredith! Such an ass!" And laughed again.

Once again Hercule Poirot encountered the shrewd, penetrating glance of

# *Jockey* Longs

REG. U. S. PAT. OFF.

Jockey Over-Knee
For scratchy tweeds.

Jockey Midway
Squirm-free comfort for ordinary wear.

Jockey Bellin
A trim, youthful waist line for dress-up occasions.

Jockey Short
For summer sports.

America's top experts on physical conditioning say that when it comes to keeping your resistance up during cold weather, a light covering next your skin is worth a bulky overcoat. The smart way to get that is with Jockey Longs . . . because whether you're lean as a minute steak or beefy as a Minnesota tackle, this garment will fit you. Made from fabric knitted to mold itself to your form, Jockey Longs are also tailored to your calf, ankle, hip and waist measurements. Furthermore, like all Jockey garments, they incorporate the famous, inverted *Y-front to provide masculine support and buttonless freedom from squirm, creep, bunch or bind. Jockey Longs are available in all weights from lightweight cotton to wool. Get a pair for those occasions when you're going to be exposed to cold. Matching shirts are contoured shorter in front to avoid bunching, longer in back to keep them in place. Children's sizes down to 4 years.

"Quality Corner"—Better stores offer Jockey in Rayon, mercerized cotton, linen and cotton, wool and cotton mixtures and the new elastic super-textile, Coopreme.

EASY TO REMEMBER *Jockey* REG. U. S. PAT. OFF.

That you may be sure of getting genuine Jockey, the name Jockey appears on the label of every garment made by Coopers and Jockey merchants are identified by the statue displayed in their windows or on their counters. Be sure to look for both whenever you buy underwear.

Miss Williams, and once again felt the years falling away and himself a meek and apprehensive little boy.

There was, he explained, a question he wished to ask.

Miss Williams intimated her willingness to hear what the question was.

Poirot said slowly, picking his words carefully:

"Angela Warren was injured as a very young child. Mrs. Crale threw a paperweight at her. Is that right?"

Miss Williams replied, "Yes."

"Who was your informant?"

"Angela herself. She volunteered the information quite early."

"What did she say exactly?"

"She touched her cheek and said: 'Caroline did this when I was a baby. She threw a paperweight at me. Never refer to it—will you?—because it upsets her dreadfully.' "

"Did Mrs. Crale herself ever mention the matter to you?"

"Only obliquely. She assumed that I knew the story. I remember her saying once, 'I know you think I spoil Angela, but, you see, I always feel there is nothing I can do to make up to her for what I did.' And on another occasion she said, 'To know you have permanently injured another human being is the heaviest burden anyone could have to bear.' "

"Thank you, Miss Williams. That is all I wanted to know."

POIROT slowed up a little as he approached the big block of flats overlooking Regent's Park. Really, when he came to think of it, he did not want to ask Angela Warren any questions at all. The only question he did want to ask her could wait. . . .

No, it was really only his insatiable passion for symmetry that was bringing him here. Five people—there should be five questions! It was neater so. It rounded off the thing better.

Angela Warren greeted him with something closely approaching eagerness. She said: "Have you found out anything? Have you got anywhere?"

Slowly Poirot nodded his head in his best China mandarin manner. "At last I make progress," he said.

"Philip Blake?" It was halfway between statement and a question.

"Mademoiselle, I do not wish to say anything at present. The moment has not yet come. What I will ask of you is to be so good as to come down to Handcross Manor. The others have consented."

She said, with a slight frown: "What do you propose to do? Reconstruct something that happened sixteen years ago?"

"See it, perhaps, from a clearer angle. You will come?"

"Oh, yes, I'll come," Angela Warren said slowly. "It will be interesting to see all those people again. I shall see *them* now, perhaps, from a clearer angle (as you put it) than I did then."

"And you will bring with you the letter that you showed me?"

Angela Warren frowned. "That letter is my own. I showed it to you for a good and sufficient reason, but I have no intention of allowing it to be read by strange and unsympathetic persons."

"But you will allow yourself to be guided by me in the matter?"

"I will do nothing of the kind. I will bring the letter with me, but I shall use my own judgment, which I venture to think is quite as good as yours."

Poirot spread out his hands in a gesture of resignation. He got up to go. He said, "You permit that I ask one little question?"

"What is it?"

"At the time of the tragedy, you had lately read—had you not?—a life of the painter Gaugin."

Angela stared at him. Then she said, "I believe—why, yes, that is quite tru She looked at him with frank curiosi "How did you know?"

"I want to show you, mademoise that even in a small, unimportant m ter I am something of a magician. Th are things I know without having to told."

THE afternoon sun shone into the l oratory at Handcross Manor. So easy chairs and a settee had b brought into the room, but they ser more to emphasize its forlorn asp than to furnish it.

Slightly embarrassed, pulling at mustache, Meredith Blake talked Carla in a desultory way. He broke once to say, "My dear, you are v like your mother—and yet unlike too."

Carla asked, "How am I like her how unlike?"

"You have her coloring and her of moving, but you are—how shall I it—more *positive* than she ever w

Philip Blake, a scowl creasing forehead, looked out of the window drummed impatiently on the pane. said: "What's the sense of all this perfectly fine Saturday afternoon—

Hercule Poirot hastened to pou on troubled waters:

"Ah, I apologize—it is, I know, pardonable to disarrange the golf. M. Blake, this is the daughter of best friend. You will stretch a poin her, will you not?"

The butler announced, "Miss V ren."

Meredith went to welcome her. said: "It's good of you to spare the Angela. You're busy, I know."

He led her over to the window.

Carla said, "Hullo, Aunt Angel read your article in the Times this n ing. It's nice to have a distingu relative." She indicated the tall, sq jawed young man with the steady eyes. "This is John Rattery. He an hope—to be married."

Angela Warren said, "Oh!—I know . . ."

Meredith went to greet the nex rival.

"Well, Miss Williams, it's a many years since we met."

THIN, frail and indomitable, the elderly governess advanced u the room. Her eyes rested thoughtful on Poirot for a minute, then they w to the tall, square-shouldered figure the well-cut tweeds.

Angela Warren came forward to eet her and said with a smile, "I feel e a schoolgirl again."

"I'm very proud of you, my ar," said Miss Williams. "You've do credit. This is Carla, I suppose. She won't remember me. She wa too young. . . ."

Philip Blake said fretfully, "W t is all this? Nobody told me—"

Hercule Poirot said: "I call it— e— an excursion into the past. Shall not all sit down? Then we shall be ad when the last guest arrives. And then she is here we can proceed to our usiness—to lay the ghosts."

Philip Blake exclaimed: "Wha om-foolery is this? You're not going t hold a *séance*, are you?"

"No, no. We are only going t discuss some events that happene long ago—to discuss them and, perha s, to see more clearly the course of the . As to the ghosts, they will not mate ialize but who is to say they are not h e, in this room, although we cannot see hem. Who is to say that Amyas and C oline Crale are not here—listening?"

Philip Blake said, "Absurd non-sense—" and broke off as th door opened again and the butler ann nced Lady Dittisham.

# HISTORY IS REPEATING ITSELF!

**The success of the original Hudson Super-Six . . . a car war-born and ahead of its time in performance, economy and long life . . . is still remembered. Now after a quarter-century of development and advancement, another new car is getting a warm welcome from buyers who are again looking for a car they can depend on throughout a period of emergency . . . the new 1942 Hudson Super-Six, on display today at all Hudson dealers!**

EVEN today, countless people remember the original Hudson Super-Six with an affectionate loyalty that few, if any, other automobiles ever enjoyed.

It served them well and economically; in every way it met the requirements of those unusual times.

Now—as in 1916—most people are buying their new cars with unusual care; they expect to drive them for a longer time than usual. Now, as then, economy takes on new importance. And again there is a great new Hudson Super-Six to meet their needs!

*Come and Try the New*
**HUDSON**
***DRIVE-MASTER****

*Easiest of All Ways to Drive!*
*No Gear-Shifting . . . No Clutch-Pushing!*

**Available at low extra cost on all 1942 Hudsons (and worth many times what it costs)*

Naturally, a quarter-century of engineering progress has brought revolutionary advancements to the Super-Six. The latest—and perhaps greatest—is Hudson's new Drive-Master. Double carburetion adds greatly both to performance and economy. Double-Safe Brakes contribute to safer driving; conditioned air ventilating and heating to healthful comfort the year round; Airfoam Seat Cushions to restful relaxation. These are just a few — plus the new beauty of Symphonic Styling.

The *number* of these new Hudsons to be built is limited by the requirements of defense production, in which Hudson is extensively engaged. In *quality,* they maintain the high standards established during Hudson's 32 years of engineering leadership.

We think you will be surprised at the low price of the new 1942 Hudson Super-Six. Your nearest Hudson dealer wants you to know that you will be most welcome to come in, look, ask questions and drive a Super-Six today. This year — of all years — it will pay you to shop carefully — and early.

***Also on Display — New Hudson Commodore Six and Eight; and New Hudson Six (priced among 1942's lowest)***

NEW 1942

# Captains All

Continued from page 15

the sand underfoot no less than furnace-like. But he saw the speck.

An hour later, it was barely a mile away. The improbability continued. It was not a ship. Not even a galleon of the Dons, or a *guardacostas* which would eagerly have rescued him to enliven a Spanish holiday by his execution. It was a ship's boat. An open boat with a single mast and a scrap of square sail, with a solitary man lolling in its stern sheets. This man made aimless gestures to himself as his boat rose and fell on the tall blue waves. He seemed to be singing lustily, but it was minutes before Captain Morgan could realize the truth. The man in the boat was drunk. Roaring drunk. Singing drunk, sailing all alone in a ship's boat a full fifty leagues from any useful shore.

Captain Morgan's profanity grew impassioned once more as his frantic shouts and caperings went unregarded. Then his luck changed. The man in the boat—he was short and fat and bull-like of build—bent unsteadily forward. He straightened up with a drinking cup, apparently, in his hands. He gulped. And then a surging of the boat toppled him sidewise and bumped him smartly against the gunwale. He grasped it with both hands to steady himself. The badly trimmed boat swung downwind. Its motion became that of an unruly horse. The tiller jerked this way and that, totally eluding the fumbling, besotted gestures of the fat man as he attempted to recapture it.

He fell clumsily upon it as Captain Morgan roared from the beach:

"Starb'd y'helm, y'fool! Clear the point an' come about—"

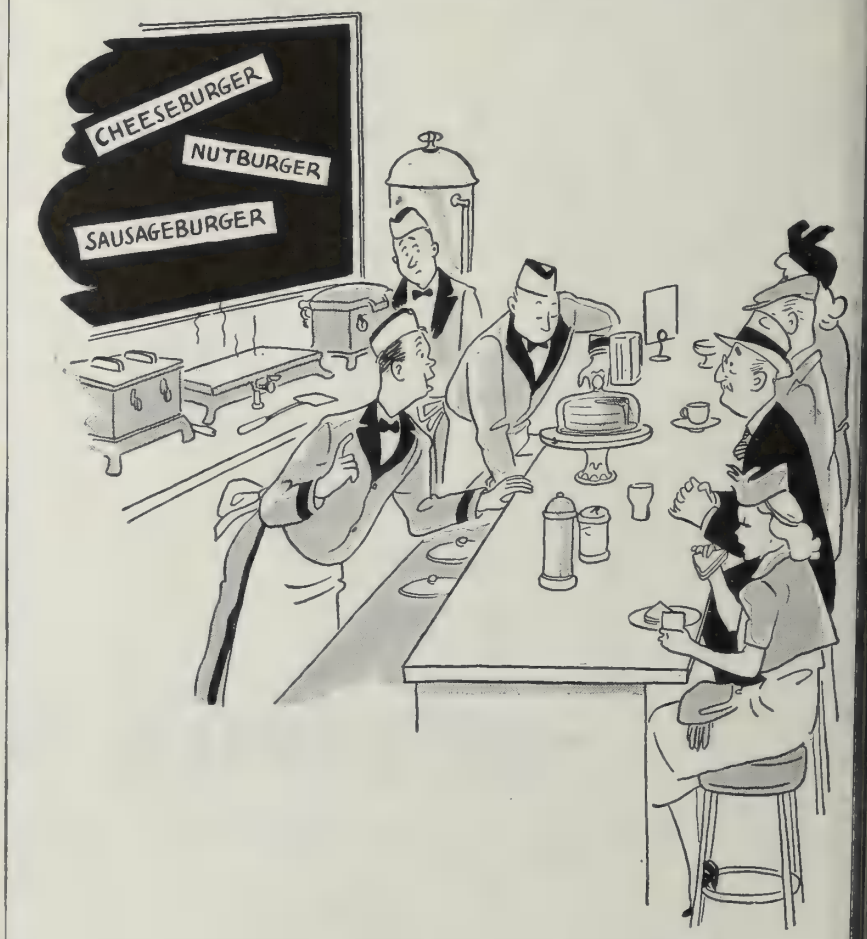
The swayings of the boat confused the fat man. His arms waved wildly while Captain Morgan fairly danced with rage, bellowing orders which did not carry through the roar of surf.

Tall waves lifted the boat. They bore her shoreward in a splendid sweep. Then they foamed and let her down with a crash upon the sand bar, and picked her up and swung her sidewise, and then rolled her over—snapping off her mast—and then worried her in the roiling water. Captain Morgan heard the cracking of planks and fairly danced with rage.

Arms flailed in the turbulent smother. There were intermittent glimpses of wreckage. The bow of the small boat was hopelessly stove in, but the stern remained apparently in one piece. And presently the fat man appeared almost at the beach. He seemed to float cork-like even in such a smother. Later still he practically rolled into shallow water and then got unsteadily to his feet. And he was still drunk.

"By the devil!" said Captain Morgan furiously. "You're a pretty sot! A fine fool! A stupid dolt! An idiot! You—"

THE newcomer's eyes fell upon him at first vaguely. Then they focused and he paled. He gulped. Then he smiled wanly.



"If it ain't Cap'n Morgan!" he said in a desperate attempt at cordiality. "I didn't know y'were here, Cap'n. How d'ye do?"

His hand closed nervously over the knife in his sash. There were pistols stuck there too, but their priming was wet. They were useless. Yet it was plain that the newcomer would have fared much better had they been in firing order.

"I don't know you," said Captain Morgan in an ominous tone, "yet you know me well enough. Who are y', and from what ship?"

"Carvel's my name, Cap'n. Captain Sam Carvel o' the Naughty Sal."

He tried to grin ingratiatingly, but

"I'll have that plain hamburger for you in a few minutes, sir. It has to be fixed up special!"

BO BROW

# "I want something that begins with 'R' —and it's not a raise"

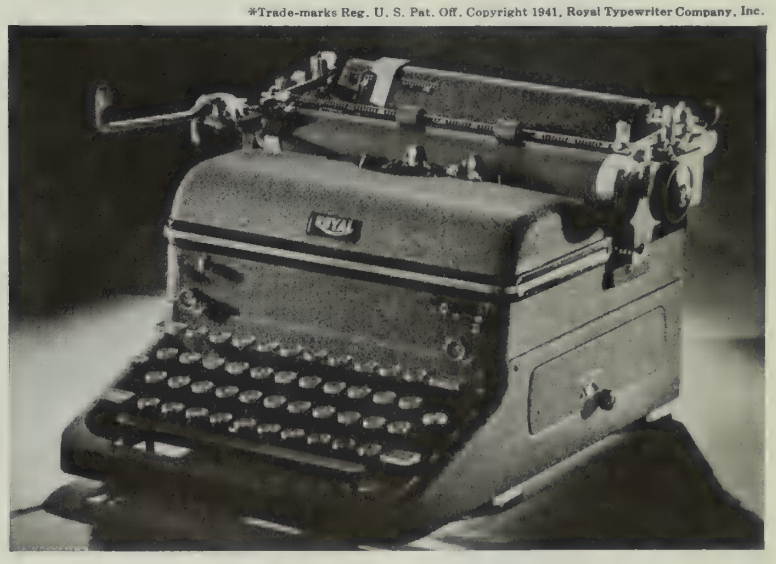
**Yesterday I got** up my courage to talk to the boss about something that's been on my mind for a long time.

*I said*, "One reason why you are such a good executive is that you have the knack of delegating authority to those who know how to use it best.

"But there's *one* person you've overlooked—and that's *me!* You really ought to give me authority to choose the make of typewriter I like best!"

Then I explained how it would work to *his* advantage. For I'd choose a *Royal*. And a Royal, I know from experience, means not only *better* work, but *faster* work.

I pointed out that only Royal has MAGIC* Margin—and it really *is* magic to a typist, the way a flick of the finger changes margins instantly! And *Segment* Shift, that lets the carriage ride smoothly along, without popping up and down every time you shift. And Touch Control*, another exclusive Royal feature. It makes the Royal my *personal* machine, adjusts the keyboard action perfectly to my style of typing. And speed? Royal's speed is so velvety and effortless that it really helps keep errors out of last minute, hurry up letters!



"But, there's still more!" I said. "Royal can actually *save you money*. It's more durable, needs fewer repairs and less servicing. That's because the machine is so well protected, both inside and out. All we need to do is phone the local Royal representative for a free 'desk test'—then you'll be convinced of all these things, yourself!"

◆ ◆ ◆

**P. S.** This morning, there on my desk was a brand new Royal. I *knew* he was a good executive!

## ROYAL
### World's Number 1
## TYPEWRITER

*Trade-marks Reg. U. S. Pat. Off. Copyright 1941, Royal Typewriter Company, Inc.

### SIX REASONS WHY TYPISTS PREFER ROYAL TWO-TO-ONE OVER ANY OTHER MAKE

**Greatest typing time-saver in years!**

**MAGIC* Margin**—Just flick this handy lever to change and set margins *automatically*. No fussing with mechanism. Only Royal has it!

**Segment Shift**—The carriage doesn't clatter and pop up when you shift on a Royal! Less noise . . . less eyestrain.

**Touch Control***—Do you tap, *peck*, or POUND when you type? A twirl of this dial adjusts key tension exactly to your individual touch. Only Royal has it!

**Accelerating Type Bars**—Royal's fast type-bar return naturally enables you to type faster.

**NoType-bar Blur!** Dancing type bars flash *unseen* on a Royal. This means less eyestrain, as does the "no glare" finish of the machine itself.

**Finger Flow Keyboard**—Only Royal has this scientifically planned keyboard, with "finger comfort" keys covered with glare-absorbing Lucite. Corner keys are platform-shaped for greater speed and ease.

Buy Defense Bonds

was not easy. The wetting had partly sobered him, and fearful emotion seemed to sober him more. He took sudden note of Captain Morgan's appearance; the clumsy, makeshift bandage about his shoulder and the sling for his right arm; the once-fine clothes torn to ribbons in the savage battle before Captain Morgan was marooned. He gaped. Then he said suspiciously:

"Cap'n Morgan wi' no weapons an' no crew? Am I drunk or dreamin', Cap'n?"

"Y'are indifferent sober," said Captain Morgan icily, "and ■ good two hundred leagues from Port Royal, and as far from ■ drop to drink unless you salvage that little keg yonder. I've but one arm fit to use."

Captain Carvel still blinked. He turned and surveyed the sand cay. Half ■ mile in one direction. A quarter of a mile in the other. Tussock grass and sand dunes and utterly empty sea all about, empty, that is, save for bits of wreckage in the surf. The sight of them completed the sobering process.

SUDDENLY he ripped out a blistering oath and went waddling back to the water. He went thigh-deep into the spume, groping anxiously for ■ handhold on the largest bit of wreckage in sight. It was the after half of the boat he had been sailing. He tugged at it, puffing, until the veins stood out on his forehead. Presently the half boat lay beached with only the furthermost surges of foam sweeping through it. Captain Carvel took the knife from his sash and cut lashings. He heaved, and then he came splashing ashore with an ironbound wooden chest in his arms. It was not a large chest, but it was heavy. It taxed his strength to carry it, and not all his bulk was fat.

Captain Morgan's eyes glittered. The elaboration of the ironwork said that the chest was Spanish. Its strength and Captain Carvel's anxiety told more. Captain Carvel now cast a doubtful, highly suspicious look at Captain Morgan, and searched all the world with his eyes once more. Then he hesitated a long time, and went reluctantly into the surf again. He salvaged the cask Captain Morgan had mentioned, a soggy bag of seabiscuit, an unappetizing lump of buccaned beef, and another cask that lay deep in the water. But from time to time he looked sharply back at the chest he had first brought ashore, and when he had finished he said uneasily:

"Cap'n Morgan, y'are truly wi'out a ship or sloop or even a piragua?"

"The fools on th' Espiritu Sanctu," said Captain Morgan harshly, "pounced on me while I slept. I pistoled three o' them and stabbed two more. But here I am."

"Marooned."

"For the time being," said Captain Morgan coldly. "It seems y'are no less unlucky yourself, Captain Carvel. How came you to be here?"

Captain Carvel scratched his head reflectively.

"I were drunk when I came ashore," he admitted. "You saw't. But before—Well, we on the Naughty Sal had heard of ■ plate ship that was leavin' Caracas. We went to find her. An' we did. They fought. We won. The Dons jumped o'erboard, leavin' her to us. We helped the last ones jump," he added blandly. "She were ■ nice prize."

Captain Morgan's face grew savage.

"The Santa Lucia!" he said wrathfully. "I'd marked her down myself! 'Twas for lack o' her capture that my men mutinied!"

"Aye? But y'see, Cap'n Morgan, when we'd looted an' sunk her, we went over to Dead Man's Cay, an' there my lads broached a couple o' hogsheads o' rum to celebrate. An' first thing y'know, all han's were dead drunk. An' when one of 'em woke up near sober, he couldn't work the ship all to hisself, so he took a mug or two to pass the time till somebody else come to, so he was drunk again when that happened."

"Y'had no discipline," said Captain Morgan scornfully.

"Mayhap," admitted Captain Carvel, "but it worrited me. I thought to myself, I did, that sooner or later the lads would be fightin', so there'd be fewer to divide wi' when it came time to part the loot from the plate ship. An' there was this here chest o' gems that was down i' the cabin' o' the Santa Lucia, worth more than all the Dons' bullion. So to save trouble, Cap'n Morgan, I took that chest o' gems an' I put it in a ship's boat wi' ■ leetle keg o' rum, some water, an' some victuals, an' I set sail all by myself. An' to tell the truth, Cap'n Morgan, I'd a bos'n, one Tom Savage, who was a mite too pop'lar wi' my lads, an' he'd a notion o' puttin' me out o' my place an' bein' captain in my stead." He sighed. "I'll wager he's cap'n now."

"I know the man," said Captain Morgan negligently. "He sailed under me once. For insolence I gave him four dozen lashes an' keelhauled him, to boot. He's sworn to ha' revenge for that, I hear." Then he added professionally: "You slashed the riggin' o' the Naughty Sal to hinder pursuit?"

"Aye," confessed Captain Carvel. He mentioned smugly, "An' besides, I set a bit of fire in her hold to keep the lads busy."

"You stove all the tubs an' buckets, o'course," added Captain Morgan again, "an' had a slow match to th' magazine?"

"Why, no, Cap'n Morgan. I did not. I was in haste."

"Y'are a fool, then," said Captain Morgan in satisfaction. "Triply damned and an idiot to boot. They'll be here come sundown to flay you alive an' toast y' over a slow fire."

Captain Carvel scratched his head.

"How'd they know my course?" he demanded.

"Fool!" snapped Captain Morgan. "Y'could ha' but one! Where'd a man of our trade find a new ship? Port Royal! How close to the wind could y'sail to make it? The course you sailed! No other!"

HE BEGAN to stride up and down the sand, thinking deeply and impatiently. Captain Carvel said uneasily:

"D'ye think Tom Savage would ha' the wit to know it, Cap'n?"

"Who would not?" demanded Captain Morgan over his shoulder.

Captain Carvel meditated deeply.

"A bad fix we're in then, Cap'n Morgan. What d'ye say?"

"I say," said Captain Morgan peevishly, "that it's a devilish long time that my throat's been parched. Pray tap that keg, Captain Carvel! My throat's a furnace!"

But Captain Carvel had meditated to some purpose.

"Look ye', Cap'n Morgan," he said painfully. "Our cases are alike more ways than one. Let's agree that if the Naughty Sal should come on us, we're sailin' in consort an' it's all for one an' each for t'other till we're safe in Port Royal. An'—an'—" The offer seemed to come with a wrench, but he made it, "—an' a fair split on the chest o' gems to boot. If ye will, Cap'n Morgan, here's my hand on't."

He offered a pudgy, hamlike hand. Captain Morgan took it with his one good one. And then, painfully, Captain Carvel held savagely fast and snatched out his knife, boring in with the obvious resolution to stab Captain Morgan to the heart.

But he did not. Instead, as the pudgy but powerful fingers tightened, Captain Morgan moved with a catlike swiftness

a terrifying ferocity. He snarled as aped, and the knife passed over his lder. But his knee went savagely, bly deep into the fat man's belly all of Captain Morgan's weight and behind it.

man could stand such a blow. Cap- Carvel uttered an explosive groan. collapsed in a convulsed, tortured on the ground, his face greenish, ing and gasping for breath.

ptain Morgan pricked him deeply his own knife point.

low speak up!" he snarled icily. the devil! y'do not honor me try- o kill me with so old a trick! But had some plan! Speak it, or you'll speak again!"

PTAIN CARVEL wheezed and asped and choked. Sobbing curses led up between his gasps. Captain an pricked him again.

old!" wheezed Captain Carvel, "I'll ee! I—I'd ha' changed clothes wi' an' built a fire. An' when my lads , they'd ha' thought 'twas me that lead-drunk an' fell in the fire an' burned."

olt!" cried Captain Morgan angrily, ld they mistake me for the fat ss o' thine? An' what o' the gems?" d ha' had to let them find the most m," wheezed Captain Carvel. "Yet a' kept out a double handful or o' the best, an' they'd ha' gone on nowin' I yet lived."

ptain Morgan said sardonically, as lucked away Captain Carvel's ls and his powder-horn and bullet- n:

a! For a moment I'd hopes of you 're naught but a fool. Had your carried, 'twould ha' left you ma- d here, an' you'd ha' lost most o' ems to boot. 'Tis no way for a in in our trade to plan!"

sat down and began to draw the d charges and reload the pistols. id it clumsily, because he had but hand and that the left one. For a while there was no sound save the surf and the wheezing, anguished breath of Captain Carvel, and such clicking sounds as the recharging of the pistols necessitated. But the fat man's breathing grew easier after a time. After a long while he sat up groggily.

"Fetch the keg o' rum," commanded Captain Morgan. His voice grew softly ferocious. "Bring me to drink, an' then fetch a plank splintered off from that boat o' yours. 'Tis to serve as a spade."

The pistols were ready. Captain Carvel's face turned a sickly hue.

"Nay!" said Captain Morgan impatiently. "I've no need to murder you. Not now! 'Tis to dig a pit for Tom Savage."

Captain Carvel, sadly chastened, waddled away. But he brought the keg, and he brought the plank. Captain Morgan drank deeply, and then led the way to the leeward side of the sand dune. He picked a spot at random and said:

"Dig here, Captain Carvel. A deep, wide hole, sufficient for the folly o' all the Naughty Sal's crew."

Captain Carvel protested indignantly. He put forth his rank. Captain Morgan put forth a pistol. Captain Carvel dug furiously. His belly hurt him. He stopped to rest. And Captain Morgan let off one of the two recharged pistols so close to his ear that he jumped and howled a protest.

"I ha' yet another pistol," said Captain Morgan savagely. "Dig!"

The sun rose higher. It grew close to midday. The white sand was a furnace-like flame which made the eyes water. But even worse than the light was the heat.

It was terrible to Captain Morgan. To Captain Carvel, streaming fat and sweat as he labored, it was sheer purgatory. He panted and wheezed as he dug. Then he sobbed. But Captain Morgan drove him on with threats and curses and once—he had recharged the first-fired pistol—with a bullet that drew

"Mrs. Jones isn't home. Could you bring him back tomorrow?"

blood. It was near to sundown before he let the fat man cease.

"Now fetch rum an' water," he commanded sardonically. "I'll e'en let you drink—a little. Not too much. We ha' more yet to do."

Captain Carvel tottered on his feet, but Captain Morgan was as good as his word. He let the exhausted fat man drink—a little. Then he drove his captive to the beach. He forced him to load himself with dry, parched bits of driftwood. He forced him to carry them close to the monstrous excavation he had made. He made him carry a second load, and a third. Then he bade him set a fire ready to light.

"Cap'n Morgan," said Captain Carvel thickly, "a fire will guide the Naughty Sal to us, wi' men who've reason to flay us both alive!"

"Set the fire!" Captain Morgan commanded.

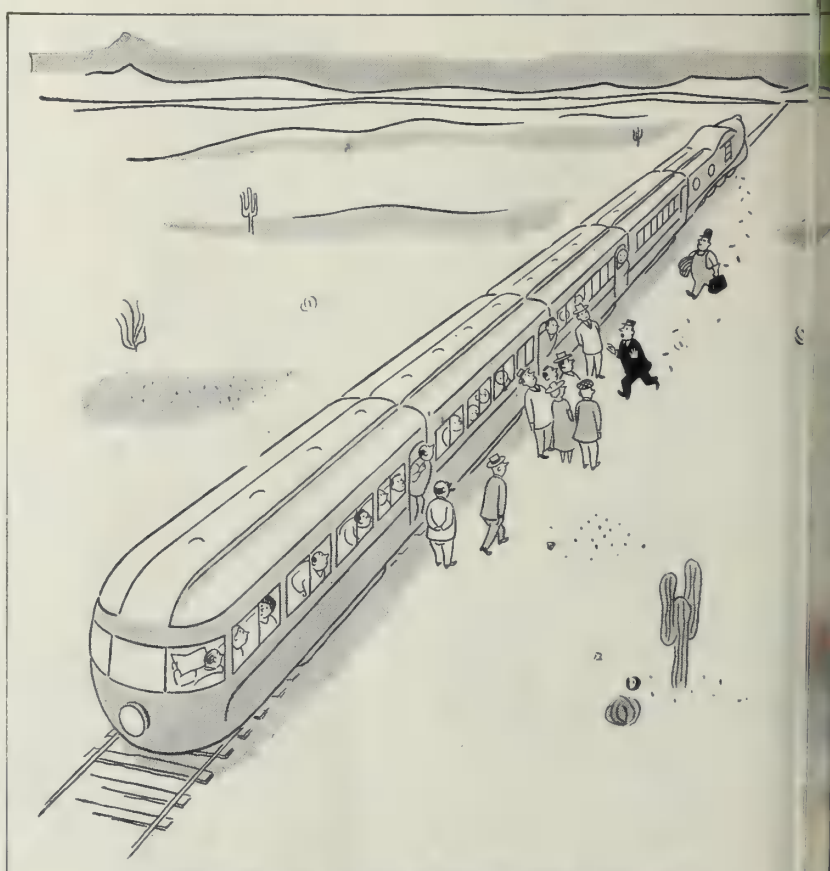
THE flames blazed brightly as the dusk grew deep. Captain Carvel collapsed. But Captain Morgan turned upon him waspishly. A pistol in his left hand glittered in the firelight.

"Not yet," he said harshly. "I ha' to think for both of us, so you must e'en work for both. Fill up the pit again."

"Cap'n Morgan—" panted Captain Carvel desperately.

"Dolt! Lackwit!" roared Captain Morgan. "Who'd look for a chest o' gems at the bottom of an empty pit? An' who'd fail to dig where a man wi' wealth to hide had dug before? To work!"

But it was easier work, if no less onerous to the exhausted fat man. And now, too, Captain Morgan was not so merciless. Three times he had his captive precede him to the beach while he searched the sea with eyes and ears. On his third trip, some time in the middle watch, he saw the distant glimmer of phosphorescence which could only be foam under the forefoot of a moving ship. Straining, he caught the vague outline of sails in the starlight.



"Now, by the devil!" said Captain Morgan delightedly, "we ha' them! Baited by our fire! An' the pit is filled just enough to be tempting! Come now, Captain Carvel, harken to what I tell 'ee. When I'm afloat, take the ch gems to a spot I'll point out, an' I come ashore wi' a boat—"

Captain Carvel stared despai out over the sea. He also saw th blur of spread canvas. The Na Sal, loaded with shipmates whon robbed and tried to roast, cor avenge their injuries. He was su deep in exhaustion and despair e curse. But Captain Morgan stru him savagely with a pistol muzzl spoke savagely, swiftly, precisely gradually a single ray of hope spra in Captain Carvel's breast an panded, and after a little he very blubbered in a mixture of exha and anticipatory relief.

The gray blur of the ship came r and solidified, and became a small vessel such as many S prizes turned into, once their bo stern castles were hewn away. dently Tom Savage knew this anc well. Moving gently in the light a came about in something very c silence, and there was the creak o falls. Then she came up into the lost way, and the anchor went Captain Morgan listened sharp sounds to tell him the state in they left her. Blocks creaked, bu was no evidence that men went a furl sail.

"One boat has gone to t'other the island," said Captain Morgan fiedly, "to pounce should you try away. They know not that you is wrecked. They'll land from th Mayhap—"

They saw the upper works of t glowing in the thin and ruddy re of the fire. Her hull was in shad sounds came ashore which tra themselves easily. Another bo ered. Men swarmed into it. creaked. The freebooter's l came straining toward the islan darkness. In minutes, it beached figures ran across the sand and i firelight. # WHAT'S THE "B" FOR— IN "B-44"?

*ANSWER:*

# BETTER LOOKING! BETTER LASTING! BETTER BUILT!..

A's the impressive thing about the new car lsmobile is turning out for '42: It's designed in :ha way as to release vital materials for defense. tOlds engineers and stylists have actually :eded in making it a better car in every way rre beautiful, more durable, more dependable, *more desirable*. Even the famous Hydra-Matic i, which Olds introduced two years ago, has been further improved. Hydra-Matic cuts out clutch pedal, conventional clutch mechanism, and all gear shifting in forward speeds. It saves thousands of driving motions for the driver—saves 10 to 15 per cent on gasoline. Built and backed by General Motors, Hydra-Matic also has behind it the enthusiastic support of 130,000 Oldsmobile owners. Hydra-Matic Drive is optional at extra cost. Try it!

97

***And why "44"? IT'S A BETTER CAR THAN ANY OTHER OLDSMOBILE IN 44 YEARS!***

With its Sleek-line Styling, Double-Duty Bumpers, Fuselage Fenders, Dreadnaught Frame, Econo-Master Engine and many other quality features, the new B-44 is definitely the best car in Oldsmobile's entire history.

1942

SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE

## DEFENSE COMES FIRST WITH OLDSMOBILE!

Quantity production of automatic cannon for fighting planes and high-caliber shell for the field artillery is today Oldsmobile's No. 1 job. Plant facilities and man power not now needed on defense work are devoted to building, in limited quantities, the Oldsmobile B-44. One of the first manufacturers in the industry to swing into mass production of defense materials, Oldsmobile stands ready and able to take on additional defense assignments.

the plate ship, but had been interrupted by their coming before he could complete its hiding. Some men ran across the island to the farther beach to roar the information across the water to the other longboat, hovering offshore on that side. A stentorian voice by the fire bellowed orders to organize a complete search of the island for the dethroned skipper.

Captain Morgan ignored such trivia. He kept his eyes upon the second boat drawn only indifferently ashore. Three members of the crew of the Naughty Sal at first remained to guard it. But one of the three ran up into the firelight when someone found the bit of plank with which Captain Carvel had dug. Already sand flew as men tore at the loosened stuff to recover the treasure he had filched from them. Other men scattered to search for their former captain. Shoutings resounded to the skies.

IT WAS too much. A second of the three boat guards ran to join in the search—whether for jewels or revenge was indeterminate. Only one remained. And then Captain Morgan, his eyes glittering, moved toward the boat along a carefully felt-for line of waist-deep water. He was in shadow. He was offshore. His approach was unsuspected.

It seemed a long time, but actually it was less than a quarter of an hour before the boat moved away from the shoreline with one man only in it. That man was Captain Morgan. The boat-guard's body lolled in the shallow water. There had been no alarm. More, the boat-guard's pistols now reposed in Captain Morgan's sash, their priming preserved unwetted. He sculled with his one good arm, swearing under his breath at his own awkwardness. But he moved steadily toward the ship.

Minutes later, he moderately raised his voice.

"Ahoy, the Naughty Sal!"

A startled, suspicious voice:

"Who's there?"

"Captain Morgan," said that gentleman shortly, "o' the Espiritu Sanctu. Throw me a line to board!"

A scurrying, of providential feet. Then a bleating bellow:

"Stand off, or we fire!"

"Tush!" said Captain Morgan fully. "You ha' an able anchor aboard, an' with eyes in your you'd see that I am alone!"

Scared and partly bewildered Captain Morgan sculled close weapon fired on him. If he were alone, it was not needful. If he were crammed with men, it would fatal. He climbed the low side Naughty Sal, using his one good and his teeth for gripping the stays. He swung his legs over and found himself in the waverin of a battle lantern's light, while of rigging and sails towered overhead.

"Hah!" he said ironically. "Five men of an anchor watch, an' muskets trained on me. And I a weapon save a knife, and am s to boot. But since y'are so frig me—"

He tossed the knife overside a scornfully.

A voice said hoarsely, very su indeed:

"Now, then, what d'ye want Morgan? When Tom Savage see

"Not when, lads," said Morgan easily, blinking in the the horn-glazed lantern. "No If! I ha' a bargain to offer yo own men mutinied yesterday rooned me on yonder sand ca Captain Carvel came ashore com this morning, but he was roun civil, an' I had to teach him n Your mates ashore will find h presently. But meanwhile th chest o' gems he took when he alone . . ."

He paused. There was eager babbling of questions.

"It is in my mind," said Morgan blandly," that you five to navigate, can take the Nau prettily into Port Royal wi'out t the lads now making so much ashore. Do the five of ye com wi' me, load the chest o' gems a it back aboard, an' we'll cut c

GERA

# HOW TO STOP A TANK—QUICK!

## It Takes a Whole Fleet of Motor Trucks—Busy on the Home Front —to Keep ONE Tank in Action!

OVER many a U. S. highway a stream of trucks goes flashing through the night.

Some are jammed with shell casings. Others are rushing machine gun mountings to hungry assembly lines. Still others carry steel plates for tanks . . . gasoline and oil for motorized columns . . . replacement parts for repairs in the field . . . food and uniforms for the soldiers.

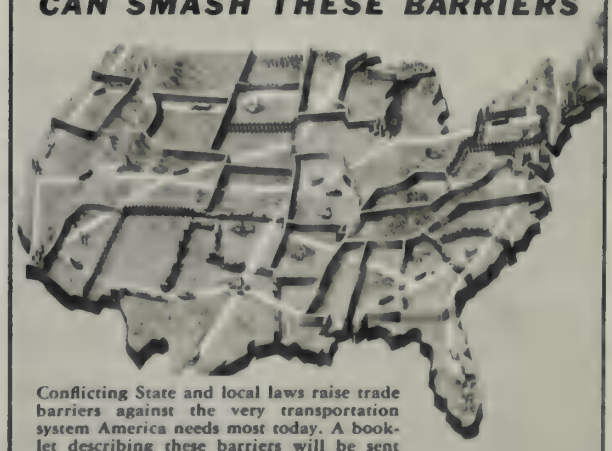
**SPEEDING DEFENSE**

*Forty to sixty per cent of the loads carried by America's freight trucks—throughout America — are for defense.*

Trucks form a giant conveyor system — linking factories together like no other transportation system can. By contrast truck loads are small . . . highly flexible. *Trucks FLOW goods into a plant in a steady stream — keeping pace with production* —instead of dumping a week's or a month's supply at once onto congested platforms.

**FASTER THAN MAIL**

Moreover—trucks are never side-tracked. Deliveries often come through faster than the U. S. Mail! Actually — express service at freight rates.



Interrupt this flow and you stop tanks — and troops — *quick!* Shortages may soon develop in consumer's goods. Prices jump.

**CUTTING COSTS**

*Help trucks roll — and you not only speed defense — you reduce the cost of your own food . . . clothing . . . and daily necessities. For everything you eat — wear — or use — comes to you all or part of the way by truck.*

Isn't it time, then, that trade barriers be abolished? Useless barriers that hamper or stop the free flow of goods by truck?

**NEITHER TRUCKS—NOR TANKS—CAN SMASH THESE BARRIERS**

Conflicting State and local laws raise trade barriers against the very transportation system America needs most today. A booklet describing these barriers will be sent to you on request.

away wi'out fuss or trouble. An' then we'll divide the loot."

Silence. Then a whispering. The men of the anchor watch conferred secretively. It was perfectly obvious to Captain Morgan that they would arrange to secure the chest by his guidance, kill him, and divide the loot among themselves without benefit to their companions. But he gave no sign of this knowledge.

The whispers ended. The leader of the five said gruffly, "What ye say sounds well, Cap'n Morgan, but 'tis known y'are a most unsarvin' man. If ye'll let us make sure ye ha' no arms—"

"One man!" said Captain Morgan sternly. "Only one may touch me! I've no mind to be pawed by a bunch of filthy rogues!"

He submitted, frowning, to the exploration of his sash and the patting of his body to make sure that no weapon was concealed. Then he said shortly:

"Now, there's the boat below. Slip down into her, lads. I'll steer ye to where the chest waits, we'll slip it on board, an'— Ye'll be the heroes o' Port Royal's wenches for as long as ye desire!"

HE STOOD by the rail. One man; two men; three descended. But Captain Morgan held up a bland hand as a fourth made to follow.

"Nay, lad," he said benignly. "Ye trust each other, an' 'tis unseamanly to leave no anchor watch. Do you two bide here."

He descended to the boat and took the steering oar. The other oars struck water. He steered with exactly the air of someone knowing precisely where he was going. Presently he headed directly inshore.

In what seemed seconds the boat beached gently. Captain Morgan saw a movement upon the sand, and moved like lightning.

He seized and fired the first of the pistols he had left in the stern sheets on his way out from the shore. At such close range he could not miss. The flame of the explosion seemed not to have died away before he had snatched up the second pistol and fired it also, and that pistol had not fallen upon the boat's bottom boards before the third of the rowers—in the very act of whirling upon him—met the deadly pellet of lead from the third pistol. Captain Morgan nodded comfortably. By leaving two members of the anchor watch aboard ship, he had made the mathematics of pistols and men come out right, with one pistol, still undischarged, left over. Beside, he had two men on board ship who would be handy for future uses.

Captain Carvel loomed up, staggering and wheezing with his load.

"Ha, Captain," said Captain Morgan blandly. "Art fairly on time. Clear the boat and ship the chest, an' we'll back to the Naughty Sal."

The longboat was huge and heavy, and though Captain Carvel rowed two oars, it moved but slowly. Yet at long last the Naughty Sal loomed up again. A voice hailed cautiously:

"How did ye fare, mates?"

Captain Morgan answered in a hoarse, unrecognizable voice:

"We ha' the chest, but we had some fighting. Heave a line!"

Two voices babbled joyously. A line dropped in the boat. Captain Carvel made it fast. As the bow of the longboat touched the ship, Captain Morgan silently thrust a pistol upon Captain Carvel. The pistol was discharged and useless; from the bottom of the longboat. But Captain Carvel could not know that. Captain Morgan swung to the Naughty Sal's deck. From there his voice sounded in sudden purring ferocity:

"Hoist up that chest, ye scum, or I'll treat ye as I did your mates when they tried to kill me! Haul!"

The joyous babbling of two voices changed to panicky protesting of innocence and loyalty. Captain Morgan's pistol threatened savagely. Then he plucked away their weapons and tossed them overside—his own pistol held in the crook of his injured arm—while driving the two captives to their task with lurid and powerful profanity. Captain Carvel puffed his way over the rail. Then pandemonium set up ashore.

"Aye!" said Captain Morgan approvingly. "On time again, Captain Carvel! An' by the howls ashore, they ha' found out summat's wrong. Do you take one of these lads, Captain, an' drive him to what's needful while I take t'other. But do not pistol him till I gi' you leave, else we may be put to some inconvenience in getting under way." He snapped at the seaman. "For'ard, scum!"

His pistol barrel pointed the command. While raging confusion reigned ashore, there was brisk if rebellious movement on the Naughty Sal. The ship's haltered, anchored motion changed abruptly as her anchor cable splashed overside.

Four men—with seven arms among them—slacked lines here and hauled at others yonder. The great yards on which her fore- and mainsails hung—braced in exactly opposite directions when the ship came to anchor in such raging haste—now creaked about till they were braced in a more normal fashion, suitable for progress in the water instead of a hasty halt at anchor. The Naughty Sal's head fell off and the sand cay swung about until it lay almost dead astern. The ship began to gather headway.

"An' now," said Captain Carvel vengefully, "we kill these two scum! I'll pistol one an' you t'other, eh, Cap'n Morgan?"

"Nay," said Captain Morgan, gently ferocious. "We but set them to swimming shoreward. Jump, lads, or I'll let your heart's blood out o' ye! Jump!"

His pistol glinted in the starlight. The two survivors of the anchor watch gave simultaneous gasps. As one man, they leaped. Twin splashes sounded astern. Captain Carvel swore angrily.

"I ha' a prejudice 'gainst a dirty ship," said Captain Morgan blandly. "If your heart was set on killing them, y'should ha' told me you'd scrub the mess from the planking after. But—" His voice grew blander still "—your pistol is not charged, Cap'n Carvel. I used it when I landed for you an' the chest, an't has not been recharged as yet. 'Twas best to let the lads swim for't."

CAPTAIN CARVEL swore yet again. His pistol clicked, harmlessly. He flung it furiously to the deck. Captain Morgan took the tiller and made fine adjustment with the steering tackles which made it possible for one man to handle a ship of this size.

Whisperings began below the Naughty Sal's forefoot. A rhythmic rise and fall of her deck planking began. Then the comfortable creaking, washing, humming sounds which tell of a ship running easily under sail.

"I think," said Captain Morgan critically, "our jibs could be a trifle better set, Captain Carvel. Will you go for'ard an' see to 't?"

Captain Carvel went forward. Blocks creaked. The movement of the Naughty Sal became, perhaps, a trifle smoother. But Captain Carvel did not return. He stayed forward. No sound came from him at all. Nor, for that matter, from Captain Morgan. The Naughty Sal ran smoothly on her course. The last faint glow of the fire on the sand cay dwindled and was lost below the horizon Captain Morgan, however, seemed still to stand by the tiller, leaning on it, as if he were the only living creature on the ship.

But very suddenly and utterly without warning a gout of flames flashed

the companion hatch leading down what should be the captain's cabin. ell-mouthed harquebus flung its strous charge of bullets into the tall e leaning on the helm. The dis- e was at most ten feet, and the fig- was a perfect target. Moreover, the uebus was the perfect weapon for urderous an assault. Fifty slugs t have torn their way into and ugh the form beside the tiller.

here was a ringing, clanging sound. shape crumpled and fell in a curi- y boneless fashion, forming a vague, dy heap upon the starlit deck. A ss clanged and rattled to the plank- Then Captain Carvel came up out e companion hatch with the smok- harquebus still in his hand, wheez- elief and self-congratulation.

hen something hit him. It was the of Captain Morgan's fourth pistol, led shrewdly by Captain Morgan's hand.

HOUR later, Captain Carvel wheezed bitterly in the longboat n close up under the stern of the ghty Sal. There was a keg of rum another of water beside him, and a of canvas with which he could— presently would—improvise a sail. ain Morgan looked benignly down, ace showing clearly in the light of ttle lantern. He sawed cheerfully a rather dull knife at the rope h held the longboat to the ship. n it parted, Captain Carvel would arooned again in a small boat, ex- as at the moment of his first sight- y Captain Morgan. But this time he o chest of gems. That, and the bul- below decks now belonged to Cap- Morgan by right of conquest. And ould not share it with anybody.

'are a man of parts," observed Cap- Morgan benevolently, as the ds parted slowly under his knife. "Aye, a man of parts, even if y'cannot distinguish ■ Don's tall cloak on a cut- lass stabbed into the tiller head from a brother captain steering wi' the same. I think well of you, Captain Carvel. Wi' time an' training you might make a capable bos'n. It may be even a serviceable mate. But not a captain. Nay! Not a captain in our trade!"

He made ■ deprecatory gesture with the knife.

"'Tis not that you do not try," he conceded sadly. "You try. Aye! I'll wager you'd already planned even your sailing into Port Royal, since one man could not work the Sal in to anchorage alone. But you'd ha' botched it, e'en if you so contrived as to near the port by daylight. You'd ha' beached her, I'll wager, or else signaled to your friends ashore to come out and help take her in. An' in either case the firstcomers would ha' robbed you of half your cargo o' gems and bullion, if indeed they did not slit your throat an' take it all.

"So as a lesson, now, do you take note that I'll sail lubberly enough the last few leagues, if need be, to make my landfall close to dawn. An' close to the harbor mouth I'll nudge ■ piragua I'll find lying off it. There'll be half ■ dozen such, filled with slaves of the tavern-keepers, catching fish for their masters to spoil in the cooking. I'll nudge such ■ little boat wi' the Naughty Sal so 'twill sink an' the slaves in it will ha' no choice but to scramble to my deck. An' then I'll press them for crew to work ship to ■ safe, snug anchorage at a pistol's point. Y'see, lad? 'Tis such fine points that show you should not try to be a captain in our trade. You ha' much promise an' many fine qualities, but—" Here Captain Morgan paused to shake his head admonishingly before severing the last strand of the towrope. "But somehow, Captain Carvel, you ha' not the knack o't!"

"Come, Victor, let's not be defeatist" BARBARA SHERMUND

HERE'S A REALLY SERVICEABLE BILLFOLD DESIGNED FOR SERVICE MEN

# BUXTON'S "SAM BROWNE"

*Specially Designed for Service Men—it's a real "find" for any Active man*

**OPEN THE HIDDEN "FLAP"** and you have *two* protected "window pockets" for identification, credentials, license or a snapshot.

**$5.00** in Military Tan or "Uniform Blue" Calfskin. Others from $3.

**THE COIN PURSE comes out** for separate use—yet double-locks back firmly into place when he wants to keep his coins, bills, papers, etc., in one compact unit.

NO matter whether he's in the Army, the Navy or the Marines—no matter whether he wears a First-Class Private's chevron or an Admiral's gold braid—he'll acclaim this *newest* Buxton as the most convenient, best planned and best looking billfold he ever saw!

It's been thought out to meet his present requirements...and beautifully made, to serve him long after he gets back into civil life. Organization PLUS! Special places for bills, checks, papers, passes, identifications, licenses, even for ■ photograph of the sender. Everything "stows" neatly—everything protected. And, in addition, a roomy, *locked*-in coin purse that can be removed easily for "solo" use.

Fine leathers, too, and Fine Craftsmanship that will stand "inspection" in any company—anywhere. In deep Military Tan for Soldiers, Aviators, Marines, and in black or deep "Uniform Blue" for the man afloat. Here's one of the few gifts that the man in the Service can really *use*. (And we'll bet that any civilian, too, would be mighty glad to get one of these handsomely tailored and downright practical billfolds.)

*Initials and Branch of Service Insignia Stamped in Gold*

MSC

A personal touch, "his" initials and service insignia (Infantry, Artillery, Air Corps, etc.). For name of dealer who'll do this for you, write Buxton, Inc., 4162 Orleans St., Springfield, Mass., or Dept. K, 47 W. 34 Street, New York City.

**PACKED IN A GIFT BOX**—and sent postpaid to army camp, ship or station. Here's ■ parcel he'll be proud to unwrap. The Caps of the Army, Navy and Marines are completely "Regulation."

# Here's the stand-out money saver of the lowest price field

## NEW 1942

# STUDEBAKER CHAMPION

*New low-cost transportation for the nation*

THIS year, it's a simple matter to get the quality you want—and the operating economy you're entitled to—in a lowest priced car.

This big, roomy, distinctively styled 1942 Studebaker Champion is the answer.

Never before has any car of lowest price offered you so much in brilliantly advanced engineering and sound, solid construction.

Never before has a lowest priced car offered the delightful handling ease, the flashing response, the restful riding comfort and sure-footed safety of this finest Champion in Studebaker history. And it costs little to maintain.

It steadily delivers astonishing mileage per gallon of gasoline and quart of oil, because the excess bulk that handicaps the economy of other cars has been streamlined out.

Moreover, this 1942 Champion is priced with appreciative regard for your increasing expenses. Its moderate price makes it the year's stand-out buy in a lowest price car.

See it now at your local Studebaker dealer's. Planar safety front wheel suspension, automatic choke, shockless multi-ratio steering—all the other famous Champion "extras at no extra cost." C. I. T. terms.

LET'S GO! U.S.A. KEEP 'EM FLYING!

TOP QUALITY MATERIALS AND WORKMANSHIP

FOR America's Defense

Studebaker is building an quantity of airplane engines, military trucks and other materiel

PRICES BEGIN AT $810* CHAMPION COMMANDER PRESIDENT

for a Champion Business Coupe

*These are delivered prices at factory, South Bend, Ind., as of 1941. Federal tax included. Prices and specifications subject to change without notice—but Studebaker quality will remain constant.

# Willy's Place

st because they booed a little?"
oed? They turned on me like mad dogs," Willy said. "Just because I had a bad day—one bad day."

Mad dogs were rabbits, Willy Kleeps recalled, compared to Central City's sporting populace, his former friends, who turned on him. It was a week before the opening of his bar and restaurant; it was a gesture of good will that made him play for George's Bluejays. After all, he'd been the leading player in the National Football League, not long before, and there was value to his name. But things did not go right. The boys from Hackensack were not impressed, and Willy wasn't in the best of shape, and first thing anybody knew, he fumbled on his five-yard line and Hackensack recovered.

When he tried to run, they sat on him as though he were a public omnibus. When he tried to kick, the Hackensacks all but dismembered him upon the spot, and then, when Benny Palermo thrust an elbow in his windpipe, nearly strangling him, and he, in all the honesty of daylight, swung on Benny's guilty jaw, the crowd began to boo and bellow, "Prima donna! Throw 'im out, the bum!" And little boys, in alto voice, kept chirping, "Willy Kleeps has got the jeeps!"

It all was much too much and Willy threw his helmet to the ground and quarreled with the referee, the linesman and the opposition; and George Felix took him out of there.

Now George, with beer in hand, said, "Willy, that's just life."

"Then I don't want any part of it. Margie was the gal who knew this football business, George. She always said it was a game for cannibals."

George shrugged. "Okay," he said. "But if you change your mind before I get some other guy—"

"I won't change my mind."

George left, and only Bertie, with the towel across his arm, was standing near the bar. He grinned and made a gesture with the towel. "It's just like I was workin' here," he said.

"Don't get ideas. But you can sleep here if you want." Willy looked across the room to where the girl sat over by the pin-ball machine. "See if the lady will have anything else," he said.

"She's still got the same beer," Bertie told him quietly. "She just holds the beer. She's a wonderful-looking girl."

Willy, by squinting, could see her turning the half-filled glass in her long white hand. Willy was a little nearsighted, though he never would confess it, and there was much about the girl he wished to see. He hoped she'd turn around. Finally she did. She turned around and she said, "Hello, Willy."

He knew the voice and his heart turned slowly in him, and with squinting now he saw her face. The girl was Margie, and he walked around the bar and across the room and she stood to shake his hand.

It wasn't always that she'd shake his hand. It used to be that she would put her cheek, her lips against his face, though that was quite some precious time ago. No more. She looked the same. She still stood tall and handsome in her clothes. She had a way of wearing them. The show-girl training, he supposed. She seemed a little tired, but she did not betray the thirty years she recently attained.

"Hello, Margie," Willy said. "Sit down."

They sat and Willy realized that George Felix must have come in through the door with her. "Did you come in with George?" he asked.

"No. I was ahead of him. I knew who it was and I didn't feel like talking. That's why I sat at the table and turned my back. Only your feet were showing behind the bar when I came in."

"Oh. Did you hear what George said to me?"

"I was listening, Willy, but I couldn't hear. I supposed you were talking football, but I couldn't hear. I really couldn't, honestly."

"Well, it's all right. After all—" But he was glad she hadn't heard him telling George his new-found attitude toward football, since such an attitude had always been her own and they had fought on such a basis through a number of years.

"But please don't think that I was snooping, Willy. I—I had just hoped you were through with football, with such a nice place and all."

"All right," he said.

"SO THEN we won't quarrel, Willy?" She held her gloves in her hands and she smiled at him. She did the old things to him and he wanted to reach across the table and hold her face in his hands. But there would be trouble. There had always been trouble.

"You still in show business?" he asked her then.

"Yes, Willy." She looked down at her gloves and her face had flushed a little. "That's—why I've come to see you." And for a moment he hoped that she would say she'd sliced her ham and put it all away, but instead, she said, "I have a chance at a legitimate part—road company of My Sister Eileen. And—oh, Willy, I'm so thrilled—"

"Good Lord! You? In drama? Margie, use your head."

"Must you say that, Willy? Must it always be the same?"

"No," he said. "I'm sorry. It's really nice to see you, Marge." So nice, he thought, that I could weep. It kills me just to look at you. He was conscious

of the apron he was wearing. He took it off and tossed it on a chair. "My regular man is off," he said.

"You look so—so earnest in your apron," Margie said. She lit a cigarette. She shook the match more than was needed for extinguishing its flame. "I suppose you are wondering why I came here?"

"I couldn't help but wonder. Is there anything that I can do?"

"Yes." Then she looked at him. "I thought I was going to be ashamed," she said, "but I'm not. Because, well, anyhow, it's honest, and I thought I'd like to see you, too, before I went away. I—I need some money, Willy."

His head froze colder than the beer. Because he hadn't any money, other than some nickels and some quarters and some dimes.

"I need someone to sign a note," she said, "for three hundred dollars. It's all legitimate. I—I'll have the money, really, very soon. I have some rents due on the stores next month." Her family had left a little real estate, he knew. "Except that I need the money now, and I didn't want to ask anybody else. Not in Central City, anyhow."

Willy breathed a fine relief. To sign a note did not take any cash. Not when you sign. Often, later, but not when you sign. "Be glad to, Marge," he said. "Be happy to. Of course." But he did not enjoy her difficulties. It was not so good to borrow money. He should know.

Margie said, "I have it here. It's one of those things that require a co-maker. Mmmm." She brought some papers from her purse. "The Central City Finance Company," she explained. "I didn't know any company to go to in New York."

Willy's sweat flowed heavily. He couldn't sign the note. He couldn't tell her that he had a note with Central City Finance for himself, and in the sum she named, which was the limit with the Central City Finance. Thus his signature would be no good. He owed them two months' payments now. Willy looked for exits, fast.

"Those bloodsuckers!" he stormed. "You're borrowing from them? You expect *me* to do business with peo like that?"

"Why not?"

"Usury," he said. "Plain usury, don't forget it. I'm a businessman. I'd rather lend you the money myse

"But I didn't want that, Willy. wouldn't have come in that case."

"Why not? What's the matter w my money?" The only thing the m ter with my money, he recalled, is t I haven't any. "What's the matter w my money, Marge?"

"Nothing. Nothing, except—"

"Forget it. You'll have the mone the morning." Oh, he thought. Th me. I'm it. George Felix and his Bl jays and the vengeful Hackensacks, waiting for a chance like this! Be Palermo, and the small boys chirpin the stands that "Willy Kleeps has the jeeps!" The heavy, endless pai it. And more than that, the shame c all to a guy who had been big lea once. Oh, he thought.

"I wouldn't do it," Margie said. ' cept that I must buy some clothes costumes. I'll be leaving tomor Willy. The show opens Friday in E beth."

"And closes in Elizabeth. Throw good money after bad. Ah, well." saw her anger rising, so he said, sorry, baby. Lemme look at you. then I'll get the money. No. No t ble, honestly."

IN THE early evening, when she gone to visit with a cousin, V called George Felix on the ph George wasn't there.

"Where is he?" Willy asked.

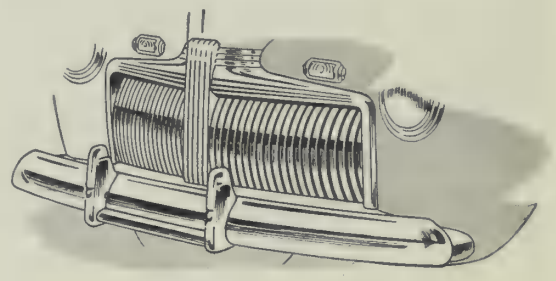
"At Palermo's," he was told.

"Palermo's!"

"Having dinner." And the conv tion ended there.

Never in his life had Willy swall pride in such a gulp. Palermo's was on Corriza Street, between a dry and a barbershop. It wa squeezed-in little place, with kit steam instead of curtains on the dows. Just a small spaghetti and bar that Benny ran with Ros wife.

They did all right, when you co

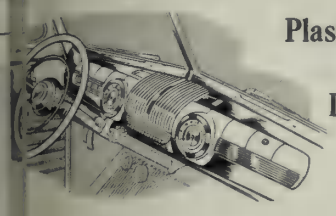


**"Mr. Hindly feels bad about not getting that defense order. He wanted so much to help!"**

IRVING

# How Defense Needs have been met and Ford Quality improved

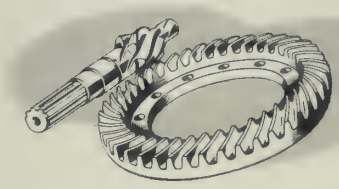
As DEFENSE PRODUCTION has gained pace, many o e have wondered about its effect on 1942 cars. Would shortages of some trials force substitutes into the motor car? Would buyers get less quality heir money this year? For our part at Ford, we are glad to say that defense rements have been met in full without a single reduction in the goodness te car mechanically—and with many real improvements in its beauty, com- and performance. Some new materials have replaced old ones, generally at er cost to us. In every case, the new is equal to or better than the old. are instances of what we have done . . .



### Steel Stampings for Die-Castings

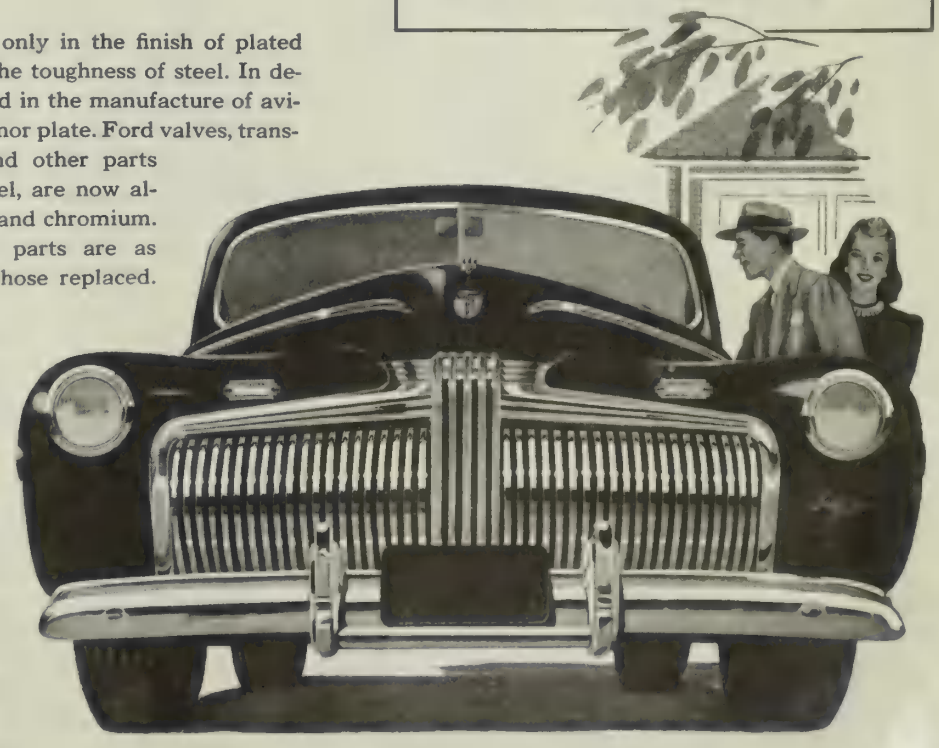
Exterior parts like radiator grilles, and mechanical parts like generators and starter end plates, are now made from steel stampings instead of die-castings, without affecting their usefulness or appearance. This has freed large amounts of zinc, aluminum and other defense-needed materials.

### Some Results in Defense Metals Saved



Based on present conditions, here are some examples of how new materials and methods in the 1942 Ford are helping relieve defense "shortages." Figures show the *cut* in use this year of the materials named:

Primary *(new)* Aluminum has been cut out 100% . . . Secondary *(re-melted)* Aluminum has been cut down 70% . . . Nickel has been cut down by 90.7% ... Magnesium, cut out almost entirely, is down 98.7% . . . Zinc has been reduced by 37.5% . . . Copper, Tin, Lead, and Tungsten cut down in varying amounts from 5.2% to 81%.



### Plastics Replace Metal for Interior Trim

ve been developing plastics for a long time d. The value of this is now apparent. The se of plastics this year in instrument panel, rille, door handles and other interior trim eased large quantities of zinc formerly used al die-castings, as well as nickel and chro- formerly used in plating bright metal parts. w plastic parts are lighter in weight, fully iceable, and very attractive in appearance.

### Molybdenum Replaces Nickel

Nickel is important not only in the finish of plated metal but in improving the toughness of steel. In defense production it is used in the manufacture of aviation engine parts and armor plate. Ford valves, transmission gears, shafts, and other parts formerly containing nickel, are now alloyed with molybdenum and chromium. For the purpose, these parts are as good as or better than those replaced.

ered Benny really was a native torn from Hackensack and not a Central City boy at all—and still on autumn Sundays played for Hackensack. It was a thing that Willy in good conscience had to fight. Besides, it was this evidence of Benny's gainful trade that had persuaded Willy, just one year before, to open up a place himself, a bigger place, with Chinese chef and no spaghetti, and with room to move around in; with the name of Willy Kleeps hung high in lights outside to bring the people in, because it was by far a bigger name than Benny's name, or the names of all Palermos stacked one on another higher than the mountains of their native Sicily.

To think that I should ever put my foot in here, he thought.

George Felix sat at a little table that was covered with a gingham cloth, working, with his elbows wide, upon a cutlet Benny's wife had set before him. George looked up and said, "Why, Willy! What a place to find you. Sit down, Willy. Try the veal."

Willy said no, thanks. But he sat solemnly at George's table. He said, "It isn't funny, George, but I'll play Sunday. I'll win you the ball game, George. I need that three hundred dollars." George listened while he chewed and Willy's appetite was monumental. "Have a sandwich, Willy. Have a steak. Or try the stew. Go ahead."

"No. But about the money, George—"

George listened. He said, "All right, you can have it now, but I don't want any temperament. I want a ball game and I figure you're the one to give it to me, Willy—no matter what they say."

ON SUNDAY afternoon, at two o'clock, Willy Kleeps ran out across the short-cropped grass of Felix Field with the Central City Bluejays. He was more excited than he'd ever been at Soldier Field, Chicago, or the Polo Grounds, New York. He heard the crowd in the tight-filled stands. Just noise. No stinging, special words for him. Not yet. He kept his eyes to business as the Bluejays ran formations down the field. He defied the crowd. Let them say what they cared to say, if they paid admission. Margie had the money, anyway.

In the backfield, Willy ran the ball wide in the mock maneuvers of the signal drill, feeling strong and thrilled with motion now, and thinking that, by sheerest chance, there could be one more ball game left in him.

"Who's that bum?" somebody called.

Willy tried to think of other things. But this was hard to do, because the other things he had in mind were not what you'd call pleasant things. He'd left his bar and restaurant in charge of Bertie, feeling that no evil could be set upon it that was not already there. And he had taken Margie to the train and wished her luck and kissed her much more warmly than he had intended, and the train pulled out and left him all alone to face the job at Felix Field.

George had said to him, "You're not in shape, Willy, and we can't make miracles. But we need you for the kicking and the passing and I'd like to have you call the plays. So don't lose your head. Don't go sluggin' Palermo and those other guys."

Hackensack won the toss and chose to kick. Willy lay back deep against the Central City goal posts, tightening the strap of his leather football hat, working his big legs up and down to loosen them. Benny Palermo was set to do the kicking for the Hackensacks, and this Palermo, he was quite a lump of flesh to have around. A third-rate sort of athlete in his high-school days, a sand-lot player after that, Benny was a many-muscled man whose skill and power developed with the years. The iceman's trade, long practiced by Palermo, had bestowed on him the arms of an ape and the strength of the Brooklyn Bridge.

Willy watched him step into the ball and boot it high. The ball grew small to the eye in the high air where it traveled, then it descended, twisting, until Willy caught it safely in his arms and started up the field.

Willy ran hard and with a cold deliberation, seeing Hackensacks of varied size and speed intent on him. He straight-armed and pivoted and moved up to his twenty-yard line where they hit him solidly and hard and pinned him to the grass.

The Bluejays fell into formation. Willy spoke the signals, working from the T, and fed the ball to Grogan, who went to the line but not an inch farther. The contact shook up Willy like a malted milk and he reflected that the man who plays this game for vanity and not for cash has no more brains than you can find inside of a beanbag, and it only proved the truth of all the things that Margie said, and proved the truth of what he'd said to George the other day.

Willy lay back to kick the Bluejays out of trouble. The pass from the center, a grown-up high-school kid, was not too good, and Willy had to leap for it high in the air, then put his foot against it in a hurried kick that went for twenty yards, no more.

"Willy Kleeps has got the jeeps!"

He heard it from the stands. It was a stupid, childish-sounding theme, seized by the mentally unbalanced. Willy told himself he would not listen to the taunts. It all was too ridiculous that they should think a big-league guy—(the Giants, Packers, Redskins and Chicago Bears—with all of these Willy had played)—should lose his nerve in the emergencies of any bush-league game at Felix Field.

Hackensack now had the ball. They played from single-wing, a powered running game. Benny Palermo hit the Central City line for five. Then someone else came through for four and then for six, up to the Central City twenty-five, and Willy told his linemen and his backs where they should play, to watch the pass—a pass was coming, sure as hell, he said. And the pass did come. Benny Palermo ran out wide and tossed a quick diagonal to a skinny end who took the ball from right in front of Willy's nose and scampered to the last white mark, while Willy, in his effort to retrieve his lapse, fell heavily upon his stomach as he missed the skinny man who slipped around him.

WILLY heard them in the stands. He heard them shouting, "Take 'im out!" Now don't get sore, he told himself. Remember, you don't like this game enough for you to get upset. He waved a slow and recognizing hand at those who called his name. They happily stood up to boo at him. The hell, he thought. He shrugged. No more can happen than has happened, anyhow.

Hackensack did not convert for the extra point. They kicked off to Central City once again. This time the ball was gathered in by Grogan, who moved nicely to the thirty-one before they brought him down. Willy had blocked a man out on the play, but, when he got up, his mouth was red. He wiped his mouth off with his hand, and his hand off on his pants. He considered the Hackensack tackle who had done him thus. Now don't get sore, he told himself. Benny Palermo, wandering behind the scrimmage line as the teams lined up again, said, "You was with the Green Bay Packers, wasn't you?" Benny thought his observation was a funny one.

y called the play, which gave the Jeffers, on a wide sweep to the Willy told himself, be nice, be member George; he let you have undred bucks. He cleared the sack tackle out of there. He did the hard meat of his shoulder suet of the big man's waistline, e man did not get up and Willy ch better now. He held his hands he referee. "All I did was block Villy said, and there was little of that. But the crowd booed, h.

Bluejays gained a first down on rty-five-yard mark. Willy hadn't yet. He thought it might be fun Still working from the T forma- Villy faked the ball to Jeffers, and slipped in through the line, cleats in the earth with a heavy nd went for five yards, ten, and going yet and stumbling from t momentum of his drive. They then, while he was smiling to , and the ball went out of his efore the whistle blew, and Willy at they had punched it from his 'alermo and another guy, and he k inside of himself that they o this thing to him. As he went omeone kicked him in his trou- ad, and he saw few things clearly e Bluejays put the salts beneath e.

up, you bum!" they called out e stands. "You're fakin' it!"

ensack now had the ball, by f Willy's losing it. Palermo ran into the center of the line, his s clearing out for him, his block- ing Willy with a dreadful shock attened him against the grass. ulled himself erect with effort. eorge Felix took him out. George hey'll bury you out there. Those ot everything ready but your one. It's just that they're small- ys who don't like big-time guys."

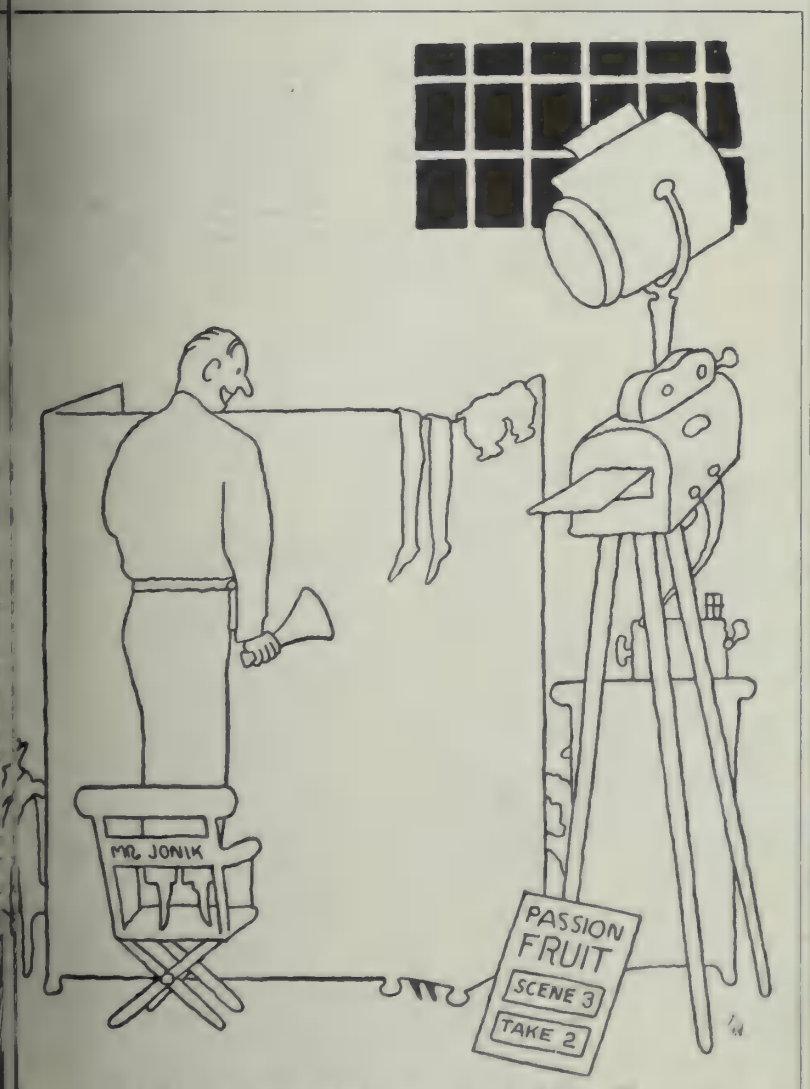
"Whoever told you I was a big-time guy?" said Willy. Then he sat and brooded and the game moved on into the second half and it was quite a game to see. Jeffers almost got away for Central City once, but Benny Palermo pulled him down and the crowd loved Benny, friend or foe; it didn't matter that he played for Hackensack. There was no further score.

Willy watched. He thought it all was amateur out there. He said to George, "I just shook those ice tongs out of my head. Everything is clear. You know what, George?"

George asked him what.

"Those bums out there. I still maintain that they are bums, especially Palermo." Thanks for the comfort, George told him. "I mean it. Lemme go out there, George."

George said, "The fans'll boycott my ball park."



"We'll see," Willy said.

"Go ahead," George said. "We're losin', anyhow."

SO WILLY ran out on the field again and the crowd was yelling while he ran and the things they called to him were choice and fancy things that they'd invented with the greatest concentration through the minutes he had been out of the game. He waved to them. Somebody threw a bottle. Willy tossed the bottle off the grass and then reported to the referee, "Kleeps replacing Goldberg."

Willy figured, well, what can I lose? He took a deep breath and the ball came back to him. He held it tight in one hand with the other swinging free. He picked an artful path between the tackle and the end. He knew that they were waiting for him, tense and overanxious.

He spun easily, away from reaching hands, into the secondary zone, and put his big free hand in Benny Palermo's

**FOR FIRMER GUMS—"NATURALLY" SPARKLING TEETH**

face, and twisted the hand a little as he caromed to the right, then kept on going for a dozen yards. They pushed him out of bounds. Then they fell on him, a drove of them, and it was not an easy thing for Willy to climb back to his feet again.

But he was calling signals steadily. He took the ball and moved out wide. He checked himself and threw a short pass into Jeffers' hands and it was midfield now, and someone, just a lonely, valiant soul, yelled, "Willy! Yay, Willy!"

Willy grinned. His nose was bloody. Willy took the ball and hit the middle of the Hackensacks and spread them with his strength. He got down to the twenty-five before they stopped him, and the stands were vocal now, more violently than ever, but with fewer of their number howling, "Bum!"

The only trouble was that Willy couldn't move. His strength was gone. He let Delancey take it on a sharp reverse that gained no yards. He used this moment to restore himself by swallowing great quantities of breezy afternoon. His legs shook under him. He tried again. He went for five. All Hackensack stood now opposed to him. He faked the center of the line again. He slipped the ball to Jeffers, who sneaked through to the twelve-yard line, while the enemy was busy pounding Willy on the grass.

Once more, he told himself. Just once. But once was not enough because his drive was piled up on the four-yard line and he lay there for a moment when the pile had been unscrambled. He just stayed there in the welcome coolness of the shadows of the afternoon. Get up, he told himself; they'll think you're faking it. And now he knew how much he wanted to have them think well of him, and how it was the nourishment that he had always lived on. He got up and the boys said in the huddle, "Take it, Willy. This is all for you. We'll clear 'em out of there."

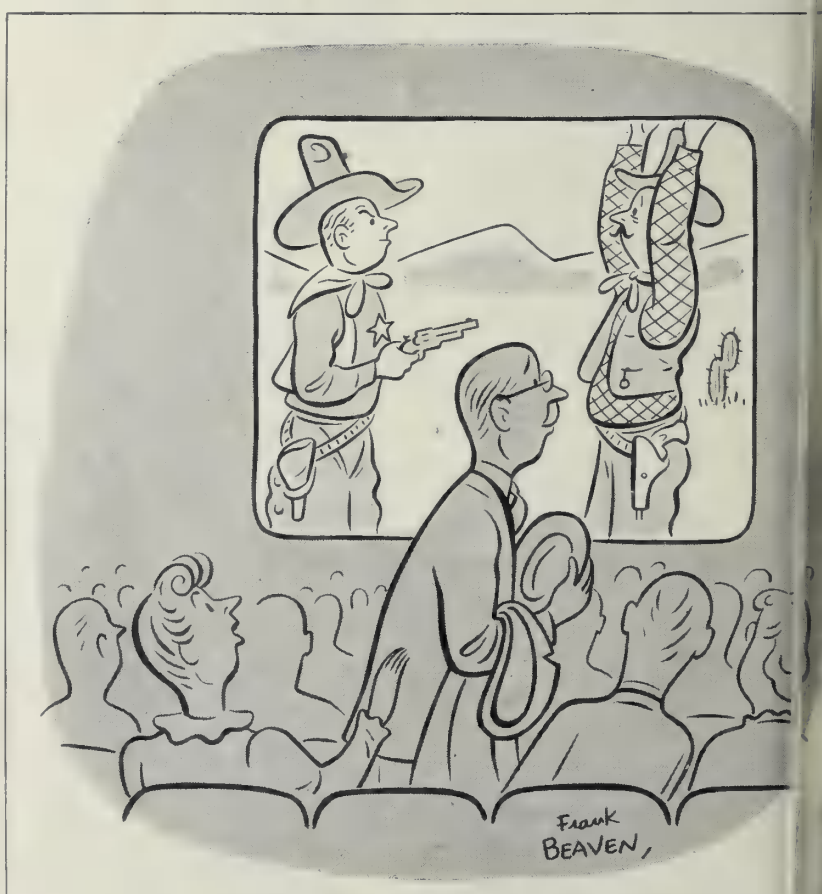
"I'm corked," he said. "Let Johnny take it." Johnny meant Jeffers and Willy meant only to be generous and just.

"You follow me," said Jeffers. "This is your game, Willy. This is big stuff we seldom see out here."

The teams lined up again, while tried to pull himself together, g loose ends of his scattered streng side of him again. The ball came He took it. He moved to the right lines locked, like the twisted fing opposed and straining hands. got the tackle who broke throug got him right, and Willy moved h him to the scrimmage line. Pa was there and almost ready ther doubting now and scared a litt and Willy ran him down the way a might run him down, and that w points for the Bluejays, that w score all around. The crowd's grew and cut away the shame year's failure. Willy stood bac as they lined up to try for the point.

He stood easy and relaxed. held the ball for him. He pla neatly where it had to be and Wi a toe to it and watched it cut between the crossbars for the sary point.

IT GETS dark quite early in Nov It was dark when Willy left the ing room. He had been there time, in the showers that helped him and on the rubbing table wh pain and tiredness had lessened body. He felt better now. He sm cigarette and he was pleased that body liked him or at least had s defaming him. He said, "That's football I'm ever going to play, But I'm glad you liked it."



George asked, "Where you now?"

Willy said, "Dunno. Not goi where, I guess. Maybe I'll go my place, make some coffee, radio news, then go to sleep."

"I'll drive you up," George s

George drove his big car fr ball park. The car droned easil until Willy, squinting through hi eyes, could see his name in front see "Willy Kleeps" and "Bar a taurant." His joint. Somebod the lights, he thought.

They went into the place an

were many people there and Willy said, "This must be Benny's trap; it can't be mine." But it was his all right. There was the evidence of Bertie, with a cleaner, whiter towel across his arm, and with a vast array of beers set on a tray, alpaca coat, a haircut, many fine illuminating things including Bertie's smile. Bertie said, "You murdered them, Chief. I knew you'd murder them."

Willy couldn't understand the great number of people eating. They were eating chicken fricassee. He looked at Bertie. Bertie said, "The special for today. With Manhasset Muffins."

"But where'd the people come from?" Willy asked.

"You brought 'em, boss. You're the biggest man in town tonight. It's like you said. It's human nature."

THERE were cloths on all the tables; simple, inexpensive cloths of gay design that dressed the room and made you think of daylight; there were autumn flowers spread about, and autumn leaves and no dust visible to Willy's eyes.

A lot of people came and said, "A great game, Willy. It was something that we won't forget."

"Well, thanks; well, thanks."

"The big-league stuff," somebody said. "The kind of thing that you don't see in Central City. That don't mean to cast any reflection, George," the man apologized. "Except that I know class when I see class."

It was nice of everyone.

Then Bertie came back with the beers again and Willy grabbed him. Willy asked him, "Bertie, what goes on? What makes? Is this my joint? No foolin', now."

"Ask her."

"Ask who?"

Bertie nodded toward the kitchen. Willy walked, with people trailing him and talking, toward the kitchen. He said to all of them, "That's fine; that's nice. I'll see you later, sure."

He went into the kitchen. Margie stood there in a pretty dress and she was giving orders to a lady in the kitchen. She had just remove apron; there was perspiration o brow; her cheeks were flushed an looked wonderful, so wonderful Willy wanted to kiss her. Bu couldn't figure things. He said, don't you let me in on it? I put y the train for Elizabeth."

"I got off the train," she sai didn't go to Elizabeth. I came here and had a talk with Bertie he told me all the things you'd s George, and he told me what a g kindly man you were and how the abused you."

"Never mind that stuff."

"And so I told him, 'Yes, I kno whole world knows that Willy's He's just a little silly in the head playing football.' And Bertie s me, 'The man's in love with you. why the beer gets stale inside the I cried then, Willy. I cried very

Willy kissed her lightly on the "How sweet," he said. "But what the drama, baby. What about Great White Way?"

"I—I hated it," she said. "It's it's just that I never could give up- not while you were playing fo anyhow. But I know why you today. You played for me. You have a penny, Willy, but you got hundred dollars for me. I—I hop don't mind, but I bought some beer, darling, and some other and fixed the place up just a bit, and Bertie fixed the lights. this business, Willy. Oh, I very much."

They walked outside and watch people at the tables and the ba Willy said, "You're very good at

"You brought the crowd," she "You won them all this afternoo

"Yeah, but is it gonna last?"

"I think so, darling," Margie She squeezed his arm. "I fire Chinaman first thing. I gave hi weeks' pay. I had to tell him that your wife, but Willy, did you eve that man's chow mein?"

Willy scratched his head. "I like it very much," he said. "B after the first six months."

# Our New Army

LETTER FROM A SOLDIER: "There are 20,000 of us in the Panama Coast Artillery and every man is a volunteer fighting soldier. We're the only outfit in the services that isn't preparing for war; we're ready—right now. None of us feel we need sympathy because we're privileged to wear the uniform of the United States Army; we need no hostesses; in fact, we need nothing. And if we did, we'd get it the way we've got everything since we came to the jungles in 1939—we'd go out and get it or build it ourselves before a lot of so-called experts could mess it up.

"Our mission is the defense of the Panama Canal against sea and air attack. We're ready to defend it and are confident we can. We've built more than 200 little cities in the depths of a thousand square miles of tropical jungles, without assistance from any civilian or other temporary hero. Each city is equipped with electric power and refrigeration, its own beer garden and telephone and radio system. We've built the network of roads connecting these cities. Our own newspaper makes a profit of a thousand dollars a month, which goes to the Athletic and Recreation Fund. Our men are content to be fighting men, their morale is excellent, their equipment is excellent. They're the best trained soldiers in the U. S. services. Since June, 1940, they've been on an alert status. If fighting starts tomorrow it will change neither their stations nor their routine duties in the smallest detail except that live ammunition will be substituted for the dummy shells with which they go through many hours of drill each day. The crews live and sleep near the guns and can go into action in less than ten minutes at any hour of the day or night.

"In 1940, almost two dozen batteries of the Panama Coast Artillery, firing their seacoast and antiaircraft guns—ranging in size from three to sixteen inches—made such high scores they were awarded the Red E, the highest official recognition for artillery excellence with its guns. This year we beat our own record and now have the greatest number of Red E's ever won by an artillery organization in the service of the United States.

"The long-suffering public might go for these facts."

# Gilmore the Gamin

Continued from page 14

'Get a few extras made while you're at it," said Mom, who had some devious purpose in mind.

When the proofs came, there was a family conference and all faces fell with the exception of Mrs. Gilmore's.

"You can always have them retouched," said Mom easily.

During this period Virginia had been playing at a little theater in San Francisco with some success. She was at her best in Waiting for Lefty, and all her friends told her she ought to be on the real stage or at least in the movies, but nobody bothered her at all from Hollywood. Mamma, however, was not so reticent. She took the retouched pictures and shipped them on to Sam Goldwyn.

### What's a Little Bike Trip?

Among Virginia's pleasures at this time was bicycle riding. This was serious business because she used the regular racing bike, the kind where the victim bends his torso to a horizontal line, has his feet encased in special stirrups and really hits the road. Virginia had made several trips to Los Angeles, a mere five hundred miles away, and now she decided she had to see Mexico. A girl friend from the East arrived and they started. They were a touch vague about money but Virginia had fifty bucks, her friend had twenty and they thought this would be ample for a two months' trip.

Quite accustomed to road travel and entirely oblivious to yoo-hoos from truck drivers, ogles from elderly gentlemen and disapproving looks from horrified ladies, they made Salinas by the first night. It had been a strenuous stretch, what with the heat and the traffic, and they thought a glass of beer at the end of the journey would set them just about right.

"We drank up seven bucks' worth, counting a little dinner," reports Virginia.

Next night they felt that a slight touch of refreshment would compensate for the struggles of the day and that took another five bucks. By the time they reached San Diego they were b... Also they were a sight, having the ...pearance of a jockey who has run ... for two miles on a muddy track. ... ing down the trail, Virginia had ... bothered by her long hair. l look. Her hair had been hacked at the back in irregular lines and it dropped off in front because of the ysentery.

Go on home, little girl," pleaded Mcre. "This is a tough business and look like hell."

guess I might as well see Mr. Goldsince I've come this far," said Gile, quietly insistent.

Ir. McIntyre put his hand over his s, and waved toward the door.

guess I might as well read for you e I've come this distance," said Vira, planting herself firmly before the t man himself.

### Mr. Goldwyn is Good, Too

o they read together, something en- y new in Mr. Goldwyn's experience. as a one-act play by Noel Coward Sam was amazed at his facility as an r. When she read, he looked at her smiled, thinking of how good he was g to be when she stopped. There some slight trouble with the accentof syllables but for an amateur the dwyn rendition was acceptable. He ed with this verdict to the point of ng Miss Gilmore.

e sent her off to the Studio Club to a room, with orders to report back what her expenses would be. She red it out to the penny—so much for nps, so much for carfare, so much laundry.

Seventy-six dollars," she reported k.

A week?" yelled Sam.

A month," amended Virginia and re- ted it almost immediately, because was what she got, to the penny. No ry but seventy-six dollars a month expenses and not one shilling more.

or six months she was in the hands dentist, at Mr. Goldwyn's expense, ing her buck teeth pushed back. en she presented herself proudly to Goldwyn at the end of that period, found he was horrified again.

You lisp!" he cried accusingly, and as the truth. As a child the buck h had allowed her tongue more lee- y and the tongue had accordingly n longer. When the teeth were d the tongue refused to contract. st assuredly she lisped.

More treatments, this time with a chiatrist. It was a hard job but she won. She still lisps slightly but not when she appears in a scene. If it appears at all it produces an effect which is quite attractive.

Then Sam put her under a stock contract at fifty a week, peon wages in Hollywood. For two years she didn't do a lick of work. She made a test for Rebecca. No dice. She wanted the Patricia Collinge role in The Little Foxes. No soap. Then Sam loaned her out to 20th Century-Fox for a pretty-girl part in High, Wide and Handsome.

"Ai-yi-yi," says Miss Gilmore, in criticism of her performance.

Next she was over at R-K-O doing the ingénue in Laddies. When asked about this Miss Gilmore, who is nothing if not frank about her work, puts her fingers daintily to her nose.

Then came a break when she got a small character part in Western Union at 20th Century-Fox under the direction of Fritz Lang. She felt she was good in that and people said she was good.

Although she is a great beauty, she hates glamor roles and knows she muddies them up. Swamp Water is right down her lane because she has a part in which she looks like somebody who has been weaned in a tree trunk.

In view of her past history as a grease monkey and general hoyden, it is interesting to find that Miss Gilmore is as demure as a squirrel. Nobody has claimed that she is a Pericles for wisdom but she belongs among the smarter of the film ladies. For years she has written poetry under her real name of Sherman Poole and much of it has been printed, some of it in good magazines.

She is probably the only girl in Hollywood who doesn't dance. She has never swung a tennis bat or hit a golf ball or ridden a horse. She swims. She has given up the bicycle. She diets. She reads great big fat books and seems to understand them. Rumor persists that she is the worst-paid actress in Hollywood. When you ask her about that, a thing no gentleman would do, she says:

"What do you want to do? Get Beverly Hills in hysterics?"

This seems to prove that she is not overpaid. The movies may not be much of a career but she has succeeded in doing one thing, anyhow—getting her teeth fixed. Some people never have that luck.

## Our New Army

Continued from page 63

h games; not so much poker as ckjack and craps. To prevent the n from running off to gambling ses in town the Army sort of con- es this pastime, even in such serv- buildings as garages, motor pools, supply quarters. Semiofficially, a com runs the game to keep it on the and up. In one main post unit the poral in charge of the pool room op- tes the game down cellar, furnishing arettes, soft drinks, clean decks of ds, lights and a blanket for the table r some reason the boys never play ds on anything but a blanket). The poral takes a cut from each change he bank in blackjack, a certain per- tage from each pot over a dollar in er and a cut on each roll of dice. The ny profits from this, too; or rather soldiers do, because the dough goes poolroom supplies. One unit of the h Infantry goes farther than that; it s a company game in which the kitty s directly to the Company Fund m which athletic equipment and gazines are bought.

Queried about these somewhat subna goings on, one officer admitted that "the boys are going to gamble and we might as well face it, so why not arrange things so they can benefit?"

THE Field Artillery Replacement Center got word of a shipment of troops from the Midwest, so they sent a crew of trucks and noncoms to greet the new men at the Fayetteville station. When the train pulled in, one lone soldier turned up—lanky William H. Wright, from Arkansas. For some days, until several hundred other men arrived, Pvt. Wright constituted the whole of the 8th Battalion, with a mess hall, an orderly room and three barracks all to himself.

MONTHS ago, hard-labor men and soldiers from the hoosegow were put to work planting soybeans—millions of them, it seemed—around the barracks and buildings at Bragg. The beans grew and sprouted and the men wondered what they had been planted for. Food, maybe? Now in November comes the answer: Plow the crop under to fertilize the soil. But the artillery area won't forget the soybean affair for

Men of America...add to the freedoms that are guaranteed to you as your heritage...the freedom of choice. Exercise it. Look at all three nationally advertised, nationally distributed trade marked shirts, offered to you at identical price ranges. Compare them. We're confident your own good judgment will pick a Jayson Troy-tailored shirt every time! The greater value in fabrics and superior workmanship is immediately apparent. Jayson shirts look more luxurious, fit better and wear longer.

some time. When the beans sprouted in front of a much-disliked officer's headquarters they spelled out a very insulting message indeed. It was plowed under—but quickly.

LOTS of letters have been leaving the fort bearing S-M-R-L-H on the envelopes. Postmen were puzzled, sweethearts were skeptical until it was explained the letters stood for Soldier's Mail—Rush Like Hell.

6TH ARMY CORPS

WITH THE SIXTH ARMY CORPS ON MANEUVERS. The 16,000 men and 2,300 vehicles of New England's Yankee Division ran the gamut of temperatures on their trip from Camp Edwards (Cape Cod) to Maness (North Carolina), where they established base camp for the duration of the First Army maneuvers. The first night out from Cape Cod was bitter cold . . . Virginia seemed like early summer . . . and in North Carolina the meteorological section of the 51st F.A. Brigade hung a thermometer in the sun and watched it pop up to 118 degrees.

But it wasn't the heat alone that bothered the Northern boys. The Sixth Army Corps (of which the 26th Division is a part) pitched its tents smack in a territory occupied by more than a million peach trees. So what? Well, it seems the trees had bugs. As one YD boy put it: "For every tree there's a million bugs, and just try multiplying that by a million trees." Natives assured the Army that the fruit flies would disappear come the first frost, which would leave only rattlesnakes, copperheads and moccasins for the men to shoo away. The gents of the 101st Observation Squadron, parked near Norwood Airport, have snakes but don't worry about them. "It's these black widow spiders," they say cheerfully, "that have us hopping."

26TH DIV.

There are compensations, though; not the least of which are the Southern gals. They not only look beautiful, the lads state, but "they talk devastating." One fast-working gent worked a little too fast. At the end of the second day in camp he made a beeline for the nearest town (Ellerbe), caught up with something sweet and Southern and sat on the doorsteps with her—just all eyes and ears. Pretty soon, the way we heard it, the mother of this cute mouse ca out and fixed the soldier with stern e "It's all right," she said, "for you sit on the stoop with Charlotte, but don't you two go wandering off." N night, back came the boy for anot session of stoop sitting. Presently mother appeared again. "Charlo honey," she said, "how do you think going to like it up No'th?" The sol didn't go back, we guess.

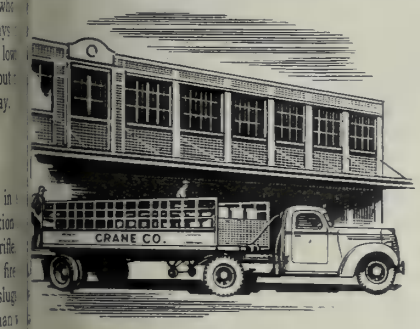
### TEXAS

RANDOLPH FIELD. Although three months old, Aviation Ca R. E. Knucklehead of the Army Corps has already made an unenvia reputation for himself. Cadet Knuc head is the brain child of Artist J Zumwalt, Randolph Field cartoonis the Training Film Preparation U and his mission is to show Rando cadets how not to fly. Everything does is as wrong as parsley on pean Samples: He didn't know that Corps fliers no longer count to ten fore pulling a parachute ripcord; t simply fall clear and immediately the 'chute into full blossom. Knuc head bailed out, stuttered badly, didn't make it; he beat Santa C down the chimney by two months, g 489 miles an hour . . . Ten minutes reporting to the flying line, his morning, Knucklehead tried to shu the motor by grabbing the propelle At present, instructors are trying to vince him that an aviation cadet sh never try to take off from insic hangar, especially when both doors closed.

Knucklehead doesn't know wha think of cartoonist Zumwalt, who from Galveston. "He's always s taging me!" yells the looping lowb digging himself and his plane out o other mountain. Or so they say.

### CALIFORNIA

40TH DIV.

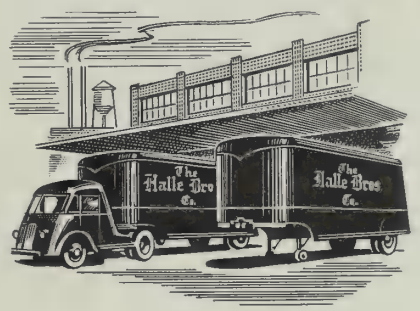


FORT ORD. Deer in s areas of the reservation become so used to rifle, chine-gun and pistol fire hardly wiggle an ear when slugs overhead. A 40th Division man w rather plug himself through the than shoot a deer by mistake, but ians aren't so considerate. So have been sneaking onto the rese

# EVERY TRAILER ON THE ROAD *Contributes to* NATIONAL DEFENSE!

★ THERE ARE THOUSANDS of Truck-Trailers in daily use on *direct* defense work . . but that's only a fraction of the Truck-Trailer industry's contribution. As a matter of fact, *every trailer we build contributes in some way to the all-out job in which our Nation is engaged:*

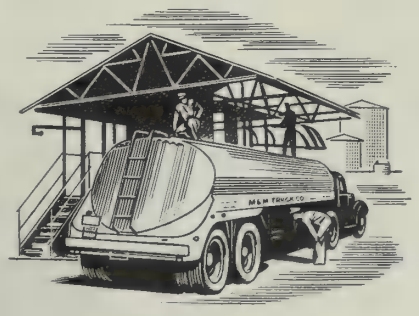
## HEAVY-DUTY TRUCKS CONSERVED FOR DIRECT DEFENSE USE . . .



• *Example* — The Crane Company, Chicago, is using a 1½-ton truck and 10-ton Fruehauf Trailer for work on which they formerly used a 5-ton truck . . because any truck can *pull* far more than it can *carry*. Across the country, Truck-Trailers release thousands of heavy-duty engines that are sorely needed for other essential work.

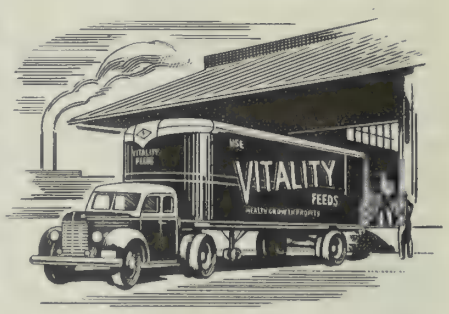
## GASOLINE AND OIL CONSERVED . . .

• *Example*—The F. J. Kress Box Co., Pittsburgh, uses up to 20 percent less gasoline and oil for the same tonnage hauled, because a *smaller* truck, *pulling* a Fruehauf Trailer, now transports more tonnage than was formerly *carried* on a *bigger* truck . . . and uses less fuel, of course. Multiply this by the number of Truck-Trailer users in the United States . . . and the conservation of gasoline and oil is tremendous!



## ENGINE PRODUCTION FACILITIES INCREASED . . .

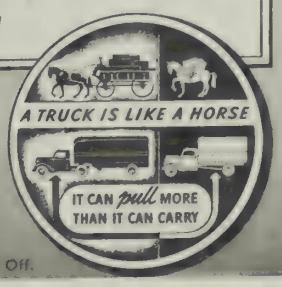
*Example* —The Halle Bros. Co., Cleveland, uses the "shuttle system" between its department store and warehouse. One truck handles three detachable Trailers — it's constantly pulling one Trailer while the others are being unloaded and loaded. Without the "shuttle system," *three trucks* would be required. Thus, production facilities for *two extra trucks* are freed for defense work. Multiply this by the thousands of users "shuttling" with Trailers, and you have an immense added production capacity!



## RAILROAD TANK CARS FREED FOR LONG HAULS . .

*Example*—M & M Truck Co., Denver, whose fleet of fifty 5,000-gal. Fruehauf Tank-Trailers hauls gasoline for one of the major producers, delivers about 15,000,000 gallons in a year. The year-round use of about 100 tank cars would be required to make these same deliveries. Consider, then, the value of 100 cars in the present emergency . . and the fact that this example represents only a very small fraction of the country . . and that Tank-Trailers can assume still larger share of the responsibility!

## RAILROAD FACILITIES RELEASED . . .



• *Example* — Vitality Mills, Chicago, now ship their livestock feed to certain of their markets by Truck-Trailer, instead of by rail freight. Through faster delivery and improved service, Vitality's business in these markets has increased by 35 percent . . . but, beyond that, the change has released rail facilities for those types of hauling work that railroads can handle best.

*Our soldiers must eat! Transporting their food is just one of the thousands of jobs that motor transport is handling. For example, one firm, using Fruehauf Trailers, hauls 64,000 lbs. of produce weekly to Fort Sill, Okla. Motor transport is helping America to put the job across!*

# "Not Malt, Not Rum, Not Wine, Not Nuts,

## *So Help Me, It's Tobacco!"*

6137 No. Meridian St.,
Indianapolis, Ind.
June 27, 1941

Larus & Bro., Richmond, Va.

Gentlemen:

I'm still a young fellow, or like to think so, and as long as I've smoked, I've smoked a pipe. Life for me has been a continual round of trying different tobacco.

I've paid as high as six dollars a pound for the stuff. I've had mixtures made to order.

I've smoked tobacco that tasted like honey, that tasted like rum, that tasted like wine, that tasted like maple sugar, that tasted like nuts, that tasted like burning hickory, that tasted like sweet grass. I once smoked a British blend that tasted like somebody's old tweed suit, so help me.

But Edgeworth—I can't possibly explain it, but Edgeworth tastes an awful lot like tobacco! Possibly it *is* tobacco and not malt, not apples, not rum, not wine, not something to disguise the taste of a product the manufacturer is ashamed of.

I shouldn't take up your time like this, really. But I long ago promised the first time I found a tobacco I could smoke for a month or more steadily without tongue-bite, throat irritation, dizziness, and at the same time enjoy the flavor every time I lighted the pipe—when I found that kind of tobacco, I was going to write the manufacturer and tell him about it. *Thanks for Edgeworth, gentlemen!*

*(Signed)* G. T. Fleming Roberts

**NOTE:** Mr. Roberts got acquainted with America's Finest Pipe Tobacco by sending in this coupon for a generous sample tin.

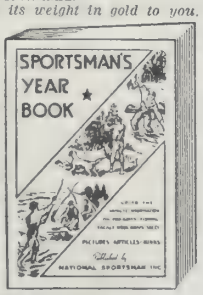
**More and Better Hunting and Fishing for you**

HUNTING AND FISHING MAGAZINE tells you how, when, and where to get it.

Enjoy these thrilling outdoor sports the year around. Read the stirring stories of sport with rod and gun by famous writers and the valuable information by leading experts about guns, ammunition, fishing tackle, camp equipment, dogs, conservation, log cabins, boats, best places for fish and game, etc.



HUNTING AND FISHING is America's LEADING outdoor magazine. It is read every month by more than a half million sportsmen who know it's the best of its kind.

*And here's a book that's worth its weight in gold to you.*

**THE SPORTSMAN'S YEAR BOOK**

Over 200 pages full of up-to-the-minute information on Shooting—Fishing—Camping—Boating—Dog Training, etc. It tells you the things you want to know about Duck, Deer, Upland Game, and Crow shooting. How to choose your gun, use of Sights, Choice of Boring, Ballistics, and Skeet.

All about Bait, Fly, and Surf casting. Kinks for Fishermen, and hundreds of other things too numerous to list here. Over 200 illustrations.

**SPECIAL OFFER**

We will send you HUNTING AND FISHING MAGAZINE for a whole year, 12 BIG Issues, plus a copy of The SPORTSMAN'S YEAR BOOK.

**BOTH FOR ONLY $1.00** Postpaid. Mail your order today—RIGHT NOW, for the biggest value ever offered sportsmen, to

205 SPORTSMAN BLDG. BOSTON, MASS.

tion, especially at night, that Post Commander Col. Roger S. Fitch has established deer patrols. Hardly a week passes without one or two of the poachers being nabbed and placed on the colonel's carpet. They get the game laws and the Fort Ord riot act read to them, then the colonel locks up their guns—just in case.

"MAYBE they do it with mirrors," muttered members of the 757th Tank Btn. What they referred to was the sight of eighteen—count 'em—eighteen tanks. For months they've been training with scout cars, jeeps and trucks bearing signs: Tank. The genuine articles aren't new but can get around without tow cars. First time the battalion went out into the hills in the armored wagons some guy put signs on three of them. Field Kitchen, they read.

CAMP ROBERTS. Two officers from Fort Benning came here and let it be known there was room down there for men interested in parachute soldiering. Some 20,000 new men, getting their thirteen weeks' basic training, yawned politely. The officers said it was interesting work. More, and less polite, yawns. Also, added the officers, it meant $50 extra pay per month. The officers signed up 259 out of the stampede that followed, and in a few days the would-be paratroopers were on Georgia-bound trains. Shortly thereafter came a wail from one of the volunteers. "By now," he wrote back, "I expected to have both legs broken from jumping out of an airplane a mile up, but all I've got is housemaid's knee from three weeks of learning how to fold a 'chute."

MOFFETT FIELD, Sunnyvale. The odds are 3,000 to 1 against him but Ralph H. Donovan never sidesteps an argument over the relative merits of the Army and Navy. A chief electrician's mate, he's the only Navy man at this Army Air Corps training center and his job is to keep an eye on a mast that has no ship. It's the huge mooring mast built years ago for the unlucky dirigibles Akron and Macon. The hangar is now an Army plane-conditioning plant. Mate Donovan's duties include (1) running the mooring mast up and down the runway's tracks twice a month to keep it from settling and (2) explaining what a sailor is doing at an Army post.

CAMP CALLAN, San Diego. Selectees of the 56th Coast Artillery training battalion are preparing for war with a few BB guns, a moving clothesline and an electric metronome. Sounds futile, but wait. Lt. Col. Manly B. Gibson, battalion commander, added the above articles to the arsenal, and he uses them as follows:

The BB guns are clapped alongside Springfields with strips of inner tubes, and the BBs land in a short-range target box whence they are retrieved for further use. At thirteen cents a thousand, Lt. Col. Gibson says he isn't going to waste ammunition; moreover, he maintains that his system teaches the boys aiming and firing weapons just as well as though they were using noisy and expensive stuff. On the big 155-mm. guns the air rifle is strapped to the barrel and the gun pointer aims at tiny bits of cloth hanging from slowly moving twine forty yards away. All distances and speeds are on a 1/100th scale. When the gun pointer finds the target he yells "Fire!" and an obliging fellow selectee squeezes the BB-gun trigger. The pellet lands in a near-by tank of water and the splash tells how close the projectile came to the "ship." As for the metronome, Lt. Col. Gibson attached same to the battalion's public-address system and its rhythmic beat has the boys picking 'em up and laying 'em down in astounding unison during basic infantry drill. Lt. Col. Gibson says he wouldn't mind if other camps swiped any or all of these innovations.

### WASHINGTON

FORT LEWIS, Tacoma. To be funny, somebody wrote a Write-to-a-Lonely-Soldier letter and dispatched it to a Chicago newspaper's lovelorn column, signing the name of Pvt. Leon Kvetko, of the 60th Signal Btn. Few days later Pvt. Kvetko went to get a letter he was expecting and was handed 115 of them. To date he has received some 800 as a result of the gag, but he no longer considers it a gag. When he began to wade through the letters he found they were in earnest, from World War veterans, mothers, young girls. Some sent pictures, some sent candy. Pvt. Kvetko parceled them out and his whole company got into the spirit of the thing and pitched in to answer the letters. "I'm the fort's biggest buyer of stationery now," says Kvetko. "Lots of people sent extra stamps and that helps to keep mailing costs down. Funny thing—I never used to write my parents, even, before this thing started." He writes home regularly now, but has to wait a week to find out what's in his mother's notes. She writes in Hebrew, which Kvetko can't read, and he has to get the rabbi to translate her letters for him.

### GENERAL

PVT. KVETKO probably has his hands full, so if you want to write to soldiers, here are some in outlying posts who promise to answer all comers. First Class Privates Sanford Silverman and Ed Farber, Station Dispensary, Dept. Training Center, Rio Hato, Republic of Panama. Pvt. Dick Fayant, Battery H, 73d C.A. (A.A.), Fort Amador, Canal Zone. And Chaplain Chester P. Hanson, U.S. Army Air Base, A.P.O. 801-C Newfoundland, thinks some letters sent to him for distribution at the airport would hike up morale no end. As we've said before, this column cannot forward any correspondence and can concern itself only with the letter problems of men in posts outside the continental United States.

INEVITABLY, many of the current morsels of Army humor are merely modernized relics of former wars and attributed to Army posts from Maine to Texas and diagonally the other way. "This really happened to Pvt. Joe Yardbird at Camp McAntitank," is the way most of them start. We'll print them here from time to time, clearly labeled for easy identification so they won't be confused with the McCoy. Might as well begin with the one about the new soldier who bought and ate sandwiches at the post exchange his first three days in camp because he thought it would be too expensive to eat in the mess hall. That one has come in from posts in nineteen states and is the first and last time it will be printed herein. Kinda funny, though.

BRINGING the total to sixty-two, the following newspapers are reported as mailing free copies to soldiers from their home towns. Michigan: The Berrien Springs Journal-Era and The Charlotte Republican. Illinois: The Downers Grove Reporter, Illiopolis Sentinel and Du Quoin News. New York: The Randolph Register, Pleasantville Townsman, Newcastle (Chappaqua) Tribune, Bayshore (L. I.) Sentinel and nine Long Island papers published by the Griscom-Van Alen Publications, Inc. Pennsylvania: The Easton Express and Westinghouse Valley News. Iowa: The Fenton Reporter. New Jersey: The Rockaway Record. Tennessee: The Greenfield Gazette. Maryland: The Bowie Register. Indiana: The Goshen News-Democrat. Florida: The Dade City Banner, New Port Richey Press and Zephyrhills News. West Virginia: The Mineral Daily News-Tribune.

"BEAN DAY!" writes Technical Sgt. Walter A. Luce, from 8th Army Corps HQ., Brownwood, Texas. "That's what the Army needs. Where are the beans? All my life I've heard about bean-eating soldiers and when I got in the Army two years ago I thought 'Ahhh—here is my chance to get plenty of beans.' Did I? In the two years I don't suppose they've given me beans a dozen times. Roast pork, roast beef, steak, fried ham, roast this and fried that—but no beans. My plan is to instigate Bean Day, and if you can get the idea into print, maybe the cooks and mess sergeants will catch wise, give us beans occasionally and make a lot of soldiers happy."

ALL right, Sergeant; you've stuck your neck out. Is everybody happy?

# Sin of the Father

Continued from page 12

"But it all leads up to our awful experience at the camp, Mildred!"

"Awful experience—"

"You see, when Reid and I were arguing about his going off with Sammy and that Screwball idiot—the poor boy looked so troubled—so I asked him what was the matter. And he said, 'I can't figure Pop out. He's got no enthusiasm whatever. You suppose we've got a pro-Nazi in our midst?' Of course, I shut him right up—"

"Edgar is definitely not pro-Nazi. I heard him tell Joe—"

"Oh, no, no—that's not it. The whole thing goes back to what happened to Edgar in France. If you'll stop and analyze it logically, you'll see yourself that when a man has been absolutely mum about a chapter in his life—why—oh, Mildred, I'm so miserable!"

"What happened at camp?"

"At the camp—oh—I meant to tell you. Edgar didn't want to go!"

"Not visit his own son?"

"No. You see, we'd had a terrible argument about Reid. I wanted Edgar to use his influence and get Reid a commission in the pro—pro—where they buy things for—"

"Procurement."

"THAT'S it. Or at least in the Intelligence, where Reid could make his scholarly talents felt. But Edgar said, 'He's had no military training.' And I said, 'Whose fault is that? You wouldn't let him take military training.' Furthermore, I pointed out that he would never allow Reid to play with toy soldiers. So why should the poor boy be handicapped at this late date—and have to go in the Army as a common private soldier? Was I right or wrong, Mildred?"

"We-ell—"

"The plain and simple truth was that Edgar did not have a commission when he was in the last war. He was a corporal or a sergeant or something like that—"

"A top sergeant, I *think* he told Joe—"

"So he told Joe! Well, he never told me what he was. I am married to a human clam. All I could get out of Edgar was that Reid should start from scratch and work up to a commission, if he wanted one."

"What did Reid say?"

"Oh, you know how he is about Edgar. Anything Edgar says is law and prophets to him. Goodness knows, Edgar has never said much—so I suppose it is only right and natural that Reid should be impressed. Why, Mildred, I argued with that boy practically all evening—and his father just sat there like a bump on a log, smoking—and when I was hoarse and limp, do you know what happened? Master Reid Ralston turned to Edgar and said, 'Should I volunteer or try to wangle a commission, Pop?' And my precious, loyal husband said just one word. 'Volunteer,' he said."

"Then why shouldn't he want to visit Reid at the camp? If he approved—"

"I don't know. But he acted right from the start as if he were going to the electric chair. Actually! His first announcement was that Reid didn't want to be bothered with us. I telephoned the camp—deliver me from ever having to do *that again*—like a call to China and everyone so curt and rude—but I finally got Reid. He said he was expecting us and would be very much disappointed if we didn't come. He said, 'It'll be like old times to Pop,' and couldn't understand Edgar's attitude."

"Joe says Edgar—"

"So I had my precious wher couldn't squirm out of going. All h was to grumble about the car not v ing right . . . bad traffic conditions we'd probably have a smashup—i ine, a father going to see his own who'd been away for weeks—and g bling."

"Joe says Edgar talked very depr about the war—"

"This wasn't war, my dear. This just driving down to camp to se own boy in the Army. Edgar didn't try to make *that* excuse. On the down, all I could get out of him that we'd make Reid feel like a Then, when we got near the camp look at the soldiers and grunt. It se so outlandish for a grown man sort of grunting and sighing, with single word of explanation. So I f said, 'Edgar, you are driving me u nuts. If you have any comme make, come out with it!' And you what he came out with?"

"Not the faintest—"

"He said, 'They're just schoolb just kids.' So I said, 'My dear I you were only nineteen when you the Army in the last war. I don't you looked much older than these Wasn't that a natural, polite back? Do you see anything obn about such a remark?"

"No, I don't."

"Well, our dear, calm, mild, Edgar said, 'Damn us all for this just sat there and scowled for h hour. The traffic was bad, but I'r that didn't justify a supposedly father going to see his only sor using such language. It startle because Edgar very rarely uses p ity of any kind."

"But, Janey, wasn't he damn older people because we let Hitle pen?"

"EDGAR was just simply sulk had ample proof of that when to the Post Headquarters or wh they call it where they receive v parents. It turned out that Rei vision or regiment was on parade spection—anyway, marching a So Edgar, the proud and doting wanted to go back to the car a I said that *I* took sufficient inte our son to want to see him in t rade. Edgar said we couldn't pi out—that all soldiers look alik parade ground. But I put my fo down and took Mr. Edgar Ralst the party of parents going to th parade field we were. It was ho

"Horrible?"

"The way that man acted. Y the camp authorities had plac party in charge of an extreme young ensign or lieutenant or—a a commissioned officer. He had beautiful uniform compared common private soldiers that m just ached for Reid. Not meani thing in particular, I said: 'I'd h see Reid with epaulets on his Wasn't that an innocent enou mark?"

"Yes, but—"

"It positively enraged Edga openly, you know. He never right out and expresses his fee so many words. He just boils i and becomes very grumpy. I th would sink right down and d shame, my dear. Oh, Mildred-

"What'd Edgar do?"

"He—oh, I've got to tell it—he was a coward. He—he ran away—"

"Nonsense!"

"Yes—he did."

"What—what makes you think that?"

"I know it."

"Did he tell you?"

"Oh, if he only would! I'd understand. I could help him. If he'd only confess to me—and talk it out. He thinks I'd be revolted. I wouldn't—not at all. I'm a very understanding person. Oh, Mildred, the terrible thing is—our boy. He's always admired Edgar so, in spite of his silence about the war. And, after the way Edgar acted at camp—what he said to Reid—the poor boy must suspect. It must be haunting him. Maybe he believes he inherited Edgar's—his—weakness—"

"I still don't believe it!"

"That's very sweet and loyal—"

"Joe wouldn't either. Whatever happened to Edgar in France—it wasn't that. How on earth could you ever get such an idea?"

"I was there, Mildred."

"You mean—at camp?"

"Yes. Edgar insisted that he was going to Reid's barracks—you know, the big building where the common, private soldiers have to sleep—and he would wait for Reid there. I put my foot right down. I said I could look at American Legion men and soldiers, too, without feeling sick and wanting to run and hide. I said I was simply amazed at his actions and talk. I said we had come down to camp to see our only son, and cheer him up and build his morale, so he could do his duty by his country in her hour of peril. I didn't mean to be cruel—even though I now suspected why Edgar would never say one word about his adventures in the last war—but what hurt me was his refusal to take me into his confidence all these years. After all, when you've been married to a man twenty-one and a half years, you should be trusted—"

"Joe doesn't trust me."

"—well, I happen to be an unusually tolerant and understanding person. I said with heavy emphasis that it was no part of an old Army soldier to go criticizing latrines and tanks and machine-gun rifles and saying he can't take a mere drill at an Army camp, with his own son a member of the Army—"

"WHAT did Edgar say to that?"

"Not one word. He merely turned on his heel and walked off. So I went back to look at the parade and by this time it had broken up and I had the dickens' own time finding Reid. It turned out that he and some of his friends had been surrounded by a lot of proud fathers. One of these older men was telling a story—ugh—it made my hair simply stand on end—do you think they should tell practically boys such things? I mean, when they are preparing for war themselves and need to have their morale bolstered?"

"Well . . . I'd have to hear the story . . . but I'm much more interested in—"

"The man that was telling the story was in the middle of the group, talking to Reid and the others. It was about a man nicknamed No-Medals—oh, Mildred, I shudder even now to think of it. Do you suppose it actually could be true?"

"How should I know, Janey? You haven't told—"

"This man said that No-Medals was in the American Army near a place called Sedan—wasn't that in France during the last war?—Well, anyway, No-Medals had a very close and dear friend. Some Germans pretended to surrender and then shot No-Medals' friend. So No-Medals went simply stark, raving mad. He found the dugout where the Germans were that had killed his friend. He filled his pockets

and a HALF DONE overhaul won't stop Oil Pumping . .
ALWAYS CHECK ENGINE BEARINGS!

IF YOU are having your car engine overhauled to stop oil pumping, remember that you will save yourself time, trouble and future expense by doing the job right the first time.

If the oil waste is caused by worn connecting rod bearings, replacing piston rings and spark plugs is only a half way job that will be disappointing in results.

The worn connecting rod bearings must also be replaced or they will continue to throw excess oil into the pistons and foul even the best of new rings and plugs. Tell your service man to check the bearings, and, if worn, to replace them with a set of Federal-Mogul Oil-Control Bearings, to restore power, pep and economy!

with hand grenades and crept up on them. Then, he deliberately threw all his hand grenades on top of them and blew them to shreds. Imagine that!"

"Fair enough, wasn't it?"

"It certainly was not, Mildred. Because, look, the Legion man said No-Medals was killing crazy. And instead of reporting him to the authorities, they let No-Medals stay right in the front line. He led all the attacks—and the whole battalion or regiment or whatever it was got infected with No-Medals' dreadful blood lust. They sent out word to the Germans that they would not take any prisoners. Oh, they did h-horrible things . . . led by that madman, No-Medals. The Legion man said that General Pershing finally had to take them from the battle and put them to work at hard labor for punishment. Do you actually believe such a thing ever happened?"

"I'd have to ask Joe. Maybe he—"

"But the most atrocious part of it was that the bigmouthed oaf bragged about No-Medals as if he were a bigger hero than men like York and Woodfill. He seemed to think that No-Medals was a fine example to hold up before those nice kids."

"OH, THE old vets like to shock 'em, Janey. But what about Reid and Edgar?"

"I'm coming to that—but first I had to settle that Legion man's hash. I pushed right into the group around Reid. I certainly ticked that big galoot off to a fare-you-well. I said—"

"What about Edgar, Janey? Why do you think—"

"I simply have nothing else to think—judging by Edgar's speech and actions. I told Reid his father had an upset stomach and was waiting for us at the barracks. Reid grinned, as he always does, and said he couldn't believe it. You know, I was sort of proud of Reid for the way he had listened to that hideously grisly story about No-Medals. He didn't show any ill effects, I mean it hadn't disturbed his morale or poise or whatever, at all. Even though he had come fresh from Harvard to face the ugly realities of life—"

"What about Edgar, Janey?"

"Oh, *well*—Reid's casual, cheerful attitude made Edgar's behavior so starkly impressive. Mind you, here wa posed war-veteran father vis only son in camp for the first tir Edgar was just sitting on the front of the barracks like a bu log and staring all around. H positively fugitive—no, it's fu looked furtive. As though afraid of being exposed or unm whatever. Reid and I had t solutely all the talking. Unt end—when it was time to go— dred—"

"What *happened*, Janey?"

"It wasn't what happened what Edgar said. It gave h completely. You see, Reid stil ghastly story the Legion man t mind. He repeated it word fo Edgar. And if I ever saw a m in his very bones, it was Edgar —showing such emotion bef own son who has got to be t do his duty—well, my heart lower and lower. When Reid the story, he said, 'You guys h been pretty rough on the k time, Pop!' Surely that was matter - of - fact enough s wasn't it?"

"Yes, but—"

"So what does Edgar do bu of sheer terror in his eyes- man, a father—and say to Rei two things wrong with Americ ing Huns, kid. Huns make them too much. And Americ they get started, are the kill diers on earth. You—you t hate the Huns too much. It that coming on—for God's Just remember that man th No-Medals.'

"Yes, *run*, he said. Oh, I my poor dear Edgar—what thing to say to Reid. I'm su pects the truth. The poor bo afraid this very minute that herited the taint of cowardic what's the matter, Mildred? you look at me that way? T instant!"

"I'm afraid you missed Janey!"

"What point?"

"Well . . . about No-Meda Joe—and have him talk to E if they say it's all right to e will!"

**"By George, it is raining! I'll just duck over to the library and get you a nice book to curl up with"**

# The Pied Piper

k. It stood there in the station in ot sunlight, interminably. Pres- a man came down the corridor.
*escendez, monsieur,*" he said. "This goes no farther."
ward stared up at him dum- ed. "But—this is the Paris train?" is necessary to change here. One descend."
hen will the next train leave for ?"
lo not know, monsieur. That is a ry affair."
got the children into their coats, red his things together, and pres- was on the platform, burdened is luggage, with the three children g after him. He went straight to tationmaster's office. There was icer there. The old man asked a traight questions, and got straight rs.
ere will be no more trains for monsieur. None at all. I cannot u why, but no more trains will run from Joigny."

RE was a finality in his tone that oked no argument. The old man "I am traveling to St. Malo, for nd, with these children. How you advise me to get there?"
young officer stared at him. "St. ? That is not the easiest journey, monsieur." He thought for a mo- "There would be trains from res. . . . And in one hour, at half wo, there is an autobus for Mon- . . . . You must go by Montargis, ieur. By the autobus to Montargis, to Pithiviers; from Pithiviers to rville, and from Angerville to res. From Chartres you will be o go by train to St. Malo."
turned to an angry Frenchwoman d Howard, and the old man was ed out of the way. He retired on- e platform, striving to remember ames of the places that he had just . Then he thought of his little deker" and got it out, and traced ecommended course across coun- Chartres. It skirted around Paris, miles farther west. So long as were busses one could get to res that way, but Heaven alone how long it would take.
knew the ropes where French ry autobusses were concerned. He and found the bus out in the sta- ard, and sat in it with the children. had been ten minutes later he d not have found a seat.
rried, and distracted by the chatter e children, he tried to plan his e. To go on to Montargis seemed nly thing to do, but was he wise to Would it not be better to try and l back to Dijon? The route that d been given through Montargis to res was quite a sensible one ac- ng to his "Baedeker"; it lay along d main road for the whole of the red miles or so to Chartres. This ould give him a good lift of thirty- r forty miles upon the way, so that e time he left it he would be within miles of Chartres and the railway Malo; provided he could get a bus rry him that sixty miles he would uite all right. If all went well he d reach Chartres that night, and Malo the next morning; then the -Channel boat and he would be in England.
seemed all right, but was it really He could get back to Dijon, pos- though even that did not seem certain. But if he got back there, then? With the Germans driving rd into France from the north, and the Italians coming up from the south. Dijon seemed to be between two fires. He could not stay indefinitely in Dijon. It was better, surely, to take courage and go forward in the bus, north and by west in the direction of the Channel and home.

The bus became filled with a hot, sweating crowd of French countrypeople. All were agitated and upset, all bore enormous packages with them, all were heading to the west.

Presently the driver climbed into his seat, and the grossly overloaded vehicle started.

The road was full of traffic. As far as Howard could see it was thronged with vehicles, all moving toward the west. He felt it really was a most extraordinary sight, a thing that he had never seen before, a population in migration.

After about two hours the bus drew off to the side of the road. The driver got down and looked under the hood. Howard and the children got out of the bus and rested at the side of the road. Howard gave the children sandwiches and milk.

Presently Rose said she heard an airplane.

Instinctively Howard turned his head. He could hear nothing.

"I hear it," Ronnie said. "Lots of airplanes."

Sheila said, "I want to hear the airplane."

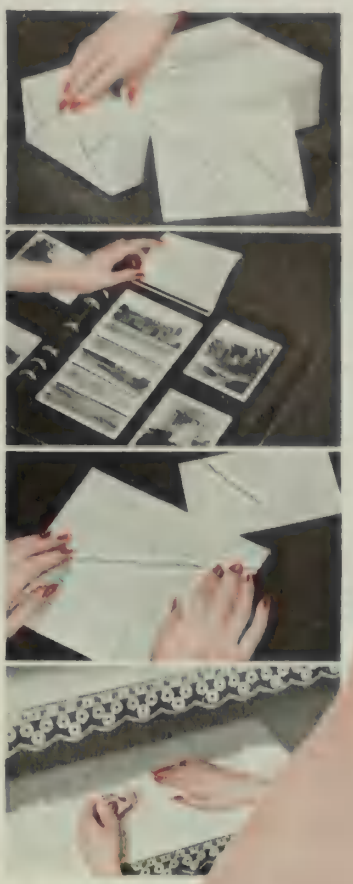
"Silly," said Ronnie. "There's lots of them. Can't you hear?"

The old man strained his ears, but he could hear nothing. "Can you see where they are?" he asked nonchalantly. A cold fear lurked in the background of his mind.

The children scanned the sky. "Yes," said Rose, pointing suddenly. "Three planes—there."

Ronnie twisted around in excitement to Howard. "They're coming down toward us! Do you think we'll see them close?"

"Where are they?" he inquired. He strained his eyes in the direction from which they had come. "Oh, I see. They won't come anywhere near here. Look, they're going down over there."



"Oh . . ." said Ronnie, disappointed. "I did want to see them close."

THEY watched the aircraft losing height toward the road, about two miles away. Howard expected to see them land among the fields beside the road, but they did not land. They flattened out and flew along just above the tree-tops, one on each side of the road and one behind flying down the middle. A little crackling rattle sounded from them as they came. The old man stared, incredulous—it could not be . . .

Then, in a quick succession, from the rear machine five bombs fell on the road. Howard saw the bombs actually leave the airplane, saw five great spurts of flame upon the road, saw queer, odd fragments hurled into the air.

From the bus a woman shrieked, "The Germans!" and pandemonium broke loose. The driver of a little car fifty yards away saw the gesticulations of the crowd, looked back over his shoulder, and drove straight into the back of a mule cart, smashing one of its wheels and cascading the occupants and load onto the road. The French around the bus dashed madly for the door, hoping for shelter in the glass and plywood body, and jammed in a struggling, pitiful mob in the entrance. The machines flew on toward them, their machine guns spitting flame. The rear machine, its bombs discharged, flew forward and to

**"Would you care to make a sixth at bridge?"** FRITZ WILKIE

the right; with a weaving motion the machine upon the right dropped back to the rear center, ready in its turn to bomb the road.

There was no time to do anything, to go anywhere, nor was there anywhere to go. Howard caught Sheila and Ronnie and pulled them close to him, flat upon the ground. He shouted to Rose to lie down, quickly.

Then the machines were on them, low-winged, single-engined monoplanes with curious bent wings, dark green in color. A burst of fire was poured into the bus from the machines to right and left; a stream of tracer bullets shot forward up the road from the center aircraft. A few bullets flickered straight over Howard and his children on the grass and spattered in the ground a few yards behind them.

FOR a moment Howard saw the gunner in the rear cockpit as he fired at them. He was a young man, not more than twenty, with a keen, tanned face. He wore a students' yellow corps cap, and he was laughing as he fired.

Then the two flanking aircraft had passed, and the center one was very near. Looking up, the old man could see the bombs slung in their racks beneath the wing; he watched in agony for them to fall. They did not fall. The machine passed by them, not a hundred feet away. He watched it as it went, sick with relief. He saw the bombs leave the machine three hundred yards up the road, and watched dumbly as the debris flew upward. He saw the wheel of a cart go sailing through the air, to land in the field.

Then that graceful, weaving dance began again, the machine in rear changing places with the one on the left. They vanished in the distance; presently Howard heard the thunder of another load of bombs upon the road.

He released the children, and sat up upon the grass. Ronnie was flushed and excited. "Weren't they *close!*" he "I did see them well. Did you see well, Sheila? Did you hear them the guns?"

He was ecstatically pleased. was quite unaffected. She said, " have some orange?"

Howard said slowly and mechan "No, you've had enough to eat. up your milk." He turned to Ros found her inclined to tears. He up, and moved over to her. "Di thing hit you?" he asked in Fren

She shook her head dumbly.

"Don't cry, then," he said "Come and drink your milk."

She turned her face up to him. they coming back? I don't like th they make."

He patted her on the sh "Never mind," he said a little u ily. "The noise won't hurt you. think they're coming back." H up the one cup with milk and to her. "Have a drink."

Ronnie said, "I wasn't frighten I?"

Sheila echoed, "I wasn't frig was I?"

The old man said patiently, "I was frightened. Rose doesn't li sort of noise, but that's not being ened." He stared over to the littl around the bus. Something ha pened there, he must go and see can have an orange," he said. third each. Will you peel it, Ro

"*Mais oui, monsieur.*"

He left the children happy prospect of more food, and went to the bus. There was a violent tracted clamor from the crowd; the women were in tears of fri rage. But to his astonishmen were no casualties save one old who had lost two fingers of her l severed cleanly near the knuck bullet. Three women, well acc to first aid in accidents upon t were tending her, not inexpertly

oward was amazed that no one had e killed. From the right a dozen ts had entered the body of the bus rd the rear; from the left the front ls, bonnet and radiator had been y shot about. Between the two the d of peasants milling round loor had escaped injury. Even the d in the small car had escaped, gh one of the women in the mule was shot through the thigh. The itself was dying in the road.

ere was nothing he could do to help ounded women. His attention was cted by a gloomy little knot of men nd the driver of the bus; they were ng despondently at the engine. The nan joined them; he knew little of inery, but it was evident even to that all was not quite right. A great of water lay beneath the engine of us; from holes in radiator and cylin- asting the brown, rusty water still ut.

e of the men turned aside to spit. on't go further," he said succinctly. took a moment or two for the full ing of this to come home to ard. "What does one do now?" he d the driver. "Will there be another "

ot unless they find a madman for iver." There was a strained silence. the driver said, "You must go on oot."

BECAME apparent to Howard that s was nothing but the ugly truth. s about four in the afternoon and ctargis was twenty-five kilometers, ifteen miles, farther on, nearer to than Joigny. They had passed or two villages upon the road from ny; no doubt one or two more lay d before Montargis. But there d be no chance of busses starting at places, nor was there any reason- chance of a hotel.

was appalling, but it was the only . He and the children would have lk, very likely the whole of the way ontargis.

went into the wrecked body of the and collected their things, the two hé cases, the little suitcase, and the ining parcels of food. There was much for him to carry very far un- the children could carry some of knew that that would not be satis- ory for long. Sheila could carry ing; indeed she would have to be carried herself a great deal of the way. Ronnie and Rose, if they were to walk fifteen miles, would have to travel light.

He carried his burdens back to the children and laid them down upon the grass. It was impossible to take the suitcase with them; he packed it with the things that they could spare most easily and left it in the bus in the faint hope that one day it might somehow be retrieved. That left the two bulging little cases and the parcels of food. He could carry those himself.

"We're going to walk on to Montargis," he explained to the children. "The bus won't go."

"Why not?" asked Ronnie.

"There's something the matter with the engine."

"Oh—may I go and see?"

Howard said firmly, "Not now. We're just going to walk on."

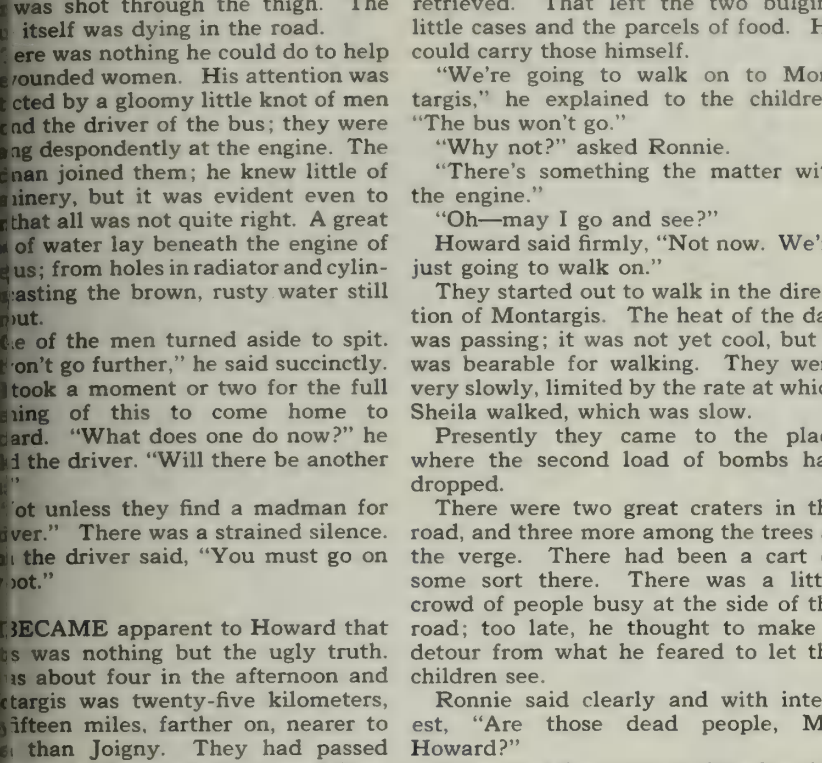
They started out to walk in the direction of Montargis. The heat of the day was passing; it was not yet cool, but it was bearable for walking. They went very slowly, limited by the rate at which Sheila walked, which was slow.

Presently they came to the place where the second load of bombs had dropped.

There were two great craters in the road, and three more among the trees at the verge. There had been a cart of some sort there. There was a little crowd of people busy at the side of the road; too late, he thought to make a detour from what he feared to let the children see.

Ronnie said clearly and with interest, "Are those dead people, Mr. Howard?"

He steered them over to the other side of the road. "Yes," he said quietly. "You must be very sorry for them."



"May I go and see?"

"No," he said. "You mustn't go and look at people when they're dead. They want to be left alone."

"Dead people do look funny, don't they, Mr. Howard?"

He could not think of what to say to that one, and herded them past in silence. Sheila was singing a little song and showed no interest; Rose crossed herself and walked by quickly with averted eyes.

They strolled on at their slow pace up the road. If there had been a side road Howard would have taken it, but there was no side road. It was impos-

## Portrait of Mrs. Whitlock's New Water Heater Tank

When Mrs. Whitlock ordered her new water heater, she asked for a *Monel* hot water tank. But that Monel was needed for *another* kind of tank. And Mrs. Whitlock is a "good sport" about it.

In fact, when she learned that her share of Monel was needed for tanks, ships and guns she soon saw *why* she has to do without her long-dreamed-of Monel hot water tank.

Even a home engineer like Mrs. Whitlock can understand that the same toughness and rust-proofness that make Monel the A-1 metal for hot water tanks also makes it an A-1 priority material during the Emergency.

And she also realizes that her bit of Monel is hastening the day when she, like so many of her friends, *can* enjoy the rust-free, trouble-proof hot water that flows from a Monel tank.

**MONEL** *Water Heater Tanks*

THE INTERNATIONAL NICKEL COMPANY, INC., 73 WALL STREET, NEW YORK, N.Y.

sible to make a detour other than by walking through the fields; it would not help him to turn back toward Joigny. It was better to go on.

They passed other casualties, but the children seemed to take little interest. He shepherded them along as quickly as he could; when they had passed the target for the final load of bombs there would probably be an end to this parade of death. He could see that place now, half a mile ahead. There were two motorcars jammed in the road, and several trees seemed to have fallen.

Slowly, so slowly, they approached the place. One of the cars was wrecked beyond redemption. The bomb had burst immediately ahead of it, splitting the radiator in two and blasting in the windscreen. Then a tree had fallen straight on top of it, crushing the roof down till it touched the chassis. There was much blood upon the road.

FOUR men, from a decrepit old car, were struggling to lift the tree aside to clear the road for their own car to pass. On the grass verge a quiet heap was roughly covered by a rug.

Pulling and heaving at the tree, the men rolled it from the car and dragged it back, clearing a narrow passage with great difficulty. They wiped their brows, sweating, and clambered back into their old two-seater. Howard stopped by them as the driver started his engine.

"Killed?" he asked quietly.

The man said bitterly, "What do you think? The filthy Boches!" He let the clutch in, and the car moved slowly forward around the tree and up the road ahead of them.

Fifty yards up the road it stopped. One of the men leaned back and shouted at him, "You—with the children. You! Look out for the little boy!"

They let the clutch in, and drove on. Howard looked down in bewilderment at Rose. "What did he mean?"

"He said there was a little boy," she said.

He looked around. "There's no little boy here."

Ronnie said, "There's only dead people here. Under that rug." He pointed with his finger.

Sheila awoke to the world about her. "I want to see the dead people."

The old man took her hand firmly in his own.

"Nobody goes to look at them," he said. "I told you that." He stared around him in bewilderment.

Sheila said, "Well, may I go and play with the boy?"

"There's no boy here, my dear."

"Yes, there is. Over there."

She pointed to the far side of the road, twenty yards beyond the tree. A little boy of five or six was standing th fact, utterly motionless. He was in gray—gray stockings above th gray shorts, and a gray jersey. H standing absolutely still, staring the road toward them. His face dead, grayish white in color.

Howard caught his breath at th of him, and said very softly, "( God!" He had never seen a chil ing like that, in all his seventy ye

He crossed quickly over to hi children following. The little bo motionless as he approached, sta him vacantly. The old man sai you hurt at all?"

There was no answer. The ch not appear to have heard him.

"Don't be afraid," Howard saic wardly he dropped down on on "What is your name?"

There was no answer.

Howard got to his feet again, ately perplexed. He must go way, not only to reach Montar also to remove his children fr sight of that appalling car, cap they realized its grim significa haunting them for the rest of the He could not stay a moment long was necessary in that place. H it seemed impossible to leave th

He crossed quickly to the otl of the road, telling the children where they were. He lifted up of the rug. They were a fairl dressed couple, not more tha years old, terribly mutilated ir He nerved himself, and oper man's coat. There was a walle inside pocket; he opened it, ar was the identity card. Jean Du 8 bis, Rue de la Victoire, Lille.

He took the wallet and some and stuffed them into his poc would turn them over to the n darme he saw.

HE WENT back to the childr said to Rose and Ronnie, "Y one of the cases each, for a lit He went up to the little boy an him, "Will you come with us? going to Montargis."

There was no answer, no sign had heard.

For a moment Howard stooc plexity; then he stooped and boy's hand. In that hot afterno a chilly, damp hand that "Come," he said with gentle "we're going to Montargis." H to the road; the boy in gray sti trotted docilely beside him. one child with either hand, the strolled down the long road, other children followed behi with a case.

## Suspicious Speed

**Continued from page 20**

Plume, owned by the Millsdale Stable and trained by Tony Pelleteri, coughed up a carrot at Belmont one morning during the early 1939 meeting. A stable attendant seized the carrot, turned it over to the authorities and it was found to contain morphine sulphate. The discovery led to the arrest of two men, Patrick Panza and Richard Hohman, who were sent to jail for a year and fined $500 each. Pelleteri and the horse's groom were suspended by the N. Y. Racing Commission for a short period, for negligence.

Other depressants have been placed in thick glucose capsules and fed to favorites. The capsules were so thick that the pill passed from the horse's stomach to its intestinal tract without melting or breaking—and then broke during the heat of the race and lulled the horse into a drowsy performance.

### Formula vs. Formula

As for the non-narcotic stimulation, Anslinger's office is powerless to act. But honest racing states do their best to stamp out this particular section of foulness. And, as usual, get scant thanks when successful.

The full story of the depravity of American racing through the so-called Golden Twenties will never be known. Suffice it to say that more than one decent horse owner retired from the game with heavy losses rather than be a part of an enterprise which had degenerated into a case of formula vs. formula instead of horse vs. horse. The filthy rottenness extended from the back-turning owners and track officials down to the lowliest swipe. The punishment the horses took (and some still take) staggers the imagination. The toll of horses which dropped dead from heart trouble or broke down because they were too coked up to know that they were breaking legs or pulling tendons mounted dizzily during the decadent decade. Bad post actors abounded.

And on the breeding farms, which are the core of the sport, the number of sterile stallions, diseased mares, miscarriages, stillborn foals and worthless get gave ample proof of how muc was coursing with the blue bl the veins of the country's racing

The first clear-cut alarm was s by Thomas B. Cromwell, then e writer for the famed publication, Horse. In the March, 1929, is wrote:

"The trainers of today who ar stimulants have done away wi needle and use a powder or a c They have also increased the i ents so far that today some of th using a concoction of heroin, c strychnine and nitrate of glyc capsules. . . . It is also a known f today they are using heroin in two-year-olds. This is destroyi thoroughbred horse of America.

"Up until the year 1893, I wou ture to say that there would n half-dozen horses stimulated wit in a week's racing, as ninety-n cent of the old-timers owning an ing thoroughbreds had some lo thought for the horse and did lieve in this brutal practice. The no more think of putting a boy a horse and sending it to the pos condition that the majority of are sending them today, and en ing the boy's life, than they w committing suicide themselves.

"But, things have changed . . now seems that the majority of who have come into the busines last twenty-five years have c with a 'hop' prescription tucked their pockets."

When the article appeared, lonesome souls such as Joseph ener and the late Admiral Grayson uttered soulful "yea shortly after that Anslinger's offi to work. It had noticed that its narcotic raids were taking the vicinity of tracks. Some of picked up were apprehended thoroughbred barns. It was before the doping crooks in th realized that Mr. Whiskers was for keeps.

Anslinger took a terrific be a "publicity-seeking interloper," some extent, still does. But A

how to take it, as he ably demonstrated when he weathered the firmest of the New Deal's patronage to unseat him in 1933. The detection of horse dopers is but one of a of his duties, but the man loves a horse and he bears down especially when the doping evil comes close . He showed up at last winter's ng of state racing commissioners Florida, in good voice, to cry down posal to have the commissioners' rule rewritten to erase the clause at trainer "shall be barred" when rse is doped and substitute "may red."

When he first began throwing his around, Anslinger was chalby a prominent owner who ofo bet him $5,000 that none of the s many horses had ever been red with. Anslinger accepted, and ted to the owner that he get ready d the $5,000 to the Society for evention of Cruelty to Animals. wner shut up. But the surprising s that a number of thoroughly but touchy owners continually Anslinger. They blame him for ng state racing laws which hold s or trainers personally responfor horses found doped in their even if the owners or trainers had tely nothing to do with the adering of the juice.

### When Owners are Helpless

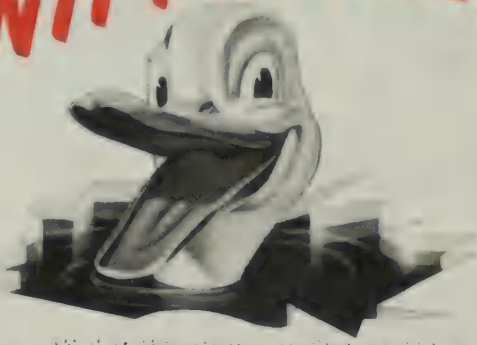
ed Gwynne Vanderbilt, for in, has said that he will not race ifornia this year because of that law pinning all responsibility for horses on the owner. Vanderbilt d a sample of how powerless an can be in the face of a determined ring. His Airflame got a "slow-" shot of morphine from someone w York in 1938, a urine test d. It came as a deep shock to the owner. Unlike owners who pay more attention to the social side turf than they do to supervise conduct of their stables, Vanderup at the crack of dawn more than not to help train his horses. in exceptionally close touch with employee from his head trainer lowliest swipe. Yet Airflame was . Hence his and other honest s' reluctance to accept blame for hing they have done everything in power to guard against.

pite the recent scandal in Cali, involving some of the fancier s, the game is getting cleaner all me. New York set a remarkable during 1940. Its well-equipped tory for the testing of the saliva, and blood of the thoroughbreds which ran there did not find one "positive." A "positive" means that tests have proved that a horse was primed. In all, the laboratory made 1,292 saliva tests, and Commissioner Herbert Bayard Swope was justly proud of the record for clean racing. Spotless also in 1941.

But, sadly enough, it doesn't necessarily follow that there wasn't a stimulated horse running in New York. There are roughly 120 narcotics and stimulants, but the saliva tests will detect only half of these. In addition, the saliva test is made on the winner only, and such other scattered horses as may be selected by the stewards on the ground that their reversal of form has been too marked. A pretty good cross section is arrived at in this way, but the fact remains that tests are made on a rather small percentage of the total number of horses competing in New York. Yet New York leads all the states in the number of saliva tests made. Its laboratory does the saliva testing for Maryland and Michigan tracks, too. Maryland sent it only 492 samples and Michigan 308. Kentucky, incidentally, tests only three horses a day.

Considerably sounder than the saliva test is the urine test, but it is involved and costly and some racing states frown on it because it is too accurate. A good substitute for all tests, when they are found to be impractical, is a well-guarded receiving barn, to which entrants are led several hours before their races. Narcotics and stimulants must be administered within thirty minutes of the race, else their effects will wear off and the horse will be a wreck instead of a streak. A properly policed receiving barn at every track would work wonders for every long-suffering two-dollar bettor and long-abused animal.

The reprehensible practice of hopping up horses probably began in the fifteenth century when gypsies, then mostly horse dealers, discovered that red pepper and ginger, inserted under a horse's tail, lent him a temporary air of friskiness which fooled the average buyer. Sweden barred gypsies as horse dealers in 1727, and Emperor Joseph II of Austria put through an imperial decree of that nature in 1783.



It remained for France to come up with the first convicted doper of thoroughbreds. He was the owner of a colt which won the Grand Prix at the turn of the century. The colt's amazing reversal of form and his highly charged appearance at the post and after the race caused officials at the track to hold up the purse. The government took a saliva test, probably the first ever made for this purpose. It was "positive." The horse was laden with heroin, and though

# What STALIN TOLD HOPKINS ABOUT HITLER

A DRAMATIC PAGE from the WORLD'S HISTORY

HOPKINS was in England, with Churchill, when he got Roosevelt's cable: "Go to Moscow, see Stalin."

Three days later he was in the Kremlin with the man of steel whose ruling is Russia's law; with the OGPU, and the utter blackouts so different from London's. What is Stalin like, what are his plans, his chances of victory? Does he want our army, our navy? What did he tell Hopkins of the Nazi-Soviet pact? How does he regard the German people, the German staff, the man Hitler?

Here is the exciting, inside story of a momentous meeting that history will long remember. You'll read it eagerly and discuss it with your family and friends. Yet, it is but one of half a hundred articles, stories and other important features in the December American Magazine, now on sale. Only 25¢ (30¢ in Canada). Get your copy today and turn first to

comparatively spotless leader
sault of the states on the horse-
practice. When Swope took
1934 he pledged his administra-
e eradication of the evil. But,
g the good reporter he is, he
wanted to know his subject. He persuaded William Woodward, a pillar of the frosty Jockey Club, to turn two of his thoroughbreds over to the commission for the purpose of testing the power of different dope formulas and the efficacy of the several types of narcotic detectors.

The horses were Andalusian and Foxton, the latter by Mr. Woodward's immortal Gallant Fox. After three months of secret testing, engaged in not only by the commission's chemists, Dr. J. G. Catlett and Charles E. Morgan, but also by veteran early-morning clockers, it was agreed that of eleven fundamental drugs four showed unmistakably that they could get more yards per minute out of the steeds. Of these, heroin was by far the most potent. It was found that morphine, most always a depressant in humans, may stimulate horses. Nitroglycerin injections helped the circulation of the dope by expanding the horses' blood vessels. Strychnine excited the spinal cords. Aconite was almost as speed-producing as heroin. Cocaine made the horses wild at the post. The urine test recovered doping proof as long as forty-eight hours after the injection, the saliva test was useless after eight hours.

Yet for reasons of convenience the saliva is the main test today—the barrier that keeps ■ rather unhealthy situation from becoming as hopeless as it was in the twenties. The saliva test itself begins when the selected horse is made to bite down on a piece of gauze placed in its mouth after ■ race. The gauze is then sealed in a glass preserving jar and mailed to the laboratory concerned. There, a wringer first takes all of the moisture out of the gauze.

Then the gauze is dipped in alcohol and again wrung out. The resultant liquids are put together in test tubes and evaporated until they are a brown crystallized stain on the bottom of the last small evaporation cup.

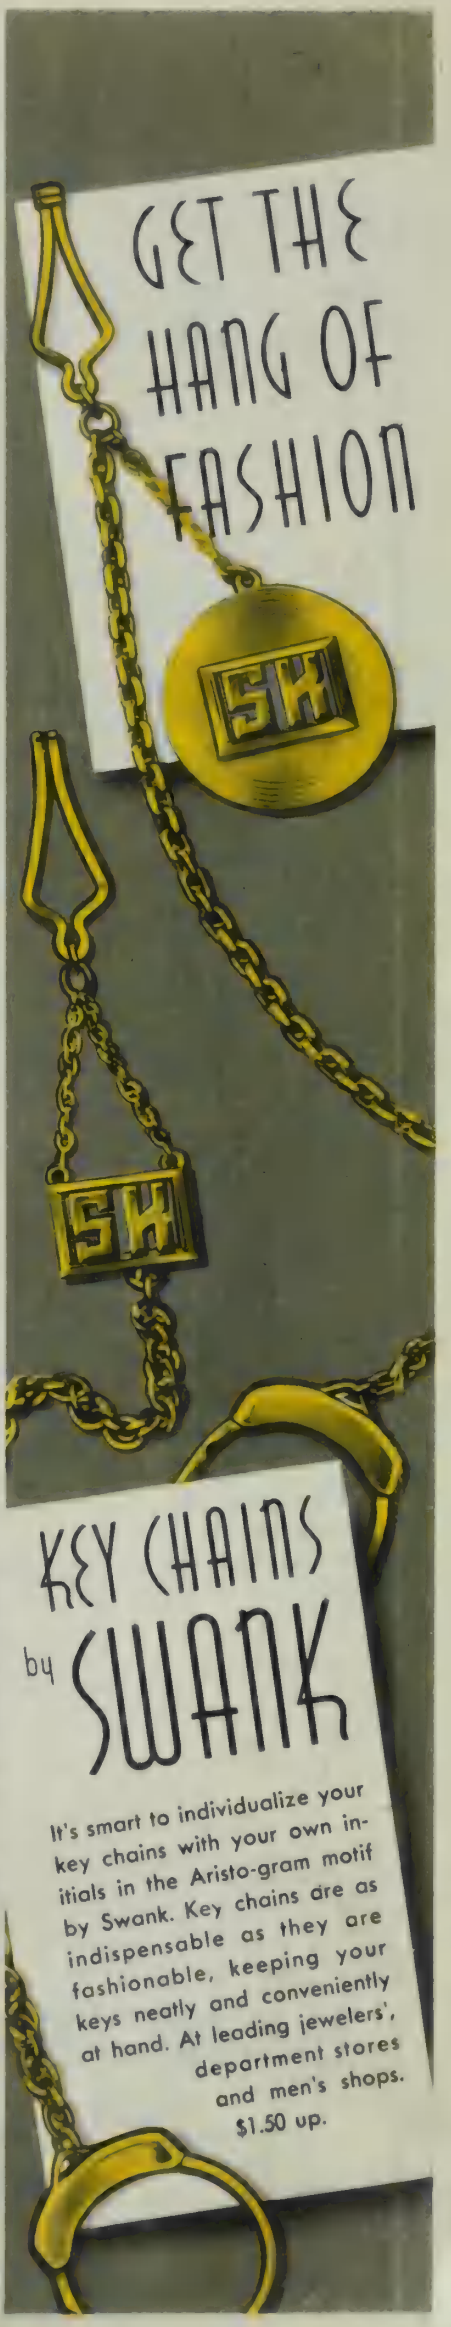
The chemist now takes a wet rubber stick and scrapes the stain until it is a tiny amount of amber-colored liquid. This is placed in a small tube at the bottom of which is a small asbestos filter. This tube is put in a larger one, and both are spun rapidly, an act which forces the liquid through the filter and strains it into the larger tube. Then the strained residue is mixed with ether, which soon rises to the top of the tube and brings with it the evidence, if any.

If the ether fails to reveal anything, then ■ mixture of chloroform and ether is mixed with the strained residue. Chloroform will reveal drugs which ether misses. If all tests fail, then the horse wasn't doped or the men who tampered with the horse used ■ formula which beat the saliva test, or the stimulant boiled away during the evaporation process. Benzedrine does this. However, there are other ways of proving that a horse has been primed with benzedrine, as will be duly attested by trainer Guy Bedwell, who was suspended for sixty days by the Maryland State Racing Commission on a charge that his horse Ginoca was pepped up with this stuff last April 24th at Havre de Grace. The commission at no time accused Bedwell personally of administering the stimulant.

### The Owner's Viewpoint

The howls of indignation which greet the announcement that a saliva test has come back "positive" are sharp indeed. The owner of the brutally mistreated horse invariably goes into a jowl-quivering rage over the audacity of linking his name with a scheme to make a few paltry hundreds. Usually he is rich and threatens to use his influence to oust the conscientious public-spirited citizens and officials concerned. The trainer cries that he is prey to every groom he hires. The grooms, who recently have been striking for more pay, deny everything. All concerned turn on whichever reporter prints the story.

W. L. Brann, wealthy owner of Challedon, offered to resign from the Jockey Club and the Maryland Jockey Club at the height of the open airing given the California caffeine-syrup case this summer. Commissioner Giesler, who had listed Brann's Challomine as one of the horses tampered with, entreated Brann not to resign. The commissioner reiterated that it was obvious that Brann was in no way suspected. But in answer to Brann's highly pardonable complaint that he disliked having even his name linked to the investigation, Giesler replied that even if some strictly innocent toes were stepped on, the general effect of the investigation would be cleaner California racing.



Just as indignant as Brann was Louis B. Mayer, whose horse Painted Veil was listed by Giesler. The movie magnate-turfman demanded of Giesler that Giesler buy out his vast turf holdings and warned Giesler from the witness chair that the embarrassment of having to appear in connection with such a scandal might induce him to retire from racing. Brann, Mayer and their racing stables were cleared of all blame in the syrup case, of course. But on July 23d, the California horse board suspended trainers A. A. Baroni, Charles McDonough, Darrell Cannon, Noble Threewitt and S. DeVore for sixty days, in the same case, and ordered them to return the purses their horses won while under the influence of the ersatz vigor.

Giesler had achieved his purpose. He had gotten a suspension pinned on men found guilty, he had given the crooks in the game another warning, and he had impressed once again on the decent men in the game the need for more careful supervision of their barns, which are, in a way, public trusts.

And so the battle continues without abatement. The beneficiaries of the work of the men who are trying to cleanse the game of the doping practice are the bettors, the suckers who are badly gypped out of untold sums each year by coked-up betting coups. The bettors, yes, and the thoroughbreds. Because of the crusading work now going on behind the scenes in racing, fewer thoroughbreds will finish their lives as hopelessly ravaged dope addicts. And more and more of them will know the peace of their well-earned green pastures.

Baseball umpires who work behind the plate use a little indicator that registers balls and strikes; they don't depend on their memory or on the scoreboard. There seems no reason why the same device couldn't be used in football. As it stands now, the referee is the Supreme Court; what he says goes and there is no recourse. If you protest, you are lucky if you get off without a five-yard penalty for "delaying the game." If you squawk too loudly, he can bench you as a troublemaker.

Sunny Sundstrom, Cornell's 1923 All-America tackle, tells an anecdote about Gil Dobie that illustrates the point. Gathering his squad around him on the first day of practice, Dobie said:

"Before starting the season it might be advisable for you fellows to know how many players constitute a football team. Can anybody answer that?"

After they had all had a try at it, Dobie shook his head in disgust.

"There are ten players on a football team; ten players and a captain. He will be so worried about his questionable association with the officials that he'll be little more than cargo."

Those little tin gods with their little tin tooters. . . .

### What's "Unnecessary Roughness?"

I know. I've played. I've gunned it from ■ left-tackle slot in the Yale Bowl where the officials seem thicker and buzz louder than flies on pane glass. In Princeton's Palmer Stadium I've seen and felt those juicy pass-interference penalties snap a team double. Penalties on warped calls that deaden, ruin a game. . . . Penalties that hit where no tape and liniment can reach.

The most damaging penalties in recent years have been for "unnecessary roughness." Three recent "bowl" games have been marred by these penalties. When invoked by a too sticky official, unnecessary roughness can mean anything from ■ wounded ego to ■ punch in the nose. It calls for a fifteen-yard penalty from the point of the foul. In the Tennessee-University of Southern California game of 1940, with less than a minute to play in the first half, Tennessee was battling desperately to hold the Trojans. With the ball on the sixteen-yard line on a play Tennessee had piled up for no gain, Umpire H. W. Scholar socked Tennessee fifteen yards for roughness, thus putting the ball on Tennessee's one-yard line, where Schindler bowled over for a touchdown.

On the same day down at New Orleans almost the same play occurred. Tulane was struggling to keep the Texas Aggies from scoring just as the first half was ending. The Aggies were plowing ahead under the drunk-tank work of John Kimbrough. Then Derace Moser of the Aggies swept to the eighteen. Here came the damaging roughness penalty and Umpire Jimmy Higgins paced off fifteen yards and placed the ball on Tulane's three-yard line, ■ crushing disaster at that juncture. Kimbrough barged through on the next play and the Texas Aggies finally won, 13-12.

But last year, at the Cotton Bowl in Dallas, the punishment was even worse for Fordham when Umpire Russell B. Goodwin ruled that the 162-pound Fordham quarterback had roughed 230-pound Kimbrough of the same Texas Aggies team. It happened in the third period. The Aggies had just scored and gone ahead, 7-6. From deep in Fordham territory Jim Blumenstock punted to Moser of the Aggies, who galloped back to Fordham's twenty-five-yard line. Kimbrough, who had gon for interference, tangled with N the sixteen-yard line, not ever shouting distance of the play. was socked for unnecessary ro The fifteen-yard sock therefo stepped off from the sixteen-y putting the ball on the one-y from where Kimbrough bulled In short, that sad event made ence of twenty-four yards at t critical moment of the game. gies finally won, 14-13.

In our book, that particular can be murder. Unless that ba or blocker is ■ victim of real —that is, kneeing, slugging or viciousness, an umpire has no calling it. Teams that get "bo are tough outfits. A player th jolt his opponent on a tackle chips were down would deser yanked from the game. What fear now is an overzealous offi has all the power of a czar. Hi toots, he points at a player "unnecessary roughness" and is ruined. There is no recou entirely a matter of the officia ment. If there is ever a scanda ball it will come out of this per the hands of a prejudiced or official it could do something to football odds.

Perhaps the cruelest mista time was made by Referee J chell in the Carnegie Tech-No game in 1938. The game w standoff when Carnegie got t the middle of the field. Qu Paul Friedlander asked Get down.

"Third down!" barked Getch

Friedlander called for a run Ray Carnelly fumbled but re yard short of first down. Fr would naturally have called fo down punt but he never had t Getchell, after unraveling t ruled the previous play fourth stead of third down and gave t Notre Dame.

"You said it was third time," protested Friedlander.

"I know," admitted Getche was wrong."

Encouraged by that bre Dame immediately went dow and the game ended 7-0.

### A Penalty that Kille

In that same year, 1938, leading Michigan 13-8, with s utes to go. It was shaping biggest upset of the year beca gan had gone into that game one favorite. Michigan kicke down from her own twenty. punt was short, Humphreys turning it to the Michigan t

"We knew we had 'em," tackle, Bill John. "You sud when a team begins to sag. Humphreys was tackled R Keegan blew his whistle and Bob Brooks of Yale had kicker Purucker. He gave first down on their thirty. P so surprised he laughed. T killed us! Harmon's passe click. That's the way it ge when a blow of that sort h They worked the ball to our tried three smashes and l Then Harmon, on a fake buc Nicholson. They beat us didn't come back."

Perhaps the worst of a Army-Navy game at Philad Navy passed from Army's

erward the official (he shall be less) said:

should have called interference st Army on the preceding play. I em get away with it. But not two ow."

k about your cold-hash victories! d so it goes each football Saturday, those little figures in white pants ng their gizzards blue, putting your ll game into a strait jacket. What plan for better officiating can be d? Just this: Make a concen- l effort to obtain officials who are ped to handle a rough, tough game ut featuring themselves above that Obtain men who, through pre- experience as players, can appre- the meaning of personal contact; who realize what a drunk-with- official can do to ruin a game.

### Look At the Wise Officials

otball is the most intricate of speed ct games. It needs rules but those must aid the game's effectiveness. many officials confuse officiousness efficiency. Any player with the tion of a catfish can sense when an petent official takes over. Once aloot starts riding his whistle both will proceed to make it tough for Have you ever wondered why tent whistle-tooting seems to en- ge fouling rather than stop it? s the reason.

e of the most respected referees r. Eddie O'Brien, who, until forced ire a few years back, worked the big games. Umpire Tom Thorp other understanding but firm of- who finds it possible to keep a rein on the teams without acting rowbeating top sergeant. Games d by Mr. Thorp have a habit of enjoyable to everybody con- d. Little picayunish fouls are ooked but none of the important et by. The result is that the play- ve fun, the play is fast and pleas- rough and the spectators have the re of seeing a game that runs evenly and without the usual e-tooting irritations.

d Linesman A. B. Maginnes be- among the better officials because rks with the teams, warns them all technical faults and eventually he game on an even keel where it ng played fairly and keenly and satisfaction to the players them- . Al Marsters, Dartmouth's great running back of a decade ago, is moving up as a younger official who knows what it is all about. There are others but they are as rare as blonds in a Zulu tribe.

Asa Bushnell, head of the Eastern Intercollegiate Football Association, has done a job of carpet-sweeping since taking over the office four years ago. He has been lining up younger officials with a sense of timing. Grading of officials both by coaches and scouts has helped. Various pappy guys whose tickers can't stand the gaff any longer now spend their Saturdays scouting active officials.

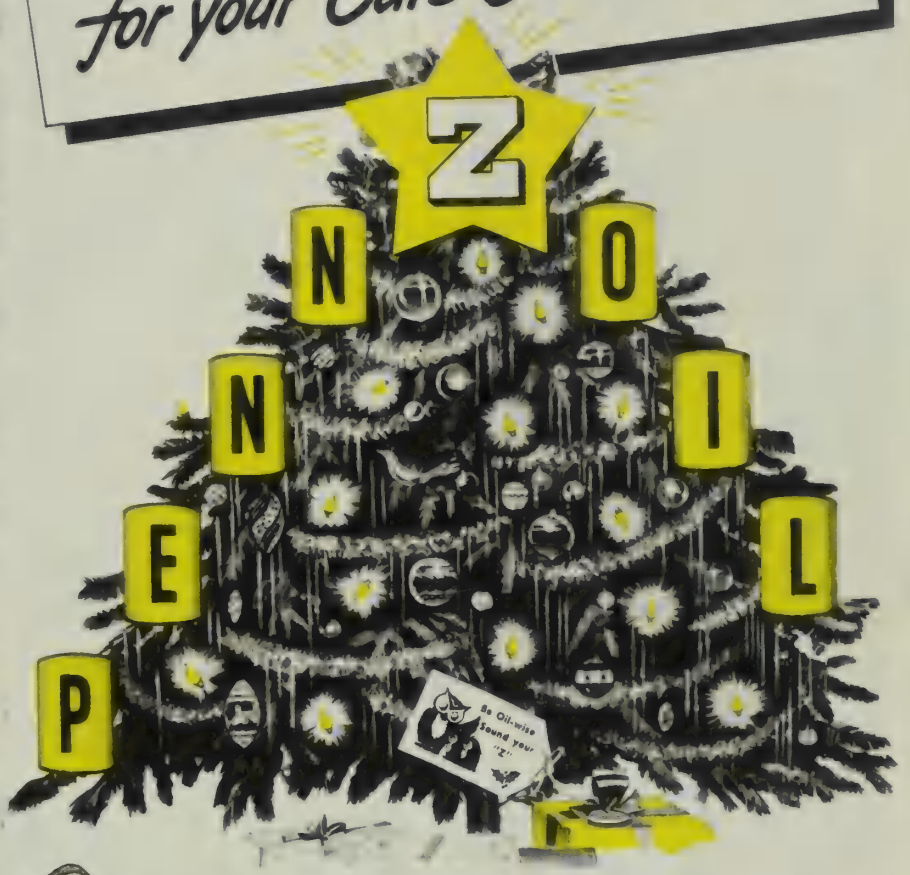
Bushnell's most advanced piece of legislation was last winter's dictum divorcing college from professional officials. It was clearly a case of "take the college or the money game—you can't work both." As a result Friesell and five prominent Eastern officials went over to the professionals.

But even more important was this year's two-day clinic at West Point where intensive work was done on the rules so that officials would have a common understanding of what went on.

"We want men who can work games with authority and part of that consists in keeping whistle-blowing and horn-tooting to a minimum. We are aiming at sensible officiating without featuring those who handle the games."

That standardization of officiating can be established is seen in the difference with which the forward-pass interference play is now called. This is a very fuzzy rule depending entirely upon the good sense of the officials. It can be interpreted in fifty ways. Some field judges in the scrap-iron league call it only if the intended receiver dies. Others call it if the defender even waves at the receiver. In a Dartmouth-Yale game in 1936, Field Judge Reagan awarded Yale a touchdown for pass interference *behind* the Dartmouth goal line. It took almost a riot for Dartmouth to get that overruled. After wild protest Referee C. M. Waters ruled that even a Divine Being in the guise of a field judge couldn't do that. He gave the ball to Yale on Dartmouth's one-yard line, first down. Dartmouth smeared two plays, the final gun sounded and the game was saved for them.

Since then there has been noticeable improvement in calling the play and there are few kicks over decisions. At one time it was feared that the anger aroused over pass-interference decisions would ruin the game. It didn't because common sense arrived on the scene.



At that instant when it can be proved to all officials that they are not necessarily being magnificent when they keep their whistle going like a drunk on New Year's Eve on Times Square, the millennium will have arrived. It can't come too soon.

ave to let the kid drive or he won't let me play with his electric trains!"

asked him. "It was bad," he nodded gently. "We fought for eight days. I killed many Germans before they got me."

One room after another showed its quota of men who had been brought back to life by the genius of Grastchenkov.

In the last war mortality from brain wounds was thirty-five per cent in this hospital. It is now less than five per cent. This is chiefly due to the efficiency of sulfanilamide as a deterrent to infection. Grastchenkov says his main problems come from bullets and shrapnel lodged in the spinal column. These are much more serious wounds than are brain injuries.

Interesting is his observation that while during the last war shrapnel caused fifty per cent of all wounds, today it causes ninety-five per cent of them. Apparently the day of the ordinary rifle is over. Bombs and shells do the damage now.

Grastchenkov is only one of many thousands mobilized to fight wounds and diseases in Russia. The whole army of surgery, medicine and research has been thrown into the battle. In many cases the civilian population has come to the aid of the men and women of science.

Blood is a precious commodity in time of war. The Soviet Central Institute of Blood Transfusion is presided over by brilliant Andre Bogdassarov, dark and eager-eyed. The Institute has three additional branches. Every day from 1,500 to 2,000 civilians go to these clinics and offer their blood. Nine tenths of the donors are young girls and women—mothers, wives and sisters of men at the front. Nearly all of them refuse pay for their services, but after each giving of her blood she is given a good meal and an extra ration coupon.

"We have three times as many donors as we need," Bogdassarov laughs. "Everyone wants to do his or her part in beating the Germans. Those who come here feel that in giving their blood they are saving the lives of soldiers and of course they are right."

### One More Arrow to Cupid's Bow

Only those above eighteen are taken. They sit on benches filling the long halls of the clinic dressed in white gowns waiting their turn. They chat and laugh and now and then one proudly displays a letter from the man who was helped to recovery by her blood. Each has the privilege of sending a note with the ampule of her blood which goes to the front. The recipient often writes his thanks, correspondence springs up and Cupid thus finds himself with one more arrow to his bow.

"Russia has for a long time been a leader in the conservation of liquid blood for the purpose of transfusion. Thousands of damaged lives have been repaired since the war began by methods either introduced or developed by Bogdassarov. Blood which he and his small army of assistants gather at the clinic can be kept "alive" for more than thirty days. Only as recently as the Spanish civil war, blood was considered to be usable only if it had been drawn ten days before.

Bogdassarov keeps the blood alive and preserved by the addition of sodium citrate and glucose. It is packed in air-tight ampules and kept at a constant low temperature. A constant stream of blood from Russian women flows to the front. Bogdassarov has done a great deal of experimenting with cadaver blood but he believes in its use only in emergency. Cadaver blood is efficacious only if used within twenty minutes after it is taken from a dead person. Two years ago this explorer in the dark red streams of the blood took up the study of plasma, or dried blood. There is a quantity of this at every front-line operating station but it again is only for emergency use. Plasma is usable for eighteen months or so but Russian doctors are not completely sold on it.

### There's No Glamor in this War

This discussion of blood and its use in reviving those on the border line of death is hardly pleasant talk, but it is war talk and it concerns the conduct of the war and is an important item in the saving of lives.

There is little of the glamorous to write about in this Russian-German phase of the war. It is a war of killing, not one of bands playing and flags waving.

It is more interesting to talk to the girls in Bogdassarov's clinic as they lie, white-clad, on the tables giving their blood so that some soldier may live to fight again. There are five tables in each room with a doctor in charge and five nurses assisting. First the nurses cleanse the arm with disinfectant; then the doctor gently inserts a needle filled with novocain into the arm. The donor feels absolutely no pain. She has just had a cup of highly sweetened tea and she has had a fine gossip with her friends in the corridor and now she lies there unafraid and content. The doctor then inserts the needle, which has a long tube attached, and within a few seconds the blood begins to flow into a glass jar. No one donor is allowed to give more than a pint of blood. I have heard them plead with the doctor in charge to be allowed the privilege of giving twice that amount. "Come back in six weeks," the doctor laughs, "and we'll take the rest."

There is another clinic which has no patients. It houses 600 horses, 2,000 guinea pigs and thousands of white mice. This is the Bacteriological Institute, where serums and vaccine are prepared. Scarlet fever, dysentery, diphtheria, typhus, tetanus and gas gangrene are the enemies that the scientists of the Institute battle. Doctor Vladimir Pavlov, young and dynamic, leads these microbe hunters. By law all children in the Soviet Union have to be immunized against smallpox, scarlet fever and diphtheria. Soldiers must be made immune to typhus, tetanus and typhoid. Pavlov showed me through the immaculate but evil-smelling clinic from attic to cellar, from largest horse to smallest guinea pig. Some of the greatest research men and women of Russia are here making serum and vaccines, experimenting with animals, trying to pierce the veil of ignorance which hides the reason why the human race catches influenza and other diseases.

"Our production has tripled since the war," Pavlov explained. "No matter what the needs at the front, we are ready to supply them. We have a surplus of everything and are continuing to produce serum and vaccines at top speed."

The people of Russia remain calm and her sons and daughters whose lives are devoted to saving lives rather than to taking them go on working. They do not hear the bombs. They hear only one voice: the voice of science, the voice of the only master they know.

TASTE the difference CAPTURED FLAVOR

Here at the Taylor Wineries, Mother Nature has left the richest, most luscious of her limited store of perfect wine-grapes. From them, we have "captured" the full flavor she bestowed—and by TAYLOR'S secret Cellar Treatment, blended them into Wines of Character. Judges consider Cripps an intellectual treat. He tackles a legal problem with confidence and deftness. Heartthrob is not in his line. His specialty is company and patent law, on which he is the greatest authority in England. His mind is the envy of the legal profession. He can become an overnight expert on any subject. If a case involves an industrial process or complicated invention of which he knows nothing, he sends for the standard works on the subject, assimilates rapidly the principles and acquires the technical jargon.

A wrangle over patent rights requiring a knowledge of science or chemistry is home ground to Cripps. He started life as a scientist. He won the Science Scholarship to New College, Oxford, but did not go there. The great chemist, Sir William Ramsay, was so impressed by his papers that he paid young Cripps the signal honor of inviting him to work in his own laboratory. Cripps did brilliant work.

Against everyone's advice he left the laboratory for law. But it was not the last of his scientific work. He had just moved into the Middle Temple when the 1914-18 war started. For the first year he drove a truck in France between Boulogne and the front line. When the government discovered that a distinguished young scientist was driving a truck they recalled him immediately to manage the vast government explosive factory at Queensferry.

It was not until the war ended, when he was nearly thirty, that he settled down to a law career. His success was spectacular. In two years he was "recognized." When he was still only thirty-eight he "took silk" and became a king's counsel. In 1930, at forty-one, he was elected Master of the Bench of the Middle Temple, named Solicitor-General in the Labor Government, and knighted by the king.

Twenty years at the bar has not enhanced his opinion of the "ruling class." "They pay me fabulous and fantastic sums to get them out of their difficul-

LOUIS PRISCILLA

EMBLEMS OF EXCELLENCE

**HOWE MEMORIAL TROPHY.** Few figure skaters in the country today can hope to win the cup shown at the right. It is emblematic of the U. S. Senior Pair Championship—awarded each year to the top pair in national competitions held by the U. S. Figure Skating Association. To merit the custody of the Howe Trophy for a year and to receive their own replicas of it, skating partners must be outstanding in the grace and skill the sport requires—they must be *better* than good!

**ETHYL EMBLEM.** There is an award for excellence in gasoline too. It is the Ethyl name. Gasoline in a pump which bears the Ethyl trade mark has to be better than good. It must be "tops" in anti-knock (octane number) and all-round quality. "Ethyl" means a cooler-running engine in summer; a quicker-starting engine in cold weather; extra power throughout the year. When you stop to buy gasoline, "Ethyl" tells you which pump contains the best.

ties," he says. "I have no hesitation in saying that the working class of this country are more capable of ruling than they are."

People who have never seen him picture him as a wild "agitator," waving his arms about and calling for the overthrow of everything. "The House of Lords has got to be abolished," says Cripps emphatically. The son of Lord Parmoor, nephew of Lord Passfield, nephew of Lord Courtney, brother-in-law of an ex-duchess, he objects to a hereditary upper house having the right of veto over the elected House of Commons. "It is absolutely ludicrous," he says, "to speak of the House of Lords and democracy in the same breath."

When all England was indulging in an orgy of respectability over King Edward and Mrs. Simpson, he stated bluntly:

"If the lady in question had been a member of the English aristocracy under precisely similar circumstances, quite a different decision would have been come to by the government."

"Bunkum and bunting," he called the coronation. "Simply being run as a political stunt by the Conservative Party."

Like most revolutionaries, Cripps is a passionate defender of law and order. On March 11, 1933, six English technicians of the Metropolitan Vickers Company were arrested in Russia on charges of sabotage. While the men were in prison in Moscow awaiting trial, the British government asked the House of Commons for authority to prohibit Russian imports to Britain, as a reprisal action.

Cripps was appalled that the British government was suggesting a course which violated both international law and the principles of common law.

In a crowded, hostile and hysterical House of Commons he rose to speak. Members knew he would give a cold legal finding. It was the last thing they wanted to hear. Amid catcalls and interjections he stubbornly cited legal precedents. "If the Honorable Gentlemen are patient enough to allow me to give further citation I quote this time from Mr. Clay, who was Secretary of State to the United States of America in 1828."

Members watching Cripps struggling to speak to an unruly and antagonistic House sweated for him, but he remained outwardly calm throughout the ordeal. Little knowing that seven years later he would himself be ambassador in Moscow, he said, "I feel convinced that if we continue . . . to treat Russia in a way in which no country has ever been treated before . . . we are seriously jeopardizing . . . all future relations with Russia."

### The "Common People" Take It

Cripps is the only man in England who can stand on a public platform and talk to a working-class audience about the "common people." If anyone else tried it the audience would be insulted. He makes it sound like the Magna Charta.

His standing with working people breaks all the rules. They know he is a "gentleman," they know he is wealthy, they can almost see the dim outlines of the stately home behind him. But they trust his political integrity.

The miners have held Cripps in especial esteem since 1934. In the early morning of September 22d of that year there was an explosion in the Gresford Colliery. The death roll was 265. A month later the government inquiry opened, with Sir Stafford Cripps, K. C., representing the North Wales Miners' Federation. Although he had never been down a mine in his life, by the time he reached the court he was an expert on colliery engineering, and carried in his mind a map of every nook and cranny of the Gresford Colliery. With Cripps conducting the case, determined to find out "the entire and complete truth as regards the condition of this mine," a routine inquiry into a regrettable disaster became a revelation of mining conditions that had far-reaching results.

It was the longest inquiry in the history of mining-disaster investigation. It lasted six weeks, 191 witnesses were called, 41,500 questions were asked. The mine manager was imprisoned, with salutary effect on the entire industry. A royal commission was set up to inquire into the whole question of safety in the mines. Although few people knew it, Cripps had given his services free.

Cripps' private life is simple. In London Sir Stafford and Lady Cripps live in a small, plainly furnished two-room apartment near Paddington Station. Lady Cripps prepares the meals, but there's no cooking to do. Cripps' truck driving experience in France in the last war left him with a serious internal complaint from which he still suffers. The doctors ordered a strict diet, which he is convinced saved his life. For more than twenty years he has lived on raw fruit, raw vegetables, milk and cheese.

Publicly Sir Stafford appears a rather somber figure. A member of Parliament once said. "He looks as if he were in permanent mourning for a lost cause." He usually wears the conventional black coat and gray striped trousers of the barrister. His dark clothes, thin figure, and academic air combine to give him a funereal appearance.

Privately he is an amusing, friendly, informal person. He has kept his personal life so separate that most of his colleagues do not really know him at all. They would be amazed if they could see him at home in an open-neck shirt romping on the lawn with the dogs, and joking and teasing with his children. Home is Goodfellows, a fifteenth-century stone house and farm in the Cotswolds which he bought after the last war. Here he lives the complete family life with Lady Cripps, their s three daughters, and two adopt

AMERICA'S FINE WATCH

"country-gentleman Fascism" at home. Conservatives denounced him angrily. The Times referred to his "viewy assumptions" as "nightmares." Labor leaders kept disapprovingly quiet. But he was elected to the National Executive Committee, the highest body of the Labor movement. Less than a year later he had resigned from the committee as a protest against Labor support of the Conservative Government's application (which he did not trust) of sanctions against Italy.

Conservatives in the House sit unmoved through passionate orations from the Labor benches, laugh at, and with, witty debaters on the other side, but Cripps' passionless, logical analysis infuriates them. Once, after Cripps had given the House a mercilessly factual, coldly withering speech on unemployment, a Conservative M. P. went into the bar for a drink, muttering savagely. "I wish he would eat a good juicy steak —just once. . . ."

Even after the announcement of the Nazi-Soviet pact and the declaration of war, Cripps went on pleading with the Chamberlain government to establish more cordial relations with Russia. Out of the Labor Party, though still a member of Parliament, he spent the winter of "phony war" doing a political tour of the world.

He was reported calling on Nehru, an old friend, in India; motoring from Mandalay to Kunming over the Burma Road; having "most friendly" chats with Chiang Kai-shek; visiting Urumchi, the Sinkiang capital, the first non-Russian Occidental allowed there in twenty years; suddenly flying from China to Moscow, talking to Molotov, flying back thirty-six hours later; seeing Arita, the Foreign Minister, in Tokyo, arriving by Clipper in San Francisco, always urging that the Nazi-Soviet pact could be broken if England and America would resume economic relations with Russia. In England six weeks later Winston Churchill, Prime Minister of the new Coalition Government, asked Cripps to attempt the course he had advocated.

But Churchill did not make him an ambassador. The Russians did that. While Cripps was in an airplane between England and Greece, Moscow sharply informed London they would not negotiate unless he came with full ambassadorial rank and powers. So while he waited in Athens, eating goat's-milk cheese and celery, he was changed from head of a trade mission to British ambassador.

### History's Biggest Double Bluff

Cripps went to diplomatically frigid Moscow at considerable personal sacrifice. It meant being away from the House of Commons at a most critical time in English history. It meant leaving his family. And it meant leaving the most highly paid law practice in England for the unpaid job of ambassador. He has never saved nor invested any money. When the living expenses of the family were paid the balance was given away under strict pledge of secrecy to the Labor Party, for Loyalist Spain, to aid China, and for the relief of refugees. Now he has no income at all, expect his 600 pounds a year as a member of Parliament.

When he arrived at the British embassy Cripps walked slowly through the sitting rooms and carefully inspected the garden. Then he went shopping. When Lady Cripps and the two younger daughters joined him in October, carefully chosen pieces of Soviet handicraft had replaced the traditionally ornate *objects d'art* in the sitting rooms, and the garden already showed signs of green-fingered care. They settled down to a lonely life restricted by diplomatic status from the normal social contacts, and by the exigencies of war from the normal diplomatic contacts. The outside world heard little of Cripps' activities.

Then early in June of this year, amidst a storm of rumors that German troops were massing against Russia, Cripps turned up suddenly in London. Political observers saw in his unexpected return the key to the Hess mystery. They had never believed the story that Hess, the fanatical Nazi and fervent admirer of Hitler, had "fled" from Germany.

When Cripps stepped out of the airplane it was the answer to the riddle. The theorists decided Hess must have brought a "kindly" offer from Hitler to rid the world of the "red menace" if only Churchill would promise not to stab him in the back. Hitler, they hoped, would mistake Cripps in an airplane for a green light from Churchill. He did. Ten days later Germany attacked the Soviet Union. Almost immediately Churchill was at the microphone with a carefully prepared speech which strongly indicated that surprise was not an element in the situation for Britain's Prime Minister. Churchill is credited with the biggest double bluff in history. Cripps is credited with having made that double bluff possible.

### The Great Change Their Minds

For Cripps the wheel had turned full circle. The political outcast of the year before was feted on all sides as the man who had thawed the ice in the Kremlin. People said his was the most brilliant appointment Churchill had made. The Conservative Times, which in the past had attacked him for the "indefatigable exercise of an irresponsible tongue," called for his inclusion in the inner war cabinet. Anthony Eden, Foreign Secretary, publicly praised him in the House of Commons. The Labor Party basked in the reflected glory of the ex-member whom they had expelled for being "too left."

The Communists, who had roundly attacked him for condemning the Russian entry into Finland as aggression, rediscovered him as a courageous and upright Socialist.

As soon as he could escape from the acclamation and the visits to 10 Downing Street and the Foreign Office, Sir Stafford hurried to Henley-on-Thames to see the handsome white-haired old man whose approval meant more to him than any Times editorial. The eighty-eight-year-old Parmoor, weak with age, but with his mind as keen as ever, sat in the sun, his sensitive fingers stroking the blanket over his knees, and discussed the international situation with his successful son.

Cripps stayed in England only two weeks. On July 12th, a few days after his return to Moscow, the Christian in the Kremlin signed the Anglo-Soviet pact he had so long advocated. It was a dream come true under nightmare conditions. Behind the public acclaim there was, for Cripps, a deep personal sadness. Two days after his return to Moscow his father had died.

Sir Stafford is alone in Moscow now. Lady Cripps and the children were not allowed to return with him.

He is still a comparative youngster in politics. It is only thirteen years since he became politically active and he is still only fifty-two, which, compared with the average age in the House of Commons, makes him a parliamentary fledgling. There is much speculation as to his future role in British politics. His prestige is rising with all parties.

Ten years ago, shortly after the aristocratic Cripps first appeared in the House of Commons as the member of Parliament for the Bristol slums, Stanley Baldwin said to a friend in the smoking room, "Here comes a future Prime Minister of England."

AN ELEPHANT FOR STRENG

# Who's the Toughest?

Continued from page 24

rs. They've had a blind date with body with sore feet for some time you're nominated, seconded and ed."

e Dolly Sisters aren't ladies. 're not gentlemen either. They're e and Eggers, better known to underworld as the Hard-boiled rs.

e name Dolly Sisters was originally d on the two stylish stout uni- ed officers you see driving around squad car marked plainly "Police" body will take them by mistake e dark. But the title gradually wed down to the partners, Boyle Eggers, after their terrific work in Cathedral bombing case when Boyle bed the Cathedral steps dressed as shwoman and Eggers helped the mailers to make bombs in a cellar in Newark.

at jumped them from punks to grade detectives, the Dolly Sisters, anywhere they wanted, doing any- they desired and reporting to no- but the commissioner. Naturally wore no uniforms and drove no red car. Sometimes they would be town car with Boyle at the wheel, times they would be in a taxi ed by Eggers, and sometimes they up on foot.

hen they used their siren they were curiosity call or showing a stranger own. When they used the double they were going after the world's chocolate malted on Ninth Avenue. n they tore along silently they were n business.

d I know they thought a lot of each . "Boyle," said Eggers, "reminds hat some men are like acorns. They as a little nut and develop into a ty monarch of the woods with ding arms, shade for the tired, fire- for the cold and lumber for the less. Except that Boyle reversed rocess. He started as a mighty oak ecame a nut."

GERS," said Boyle, "who was last ear's honor man, will soon have the st wrists in the service from try- oorknobs in the suburbs. He would r hang that left hook of his on his theart's chin than wrap it around waist where it belongs. He thinks isn't a question in the world that be settled with a left hook and that des lunch-wagon coffee. I know he ls pretty good now but Eggers and ning bugs both look brightest when are going away."

hough Boyle was the diplomat of air he had a pretty good overland when he knocked out Eggers in olice-games welterweight finals in

The next year Eggers' left hook ed things up in the middleweights it knocked his partner colder than ll-digger's lunch. And, believe Rip- r the marching Chinese, it was a le kayo when they fought in the light heavyweights a year later. The hook and the swing crossed each other, there was a pop, pop, like bubble gum, and, as Eggers said, "We each got a lov- ing cup for hating one another."

When I went down to the big store to get in touch with the Dolly Sisters the first one I bump into is Eggers in the gym where he is boxing with his shadow and trying to uppercut it. That's never been done. When I ask for Boyle he knows I have something hotter than third base in the Texas League. I never tell Eggers anything because Boyle will listen to reason long enough to enable you to beat the women and children to the lifeboats. When Eggers cocked that left hand he believed the customer was always ripe. The only way to talk with him was in an Army overcoat with the collar turned up.

I LOCATE Boyle in a side room where he is setting Oscar up with a left jab and banging him with a looping right. As Oscar is a sandbag he can take it like a burglar with a license to steal. I tell him that I have a line on the Out-of-Town Mob, and he bangs Oscar about waist high with a right. It was the first time I ever heard a sandbag say "Ouch."

I tell Boyle all I know from Eddie Miller and how the mob has scared him about his mother. Boyle calls in Eggers and they both shove me into their car and we're off for the Friars Club. Eggers is doing seventy miles per up Fifth Avenue, driving with his right hand, wiping off the windshield with a left hook and yelling, "If I catch up to those mugs I'll stop 'em quicker than a bricklayer in a thundershower."

The Dolly Sisters get a look at Eddie while he's still out like a hung jury. "He's the man we want," said Boyle, "he's going to talk if I have to vaccinate him with a phonograph needle."

"That mob has him plenty scared," I said. "They promised him they would give it to his mother in spades. If there is anything on earth that Eddie loves it's his mother. He has to lay twenty-seven thousand on the line in two weeks or they will snatch her."

"He pays nothing," said Boyle, "and his mother is going to be as safe as a single over second. If there is any mob tougher than Boyle and Eggers then we resign and start life all over again as bouncers in an orphan asylum."

"Eddie will take some convincing," I said.

"Here's the convincer," Eggers remarked as he whistled a left hook at my chops. If I hadn't ducked he would have knocked me colder than a popsickle. "We're leaving," said Boyle. "Call us when he is strong enough to dial a radio with both hands. He's got a date to keep with the Out-of-Town Mob."

Well, two weeks later Eddie kept a date with the Out-of-Town Mob and the

"They're all full up in th' cell block, Sarge. Is it okay if I lock this guy in your desk?"

JAY IRVING

Dolly Sisters grabbed the contact man. It was Little Nocky's brother, which meant that one snatch was a fake, staged to take the heat off the local boys. It also meant the Out-of-Town Mob had local contacts. By the time Little Nocky's brother had an audition with the Dolly Sisters he stopped more punches than the gong in Madison Square Garden. And he sang like a road company of Madame Butterfly. The Out-of-Town Mob was from Chicago and hotter than flannel underwear. Boyle and Eggers went out and grabbed them all and lumped them up like a sack of potatoes. But they missed Little Nocky, who had a sixth sense without the other five.

EVERYTHING was setting as neat as a nurse's cap with the Dolly Sisters congratulating themselves that they would send the Out-of-Town Mob away for so long a stretch that when they got out they would be frightened by an umbrella.

Their star witness is Eddie. And then Eddie dummies up. He has got a telephone call from Little Nocky, who tells him he will snatch Eddie's ma and give her the hotfoot with an acetylene torch.

Well, the Dolly Sisters are madder than a porcupine with ingrown quills. They take Eddie into executive session and Boyle asks, "Why are you scared of the Out-of-Town Mob when they're jugged like cider in October?"

Eddie says Little Nocky is looser than a busted axle and he is awful tough. "Is he tougher than me?" Boyle wants to know as Eggers clips Eddie with a left hook. To their surprise Eddie takes it standing up. A fellow who has been worked over by the Out-of-Town Mob can take it like a post-office blotter. Then Boyle wings over that right load of dynamite and down goes Eddie but he isn't out.

"Who's the toughest?" yells Eggers, "Me or Little Nocky?" as he gives Eddie the leather right in the ribs. "Do you mean to say you're more scared of the Out-of-Town Mob than you are of me?" Boyle hollered as he picks Eddie up with his left hand and smears him with a right. And by the time Eddie is ready to talk he can't. His lips are swelled like a busted sofa and his eyes are ace-deuce. He must have been awful scared of the Out-of-Town Mob, for it's two hours later that he nods his head when Eggers yells, "Who's the toughest?"

It was a question of professional pride with the Dolly Sisters. They had given Eddie a course in applied muscular psychology. They believed in fighting fire with fire insurance.

And a little later Eddie is in the reception room of the Friars Club, this time with shoes but more lumps. I call up his ma and say that Eddie has left for Hollywood and will be gone two weeks. He was up and walking in ten days with his ribs taped in from left to right and he goes over to see his ma. The rest has done him good and he's as dapper as a new-laid egg. But his ma says somebody has called her on the telephone and threatened her life. That sets Eddie right back on his goal line again, and the Dolly Sisters are only human. The beating they gave Eddie was more in sorrow than in anger. But they had to prove who was the toughest and they invite Eddie down to the big store. This time they take him down to the Goldfish Room. Some people will tell you there's no such thing as the Goldfish Room but I can describe it. The chairs, tables and rugs can be taken out of the room, which leaves the floor of white tile. So are the walls. The Goldfish Room can be washed up with a hose. Then they put the furniture back.

EDDIE is sitting in the room with his back to the door talking to Boyle when there's a scuffling sound out in the corridor and he can hear somebody yelling, "Giddap, you!" Eddie rounds and there is a fellow crawling into the room with Eggers standing on his back. The man doing the crawling is the Lump Man for the Out-of-Town Mob. He's the fellow who put the heat to Eddie's feet and stuck the toothpicks under his toenails. The fellow looks pretty scared.

Everything he does to Eddie they do to him. There's four in the Out-of-Town Mob not including the local contact, Little Nocky, who is still loose. Eggers goes out and rides them in one by one until they are all stretched out flatter than wet leaves on a slate walk.

While Eddie looks on, Boyle pours office mucilage on the floor and makes them rub their noses in it. "Who's the toughest?" he asks and they all say, "You are." Eggers yells, "Louder" and they start singing pretty loud for hoodlums. And when they crawl up one by one and lick mustard off Eddie's shoes, Eddie realizes they aren't so tough.

And he says he will go through with his testimony provided somebody guards his mother because Little Nocky is still loose and he is tough.

can have your choice of us," yle. "Take your pick. She alone a minute until these in the shade. And Little Nocky with them. Which one do you

ke you," Eddie said to Boyle; ers screamed, "What, is he han me?" He cocked that left d Boyle primed his right, but uared it by saying, "No, he's no han you, but ma likes to go to bs and he's the best dancer."

st night out ma and her body- de the Barn Club, the Village , the Dipsy-Doo, the Barrel of nd Heinie Kabboobles. Boyle afely home at dawn and turned bodyguard job to the copper on Then he staggered up to my the club to get some sleep.

cond night ma starts in with dance at seven at the Starlight the Waldorf, she swings and th Benny Mays at the Com- bobs and dips with Jimmy the La Palomba and winds up urger Paradise whirling poor the internal rumblings of a At seven the next morning he to the Friars Club with his his hand. Sitting on the edge d, he says, "Look at those blis- ny feet. She's giving me the music. I can't stand it. She's for me."

threatens to resign, but Eddie no dice with Little Nocky still ose. And while the hunt goes e short lamster, Boyle con- dance around the clock with na.

having the time of her life, not that Boyle is protecting her tle Nocky. All she knows is ie has very nice friends who r in the evenings when Eddie It gets too much for one man le asks for a relief. Eddie's think of going out with any- Boyle so they give him an- other handsome young detective to spell him. Ma takes the two in her syncopated stride and by three in the morning they have been to Maison Blottz, the Gypsy Trail, Joe's Roach Ranch, La Toot Tavern, the Hashienda and three other circulating libraries where they read by the subdued glow of an electric light in a bass drum.

All the dancing and the attentions of two handsome young men is making Eddie's ma younger, slimmer and prettier. But it is wrecking Boyle, who is busy sending out for reinforcements. The only chance he has is that Eggers rounds up Little Nocky so that Ma's Eddie will not lose his nerve and have to get another working over. For by this time Boyle is about as tenderhearted as he is tender-footed. Eggers has a line on Little Nocky that takes him around the night-club circuit and one night he bumps into Eddie's ma and Boyle.

It's the old Villa Maxie's, which is now closed. It is the sixth stop for Boyle that night and by now he knows the spots better than a milkman's horse. In a month he has bought his overcoat twice. Once for cash and once in installments to hat-check girls. Well, Boyle is sure glad to see Eggers and an hour later Ma has danced them both down until their hip pockets are dipping sand.

IT'S three in the morning then and ma has no more intention of going home than she has of going over Niagara Falls in a telephone booth. Finally, Eggers can't take it any more. With Boyle pleading with tears in his big, brown eyes, Eggers forces his way to the coat room for his autumn flogger.

He hands in his check and then says to the girl, "That's a pretty nice benny over there," pointing to a terrific raccoon benjamin that seems a bit early in the season.

"A Dartmouth boy," the girl smiled, "went overboard last week celebrating

MEDICATED FOR

# SANDPAPER THROAT

Throat raw, raspy, due to a cold? Get yourself Luden's and help yourself to quick and soothing relief. Special medicinal ingredients and cooling, comforting menthol help ease sore, tender throat membranes.

Copr. 1941, Luden's, Inc.

and left it. He says he will be in next week and bail it out."

"That's strange," said Eggers, "there must be Dartmouth boys in hock all over town. That's the third raccoon flogger I've seen tonight and they're all for big men. Why, it reaches from the hook to the floor. Do you mind if I look at that one?" Eggers shoved his way past the girl and ran his hand over the fur. Then he hooked it about belt line with his left.

The overcoat said, "Ouch!"

Not to be outdone in Oriental courtesy Boyle reached over and slugged the raccoon about the third button with his overland right. This time the overcoat was silent but Little Nocky fell out.

"Well," said Eggers to the girl, "wives are checking their husbands these days."

Then he picks up Little Nocky and says, "A rat in a raccoon's clothing."

He's about to pop Little Nocky again when Boyle stops him: "Just a minute, we'll give him a touch of high life." They take him in the men's room, wash his face, comb his hair and bring him out as dapper as ever. Then they take him over to their table and say, "Mrs. Miller, I want you to meet one of Eddie's best friends, Mr. Tattistrat from Porteroff. He's the best dancer in the country."

Naturally, Eddie's ma doesn't know about double talk but she thinks Mr. Tattistrat is a very nice fellow even if he doesn't seem to know the exact location of Porteroff. In the Villa Maxie's they use the double-band system so the music never stops. Neither does Eddie's ma and in about thirty or forty minutes Mr. Tattistrat from Porteroff is commencing to wilt.

Eddie's ma is certain that Boyle knows the nicest kind of people. She isn't hep that the gorilla she's dancing with has gouged twenty-three thousand out of Eddie and is after twenty-seven more. She doesn't know that Mr. Tattistrat from Porteroff stuck toothpicks under her boy's toenails. And she doesn't know that Mr. Tattistrat from Porteroff would cut her throat for a wooden nickel just for the pleasure of throwing the nickel off a bridge and watching it float. Eddie's ma doesn't know a lot of things. But she does she is having a wonderful evening

She also doesn't know that danc the worst punishment you could gorilla because they all have craps er's feet. Their toes curl up bending over and shooting dice c floor. That hamstrings them a year or so. In a few more minute Tattistrat glides by Boyle and and says cater-cornered, "What d want from me?" But they pay no tion.

The next time around Mr. Tat sideswipes, "How about the full ment in the Goldfish Room?" Bu make him keep going until Eddi is willing to go home.

That's something Eddie's ma intention of doing. And, finall Tattistrat from Porteroff cried t With tears running down his f pleads with the Dolly Sisters, take me to the Goldfish Room. too tough for me."

"Have they got dancing there?" Eddie's ma.

"Yes, they have," said Boyle, "sort of one-sided."

WELL, the three of them see ma home as usual in the dawn less light, and she thanks them a wonderful evening. Especially M tistrat from Porteroff.

Then the Dolly Sisters escort Nocky to his new apartments d the big store. About an hour lat a phone call that Eggers is dow in the reception room and w comes up he has a shiner that lo an elephant's ear on a mouse. I that before stashing Little Nock form-fitting cell they have an ar over their pet punches and deci Little Nocky will catch and ref

Boyle wins first serve and wh gers holds Nocky from the back lets go. They don't realize tha Nocky is now a dual personality way, Mr. Tattistrat from Porter and Boyle's overland right sma gers right where the expressi the face and knocks him colde screen door facing north.

So Eggers used my room in th Club for a couple of weeks.

*How many risks* do you see that can be insured in the Two Hartfords?*

**Risks of financial loss*

a Hartford agent studies *your* insurance re" he can give you the right answer. es *all* your risks of financial loss—covers st against *large losses* that might cripple nancially.

***Let's look at the picture again***

a fire insurance policy, endorsed to give protection against other hazards, should house, contents, garage and car. Next—lly as important from a large loss stand—is liability insurance against damage suits resulting from ownership of home, car and dog.

Then comes burglary and theft insurance or household contents and car. This man should consider insuring his stamp collection and camera. If very valuable, the portrait should be insured under a fine arts policy.

***Accidents do happen!***

Mr. and Mrs. Home Owner should be vitally interested in personal accident insurance to cover medical and hospital bills. They should consider collision insurance, which pays for repairs to one's own car—and property damage insurance, which covers liability for damage to the other fellow's.

Should damage to the house make it temporarily unlivable, rent insurance would pay the rent elsewhere. And the windows of a house may be insured under a glass policy.

A fair answer to the headline question is "at least ten risks."

***An analysis may surprise you***

Do you know *all* the risks of financial loss in your own "*picture*"? Why not let the nearest Hartford agent study them? Just call Western Union (in Canada, call Canadian National Telegraphs) and ask for his name and address. Or talk with your own broker.

***Ever since 1810, "Hartford" on a policy has meant a sure promise to pay losses.***

# The New Disorder

BERLIN naturally is letting out only the most guarded reports of what is happening to Hitler's New Order in German-occupied Europe. Even so, those reports add up to a picture of seething discontent, frequent killings and maimings of German soldiers, defiance of the most ferocious reprisals yet thought up by Gauleiters Terboven in Norway, Stuelpnagel in Paris. Heydrich in what was Czechoslovakia.

The real picture must be a good deal more lurid. For one item, it is reported reliably that Hitler needs 2,000,000 soldiers and their equipment and ammunition to keep his slaves down. For another, the Serb guerrillas in Yugoslavia are evidently making good their promise to fight to the last man from the woods, rocks and caves. Same as to Greece; and the same, too, as to Italy's puppet kingdom of Croatia, some of whose coastal towns the Italians have felt called on to pacify with shells from fighting ships. Some news dispatches even speak of "the Balkan front" again.

It's the freedom-and-democracy angle of it all that interests us most.

In many parts of Europe, freedom and democracy before this war were only ideals. In other parts, such as Czechoslovakia and Poland, freedom and democracy were just getting up on wobbly legs, having been foaled only as recently as the peace conferences of 1919-20. Yet now the common man in all those territories is sabotaging the New Slavery, and often risking his life to do so.

As for Norway, which has a long tradition of freedom and democracy—well, it looks as if the Norwegians' bulldog stubbornness may yet compel Berlin to give them back their country in disgust.

Let us now briefly consider the United States. Here, we have had 166 years come next July 4th of the freedom-and-democracy tradition. It is ingrained in us. We may forget it now and then, but not for any great length of time. Witness what we did to federal prohibition as soon as a majority of us became convinced that it was no good.

Not naming any names or pointing any fingers of suspicion; but we thought we would mention these matters for the benefit of any who may be thinking that now is the time to start pushing the American people around.

# Sanity and Censorship

THE Navy Department took a deep breath the ot and ordained that names of British naval vessels in American ports might thenceforth be published.

Previously, the whole city of Philadelphia was s to keep secret the fact that H.M.S. Resolute had put Philadelphia Navy Yard for repairs; no more than 7 New Yorkers, because there are no more, knew tha Malaya had arrived at the Brooklyn Navy Yard wi in her hull; the population of Newport News was s not to notice that the aircraft carrier Illustrious h brought there for treatment.

It was a ridiculous situation, which kept no secrets from the Nazis and was a vicious breeder c and exaggerated gossip in this country.

To let the essentials of these news stories get i withholding only such details as might furnish lead many's U-boat and long-range bomber dispatchers ously common sense. It should help British and morale, and hurt German morale. In some cases it to refute the exaggerated sinking claims for which Germans and the Italians have long been notorious.

It's a pleasure to hand Secretary of the Navy Fr a pat on the back for this upsurge of common sens wish him many happy returns of the same.

# Kill this Pension Grab

IF YOU are opposed to unconscionable Treasur lobbyists misrepresenting veterans of the pre better make a note of HR4 and HR4845 as a cou about which to write your congressman and senat

Both of these bills have passed the House, furti grants a pension to surviving dependents (wife o any man who was in the service as long as 90 days a less of whether he ever did any fighting. HR484 to step up compensation for totally disabled vete would probably be okay if that were all. But 48 ries a joker granting a pension of $40 a month for eran at age 65, injured or uninjured during the wa only that he must show that his income is small. with the help of a capable shyster can skate aroun viso to this pension.

There is no justification for these bills. A Ho rified of lobbyists would have kicked them down steps. It is doubtful that more than a handful want them made law. They will load additional the taxpayers—who, after paying their World W the highest wages in the world during the conflict, them $8,000,000,000 in bonuses and other benefit war, plus $5,000,000,000 more in hospitalizatio service, transportation, etc., etc.

We hope the Senate can dig up the courage and kindred pension grabs; or that if the Sena President can. There is a limit to what the ta stand. The veterans' lobbyists nudge us closer t

# Great Man's Monumen

IGNACE JAN PADEREWSKI is gone, but the Testimonial Fund carries on. An outgrowth mission for Polish Relief, which was formed w was caving under Hitler's planes and tanks, the Fund has collected about $1,000,000. It has d money to Polish refugees and to a memorial hosp burgh, Scotland.

If you'd like to pay some concrete respec whom Americans admired as a great statesman artist, and at the same time help a lot of that ma countrymen, the Paderewski Testimonial Fund, 36th St., New York, N. Y., is the organization to tribute. Every dollar sent to it will do 100 ce good in the world.

**NOTE HOW LISTERINE GARGLE REDUCED GERMS**

BEFORE

The two drawings illustrate height of range in germ reductions on mouth and throat surfaces in test cases before and after gargling Listerine Antiseptic. Fifteen minutes after gargling, germ reductions up to 96.7% were noted; and even one hour after, germ were still reduced as much as 80%.

AFTER

AT THE FIRST SYMPTOM OF A

# OLD OR SORE THROAT—Listerine, QUICK!

**ne Antiseptic reaches way back on the throat fces to kill "secondary invaders". . . the very e of germs that make a cold more troublesome.**

Th prompt and frequent use of full strength Listerine tiptic may keep a cold from getting serious, or head off ntirely . . . at the same time relieving throat ir n hen due to a cold.

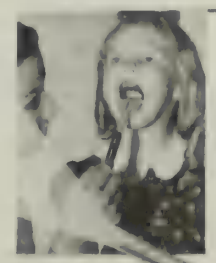
ts alue as a precaution against colds and sore th ... h en demonstrated by some of the sanest, mos ss e research work ever attempted in connectio d revention and treatment.

*Ten Years of Research*

Actual tests conducted on employees in several industrial plants during a ten year period of research revealed this astonishing truth: That those who gargled regularly with Listerine Antiseptic twice daily had fewer colds and milder colds than non-users, and fewer sore throats.

*Kills "Secondary Invaders" on Tissue Surfaces*

This impressive record is explained, we believe, by Listerine Antiseptic's germ-killing action . . . its ability to kill threatening "secondary invaders"—the very types of germs that live in the mouth and throat and are largely responsible, many authorities say, for the bothersome aspects of a cold.



*Tests Showed Outstanding Germ Reductions on Tissue Surfaces*

When you gargle with Listerine, the cool amber liquid reaches way back on throat surfaces and kills millions of the "secondary invaders" on those areas—not all of them, mind you, but so many that any major invasion of the delicate membrane may be halted and infection thereby checked.

Even 15 minutes after Listerine gargle, tests have shown bacterial reductions on mouth and throat surfaces ranging to 96.7%. Up to 80% an hour afterward.

In view of this evidence, don't you think it's a sensible precaution against colds to gargle with Listerine Antiseptic systematically twice a day and oftener when you feel a cold getting started?

COVER JOE KNEISEL

# ANY WEEK

WE WERE complaining about our lot. A long-drawn-out chore was keeping us in Washington. We prefer our Washington in small doses. Anyway, we were complaining. We were overheard by a gentleman from Chicago, Illinois—a responsible fellow who for many years has been making paper boxes and cartons in large quantities and with great success. "So you'd like to get out of here," said he. Obviously he was having some trouble controlling himself. "I've listened to you. Now you listen to me. Twenty weeks ago I got a contract to make paper cartons for the United States Navy. The Navy has designed its own carton. It's pretty much like any other carton but the seams are different. I hesitated to take the contract, saying that there was no carton machinery capable of making Navy seams. The Navy told me to go ahead and make a machine and how much would it cost. I said it would cost five hundred dollars. The Navy snapped its fingers, told me to go ahead, get a priority order from OPM for the steel and get busy. My dear sir, you're complaining. I have been here twenty weeks trying to get somebody in OPM to sign an order upon the steel company releasing to me the small amount of steel I'll need to build a five-hundred-dollar machine to make Navy seams on a couple million dollars' worth of cartons. My dear friend, will you be so good as to shut your mouth and let somebody complain who knows how."

SO WE shut up and pretty soon struck up a conversation with a man who was complaining that the peanuts the house served with drinks were stale. He was an automotive engineer. After finishing his peanut grumbles he stopped fooling. He told us that he'd just got back from a proving ground where the Army had been testing jeeps and command cars equipped with an almost revolutionary idea in tires and compensating springs or snubbers. The combination was the product of a whole board of engineers and tire manufacturers, but the Army just wasn't sure. The tests conducted cross-country, over hill, dale, meadow, creek and bog land were more than satisfactory. Generals were rubbing their hands all over the place. But the Army insisted on another test—racing the revolutionarily equipped cars around a small circular pad of concrete for eight hours. "So I told the Army," said our engineer, "that I'd heard of countries going to war straight out and I'd heard of countries going to war zigzag, but that I'd never heard of anybody going to war in circles." So we left him but not before seeing a gentleman at the next table lean over, tap him on the shoulder, and say: "Oh, you haven't, hey? Well, just stick around, my friend."

OUR deeper sympathies, however, are with Mr. Morgenthau, Secretary of the Treasury. Mr. Morgenthau, as you've probably heard, is more than anxious that his fellow countrymen buy defense bonds and savings stamps in large quantities. But while you are piling up these gilt-edged investments at a great rate, being both shrewd and patriotic, Mr. Morgenthau cannot buy even a twenty-five-center. We dropped in on Mr. Morgenthau aiming to comfort him. He said that he appreciated our feelings but that the hurt was wellnigh incurable. Away back in 1889, he told us, Congress in a virtuous moment passed a law prohibiting any Secretary of the Treasury from buying government securities of any kind. It seems that back in the President Grant era which, for the benefit of the children, was something like the blackjack days of Warren Harding, a Secretary bought government bonds at sixty cents on the dollar and sold them later at par. We went out and bought a few books of stamps and notified Mr. Morgenthau by telephone. "Thank you," said he—but ruefully.

THE devout scrapbook clippers of the comicartoons in this excellent publication are apprised of a volume entitled Collier's Collects Its Wits, containing 339 cartoons selected by our dour Mr. Williams. Harcourt, Brace & Company are sponsors of the job, which is now being sold in all bookstores that are worthy of their salt. Better hasten thence.

BACK in Washington, we met a gentleman named Dowd E. Dowd. Of course we shall receive letters denying that there is anybody of that name. But we can't help it. The fellow's name is Dowd E. Dowd, and we're not to blame. He lives in Baltimore, Maryland, too, and we had nothing to do with that either. Anyway, Mr. Dowd E. Dowd was in a hurry. He had just been to OPM, OPA and SPAB—the defense triplets. "I am now on my way to the former seat of the government of the United States—Capitol Hill," said he.

HOWEVER, we would not have you believe that things are not getting done with ruffles and flourishes in Washington. We have just paid a couple of courtesy calls at the Navy and War departments, observing censorship at close range. The most interesting demonstration occurs when a manuscript dealing with the activities of both the Army and the N works. Both departments Navy almost invariably erything in it having to Army, on the theory that portant anyway. A nice ri kept alive at the expense of the manuscript—provi any manuscript left and disemboweled condition, gets printed. We were di in the State Department national affairs are regar pletely paltry to begin wit us that when Colonel E was brought to Washingt Roosevelt's co-ordinator gence, the Navy sugges colonel be made a ma The Army suggested tha an admiral. The colonel he be left alone, certai moted by either side. A just been looking into t asking an F.B.I. man F.B.I. information was relayed to the colonel, to transmitted to the Pres tainly," said he. "Do everything we know ex know about Donovan."

AND one of our State friends told us that the number of Grade-A g ficials who go much f Russo-Nazi war situat used to. Until recently tant gentlemen were pra sides lose. Now, accor them in a dinner con our friend in the State it's like this: "While Russia has the heroic t until next spring to g American political and sons maybe the sooner better."

WE HAD lunch with a and Navy morale office a great deal of talk abo —states and communit lukewarm or even chil titude toward nationa great many places were being badly in need of ing up. You'd be sur what to our chagrin, o not asked. But if we'd name a good place for gin needling the citize been ready:

# THE SUN IS MY UNDOING

with all the action of ANTHONY ADVERSE . . . all the thrills of GONE WITH THE WIND!

*To New LITERARY GUILD Members*

## . . . THIS GREAT ROMANTIC NOVEL

*1176 Pages!*
A SENSATIONAL NEW BEST-SELLER!

*5,000 Copies Bought Last Month at $3.00!*

*You May Have It Free!*

THE SUN IS MY UNDOING is a story on the heroic scale, a chronicle that lifts the reader out of his own world and sweeps him on breathlessly for nearly 1200 pages crowded with adventure!

Its time is the great days of sailing ships, and it begins in Bristol when young Matthew Flood, driven from the arms of his bride-to-be to the afterdeck of an African slaver, embarks on a journey that is to cover half the globe and tangle the destinies of generations unborn. The ports this story touches are the reeking coast of Africa, fair Barbados, gay and scheming Cuba, the Barbary haunts of pirates, the palaces of Seville and Madrid, returning at last to the stately homes of England. You'll be thrilled to the very end of this exciting novel.

*The Sun Is My Undoing* is the story of one undying love and a dozen interwoven tales of ambition and intrigue, of daring and adventure. Critics have showered it with adjectives like "magnificent" (N. Y. Times), "tremendous" (N. Y. Sun). "A hero to rival Anthony Adverse and Rhett Butler" (Buffalo Evening News). What a grand opportunity to start your Literary Guild membership with a gift like this! Thousands have bought and are buying this book through the regular channels at $3.00 a copy, but as a new Guild member you may have it absolutely FREE if you act promptly! Read details of Guild membership below—then mail coupon!

## terary Guild Membership Is FREE—and You Save to 50%—and more—on Outstanding New Books

traordinary savings which you can make on the new books are ongest reason for joining the Literary Guild—especially since bership costs you nothing. You can add to your library many of at, most important books, both fiction and non-fiction at a flat only $2.00 each—regardless of the higher prices (from $2.50 to which they are published. There is *no obligation on your* to accept a book every month after you have joined; you may take four Guild selections a year to enjoy full membership.

***ild Membership Saves You as Much as 50%!*** Every month the nufactures for its huge membership a special Guild Edition of outstanding new book, selected from the advance lists of leading ishers. Even if the publisher's price is as much as $4.00, *you* pay $1.0 for your handsome Guild edition. And you get it *on approval* the very day that the more expensive publisher's edition is on sale! Furthermore, the Literary Guild now gives each member a book as soon as four Guild selections have been purchased at $1.0 each. This FREE book is always a popular title, selling at m $2.50 to $4.00!

***Magazine "Wings" FREE.*** As a Guild member you receive FREE the famous Guild magazine "Wings," which contains illustrated articles about the current selection and its author, and includes a special contribution by the author.

"Wings" also contains an advance description of the book to be selected the following month. If you feel you do not want to examine the book, merely notify the Guild not to send it when the time comes. On the other hand, if the selection sounds interesting, you may have it sent for your approval.

"Wings" is also an invaluable guide to all important current reading, for each month it reviews about 30 new books, any of which may be purchased through the Guild at the established retail prices.

***Send No Money Just Mail the Coupon.*** Guild service starts as soon as you accept Free membership. "The Sun Is My Undoing" will be sent you immediately absolutely FREE. But you are urged to mail the coupon at once this offer may soon have to be withdrawn! *Literary Guild of America, Garden City, New York.*

# "Say, sister, are you in the Navy, too?"

"LOOKS like your boss is copying Uncle Sam! The soda fountains on our big battle wagons serve us our fountain drinks in Dixie Cups, too. They're taking no chances on our catching anything from somebody else's glass. Guess your boss has the same idea . . . protecting his customers."

Milk bars and soda fountains in increasing numbers are swinging to individual service in Dixie Cups. It is truly a sign of the times.

Mouth-to-mouth contagion from public drinking vessels can no longer be tolerated. The hazard in their use can be checked only by sanitizing with intense heat or chemicals—and that takes time. Merely dousing in soap and hot water is not enough. Dixie Cups, used but once and then thrown away, are the increasingly popular answer.

**DIXIE CUPS**

DIXIE-VORTEX COMPANY, EASTON, PA., CHICAGO, ILL., TORONTO, CAN

*DIXIE CUPS are safeguards of health at all times everywhere. In the office, in the shop, in public places, at soda fountains, on trains and airplanes, the common drinking vessel is a thing of the past. The expanding uses of Dixie Cups are but an indication of the trend of the times.*

# WING TALK

INTERNATIONA

**No pilot would fly a duplicate of this plane from Iceland to the U. S. today, but the Army Round the World fliers did it in 1924**

THE second American invasion of Iceland is more extensive than the first, which occurred in the late summer of 1924 when the Army World Fliers put in at Reykjavik and were held there for 13 days for engine changes and weather to Greenland. Accompanying the four airmen—Lieuts. Lowell H. Smith, Leslie P. Arnold, Eric Nelson and Jack Harding—were two United States cruisers, two destroyers and six newspapermen, among whom were our Damon Runyon and your correspondent. Lieuts. Leigh Wade and Henry H. Ogden were fished out of the bleak waters of the North Sea between the Orkney and Faroe islands by our cruiser, the Richmond, when they went down with engine trouble. Having flown all the way from California to that remote spot only to be ruled out by the failure of an oil pump was sufficient to make the boys want to retire to their cabin and quietly cut their throats. We watched them closely until they got another plane in Nova Scotia and completed the trip.

The Army pilots were flying Douglas world cruisers, specially built biplanes each powered with a 400-h.p. Liberty engine. They could change over from wheels to twin pontoons for long overwater hops. Top speed was 90 miles per hour, cruising range 10 hours. It is doubtful if any airman today, including the original Army pilots, would attempt to fly from Reykjavik to the United States in an exact duplicate of these ships. Yet our boys did it.

Lieut. Smith, leader of the flight, is now Col. Smith, U. S. Army Air Forces. Lieut. Arnold is an executive of Eastern Air Lines. Lieuts. Nelson, Harding and Ogden are in civilian aviation; and Lieut. Wade, now Major Wade, is on active duty in the office of the Chief of Army Air Forces in Washington.

THE group captain of the R.A.F. Bomber Command, who has made many day and night raids over Germany, was a passenger on a Dutch freighter, part of a convoy en route to the United States. Six hundred miles off the European continent, they were visited by a Focke-Wulf four-engined landplane bomber which picked out a tanker and practically blew it out of the water. There was a bit of admiration in the group captain's voice as he described the accuracy of the enemy bomber. And as an afterthought he said, "Our gunners got him though. I felt very sorry for poor Jerry." Amer cans have but one complaint again the British. If they would only g mad!

THE young naval aviator was ve proud of his new custom-built ca It slid over the highways so easily ar smoothly that he lost all sense of spee That is what he tried to tell the hig way patrolman who intercepted him a small community and told him h license was suspended for a month the charge of driving a mile a minut A few days later the young pilot fou himself in his fighter plane approac ing the same village. Down went t nose, and down the main street roared. At that very moment, his co manding officer stepped onto the str from the corner drugstore. Fast as was going, the C.O. was able to re the markings on the ship.

The young officer now was co fronted with charges of violating t federal air navigation laws as well a number of Navy regulations. He h no alibi, no excuse, nothing but t truth to tell with an indirect appeal public antipathy toward speed cops.

"I just thought I'd show that cop th 60 miles an hour really wasn't fa was the conclusion of his brief offic explanation.

AND out in a pretty little town Nevada, there are still a few w refer to the time an Army plane ca right down the main street on a le with the second-floor windows. We w confess to those people that we had j cleared a 10,000-foot mountain ra by inches and below us was the beau ful valley with the town in the cent As the mountain sloped away from we lost altitude too, and thought w take a look at the place. The pilot, w then wore the silver bars of first lieut ant, now has eagles on his should and it would be a very bad exam to the youngsters of the Air Forces reveal his present command and s tion. But at that time he had the bl outlook of being a first lieutenant the next 20 years (he had been one the previous 10) and he didn't m care. So he let them have it and the end of the street he pulled up int *chandelle,* leveled off and we were our way to California. That was in 1 and luckily for him no superior offi stepped out of the drugstore as whizzed by.

F. R.

*Very, very funny! Look, I'm choking to death with mirth!*

*Don't stop now . . . but you're away out of the groove on tires, chum!*

*Okay, Gruesome! What's the new number? Switch to B. F. Goodrich?*

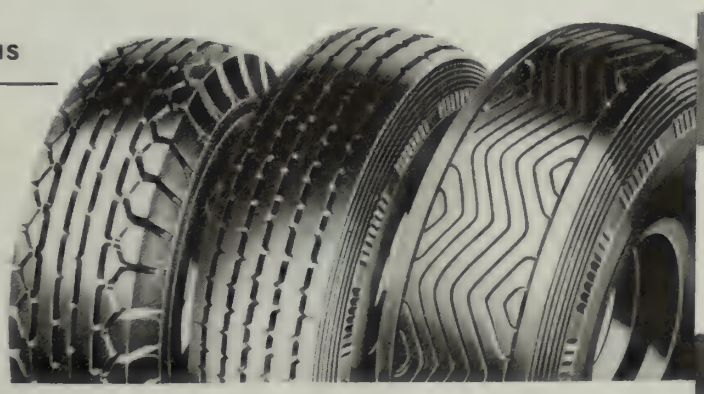
*Brother, you ain't improvising!*

★ ★ ★

**WE:** *Buying tires today is a far different business than it was just a few weeks ago.* Because you don't know—*nobody* knows—what the picture will be the next time you need tires. Today you've got to be *sure* of mileage—*sure* of safety. You can't take chances!

That's why it pays *double* today to stick to Silvertowns. Every one of these rugged tires is made with Duramin, the "tire vitamin" that keeps youth in the rubber. Silvertowns will wear and *wear!*

That's very important to you. And it's important to Uncle Sam, too, because it helps save rubber that may be vitally needed.



So far, Silvertown prices are still quite low. And you need not pay cash, either. All B. F. Goodrich Silvertown Stores, and many Goodrich Dealers, offer the convenient Budget Plan.

*new* **SILVERTOWNS**

**ILVERTOWN.** Duramin
nger wear, and top qual-
cords make it stronger

**ILVERTOWN.** Duramin-
es the best combination
e, safety, comfort, and
ning.

**ER SILVERTOWN.** No

## By Freling Foster

*During* Civil War days, New York's Bowery had many low saloons where liquor was never served in a glass or mug. The customer merely placed a nickel on the bar, picked up a rubber tube attached to a barrel of whisky and drank, under the watchful eye of the bartender, all he could without taking a breath.

*On* many trains in the United States, the operating crews are changed on an average of every 200 miles, or about every three and a half hours. For example, one train, which runs between New York and Chicago and covers nearly 1,000 miles in 16 hours, changes its crew five times, while another, which runs between New York and Miami and covers nearly 1,400 miles in 25 hours, changes its crew seven times.

*The* Los Angeles General Hospital now uses paper bowls, plates and cups exclusively and, despite the fact that they will cost more than $40,000 a year, the institution expects to save considerable money through the elimination of the labor that was required to sterilize, wash and dry ten thousand pieces of crockery three times a day.—*By Ida Clemens Tuma, El Monte, California.*

*Levulose,* the sweetest of all the hundred or more different kinds of sugars, can be made from such plants as chicory, dahlias and Jerusalem artichokes.

*The* upper part of the North American continent is so wide that it has eight time zones, or twice as many as the United States. From east to west, they are: Newfoundland, Atlantic, Eastern, Central, Mountain, Pacific, Yukon and Alaskan.—*By Bruce E. Butt, Harrisburg, Pennsylvania.*

*Trunkfishes,* of the family *Ostraciidae,* which are found in warm seas, are shaped like other fish, but their bodies are encased in a hard shell, like that of a turtle, and only the jaws, fins, eyes and tail are free to move.—*By Mrs. Howard H. Lane, Gainesville, Florida.*

.TED BY ELMORE BROWN

**t easy for a man who has spent of his life in football to wash ads of the game. Fortunately re, Mary Warren knew it, too**

EN Shore saw them coming across the cam- us in a small, tight group, he was at first rprised and a little puzzled. There were rdish, the coach; Malone, the director of ; and Markell, the publicity man for the membering that Burdish liked neither of the articularly, Shore began to have a feeling oding. Only something serious could bring ee together.

wondered with a kind of grim amusement ad really found out at last, and waited for ps on the stairs. When he heard the steps, he was the pay-off.

ey opened the door, Burdish looked as he m. Markell was panting and indignant. Ma- red-faced and blustering; he carried an afternoon paper in his hand and tossed it on Shore's desk so that the big headline stared up at him.

"Shore Revealed as Author of 'Benchwarmer,'" the headline read. The subhead read: "Scarlet's Captain Betrays Teammates." Anger flashed in Shore at the subhead but he caught himself.

"Well, say something," Malone half shouted. "Is it true or isn't it?"

Shore wondered how the Express had found out about it. They'd been trying to run down the author of the column in the rival newspaper, the Dispatch, for a long time. A long weariness got the better of Shore. He had had to use his talents as an athlete to get virtually everything he wanted in his life. He had been sick of doing it a long time; he supposed it was why he had written the column, vaguely critical of the players, the team, but principally of Malone and his high-pressure ways.

"Answer me!" Malone said.

"Yeah," Shore said slowly. "I wrote it. What about it?"

Malone grew purple. But before he could speak, Burdish said, "That was pretty cheap stuff, Joe, not what I'd expect of you."

Burdish could hurt him a little, Shore knew, but

**ident ticket taker was embarrassed. He had orders, he said, that Shore was not to be admitted**

**With his long, rawboned body stretched to its limit, he got his hands in front of the ball. The dull sound was like music**

not as much as if he had not called him by his first name. Somehow, he felt that Burdish was capable of understanding why he had done it; not now, perhaps, but in time. There was a silence, inexplicable, and finally Malone broke it.

"You're a brave guy, all right," he said. "Talking about people under a—a *nom de plume*."

"I'm as brave as I have to be," Shore said.

"I suppose you know what this means?" Malone said.

Shore stood up. "I know perfectly," he said. "You have my resignation as captain. You'll have it in writing tomorrow." You'd think the column had been vicious instead of funny, Shore thought. He saw suddenly that someone like Malone could stand humor least of all.

They were shocked at his calmness, at the briefness of the interview, he saw. He advanced slowly on Malone and Markell. They went through the door, sidling. "You ought to resign from school, too, if you had any shame," Markell shouted.

"Go blow your horn, windbag," Shore told him. He turned to Burdish. They looked at each other, then Burdish glanced away and he went silently from the room. In his own inner confusion, in what was close to dismay, Shore could still be sorry for Burdish. He closed and locked his door and sat, now that they had gone, heavily by the window.

He stayed there, motionless, a long time. From the practice field, behind its canvas screens, he could hear the noise of practice, the shouting, thin at this distance, the skirl of a whistle. Someone knocked on his door and when Shore didn't answer, said, "Someone wants you on the phone, Joe."

"Who?"

"Someone named Warren. E. J. Warren."

"Tell him I'm not around."

That would be E. J. Warren, the publisher of the Dispatch, Shore knew, and not a bad guy. Shore wanted no sympathy from anyone. He wondered, then, what it would be like, going to school among people most of whom were hostile.

A car drove slowly along the narrow, graveled drive that circled the quadrangle. It stopped before Shore's entry. He didn't know the car. He watched and saw a girl get out of the car, hesitate, look about and glance up. Even in that light he could see how well dressed she was, the lines of the tailored suit, the hat with the little brim. He had a sudden curiosity about the face, shadowy in the dusk. On an impulse, he put on a jacket and went down the steps of the entry.

The girl heard him open the door and turned. "Could you tell me where Mr. Shore lives?" she asked. "There doesn't seem to be anyone else around I could ask."

"They're all at dinner," Shore said. "What do you want to see him for, anyhow? He's an outcast around here."

Her silence touched him curiously. "You don't mean that really," she said. "So soon and—and—"

"What did you want to see him for?"

"Well, if you feel that way toward him, I—"

"I'm Shore," he said. They were closer to each other now. Her face, very lovely, seemed to float as the darkness of her suit blended with the dusk.

"But how can I know," she said, "after what you've just said?"

"My picture's been in the paper once or twice," he said, then regretted it.

"I've been away," she said. "I did see your—his picture once." She moved slightly to one side to get the last light from the west across his features.

NEITHER of them spoke for a moment. "I guess you are Mr. Shore," she said. "I'm sorry, but you spoke so oddly—"

"Apparently, I've been acting oddly, too," he said.

"I'm Mary Warren," she said. "My father tried to get you this afternoon and couldn't, so he sent me down here to try to see you. He's very sorry about what has happened. If there's some way he can help you avoid any further embarrassment—oh, I suppose it's his fault more than yours."

"All I'm interested in," Shore s how the Express found out ab

"As near as anyone can tell," Warren said, "some one of the spondents here at the universi your copy lying on the sports desk and went to the rival pap his little scoop."

"It doesn't really matter," Sho "What are they dragging you i for, though? I never knew E. J. had a daughter."

"I've been away at school the time. He wanted some sort story about you, to counteract t sible bad publicity. I'm working paper now."

"Possible bad publicity," he re "That's putting it euphemistic right. I'll never get a job as co place."

HER hesitation made him wo was almost as though she proved of something. He said, want anything more written ab Let this thing die. It'll be a wonder and then gone."

"I've been digging in files all a and know a great deal about y said.

"For instance, what?" he said

"The—the obvious things," "That you're an orphan, that gone to prep school and college ing football, that you should America this year."

"It doesn't say anything abo a fool, does it?" he said.

"I suppose you do regret hav ten what you did."

"Only in that it may prevent ting a job as a coach later on."

Again the slight hesitatio aren't there other things a u graduate could work at?"

Shore himself hesitated. "I when one achieves a place of in what is called the world of s apt to blind one to the fact t are other functions in life."

"Well, why did you write umn?"

"I guess in some sort of re the last five years, when every gotten—my education, my clot my food—has come from m football. I suppose I wrote th as an outlet."

"And still you want to co you graduate?"

"A trifle inconsistent, isn't it?

"My father's regretted that lished the column now. Not t annoyed some people so muc it has hurt you. He'd like to thing for you. I suppose thi an article to counteract what pened is the first thing he ca if you can think of other thing he'll try to help you."

WALL-KERLEE

# THE SILENT WAR

BY HENRY A. WALLACE

VICE-PRESIDENT OF THE UNITED STATES

**Under the Constitution the function of Vice-President is legislative, but President Roosevelt has seen fit to put the Vice-President to work. The Economic Defense Board, of which he is chairman, must see that our economic power is used to cripple Hitler. It must keep war materials from reaching the Nazis; it must see that all the American republics get a fair break insofar as available materials will permit. Mr. Wallace asks and gets the eager help of a hemisphere**

ONE day not long ago, a group of American and Brazilian officials met in Rio de Janeiro. They affixed their signatures to an agreement between our country and Brazil.

The ceremony got little public attention, yet it was important. For Brazil agreed to sell us her entire surplus of eleven crucial materials—bauxite, beryl ore, chromite, nickel, industrial diamonds, manganese, mica, quartz crystals, rubber, rutile and zircon. Thus, we got first call on the quantities of all these materials which Brazil does not sell to private industry within the Western Hemisphere.

Such materials are precious beyond the power of the dollar sign to express. They are essentials of war. Without them, we cannot defend ourselves; and without them, Germany cannot win.

With Mexico and Peru we signed similar agreements, covering more than a score of vital materials. Bolivia has already contracted to sell us her entire tungsten output at a price considerably below Japanese offers. She is also selling us most of her tin. We are preferred customers for Chilean and Peruvian copper and negotiations are now under way to guarantee us the entire exportable surplus of all Argentine, Bolivian and Chilean strategic materials.

Our deals for the supplies we need—which the Axis powers are equally anxious to get—have gone far beyond the Western Hemisphere. We have entered into an agreement with Turkey for a large part of her chromite, with Madagascar for graphite and mica. We are getting rubber and tin from the Malay states and the Dutch East Indies, mica from India.

This is economic war—or economic defense, as you choose. We intend to corner the markets on as many strategic and critical materials as we can get. We intend to buy them to speed up our own defense program. We intend to prevent them from being used to feed the war machines of the Axis countries.

This economic war is as important as the spectacular battles in Russia or China or Crete. It is a battle to end the battles, a war to end the war. Each time we whittle down the supplies of raw materials available to Germany, Italy or Japan, we wreck a portion of the Axis military machine.

Economic preparedness today determines military success. Verdicts on the battlefield depend less on men and courage than on machines and skills, metals and chemicals, blast furnaces and intricate tools far behind the military fronts. We are ready now to revise Forrest's famous saying that the essence of victory was "gettin' thar fustest with the mostest men." Now it is getting there first with the most and best machines.

The power-driven machine has been man's greatest hope of economic freedom and relief from starvation and drudgery. But the promise has been twisted by Hitler and his henchmen into a means for the easy and permanent mastery of all peoples whose machines are inferior to theirs. Germany, the strongest industrial nation in Europe, has attacked at will almost all the less industrialized nations around her—Austria, Czechoslovakia, Norway, Denmark, France, Poland, Belgium, Holland—and turned their citizens into cheap slave labor, toiling at the machines of the conquerors.

We did not believe it possible, but a highly industrialized nation, ruled by base men, can not only enslave captive nations but control them in a way that conquered nations have never been controlled before. The formula is simple. Their machines are taken from them, they are forbidden to buy new industrial equipment, information and education are denied them, and the threat of starvation keeps them submissive. The clock can be turned back by a thousand years to early feudalism.

The people of Europe tried with plain heroism to overcome the enormous superiority of machines and materials which the Germans had piled up. It was not enough. It will never again in the world's immediate future be enough by itself.

When Prime Minister Churchill said, "Rarely have so many owed so much to so few," he was paying tribute to the great courage of the airmen who saved England from quick conquest in the summer of 1940. But all the courage in the world could not have saved England without the machines in which Britain's defenders flew.

The planes and ships which defended England, like the planes and ships which have threatened her with invasion, were put together from materials collected from all the earth. The production of armaments today requires a complex blending of millions of tons of iron and steel, coal, oil, copper, rubber, nickel, aluminum, manganese, zinc, tungsten, antimony and scores of indispensable products. Lacking any one of these vital ingredients, the 1941-model fighting machine loses the fine perfection it must have to be efficient.

The Nazis were at the job of collecting strategic and critical materials for many years before the rest of the world realized the awful threat to its freedom. Germany originally had deficiencies in most of the key materials; the collection of adequate supplies for a total war became cardinal Nazi economic policy; and the day the Nazi agents began scouring the earth for strategic raw materials the war had begun. The Nazis bought what they needed at whatever prices they had to pay and built up stock piles against the day when overseas supplies would be cut off by British blockade. Nazi scientists worked day and night to produce substitute materials—synthetic rubber, oil, wool.

When Hitler was stocked up, he struck. He was ready and the democracies were not—because they had already lost the first phase of the economic war.

### Goods Are a Nation's Strength

Much of the materials they needed the Nazis secured from nations with whom they could barter and whose economic lives they could control. But England and the United States together sold them enough iron and copper and scrap metals to carry them through months of warfare. Some of their purchasing has been done through Japanese firms which bought from us 4,350,000 tons of scrap iron and steel in the two and one half years before we embargoed them in October, 1940. Japan's purchases of mercury here in 1940 jumped 240 times over the amounts acquired in 1938, and her purchases of zinc increased 60 times. Now all three materials are on our critical list and their export is under license. We need them badly for our own defense.

To defeat Hitler, we must first outproduce him. Outproducing him means building factories and power plants to run the factories. It means trying to break all the bottlenecks in manufacturing and turning out military goods in quantities that even this industrialized nation never dreamed of. And each of these things means drawing to us—and away from Hitler—all the world's natural resources that we can lay our hands on. They mean, in other words, applying the conspicuous lesson of the present war—that goods are a nation's strength. Our dollars must be converted into goods and more goods with desperate haste.

During the past year our government had made several important moves on the economic front to supplement our aid to Britain with direct pressure against the Axis. We began controlling exports from the United States to keep key materials from the enemies of democracy. We froze dollar assets here of nationals of Axis-dominated countries to prevent them from being used against us. We blacklisted individuals and firms in Latin America with Axis connections to prevent them from using money, materials and information to impede hemisphere friendliness and defense. We moved through our patent control to prevent the publication of inventions vital to defense. Most important, we are buying up strategic materials.

Today virtually everything, from ships and shoes to sealing wax, has a military use. We are lucky, for we have in our country most of the basic supplies we require for a high-speed industrial economy. And we have plenty of food. But when we get into the extraordinary mass production of intricate weapons, we find that there are a number of things we cannot furnish ourselves.

### Ben Franklin Had the Idea

The armor plate of battleships and tanks takes not only steel, but manganese, nickel, chromite, tungsten and vanadium—which we get from Latin America, Canada, Turkey, Africa and China. Airplanes use enormous quantities of aluminum, with the lightest pursuit ships absorbing 2,700 pounds, the heaviest bombers ten times that much, and most of the bauxite from which our aluminum is made we get from South America.

Radios for sending messages from the planes must have piezo-electric quartz—which we can get only from Brazil. Tubes and condensers for the radios, and spark plugs and generators for the planes, must have sheet mica—which we get from India, Brazil and Argentina. For airplane magnetos and the making of smokeless powder, we must have platinum, which we get from Colombia, Canada, South Africa and the Soviet Union. High-speed tools and armor-piercing bullets must have tungsten—which we get from China, Bolivia and Argentina. So it goes. The list is long.

One battleship will use a hundred pounds of the humble sheet mica and it must have the hundred pounds to be an effective fighting unit. The lack of a single truly vital material can force a nation to use inferior weapons, and hence, to fight an inferior fight. Benjamin Franklin's famous old jingle comes to mind:

For the want of a nail the shoe was lost,
For the want of a shoe the horse was lost,
For the want of a horse the rider was lost,
For the want of a rider the battle was lost,
For the want of a battle the kingdom was lost—
And all for want of a horseshoe nail.

Germany is reported to be running short of copper, tungsten, mica, nickel, tin, oil and scores of lesser materials. Dollars spent now to keep these materials from the Nazis will inevitably weaken them. Had England and the United States started earlier to buy up the world supply of essential raw materials, construction of the present horrible German war machine might have been blocked at relatively little cost. Now we are spending many billions merely to catch up.

In our attempt to control all the basic war materials we can, the co-operation

## By Frank Gervasi

**From smug Bermuda to bewildered Siam, war in many lands throughout the world shows many faces to a Collier's correspondent on a remarkable journey**

I'VE just returned from 36,000 miles and eight months around the world. I've returned to Suburbia. I live in that particular expression of Suburbia called Bronxville, in Westchester County, New York. It was a village when I left it eight months ago. It still had its old town hall. They've torn it down and now the place is merely another suburb, quiet, smug, income-tax conscious and worried whether the Community Chest drive will reach its quota this year. When I left it was Bundles for Britain. At the local movie they used to play The Star-Spangled Banner after the shows. They don't do it any more. They don't even play Pomp and Circumstance.

It is a shock to come out of the darkness into the light, to move from privation and death into abundance and life. Eight months is a long time. Those last eight months were longer than all of the seven years I'd spent before in Europe, watching this war being made. They were longer than all the previous months of watching the war being waged or anticipated in England and France, Holland, Portugal, Spain, Italy and then in Hungary and the Balkans and the Near East. In eight months of almost constant travel your perspective changes. Things that weren't in focus before sharpen. Things you merely suspected become realities. You become aware, in 36,000 miles of journey by land and sea and air, of forces you didn't dream existed. You learn, in that time, that this war has seven faces and as many moods.

In Bermuda the war had a smug visage. There was abundance, although you wouldn't believe it to hear Bermudians complain of the difficulty of obtaining gin and the better brandies. But there was plenty of everything. Only the Bermudians' tolerance of Americans was rationed.

Bermuda is a crown colony, a simpler form of British imperial life. Its emotions are uncomplex. American tourists no longer come in tens of thousands with money to unfold. And Bermudians, logically, complain. They resent the "invasion"—the quotes are theirs—of American engineers and surveyors who came to build a naval base for the U. S. A. They miss tourist money.

Bermudian houses grow with scrubbed white and coral countenances out of the green land. They grow with the trees and shrubs. Bermudians are loath to see steam shovels gnaw the earth where their homes had stood. They express their resentment over teacups and cocktail glasses. They envision hamburger and hot-dog stands and billboards. They are certain their horse carriages will be replaced by "smelly motorcars." They see their bit of England, their quiet respectability and, therefore, their major commodity, threatened by the invasion of the Continentals. You feel sorry for them.

You learned that they'd arrange matters so that all the materials Uncle Sam would use in the construction of the base would have to be either local or imported at a high duty and handled by local brokers at fat commissions. Bermudians told you that "We don't want you in the war, old boy, just make us the airplanes and tanks and guns." You didn't like being reminded Uncle Sam was just an old Uncle Shylock and then, in a second breath, being vehemently told that America must enter the war. But that's the way it is with people. They're slightly mixed up about this war.

Six or seven "tools of war" wallowed like winged whales on the incredibly blue waters off Darrell's Island. They were the big Consolidated PBY flying boats England needed to patrol her coasts and the North Atlantic. I was to have departed in one a day or two after my arrival in Hamilton by Clipper from Baltimore. But I didn't get off on the appointed day. I waited three weeks for the big bomber to be groomed and for the crew to be trained. The long delay was due to two deficiencies in the British approach to war. One was lack of organization and the other was low-grade mechanical aptitude. I learned in Bermuda what Labor Minister Ernest Bevin meant when he told the House of Commons that England lacks a double-purpose army and that the German army has a higher mechanical ability than Britain's. Months later, on the road to Alexandria from Cairo, Corporal Smythe gave me a practical demonstration, too, of what Bevin meant. And Captain James Roosevelt in his capacity of military observer received an object lesson in the same highly important subject in the Iraq desert. But about those bombers, in Bermuda. . . .

### They Call It Tradition

The Canadian Pacific Railroad Company and the British Overseas Airways Corporation contracted to ferry the PBY bombers from Bermuda to England. They hired crack American fliers like Clyde Pangborn and expert navigators like Bernt Balchen to handle the job, at good salaries and large expense accounts. But Pangborn and Balchen didn't fly a single one of those boats. The Royal Air Force stepped in and said they'd handle this. The Royal Canadian Air Force moved in, too. The snarl of orders and counterorders was so bad the Air Ministry in London was obliged to intervene. If it hadn't the planes would have remained there until the Gulf Stream changed its course. But this was only part of the story. We call it red tape. The British call it tradition.

After we'd waited a week, a Canadian pilot friend tipped me off that we were getting away the following day. But the next morning he said it was all off. A generator had burned out. Somebody had forgotten to oil the bearing would take at least two weeks for one to come out from the Consoli factory in Los Angeles. There wa maintenance shop in Bermuda. were no spare parts. Delays fol one upon the other. Once it was be the radio receiver was asnarl. N knew how to repair it. Several were damaged by inexperienced who practiced crash landings wi boat, as though knowing how to land on the North Atlantic in would have done anyone any gooc it was written in an instruction that crash landings must be pra —and Britain didn't get the bomb

Finally, one rain-lashed morn crawled, cold and slightly scare the belly of one of the PBY's. Ju fore the take-off somebody sho paper under my nose saying I wo write anything about the flight t land. I knew more sensible cen England would revoke it and I write about the flight, so I sign paper. I wasn't so sure I would se land anyway.

We bounced heavily on the bla ter of Hamilton Bay. We had 4 lons of spare gas inboard, in long tanks, trussed on two-by-fours strained into the air with all t luctance of a teakwood log. T three hours and ten minutes la

MAP BY CARL ROSE

were in England. We landed "somewhere in Wales" and it was snowing and a red-faced captain of the Scots Guards and a pleasant little officer of the R.A.F. Intelligence filled us with hot tea, brandy and then lamb stew. We'd made it, and Lloyd's of London had bet Collier's heavy odds, as insurance rates go, that I wouldn't.

To be in England again was to be back in reality. The Welsh are sturdy people, close to the earth. They are thick-bodied, with large workers' hands and large, honest faces and sturdy feet. They were good to see after the snobbish colonials of Bermuda. You could see the Welsh were working harder in their mines and factories and in their fields than ever before. You could see their quiet happiness, feel their joy in work. They were grim, yes, and quietly determined, but they smiled readily enough and they joked about Woodbines (cigarettes) being hard to get. There was a shortage of tobacco. They missed their chocolate. Newsstands had signs: "No Chocolate. No Candy."

As the train to London moved through Wales you looked out the window at every station and you couldn't tell where you were. Everywhere in England it was the same. The English have adopted a national anonymity to befuddle the possible invader. They removed the signs from railroad stations or blacked them out. They've taken down road signs and all traffic indicators that might identify towns, villages and crossroads. You would need to know England well indeed to find your way about. You would need to have lived in England nearly all your life to distinguish Tunbridge Wells from a hundred other Tunbridge Wellses. Parachutists would have a tough time of it in England. Tailors', apothecaries', fishmongers' and greengrocers' shops have removed signs bearing their towns' names. Village inns have changed their identities or become anonymities. It will be useless for the Germans to look for the Golden Swan. They wouldn't know the old pub.

### England Discovers Itself

I hadn't been in England since the winter of 1939. That was when they called this the Phony War and the dispatches of correspondents reflected a profound disappointment that nobody was being killed. It was a strange England then. A social revolution had begun when they siphoned the school children out of the slums and into the provinces. Mayfair learned then how miserably Lambeth lived. You heard Englishmen promise themselves that the misery many of them were seeing for the first time in their lives would be remedied. We'll build a new England, they said. Let's hope the war lasts long enough, they said, and we'll rebuild our social system and banish the dole and want and hunger. And boys from the slums were returning to the land and liking it.

But there was also disunity then in England. There was a tendency to discuss the peace rather than a will to work to win the war. They said they would muddle through and they argued about what Britain's war aims should be. All this had changed by the winter of 1941.

Lambeth and Mayfair were in the ARP together. Charlie Brickett and Lord Portdowner belonged to the same fire brigade. They dragged each other out of the debris the bombs left of their homes and they frequently messed and slept together in the community feeding centers. Each discovered in the other qualities they hadn't suspected. Old Etonians and old Harrovians learned that wars aren't won only on the playing fields by wearers of the old school tie. They discovered that lathes and drill presses and assembly lines have considerable to do with winning wars. I heard many of the landed rich say they knew the day of the shooting box and the fox hunt was gone. And there was

# SUCH AS I HAVE

## By Hugh MacNair Kahler

ILLUSTRATED BY C. C. BEALL

**For a moment, as her eyes looked into mine, she had been afraid. Then the trapped, desperate look was gone and she was smiling**

I WAS sorry that I'd let a silly, sentimental impulse prod me into stopping over between trains and looking up Jim and Milly Tucker. Old friends unseen since youth, I told myself, were better kept as unamended memories.

Not that Jim Tucker had changed so much—he'd only middle-aged into the pudgy, stoop-shouldered, complacent insignificance I might have expected. Even Milly wasn't very different—outwardly.

She'd kept her clear, vivid beauty; she was still slender and straightly, confidently erect, still—my old secret word for her was in my mind again—still queenly. But for a moment, as her eyes looked into mine and recognized me, she had been afraid.

Only for a moment. Then the trapped, desperate look was gone and she was smiling, calling my name in the cool, clear, quiet voice I hadn't forgotten, giving me both her hands. But I knew that I would never stop remembering that I had seen her eyes when there had been fear in them.

Of course I could guess why it had been there. She knew that I must know why she'd married Jim, and she was afraid that I might say something would let him find out why.

It made me angry, sick. I'd thought of her queen, brought low like other queens before her it had never crossed my mind that she could learned to set value on cheap, vulgar things her, on this smug little house, this smug, sm little man—so much value that she could be f ened at the thought of losing them.

It was like Jim Tucker to drag Larry Win name out into spoken sound, so that Milly couldn't go on pretending to each other that it in our minds. He hadn't quit pounding my sh before he was asking, eagerly, about good old

I said carelessly that I never saw Larry any and tried to turn the talk, but Jim wouldn't le

"No, I suppose not," he said. "Climbed to for all of us, Larry has. Often wonder if he's go being down on me. Can't blame him if he h They say everything's fair in love and war, but see that Larry had a right to be sore at me, st his girl the minute his back was turned."

Somehow his smirk didn't seem so silly, no was looking at Milly and he sucked in a slow b that squared the stoop out of his shoulders. H a man seeing a miracle, marveling and yet u persuaded of its realness.

I knew that his faded, nearsighted eyes watching Jim Tucker play Lochinvar. He was s himself ride up to the church door, sweep Larry ship's love up to his saddlebow and gallop of midnight Gretna Green.

"Never blamed Larry for not answering the I wrote him," he said. "I could guess how hard h taking it."

I was remembering just how Larry had tal I was seeing him wave Jim's letter, listening t laugh. He'd expected me to laugh with him, t gratulate him because Milly was off his hand there was no danger, any more, of her trying to trouble for him when his engagement to his daughter was announced. I was remembering just before I hit him in the mouth, he'd given sly, sniggering hint that Milly might have had a urgent reason than wounded pride for being in a hurry to marry somebody, anybody.

AND I was thinking, too, about lies, and findi that there could be something splendid and ble in them. In lies like this one of Milly's, chea cowardly and shabby in its first telling, mayb not now, told and retold, hour after wary, gu hour, year after year, in every speech and eve lence, in things done and left undone, never for kept momently in mind against the nag of pai drug of tiredness, the heat of sudden, blinding With all my heart I hated Jim Tucker, hated hi cause all the shining wonder of that lie had spent on him, spent to keep that smirk on hi face, to feed his vanity, to let his pygmy soul up and strut!

"Yes," I said. "He took it hard."

It was easier to look at Jim's delighted gri to see Milly's eyes trying to thank me. Than I got away from them, somehow, as quickly could, but I didn't get away from Jim. I had him drive me to the station in his car, a car that have been created in his image, as small and and smugly commonplace as he was. He through empty streets at twenty miles an hou an air of high, desperate adventure, too inte talk. I was glad of that. Having to listen t would make it worse for me, I knew, when thought of Milly.

I got out quickly when we stopped in front new, ugly station, but as I shook hands som in Jim's face kept me from hurrying away. He smirking now.

"Guess you know why I talked that way at about Larry." His voice checked on the name there were grit in his throat. "Wanted to mak you wouldn't accident'ly say something that let Milly catch on that I knew about—about—

His face had changed again. Somewhere el long ago, I had seen that same look—wistful, ened.

"I don't know if I could stand it if Milly was out that Larry answered that letter I wrote hi told me—told me—" he stopped. "When there' one thing you can give a woman like Milly- one thing that's good enough to give her, I me —it kind of scares you to think of not bein to—to keep on giving it to her."

"I know," I said. And I did know. I could understand, suddenly, how Milly might have afraid, not of losing, but of not having gifts, v gifts, to give.

ENE SMITH

Two of Mainbocher's mannequins take time out to show you how well his now famous sweater costumes look at a party. Yellow cashmere cardigan and black pull-over to your left, beaded with gold and pearls and worn with a long black wool skirt. Beige cashmere cardigan to your right, lined with brown Persian lamb and worn with brown day-length wool dress

Another Mainbocher mannequin steps out of a fitting room wearing a red wool coat lined with black Persian lamb. As practical for your morning walk with Fido as it is beautiful for a formal evening wrap

**ainbocher, who designs ths for the Duchess of ndsor and who recently ved his Paris workrooms to w York, shows you how to will dressed on any budget**

WHEN Wallis Simpson became the Duchess of Windsor she wore a wedding dress designed for her Mainbocher of Paris. It was a pretty dress, fitted smooth in the middle, bell and full above, very flattering to the duchess' fine figure. And remarkably short time there was no in this wide land where Wallis was not a featured color. Copies of duchess' gown could be had in a full range of sizes, and at all prices from an down to a very brief song. So universally becoming to the feminine figure dress cut and fitted in this fashion variations of it are still to be found your wardrobe today. And that, lady, is how many of our best fashions begin—designed by a skillful dress worn by a woman in the spotlight, copied and adapted into a general fashion.

Paris, the most prolific source of such fashion instigation, is now lost—for the duration—to fashion. But Mainbocher and the duchess are not. Mainbocher, who was born Main Bocher in Chicago, and who, after a wandering career as artist, musician, soldier, fashion editor, settled down to be one of the top-ranking Paris dressmakers, a year ago moved shop to New York, where he is busily designing the same kind of ladylike, beautifully made clothes he did in Paris. And the duchess, on her trip to the United States and Canada, packed along a dozen of his creations. Since they both prefer simple, wearable clothes that are the kind best suited also to you and to me, that is a very good thing. They can work things out between them, and smart manufacturers will then see that we benefit immediately from the results.

Take, for example, the simple daytime dress, with enough zip to it to double for bridge and informal evening parties . . . the kind of dress you rate a necessity. The duchess has one in black wool jersey, with front fullness

*The Story Thus Far:*

LONELY and unhappy, following the death of his only son (killed while flying with the Royal Air Force), John Sidney Howard, a retired English barrister, leaves England and goes to placid little Cidoton, a French village where, in days gone by, he had spent many pleasant vacations.

Among the guests at his hotel are Mrs. Cavanagh, an Englishwoman, and her two small children: Ronald and Sheila. Mrs. Cavanagh's husband lives in Geneva, where he is employed by the League of Nations. He feels that, come what may, he must not desert his post. . . .

Howard decides to return to England. Cavanagh—alarmed by the approach of the Germans, who are driving into France—asks him if he will take the children to England; and Howard promises to take them. . . .

The journey toward the Channel proves to be a difficult one. In Dijon, little Sheila becomes ill. A kindly hotel maid assists Howard in caring for the child. Then, as Howard prepares to move on, the maid implores him to take her brother's little daughter, "*la petite* Rose"—whom her brother had sent to her from London—back to England. Howard is nearly seventy; he is far from strong, physically; he knows what the care of another child will entail. Nevertheless, when he leaves Dijon, little Rose is a member of the party.

The army takes over the trains. At Joigny, the old man piles his charges into a bus bound for Montargis. The bus starts down a crowded road. Fifteen miles from Montargis, German planes, swooping down on the road, spray machine-gun bullets and drop bombs—and the bus is put out of commission.

There being no vehicles available, Howard decides that he and the children must walk to Montargis. They start, under a blazing sun. Walking slowly, painfully, they presently reach a wrecked car. In the car are two dead persons—a man and a woman. Near the car is a small boy—five or six years of age.

Howard speaks to the boy, asks him what his name is. The boy—gray-faced, terrified—does not answer. Howard goes through the dead man's pockets; he finds the man's identity card. According to the card, the man is Jean Duchot, of Lille. Howard, having read the card, stands there in perplexity. The boy, he realizes, is utterly helpless. After a time, the old man takes the little fellow's hand and, with the other children beside him, moves off down the road.

"Now, at last, Caroline Crale has the opportunity to pay the debt she owes"

# Murder in Retrospect

**By Agatha Christie**

ILLUSTRATED BY MARIO COOPER

*...tory Thus Far:*

...EDITH BLAKE, an amateur chemist, ...ves tea to a small group of guests at his ...country house. Hours later, after ev... has gone, he notes that ... bottle of ...(a poison) has disappeared.

...ilith Blake's guests had been: his ... Philip; Amyas Crale and his wife; ...eer, a house guest of the Crales; and ...el Warren, Mrs. Crale's half sister. Any ...nem could have stolen the poison. The ...g morning, Crale dies, shortly after ... some beer given to him by Caroline, ...; and subsequent analysis proves that ... *had contained coniine!* Since the ... is strong against Caroline Crale—she ...ed, charged with the crime. A year ...fter having been convicted and sen...to penal servitude for life—she sud...es.

...n years after the trial, "Carla" Crale ...rale's daughter, who, at the time of the ... had been very young) employs Her... Prot, noted Belgian criminal investiga... is in London, to dig up what he can ...ing to the case and, if possible, learn ... She has, it appears, read a letter ad...to her by her mother, in which the con...oman asserts her innocence.

...t begins his investigation at once. He soon learns that, at the time of the murder, Amyas Crale had been painting Elsa Greer's portrait; and that (known to his wife) he had been infatuated with the girl. He learns, furthermore, that, with the exception of Meredith Blake and one or two others, everyone feels sure that the verdict of guilty had been a just one. All of the principals in the celebrated affair are co-operative; and a few—the Blake brothers, Elsa Greer and others—go so far as to set down in writing every detail they can recall of the case.

Especially damning is the testimony of Cecilia Williams, who had been Angela Warren's governess at the time Crale died. Miss Williams, an old maid, is positive that, after the murder, she had seen Mrs. Crale polish a beer bottle with her handkerchief; then press her husband's hand to the bottle!

Nevertheless, the little Belgian reserves judgment. Anxious to clear up some dubious points, he invites a number of important witnesses to meet him at Meredith Blake's home. Everyone accepts the invitation; everyone arrives—everyone except Elsa Greer (who has become Lady Dittisham).

Then, in the midst of some desultory talk, the butler appears—and announces her ladyship.

## Conclusion

ELSA DITTISHAM came in with that faint, bored insolence that was a characteristic of hers. She gave Meredith a slight smile, stared coldly at Angela and Philip, and went over to a chair by the window a little apart from the others. She loosened the rich pale furs round her neck and let them fall back. She looked for a minute or two about the room, at Carla, and the girl stared back, thoughtfully appraising the woman who had wrought the havoc in her parents' lives. There was no animosity in her young, earnest face, only curiosity.

Elsa said, "I am sorry if I am late, M. Poirot."

"It was very good of you to come, madame."

Cecilia Williams snorted ever so slightly. Elsa met the animosity in her eyes with a complete lack of interest. She said: "I wouldn't have known *you*, Angela. How long is it? Sixteen years?"

Hercule Poirot seized his opportunity: "Yes, it is sixteen years since the events of which we are to speak, but let me first tell you why we are here." And in a few simple words he outlined Carla's appeal to him and his acceptance of the task.

He went on quickly, ignoring the gathering storm visible on Philip's face and the shocked distaste on Meredith's.

"I accepted that commission. I set to work to find out—the truth."

Carla Lemarchant, in the big grandfather chair, heard Poirot's words dimly, from a distance. With her hand shielding her eyes she studied five faces surreptitiously. Could she see any of these people committing murder?

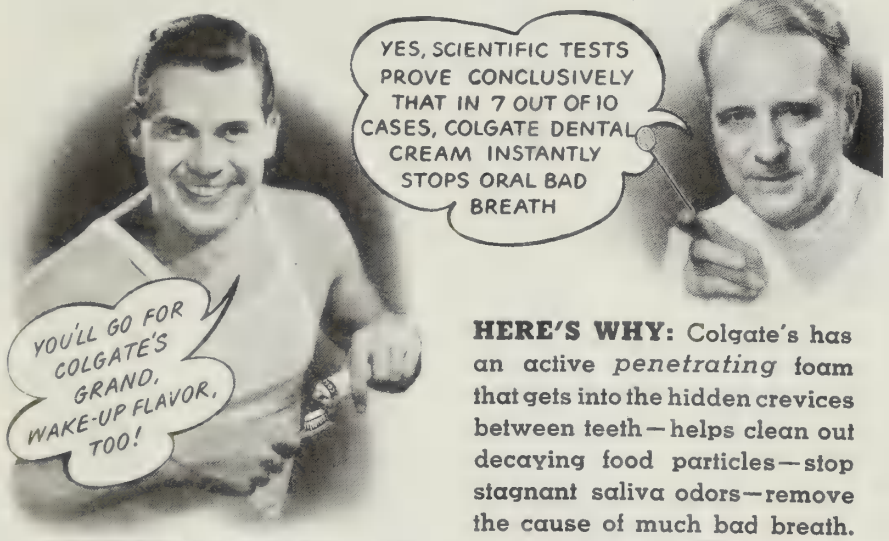
Could she—if she tried hard—visualize one of them killing someone? Yes, perhaps; but it wouldn't be the right kind of murder. She could picture Philip Blake, in an outburst of fury, strangling some woman—yes, she *could* picture that. . . . And she could picture Meredith Blake threatening a burglar with a revolver—and letting it off by accident. . . . And she could picture Angela Warren, also firing a revolver, but not by accident. With no personal feeling in the matter—the safety of the expedition depended on it! And Elsa, in some fantastic castle, saying from her couch of Oriental silks, "Throw the wretch over the battlements!"

All wild fancies—and not even in the wildest flight of fancy could she imagine little Miss Williams killing anybody at all!

Hercule Poirot was talking:

"That was my task—to put myself in reverse gear, as it were, and go back through the years and discover what really happened."

Philip Blake said, "We all know what happened. To pretend anything else is a swindle—that's what it is, a barefaced swindle. You're getting money out of this girl on false pretenses."



Poirot did not allow himself to be angered. He said:

# Do You Wonder Who's Kissing Her Now?

**When you find that you're forgotten by the girl you can't forget, here's a tip . . . Use Colgate Dental Cream—the toothpaste that cleans your breath while it cleans your teeth!**

**HERE'S WHY:** Colgate's has an active *penetrating* foam that gets into the hidden crevices between teeth—helps clean out decaying food particles—stop stagnant saliva odors—remove the cause of much bad breath.

**BESIDES,** Colgate's has a soft, safe polishing agent that cleans enamel thoroughly, yet gently . . . makes teeth naturally bright, sparkling! No wonder people everywhere are quitting liquids, powders and other pastes for Colgate Dental Cream!

## Captain of the Team

Continued from page 12

Shore started to say that there was nothing they could do for him. Then, looking at her in the dim light, he hesitated. "I was thinking of going some place out in the country for dinner," he said. "I'd like you to come along, if you think you can classify that under something your father can do for me."

"I can't classify it that way," she said, "but I'll go along."

"You can leave your car here," he said. "Mine's over by the gym." He took two steps in that direction and stopped. "I guess it isn't, at that," he said. He could feel her glance of curiosity.

"No, I'm not crazy," he said. "I don't really own the car. It's one of the—what do they call it?—perquisites of my office. I'm allowed to use it so long as I'm a good boy and score touchdowns. Now that I'm in disgrace, I don't imagine they'll let me play with it any more."

Again her own hesitation before she spoke: "We can use mine. If you don't mind?"

"I do mind," he said, "but now that I've asked you to dinner there's nothing else to do but use yours."

THE rapid motion of the car, the sound of the wind blowing against the corners of the convertible, made him quiet. Or he attributed his quietness to them, as though unwilling to recognize its real source, the girl next to him.

They stopped at a fashionable little place in a village about fifteen miles away. There were always a few undergraduates there with their dates for dinner, but Shore had forgotten this until he stood inside the place with Mary Warren. One freshman with heavy-rimmed eyeglasses stared at Shore, speechless, his mouth open.

"I suppose this is how the angels felt after they had fallen," he said. He tried to grin but only smirked. "If you can stand it, I can, though."

"It doesn't bother me," she said.

When they were seated around a corner, out of sight of most of the eyes, Shore looked at her. He had not seen her in a clear light and now, looking at her, he smiled.

"I didn't know you were so good to look at," he said.

"And I've been thinking all the while you had been blinded by my fatal beauty, even in the dusk!"

He was able to laugh. "It's nice to have a sense of humor," he said. "If I had one, it would save me now. Do you think it's possible to acquire one?"

She didn't look at him. "As much as you need," she said slowly.

"I didn't know E. J. Warren had a daughter," Shore said again.

"I've been away," she said. "I finished at Oxford the summer before the war started. Then I stayed there doing volunteer work until a few weeks ago. My father hasn't been too well and I had to come home."

"I sometimes wonder why he let me run that column in his paper. Of course, there was nothing vicious in it, but it was pretty critical of things connected with football."

She looked at him a moment before answering. "Don't you really know?" she said levelly.

He shook his head.

"I had a brother who was killed playing prep-school football six years ago," she said.

Shore felt embarrassed for some reason obscure to him. "I'm sorry," he said.

They finished their dinner without talking a great deal. Leaving the place, he felt as though he had known her a long time. It wasn't until they were outside that he realized, with a sa which was curiously grim, th toward the door with her, he ha noticed the other undergradu

She wanted to drive hin campus, but he made her go to As he said goodby to her, a si between them. Why it did, r them was sure. The reference made to her dead brother didn account for it, Shore knew. he was grateful to her; only la he know why. When he kissed she neither resisted nor respo dropped his arms from her shoulders. "You're a very nic he said, and turned away.

Walking back to the campu quietly happy.

Going to his classes the next d undisturbed by the glances, th that greeted him wherever he w campus daily made the mos had happened. There were ev views with some of the promin bers of sororities, who said una they were never going to da again. It was all just a touc bother him, he thought.

He saw Mary Warren ev that week. She was always ple he was in love with her before realized it, but he did not kiss He knew he was grateful to h he knew that he loved her, be had given him a detachmen never had before, so that in cla campus, at the eating places only vaguely aware of the qu tile tide of people around him.

It wasn't until the Saturda week that he was bothered. better than to ask Mary to game with him. He had stop ing his sweater with the vars gram on it; and now he bough to enter the stadium. He was the gate. The student ticket embarrassed but he had two s licemen behind him. He had ticket taker said, that Shore be admitted to the stadium.

FOR the first time since the the story broke, Shore felt wilderment was strong in him he had a sense of being hunte staring at him, some angry, sudden sympathy, made him t choking him, and stride away.

He went to his room and the radio. The team had b feated in its first five games were expected to win this s without too much trouble, three touchdowns.

But at the half neither seored. The announcer ment creetly once or twice that the seemed to miss its captain an Shore. Shore wondered if They ought to be angry enou to ride over anything. Some of him knew, though, on wha ing the synchronization of a ball team depended, and C sophomore fullback who had place, was obviously trying would be just that his handl ball, his movements in the in tack Burdish had designed, timed right.

Tension increased in Shore ond half went along, still score. All during the fourth paced the floor. He thought h errors in the way Boudreau, terback, called his plays. Wit ning attack working well, Bou begun to pass. It didn't m Then suddenly, it did make

"On account of your brother?"

"Partly that," she said. "I'd like you to be able to outgrow a mere game."

"I would have in time," he said. "The column was a sign of it."

"But now, too, you must," she said. Her head came up a little more and his heart lifted suddenly as he saw that for the first time her lips were willing.

THE latter part of the next week there were first rumors that the team didn't look so well in practice. Then more and stranger rumors that Shore was going to be permitted to come back and play.

The third day, a Friday, after the rumors first appeared, Malone issued a statement saying that even if Shore wanted to play, he, Malone, wouldn't let him.

The team lost that Saturday and Shore tried to tell himself that it didn't matter. He had seen E. J. Warren at his home and Warren had offered him a job on the paper, whenever he cared to take it. He took long drives with Mary in the afternoons of the week following. He liked the autumn colors on the mountains, but he didn't like them so much, he knew, that he must drive through them every day. He finally knew that he was just trying to be away from school during the hours of football practice.

The team tied again the next Saturday and Shore, going through the motions of indifference, still could think how keenly those on the team must feel it. Because this was supposed to have been one of the school's great teams, bound for the Rose Bowl.

There was only one game left, the traditional game with State. On the Sunday afternoon after the second tie game, Shore was in his room alone when there was a knock on the door. When he opened it he was surprised to find Burdish there. At first he hardly recognized

"Once more around the world, Captain"

## How's your "Pep Appeal"? —by Bundy

**June:** Hello, serious! How's the book? Got a new thriller?
**Nancy:** Oh, it's nothing much. Just a little thing I sent for.

**June:** Wow! "How to be a glamour girl!" Well, of all the . . .
**Nancy:** Stop it! You're a spite cat, June. A girl's *got* to have a *little* something these days.

**June:** I'll say she has! And you're going to start getting it! Glamour, my grandpa! The way you've been moping around and picking at your food! I'll bet you're not even on speaking terms with vitamins. What you need is more "pep appeal"!

**June:** And here's where we make a start toward getting more vitamins. You've got to have them all, and right in this delicious cereal—called KELLOGG'S PEP—are extra-rich sources of two of the most important ones—vitamins $B_1$ and D.
**Nancy:** Hey! Stop the sales talk! This is the most gorgeous cereal I ever tasted. And if getting the other vitamins can be as much fun as this, hold everything! I'm going to have PEP every morning!

## Vitamins for pep! *Kellogg's Pep* for vitamins!

*Pep contains per serving: 4/5 to 1/5 the minimum daily need of vitamin $B_1$, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.*

LONGINES
the most honored watch in Aviation

IGOR SIKORSKY, one of our foremost flyers and a gifted original airplane designer, has made many contributions to the science of aeronautics. His recent world's record in sustained flight, made in the Helicopter he designed, may open the way to an even greater expansion in the airplane industry. Mr. Sikorsky's new record was officially timed by Longines Watches, official timepiece for the National Aeronautic Association.

Longines
THE WORLD'S MOST HONORED WATCH

Aviation today owes much to those pioneers who, with daring ocean flights, focused the attention of the world on the ultimate possibilities of the airplane. And practically all of them—Byrd, Chamberlain, Post, Earhardt, Pangborn, Balchen, Mattern, Hughes and others—used Longines Watches for navigation. Following the trail they blazed, Pan American, Royal Dutch, and American Export Airlines laid down their far-flung ocean routes, and again Longines Watches served their navigators.

The Longines aviation watches used then and now are the products of Longines research and development. The skill, experience and workmanship necessary for the construction of complicated aviation watches of extreme accuracy have contributed to the betterment of all Longines Watches.

Longines jewelers now show the 75th Anniversary Longines Watches from $44*, also Wittnauer Watches at $27.50* upward, products of—

him, for Burdish was bundled up in a furry topcoat that went round him almost twice like a blanket and the high collar was pulled up around his face.

He had never disliked Burdish and now Shore's impulse was to laugh. "Who you hiding from, Buck?" he said.

"Oh, it's not funny," Burdish said. He came into the room and Shore closed the door behind him. He took off his coat without looking at Shore. Still with his eyes some other place in the room, the coach sat down.

"You know, Buck," Shore said, to put him at his ease, and also because it was true, "I'm sorry if what I wrote in that damn' column hurt you, because I've never had anything against you."

"You didn't hurt me," Burdish said, "and you didn't hurt the team. If anything, you made them better players. Why, sometimes you were funny enough to make me laugh in spite of myself."

They both refrained from mentioning Malone's name. "I guess you know why I'm here," Burdish said.

Shore looked at him and tried to think of something noncommittal to say. "I want you to play in this last game," Burdish said.

A curious thrill leaped in Shore, as though he had glimpsed some strange, wild glory. It died and he was aware of his mind growing devious. "You're going to go against Malone?" he said.

"I may lose my job anyhow," Burdish said, "after what's happened to what should have been an unbeaten team."

"Do you think the other players want me to? We haven't spoken on the campus."

"They're afraid of Malone," Burdish said. "But we haven't elected another captain."

Shore said nothing.

"I'm going to say something," Burdish went on, "and if I hurt you it will be unintentional. You don't want to play in that game." He paused. "Football coaches are supposed to be stupid in spite of the fact that they design each year a new pattern out of different men to play the most intricate game in the world. . . . But I can put two and two together, and I've seen you with old man Warren's daughter."

"So what?" Shore said, but quietly.

"So that I know about her brother and I know how smart she is, and the honors she took at Oxford and the way she doesn't like violence, specifically football."

"You know even a little more than I do," Shore said, still quiet.

"I'm not trying to talk against her and I'm not denying what in the classroom they'd call the validity of her position. All I'd like to say is that there is a time in life for violence, and a time that isn't for it. A time to fish and a time to dry the nets."

HE PAUSED again, closely watching Shore's face, which had begun to work slightly. "This is the last time for you," he went on. "You're probably through with football after this. I don't think you're going to coach or play pro, although you could do either. These others on the team, most of them coming back next year, are pretty bewildered. If they could pull themselves together for this last game it would mean a lot. There's only one thing that can do that for them."

He had a lot more to say, but he never had to say it. Shore had risen and was pacing the room, running his fingers through his hair.

"Oh, all right," he said, "all right. I'm probably in lousy shape, but I'll play." He turned suddenly on the coach. "But what about Malone? Supposing he turns on the heat?"

"Malone leaves tomorrow morning on a three-day speaking tour downstate. He won't be back until Thursday morning. By that time we'll be over any contact work we'll have before the game. And I don't know but that public opinion can be turned against him. We'll have secret practice the days you're out, barring the newspapermen and threatening with dismissal any manager or player who mentions that you're going to play."

"And Markell, that windbag?"

"That's what gave me the idea," Burdish said. "Markell is confined to his home with mumps. He can't talk, which with him is like not being able to eat."

Shore smiled. "If I could start now," he said, "it wouldn't be so bad."

"Listen," Burdish said, his own excitement showing for the first time, "I'll have the rest of the backfield and a center over in the gym in an hour. You can run signals and no one will be allowed in."

On the way over to the gym an hour later, Shore stopped to call Mary Warren. She wasn't home.

The next morning he had a note from her. It said simply that she thought they had been seeing perhaps too much of each other and so she was going away for a week to think some things over. She would be back Saturday and pick him up at a certain corner early in the evening.

That afternoon, behind the locked and guarded doors of the practice field, and while the resting varsity looked on, Shore, playing with the scrub, ran for three touchdowns against the second team.

THE tension that had developed by the time Shore stood dressing in the locker room Saturday was all but unbearable. The story hadn't broken until the previous day, and the very suddenness of it had put it on the front pages of some papers, in eight-column streamer heads on the sports pages of others.

He had not heard from Mary all week and the irritation resulting from this had put an edge on his physical condition that was razor sharp. He had written a note the previous night and it would be waiting for her when she got home today. He told her why he was going to play football again, or why he thought he was going to play it, and he told her that he loved her a great deal but that if she didn't want to meet him that night as she had planned, he w stand, although he would regret it.

And now they were starti after Burdish had talked rough hand pulled Shore as der the noise of cleats on Klitowski, the tackle, said, ' what you wrote about m able to throw a reverse high you lug, but I want you to going to block like hell for

Shore nodded, his han hard on Klitowski's arm. A cold sunlight and sound. . .

It was the first time i State's players were pick They were big, sullen men seys, and they mobbed Shor play and when they got u and elbows, one of them c rat and someone else said h low highbrow, and then Sh way it was going to be that

By one of those curio transpositions of opinion times seem to afflict me especially when working a team, it was as though Sh the men in the red jerseys his own men by what he ha was simply that whereas h had forgiven him, oth throughout the country ha was little logic to it, but

**BUTCH** By Larr Reynol

**"There ain't nothin' else to do nights. The town ain't got adequate recreational facilities"**

There is the right of a small child to its chance for health and love and laughter, to a good start toward who-knows-what fine and useful life in years to come.

Simple things, aren't they, these things that spell America and add up to freedom!

So simple, so wholesome, it seems daft that somewhere bombs scream down to blast them, tanks lunge to crush them, bullets fly to drive from the minds of men the idea that these *are* their rights, inalienable.

But the bombs do fall, the tanks do roll, the bullets do fly – and in such a world our only shield seems to be more bombs of our own with bombers to carry them, more tanks and the cannon to arm them, more bullets and faster guns to fire them.

So it is that from Goodyear factories meant for building things to enlarge life and make it better, now must flow in a swelling tide the things our country needs if we are to hold what we have.

Skills and facilities developed that a peaceful world might have better tires, floor coverings, soles and heels, transmission belts and a thousand like useful things, now focus on the making of barrage balloons, bomber wings and tails, bullet-puncture-sealing inner tubes and fuel tanks, gas masks, rubber tank track treads and a host of other Goodyear-made defense products.

This is no choice of ours – like yourself, we would far rather spend our days making this a land where life can be richer, liberty enjoyed, where the pursuit of happiness can go steadily on.

But when the decision lies between helping our government prepare for impregnable defense of such things, or running the risk of having them swept away, there is no option and we feel as we know you do.

That is why, for the time being, some Goodyear dealer may not have in stock the particular size and kind of Goodyear tire you want – simply because, that which we in America have, we intend to do our part to hold.

Compared with holding it, what else matters?

All-Weather—T. M. The Goodyear Tire & Rubber Company

**NOT EXACTLY A SHORTAGE**

*should have to wait a so to get the tire you it is due not so much bber "shortage" as to a d "longage"—plus the ty of building up a na- rubber-stock pile. In the months this year the in-dustry has produced 4,000,000 more auto tires for renewal purposes alone, than the past ten years' average, for the same period, and our sales of the world-famed "G-3" All-Weather have for months been rising to new highs.*

Birds Eye Turkey—Now

jersey hit him before he touched the ground. It was like being hit in the ribs with the edge of a board and he gasped, lost consciousness briefly, and came to a few seconds later, rolling free but with the ball gone.

State had the ball and Shore's own team was confused at the sudden change in fortune. The State quarterback called a pass on the first play and it went for a touchdown. They kicked the point after touchdown.

In the huddle now Shore could sense the sullenness of the others. They had forgiven him, and now he had failed them.

It was late in the third quarter when they took the ball on their own twenty-yard line and began a weary, bitter march up the field. It ended with Shore, on a fourth down with one to go, diving over State's goal line early in the fourth quarter, and lying there, half conscious.

Boudreau called on him to kick the point after touchdown and Shore was afraid to say he was weak and almost out on his feet. It might do something to the spirit of the others. The ball wabbled like a wounded duck and flew wide.

Walking back for the kickoff, he gained some strength. The moment found him clearheaded. He could wonder now why he had risked Mary to play this last game. His reasons before had been clear to him and seemingly valid. Now they seemed less so.

They got a break on a State fumble and Shore broke off-tackle, his knees pumping high, his body at a constantly changing, veering angle as he shifted and pivoted. He got twelve yards, and it was first down on the fifty-yard line. There were six minutes left to play.

Some of the others' sullenness had gone into him, and a kind of dull fury. He could never quite break loose but he always gained some. And he was always hurt. The game had reached a peak of savagery, and he could feel, in a kind of wonder, the welts on his cheeks from cleats. But he had them now, he knew, as they hammered it out, three and four yards at a time. State was tired. With two minutes to go, they were a yard from the goal line. Boudreau called for him to carry the ball again and said no, but they thought he was est instead of groggy. He fumblec as he reached the line of scrimma a State guard recovered.

For a moment Shore thought, is the way it feels when the world Later, the thought would seem cl but now it didn't. State was g as they lined up. Their punte back almost at the limit of the en This play or the next would end i knew, 7-6. Wearily, just as the b passed, Shore charged up and ir line of scrimmage and throug flung himself toward the punter State blocker caught him acro knees and he fell. Falling, he cou see Klitowski, his face a mask o his long, rawboned body stretc its limit, get his hands in front ball rising from the kicker's foo dull sound was like music. Tl bobbled and a State man fell on safety, but the two points were to win.

They came to Shore then, h players, in a great rush, but he to Klitowski. It didn't seem to d good, though. The crowd was all them.

LATER, in the cold, Shore wa the corner near the stadium w was to meet Mary. In the du shadow, the few straggling spe could not recognize him. He knew she would not come. He tried himself that it had been worth it, knew it hadn't. With the wind b he didn't hear the car pull up him until it was there. He loc her in it, unbelievingly.

"I didn't think you were comi said.

"I was afraid of that," she s had an awful time getting out parking lot."

"The parking lot?" he said. "

She nodded. "The way it wa said, "was that if you were goin it, I wanted to be there."

He stood there, in the cold, at her until she told him to ge car. "You look as though you ne ing care of," she said.

"I phoned the Postmaster General about baby, darling, but he sa they have all the important people they need for stamps right no

"I hear they're holding you for the invasion."

"I'll bet it's the Middle East for you. Heat, flies, and horrible odds. It's a lonely grave in the sands, for you, so you might as well leave me that little book with all the telephone numbers . . . They've made me section leader—I'd a damn' sight rather be going along."

THE unknown place in Scotland turned out to be a station for training night fighters. It was one of the first of such stations where aircraft and new devices were tested and theories of attack tried out. They had Hurricanes and Defiants and light bombers made into fighters, all carrying hush-hush equipment.

Rhodes became an inmate of a strange world where daylight was a pallid phenomenon to be slept through. They flew in the dark void below the stars, they let down on faith into the darkness to land on a white ribbon that unrolled for a moment and was gone again. The staring faces of dials haunted them. It was a world of taut nerves and glaring eyes and the batlike shadows of other aircraft looming suddenly on their wing tips.

"I suppose you would say we are more like ghosts than ever," he wrote to her. "But when we get a chance to think we don't feel like ghosts. If you tickle us, do we not laugh? We still hold rather hopefully to our claim on this darkened earth . . . I can remember a voyage in a punt, the greenness of woods and the clearness of water. They say we are moving south soon."

HE WAS a flight lieutenant now, leading a flight of six Hurricanes. One night he led them from a southern field over the coast to the Channel. He looked over the dark snout of his aircraft and his heart felt that familiar lift of wonder.

"'And gentlemen in England now a-bed—you're missing something!'"

War had shown them the splendors of the dawn and sunset skies but the firmament had nothing more fair to show than this. A full moon had risen. The coast of France was a blue shadow on a blue flood and the white cliffs of England were no less grand because they were so little.

The moonlight sparkled on their wings and turrets. They were like great fish swimming through the phosphorescence. Their detail came up, shadows grew between the wings and fuselage. The darkened Hurricanes struck upward with streams of tracer bullets, in a climbing beam attack passing right through the formation.

They were above them now, black silhouettes in the eye of the moon and now their air was crossed and crisscrossed with fire. Below them was smoke and spinning confusion. The formation had broken, bombers turned blindly into one another's tracks, dropping their bombs. Two were falling, bright with flames. One of the Hurricanes was down below the smoke. Rhodes had seen the flare and felt the concussion as it crashed a bomber and both had gone to pieces in the air. The pilot was dead, no use to call for a rescue launch.

The Hurricanes came swimming out of the milkiness to reform on him. There was something wrong with No. 5, something wrong in the pilot's voice as he reported.

"Are you hurt, St. John?"

"Yes—sir."

From his voice he guessed the boy

The Profile with a Point!

Every Allison-powered U. S. Army fighter is distinguished by the slender pointed nose you see in the picture below—the nose that helps make them as swift and agile in action as they look.

And this they've proved in the toughest test of all—in actual combat with the RAF—as you read in the news from the fighting front day after day.

But that's not the only good news about this advanced liquid-cooled engine. Thanks to the cooperative energy of our Army and aircraft industry, it's now moving from production lines to planes in ever increasing quantities month by month.

The incomparable Bacardi Cocktail is first choice of the knowing . . . always refreshing . . . always correct . . . and always welcome. But just remember . . . if it isn't made with Bacardi it isn't a Bacardi Cocktail.
(Ruling of the N.Y. Supreme Court, Apr. 28, 1936.)

*Here's the recipe in rhyme:*

**A LITTLE SOUR,**
(Juice of half a lime)
**A LITTLE SWEET,**
(½ teaspoonful of sugar)
**THE TROPIC SUN,**
(A jigger of BACARDI, White or Silver Label)
**WITHOUT THE HEAT!**
(Ice and shake well)

THERE'S A DIFFERENCE WORTH KNOWING...
BACARDI

*RUM 89 PROOF—Schenley Import Corp., N.Y. Copr. 1941*

was holding desperately to consciousness through waves of pain.

"Then beat it. Your nearest field is Xover, course 340. Can you hear me? You can make it in three minutes, boy. Stick it. Go on."

"IT'S a big raid," said the group commander. He stood with the tired pilots around the illuminated map.

"Now you can see the pattern. The whole south coast is being pounded, with the greatest concentration here." He put his finger on a Channel port. "Reports from that area"—he hesitated—"are distressing. The dwelling districts have been savagely handled, civilian casualties are heavy. It is probable that the enemy is now using dive bombers. Gentlemen, that city must be relieved. The remaining pilots of A flight will join B flight under Flight Lieutenant Rhodes. Good luck."

Their Hurricanes had been refueled and rearmed. They were helped again into their parachutes by the ground crews, those shadowy shapes that were reluctant to let them go without a word. "She's ready and willin', sir." "Thirteen bullet holes in the fin, that's your lucky number." "There's a broken fairing on the cockpit edge, watch it, sir." "Good luck."

"Thanks, sergeant."

Boundary lights winked briefly for them and they were up and gone.

Dark, silver-edged clouds were moving with the wing; soon the light would be gone. Rhodes looked down and saw his old station below—the gray spread of the field, the moon-blanched buildings.

As he passed over, he turned his radio in. "'Once more unto the breach, dear friends, once more—' Hi, Cissy, you old sleepyhead."

The clouds covered the moon and the lights that looked like a line of candle flames grew red and angry. As they drew near they saw that the city was burning.

It was beautiful from above—a garden of red, round fires, and every minute another bursting into bloom. It was beautiful—and given one grain of imagination, it was sickening. Among those fires were men and women, and sick people in hospitals and sobbing children. He saw a black circle blown in the heart of a fire, hiding the flames with its dust. That was high explosive, big stuff.

HIS earphones were chattering with information from the radio locators. They were reeling off the height, course and speed of aircraft approaching the coast. Without eyes to see, they were plotting their movement by the action of radio waves and fixing them within a few thousand feet. The raiders were coming in on three beams, with the regularity of trains. Wishing it was a squadron, he sent the section from B flight to cut across the beams off the coast. He called the ground batteries and the voice of the commander was hoarse and urgent:

"They're bombing as low as 2,500—we haven't enough guns to keep them off. They're murdering this city."

"There's a flight between you and the Channel now. Reduce your ranges to 5,000, leave the port area alone. Turn on all your searchlights."

The beams staggered and slid on the rolling clouds of dust and smoke. Antiaircraft shells flamed and blackened and the air was riven by the burst of high explosive and billows of heat. It was more like a rapids than air. The Hurricanes leaped and rocked.

A black dragonfly had blundered into the whiteness of a beam. Instantly other searchlights laid their long fingers on it. The three Hurricanes struck from the rim of darkness, above, astern and below. The bomber turned over, its engines aflame, and spun down through its fantastic cage of light.

"Something for you," muttered Rhodes to the battered city. "We'll get you some more."

In the darkness, he had lost his flight. He circled out over the Channel, hunting the level on which the bombers were coming in. Something passed him unseen, so close that the rush of air flipped his Hurricane like a chip on a wave. He saw that the earth had gone dark and the sky was on fire and turned himself right side up. He bumped into another disturbed patch of air, and like a hound on the scent, he turned through it and glimpsed a clot against the sky. He carried his cannon and machine guns almost into the belly of that shape and at the first burst it blew up.

The force of the explosion sent him into a spin—he was pulling out of it in a brightness lit by flaming wreckage when from the darkness behind came a rain of fire. There was a leap of light behind his eyes, a searing, paralyzing pain—and miraculously there was no more noise, only stillness, and the feeling that sleep was coming. A face was looking down at him, her head was fair against the green leaves.

"Sorry, Sergeant," he said faintly. "Too many crocodiles—I—can't—shoot—any—more—"

CISSY CECILLE stood by the hospital bed, looking down at the bandaged head. He gave him a gingerly, one-finger poke. "The things that come down in parachutes."

"That you, Cissy?"

"Sure. They called me in for a consultation. How do you feel?"

"Swell—as in seasick."

"Always the old fight—always the bum joke. And some scrap, Geoff. We heard you go over. I got that foul crack about being asleep. And such language! I thought that the control ... going to drop off and h... desk.

# Six Pullman passengers have their say—

EW WEEKS AGO we put a cameraman and a newspaper reporter aboard a Pullman train nd out exactly what different people thought about Pullman travel. Job of the camera- : to snap unstudied, unposed pictures. Job of the reporter: to interview typical Pullman engers and get frank answers to ques- about Pullman comfort, Pullman service.

e following interviews are the result of investigation, made on a typical Pullman ating between New York and Chicago.

PASSENGER: Walter H. Brown
Salesman, Jenkintown, Pa.

TION:

*w did you sleep last night?*

ROWN:

ke a top. I always sleep well on a Pullman. I think u have the most comfortable beds on earth. Not mention that the sheets are so crisp they crackle and all the blankets you need.

PASSENGER: M. W. Boyer
Sales Executive, Chicago, Ill.

TION:

*you and your wife travel Pullman quite often? Do u find it comfortable?*

BOYER:

, very. We've always been ones for liking our com- t and I guess that's the big reason we travel this y. Mrs. Boyer especially likes the little homelike uches like having clothes hangers and reading hts and plenty of shelf space in the berths. It's out as comfortable as home, I'd say.

PASSENGER: Arthur Secor
Mechanical Engineer, Pearl River, New York

QUESTION:

*What did you think about the service of your porter?*

MR. SECOR:

Pretty near perfect. He even polished my shoes better than my regular bootblack. I swear I don't know how he takes care of so many people so well.

PASSENGER: Mrs. Larry French
Housewife, Los Angeles, California

QUESTION:

*Does it bore you to ride on a Pullman?*

MRS. FRENCH:

Bore me? I should say not. You can meet the most charming and sociable people on a Pullman. There's really no nicer place in the world for friendly conversation than a Pullman lounge car.

PASSENGER: Walter Williams
Traffic Manager, Chicago, Ill.

QUESTION:

*You say you're an old Pullman passenger? Just why do you go Pullman?*

MR. WILLIAMS:

Because, as a businessman, I have to be sure I'm going to arrive *where* I'm going *when* I've promised to—regardless of weather. And on a Pullman I can really relax. I know I'm safe.

PASSENGER: Helene Petitjean
Teacher, Denver, Colorado

QUESTION:

*Do you think Pullman travel is expensive?*

MRS. PETITJEAN:

Well, I teach French for a living, but I can afford to go Pullman. What little extra it costs is more than worth it. When I travel other ways I get terribly tired out and irritated. Going by Pullman is as comfortable as living in my own house.

* * *

**WE HOPE** these people have convinced you that you should try Pullman the next time you go some place. You'll find it's the pleasantest way to travel.

COPR. 1941 THE PULLMAN CO.

FOR COMFORT, SAFETY AND DEPENDABILITY—GO PULLMAN

# Early American

**By Herbert Best**

ILLUSTRATED BY WILLIAM P

**The boy Dan'l, stocky and sullen in his grief, told what little there was to tell**

**The neighbors knew that young Dan'l Frost was licked from the start, but Dan'l never did find it out**

"SLAVEHOLDING," spoke up little Cicero, husband of Mis' Ditch across to the Tavern, "ain't any longer allowed in York State."

That was sure a fact. But Cicero made it sound like a challenge to the three, four other idlers in Gunsmith's shop.

"Cicero, you're plumb crazy." Solomon Broadmoor set down a stocking plane, which he had been testing on the calluses of his left hand. "Hain't you never heard tell of adopting young'uns for the young'un's own good?"

For lack of a smithy in the small settlement of Cold Brook, Gunsmith's workshop served as a forum for the discussion of guns and horses, of village affairs, and even news of the less-important world which was outside the hill-locked valley. The slab-sided lean-to with its earthen floor lay conveniently opposite the Tavern, to which one week came the northbound coach up the Hudson Valley from Albany, and the next week the southbound coach from the thin line of forts and settlements stringing down the west shore of the lake from Canada.

Gunsmith set a finished rifle up in the rack and lifted down another. He paid no heed to the discussion; folks who had time to dawdle around in midmorning were like to say naught worth hearkening to.

Beyond the focus of his attention Sol and Cicero were still arguing about old man Frost and his children. Gunsmith's mind kept picking up bits of the talk. It wasn't rightly a story so much as a kind of happening. The folks of Cold Brook had made a great to-do over it.

OLD man Frost—he was old as settlers went, rising seventy—had driven his yoke of oxen and sled down to Sandy Hill, to trade a load of potash and his winter catch of pelts against the summer needs of his wife and three young'uns. Though he hurried against the thaw that might set in and turn the frozen trail back to mire and belly-deep swamp, it was four full days before he returned with his salt, two, three lengths of cloth, a scythe blade, a small keg of powder, and suchlike.

His long whip cracking like pistol shots in the cold air to tell of his coming, he drew around the bend of the hill. He must have stared then, blinking his eyes, thinking he was snow-blinded. No home. . . . No wife. . . . Just a blackened ring where the snow had melted, and in the middle of the ring cold gray ashes.

He must have thought the children too had gone, until they came out, still frightened, from the forest. Old man Frost questioned the eldest girl, but she could do naught but cry. And the little girl just held tight a-holt of his leg and said nothing. The boy Dan'l, stocky and kind of sullen in his grief, told what little there was to tell.

As soon as their Pa had drawn out of sight, four days back, their Ma had taken with one of those spells she had, crying and angry both to-once, and drove them all out from underfoot. So the three young'uns took the hand ax, to cut a hole in the ice of the lake, and went a-fishing. With first dusk they returned, hoping that their Ma might be better. Seeing a glow, they hurried; but when they came out from the trees there was little left but embers.

They huddled together, there in the last of the chilly sunset, asking one another what had happened, and what they were going to do now. As it grew dark the boy cut them a shelter of hemlock boughs for bed and windbreak; and the eldest girl built a fire from the embers and roasted a mess of fish. Eldest had wanted Young'un to run for a neighbor; but Dan'l had pointed out there was naught that ary neighbor could do now, so they'd best wait for

That was all Dan'l had to te of the happening; except that they had kept the fire going, down to the lake again to fish, visited the trap line as their said to do.

Old man Frost listened to his didn't say aught. Just unslung der horn and hunting bag lik grown too heavy, and hung it muzzle of his rifle. He made unyoke the oxen. But their been in the lean-to; and ther lean-to, no stall, nothing.

Old man Frost looked migh more shrunk in on himself th his beard a streaky yellow ag whiter snow. He stood for a while, not taking his eyes off that had been his wife and his

Then he sighed, slung his horn again, picked up his turned about. Dan'l made t But the old man said, "Stay th and walked off northward into t

He had not come back.

Of course the women said right to leave the children, them like that. But, if he was crazed with sorrow, like as n come over him how he' amounted to much. And with of the way, he'd figure, the would take in the young'uns

n francs. May I see the

n through the cow house to ehind. It was a large, bare ith a threshing floor at ty and comfortless. The an followed behind them. is head. "I am desolated, the children must have a ook somewhere else."

e younger woman whisper out the hayloft. He heard man protest angrily. He ung one say, "*Ils sont fa- its. . . .*" Then they turned ferred together.

t proved to be quite pos- s a shelter anyway, and here the children could ade a bargain for them to r fifteen francs. He found en had milk to spare but He left the children in the and brought the pram in he broke his bread in two lf of it to the younger ould make bread and milk en.

Half an hour later he was doing what he could to make the children comfortable upon the hay. The younger woman came in and stood watching for a moment. "You have no blankets, then?" she said.

He shook his head, bitterly regretful that he had left his blanket in the bus. "It was necessary to leave everything, madame," he said quietly.

She did not speak, but presently she went away. Ten minutes later she returned, with two coarse blankets of the sort used for horses. "Do not tell *ma mère,*" she said gruffly.

He thanked her, and busied himself making a bed for the children. She stood there watching him, silent and bovine. Presently the children were comfortable and settled for the night. When they were asleep Howard trod down a little of the hay into a bed, and lay down himself, pulling his jacket around him.

He did not sleep well. Dawn came at about four, a thin gray light that stole into the loft, pointing the cobwebs strung between the rafters. He dozed and slept again; at about six he got up and went down the ladder, and sluiced his face under the pump. The growth of thin stubble on his chin offended him, but he shrank from trying to shave beneath the pump. In Montargis there would be a hotel; he would wait till then.

The women were already busy about the work of the farm. He spoke to the older one, and asked if she would make some coffee for the children. Three francs, for the four of them, she said. He reassured her on that point, and went to get the children up.

He found them already running about; they had seen him go downstairs. He sent them down to wash their faces at the pump. Then he gave them their coffee in the kitchen of the farm with the remainder of the bread, attended to their more personal requirements, paid the old lady seventeen francs for food and lodging. At about quarter past seven he led them one by one past the *chien méchant* and out onto the road again, pushing the pram before him.

They went very slowly, making not more than a mile and a half in each hour.

The road was full of refugees. Farm carts, drawn by great Flemish horses, lumbered down the middle of the road at walking pace, loaded with furniture and bedding and sacks of food and people. Between them and around them seethed the motor traffic: big cars and little cars, occasional ambulances and motor bicycles, all going to the west. All were choked with dust, all sweating and distressed, all pressing on to Montargis. From time to time an airplane flew near the road; then there was panic and an accident or two. But no bombs were dropped that day.

The heat was intense. At about a quarter to twelve they came to a place where a little stream ran beside the road, and here there was another block of many traffic blocks caused by the drivers of the farm wagons who stopped to water their horses. Howard decided to make a halt; he pushed the perambulator a little way over the field away from the road to where a little sandy spit ran out into the stream beneath the trees.

"Well stop here for lunch," he said to the children. "Go and wash your hands and faces in the water." He took the food and sat down in the shade; he was very tired, but there were still five miles or more to Montargis. Surely, there would be a motorbus there!

Ronnie said, "May I paddle, Mr. Howard?"

He roused himself. "Bathe if you want to," he said. "It's hot enough."

"May I really bathe?"

Sheila echoed, "May I really bathe, too?"

He got up from the grass. "I don't see why not," he said slowly. "Take your things off and have a bath before lunch if you want to."

THE English children needed no further encouragement. Ronnie was out of his few clothes and splashing in the water in a few seconds; Sheila got into a tangle with her bodice and had to be helped. Howard watched them for a minute, amused. Then he turned to Rose. "Would you like to go in, too?" he said in French.

She shook her head in scandalized amazement. "It is not nice, that, monsieur. Not at all."

He glanced at the little naked bodies gleaming in the sun. "No," he said reflectively, "I suppose it's not. Still, they may as well go on, now they've started." He turned to Pierre. "Would you like to bathe, Pierre?"

The little boy in gray stared round-eyed at the English children. "*Non merci,* monsieur," he said.

Howard said, "Wouldn't you like to take your shoes off and have a paddle, then? In the water?" The child looked doubtfully at him, and then at Rose. "It's nice in the water." He turned to Rose, "Take him and let him put his feet in the water, Rose."

She took the little boy's shoes and socks off and they went down and paddled at the very edge of the water. Howard went back to the shade of the trees and sat down again where he could see the children. Presently Sheila splashed a little water at the paddlers; he heard *la petite* Rose scolding. He saw the little boy in gray, standing in an inch of water, stoop and put his hand in, and splash a little back. And then, among the children's chatter, he heard a shrill little sound that was quite new to him.

It was Pierre laughing.

Behind his back he heard a man say, "God love a duck. Look at them happy kids—just like Brighton."

Another said, "Never mind about the muckin' kids. Look at the mud they've stirred up. We can't put that stuff in the

radiator. Better go on upstream a bit. And get a move on or we'll be here all the muckin' night."

Howard swung round and there, before him in the field, were two men, dirty and unshaven, in British Royal Air Force uniform. One was a corporal and one a driver.

He started up. "I'm English," he burst out. "Have you got a car?"

The corporal stared at him, amazed. "And who the muckin' hell might you be?"

"I'm English. These children are English, two of them. We're trying to get through to Chartres."

"Chartres?" The corporal was puzzled.

"Charters, 'e means," the driver said. "I see that on the map."

Howard said, "You've got a car?"

"Workshop lorry," said the corporal. He swung round on the driver. "Get the muckin' water and start filling up, Bert." The driver went off upstream, swinging the can.

The old man said, "Can you give us a lift?"

"What, you and all them kids? I dunno about that, mate. How far do you want to go?"

"I'm trying to get back to England."

"You ain't the only one."

"I only want a lift to Chartres. They say that trains are running from there to St. Malo."

"You don't want to believe all these Froggies say. Tried to tell us it was all right goin' through a place called Susan yesterday, and when we got there it was full of muckin' Jerries! All loosing off their hipes at Bert and me like we was Aunt Sally! I got the old Bren going over the windshield and we went round the roundabout like it was the banking at Brooklands, and out the way we come, and all we got was two bullets in the motor generator what makes the juice for lighting. But fancy saying we could go through there! Susan the name was, or something of that."

The old man blinked at him. "Where are you making for?"

THE corporal said, "Place called Brest. Officer said to go there if we got cut off, and we'd get the lorry shipped back home from there."

Howard said, "Take us with you."

The other looked uncertainly at the children. "I dunno if there'd be room. Them kids ain't English."

"Two of them are. They're speaking French now, but that's because they've been brought up in France."

The driver passed them with his dripping can, going toward the road.

"What are the other two?"

"They're French."

"I ain't taking no Froggie kids along," the corporal said. "I ain't got no room for one thing, and they're just as well left in their own place, to my way of thinking. I don't mind obliging you and the two English ones."

Howard said, "You don't understand. The two French ones are in my care." He explained the situation to the man.

"It's no good, mate," he said. "I ain't got room for all of you."

Howard said slowly, "I see. . . ." He stared for a moment absently at the traffic on the road. "If it's a matter of room," he said, "will you take the four children through to Brest with you? They won't take up much room. I'll give you a letter for the R.T.O. at Brest, and a letter to my solicitor in England. And I can give you money for anything they'll want."

The other wrinkled his brows. "Leaving you here?"

"I'll be all right. In fact, I'll get along quicker without them."

"You mean take them two Froggie kids along 'stead of you? Is that what you're getting at?"

"I'll be all right. I know France well."

"Don't talk so bloody soft. What would I do with four muckin' kids and only Bert along o' me?" He swung round on his heel. "Come on, then. Get them kids dressed toot and sweet—I ain't going to wait all night. And if I finds them messing around I'll tan their little bottoms for them, straight I will."

He swung off back toward his lorry. Howard hurried down to the sand spit and called the children to him. "Come on and get your clothes on, quickly," he said. "We're going in a motor lorry."

Ronnie faced him, stark naked. "Really? What sort is it? May I sit by the driver, Mr. Howard?"

Sheila, similarly nude, echoed, "May I sit by the driver, too?"

"Come on and get your clothes on," he repeated. He turned to Rose and said in French, "Put your stockings on, Rose, and help Pierre. We've got to be very quick."

He hurried the children all he could, but they were wet and the clothes stuck to them; he had no towel. Before he was finished the two Air Force men were back with him, worrying with their urgency to start. At last he had the children ready. "Will you be able to take my perambulator?" he asked a little timidly.

The corporal said, "We can't take that muckin' thing, mate. It's not worth a dollar."

The old man said, "I know it's not. But if we have to walk again it's all I've got to put the little ones in."

The driver chipped in, "Let 'im take it on the roof. It'll ride there all right, Corp. We'll all be walking if we don't get hold of juice."

"Cripes!" the corporal said. "Call this a workshop lorry! All right, stick it on the roof."

He hustled them toward the road. The lorry stood gigantic by the roadside, the traffic eddying around it. Inside, it was stuffed full of machinery. An enormous lathe stood in the middle. A grinding wheel and valve-facing machine stood at one end, a little filing and sawing machine at the other. Beneath the lathe a motor-generator set was housed; above it was a long electric switchboard. The men's kit bags occupied what little room there was.

Howard hastily removed their lunch from the pram, and watched it heaved up onto the roof of the van. Then he helped the children up among the machinery. The corporal r

to the trap in the partition, said over their shoulders, "I don't mind walking in ahead to have a look, if you wait here."

"Walk in ahead of us?"

"I don't see that there'd be much risk in that. With all these refugees about I can't see that there'd be much risk in it. I'd rather do that than drive in with you if there's any chance of being fired on."

"Something in what he says," the driver said. "If the Jerries *are* there, we mightn't find another roundabout this time."

They discussed it for a minute or two. There was no road alternative to going through the town that did not mean a ten-mile journey back toward Montargis. "An' that's not so bloody funny, either," said the corporal. "Meet the Jerries coming up behind us, like as not."

He hesitated, irresolute. "Okay," he said at last. "Nip in and have a look, mate. Give us the wire if it's all okey-doke. Wave something if it's all right to come on."

The old man said, "I'll have to take the children with me."

"Hell! I don't want to sit here all the bloody day, mate."

The old man said, "I'm not going to be separated from the children." He paused. "You see, they're in my charge. Just like your lathe."

The driver burst out laughing. "That's a good one, Corp! Just like your muckin' lathe, he said."

The corporal said, "Well, put a jerk in it, anyway."

The old man got down from the lorry and lifted the children one by one down into the hot sunlight on the dusty, deserted road. He started off with them down the road toward the town, leading the two little ones by the hand, thinking uneasily that if he were to become separated from the lorry he would inevitably lose his perambulator. He made all speed possible, but it was twenty minutes before he led them into the town.

THERE were no Germans to be seen. The town was virtually deserted; only one or two very old women peered at him from behind curtains or around the half-closed doors of shops. In the gutter of the road that led toward the north a tattered, dirty child that might have been of either sex in its short smock, was chewing something horrible. A few yards up the road a dead horse had been dragged half up onto the pavement and left there, distended and stinking. A dog was tearing at it.

It was a beastly, sordid little town, the old man felt. He caught one of the old women at a door. "Are the Germans here?" he said.

"They are coming from the north," she quavered. "They will ravish everyone, and shoot us."

The old man felt instinctively that this was nonsense. "Have you seen any Germans in the town yet?"

"There is one there."

He looked around, startled. "Where?"

"There." She pointed a trembling, withered hand at the child in the gutter.

"There?" The woman must be mad, distraught with terror of the invaders.

"It speaks only German. It is the child of spies." She caught his arm with senile urgency. "Throw a stone and chase it away. It will bring the Germans to this house if it stays there."

Howard shook her off. "Are any German soldiers here yet?"

She did not answer, but shouted a shrill scream of dirty imprecations at the child in the gutter. The child, a little boy, Howard thought, lifted his head and looked at her with infantile disdain.

There was nothing more to be learned from the old hag; it was now clear to him there were no Germans in the town.

He turned away; as he did so there was a sharp crack, and a fair-sized stone rolled down the pavement near the German spy. The child slunk off fifty yards down the street, and squatted down again upon the curb.

The old man was very angry, but he had other things to do. He said to Rose, "Look after the children for a minute, Rose. Don't let them go away, or speak to anyone."

He hurried back along the road that they had entered the town by. He had to go a couple of hundred yards before he came in sight of the lorry, parked by the roadside half a mile away. He waved his hat at it, and saw it move toward him; then he turned, and walked back to where he had left the children.

The lorry overtook him near the crossroads in the middle of the town. The corporal leaned down from the cab. "Any juice here, do you think?" The old man looked at him, uncomprehending. "Petrol, mate."

"Oh—I don't know. I wouldn't hang about here very long."

"That's right," the driver muttered. "Let's get on out of it. It don't look so good to me."

"We got to get juice."

"We got close on five gallons left. Get us to Angerville."

"Okay." The corporal said to Howard, "Get the kids into the back and we'll 'op it."

Howard looked for his children. They were not where he had left them; he looked around, and they were up the road with the German spy, who was crying miserably.

"Rose," he shouted. "Come on. Bring the children."

She called in a thin, piping voice, "He is hurt."

"Come on," he cried. The children looked at him but did not stir. He hurried over to them. "Why don't you come when I call you?"

Rose faced the old man, her little face crimson with anger. "Somebody threw a stone at him and hit him. I saw them do it. It is not right, that."

True enough, a sticky stream of blood was running down the back of the child's neck into his filthy clothes. A sudden loathing for the town enveloped the old man. He took his handkerchief and mopped at the wound.

*La petite* Rose said, "It is not ri throw a stone at him, and a big w too, monsieur. This is a bad, dirty to do a thing like that."

Ronnie said, "He's coming wi Mr. Howard. He can sit on the end of Bert's kit bag by the ' motor."

The old man said, "He belongs We can't take him away with us. in his mind came the thought might be kind to do so.

"He doesn't belong here," said "Two days only he has been here woman said so."

THERE was a hurried, heavy st hind them. "What's going on said the corporal.

Howard turned to him. "T throwing stones at this child," h He showed the man the cut on the neck.

"Who's throwing stones?"

"All the people in the village. think he's a German spy."

"Who—'im?" The corporal "He ain't more'n seven years old!

"I saw the woman do it," said R "That house there. She threw a and did that."

"My muckin' aunt," the corpora He turned to Howard, "Anyway, to beat it."

"I know." The old man hes "What'll we do? Leave him here disgusting place? Or bring him with us?"

"Bring him along, mate, if yo like it. I ain't worried over the a of spying that he'll do."

The old man bent and spoke child. "Would you like to com us?" he said in French.

The little boy said something other language.

Howard said, "*Sprechen sie Deu* That was the limit of the Germa he could recall at the moment, drew no response.

He straightened up, heavy wit responsibility. "We'll take him us," he said quietly. "If we leav here they'll probably end by him."

"If we don't get a move on," sa corporal, "the bloody Jerries w here and kill the lot of us."

# SYMBOLS DEAR TO SCOTLAND

Coat of arms of a 19th century Stewart. It is distinguished from many scores of Stewart arms by a black border, as the Black Label distinguishes Johnnie Walker Scotch of 12 years age.

The Great Seal of David II, ancient king of Scotland—the land whose most regal export today is the Black Label of Johnnie Walker.

The colours Or and Sable (gold and black), which add richness to this Scottish coat armour of 1674, are found in the Black Label of Johnnie Walker and call to mind its richness and rarity.

The proud Black Label, affixed to a rare, mellow Scotch whisky of that name by John Walker and Sons, Ltd. Name this Black Label wherever you are—it is a mark of exceptional taste.

onic Home high-school foot- became a member of the division," or top bracket, of Interscholastic League in e then, this school, which more than sixty-five boys in gh-school grades, and com- st schools with 500 to 3,000 as won seventy-four games, lost fifteen and tied five. It has won six district titles, gone to the state finals once and to the state semifinals three times. In practically every case the team that has eliminated the boys in the district or semifinal championships has later gone on to win the state title.

In all probability, the Masons have won more football games during the last nine seasons than any other squad in the country playing a rigorous schedule. But the team's appeal does not lie wholly in its continued success. Even during its few lean seasons, the Home teams have drawn well at the box office. The spectacle of a dozen or so fatherless kids, battling against numerically superior squads, in what Texans consider the toughest schoolboy football league, provides an annual and very thrilling gridiron drama.

### Not Many, but Good

Like the Notre Dame teams of the Knute Rockne era, the Masons draw their largest body of followers from those "who never went to school" or who have no strong ties to any prep school. Like those Rockne teams, the Masons have an intelligent, unorthodox and colorful coach.

Ninety per cent of the Home high-school boys play on some sort of football team. But Dr. Russell seldom has more than fifteen who are physically ready and eligible for the "varsity."

Each of these fifteen or so is likely to have played football since infancy. He will not have to be taught any fundamentals. He may know more football than many a college sophomore player. Out of the fifteen, Coach Russell will select the eleven best boys and play them—most of the time without regard for positions. Russell likes to have two or three utility performers, and he works with these fully as much as with the so-called regulars. He likes to have a husky relief linesman who can play all of the interior forward positions. He often requires the backs to know all the secondary and end assignments.

In 1940 the Masons went as far as the state semifinals with only thirteen first-line players. A new ruling in the Interscholastic League, whittling the age limit to eighteen years, had cut six stars off the Home squad. Otherwise, Mr. Russell would have had his most powerful outfit in history.

This season, Russell has had to make still greater demands upon the versatility of his players. He has seven of last year's thirteen-man gang returning. But most of the other players were unimpressive in last spring's rehearsals. Rusty has been working with the problem of placing his seven experienced kids where they will do the most good.

The bespectacled coach holds regular consultations with his athletes in which the boys discuss one another's strengths and weaknesses with the most amazing candor and without a trace of self-consciousness or malice. They talk like scientists discussing an experiment.

Out of these discussions, Dr. Russell has cooked up the following sample of conflicting assignments for some of his players in this campaign: DeWitt Coulter, all-state tackle of last season, will handle his regular tackle duties on defense, alone. When the Masons have the ball, the giant Coulter will be the blocking back. Walter Finnigan, utility linesman of '40, will have his duties somewhat simplified. He'll play center on offense and end on defense.

Billy Cagle, a guard last year, will be a wingback on offense and center on defense. Tom Brady and J. L. Daniels will appear as offensive ends and defensive halfbacks. Such big backs as Gordy Brown and Louis Burress can handle any of the secondary jobs.

better parents to them than he could be.

Gunsmith's thoughts followed, unconsciously, the discussion in his workshop, the retelling for perhaps the twentieth time of what happened to old man Frost. He gave a last file stroke to the frizzen steel, and pressed the trigger. The flint gave a spray of sparks now. 'Twas just the face of the frizzen steel had been hollowed with use. . . .

"Ain't that so, Gunsmith?" asked Sol Broadmoor.

Gunsmith hitched at his spectacles.

"No, Sol. Don't seem that way to me. Calculate the old man just felt like something had broke inside of him, and with his wife gone he hadn't the gumption to go back and make good."

Gunsmith tested other parts of the rifle. As he set it in the jaws of the vise his mind filled in the picture behind Sol Broadmoor's talk. A week or more after old man Frost had lit out, a neighbor, passing up through from the lake and seeing no house, had stopped—and been the first of many to hear of the happening.

"Ma's dead, burned. Pa's gone, but we're a-waiting for him," Dan'l said. And turned back, matter-of-fact, to lift a few potatoes from under the earth and straw of the root cellar.

THE first neighbor's news brought other neighbors a-running. There'd been little enough to talk of all winter long, not so much as a birth or death, scarce even the howl of a wolf. So the village soon had the rights of the happening, how the young'uns' Ma was like to have set fire to herself and the cabin in one of her falling spells. The womenfolk vowed that just as soon as old man Frost came back they'd give him a piece of their minds for leaving his family to shift for themselves. And meanwhile they'd take the young'uns back home with them.

Just who was to take which young'un? The womenfolk talked it back and forth for near on an hour. While they argued, Dan'l went right on with his tasks, leading the oxen up the hillside, snaking down a bundle of sapling poles, and notching the ends. He was building him a little shack, though the timbers had to be light and short so that he and the youngest could handle them.

When the women had it all thrashed who was to have which young'un and who wasn't, Dan'l stopped swinging his ax to say, "Nossir, ma'am. Pa said to stay. And I guess Pa knowed."

When a woman said, "Come, Viney, dear!" and tried to take her by the hand, Young'un drew behind Dan'l. And when the woman called on her husband to help, Dan'l took a firm holt of his ax and stepped out to meet him.

"Nossir, ma'am!" Dan'l said it again, slow, like he was being extra patient. "Nossir, ma'am. Pa said to stay."

Then and later there had been sharp talk among the women of how growed men had been outfaced by one small boy. But among the menfolk was a feeling to let the children be, and see how they'd make out.

Mary and Gunsmith hadn't thought to go pestering them. So it was well along into spring when Gunsmith reached down an old powder horn, washed it outside in the millstream, and carried it into the house to dry. Mary, whose eyes were the keener for her deafness, gave him a glance of inquiry. When breakfast ended Gunsmith slung the empty horn at his side and said he guessed he'd step up a ways and see how the Frosts were making out.

He found Dan'l Frost squatting on his heels, pounding a tree wooden plow with the ba The tall, thin girl was ho pole, and Viney the young'u dering the crosspiece at th handle. The two brown but waiting for the yoke t to the pole, slowly chewed the warm sunshine and l offering neighborly advice.

Gunsmith stepped up an powder horn.

"Don't happen your Pa more salt in his spring vi you can use? Seems I ca hornful."

Dan'l looked pleased an to the log shelter. 'Twa'n't yet a mighty useful shack Dan'l reached under a bun out a cotton sack of coars He filled Gunsmith's horn

"There's two more bag mighty welcome to all yo Reed, before the porcupin 'Tain't like I can git arou me new meat barrels bef three ain't apt to eat as was used."

So the boy was alrea ahead to next winter, not c Pa to return. Gunsmith l at the strings of smoked f withes, at the dried venis roof. He'd admire to knc had killed his deer withou

"Making out mighty like."

"Aim to skin me some popple now the sap is riz hoeing's done and harvest have me logs to roll us u lean-to. Peter and Paul here—" he nodded towar end of the shack—"but 'ta for their wintering."

It looked as if the boy ured out. This was good thing to tell Mary.

"Somewheres in the ash your Pa's broadax, draw splitter and suchlike. B the forge some evening. I I'll show you how to pu back in them; it don't do forehanded."

THAT left the reason f visit still untold. Whe come to him, it seemed plain horse sense and n Dan'l's Pa would have see but it looked now as if Da ent.

"Seeing you loaned me how'd it be if I was to d load of corn and suchlike needing?"

The boy's mouth tighte smith had feared it wo Mist' Reed. Till grazing g and Paul c'n make out in the root cellar. And t ain't like to hunger. Pa di to borrowing."

However, it was not when Gunsmith's crafty the unneeded salt was re eldest Frost came down return. She'd know that good soap as anyone ar better; and Gunsmith gu reason, and was pleased and Dan'l. The boy ha borrow from one who had from him. Later, when came along with first a h scythe blade and other to the temper had been bur smith let him do most of even had him lend a ha

u repairs, as though in payment for he charcoal.

e small girl, garbed like her brother n ust as silent, came down with Dan'l a time, as if she was his apprentice. it smith would hear a tap at the door f e workshop and go out to let them n. there'd be twilight outside, but dark as e, it being early summer, so Gun- m n would go back to the kitchen for idle, and for an ember to rekindle be forge. Then the three would work o her, heating and hammering and u ching, till Young'un's eyes screwed p ith sleep as she worked the handle f e bellows, and Gunsmith set him- el o keep a watch on Dan'l lest in his re iness he grasp a red-hot iron or as a finger under the hammer. And de hole while there'd be no more than v three words between them, unless Ja I remembered to caution, "No call o biting your nails, Young'un."

SUMMER days lengthened, and Gun- or nith, stripped to the waist except is stiff cowhide apron, sweat running rc beard to chest, welded and forged n shod from dawn to dark. Neighbors o alled on to help with their beasts n broken farming tools now pre- er d the shade of the twin maples out- id to the cramped, hot shop.

the breathing spell before harvest it smith found time to weld, bore and if seven new barrels. And now that e asn't so pressed by work Mary n d him to go up to the Frost place n see for himself how they fared. o dn't he, she asked, pretend he w something to old man Frost, and a ed Dan'l to take out the debt in or work? By now the boy must stand n ed of tools, and it wouldn't be in is nature to come down and beg the of them.

For several days Gunsmith pondered no question, but he could see no way. Ja l's Pa had been more apt to owe ne be owed, and Dan'l would know Gunsmith could find no excuse to ke not to go, nor yet an excuse to Ja l for going. And then the boy came o n to the shop and saved all the co ble. He was shadowed, as usual, by Ja g'un.

The little girl was smiling and plump s ver. But Dan'l for all his pride looked kind of peaked. His broadax and hand ax, their edges worn so round they were past filing or whetting, showed where some of his strength had gone. While he and Gunsmith set to work with forge and hammer to draw out new edges, the old man listened to the tale of their doings. Their crops, it seemed, promised well, considering. But the new cabin was hanging fire and it didn't seem that it would ever be finished.

"It's all account of Eldest," Dan'l explained. "Young'un leads off Peter and Paul, and up-swings the log. I don't no more'n git the log levered into place so it sets good than Eldest looks up from her chinking to say that's right where she aims to have another window hole or what all. And down the log has to come again for cutting."

"Womenfolk!" said Young'un, in a voice as solemn-deep as she could compass. "Womenfolk is that pernickety! I don't never aim to be a woman."

"Not aim to be a woman? Pa wouldn't hold with such talk," her brother reproved her. "When our hands gits to be six months ahead of our bellies, we'll see can we spare a swap to git ye learned how." But, as he explained to Gunsmith, 'twa'n't just any woman would serve to learn Young'un. For there must be a right and a wrong way to being a woman, same as to using an ax.

Gunsmith, silently burying a chuckle in his beard, nodded agreement, drove a wedge into the new ax handle to secure the head, rasped the wood off flush and handed it to Young'un. She tried its edge with an expert thumb, picked out a stone on the bench and started to whet.

Dan'l was busy fitting part of the old ax handle to the smaller hand ax in place of the haft they had needed to burn out. Gunsmith reached among the dust and cobwebs of the crossbeams which braced the shop against the vibration of the machinery and water wheel outside. He drew down a pod auger, gave its edge a few careful wipes with a file, and set the tool beside the boy.

"If ye'd take this in change for the salt I borrowed off ye, Dan'l, I'd be right pleased. A man don't care to stand beholden overlong, even to a friend."

Dan'l set down the hand ax to take

"You sit right here with me, Mom, and nobody'll notice you!"

# HOW TO MAKE YOUR NEXT PAY CHECK GO FARTHER

***The story of a remarkable plan and how you can use it to stretch your dollars***

DO your expenses seem to get bigger month by month? Do you wish you could find some way to make the old pay check go farther?

That problem puzzles a lot of folks these days. We don't pretend to know any easy way out, either. But there's one thing every family can do. You can plan the best way to spend each pay check—*before you spend it.*

Not long ago we made an important discovery. All of us know that some families stay out of money troubles through ups and downs. Yet they deny that they "budget." How do they do it? We decided to find out. The answer is simple. They *do* plan, if only in their minds, to do three things with each pay check.

1. Get ready to meet large occasional expenses—such as taxes and insurance.
2. Pay debts from the past—instalment payments, for instance.
3. Live on what is left.

When you have no spending plan, there's always a risk that one of these, Future, Past or Present Spending will crowd out the others. A plan helps you to keep your spending in balance. You get more of the things you want because you plan their purchase before your money is spent. You are able to pay for the things you must have because your plan keeps you from spending too much on the non-essentials.

**How to look ahead**

Take the first item, the Future, for example. Suppose that you have a large bill coming due in the next few months. Count the number of pay days between now and then. Figure out how much you should set aside each pay day in order to have the money when you need it. That way you can meet large expenses without worrying.

Budgeting is nothing but a common sense way of planning how you're going to spend your money while you still have it—a way to control your spending to get plenty of fun out of life while making both ends meet.

Would you like to receive a little book which will help you plan your spending? The Budget Calendar makes budgeting easy and simple. No tiresome bookkeeping is required. There are "plan for spending" sheets for every pay day in the year.

Household Finance has published the Budget Calendar as a contribution to better family money management. You are invited to ask for a copy without obligation. There will be no solicitation or follow-up.

**How home money management aids national defense**

*Defense of the nation begins with defense of the home. Home defense means learning how to stretch every dollar till it covers taxes, contributions to charity, defense stamps and bonds, and all the things a family needs for mental and physical health. That's a big job.*

*We hope that this message will encourage and help folks to keep their money affairs on a sound basis—and that it will contribute to a more effective defense effort.*

Can't Keep Grandma In Her Chair

She's as Lively as a Youngster— Now her Backache is better

Many sufferers relieve nagging backache quickly, once they discover that the real cause of their trouble may be tired kidneys.

The kidneys are Nature's chief way of taking the excess acids and waste out of the blood. They help most people pass about 3 pints a day.

When disorder of kidney function permits poisonous matter to remain in your blood, it may cause nagging backache, rheumatic pains, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes, headaches and dizziness.

Don't wait! Ask your druggist for Doan's Pills, used successfully by millions for over 40 years. They give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from your blood. Get Doan's Pills.

up the auger and try its edge. He reckoned out aloud the gain he'd have from the new tool. Boring green wood with a hot iron had taken nigh on an hour each hole. Pegging the logs at door and windows was most done. But there were all the roof timbers to be pinned. And Eldest had set her heart on ▪ puncheon floor some day, so there'd be a heap more boring and pegging. . . .

The boy and his sister were most ready to go, and there was something that Gunsmith still wanted to find out.

"Ye know, Dan'l, I was half minded to ask did you need seed in swap for more salt. But seems you had enough . . ." He let it trail off, half questioning; and so as to keep the boy a while handed him a sliver of glass to smooth down the new ax handle.

Dan'l's answer made Gunsmith frown. It seemed Sim Higgins had loaned the seed, just as he had loaned it to Dan'l's Pa the year before. And when he had drawn it up to the Frost place he had brought out ▪ paper, ▪ quill and an inkhorn, and asked Dan'l to set his mark. Dan'l could do more than make his mark, he could set his full name to the paper. But he had to pretend to read the writing above it, as he could only spell out print. Dan'l had liked the paper, as it made the deal businesslike, and not ▪ favor begged from a neighbor. Whatever the paper said didn't matter, as he could pay back all this year's seed, and more, from this year's harvest.

But Gunsmith was troubled. And, when the children had picked up their tools and trudged off homeward, still troubled, he carried the problem to Mary. Setting name to paper meant law, if not lawyers. And Sim Higgins, though 'twas no use to warn Dan'l now, was the kind of man who dursen't set hands in his own pockets for fear he'd rob himself.

CORN was hardening in the ear; so, as debts mostly fell due after harvest, Gunsmith closed his shop one morning and went visiting. When he returned in late forenoon, and tied on his apron to weld a new tang to a scythe, he was more silent than usual. But smiling to himself. He hadn't cared to go troubling the folks that owed him, but Mary had been right as usual. Sol Broadmoor, as soon as he had the rights of it, had slapped his knees and guffawed. Eph Birdsell had called Phebe from her baking to hear.

"You're a hard creditor, Mist' Reed!" she had said, her eyes kind of twinkling. "But if Eph ain't to home when the call comes I'll carry the payment over in my own arms."

Other neighbors had promised willingly enough too. Just let Gunsmith send word, and they'd come a-running. Till then they'd talk lesser'n ▪ dead Injun.

For three weeks Gunsmith worked with one eye on the road. Then Sim Higgins came spraddling along. Sim wa'n't one to walk if he could ride, so it looked to be true he'd sold his team to the sawmills at the Falls.

Luck was in Gunsmith's favor, for no one else was in the shop. And though Mary was down to Tall Rock, proving and sighting, he had only to hang a cloth from a window, as she'd arranged, and she'd see and understand.

"Morning, Sim." Gunsmith tried to make the greeting sound hearty and innocent. "You look dusty and kind of tired. If you've ▪ mind to set a while, I'd take it right neighborly if you'd give an eye to the tools for half an hour. I got to git me along up to Dan'l Frost to see about a debt."

"Why, now, Gam . . ." Sim Higgins hesitated, shifting on his feet, then snapped at the lure: "Why, now, if I wa'n't aiming to go that way myself!"

Gunsmith hung up his heavy apron, stepped into the kitchen a moment, and returned with his old foxskin cap.

"Dan'l still owing ye for his Pa's rifle?" Sim asked sharply.

Gunsmith said nothing, and Sim's suspicions grew.

"Seems like I'd best step along with ye, Gam. Dan'l ain't got much, and first come first served." He patted his pocket complacently.

THE land which Dan'l had put to the plow was now bare again except for roots of trees and corn, and bundles of stalks. Dusty ruts showed where the old sled had drawn home a triumphant harvest. The new home was a small cabin, nigh to being finished, with clay and field-stone chimney at one end, and ▪ lean-to for corncrib and ox stall at the side. The children must have been prouder than old gobblers at what they'd done. And they'd a right to the pride.

Eldest was podding dry beans beside the door as Gunsmith and Sim Higgins came up. At her call Dan'l and Young'un stepped around from where they'd been deepening the root cellar. From worn moccasins to her bare tousled hair, Young'un was just a small-bore short-stocked pattern of Dan'l.

Sim Higgins hadn't a word to say for the corn, the beans, the squash, the pumpkins and what all, though he looked at them close enough. Then Dan'l excused himself to get together what he owed. And Young'un led Gunsmith and Sim Higgins down to the lower pasture to visit with Peter and Paul. Sim ran his hands over the oxen's slick brown hides, and asked about them as though he was minded to buy. Though it was plain to a half-wit that neither Young'un nor Dan'l would sell; Peter and Paul being that nigh to being Frosts themselves.

When they climbed the hill again, Dan'l had piled the sled with plump skin sacks, rough woven baskets and one of Eldest's caldrons. Eldest was standing beside him in ▪ work apron and ▪ worn dress that Gunsmith thought he'd seen before on Mary, but trim and straight as a new-polished gun barrel.

"Hain't got a bushel measure, Mist' Higgins, but the seed's all there and we'll tally it off soon as I've drawed it down to your place." Dan'l shook a drop of sweat from his nose, and kind of stiffened up with pride. "Dunno how to thank ye, but Eldest wants you should accept a mite of maple syrup we kin spare from last spring's sugari . . . and . . . if there's any ti help ye in return . . ."

"Now, Dan'l, that's mighty you." Then Sim Higgins m tense to be puzzled. He drew from his pocket, glanced over i at the piled sled and shook "But, Dan'l, ye're just joking, Or have ye forgot what yer owing me these six years past say nought when yer Pa lit left ye, seeing ye was in trou now . . ."

"Hold on, Sim!" Gunsmit objection. "A boy of fourteen countable. And where's the it's owed ye in the first place!

Dan'l looked frighted, but s else besides. "It's all right, Mi I don't nowise aim to stay How much d'ye reckon to be ow Higgins?"

Sim Higgins began to read a the long list drew to an end wondered how even a feckles like old man Frost could have borrow so much that his own should have raised. Dan'l wo to pay in corn for costly whea and for molasses too, when ma from the Frost's own sugar bu have been sweetening aplen smith could see Dan'l figurin was figuring himself, turning this and that into bushels and of corn.

THEN Gunsmith thought he creak of an axle way off in tance, though no one else ha the sound. Mary must have cloth signal in the window, a around mighty quick. Sim Hi puny legs a-straddle, was sti his paper and pretending to Neither Eldest nor Young'un as whispered, but kept close smith as though for company

Dan'l, his shoulders saggin slowly to the lean-to and bega a bushel basket with golden-ye Three journeys he made, mov man dazed, and emptied the ket beside the sled. Each b taking him a bushel nearer th corncrib would be empty and gins still unpaid. And all five

But the creaking was drawi and with it the sound of mer Gunsmith wondered could things off for a while, till the r

# "Mr. Horton will brag about it all year!"

*But His Wife Chose The A&P Super Market . . . Where He Is Choosing The Turkey!*

Between ourselves, Mr. Horton couldn't fail to get a splendid turkey in the A&P "Super"! For A&P selects turkeys with the utmost care to get the tenderest, tastiest, fresh young birds for your money. So why Mr. Horton's fun by telling him folks select prizes here *every* day?

Right around the calendar you'll find delicious meats . . . tender young juicy steaks, flavorful chops . . . at amazing savings in your A&P Super Meats are always at the peak of flavor in this modern food department . . . fresh things are always fresh, for they whisk in and out again at rapid rate. Fruits and vegetables are rushed from field and orchard *hours* . . . dairy products direct from the farms . . . baked goods oven-fresh!

The very fact that folks buy so much in the A&P Super Market keeps prices down. More than 2000 different items share one low store-keeping expense, so each item is priced way down to earth—not just occasionally but every day of the week, every week of the year.

To top it all, you'll find many fine foods exclusive with A&P. These are A&P brands with their quality guarded from *source to sale* . . . and many of them at tremendous savings! Try for example, A&P's famous Teas and Coffees . . . the 33 Ann Page Foods . . . White House Evaporated Milk . . . Jane Parker Donuts, Cakes and Rolls . . . Marvel "Enriched" Bread!

Buy all your food needs in your A&P Super Market and you'll save on your *entire* grocery bill. Don't wait for Thanksgiving . . . but drop in today! You'll find it fun to go A&P Super Marketing.

**A&P SUPER MARKETS**

SAVE UP TO 25%* ON MANY FINE FOODS

A&P FOOD STORES

*Many A&P brands bring you savings up to 25% compared to prices usually asked for other nationally known products of comparable quality. You'll enjoy the goodness of our Marvel Bread and Jane Parker Cakes, Rolls and Donuts—the 33 Ann Page Foods—A&P Teas and Coffees—White House Evaporated Milk—34 A&P Canned Fruits and Vegetables—Yukon Club Beverages—and many others.

**SOLD EXCLUSIVELY AT A&P**

**PRIZED FOR THANKSGIVING!**

**CONSUMER FACTS:** Pilgrim Turkeys—A&P's own brand—are all top-grade birds from the best turkey-raising regions in the United States. They are all carefully fed, carefully selected, and dressed just the way you want them. Fresh-killed for Thanksgiving, these turkeys are plump, tender birds in the bloom of youth . . . certain to please you, and, of course, sold with a money back guarantee.

and save Dan'l his first bitter taste of failure. He took two strides, and laid a heavy hand on Sim Higgins' shoulder.

"Now, Sim! There's more to trading than first trapping a neighbor and then skinning him. In beggaring others you've nigh beggared yourself, for there's none left hereabouts who'll trust you in trade or sale." He let Sim get the rights of that, then added: "Now take what Dan'l can afford to give, and no more. Leave him and his the run of their teeth, and seed for next sowing. He'll pay you in the end, will Dan'l, though he's no call to do it."

He knew as he spoke he might well have saved his breath.

Sim stepped back a pace to free his shoulder, and tapped the paper in his hand.

"Don't seem like ye understand, Gam. It's writ here: 'I Daniel Frost acknowledge the above debt in full. In failure to pay on demand I agree to surrender to Simkin Higgins all right and title in the twin yoke of oxen known as Peter and Paul, the same being in good working condition and free of known fault, vice or sickness.' Now that's a contract I've used the past fifteen year, and I hain't knowed it to fail me yet." He paused to enjoy his triumph. "Dan'l's just figuring out whether he can pay, or whether he'll hand over them oxen. Guess it'll have to be the oxen!"

DAN'L set down his bushel basket to stare, unbelieving. Young'un gave a kind of choke.

"No harm to checking first, son." Gunsmith took Dan'l by the elbow. "Maybe there's something you've forgot."

Together they measured the hay in the shack and the hemlock shelter, checked over the potatoes and roots and cabbage stacked in careful piles before the empty cellar, priced even the apples ripening on the tree. Gunsmith, whose repairs to guns and tools were paid for in anything from venison to cider, prided himself to value a farrowing sow to within a pint or two of peas or to price a load of potash to within ten cents of what it would fetch delivered at Sandy Hill. But the Frost farm was small, even for this valley, and the young'uns, even with Peter and Paul for the hauling, hadn't harvested enough in one season to cover six seasons or more of careless borrowing. No telling, too, but what Sim had added to what was owing.

Stopping a pace to set a value of three cents on the beans that Eldest had left beside the door, Gunsmith and Dan'l came back to where Sim, grinning gap-toothed, was awaiting them.

His eyes big, and hurt-seeming, Dan'l looked off down the hill. Then put fingers to mouth and blew a whistle. Shaky it was, but the big oxen in the lower pasture raised their heads. Dan'l blew again, a surer note. Slowly, all eyes upon them, the ponderous beasts left their grazing and slowly began to climb the hill.

Young'un ran down to meet them, and, hanging yoke-fashion about their necks, paced between them to their heavy plodding.

Dan'l was muttering, over and over, "A man can't break his given word. Nossir! Pa wouldn't hold with it. Pa wouldn't hold with a man breaking his given word . . . Pa wouldn't . . ."

"Morning, Dan'l." It was Eph Birdsell. "Morning, Uncle Gam; morning Sim." He dropped off his light wagon, and knotted the reins. "Fine yoke of oxen you got, Dan'l. Can't call to mind when I've seed a better match with more weight to their shoulders."

"Morning, folks!" Sol Broadmoor in his heavier ox-drawn rig came creaking up behind. He nodded to Gunsmith, stared hard at Sim Higgins and cautioned Dan'l: "Don't let that bandy-legged little feller git too near yer oxen, or ye'll find him trying to ... away in his breeches pocket. ... how trust him within sight ... kin carry." "Now if I was Dan'l," Gunsmith spoke as though to himself, "I don't know as I'd care to have this truck rotting down all winter so near to the cabin. I'd give Sim Higgins two, three days to fetch it, and then I'd draw it down load by load and throw it in the crick."

He gave that time to sink in, and watched the faces. Sim looked startled, thinking how he'd lose everything. Someone began to chuckle. And Dan'l was listening closely.

"Or I dunno but what I might drive a bargain, a hard bargain that would earn me Sim Higgins' respect." Gunsmith narrowed his eyes in thought. "Now I don't reckon I'd be too hard on Sim, seeing he don't know no better. I'd offer to draw down what's on the sled, and take what's in the pile and all else on the farm as my price. And I'd give Sim Higgins just time to say 'yes' or 'no.'"

'TWASN'T till the following Sunday that Dan'l came down to the settlement. Across the way folks were clustering outside the Tavern, waiting for meeting. Mary gathered up Eldest and Young'un, and, taking them across to greet Preacher, left the two menfolk together.

Gunsmith led Dan'l into the kitchen. In silence they drew two chairs to the comfortably warm hearth.

"Pa used to say good neighbors counts for more than a rich topsoil." Dan'l stirred in his seat, stretching closer to the embers. "I reckon I got good neighbors, Mist' Reed."

Gunsmith kept silence.

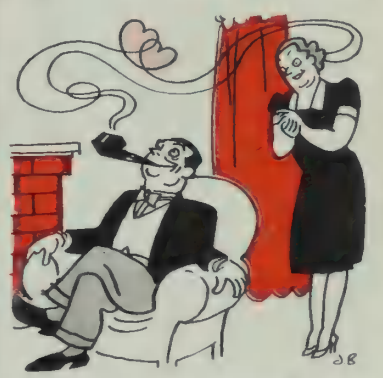
"Next year, if winter pelts is good, I aim to trade for a sow and breed me some livestock." Then a picture began to form in Dan'l's mind, more distant than any he had allowed himself during the pressing day-to-day toil and planning of the summer. "Eldest's li'ble to git herself a husband, being a good cook and all. And if I was to find time to go a-courting, though 'twon't be yet a while, and bring me home a wife . . . And Young'un, in five years—she's shooting up . . ."

Then Dan'l, aged fourteen, reined himself back to the difficult present.

"Young'un . . . Pa said not to bite her nails. Only," he sighed, "a man can't do but just so much!"

PUNGENT PIPE PUTS PA IN PICKLE

*—but he's out of the dog house now!*



**THIS IS THE HARD WAY** to enjoy a smoke. Ma forbids pipes in the house, so Pa sneaks over to the fireplace, lies flat on his back, and puffs up the flue. Oops! Here's Ma!

**LOOKS LIKE THE FINISH!** One wallop and that smelly old briar will be no more. Why hadn't someone told Pa to *clean* his pipe more often and smoke a *mild* tobacco? But wait!

**"THIS IS THE EASY WAY** to make a pipe popular," hollered the man next door. "Sir Walter's the mildest, sweetest tobacco you ever sniffed. Be a sport, Ma. Let Pa try some."

**LOOKS LIKE THE START** of a happy ending. Ma's in love with Sir Walter's mellow fragrance. And Pa's delighted with the cool, rich flavor of this choice burley blend.

ay was invaded. A few were but very few. And there were portunists. But the plain peoorway, the farmers, city people, l right."

words "all right" you see that he means unbending, fierce patriotism. And when he said "plain people" I knew what he meant, too. The common people of Norway have been independent landowners for more centuries than any nation in the world. There has been neither a nobility nor a peasant class; no swollen rich nor degraded poor. It is a country where a railroad conductor or a high-school teacher may be a distinguished man, or know Ibsen by heart.

This is Major Reistad's story: On April 9th the Germans swooped on Oslo. The king and government escaped northward. All along the coast the Norwegian navy fought, sinking, with the British, a third of the German battle fleet. Their tiny army was desperately trying to reestablish its lines.

Major Reistad, squadron leader of the air force in southern Norway, knew nothing of what had happened until two o'clock that morning. But because of a premonition, he had ordered his men to fit their old 1924-model Fokker planes with skis, so that they could land on snowfields farther north. In an hour and a half, German bombers came and smashed his airport. He flew northward with his old Fokkers and joined the reassembling Norwegian army under General Ruge.

### And Norway Fought On

The German bombers followed, blasting them out of two airports, so they flew to ice- and snow-covered lakes in the mountains. Farmers brought them tins of gasoline that they had siphoned out of their farm machinery and automobiles. Then while the Nazis, with their tanks and clouds of bombers, were forcing their way diagonally up from Oslo to Trondheim in a bloody war that lasted 62 days and destroyed 60,000 Nazis and 15,000 Norwegians, Reistad and his men were using their antiquated planes with ingenuity.

They tried dive-bombing by aiming planes at their targets. This worked well. On one occasion they built the most fantastic airport ever made: A blizzard came and herdsmen rounded up 3,000 reindeer on a lake to trample down the snow and make it hard enough for take-offs.

After two months, the British had to give up Narvik because Hitler had invaded Flanders. General Ruge surrendered. But as a symbol that Norway would never give up, he would neither flee nor sign an armistice. He is in a German prison camp. Major Reistad and his men disbanded, swearing to meet again somewhere to continue the fight. "Where we are, Norway is."

The Norwegian government had some planes on order in the United States. It was decided to have these delivered to Canada, and a year ago the new and modern and well-equipped Norwegian air force was established.

*(Continued on page 76)*

# Fashions with a Future

Continued from page 19

in the skirt, that is distinguished by the very simple trick of inserting two panels of black satin in this fullness and matching them with black satin gloves. Another slim wool dress in royal blue has black jet beading on the tiny tabs of the bodice that turn back at the throat to make a collar, and on the skirt just below the belt. A third of these easy-to-wear dresses the duchess wore in her native Baltimore in white crepe, trimmed with black velvet that outlines the V neck and loops at the waist to make a brief black peplum across the front of the skirt—a combination that looks like a sure-fire fashion setter.

What else is Mainbocher backing for the new season? Watch his winter opening, and you'll see. You'll also be sitting in on a typical Paris opening, for he has transferred the whole tense, excited atmosphere and setup to New York. There's the white, baroque-plaster ornamented salon, ringed with little gilt ballroom chairs and long, brown-felt-covered sofas, and crowded with ladies of wealth and fashion, who sparkle with jewels and chatter with excitement as the mannequins swing through the room. If you are looking for the bizarre, the startling, you will be disappointed. Here is elegance, simplicity, understatement in clothes.

### Fur-lined Luxury

Furs, first. But restrained almost out of sight. Most of us, given a fine lot of Persian lamb, would think only of putting it where it would show the most. Not Mainbocher. A handsome, boxy red wool coat is completely lined with black Persian that shows only in the turned-back cuffs and when the coat swings open as the mannequin walks. Casual and beautiful. There's been more talk than usual this season about fur-lined coats, and this should clinch the fashion. Rabbit, burunduki, woolly lamb—plenty of low-priced furs would do a good-looking job.

Next, of all things, a fur-lined sweater, just to insist on the idea. It's a beige cashmere cardigan, lined with brown Persian, a stunning jacket over a wool dress. But also an expensive item that we'll leave in the custom-order department. It does, however, demonstrate a point Mainbocher would like to make, because it's the nearest he will come to a short fur jacket with a day-length skirt. Why, he wants to know, wear those fluffy unflattering things that make you hump-shouldered and neckless, cut you off square and wide in the middle and leave you to freeze below?

Suits are slim, the skirts flaring only enough for ease. One is a black wool dress, turned into a suit by the addition of a beige jersey jacket, collared in Persian. The dress-with-jacket theme is a strong one this season. The jackets here are short and fitted, ignoring completely all you have been reading in the past year about longer fitted jackets on suits. These, Mainbocher refuses to make for American women.

"I played with the longer-coat idea four years ago in Paris, but gave it up for two reasons," he says gently. "First, it creases very unpleasantly after sitting, and second, the long line is too difficult for the average hips. But peplums are different: Peplums flare. You know some of that fullness is fabric, not part of the lady. You'll find peplums all through my collections, and you'll find them all through the market because American women know and demand a flattering thing when they see it."

Something else in this fashion showing that we will demand: Sweaters again. Dressed up with bead embroidery at wrist and throat. Your old college cardigan, shapely in yellow cashmere, bedecked at the neck with pearls and gold beads, going out with a slim black wool dinner skirt and a black cashmere pull-over, also bejeweled at the neck. It's a fashion with a kick in it, giving you the pleasure of feeling dressed up, yet not overdressed for the favorite hamburgers-for-two evening, sitting on a high stool beside a handsome young officer in uniform.

Missing entirely are the extremes, the exaggerations of the old-time Paris collections that made the headlines but had to be modified before they could be worn. Every dress in this collection is wearable as is, making it tough on the fashion press. It's fun to have crazy, sensational fashions to write about. Peps up the page and hands the boys a laugh. But the fashion-show audience approves and applauds, and as the last mannequin moves through the room declares it the finest collection Mainbocher has ever done.

He's gratified when you shake his hand behind the scenes afterward, and tell him so. He has worked hard and earnestly to express his convictions in these clothes. Convictions that the clothes you wear are important to your comfort and your self-assurance, as well as your good looks, and therefore worth infinite pains in the designing and the selecting of them; but that they should be subordinated to the kind of life you lead and entirely dictated by it. You are well dressed, he thinks, only when you are appropriately dressed, and this has nothing whatever to do with custom-order, nothing to do with cost.

"One of the best-dressed women I have ever seen," he says, "was my hostess at a recent dinner party. She cooked the dinner herself, but s not for this occasion wear a silk and then tie an apron over it. Sh a cotton dress that was practical kitchen and yet charming at the h the table. Such good sense to dr comingly, to suit her life and the sion, is what makes the well-d woman."

He appreciates that it is ofte cult to find this exactly right dre he gives you some sound advice.

### Looks Come Before Fashio

Go slow when you shop. If yo find a dress that is as good or bett the favorite dress in your wa don't buy any. There is no rule calendar that at the stroke of season you must rush out and bu clothes. Better wear last year's that is becoming than this year' that you picked up in a hurry a hate from this day forth. F changes, but not so fast that a dre good for years if it is carefully

Be wary of fashions that are promoted. The too peasanty, t costumey, the tricky little numbe originated in some clever pro girl's head rather than from yo needs. They may be fun to w the moment, and fun to talk abo they'll pass promptly out of the picture, leaving you with a cl closet and looking definitely d you continue to wear them.

Watch your figure. Clothes a designed for the slim, and scalin up to the fat-girl size won't ma look like the model. The best cl the world won't be becoming en draw eyes in your direction, you've kept your own eyes—wi results—on the scales.

**"But couldn't you learn to operate it? Charlotte is always so busy with the children"**

*"Did I tell you girls how these cards were presented to my father by Admiral Dewey?"*

One of the ladies is wondering, dully, how long *the Admiral* used them. Her partner is thinking of his famous words: "You may fire when you're ready, Gridley." (The third one just wants to go home.)

♣ Bridge, poker, pinochle, rummy, hearts—they're all more fun with fresh, clean cards. Whatever price you pay, your top value is one of the popular brands made by The United States Playing Card Company.

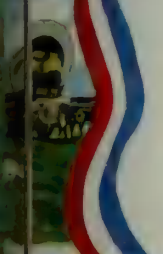
# Our New Army

WASHINGTON

SECOND INTERCEPTOR COMMAND, Seattle. Whether you live in Keokuk or Tampa, the Army Air Forces have already renamed your spot of ground Bruno, Dora, Nellie, or some such; and not just because of some whimsy. On both the Atlantic and Pacific coasts, highly developed aircraft-warning services are being set up and thousands of civilian observers are being trained to phone enemy-plane reports to giant filter stations like the one at Seattle under Brigadier General Carlyle Wash. New York was "bombed" last month in an interceptor test and Seattle put on a similar demonstration about ten days ago. Anyway, to get back to Dora and Nellie, your town—say it's Millville—has been given another tag so it won't sound like Pillville over the phone.

Officers and soldiers, assisted by women volunteers, plot the reports on room-size table-top maps; red if the airplane was seen, green if only heard. The clocks in the room have no numerals; each five minutes on the dial is indicated by one of three color segments: red, green, blue. When one of the 850 observers phones a report during a five-minute blue section, a blue mark is placed on his spot on the map. After fifteen minutes, when another blue period shows on the clock, all blue reports from the previous quarter-hour are eliminated. This keeps the whole business up to date and the strategy boys at headquarters are able to plot the course of the invaders.

The U. S. and surrounding real estate are divided into areas splitting the longitudinal lines in quarters, each numbered from 1 to 99. The latitudinal lines are cut in thirds and each is given a name. To simplify this, the whole territory is chopped into pieces fifteen miles square, with observers in each. The latitudinal names are in alphabetical order; if you start at the northwestern tip of the U. S. and head south, the 15-mile strips breeze through Adam, Bruno, Clara, Dora, Ernest, Floyd, George, Henry, Ida and so on down to Thomas. They don't go past the letter T but start in again with Alice, Bertha, Charles, et cetera.



To the Air Force, Seattle is Clara, T
and Portland is Nellie. These same

# Armour's 75th Anniversary

## 75 YEARS OF PUBLIC SERVICE...
## in supplying America's needs... A length of service no other major packing company can equal

COPYRIGHT 1941, ARMOUR AND COMPANY, CHICAGO

*This month, Armour and Company begins its 75th consecutive year in supplying meat to America—a length of service unequalled by any other major packing company. During those years, Armour has never lost sight of the fact that good service to you is its justification for being in business.*

*All of us at Armour know that this company has grown only to the extent that it has served you. To merit your continued confidence and good will—it is our firm purpose to serve you in even greater measure in the years to come.*

*G. A. Eastwood*

*President*
*Armour and Company*

**is ne Mainstay of American Vitality!** You have ariety of fresh, smoked and canned meats to fm. Armour and Company operates 33 packing o r 300 storage branches and a vast refrigerated rt ystem to bring fresh meat to your table daily. lif ent from grandmother's day—when fresh meat ra y and the supply seasonal at best.

**American Prosperity Begins on the Farm**—and livestock is a basic farm commodity. The farmer's major crops—hay, fodder, corn and many other grains go to fatten his cattle, hogs, sheep. For 75 years Armour has helped maintain a ready cash market for the farmers' livestock...and developed many by-products, effecting savings for both farmers and consumers.

## Armour Products - Crowning Achievements of 75 Years of Experience

**America's Finest Ham and Bacon!** s a o, nothing like Armour's Star Ham could be ...at any price! Sugar-cured, hickory-smoked, w ted for tenderness before it comes to your home l lers declare it America's most delicious ham! m r's Star Bacon is held in the same high esteem! pr ucts are only two of Armour's proud con- ns o America's mealtime pleasure.

**Finer-Flavored Sausage—Made Fresh Every Day!** To meet the increasing demand for fine sausage in America, Armour brought master sausage makers from many parts of Europe, gave them finer meats, finer equipment to work with. So, today, Armour's 150 varieties of sausage are unmatched for flavor! Scores of Armour's Sausage Kitchens are located all across America to bring you Star Sausages *fresh*—at their tasty best!

**Ready-to-Serve Meats—An Armour Contribution!** The prepared meats in tin and glass that are so popular with American women (millions of cans are sold every year)—were pioneered by Armour in 1878 with a small line of 5 meats. These developed into America's largest and most popular line of quality canned meats! And quality is the outstanding characteristic of Armour's Cloverbloom Butter, Eggs, Cheese and Poultry.

# Keep a date with summer - this winter!

## Make the trip on pocket mone/— in Super-Coach warmth and con for

THE *"take-your-vacation-in-winter"* movement is going great guns—and for such excellent reasons! *FIRST*—bitter-cold weather is something you *ought* to dodge, for even a few days—if you value your health and efficiency. *SECOND*—travel is now amazingly low in cost, although nearly all other prices have sky-rocketed (you skip winter fuel and clothing bills while in the South, too)! *THIRD*—Greyhound offers the convenient, comfortable way to reach southern sunshine, with more optional scenic routes to choose from (going one way, returning anoth— Express and Limited schedules—l er than any other kind of transporta n (ac one-third the cost of driving).

You can be in New York, Chicago eve Detroit, or Philadelphia today—ir orn on the Gulf Coast tomorrow! Cal rnia the great Southwest seem scarc fas away, so fascinating are the r unt deserts and Indian country travers en *Don't let Winter stand you up! Mak Summer in the South—and go*

### GEORGIA

2D ARMORED DIV.

FORT BENNING. This is a story of frustration, sort of. It concerns Pvt. Frederick W. Meuschke, who was drafted and assigned to the 82d Reconnaissance Btn. of the Second Armored Division. This outfit apparently took no notice of Pvt. Meuschke's extraordinary abilities, excellent experience and diligence to duty; each month the soldier hopefully scanned the list of new ratings and promotions and his name was not listed therein. Then suddenly, on October 13th, a new list was pinned up and on it was our man's name—Corporal Meuschke, at last. "Nice going, soldier!" cried his pals. Next day, October 14th to be exact, the corporal received a message from the Adjutant General's office. Boiled down, it advised Mr. Meuschke that, having reached the doddering age of twenty-eight plus, he was released from active service, effective immediately.

### FLORIDA

31ST DIV.

CAMP BLANDING, Starke. Introducing Pvt. Johnny McDowell, of the 167th Infantry. Not long ago Johnny went to the Station Hospital for an appendectomy, which was performed with a local anesthetic while the victim evinced profound interest in the proceedings. Everything came out all right, even though, as the operating surgeon sewed up the incision, Johnny piped up with: "Stitch me, Doctor, eight to the scar!"

43D DIV.

ANYONE within earshot can tab Pvt. Jack Pearow as a native of Memphis, Tenn., but instead of landing with the 30th or 31st Division this gent found himself a member of the 43d Military Police; so there he is, a lone Southerner surrounded by nearly 20,000 Yankees. He has already acquired a taste for maple syrup—pretty unusual—and on two occasions has been observed ordering pie and No'thun coffee, which means he can't return to Shelby County without special dispensation. But what gets the goats of restaurant waiters in Jacksonville and Starke is Pearow's popping in, all dolled up in New England Division insignia, and ordering grits, ham gravy, corn bread, turnip greens, collards, sorghum and black-eye peas. Lots of curious people ask him where he's from. "Memphis, Maine," he says.

GROENHOFF

**Forty miles of these new, five-line telephone poles can be put up daily by the 8th Provisional Signal Btn., Camp Bowie, Tex.**

### THE CAROLINAS

1ST ARMY

ADOWN in the desolate Carolina country of peach orchards, sand, pine, oak, and tobacco and cotton fields, the 1st Army is making soldiers out of men who not long ago were called Joe. Until a couple of weeks ago the 1st Division, the best trained and best equipped outfit in the country, was showing the 6th Army Corps how to get around in Frank Gervasi country. Within the next two weeks the whole 1st Army will clash with the 4th Army Corps and 350,000 soldiers will be milling around in the maneuver windup . . . Men in the 6th Corps have been trained both to swim and to ski. To put it in their own words: "What's cooking?" . . . The newest gadget unfolded for use in these maneuvers is sparkproof shoes, for the lads who handle gasoline and other flame-busting stuff. The shoes are made of fiber and nonsparking metal. . . . The Army put out an order that neither officers nor enlisted men could take their cars into the Carolinas, but at least one Massachusetts private got around that one. He bought himself an antiquated Ford and a white shirt, smeared the latter with oil and finds it no problem to go where he chooses. Army cars avoid his careenings with as much margin as possible. "Just another screwball Carolina cracker in a jaloppy," is their misjudgment.

AHHH—and now we really have something. It was invented by Pvt. Johnny Self, of MacDill Field's 37th Matériel Squadron, now based at Fort Jackson, South Carolina, for the duration of the present maneuvers. It's a soldier's watch, without numbers and without a minute hand. What Pvt. Self did was scrape off the numerals, substituting in their proper places such important daily events as Reveille, Chow, Roll Call, Recall, Retreat, Lights Out and Taps. Why didn't you think of that?

### GENERAL

LET'S try to straighten out the regional differences in the use of the word jeep. In the South, the little reconnaissance car is called a peep; the larger command car is called a jeep. Up North and out West the names are, respectively, jeep and goon. How about a vote on it?

SIGNIFICANT NOTE: The newest Army directory gives no information about military establishments outside the limits of the continental U. S.

"I DON'T know how many you got," writes Second Lieut. James L. Denig from the Marine Barracks at Quantico, Va., "but you should have got a flood of letters from hard-working Marines all over. (We did, but the guys were too mad to sign their names.) You stated in a caption for pictures of the Army practicing landings (Collier's, Oct. 11th) that for the first time in history of landing operations a bantam car, a 37-mm. antitank gun and a .30-caliber machine gun were put ashore. Maybe the Army is just getting around to it, but the Marines have been doing it for years. They've done it in the past for keeps and are ready today to do it for keeps. Weapons of the type you mention are piddling compared to our tanks, trucks, 105-mm. howitzers, 75-mm. pack howitzers and so on down the list. Please give the Marines their due."

SHUCKS—everybody knows the Marines have the situation well in hand.

no bitterness in them. Men of England stopped quarreling about war aims. They no longer discussed the peace. Out of the bombs there emerged a will to survive that was harnessed to the machines that produce the machines. Women learned how to use lathes and handle hammers. Britain went to work. The bombs hadn't distinguished between Mayfair and Lambeth and England was united.

They knew in England what they were up against. Ernest Bevin told them. Englishmen knew they were only 45,000,000 against 300,000,000. They knew that of their total population some 18,000,000 were able to fight and work and that in the enemy camp there were at least 182,000,000 who could man the war machines and the machines behind the planes and tanks and guns at the front. They knew in England that the huge reservoir of man power of India's 400,000,000 people was of little use in this war, for the men of India are not mechanics. They would have overwhelmed the Germans with Indian troops alone, in the old days, when numbers meant something. Now numbers mean little unless they are numbers of mechanics, engineers, transport experts, managers, organizers, chemists, toolmakers, diemakers, patternmakers, tinsmiths, electricians, for it's that kind of a war. Ernie told them. Ernie told them that Britain's army hasn't the highly developed mechanical aptitude of the German army. In a war between peasants and mechanics the mechanics will win. Perhaps elsewhere such inequalities might breed defeatism. There was none in the England to which I flew in a bomber in February, 1941.

### Seamen Must Eat

The Jerries bombed Liverpool the night we sailed. We moved down the Mersey and into the Irish Sea and for a few days we were convoyed and then we were on our own. We sailed on the ancient sclerotic Themistocles, once a crack packet of the Blue Funnel Line on the Cape run to Australia. Liverpudlians called her the Temmy Stocles and some unprintable things, but she was a good ship.

There was no rationing aboard. There's something exquisitely English about that. They wouldn't deprive men who risk their lives on the seas of the cheese and sugar and meat and eggs they do without in England. We had seven-course dinners all the way to Cape Town. For thirty-one days we ate menus such as you'd find at the Ritz. We landed in Cape Town with heavier waistlines. We even had butter. Margarine is the best they can manage even at the Savoy, in London. Raiders got the Britannia, which had sailed with us. They got her one night some twenty-five miles off our starboard bow and we were thankful that old Temmy Stocles was as slow as she was. Another quarter knot to our speed and the raiders would have got us, too. We'd have been alongside her.

We were in danger every one of the thirty-one days we sailed. We wished aboard ship that wars could be won with courage alone and with that uncomplaining forbearance of Englishmen. Aboard ship we learned that it is one thing to be an Englishman and an Australian and a Canadian or a New Zealander, and another to be a Briton, a Britisher. There's something vital about Englishmen and the others. They are men. But the Britisher is an idea. He represents a way of life that you—and Englishmen and the others—feel is passing. His flag is the old school tie. We were five hundred aboard the Themistocles. Some were Canadians and others Australians and New Zealanders. A few were British. In the smoke room and the lounge when they waved the old school tie and talked of "Empire" the Aussies and the Anzacs and the Canadians gave them the bird. The Englishmen smiled upon them wisely, patiently. By the time we'd reached Cape Town the old-school-tie gentlemen occupied one table in a corner of the smoke room and the rest of us left them strictly alone. They were an oldish, puzzled-looking lot and inspired sympathy.

If in Bermuda the war's mien had been complacent and in England composed and brave and earnest, in South Africa it was surly. In South Africa the war's visage was that of a man who had taken a step against his will. You encounter in the Union one of the weirdest anachronisms of the war. Here, as elsewhere in the Commonwealth of Nations, there are no rations. Here you sense, as in Bermuda, a remoteness from war that isn't merely physical and at the same time a vigor and realism that is English and Canadian and Australian. You find similarities between the South African way of life and the American. The Union is American in the polyglot character of its population. It's American in the neon-lighted and skyscrapered glamor of its big cities. You can get chocolate ice-cream sodas and hot dogs and lemon cokes. Here apothecaries are drugstores and goods trains are freights. And South African troops can't fight outside the continent of Africa.

Although South Africa entered the war by the slim approval of 51 votes to 47, the Union has raised a volunteer army of 150,000 from its 2,000,000 white population. It's one of the best armies in the war. It brought Italy's empire down around Mussolini's ears in a short, brilliant campaign. But prowar newspapers must barricade their offices to prevent isolationist Afrikander mobs from smashing the presses. Antiwar riots in Johannesburg and in Durban. Demands in t assurances from Great Brit the war and if possible du the Union be granted full in Down in South Africa the who still remember the Boer part of the British Empire. even the "Commonwealth tag which their own prime Christiaan Smuts, invente thered the League of Nati mandate system. SOOTHE it with GLYCO-THYMOLINE

Insist on Glyco-Thymoline for gargling and spraying. Glyco-Thymoline is *gentle*, but effective, and helps to soothe and heal the delicate membranes of the nose and throat which are so often irritated by common colds and ordinary sore throats.

For fifty years many physicians and druggists have used and recommended Glyco-Thymoline for helping to relieve the discomforts of common colds and ordinary sore throats. Keep a bottle handy always . . . and use as directed.

GLYCO-THYMOLINE

TRY GLYCO-THYMOLINE AS A DAILY MOUTH WASH

"Pay attention to your work and you won't have to worry about what it's for!" FRANK OWEN

rapidly toward unity. He said the Union realized that it must submerge its fierce patriotism for independence temporarily to defeat Hitler. The South Africans, he said, realize increasingly that a German victory would mean indefinite postponement of South African independence. Two days later I was on the train for Durban.

Durban might be Miami. There are beaches and swank hotels and there is the midway atmosphere of a resort and that of the port. Like Miami, Durban is both. The journey to Durban might have been a journey across Texas. The great plain between Cape Town and Durban they call the karoo. Mesquite, sagebrush and yellow plains of tallish grass. Natives in bright blankets. Great range country and the white men might be Texans, tall and lean and hard. It is a journey of two days and three nights across the 900-odd miles of karoo. At Durban I boarded an Imperial Airways flying boat for Mozambique and Lake Victoria.

### Never Forget Kimberley

Often we flew low over herds of elephants. Twice we saw hippos awash in the mudbanks of jungle streams. But on the third day we went deep inland to pick up the tributaries of the Nile. The land below changed from green to brown and then to buff and we were flying over wretched desert country. From the observation deck of the plane, a raised runway on the ship's port side in the smoking compartment, we looked down and wondered that men should fight for the possession of that lifeless land.

Just north of Khartoum we flew over country so repugnant that an R.A.F. officer en route to a new post in Wadi Halfa nudged me, pointed down at the yellow wastes and said he thought it was bloody awful land. He said he thought the worst possible trick England could play on her enemy would be to give the whole bloody business to Germany, what? I reminded him of Kimberley and the Transvaal and the lush lands we'd seen around Victoria. Over where we flew Chinese Gordon had fought. Five days and four nights after our take-off from Durban we were in Cairo. The pyramids appeared small. The Sphinx was an indistinguishable lump. The whole suggested decadence rather than strength. But Cairo's gardens and boulevards were alive with trees that bore purple blossoms and the Nile was ageless and sinuous and strong. It was the backbone of a nation we saw.

Cairo, the capital of the battle of Africa, was shocking even after Cape Town. Cairo was a Hollywood movie of itself at war. Lights blazed at night. In restaurants you saw food returned to the kitchen because it was improperly cooked, food in heaps. Here diners fussed about the sauce in the *coq au vin*, the temperature of a bottle. It took nearly a month to bring into focus the blurred picture of old-line officers, gaiety, wine, women, laughter, Arabs in the nightshirts they call galabias, turbaned Indian officers, swashbuckling Aussies in broad-brimmed campaign hats, refugees in pith helmets and an atmosphere generally of a conglomeration of extras on location to shoot a superdooper of a war film. After a month you saw that it couldn't have been otherwise. England had cleared out the old-school-tie soldiers in the democratization of the British army and sent them all away where they'd do the least harm. Cairo, until the big shake-up that came later in the summer, got them all, from useless brigadiers to fuzzy-chinned "leftenants" whose only claim to a commission lay in their births or bank accounts. In this war to preserve democracy it was disturbing to see signs over the bars of the smart hotels such as Shepheard's or the Continental limiting patronage to officers. Then you remembered that even in our army corporals don't drink with captains and majors.

But up forward with the troops, you forgot Cairo. You forgot Cairo but you were reminded sharply of the lesson you'd learned in Bermuda that the British virtues don't include the ability to organize and an aptitude for mechanics.

"It's not his fault, really," Buzz droned. He was weary. "He isn't to blame. Six months ago Smythe was a baker's apprentice in Huddersfield. He drove a horse and wagon. He'd never driven a car or a truck. He wasn't quite up to the mark, physically, to enter one of the armed branches of the service, so they put him into the RASC. How he got to be a corporal, I don't know. Better education than most, most likely. He doesn't know a blasted thing about machinery. He had about six weeks in an auto shop learning mechanics, but I doubt if he could change a fouled plug. I'm afraid we've become a nation of brokers and shopkeepers. Smythe is the result.

"We certainly didn't have mechanics when the war came. We had a small class of craftsmen. They made our motors and airplanes. We weren't ready for war. I don't mean merely that we didn't have tanks, guns and planes. Heaven knows we didn't. What's more important, we didn't have engineers. You Americans are a nation of mechanics. So are the Germans. I'm afraid we aren't. At least, we weren't. . . ."

I thought of American boys who convert asthmatic jaloppies into racing cars, of kids who make gasoline motors and put them in real airplanes that fly. I thought of newsstands agleam with how-to-make-its. Buzz knew what he was talking about. In private life he was a machinery salesman in Manchester.

And yet, in the desert, you saw Tommies mount two-pounder guns on Chevrolet chassis. You saw them chase German tanks with these. And sometimes they'd win.

But in the desert, too, you saw roads that were permitted to rut and disintegrate under the pounding of trucks and tanks and heavy guns. Nothing was done to repair them. Tar in rust-splotched barrels lined the road for miles between Alex and Salum, as though somebody had intended to fix those roads so the war could run more smoothly but had run out of money or initiative. The roads tore the equipment to pieces. Good American trucks lasted from four to six months on those roads. The toll in springs, tires, axles, gears and bodies was terrific. And the supply lines stalled and men died up forward because ambulances reached them too late.

Back in Cairo you heard Jimmy Roosevelt tell how in Iraq the British diddled for days trying to span a small stream with sandbags. An American soldier suggested the river be bridged. It was and the column moved over it and onward to rebellious Bagdad. It just hadn't occurred to this particular

Pink ELEPHANTS last night?

When Your Rebellious Stomach is Sour, Sickish, or Upset—
don't aggravate the condition with overdoses of antacids or drastic physics or purges. Take soothing PEPTO-BISMOL.

In the PINK today?

PEPTO-BISMOL helps bring relief when the stomach is upset by overindulgence, change of diet, or improper combinations of food and drink...when there is distress from gas pains, nervous indigestion or simple diarrhea.

PEPTO-BISMOL is not an antacid and has no laxative action. It helps soothe the irritated intestinal walls as well as the stomach, and is decidedly pleasant to the taste.

In two sizes—at your druggist. Or by the dose at drug store fountains.

unit to bridge the river, which would have saved three days time in relieving Bagdad and in three days Englishmen died.

By the time I left Cairo at the end of July General Auchinleck had arrived to take command of the Middle East and a new deal was dealt all around. The old-school-tie boys got down off the polished stools of the Ghezira Sporting Club and Continental Hotel bars and went to work. General Sir Archibald Wavell had had too much to contend with. The work he did was subdivided, with Auchinleck concerned only with military operations while Captain Oliver Lyttleton, Churchill's personal representative in the Middle East, took over supply and transport and political relations with Egypt and neighbor states.

India was a two-day flight from Cairo via Basra, at the head of the Persian Gulf. From Cairo to Karachi and thence to Simla was to move from reality to unreality again. India conveyed none of the glamor and romance of fiction and Kipling. At Lahore old Zam Zam stood, its wooden wheels bleached by the sun, its impressive bronze barrel green with the years. But Kim wasn't there. I couldn't find Kim anywhere in India; his spirit must have died long, long ago. Maybe I didn't have the eyes to see, but I couldn't find Kim and I felt cheated.

### India Wants Only Independence

I found instead of Kim and adventure a nation more concerned with itself than with victory over Germany, a-quiver with a subsurface struggle between Hindu and Moslem that the war had failed to still. India wanted independence and wanted it immediately. India's leaders told Britain that if Britain is fighting for democracy India wanted a down payment of democracy right away. Hindus, Moslems, Sikhs and Parsees argued about proportionate representation on the viceroy's national-defense council and expressed their disapproval of his selections of representatives from the warring groups with strikes and passive resistance. Mahatma Gandhi's movement, dedicated to nonviolence, was slightly bewildered in a highly violent world. The revolutionary Nehru still held that India, to emerge as a nation, must one day run with blood. He is a Hindu. The whole business irked the old-school-tie boys and the jails were full.

Otherwise life proceeded much as usual in India. Some people, in Bombay and Calcutta, were growing rich or richer by trading in jute and cotton and other commodities badly needed by the British. But the ladies continued their tea fights and all the white folks had plenty to eat and the war was something that was happening to somebody else. Only General Wavell seemed to take the war seriously. I saw him at tea in Simla. He had just arrived to take over his new job as commander in chief in India and had inspected the northwest frontier. He appeared tired and worried, although he expressed satisfaction at the state of the defense on the frontier. At the moment he was planning occupation of Iran with the Russians.

All of the civil servants and the ladies and gentlemen had moved, as they had done and their fathers and grandfathers and great grandfathers before them, from Bombay to Poona, or from Delhi and Lahore to Simla, to escape the heat. The rajas and maharajas went pigsticking and tiger-shooting and complained of the high cost of maintaining the state armies they contributed to the British defense. They didn't complain too loudly nor too openly. They rule so long as Britain rules. Once India attains independence their days of receiving in taxes their weight in gold are done.

"Try t'get a cab on a night like this. . . ."

From Calcutta it was an overnight hop by KLM airliner into Siam, where a pleasant little people wondered how long they would remain the Land of Muang Thai, or the Land of Free Men. They were over their heads in Jap tourists. A British minister drank his port and coddled his brandy and assured the Thais Britain would fight for Thailand if, if and if. At the same time he sought to interest the U.S.A. in that little country, to which Americans replied that it would be difficult indeed to interest citizens of Minnesota and Iowa and the Dakotas in a war to save Thailand. The war in Thailand wore a puzzled, childish little grin.

Nothing made sense in Singapore. Here was the finest British base in the Far East. But there wasn't a fleet anywhere in sight. We flew over surrounding waters and didn't see any ships, any warships, either. But, of course, in Singapore, they hinted mysteriously that the fleet was somewhere about. Maybe it was. We were eminently unconvinced. And of all the unconvincing characters we met in Singapore the funniest and the most exasperating was the local press-relations officer. For some twenty years he had been a magistrate—in the Fiji Islands. He was a naval reserve officer, a lieutenant commander, and was called to duty recently. As a former magistrate in the Fiji Islands he was, of course, extremely helpful to the foreign press. He didn't know one newspaper from another and the only press association he'd ever heard of was Reuter's. He knew what the BBC was but he'd never heard of CBS or NBC. He dedicated himself to the proposition that no one, absolutely no one, old boy, should find out one damned thing about Singapore. He was eminently successful.

But there were an Australian and an old friend from London named Norman Barrymaine who managed to slip us some information through the Fiji Islander's Maginot Line of silence. From them I learned that Singapore could handle the entire American Far Eastern fleet in the event of war with Japan, that steps had been taken to supply and revictual and refuel our ships in the base. They told me, too, that Singapore is defensively strong enough, now, to thwart any Jap attempt to invade and hold the Malay Peninsula which, if true, means India's flank is protected and that the Dutch East Indies as well as Australia and New Zealand won't find themselves immediately with the war on their doorstep—not without warning, at least.

# The Silent War

Continued from page 15

of the Latin-American countries has been thrilling evidence of what international harmony can accomplish. Disruption of normal markets because of the war shocked the economic systems of the Latin-American countries so badly that in self-preservation they had to sell to whatever buyers presented themselves. Yet they are now making us preferred customers. As a result, we have gained immeasurably in the economic war, have actually won back some of the ground we lost by our slow start.

### Leaks That Must Be Plugged

Japan has been an extremely active and extensive buyer of South America's strategic materials during the past two years. As the United States and the British Empire embargoed a long list of key materials which Japan had been getting, she has turned increasingly to the one big trade area still open to her—Latin America. Her purchases of mica in Brazil jumped from 4 metric tons in 1937 to 624 in 1940, and her takings of quartz crystal more than doubled. She bought nearly twenty times more platinum from Colombia in 1940 than in 1938, more than three times as much lead from Mexico in the first four months of 1941 as she had bought there during the whole of 1939. And before our contract with Mexico, Japan was getting—at bonus prices—quantities of mercury, valuable in fulminates for detonating high explosives, in antifouling paint for ship bottoms, and other basic war purposes.

For Chilean and Peruvian copper, Bolivian and Argentine tungsten, Brazilian and Argentine mica, Brazilian industrial diamonds, Japanese agents have been on the spot eager to top our bids. Japan was buying not only for her own war needs but for Germany. Prior to the war Germany had been taking most of Peru's molybdenum. In 1940 Japan took it.

Although the British blockade has cut off practically all direct trade to Europe we know that critically needed Latin American materials have also been reaching Germany by the Italian airline —Lati—which flies from Brazil, and occasionally by German ships running the blockade. Quartz crystals, industrial diamonds, mica and platinum flown from South America to Italy and Germany have been invaluable to the Axis war effort. By the co-operative contracts with Latin America, many of the leaks have been plugged. But much still remains to be done, especially in preventing the less critical materials from reaching the Axis.

Our program of buying for defense must take into account other commodities which the Axis will buy if we or Britain do not. Not only metals, but lard, castor beans, cottonseed oil—fats and oils of which the Nazis have acute need—have gone from South America to Germany. It may be just as important for us to prevent these products from reaching Germany as it is to prevent her from getting copper.

Japanese purchases of Brazilian castor beans, the source of castor oil, an important lubricant for high-speed engines, rose from 344 metric tons in 1937 to 19,063 in 1940. Her purchases of oil-bearing seeds from Argentina jumped four-hundredfold between 1939 and 1940.

Any oil-yielding product is avidly seized upon by the Germans and immediately turned to use. Peanuts are being carried by plane from Vichy-controlled French West Africa to be pressed into peanut oil to fuel Diesel-motored engines. When we consider that a German submarine can operate for a year on 1,250 tons of peanut oil, we realize the aggressive purposes to which usually inoffensive commodities can be put.

A total effort to hasten the defeat of the Axis powers means plugging all the loopholes through which goods of any kind are reaching them.

Part of our job is to make sure that other free nations get the goods they need to keep their economies functioning. With other sources cut off, the Latin-American nations are especially dependent upon us for products necessary to maintain their economic stability at home, and to produce strategic

materials for us. In the interests of hemisphere protection and development, we must supply them with as much as possible of the goods they need. This is vitally important if they are to supply us with all the raw materials we need.

We want to adopt the principle of the ever-normal granary which we have already successfully used in agriculture. That policy is now enabling us to convert our reserve stocks into an ever-normal food supply for ourselves and for the peoples resisting aggression. In the same way, we aim to build up an ever-normal stock pile of critically needed defense materials, to be used wherever they can be most effective.

### Unity in Economic War

In several ways a good beginning has been made. Our economic defense efforts have needed unified control and a central agency which could work out with Britain and other anti-Axis powers the best use of our combined economic resources. We have needed more singleness of policy within our own government. On July 30th the President established the Economic Defense Board to co-ordinate our international economic activities. Soon afterward, defense production at home was centered under the Supply, Priorities and Allocations Board. The chairmanship of both boards was given to the Vice-President of the United States. On September 15th the President combined the export licensing functions of the Department of State and the former Office of Export Control into one unit and placed them under the administrative direction of the chairman of the Economic Defense Board.

The first job assigned to both boards was to ascertain the maximum possible production of all strategic and critical materials in the United States and in other trade areas still open to us. Possession of this knowledge is fundamental to our entire defense effort. It is one of the ultimate measures of our total strength.

We have already discovered some extraordinary situations. In a Hoboken railroad yard, for example, we found lying in storage thousands of tons of aluminum, tin plate, iron and steel products originally destined, more than a year ago, for shipment to countries now dominated by the Axis. With shortages already apparent in copper, aluminum, tungsten, scrap iron and steel—all vital for defense—we need every ton of such materials anywhere in the country. Our government has the power to take over such stocks and it inten to e that power.

We know that there stances of valuable goods It is up to every America his part to see that all s are made available for de this emergency, when civi to sacrifice, when our y required to serve their co for little pay, we cannot to deprive us of what we they can make big profits who thus speculates with goods is gambling with freedom of all of us. Th Economic Defense Board to the immediate job—the economic power all ove hasten the defeat of the and to strengthen the eco of our friends. It has also the President to work out various departments an postwar economic reconst help find ways to establis prosperous international lationships.

C[o]per likes to box with Terry
o[t]hes being babied by him.

"Don't pull your punches," he tells Terry; but the studio warns, "Go easy during production, because a broken nose or a blackened eye is a serious obstacle in the middle of a picture."

"Once Coop caught me faking my punches," Terry grins, "and he raised the devil. He said a few uncomplimentary things and I got mad and let go a hard one. It caught him right in the eye! But the gods were kind—that night the film technicians called a strike and by the time it was over Gary's eye was back to normal."

The newer screen personalities are just as intimate with Terry as the older ones and he's right proud of his "babies" but permits no breaking of rigid training rules. That's why he visits the night clubs once or twice a week and sends his patients home where they belong. When Terry undertakes a job, he sees it through, and no highballs, French fried potatoes or midnight hours are going to interfere with his work. Moreover, he can train them up or down—whatever the script demands.

When Metro-Goldwyn-Mayer was preparing to make The Crowd Roars, Robert Taylor was assigned the stellar role of the brilliant young runner-up for top fistic honors; William Gargan awarded the part of the aging champion whom Taylor defeats for the crown. Now, as it happened, Taylor was underweight and didn't look like a ring monarch, while Gargan was so heavy, he didn't even give the appearance of an *aging* champion.

M-G-M sent for Terry. He took both men to his club, went to work on them. He put fifteen pounds on Taylor, tautened his muscles and entire frame, brought him right into the pink, so that he looked every inch a champion. He took a like amount of weight off Gargan, working especially on the rubber tire around his midsection, to reveal the nice, clean, fighting frame that Bill naturally possesses. Terry is particularly proud of his work with Gargan. After

## ALDER GULCH

**BEGINS IN NEXT WEEK'S COLLIE S**

thinning down to proper weight, adding vitality, verve, and "oomph" to his personality, he became a star in pictures like Cheers for Miss Bishop, Mr. and Mrs. Turp Call On the President, and other vehicles.

It is a truism that most of the mature stars in pictures look at least ten years younger than their actual age. The reason for this is that they keep their waistlines slim, their shoulders straight, and their hips normal. It is Terry's specialty to aid them in achieving this ideal appearance.

Terry is just as popular with the ladies as he is with the men. Many of filmdom's most glittering "names" are faithful daily attendants at his popular health emporium.

"Five years or so ago," Terry explains, "if a star was genuinely well-established, there was no need for her to worry about a little weight. When the time drew near, her director would say to her, 'You'd better lose about ten pounds, hon, we're starting the picture in three weeks.' Whereupon the star would drag out her favorite diet and drop the unwanted poundage.

### It's Good for Spirit, Too

"But competition for choice film roles is infinitely more keen nowadays. When word leaks out that a studio has purchased a popular story, there's a mad scramble to try out for the plum part. Tests are likely to start at any time, and there is no extended period allowed for convenient conditioning. If an actress is to win, she must be ready at a moment's notice. If she isn't—well, it's just too bad."

Terry not only trims down figures, he trims up spirits. Patricia Morison, as the most promising of Paramount's Golden Circle players, started off with a bang and then started slipping. The whispering campaign started. *Patricia was too fat.* Pat was a little overweight, but more than that, she had lost her fighting spirit. Terry took her in hand and put her through her paces. She lost a few pounds and picked up a lot of spunk.

Conditioning star mothers is a specialty with Terry. Irene Hervey, Margaret Sullavan, Norma Shearer, Mary Astor, Virginia Bruce, Anne Shirley, Lily Damita, all have found new figures and new faith at Terry's.

"During their period of retirement from the screen, they pamper themselves so that when they attempt to return to work they are timid," Terry explains. "They have to learn to take it all over again.

"To a degree, you've got to have a bedside manner in this business," Terry admits. "Stars are emotional, temperamental, overimaginative and hypersensitive. While most of them are quite egotistical where their w cerned, they resent being star in a place like mine pleasant, casual camarad fawning or extravagant con other words, they want t feel like ordinary human b of something ultrapreciou in a velvet setting.

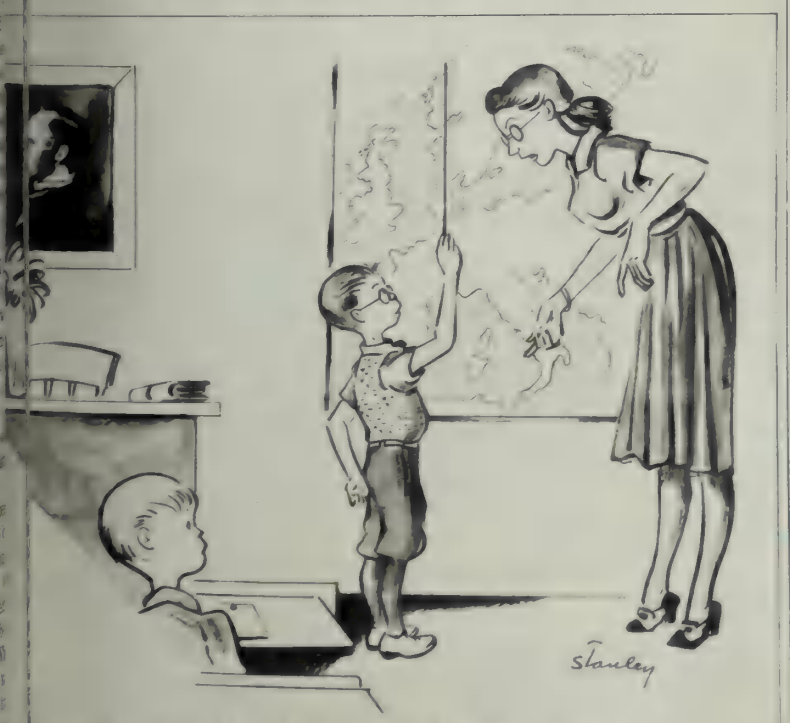
[He]Poirot said:



"It as not my part to accept the
o*others*. I had to examine
er[y] for *myself*. To examine the
ho[w] to satisfy myself that the
op[en] of the case accorded itself with them. To do this I went over the police files carefully and I also succeeded in getting the five people who were on the spot to write me out their own accounts of the tragedy. These accounts were very valuable, for they contained certain matter which the police files could not give me—that is to say: A, certain conversations and incidents which, from the police point of view, were not relevant; B, the opinions of the people themselves as to what Caroline Crale was thinking and feeling (not admissible legally as evidence); C, certain facts which had been deliberately withheld from the police.

"I was in a position now to judge the case for *myself*. There seems no doubt whatever that Caroline Crale had ample motive for the crime. She loved her husband, he had publicly admitted that he was about to leave her for another woman, and by her own admission she was a jealous woman.

"To come from motives to means—an empty scent bottle that had contained coniine was found in her bureau drawer. There were no fingerprints upon it but hers. When asked about it by the police she admitted taking it from this room we are in now. The coniine bottle here also had her fingerprints upon it. I questioned Mr. Meredith Blake as to the order in which the people left this room on that day, for it seemed to me hardly conceivable that *anyone* should be able to help himself to the poison while five people were in the room.

"The people left the room in this order: Elsa Greer, Meredith Blake, Angela Warren and Philip Blake, Amyas Crale, and lastly Caroline Crale. Moreover, Mr. Meredith Blake had his back to the room while he was waiting for Mrs. Crale to come out, so that it was impossible for him to see what she was doing. She had, that is to say, the opportunity. I am therefore satisfied that she did take the coniine. There is indirect confirmation of it.

"Mr. Meredith Blake said to me the other day: 'I can remember standing here and smelling the jasmine through the open window.' But the month was September, and the jasmine creeper outside that window would have fin-

*Made to stay brighter longer*

ished flowering. It is the ordinary jasmine which blooms in June and July. But the scent bottle found in her room and which contained the dregs of coniine had originally contained jasmine scent. I take it as certain, then, that Mrs. Crale decided to steal the coniine, and surreptitiously emptied out the scent from a bottle she had in her bag.

"I tested that a second time the other day when I asked Mr. Blake to shut his eyes and try and remember the order of leaving the room. A whiff of jasmine scent stimulated his memory immediately. We are all more influenced by smell than we know.

"So we come to the morning of the fatal day. So far the facts are not in dispute. Miss Greer's sudden revealing of the fact that she and Mr. Crale contemplate marriage, Amyas Crale's confirmation of that, and Caroline Crale's deep distress. None of these things depend on the evidence of one witness only.

"On the following morning there is a scene between husband and wife in the library. The first thing that is overheard is Caroline Crale saying, 'You and your women!' in a bitter voice and finally going on to say, 'Some day I'll kill you.' Philip Blake overheard this from the hall. And Miss Greer overheard it from the terrace outside.

"She then heard Mr. Crale ask his wife to be reasonable. And she heard Mrs. Crale say, 'Sooner than let you go to that girl—I'll kill you.' Soon after this, Amyas comes out and brusquely tells Elsa Greer to come down and pose for him. She gets a pull-over and accompanies him.

"There is nothing so far that seems psychologically incorrect. Everyone has behaved as he or she might be expected to behave. But we come now to something that *is* incongruous.

"Meredith Blake discovers his loss, telephones his brother. They meet down at the landing stage and they come up past the Battery Garden, where Caroline Crale is having a discussion with her husband on the subject of Angela's going to school. Now, that does strike me as very odd. Husband and wife have a terrific scene, ending in a distinct threat on Caroline's part, and yet, twenty minutes or so later, she goes down and starts a trivial domestic argument."

POIROT turned to Meredith Blake: "You speak in your narrative of certain words you overheard Crale say. These were: 'It's all settled—I'll see to her packing.' That is right?"

Meredith Blake said, "It was something like that—yes."

Poirot turned to Philip Blake. "Is your recollection the same?"

The latter frowned. "I didn't remember it till you say so, but I do remember now. Something *was* said about packing!"

"Said by Mr. Crale—not Mrs. Crale?"

"Amyas said it. All I heard Caroline say was something about its being very hard on the girl. Anyway, what does all this matter? We all know Angela was off to school in a day or two."

Poirot said: "You do not see the force of my objection. Why should *Amyas Crale* pack for the girl? It is absurd, that! There was Mrs. Crale, there was Miss Williams, there was a housemaid. It is a woman's job to pack—not a man's."

"What does it matter?" Philip Blake said impatiently. "It has nothing to do with the crime."

"You think not? For me, it was the first point that struck me as suggestive. And it is immediately followed by another. Mrs. Crale, a desperate woman, brokenhearted, who has threatened her husband a short while before and who is certainly contemplating either suicide or murder, now offer amicable manner to bring down some iced beer."

Meredith Blake said sl isn't odd if she was conten der. Then, surely, it is j *would* do. Dissimulate!"

"You think so? She h poison her husband; she h the poison. Her husband k of beer down in the Bat Surely, if she has any inte she will put the poison in bottles at a moment whe one about."

MEREDITH BLAKE ob couldn't have done body else might have dru

"Yes, Elsa Greer. Do that having made up her der her husband, Caroline have scruples against ki too?

"But let us not argue th us confine ourselves to f Crale says she will send down some iced beer. Sh the house, fetches a bottle servatory, where it was ke it down to him. She pou gives it to him. Amyas C off and says, 'Everything t day.'

"Mrs. Crale goes up house. She has lunch and as usual. It has been sai she looks a little worrie cupied. That does not hel is no criterion of behavio derer. There are calm m excited murderers.

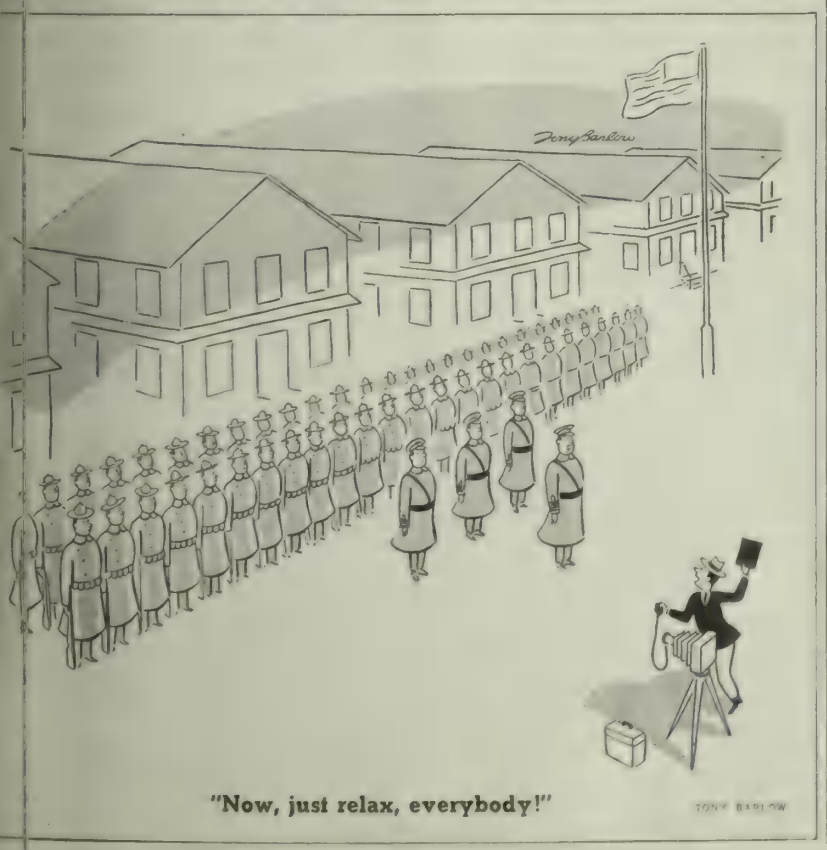
line Crale's last letter, the shadows were deepening in the corners of the room. Carla had a sudden feeling of someone in the room, gathering shape, listening, breathing, waiting. She thought: "*She's* here—my mother's here. Caroline—Caroline Crale is *here* in this room!"

Hercule Poirot's voice ceased. He said:

"You will all agree, I think, that that is a very remarkable letter. A beautiful letter, too, but certainly remarkable. For there is one striking omission in it—it contains no protestation of innocence."



Angela Warren said without turning her head, "That was unnecessary."

"Yes, Miss Warren, it was unnecessary. Caroline Crale had no need to tell her sister that she was innocent, because she thought her sister knew that fact already—knew it for the best of all reasons. All Caroline Crale was concerned about was to comfort and reassure and to avert the possibility of a confession from Angela. She reiterates again and again—'*It's all right, darling; it's all, all right.*'"

ANGELA WARREN said: "Can't you understand? She wanted me to be happy, that is all."

"Yes, she wanted you to be happy, that is abundantly clear. It is her one preoccupation. She has a child, but it is not that child of whom she is thinking—that is to come later. No, it is her sister who occupies her mind to the exclusion of everything else. Her sister must be reassured, must be encouraged to live her life, to be happy and successful. And so that the burden of acceptance may not be too great, Caroline includes that one very significant phrase: '*One must pay one's debts.*'

"That one phrase explains everything. It refers explicitly to the burden that Caroline has carried for so many years, ever since, in a fit of uncontrolled adolescent rage, she hurled a paperweight at her baby sister and injured that sister for life. Now, at last, she has the opportunity to pay the debt she owes. And if it is any consolation, I will say to you all that I earnestly believe that in the payment of that debt Caroline Crale did achieve a peace and serenity greater than any she had ever known. Because of her belief that she was paying that debt, the ordeal of trial and condemnation could not touch her. It is a strange

thing to say of a condemned murderess —but she had everything to make her happy. Yes, more than you imagine, as I will show you presently.

"See how, by this explanation, everything falls into its place where Caroline's own reactions are concerned. Look at the series of events from her point of view. To begin with, on the preceding evening, an event occurs which reminds her forcibly of her own undisciplined girlhood. Angela throws a *paperweight* at Amyas Crale. That, remember, is what she herself did many years ago. Angela shouts out that she wishes Amyas was dead.

"Then, on the next morning, Caroline comes into the little conservatory and finds Angela tampering with the beer. Remember Miss Williams' words: 'Angela was there. She looked guilty. . . .' Guilty of playing truant was what Miss Williams meant; but to Caroline, Angela's guilty face, as she was caught unawares, would have a different meaning. Remember that on at least one occasion before Angela had put things in Amyas' drink. It was an idea which might readily occur to her.

"Caroline takes the bottle *that Angela gives her* and goes down with it to the Battery. And there she pours it out and gives it to Amyas, and he makes a face as he tosses it off and utters those significant words: 'Everything tastes foul today.'

"Caroline has no suspicions then, but after lunch she goes down to the Battery and finds her husband dead—and she has no doubts at all but that he has been poisoned. *She* has not done it. Who, then, has? And the whole thing comes over her with a rush: Angela's threats, Angela's face stooping over the beer and caught unawares—guilty—guilty—guilty. Why has the child done it? As a revenge on Amyas, perhaps not meaning to kill, just to make him ill or sick? Or has she done it for her, Caroline's, sake? Has she realized and resented Amyas' desertion of her sister.

"Caroline remembers—oh, so well—her own undisciplined violent emotions at Angela's age. And only one thought springs to her mind: How can she protect Angela? Angela handled that bottle —Angela's fingerprints will be on it. She quickly wipes it and polishes it. If only everybody can be got to believe it is suicide. If Amyas' fingerprints are the only ones found. She tries to fit his dead fingers round the bottle—working desperately, listening for someone to come. . . .

"Once take that assumption as true and everything from then on fits in. Her anxiety about Angela all along, her insistence on getting her away, keeping her out of touch with what was going on. Her fear of Angela's being questioned unduly by the police. Finally her overwhelming anxiety to get Angela out of England before the trial comes on. Because she is always terrified that Angela might break down and confess."

SLOWLY, Angela Warren swung around. Her eyes, hard and contemptuous, ranged over the faces turned toward her.

She said: "You're blind fools—all of you. Don't you know that if I had done it I *would* have confessed? I'd never have let Caroline suffer for what I'd done. Never!"

"But you did tamper with the beer," Poirot said.

"I? Tamper with the beer?"

Poirot turned to Meredith Blake. "Listen, monsieur. In your account here of what happened you describe having heard sounds in this room, which is below your bedroom, on the morning of the crime."

Blake nodded. "But it was only a cat."

"How do you know it was a cat?"

"I—I can't remember. But it was a cat. I am quite sure it was a cat. The window was open just wide enough for a cat to get through."

"But it was not fixed in that position. The sash moves freely. It could have been pushed up and a human being could have got in and out."

"Yes, but I know it was a cat."

"You did not *see* a cat?"

Blake said perplexedly and slowly, "No, I did not see it—" He paused, frowning. "And yet I know."

"I will tell you *why* you know presently. In the meantime I put this point to you: Someone could have come up to the house that morning, have got into your laboratory, taken something from the shelf and gone again without your seeing him or her. Now, if that someone had come over from Alderbury it could not have been Philip Blake, nor Elsa Greer, nor Amyas Crale, nor Caroline Crale. We know quite well what all those four were doing. That leaves Angela Warren and Miss Williams.

"Miss Williams was over here—you actually met her as you went out. She told you then that she was looking for Angela. Angela had gone bathing early, but Miss Williams did not see her in the water, nor anywhere on the rocks. She could swim across to this side easily—in fact, she did so later in the morning when she was bathing with Philip Blake. I suggest that she swam across here, came up to the house, got in through the window and took something from the shelf."

ANGELA WARREN said, "I did nothing of the kind—not at least—"

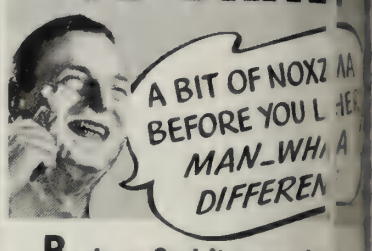
"Ah!" Poirot gave a yelp of triumph. "*You have remembered.* You told me —did you not?—that to play a malicious joke on Amyas Crale you pinched some of what you called 'the cat stuff'—that is how you put it—"

Meredith Blake said sharply, "Valerian! Of course."

"Exactly. *That* is what made you sure in your mind that it was a cat who had been in the room. Your nose is very sensitive. You smelled the faint, unpleasant odor of valerian without knowing, perhaps, that you did so, but it suggested to your subconscious mind 'cat'. Cats love valerian and will go anywhere for it. Valerian is particularly nasty to taste, and it was your account of it the day before which made mischievous Miss Angela plan to put some in her brother-in-law's beer, which she knew he always tossed down his throat in a draught."

Angela Warren said wonderingly: "Was it really that day? I remember taking it perfectly—yes, and I remember putting it in the beer and Caroline coming in and nearly catching me! Of course I remember. . . . But I've never connected it with that particular day."

"Of course not, because there was no connection *in your mind.* The two events were entirely dissimilar to you. One was on a par with other mischievous pranks, the other was a bombshell of tragedy arriving without warning and succeeding in banishing all lesser incidents from your mind. But me, I noticed when you spoke of it that you said, 'I pinched, etc., etc., *to put* it in Amyas' drink.' You did not say you had actually *done* so."



"No, because I never did. Caroline came in just when I was unscrewing the bottle. Oh!" It was a cry. "And Caroline thought—she thought it was *me!*"

She stopped. She looked around. She said quietly in her usual cool tones, "I suppose you all think so too."

She paused and then said, "*I didn't kill Amyas.* Not as the result of a malicious joke nor in any other way. If I had I would never have kept silence."

Miss Williams said sharply, "Of

d, I think, make an effort not to oiled with Elsa to begin with. ed her what kind of man he she would not take warning. d on to her fate. And to a man like Crale, women were fair game. If you had asked him, he would have said easily that Elsa was young—she'd soon get over it. That was the way Amyas Crale's mind worked.

"His wife was actually the only person he cared about at all. He wasn't worrying much about her. She only had to put up with things for a few days longer. He was furious with Elsa for blurting out things to Caroline, but he still optimistically thought it would be 'all right.' Caroline would forgive him as she had done so often before, and Elsa—Elsa would just have to 'lump it.' So simple are the problems of life to a man like Amyas Crale.

"BUT I think that that last evening he became really worried. About Caroline, not about Elsa. Perhaps he went to her room and she refused to speak to him. At any rate, after a restless night he took her aside after breakfast and blurted out the truth. He had been infatuated with Elsa, but it was all over. Once he'd finished the picture he'd never see her again.

"And it was in answer to that that Caroline Crale cried out indignantly, 'You and your women!' That phrase, you see, put Elsa in a class with others —those others who had gone their way. And she added indignantly, 'Some day I'll kill you.'

"She was angry, revolted by his callousness and by his cruelty to the girl. When Philip Blake saw her in the hall and heard her murmur to herself, 'It's too cruel!' it was of Elsa she was thinking.

"As for Crale, he came out of the library, found Elsa with Philip Blake and brusquely ordered her down to go on with the sitting. What he did not know was that Elsa Greer had been sitting just outside the library window and had overheard everything. And the account she gave later of that conversation was not the true one. There is only her word for it, remember.

"Imagine the shock it must have been to her to hear the truth, brutally spoken!

"On the previous afternoon Meredith Blake has told us that while he was waiting for Caroline to leave this room he was standing in the doorway with his back to the room. He was talking to Elsa Greer. That means that she would have been *facing* him and that *she* could see exactly what Caroline was doing over his shoulder—and that she *was the only person who could do so.*

"She saw Caroline take that poison. She said nothing, but she remembered it as she sat outside the library window.

"When Amyas Crale came out she made the excuse of wanting a pull-over and went up to Caroline Crale's room to look for that poison. Women know where other women are likely to hide things. She found it and, being careful not to obliterate any fingerprints or to leave her own, she drew off the fluid into a fountain-pen filler.

"Then she came down again and went off with Crale to the Battery Garden. And presently, no doubt, she poured

ON THE ALKALINE SIDE

Your Own Railroad Empire IN MINIATURE

Fun gets the "high ball" when you have a true-to-life setting like this for your trains. And with Skyline Scenery—Model Buildings and Scenic Backgrounds —it's easy and surprisingly inexpensive to achieve. Here are authentic scale models of stations, interlocking towers, homes and a variety of other buildings to place beside your tracks—broad sweeping panoramas of city and country-side for your backgrounds. In short, here's everything that's needed. Skyline Model Buildings come in inexpensive kits, quick and simple to put together. The Backgrounds in full color, each 2 x 6 feet, may be had in four beautiful and realistic scenes. See Skyline at your favorite hardware or department store. Send 3c stamp for illustrated folder.

"How I Grew Wealthy OVERNIGHT"

"Home and the dinner table held an extra kick that night. I sat there feeling a lot more self-confident, knowing that I had created —in a single day—a life insurance estate sufficient to afford *real* protection for *each of the most important people in my life.*"

*Secure our booklet, "So their Income is Certain", from the representative who calls on you, or receive it from one of them by writing to the address below.*

The Mutual Life Insurance Company OF NEW YORK

"FIRST IN AMERICA"

LEWIS W. DOUGLAS, PRESIDENT — 34 NASSAU STREET • NEW YORK CITY

him out some beer and he tossed it down in his usual way.

"Meanwhile, Caroline Crale was seriously disturbed. When she saw Elsa come up to the house (this time really to fetch a pull-over), Caroline slipped quickly down to the Battery Garden and tackled her husband. What he is doing is shameful! She won't stand for it! It's unbelievably cruel and hard on the girl! Amyas, irritable at being interrupted, says it's all settled—when the picture is done he'll send the girl packing! *'It's all settled—I'll send her packing, I tell you!'*

"AND then they hear the footsteps of the two Blakes, and Caroline comes out and, slightly embarrassed, murmurs something about Angela and school and having a lot to do, and by a natural association of ideas the two men judge the conversation they have overheard refers to *Angela* and 'I'll send her packing' becomes 'I'll see to her packing.'

"And Elsa, pull-over in hand, comes down the path, cool and smiling, and takes up the pose once more.

"She has counted, no doubt, upon Caroline's being suspected and the coniine bottle being found in her room. But Caroline now plays into her hands completely. She brings down some iced beer and pours it out for her husband.

"Amyas tosses it off, makes a face and says, 'Everything tastes foul today.'

"Do you not see how significant that remark is? *Everything tastes* foul? Then there has been something else *before* that beer that has tasted unpleasant and the taste of which is *still in his mouth.* And one other point: Philip Blake speaks of Crale's staggering a little and wonders 'if he has been drinking.' But that slight stagger was the *first sign of the coniine working,* and that means *that it had already been administered to him some time before Caroline brought him the iced bottle of beer.*

"And so Elsa Greer sat on the gray wall and posed and, since she must keep him from suspecting until it was too late, she talked to Amyas Crale brightly and naturally. Presently she saw Meredith on the bench above and waved her hand to him and acted her part even more thoroughly for his behalf.

"And Amyas Crale, a man who detested illness and refused to give in to it, painted doggedly on till his limbs failed and his speech thickened, and he sprawled there on that bench, helpless, but with his mind still clear.

"The bell sounded from the house and Meredith left the bench to come down to the Battery. I think in that brief moment Elsa left her place and ran across to the table and dropped the last few drops of the poison into the beer glass that held that last innocent drink. (She got rid of the dropper on the path up to the house, crushing it to powder.) Then she met Meredith in the doorway.

"There is a glare there coming in out of the shadows. Meredith did not see very clearly—only his friend sprawled in a familiar position and saw his eyes turn from the picture in what he described as a malevolent glare.

"How much did Amyas know or guess? How much his conscious mind knew we cannot tell, but his hand and his eye were faithful."

*Hercule Poirot gestured toward the picture on the wall.*

"I should have known when I first saw that picture. For it is a very remarkable picture. It is the picture of a murderess painted by her victim—it is the picture of a girl watching her lover die. . . ."

IN THE silence that followed—a horrified, appalled silence—the sunset slowly flickered away, the last gleam left the window where it had rested on the dark head and pale woman sitting there.

Elsa Dittisham moved She said: "Take them awa Leave me with M. Poirot."

She sat there motionles door shut behind them. Th "You are very clever, aren'

Poirot did not answer.

She said, "What do you to do? Confess?"

He shook his head.

"Because I shall do not kind!" Elsa said. "And I nothing. But what we sa gether, does not matter. I only your word against mi

"Exactly."

"I want to know what yo to do."

Hercule Poirot said. " everything I can to induce ties to grant a posthumous to Caroline Crale."

Elsa laughed. "How a said. "To be given a free something you didn't do." said, "What about me?"

"I shall lay my conclus the necessary people. If there is the possibility of n case against you, then they will tell you in my opinion sufficient evidence—there ferences, not facts. Moreov not be anxious to proceed one in your position unl ample justification for suc

ve rgets! Real situations!" cries ct . "What I want to do is put it gether and see how it works." se is starting his fifteenth year ich and high-school principal at on . During this period his foot- ar have won 130 games, lost 27, and tied six. Rusty is a tall, bespectacled fellow whom you'd probably mistake for a college professor.

Russell has worn the same brown suit to games for the last half dozen or so seasons. The suit fits Rusty a little close in spots, which may have prompted the remark of a Dallas fan that the Mason coach "looks country as a coon."

Russell appears slight in his clothes. He is considerably thinner than when he played end in spectacular fashion for Howard Payne College during the years immediately before and after the World War.

Rusty was a junior when the United States entered the war in 1917. He enlisted promptly and served with the 90th Division in France. At the battle of St. Mihiel, Rusty's outfit was under a gas barrage for two days. The gangling, redheaded boy spent the last months of the war in a French hospital. After being discharged from the Army, Russell got a job with an oil-well supply company in the west Texas oil fields. It looked as if he were through with football. But after a year under the Texas sun his lungs had healed. He returned to Howard Payne and played enough end to earn a place on the all-conference team.

Opposing coaches complain that the Masons have an immense psychological advantage. It's hard to work up a mad against the polite Home kids. Every one of the boys is a perfect sport. A Mason picks you up—after he has knocked your fillings loose.

The Masons earned their "Mighty Mites" title back in '38 when they were a tempestuous gang of welterweight lateralists. Since then some critics argue that they've become too uniformly husky for such a nickname.

In '38 Dallas Highland Park had its best football team. But the Masons, outweighed fifteen pounds to the man and with only a couple of reserves, whipped the Highlanders twice, once in an early-season practice game and again in a December championship thriller before 25,000, with Moses on the bench howling like a coyote in pokeberry time.

Around 120,000 fans saw the Mighty Mites that year. They tossed forward passes and multilaterals through the baffled ranks of bigger foes and went to the state semifinals.

### They're Off Again

From '29 until the final game of the '33 season the Masons went unbeaten by a high-school team (they dropped one decision, 6-7, to a junior-college squad). In '31, the school, while going unbeaten and winning a regional Class B championship, scored 425 points. In '32, the Masons were admitted to Class AA division of the Interscholastic League. They went to the state finals, where they played a scoreless tie with Corsicana on a snow-covered field.

After '32, the Masons never managed to reach the state finals again. They were braked somewhere along the line by tough squads from Lubbock and Amarillo, and, on two occasions, by Dallas teams. The Home's other district titles came in '34, '35, '38, '39 and last season. And as this is written they have won their first six games this season.

Team physician for the Masons is Dr. E. P. Hall, a stern-faced, warm-hearted old fellow, who has been sitting on Home football benches and caring for Home athletes since the season of 1900.

Somewhat grumpy around the kids, Doc Hall praises them lavishly when

"This is the Plan for Us!...WE PAY LESS PER MONTH BECAUSE THE TOTAL COST IS LOWER!"

There may be more than one way to save money when you buy a car on time — but the surest way is for you to get the lowest financing cost you can find. And the GMAC Figuring Chart will help you find it . . .

This simple chart gives you all the facts about financing in dollars and cents . . . shows you exactly what you get for what you pay. In just a few minutes you can figure the cost of your entire deal—*before* you buy!

You'll find that the helpful, friendly General Motors Instalment Plan offers a surprisingly low financing cost . . . one that means low monthly payments for you. And notice, too, that this plan includes broad insurance protection for your car.

But see for yourself just where and how you can save! Send the coupon for your Figuring Chart today!

they're not in earshot. Once someone remarked to Doc Hall that "most of the Mason footballers looked enough alike to be brothers."

"Well," replied Doc, "they don't look alike no more than any other bunch of boys. It's true that we've got a lot of cotton-headed kids and they're usually pretty well sun-tanned. But they don't look especially alike. They've just got such similar and pleasing ways that you get them mixed up."

Doc Hall has the happy memory of hundreds and hundreds of boys back through the forty-one years. But he seems able to remember almost any of them you can mention.

Doc Hall hopes to make it fifty years on the Mason bench. "If I ever retire, they can have all of my pr my work at the Home. I stay with those kids until I

## Fighting Wings for Norway

Continued from page 53

The boys escaping from Norway began to come. One group of young aviators in Norway rowed out to four Heinkel bombing seaplanes as they rode at anchor in ■ fjord, clambered aboard and took off while the Nazi pilots drank coffee ashore. They flew to the Shetland Islands, sailing down amid the screaming of British sirens and guns ready to burst into action.

Major Reistad told of three boys:

"They calked up a leaky old sailboat, really an impossible boat. They struck out into the North Sea. There were bad storms. Three times the boat —how do you say it, the sail in the water?—capsized, ya. It had ■ heavy iron keel and righted itself, but three times they were thrown far out in the sea. They had tied themselves to the boat with ropes and pulled themselves back hand-over-hand."

Two boys, with six dollars, bought a leaky old rowboat and some bread. They calked the seams. Rowing at night and sleeping by day in fjords, finally striking out to sea, guided by a pocket compass, they reached the tiny Shetland Islands, an amazing feat of navigation.

Twenty fliers are from Norwegian whalers in the Antarctic. Whole ships' crews have volunteered and been turned down, because Norway cannot afford to weaken her merchant marine. It is now her sole support. The money it makes pays the entire expenses of the Norwegian government-in-exile, of the Norwegian navy and of the air force in Canada.

That is why Major Reistad and other exiled leaders carry Norway's future. Will Norway have anything left after the war? Her merchant fleet is the only source of wealth, the only nucleus she can build on. From 60 to 70 per cent of it is under British charter and sailing continuously through the danger zone, and Churchill has said that it has done more for Britain "than a million well-equipped soldiers."

But the merchant fleet is continuously being sunk, and ■ thousand sailors have been killed. And the frightening thing to the Norwegians is that they have no place to rebuild ships, as Britain and the United States have. The goose that lays the golden eggs is shrinking.

With protective sternness, Major Reistad told of the exhaustion of the Norwegian sailors, exiled wanderers who can never see home. You can feel at once his affection and concern for every sailor and all his own men. He does not drink or smoke. He is a formidable athlete, having won the 1928 Olympic ski-jumping championship; and he has Norwegian national championships in running, broad and high jumping, javelin and discus throwing and swimming.

When I left he said:

"Tell the American-No help us. We looked to th did not do much. They cal 'Sons of Norway' and tal Viking spirit. But you car be a son when you see Nor and being wiped out, and

n at two hundred feet. There were locked fenders and smashed radiators for a mile. Now they make them stay up 2,500 feet."

In fact so many Canadian girls have married Norwegian fliers that Major Reistad has had to issue a public warning:

"I wish to ask the Canadian women to think the matter well over before they marry a Norwegian . . . When we return to Norway we go to a country on the verge of ruin, where the Germans have taken everything . . . The standard of living will be so reduced that one must be a Norwegian to stand the strain . . . The Canadian women are used to an abundance here and may repent their decision bitterly. On the other hand, of course, such great love may exist."

This last sentence, of course, no army officer in the world except a Norwegian could possibly have uttered.

### At the Top of the Class

The last evening, I spent with Lieutenant X.—a slight young man with blue eyes in his thin, tanned face and a salient nose. He was shot down twice in Norway.

In the dining room of the hotel, he hastened to pull out my chair. "As we say, 'Please excuse my Norwegian manners,'" he said, and explained (what I knew already) that in Norway women are so accepted as friendly equals that men forget to jump around for them much.

He told me how Major Reistad, when he leaves his lodgings in the morning to go to the office headquarters three or four miles away, runs instead of walking. "The policemen wonder, 'Is it a fire?' People in cars ask him if he wants a ride. They would all be surprised if they knew he was the Commander of the Royal Norwegian Air Force and just must get some exercise. He is the kind of man who has so much energy you have to put big stones on his chest to make him sleep."

He tells of the Norwegian fliers in their intermediary school, where they are trained with Canadian and British fliers. "In grading one class, the five best were Norwegians."

He says gently: "I would not think we deserved anything, if Norway had not been generous to other countries. She gave fifty-three million Kronen to Finland. That is about ten dollars apiece. Then Nansen's work repatriating prisoners after the last war—that was the greatest humanitarian work of a whole century.

"The boys get thirty dollars a month, but many give fifteen of that to buy new planes for Norway."

Then it was after midnight and I had to start driving for Minnesota.

"How far is it?"

"A thousand miles."

"Oh, my . . . How fast do you go?"

"Sometimes about seventy miles an hour."

He looked almost shocked at the thought, this young man with his Odyssey of wild sky-catapulting, tempest-piercing danger, with all these months of anguish and patience.

At home in peaceful Minnesota you hardly ever see a soldier or even a policeman. But everybody is pretty blue about the draft. "You lose out on a whole college year." "Say that a guy has got a little business started—it's the most important year of his life."

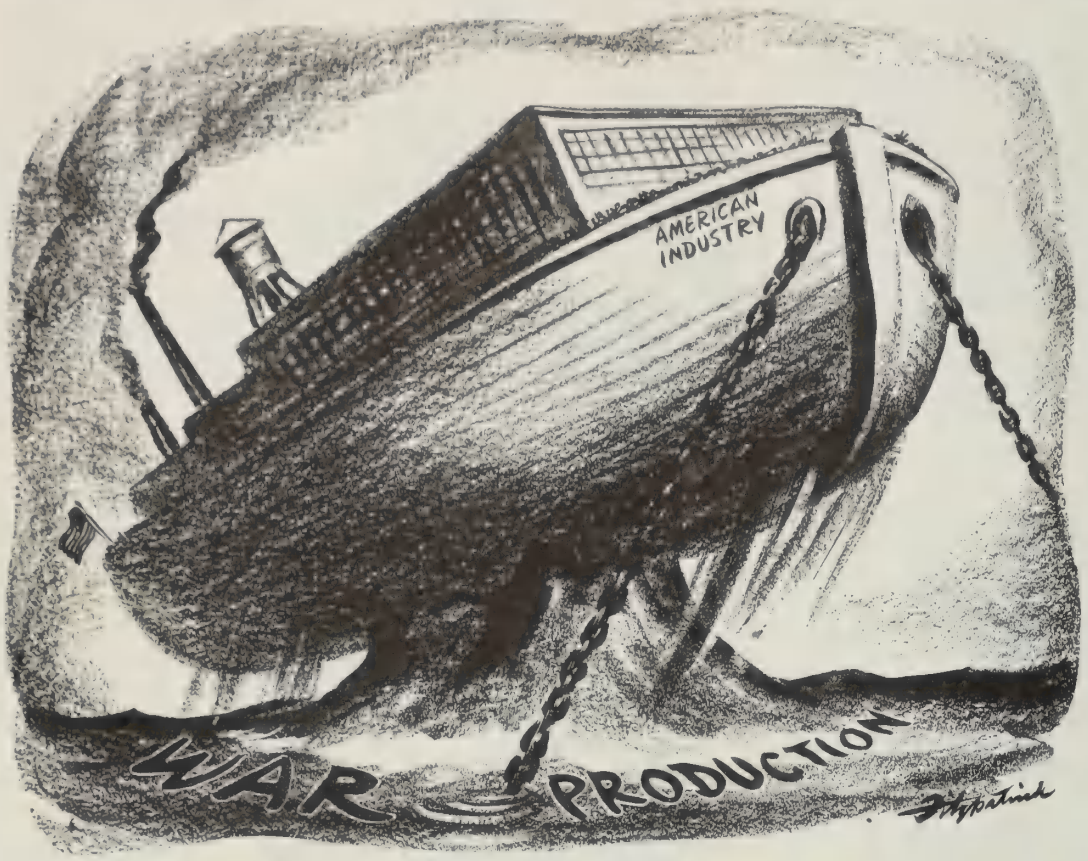
It is nobody's fault—the difference in feeling between exiled Norwegians and Americans who have never been exiled. Human beings lack imagination. We are all heroes when our own children are suffering. But only a Shelley or a St. Francis or a Nansen can feel generous heroism, can act and help, when the suffering is very far away.

"So you operate a COMPTOMETER? Lucky you!"

"I guess the Comptometer is like home — you don't appreciate either one until you get away from it!

"For instance, when I was operating a Comptometer, I didn't realize what a wonderful device that Controlled-Key safeguard really is. Just think — every time I 'fumbled' a key stroke, or didn't depress the key fully, the keyboard locked! And it didn't take more than a split second to correct the faulty stroke and go right ahead with the calculation!

"But now I'm working with another machine — and it doesn't have any such *operator-protection*, because the Controlled-Key is exclusive with Comptometer. So now I make more errors . . . and, of course, the Boss doesn't blame the machine. *He blames me!*



"And not only do I have to 'take the rap' for this other machine, but it's harder on my eyes and nerves! It doesn't have Comptometer's no-glare 'windows' on the answer dials. It doesn't have the Comptometer's feather-light, silent key stroke, and loads of other Comptometer features that protect the operator!

"So the next time the Boss blames *me* for an operating error that the Controlled-Key would have prevented, or complains about my taking too much time on a figure-work job, I'm going to tell him to go read a Comptometer advertisement!

"Especially that part where it says: *Telephone your local Comptometer Co. man for an on-your-work demonstration . . . or write direct to Felt & Tarrant Mfg. Co., 1714 North Paulina Street, Chicago, Illinois.*"

## Business and the Peace

WE SECOND the motion framed in these words by President Charles E. Wilson of General Electric in our colleague, The American Magazine:

I propose that we hold a Congress of this American Free Enterprise System, to be convened late this fall or winter. This would be a sort of a constitutional convention to draw up new, self-imposed rules for industrial and commercial progress, acceptable to the majority of our people.

The Congress should include representatives of industry, of agriculture, of the labor unions, of finance and commerce.

The general purpose would be to build a reservoir of distribution, and employment; and to make plans for releasing this reservoir, in increasing volume, when and as military expenditure falls off.

Mr. Wilson is thinking of the end of the war, whenever it comes, and the sudden slump expected then. He frankly fears that, unless private free enterprise in the democracies can somehow keep enough wheels turning through the slump, government will step in and take over the job. That will mean state socialism, which is another name for the totalitarianism which the democracies are now fighting.

We think this congress had better be held; and that it should be no halfhearted affair engineered by platitude peddlers and attended chiefly by stuffed shirts. The postwar period promises to put free enterprise to its supreme test, especially in the United States.

The potential lifesaver for American free enterprise may be found in this proposed industrial congress. At least it had better be given a tryout—unless American free enterprise, as some suspect, is supinely asking for the deathblow which its enemies are anxious to hand it. Nobody is going to fight for it unless it shows signs of fighting for itself.

## Common Sense about Russia

FOR all the myriad words printed and spoken up to now about American and British obligations toward Russia in the fight against Hitler, we think Winston Churchill's remarks of last June 22d, the day Hitler attacked Russia, are still the most sensible.

What Churchill said was that the Hitler onslaught had changed none of the Communist leopard's spots, but that an ally is an ally, and that Churchill intended to help his new ally as best he could. And that seems to us the long and the short of it.

By surprising all the topflight experts, including Hitler himself, with the magnitude of its armaments and the strength of its resistance, Russia gave Britain and its friends a priceless snatch of time to strengthen their own defenses, step up production, and pile up offensive weapons. Russia deserves Allied gratitude for that; and in any case where Allied shipments to Russia will help the general Allied cause those shipments should be sent.

But why all these efforts to pretend that Russia is something which we know it is not? Russia is not a democracy. Under the Reds as under the Czars, Russia is a cruel despotism.

Why kid ourselves otherwise? The western Allies in the other war didn't make believe that Czarist Russia was a democracy. They accepted what help the Czar's slaves could give them, and were thankful.

Efforts to camouflage Russia do the Allied cause more harm than good, we believe. They arouse widespread scorn for such hypocrisy; and they give a new lease on life to the domestic Reds and fellow travelers, the most dangerous camarilla in this country.

Stalin is on our side because e h
It's much nicer to have him or ur
it would be to have him ag ut
it is foolish to pretend that h
he is not.

## DELCO Commercial Batteries for Extra-Duty Requirements

Delco commercial batteries for commercial cars, light trucks and taxicabs are specially designed to give long, dependable performance in extra-duty service. Dual insulation—Port Orford cedar separators and glass mats—assure long life. The heavy construction of the genuine hard rubber case, extra-heavy grids and conductors safeguard them against damage from hard usage. Extra starting ability in cold weather—an outstanding characteristic of all Delco batteries—helps keep deliveries on schedule.

For passenger car requirements, there is a Delco battery that is exactly right for every make and model automobile. Six million car owners depend on the sure starting power of Delco batteries every day. Forty-three per cent of all new cars sold have Delco batteries as original equipment.

Your Delco battery dealer has a Delco battery that will meet your needs.

PRODUCT OF **Delco-Remy**

*Delco batteries are available through 34,000 Delco battery dealers in every section of the United States. Delco batteries are distributed nationally under the direction of United Motors Service.*

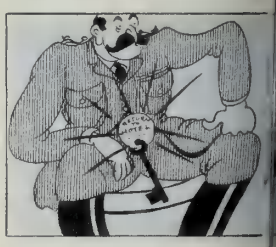
# ANY WEEK

IN CIVILIAN life the grim-looking, 24-year-old gentleman on this week's cover ran an air hammer on Georgia highway construction. Right now, Third-Class Specialist Pvt. Milford B. Stevens, of Roopville, Ga., sticks his chin out for $50 a month as a "popsicle" rider in Co. G, 66th (Light) Armored Regiment, normally based at Fort Benning. Inducted a little more than a year ago, Stevens graduated as a tank and armored-vehicle driver from the Fort Knox Tank Mechanics School last June, learned to ride a motorcycle in August, found out about Louisiana red dust a month later and is currently tearing along with the rest of the "Hell on Wheels" boys (see page 20) in the Carolina war maneuvers.



Like the others, Stevens travels light, but self-sufficiently, on the heaviest of two-wheeled machines. In front of his right knee is his encased gas mask. Hooked around the front springs, and looking like coffee percolator parts, are his dust respirator filters, to prevent silicosis. In the pack behind him are his blankets, half a shelter tent, underwear and field jacket. In the right saddlebag are his raincoat, ammunition and messages; in the left, his musette bag containing mess utensils, towel, handkerchief, socks, flashlight, toilet articles and one-day hard rations. On his pistol belt is his canteen cup and first-aid kit. He wears goggles, a leather chin protector and sometimes a crash helmet. From his jacket pocket generally protrudes a candy bar (in this case removed and presently returned in a somewhat damaged condition by the photographer). The strips of red cloth are Red Army identification.

Pvt. Stevens is one of 1,700 men and officers comprising the 2d Armored Division's 66th, the first offspring of the first U. S. Tank Corps organized early in 1918. This mobile arsenal of destruction, commanded by Col. Wm. H. H. Morris, Jr., has 129 heavily armed tanks and 73 half-track vehicles, all capable of traveling 50 m.p.h. over long distances and firing more than 1,000,000 bullets and small shells every sixty seconds. An outfit to be reckoned with.

WHEN they resume handing out Nobel prizes and get them down to common levels we shall offer the name of Mr. Charley Redcalf (not an Indian) for whatever they wish to grant a championship honest man. Mr. Redcalf lives in Miami, Florida. He has been working on what he calls Navy construction. He doesn't say whether it's ships or quarters but he does say that "it's the general opinion of everybody here that we'd be less of a nuisance if we were back on WPA." Anyway it's what Mr. Redcalf has to say about his wage that has us cheering madly. "I'm getting," says he, "on an average of one hundred bucks a week for what I'm doing and I will gladly give two weeks' salary to any deserving charity you name if you can find a guy less worth it. All I do is watch what the guy next to me is doing and then try to imitate him. If he's doing it wrong so am I but I wouldn't know it."

WE WERE interested to hear of the Englishman who, at a cocktail party given in Washington for a brand-new British war mission, was swarmed under by an American lady with apologies. "Dear Mr.————" she cried. "I've come here to tell you that I'm positively ashamed of my country and my countrymen to think that we are not over there sharing the agonies, the horrors, the hardships with you in your heroic fight against that monster Hitler." She had much more to say along the same lines—and said it. Presently however our Englishman fought free and roared: "Madame, please. Please don't feel so bad. Let me assure you that if I were an American and saw all us English around I'd be an isolationist."

WE FEAR that recently we've given you the idea that there's not so much as a square inch of quiet in all Washington. If we have, we've erred. From what we've heard peace and tranquillity reign largely in the Wages and Hours Division of the Department of Labor, and Colonel Philip B. Fleming, U.S.A., the Administrator, an able soldier unaccustomed to inactivity, yearns to get back to active military service. The trouble is that with wages what they are, in and because of defense, nobody would think of working for the legal minimum wage. Therefore, neither workers nor employers have any reason to bother the colonel. And yet we rely upon the colonel to deal tellingly with the situation. Once in the early days of the New Deal, the colonel and Lieutenant Colonel Royal Lord, U

# Shorter days mean longer odds – **against** you!

Winter invariably brings heavier tolls of traffic accidents. Despite the fact that there are normally fewer cars on the road, there are usually more than one and a half times as many accidents in December as in June.

Shorter days mean more hours of darkness. These shorter days bring with them stormy weather and other seasonal dangers in driving your car. These abnormal burdens are placed on drivers every Winter—and particularly this Winter because rapidly accelerating defense activities are putting more and more men and cars on the roads.

The careful driver balances increased dangers with increased caution and *pre*-caution. Here are a few suggestions he keeps in mind throughout the Winter months.

***The careful driver*** makes sure that his lighting equipment is adequate and properly adjusted for longer hours of darkness, snow, sleet or fog; also that windshield wipers and defrosters are working effectively.

***His chances of skidding*** are reduced by having brakes properly adjusted, by using tire chains on snow, slush and ice. The safe driver knows and practices safe driving technique on slippery surfaces. He is always on the alert for the unexpected icy spot.

***He leaves more room*** than usual between himself and the car ahead, is more cautious than ever about passing cars when approaching hills or curves. On hills, he watches out for children on sleds.

***The careful driver*** makes up his mind to drive at speeds reduced in conformity to road conditions throughout this season.

***He remembers*** to be especially wary of carbon monoxide gas hazards in garages. If his car is a closed model, particularly an old one, he will have it checked for leakage.

BETTER BECAUSE OF CHRYSLER CORPORATION ENGINEERING

**R.A.F. fliers who bail out over the Channel try to make moored flo from which they are rescued by speedboat on radioing for he**

STYLES in aircraft and air tactics have changed several times since the war began. Sometimes they have been influenced by what the Germans have used; others by the way the battle lines have shifted. Because the Germans had been preparing for an air war for at least six years and possess great technical and industrial skill, whatever they produce has a great effect on the other side.

A brand-new Messerschmitt 109F, the very latest of this line of fighters, has been captured, and in the opinion of returning Army Air Force observers has features that should be incorporated in future American designs. Instead of bristling with armament like the British and American planes, it possesses one cannon smaller than a 20-millimeter, which the Germans heretofore have used and which the British are now installing in their fighters, and two machine guns comparable to our .50 calibers. It is powered with a 1,300-horsepower Daimler-Benz, liquid-cooled in-line engine, and the plane fully equipped for battle weighs only 5,600 pounds. The low weight of the ship and the high horsepower give it an advantage of speed and maneuverability at high altitudes. Both British and American fighters have been getting heavier and heavier as more armament, armor plate and ammunition are loaded on board.

Two distinct theories are now set up, each with their advocates. One sponsors larger and more heavily armed fighters weighing up to twelve and fifteen thousand pounds and mounting air-cooled radial engines of 2,000 horsepower, and the other favors keeping down weight and armament in return for high altitude performance and superior maneuverability. Since it is now evident that one type of plane cannot be superior in all operations from treetops to 50,000 feet, the result is going to be an all-out effort for large numbers of both light and heavy fighters.

LOOK into the cockpits of our military planes, if you can get permission, and you'll see enough switches, knobs and buttons to make your head swim. Look very closely and you'll see one particular switch fenced off with a plastic guard and if you try to flip it with one finger while flipping others at the same time you just won't be able to. All this has been made necessary by a series of embarrassing occurrences which have reddened the faces o guilty of a slight slip of the fin

Coming in for a landing, th flips a switch and down goes his gear. When this is securely lo place he flips another switch, r which drops his flaps, or air

After he is on the ground anc up to the line, the pilot is busy out for other ships, and as h along he reaches over to the fla without taking his eyes off the f flips it to retract the flaps. Mo once he has flipped the wrong and has had that sickening fe the wheels falling out from un and the plane dropping on it Damage always has been limi bent propeller, and the extend which he thought he was retrac

So now that little landing-gea is fenced off from the flap sw the new generation of militar will not wear the permanent bl their predecessors.

HATRED of the Nazis by quered Poles is so intense justified that no one dares at ask those fiery people to be and charge it all up to war. A times the boys in the R.A.F. the Polish pilots who are fly fires and Hurricanes with Briti ings would look upon the air b a sports contest instead of mi absolute extermination. There ferent aproach to warfare amo and, with certain exceptions amount of gallantry and admi the skill of the adversary on b Things have been going along of late until a Pole or two, fire and brimstone of hate f thing Nazi, not only crippled s man planes over the Channel to work on the Luftwaffe p their machine guns as they flo in their parachutes. That has bad feeling, and of course t retaliated the next time and mercy to R.A.F. pilots who h out. The British pay highest the fierce fighters they have but it seems there are severa fight a war.

It was BINGO for BUTTERCUP

*when she scrapped the*

double O

OF COURSE Buttercup's "dated up" a lot oftener since she got wise to the "Double O" (Offensive-looking teeth; Offensive breath)! Naturally a girl with a bright, attractive smile and pleasant breath stands a better chance than a girl who has the "Double O."

**What To Do About It**

If *you've* been careless about this double offense, why not get after it with the delightful double precaution that so many wise and popular women use?

**For the teeth,** the new Listerine Tooth Paste. It's the result of a years' work on the part of experts in the field of oral hygiene. This new paste is created especially to help bring out the natural beauty of your smile. It does a remarkable job on dull, dingy teeth, removing cloudy, loose deposits. Many women say they can see its beautifying effects in a surprisingly short time!

**And for a sweeter breath**—Listerine Antiseptic, of course. Listerine quickly halts food fermentation in the mouth, a frequent cause of halitosis (bad breath).

**Delightful Daily Double**

If you want to make a good impression on others, never neglect the "Double O" (Offensive-looking teeth; Offensive breath).

Start in today with the delightful Listerine Daily Double: Listerine Tooth Paste for an attractive smile and Listerine Antiseptic for a more agreeable breath.

LAMBERT PHARMACAL CO., *St. Louis, Mo.*

# *Not* by appointment

FATE makes no appointments with emergency. That's why certain simple defenses against the unforeseen must always be kept ready and waiting. The heroism of the man who launches a lifeboat at the moment of peril is matched by the forethought of the man who arranged to have it ready.

Always ready for the most critical emergency which can come to your family is the life insurance provided by your forethought. Like a lifeboat on a serene shore it is indispensable to your peace of mind and to the safety of those who look to you for support.

The courage and enterprise of your dependents would not be enough to see them through if they should ever have to face life without you. Their most urgent need during the difficult days of readjustment would be money enough to cover day-to-day expenses. Under the provisions of a John Hancock Readjustment Income Plan, you can promise your dependents that, should the unexpected happe they have an income paid for a defi e time in definite amounts. This perm s a re to make plans for the future, nhamp by immediate worries over aking meet.

The John Hancock Readjust ent I Plan is a simple defense measur which husband and father can affo . Our let, "A Talking Picture," escribes such a plan is protecting a pical ican family. Write for your opy partment C-9, John Hancoc Mutua Insurance Company, 197 Cla ndon S Boston, Massachusetts.

the color of night at once deepened so that the surface of the river became a vague-moving oil surface into which a man might quickly drop and quickly vanish. Pierce bent and unlaced his shoes. He kicked them quietly off, moved to the break of the deck and descended the ladder.

He went by the bosun, passed the galley and paused near the mainmast shrouds. Mister Sitgreaves, the first mate, stood against the starboard rail and Canrinus, the second officer, was in the same sentry position on the port side. The captain was above them on the aft deck, his cigar bright-burning in the shadows. "Mister Sitgreaves," called the captain, "come here."

There were two Sitgreaveses on this ship, the mate and his brother, the captain. The mate retreated aft and went scuffing up the aft-deck's ladder. On the amidships hatch cover the rest of the Panama Chief's crew silently and sullenly waited for a break to come, hating the ship and its master and its officers.

The captain said in his bold, steady voice, "If any man tries to jump ship, Mister Sitgreaves, knock him down. This crew is signed from San Francisco to Canton and return. I'm no hand to lose my men."

The captain was afraid of losing his men, as well he might be. All of them, excepting the two mates and the bosun, had been shanghaied aboard at San Francisco by force and knockout drops. There had been, Pierce remembered, an amiable man beside him in the Bella Union saloon. The amiable man had suggested a drink and presently he, Pierce, had died on his feet, to awaken on the Panama Chief at sea.

"Bully boy," said a murmuring voice from the amidships hatch cover.

The captain moved to th ladder and he stared below the crew his hard, short la like me down there, no dou confusion whereby you your escape. I'll not pleas put to sea. Then, by gad, confusion."

On the hatch cover me bitterly murmured. The Mister Sitgreaves, clanke ladder and took his statior starboard rail. ED R COLLIER'S BY FRANK LYNCH

Author Ernest Haycox owns an excellently equipped woodworking shop and turns out furniture as a hobby

# Books and Saddles

## By Jim Marshall

**d own, pardner, around arpfire and visit with ne boss of the Haycox ry whose seventeenth , Alder Gulch, begins g eleven of this issue**

RY once in a while—although k ws better—Ernest Haycox dvn and pecks himself out a estern serial plot. He writes describes the hero, heroine, ats, secondary characters and final clinch, sixty thousand words away. This done, Mr. Haycox glances glumly through the six or seven thousand words of the synopsis and throws the whole thing into the fire.

Once, some years ago, he figured out a complete plot and stuck grimly to it. The result was pretty terrible. None of Erny's friends even mention the thing, preferring to remember the sixteen good Western novels he's written—with no idea, when he started each, how it was going to turn out.

Today, when he feels a serial for Collier's coming on, Mr. Haycox simply dreams up a hero, a general situation and an opening scene. His heroes are pretty real to him. They're all rebels, more or less; strongly individualistic guys, with a touch of sadness somewhere. They represent to their creator something typical of the Old West.

"The West," says Haycox, "was—and to some extent still is—the last major stand of freedom and the rights of individuals who are willing to fight for them. It still is the freest place in the world—and that is why Western stories have such a universal appeal."

What is going to happen after Haycox's hero has ridden into Haycox's scene no one has the slightest idea, least of all Haycox.

"You place your hero in a certain setting, at a certain period—maybe half a century ago—and let him meet the other characters," explains Erny. "Then if you have your characters and their setting clearly in mind, they'll write the story for you. All you have to do is hammer it out on the typewriter."

Haycox, now ranked as America's ace Western-story writer, has been hammering them out that way since he sold his first story for $30 back in 1922. He was a student then at the University of Oregon, learning journalism and short-story writing and living in a converted chicken coop back of a fraternity house in Eugene. The walls of the coop were covered with rejection slips and it became a game among the several budding scribblers at the college to collect rare slips from obscure magazines.

But before he went to the university, Erny had had a pretty full life. At twelve he was making a living on the streets of Portland, Oregon, where he was born. He sold the Oregonian and the Oregon Journal and Portland News, and when he had fifteen cents he ate in a Jap restaurant. This sustained him until he could make another fifteen cents for more food. Well, it was steady work, but it got him nowhere.

He tried other jobs—bellboy in a family hotel, dishwashing at half the lumber camps in Oregon, anything he could lay his hands on. In 1914 he drifted south to San Francisco and got a job as a delivery boy for a hat factory. This paid $5 a week. A room cost $1.25 and a meal ticket $3.50, leaving two bits for the more abundant life. Besides, the hatboxes were too large to go on streetcars and the kid had to walk around delivering them.

So he left the hat factory and got a job as news butcher on the old Oakland, Antioch & Eastern, an interurban line running to Sacramento. You rode continuously and met interesting people and somebody was always leaving half a package of popcorn or a chunk of peanut brittle that a growing boy could use.

# Lady Makes Good

By Kyle Crichton

WALL KERLEE

**Here is Joanna Boniface Winnifrith of Ightham—who is now better known in movie circles as Anna Lee**

FROM our European operatives we learn that the ambition of all English actresses is to get a Hollywood contract and join the Nanny set. A requisite for this is that you should be married and have a child. Naturally, when you are an actress and have a child, the child must have a nursemaid. The nursemaid is Nanny. All decent English families have a Nanny. Nannies seem to be a strange breed of people. They have no names. They are known solely by the names of their employers.

"Nanny Stevenson had tea this afternoon with Nanny Rathbone; Nanny Stevenson went to the cinema last night with Nanny Best."

From this you will know that the Stevensons are in town. Robert Stevenson is a director at RKO and a successful gentleman. His wife is Anna Lee, who plays opposite Ronald Colman in My Life with Caroline and is now featured in How Green Was My Valley, the John Ford production at 20th Century-Fox.

When you have that assimilated, we will really knock your eye out with a story. You're not going to believe it and nobody is going to push it off on you, but Mrs. Stevenson will raise her right hand in solemn oath and swear that it doesn't pay to be the wife of a movie director.

This is the evidence: when Lewis Milestone was getting My Life with Caroline ready for production he found he had no leading woman. Mr. Stevenson knew of the crisis and he also knew that Miss Lee, his spouse, was not only available but was slightly frothing at the jowls for want of lucrative labor. But did Mr. Stevenson so much as say, "By the way, Miley, old man, I think you might take a look at a little girl who did rather well in British films, a Miss Lee?" Mr. Stevenson did nothing of the kind. He played the game like a little man. He bit his tongue, he gulped back a sob, but no words passed his lips.

Up to this point we feel that truth is being preserved. But, according to the story, Milestone, desperate even to the point of looking at old English films, encountered one called A Young Man's Fancy, took one look at Miss Lee's calcimined countenance and started leaping. Mr. Milestone is a heavy man; he leaps only under severe provocation.

"Where is this beautiful lady?" Mr. Milestone is reported to have cried. "Find her and let not an hour pass. Use bloodhounds, radio interceptors and special-delivery air-mail letters!"

### Right Under Their Noses

There were cables to London, there were frantic inquiries at theatrical agencies. Finally she was found at San Francisco, where she had gone for the week end.

"I think you will like Hollywood, Miss Lee," Mr. Milestone is reported to have said over the phone, wheedlingly. Miss Lee refrained from saying she had been living in the place for six months and liked it right well, barring the climate. She said merely she would come down and hear what Mr. Milestone had to say.

Is there anybody in the house who believes Milestone didn't know that Lee was Stevenson? No? Well, let's go on.

She started in life as Joanna Boniface Winnifrith, the daughter of the rector of Ightham, near Sevenoaks, England. Her father ran a boys' school and she was the only girl around. At his death she talked her mother into allowing her to enter the Central School of Speech Training and Dramatic Arts in London, better known as Miss Fogarty's. Joanna Boniface was fifteen at the time and it was a step of some a dominie's daughter. T held in Albert Hall, wl between our Madison S and Carnegie Hall, and was sneaking into the l prize fights, concerts and cos. After a year she qu as understudy with a th company.

"It turned out that hated me," says Miss L tion.

What got her the conse was the assurance that in the hands of the Actor which recommended boa the week stands and kep moral lapses. As a preac Winnifrith couldn't very that.

"The 'dig's' keeper wa 'Ma' and there was inva graphed photograph o Tree in the parlor and t ways out in the back yar a bucket of water to pou You couldn't cook your you could buy a kipper fix it up, taking a nice self. Room rent was c six, about two dollars, week."

The provincial acto

Thorgens called for time, wiped his mouth and stood up in the line. "If you guys want to get me, come on," he said. "This is your last chance"

# Second Wind

## By Stanley Frank

ILLUSTRATED BY HARRY L. TIMMINS

**Espionage and football, or how a Miss Hobie Baker sabotaged the game she loved**

THORGENS spotted the familiar, funny little hat with the impudent feather and, as always, wrapped up his illusions in a foolish grin. Thorgens knew he was strong as an ox and no smarter, a self-appraisal invariably stimulated and emphasized by Hobie. Now, walking down the steps leading from the Polo Grounds to the street, he hurried on his bum leg to have Hobie knock his brains out, thereby completing the process begun by the Chicago Bears.

It was no use trying to kid Hobie; she knew when he played a lousy game and she would tell him as much, in spades and with gestures. You knew where you stood with Hobie. You could count on her, just as you could depend on Nagurski to belt out five yards every time he carried the ball, on Baugh to pitch at least one touchdown a game and on Manders to kick the points. Thorgens had been around long enough to realize consistency was the hallmark of a champion. In his book, Hobie was the Queen of the May, with a meat ax in each hand to belabor him when he played a bad game of football.

He favored his left leg to cover up his limp as he went up to her under the street light. "Been waiting long, sugar?" he asked brightly.

Hobie pushed back the sleeve of her coat and consulted her wrist watch. "I've been waiting since two o'clock, or almost four hours, for you to do something right," she said archly.

Thorgens sighed. Hobie wasn't wasting time with the how've-ya-been or whaddye-know formalities tonight. "I wasn't that bad, was I?" he protested mildly.

"You were terrible," Hobie said simply.

Thorgens took her arm and steered her toward the subway. They went down into the hole in the ground and Hobie jiggled all over pleasingly when she ran ahead to catch the train roaring into the station on the lower level. They found separate seats on opposite sides of the aisle and Thorgens sat back to relax and admire Hobie's legs. She intercepted his glance, uncrossed her legs and glared. . . .

Thorgens had seen the subway for the first time five years before, when he came to New York to join the Giants fresh out of Minnesota. He was one of the magnificent Swedes, undefeated Big Ten champions, and there were pictures in the papers, endorsements in the magazines and one hundred and fifty dollars every Sunday for playing a game he had been playing for seven years for nothing but the hell of it, plus board, room, tuition in college. Thorgens thought the one-fifty a week, every week for three months, was wonderful.

A hundred and a half was chicken feed. Thorgens got up to four hundred a game the year he made all-league tackle and the Giants won the championship. But the Giants no longer were winning championships and the honeymoon was over for Thorgens. He was down to two-fifty and he had a hunch the mailman would be coming around with bad news when the club mailed the contracts next summer.

Originally, there had been nine of the big Swedes from Minnesota, but now Thorgens was the only one left in the

# Naval Engagement

## By George Trevor

**After all these years Navy now has a football team it honestly can brag about—thanks to Swede Larson, who, in exactly three years, has performed a real coaching miracle**

WHEN Swede Larson enlisted in the Marine Corps in 1917, fresh out of high school in Minneapolis, it caused some heartburning in the family. His father, although patriotically proud of the choice, was regretful that the boy wasn't going to follow in his footsteps at the University of Minnesota. Also he was somewhat hazy about his son's selection.

"What is a marine?" he asked.

"Well-l," began Swede. "It's something like a . . ."

"Soldier or sailor?" asked his father.

"Both," said Swede, not too sure.

"Now, Emery," said his father, "don't make jokes. We'll look it up in the encyclopedia."

He looked it up and found that Swede was right. Swede was a Marine private for a while and then went to Annapolis and got a commission and now he is football coach at Navy and if Army, by some miracle, should lick Major Emery Ellsworth Larson's team this week in Philadelphia, it will be the first time, either as a player or as a coach, that Swede Larson has experienced such a disaster.

By a coincidence, both service teams happen to be good this year, which is a break for morale. It has not always been thus. For years Navy couldn't have beaten Army with eight trained gunners in the backfield. Last year Army, through most of the season, played like a group of little boys that had never recovered from early cases of rickets. Earl Blaik has corrected that situation; Navy has three sets of strength everywhere; and the result should be as fine a chorus of bone-crushing as the Army-Navy game has seen in years.

Swede comes by his football from tradition. His father was captain and guard on the Minnesota team of 1895; his brother, Douglas, was Minnesota center in 1920-21; another brother, Ted, was halfback and center on St. Olaf's (Minn.). Swede got his start at West High, Minneapolis, on a team that contained such greats as Earl Martineau and Al Ruben, later stars at Minnesota. Swede alternated at center and tackle on that team and was captain in his senior year.

### The Hero Makes His Debut

Then the war and the Marines. He fought the war from a post at guard duty at the Bear Mountain station close to West Point. Major Larson prefers not to mention these days, saying merely: "I was disappointed."

Through the help of Congressman Harold Knutson of Minnesota, he got an appointment to Annapolis after the war and was on the great Gil Dobie teams of that period almost immediately, plebes being eligible then. The great game of that era was the famous Navy-Great Lakes Training School classic, perhaps the most exciting game ever played anywhere. In the first two minutes of the game, the regular Navy center made a bad pass and Dobie said to Swede: "Warm up, Larson."

Larson started running up and down the side lines. He ran for fifty-eight minutes and never did get in the game. When somebody reminded Dobie of this, he said:

"Hell, we'll win without a center."

But Navy didn't win. It was ahead 6-0 with about a minute to play and Bill Ingram was going over for a second Navy touchdown when Erickson of Great Lakes stole the ball and started down with a clear field. When he was halfway to the goal line and no regular Navy man even in sight, he was suddenly tackled with fury and completely buried by Saunders, a sub guard of Navy, who, overcome by this disaster, had come off the bench and floored him.

Pandemonium. Fights. Utter confusion. Jimmy Conzelman, coach of the Great Lakes team, swears that they only got the touchdown by gathering around the ball in a scrum and forcing it over the goal line. Larson says this is the bunk. There was no rule to cover the play. Unnecessary interference is only penalized by half the distance to the goal line. That would have saved the game for Navy, but, according to Larson, Admiral Eberle, superintendent of the Academy, came down on the field and insisted that the touchdown be awarded to Great Lakes. They kicked the goal and won, 7-6.

Larson was fond of Dobie, the gloom-ing Gil, who seriously predicted befo every game that if Navy could hold t opposition to six touchdowns, he wou be satisfied.

"That's great psychology if you ha great players," says Larson, "and had them. Dobie would work for hou on the 'three out and up' play, timi it with a stop watch. The halfba would take three steps to the right a then go into the line. I'd loft a soft p to the back just at the right mome Nobody could stop that play."

### The World's Most Uncertain Gam

Navy was not defeated by Army these days, even with the great W French in the Army backfield, but game Larson remembers with the m pleasure is the Princeton game in senior year when Navy avenged a feat of the year before. He rememt it best because of a remark by the eree. There had been a pile-up an Princeton man had swung on the ene The referee threw himself at the m grabbed the man whom he couldn't and howled:

"Whoever owns this hand goes of the game!"

When he was graduated from Academy, Swede wrote Dobie, who then at Cornell, and applied for a co ing job.

"Stay in the service," advised D "Football coaching is the most un tain thing in the world."

So Larson stayed in the service also coached. He was at Quantic 1922 under General Smedley Bu coaching the football squad and pla on it along with John Beckett, the Oregon tackle. They defeated the Army Corps team that was heade Gene Vidal, but next year the w team was almost court-martialed General Butler said he would be s fied with a 40-0 victory over V.M.I the team instead lost 6-0.

"Football is like a war!" bell General Butler in a rage. "Who ir wants to lose a war!"

***It took a stroke of fortune disguised as a calamity to show them what they needed to be happy***

**"They'll be counting strongly on surprise," Marivaux said. "We'll give them surprise," one of the men shouted. They were beyond the town, past the last of the outlying houses**

ZANNE CHAUVET sat comfortly in the deep grass. From the rner of her eye, without turning ad, she could see the brown curve n Willis' cheek; she could see the his shoulders. He was an Eng-n: strange.

adn't a wife in England (or anyelse). He had said as much. She d, then, to be brazen.

pale cloud moved languidly the sky, traveling westward to-Cuba. She smiled at it.

thought: If only you could bring lf to consider the matter fairly thout prejudice—reasonably, with ter avoidance of artificiality—you be forced to confess that the hand aven was obvious in it. Yes, she herself; the facts actually cried for sensible attention.

he first place, it need scarcely be that a young woman should . And if she happened to possess ain attractiveness, and the young vas attractive too, then so much tter, for themselves and for pos-

, incontestably," she said under eath, serenely, "it's all so very

ainly this was a generalization rooked no disputing: A young n should marry. It was neither rational nor quite proper to do ise. Well, then; in the present did anything really stand in the Her property— Hardly. Her ty was an accident, in a manner aking. She had been born to it, she had done nothing to deserve it. Suzanne Chauvet was prepared to regard her property as of no importance at all —whatever the others might say.

The others— She plucked a blade of grass and clamped her white teeth upon it. Her mind raced on. Confound and mortify the others, she said to herself with unaccustomed violence of thought.

She knew that others, certain people of the port town, Cayona—she could give names to them—could be counted upon to declare that John Willis was a wanderer, an adventurer, a man without property—and an Englishman. Thus they would sum him up, harshly.

She felt a sudden keen thrust of anger.

She assured herself that there was doubtless a special hell devised for gossips of Cayona. She found a moment's solace in the thought.

"But now it is necessary to be brazen," she remarked privately. "Because he is an Englishman: strange."

She turned her head and looked at John Willis as he sat quietly, thoughtfully, beside her in the grass.

HE WAS, now, staring at the sea that curled upon the shore a thousand or more feet below them. The slope was precipitous and brilliantly green. Distantly across the fine dark blue water rose the wild and unpeopled mountains of western Haiti. The West Indian sun was hot; there was no breeze. But the almond tree on the crest where they sat offered shade that had almost the texture of velvet.

Suzanne Chauvet was not, for the moment, aware of either sun or shade. "There is something I must speak to you about," she said.

She would, she declared, be entirely frank with him. She said, looking at him evenly and without embarrassment, "I have always felt the greatest respect for Englishmen. In that I differ from my father. He used to say the English were unprincipled, unscrupulous and ruffianly. He was bitter on the subject; so are a lot of others in this colony."

John Willis nodded, but did not shape a reply.

The girl smiled pleasantly, almost gaily, yet there was deep seriousness in her wide black eyes. "I can still hear my father," she went on, "though he's been dead now for three years, may he rest quietly. He used to stand up here on the crest—this is, you know, the highest point of our land—and stare out over the sea and say to me, 'Suzanne,' speaking gruffly, 'some day when this island grows prosperous with farming, the English will sail up the Windward Passage from Jamaica and they will lay their guns on us and destroy us and drive us out!' "

John Willis moved his head and his eyes met hers. His lean brown face, topped by an unruly shock of corn-colored hair, was expressionless. "But that was unreasonable—" he said, mildly.

# One of We's Own

**By Roark Bradford**

ILLUSTRATED BY WILLLAM MEADE PRINCE

**"Hot damn!" said Lounetty's restless husband. "Hit's so many places whar I'm ain't, I don't see how come I'm whar I'm is!"**

IT WAS spring in the Red River bottoms of northern Louisiana. The winter's dark cold nights and foggy days were gone, and now bright sunshine and balmy air swept the land. The birds chirped gaily, the women wore colorful clothes and laughed at nothing and the men stretched lazily, talking dreamily of the big crop of cotton they would sell next fall if they "lived and nothing happened."

It was not the mystic power of the vernal equinox that made Lake spend his last nickel for a bottle of red soda for Lou-netty. Nor was it budding love that made him watch her stick a thumb in the bottle's neck, shake it, and then observe the bubbles.

"I swear to my soul, Lou-netty," Lake said to her, "you's what dey calls a cutie! De way you make dem bubbles come up in dat strawberry is jest de way you make de pyore love bubble up inside my heart."

Lake had come to Little Bee Bend plantation for the cotton-picking season, the fall before. With his savings and an occasional job at "day wages," he had managed to stay on until spring.

Little Bee Bend people knew little about him, although he had nothing in particular to conceal. He claimed he came from a place named Lake Village, so they called him Lake and asked nothing more about him. He was capable enough, but nothing extra.

Anyone who took the trouble to think about him figured that he had come to Little Bee Bend of his own free will and was at liberty to go the same way. He was not considered "one er we's own," as the regular residents of the plantation referred to themselves. Not until the time came for Giles to assign specific land to each man did L lize he was not a member of t Giles offered Lake no land at al protested.

"You might do efn I couldn better," Giles told him.

"I'm better'n some you got argued. "You seed me pick co de best and you seed me plo knows I steps faster den Joe Bo you knows I'm got mo' sense in den Jett—"

"Yeah," Giles admitted, " Boody and Jett is we's own. I too good but dey kin git along de homefolks."

"I kin git along, too," Lake got along over in Texas and I over in Arkansas. I got along u and I got along down de river c'd git along even in McGee-

"Dat's jest de p'int er not g no crop," Giles said. "For a yo you done got along in too mar You's what dey calls a ramble axin' you no questions, but I picked cotton hyar last fall, er cotton-pickin' time. And dat dat you had done left out f'm was at, about de time cott started. You don't stay in long enough to make you a den pick hit. You got to r place to place."

"BUT I done quit ramblin'," sisted. "Dat's how come settle down on Little Bee and a crop, hyar."

"You aims to quit rambl said, "but one er dese days wake up and find yo'se'f purt de credicks at de commissary, grassy in yo' crop, and dat you'd change yo' mind. Why ain't even got you no wife t down."

Lake pretended shyness. to git one," he said.

Giles laughed. After all, that low patch known as Burr cut that no man wante Its seven acres would mak bales, if the grass were kep If Johnson grass got the u just once, you might just as mower and hay baler to wor would be no cotton on Cockl fall. The cut had whipped m man. It was the first land water when it rained, and the out. It stayed wet several than any other land on Little and Johnson grass can do growing in two or three extra

"Git you a wife," Giles "and I'll gi' you a crop fo present."

It was not Lake's first e marriage, nor did he figure his last. He selected Lou-n she seemed calm, capable a He began his courtship by bottle of red soda pop and wooing on the commissar likening her technique in b bles to the top between sips of love on his heart.

"But I ain't shakin' yo' h is dis strawberry," Lou-ne ain't did nothin' to yo' ole ain't got no call to bubble bles at me."

"Aw, go 'haid, Thaing," "Ev'y time you opens dat er yo'n, hit jest drools ou for me. Efn I had me two over to town and buy you candy-stripe socks."

# OUR NEW ARMY

6TH ARMY CORPS

MANEUVER NOTES: In Norman, N. C., the 101st Cavalry's Corp. Charles T. Kirk was having trouble with some of the men in his squad who wouldn't keep their clothes hung up. Stuff all over the place. Corp. Kirk found the answer. He procured what is described as "a sort of dog" and trained him to be a first-class tearer-upper of socks and other apparel not being worn. The boys are so neat now you wouldn't know the old squad. . . . One inventive trooper in the mechanized regiment decided the easiest way to heat a can of beans was to wire it to the exhaust manifold of his scout car. Soon's he got it all rigged up, orders came to move out. Ten minutes later there was a loud bang from under the hood. Yep. Beans.

## SOUTH CAROLINA

CAMP CROFT, Spartanburg. Activated last February, this infantry replacement training center is now in line for two distinctions. (1) It is said to be the largest cantonment around which no trailer brothel has been found and (2) it is probably the "marryingest" Army post in the country.

Since mid-February, some 500 of an average of 15,000 soldiers have taken brides. The record is thirty-seven in one week. Simplicity of South Carolina marriage laws is the best reason ascribed for the boom in marriages. There are no restrictions other than that the girl be sixteen, the boy eighteen; and there is no waiting period, no blood tests. Just a dollar and a quarter for the license.

8TH DIV.

FORT JACKSON, Columbia. The things that Pfc. Chas. H. Delamater, 4th Ordnance Co. Detachment, never knew until he was inducted are many and varied. Here, according to a recent dispatch from him, are a few of them:

"That 5:30 A. M. is a better time to get up than to go to bed. That more draftees are afraid of being turned down than accepted. That some Reception Centers are very bad examples of Army life. That a lot of rest can be had in the ten minutes of every hour permitted men in training. That a technical sergeant doesn't have to be technical. That a soldier on guard duty allowing a prisoner to escape must serve the prisoner's term. That shavetails aren't such bad guys. That Regular Army and Reserve officers disagree on training procedure, the former believing the sergeants should do the work to make them more self-reliant, the latter believing they should do it themselves so they won't forget how. That the primary requisite for admission to Officers School is leadership—experience, education and ability are secondary. That two shelter halves can be made into a boat large enough to float the full equipment of two men. That K.P. duty as a punishment is against Army regulations; and that peeling potatoes is the easiest part of K.P. That the War Between the States is discussed more often than the current World War. And that a steel helmet is a hair restorer; it stimulates the scalp by bouncing around on the head."

## MISSISSIPPI

37TH DIV.

CAMP SHELBY, Hattiesburg. Top Kick Robert Wolfe, Co. D, 112th Quartermaster Regiment, sent his company clerk on an errand the other day and sort of wishes he hadn't. The clerk was delayed, and when somebody finally entered the tent the sergeant, scraping the whiskers off his face, yelled over his shoulder as to wit: "Where the hell have you been?" Because the immediate silence was extremely pregnant, the sergeant turned around to face the division's commanding general, Major Gen. Robert S. Beightler, and several staff officers. "Attention!" croaked Sgt. Wolfe. Sgt. Sylvester Rowan, who was pulling on his trousers, snapped to attention and, as is customary in embarrassing moments of this type, his pants rolled down to his ankles.

OFFICERS and men of the Hq. Co. and Band, 147th Infantry, put up a public-address outfit in the two units so that sergeants, instead of blowing whistles, can now yap their orders into a microphone. The system is okay by everybody except Pvt. Bruno Egger. Seems Pvt. Egger gets regular shipments of cookies and candy from home, and that whenever a new batch is tossed into the orderly tent a sergeant tells Pvt. Egger about it via loud-speaker. By the

confined to armored forces. The men the fire power of a cavalry regiment

A CONVOY of tanks trundled through a small Kansas town toward the mock attack. Twenty-five yards apart they came, charging over the trembling pavement, shaking the clapboard buildings and rattling store-front windows. Occasionally one sidled onto the dirt shoulder, chewed the earth and raised a red cloud that choked onlookers. Presently heads turned toward ■ screaming siren approaching from the opposite direction. Wide open, ■ goggled motorcyclist ripped around a bend and swished by the two leading tanks.

He never passed the third.

A pavement crevice twisted his front wheel, the rear of the cycle jerked up and snapped him with the speed of ■ pellet at the oncoming tank. His body smashed on the front of the steel hulk.

Deep-throatedly the column halted and idled at the roadside. A captain quick-stepped to the scene; a glance at the motorcycle's insignia showed it to be one of his men. Color drained from his face.

A private, one of the tank's crew, clambered out and approached his captain. He surveyed the remains briefly, then looked at his commander.

"Looks like he's dead, sir."

The captain surveyed him sourly. "Apparently so."

"Well, then, sir," the private said, haltingly, "can I have his motorcycle job?"

Army Armored Force veterans, continually enthralled by field performance of the motorcyclists, recall in bivouac bull sessions the audacious request of this private. The incident occurred in the early summer of '37, when the 7th Cavalry Brigade (mechanized), a forerunner of our present Armored Divisions, maneuvered in the Ft. Riley, Kansas, area. Since then hundreds of cycle soldiers have slithered and slipped, hurdled and hit, flipped and flopped and when handle bars ram into them or when tanks don't stop in time, the investigating officer writes those four little words in the accident report, "In line of duty," which entitles one to military honors at Arlington or a long time in a hospital bed as a plaster-cast saint. All this at government expense.

Before the advent of armored vehicles in the Army, motorcyclists were mere messengers with occasional light convoy duty interspersed. It was nice work and everybody tried to get it. Nowadays it's different. A rough, dangerous, romantic assignment, it has developed a rough, dangerous, romantic breed of men. Some of the toughest guys in the Army.

"But," you say, "what about Eddie (Thirty Degree Angle) Sullivan, who races in the barnstorming cycle circuit?"

"Sure," I answer, "Eddie's good. Odds are he'll beat Private Smith on the board track and dirt track, too. But it's not only speed that counts in the Army. Have Eddie put on full field equipment and ride down a pitted country road at night at 35 or 40 miles an hour. Maybe they're practicing black-out and Eddie somehow has to get to the head of the column to block civilian traffic at the big intersection not far distant. In front of him a thirty-ton tank is thundering along, emitting only ■ pencil-thin blue light. There's another behind him, and if he falls they'll never see him. Eddie has to pass. The country lane isn't wide enough for both the tank and Eddie. It's impossible to see the ditch, but it's the only chance. Can Eddie do it? Private Smith can. They're tough hombres, these cycle cowboys."

"Okay, maybe these guys are tough," you say, "but what about tank crews and the pilots and the parachutists at Fort Benning. What are they, softy-pants?"

I'm glad you asked me, brother. The answer is no.

But the Army is cracking up more motorcyclists than all three put together. War may reverse the scales on this point, but the fact remains at present. Newspapers, in quest of the dramatic, ferret out air crashes and scream about them. True, most of the comparatively few are fatalities. As for our parachute squadron, I suppose they boast many wrenched and broken legs, but I have heard of only one death. You'll agree both the pilot and the parachutist are heroes. The treasury pays each of them fifty to a hundred bucks additional per month for being heroes, while a tank crew (not to go so far as to mention the motorcyclist) in ■ more uncomfortable job has its beer limited by the usual basic pay allowance.

Every time one of America's five armored divisions takes to the field, say for three or four days, it is conservative to count on a number of accidents—usually motorcyclists. Even when a division shows itself off in a cross-country review, or "rat race," that lasts half an hour, the medicos are ready for business. A political committee visiting Fort Benning and especially ■ camp-canvassing bunch of movie photogs would be surprised to know the costs of their visits. The Secretary of War probably doesn't know that the "rat race" in his honor at Fort Knox snuffed out two lives; one ■ motorcyclist who flopped in the blinding dust in front of ■ tank herd, the other a tank sergeant who was standing in the turret when the tank overturned.

Safe driving is preached daily by Army authorities but preparing for war is an inherently dangerous business. Tankmen, pilots, parachutists know they face the prospect; motorcyclists expect it. Their philosophy was reflected in the request of that private in Kansas. To

*(Continued on page 73)*

Taciturn and sinewy, the cycle boys take their jobs seriously. Full field regalia (details on page 4) includes a dust respirator, worn by the man at left, as a guard against silicosis

Like most other soldiers on maneuvers, the motorcyclists sleep when and where they can, with a pack for a pillow and saddle and gas tank for a mattress. Despite motorization, shoes wear out fast

# The Pied Piper

## By Nevil Shute

ILLUSTRATED BY HARRY BECKHOFF

*The Story Thus Far:*

WHEN his only son, a member of the R.A.F., is killed, John Sidney Howard, a retired English barrister, tries to find forgetfulness, years of the placid French village of Cidoton where, days gone by, he had spent many pleasant vacations. Among those whom he meets, and sincerely likes, at his little hotel are Mr. and Mrs. Cavanagh. The Cavanaghs have two children: Ronald and Sheila. Mr. Cavanagh, employed by the League of Nations in Geneva, is obsessed with the idea that, come what may, he must never desert his post.

The Germans begin their drive into France; and Howard decides to return to England. Whereupon, the Cavanaghs (who are English) ask him if he will take the children to England with him. Howard is an old man—he is nearly seventy, he is growing feeble; he realizes he should not encumber himself with the children but he has not the heart to refuse his friends.

The journey toward the channel is an arduous one. In Dijon, little Sheila becomes ill. A sympathetic hotel maid takes her in hand, nurses her skillfully; and when the little party is about to leave Dijon, she implores Howard to take with him her niece, the daughter of a Frenchman (the maid's brother) who is living in London. The little girl's name is Rose—the maid calls her "*la petite* Rose." Howard hesitates, but finds himself unable to refuse the maid's request.

The old man and his charges reach Joigny, by train. There, they take a bus for Montargis. Some fifteen miles from their destination, German planes bomb the crowded road, wreck the bus; after which, there is nothing to do but walk!

They walk slowly. Presently, they reach a badly smashed car. In the car are two dead persons—a man and a woman. Near the car is a small boy—five or six years of age. Howard speaks to the boy, asks him what his name is. The boy, terrified, is unable to answer. Taking pity on the little fellow (whose name, it is later learned, is Pierre), the old man decides to take him along.

After a time, two English soldiers—a corporal in the R.A.F. and a driver—give Howard and the children a lift, in a motor lorry, take them to Pithiviers. Reconnoitering in the town, Howard and the corporal encounter a pitiful little figure—a little Dutch boy, perhaps seven, who is being stoned by the villagers. Making inquiries, the old man learns that the terrified and embittered villagers suspect the boy of being a German—*and a spy!* Howard, deeply touched, realizing that the little fellow may be killed if he remains in the town, makes another sudden decision. "We'll take him along with us," he says quietly. "All right," the corporal says. "But if we don't get a move on us, the bloody Jerries will be here and kill the lot of us."

### V

HOWARD picked up the spy, who suffered that in silence; they hurried to the lorry. The child smelled and was plainly verminous; the old man turned his face away in nausea. Perhaps in Angerville there would be nuns who would take charge of him. They might take Pierre, too, though Pierre was so little bother that the old man didn't mind about him much.

They put the children in the workshop; Howard got in with them and the corporal got into the front seat by the driver. The big truck moved across the road from Paris and out upon the road to Angerville, seventeen miles away.

"If we don't get some juice in Angerville," the driver said, "we'll be bloody well sunk."

In the van, crouched down beside the lathe with the children huddled around him, the old man pulled out a sticky bundle of chocolate. He broke off five pieces for the children; as soon as the German spy realized what it was he stretched out a filthy paw and said something unintelligible. He ate it greedily, and stretched out his hand for more.

"You wait a bit." The old man gave the chocolate to the other children. Pierre whispered, "*Merci,* monsieur."

*La petite* Rose leaned down to him. "After supper, Pierre?" she s Monsieur keep it for you to supper?"

The little boy whispered, Sunday. On Sunday I may h late after supper. Is today

The old man said, "I'm not what day it is. But I don't mother will mind if you hav after supper tonight. I'll p and you can have it then."

They drove on at a good pa the hot afternoon. Three Angerville the corporal t spoke to Howard through "Getting near that next tow said. "We got to get some or we're done."

The old man said, "If you likely on the road I'll ask hi depot is."

"Okay."

In a few minutes they cam A car stood outside it, and carrying sacks of grain or f the car into the farm. "Sto old man said, "I'll ask that

eighteen bucks a day. Shovel runners get as high as $175 a week. They were getting quite drunk along the bar, and the soldiers sipped their beer in the center of the room and watched them soberly. We asked a soldier if they ever had any trouble.

"Oh, no, we don't have no trouble," he replied matter-of-factly. He was watching the group along the bar with a calculating eye. "We just wait till they get drunk enough, is all." He polished his hands. "That way we never have no trouble at all."

### This Place is Hot

Some of the troops they expect at Dutch Harbor this winter will have to live in tents until barracks can be built, but it can't be helped. There is work to be done here, and they can't get enough workers from the States. So far nobody who has applied for a job at Dutch Harbor has been turned down; but still they can't get workers enough. Even at $175 a week they can't get the workmen to stay. Every ship from the States takes away as many workmen as it brings.

"They're scared to stay," one of the soldiers said. He wasn't resentful—just mentioned it. "They're scared the bombing's going to start. They found out we got orders to evacuate all women and children from Unalaska if it starts, and they're scared to bring their families, and they're scared to be up here in Alaska away from their families. I can't blame 'em," he shrugged. "This place is hot."

The heat is on, here at Dutch Harbor; for the Aleutians form our westernmost outpost in the Pacific, eight degrees west of Hawaii, less than eight hundred miles from Japan itself. Two hundred and fifty miles north is Russia's heavily fortified Komandorski Island—a rich plum for an enemy power if Russia falls. At about the same distance from American soil is a big Soviet air base at St. Lawrence Bay, reportedly built by Nazi engineers. And across the narrow Bering Straits is still another base on Russia's East Cape peninsula at Weylin, only forty-seven miles from Alaska. The capture of Siberia by Nazi-dominated Japan—and any effective resistance by Siberia's two semiautonomous armies, in case the Moscow government crumbles, is at least problematical—would mean that we should have strong Nazi military bases and airports literally within shooting distance of the United States.

They take it for granted in Dutch Harbor that when it comes, they will get it first.

Not only at Dutch Harbor; they're getting ready all over Alaska today. You will see it, in the course of this article, at the Navy's other two Alaskan bases at Kodiak and at Sitka; see it for the first time, as far as we know, since up to now no correspondent has been permitted to inspect or photograph these sites. You will see it in the interior at the Army's nearly completed cold-weather experimental stations and its smaller auxiliary fields. You will see the Alaskan tundra quaking with the greatest burst of activity since gold-rush days, the mountains rumbling with dynamite, the yellow carryalls hauling out the ancient spruce stumps, the 'dozers uprooting million-year-old mastodon bones in the freshly thawed muck, the cats and the scrapers smoothing the ground for runways. Night and day you will hear the hammers pounding, the concrete mixers grinding, the steel framework of hangars rising clamorously against a silent background of forests and glaciers. You will find huge Army bombers, on experimental flights, alighting at remote Eskimo villages in the Arctic. You will see ships from the States arriving every day with more and more men, at such a rate that the white population of the Territory may be doubled in a year. You will see a hundred million dollars being poured into Alaska today to make it ready.

### Designed for Offense

Ready for what? Invasion? Military experts generally scoff at the idea that an enemy would attempt to capture a territory so far from home, so sparsely settled and undeveloped that it would be impossible to hold it successfully. Attack by parachute troops? Air-borne tanks? A siege of Alaska by an enemy fleet? No; none of these. Contrary to popular impression, our Army and Navy

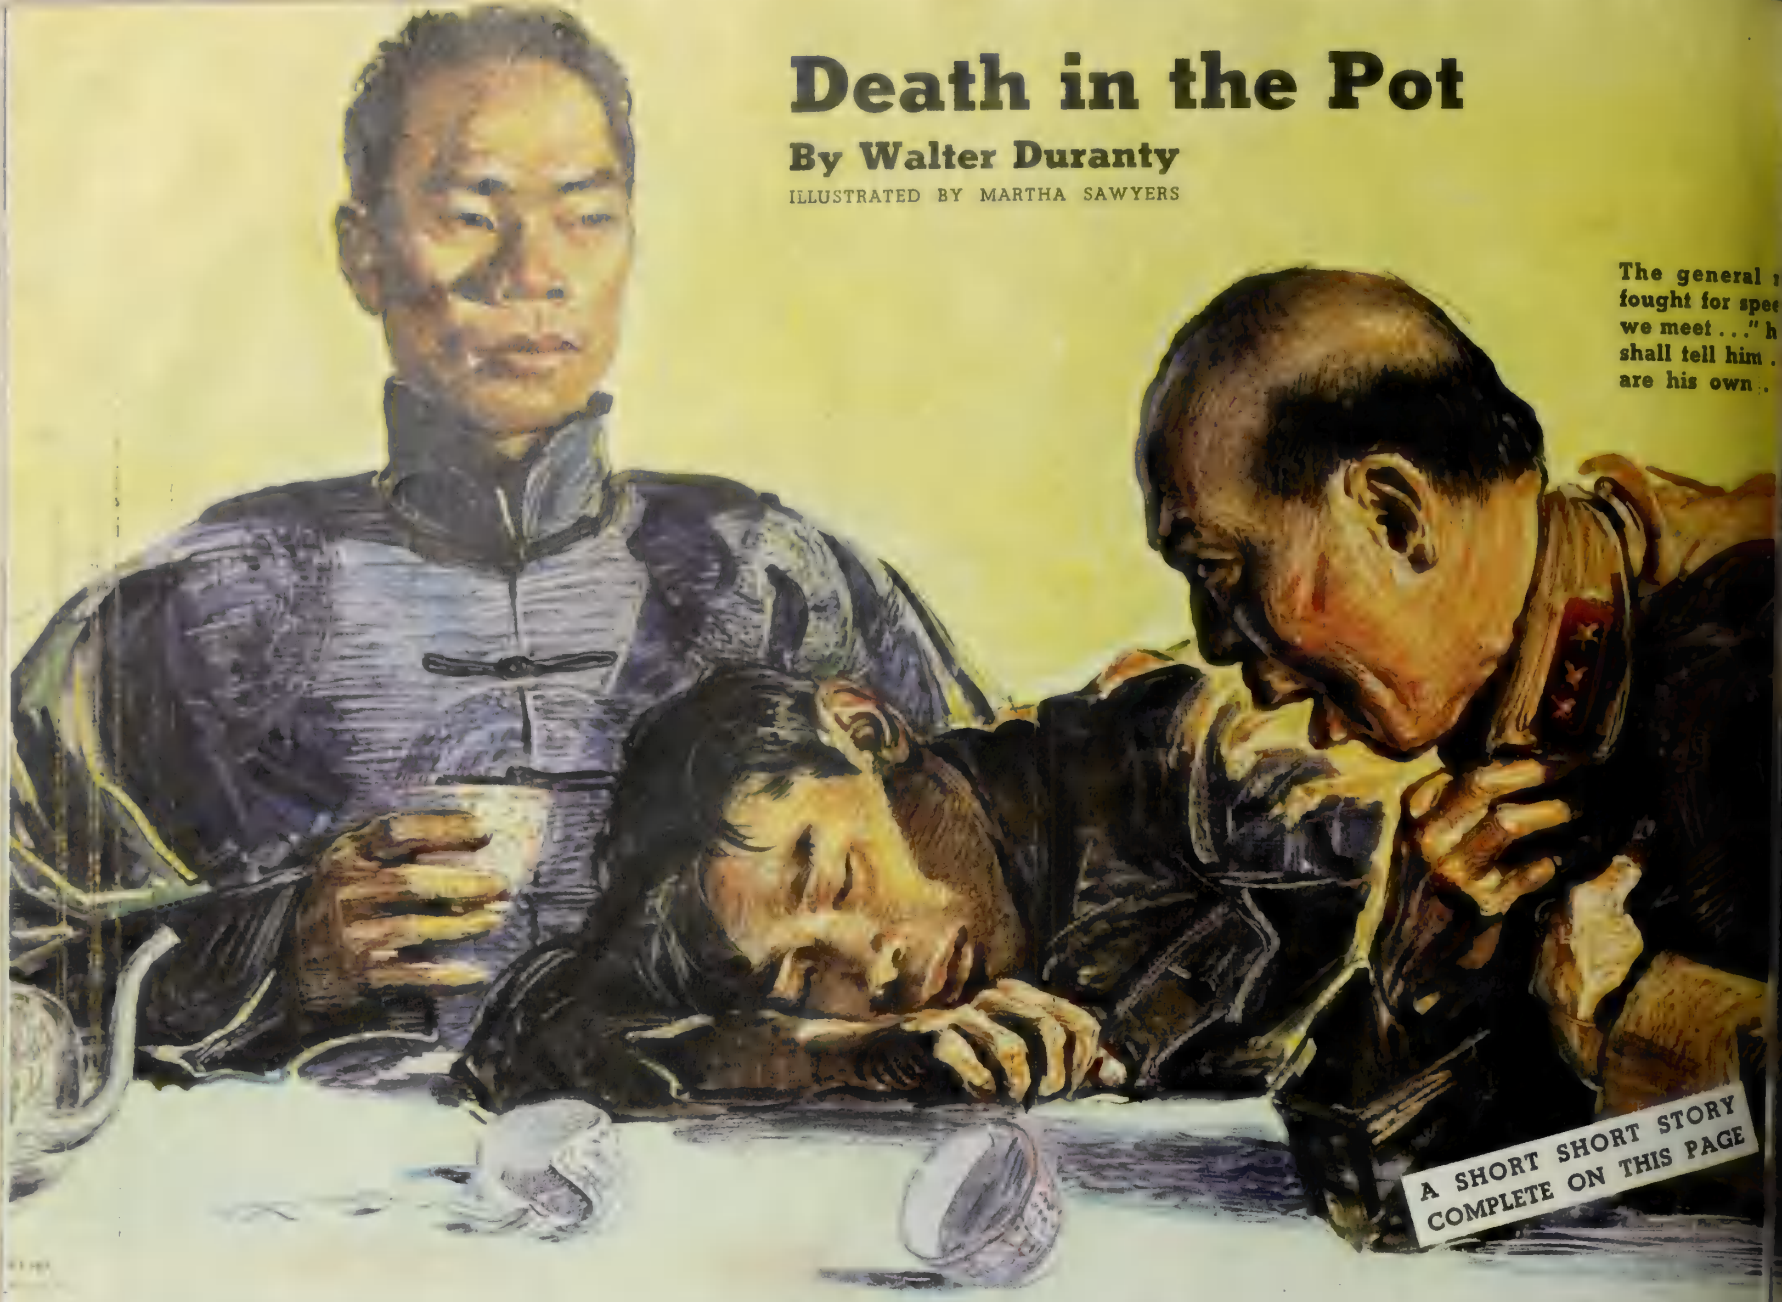
ROLF KLEP

are not primarily concerned today with Alaskan defense. There is another reason for all the military preparation going on up there in such a hurry right now.

That reason is offense.

Take a globe and a piece of string. Put one end of the string on Tokyo, and the other on Seattle. The string will cross the Aleutian Islands twice. Dutch Harbor, you will find, lies smack in the middle of the shortest ocean highway between the United States and Japan. Now swing the western end of your string down as far as Manila. Still it will pass only a few hundred miles south of the Aleutians. Actually it is shorter to Manila by way of Dutch Harbor than by way of Honolulu. (Impossible? Check it yourself.) Even the southern islands of Guam and Luzon, you will find, are nearer our Pacific coast by way of Alaska than by way of the Hawaiians.

Try a little further. Run your string from Panama to Nome, Alaska, and down again from Nome to Singapore. Incredible as it seems, you will have come within fifteen degrees of forming an absolutely straight line. For the startling fact is that the shortest route from *any* part of northern Asia to *any* part of North America is either through, or close to, our Territory in the north. Alaska lies virtually dead center. All roads, it seems, lead to Nome.



What does it add up to, then? Briefly, that we have in the Aleutians a transoceanic bridge of potential island bases unequaled anywhere else in the world. They are located strategically on the flank of the most direct routes from northern Asia, not only to our own coast but also to Hawaii; any Oriental force proceeding against Honolulu, for example, would automatically have them on its left and rear. The mere existence of well-fortified bases in these islands

# Death in the Pot

## By Walter Duranty

ILLUSTRATED BY MARTHA SAWYERS

A SHORT SHORT STORY COMPLETE ON THIS PAGE

"IT IS perfect," said Baron von Neustadt, caressing the little teapot. "Ming of course. It cost me dearly—a Han jade seal which I loved."

The baron was past eighty, but his eyes were clear and there was no tremor in his voice. He had been dean of the diplomatic corps at Peking for many years.

I took the little teapot from the old man's hand. "But why has it two compartments?" I asked as I lifted the lid, whose top was a four-clawed dragon. "And why these two holes in the handle?"

The baron's smile was subtle. "Ah, it's new to you, is it? They *are* very rare, very ingenious. . . . Do you remember Ho-hang-min?"

"You mean the northern dictator—the old marshal?"

"Yes, that one," said the baron. "He began as a bandit leader in the northern provinces and helped the Russians in the war of 1904. Then he swung to the Japanese, four million dollars the price was, and so they won. He grew too strong and that worried the Japanese. So his train was dynamited and he went to join his ancestors.

"General Yung-feng, the old marshal's chief of staff, had a finger in that murderous pie. I think he provided the dynamite. He was *most* ambitious. I suppose too he despised the young marshal, as they called him, the old man's son, whose name was Ho-min-cheng; he thought he was sodden and ruined by drugs. A not uncommon mistake for intelligent men to make, to undervalue an opponent.

"The young marshal had an English adviser, under whose influence he 'took a cure,' as Americans say. Thus restored, he became aware of General Yung-feng's conspiracy, and asked him to dinner.

"At that time, the general had made his plans to kill the young marshal and seize power in the northern provinces.

"Being Chinese and astute, the general took with him to the banquet four or five of his trustiest henchmen, all armed with Luger pistols.

"The young marshal received the general warmly and offered, most politely, to seat his guest in the host's place at the foot of the table with his back to the door. Yung-feng refused the honor and sat himself down in the middle with his gunmen on both sides. He had no suspicions, but he took no chances, and was careful to partake only of such dishes as the marshal had tasted already.

"After the dinner the young marshal clapped his hands and they brought him tea, in this teapot, this very same porcelain teapot. He poured for himself and for the general and for the general's henchmen. He drank the tea from his cup before the general drank, and his henchmen. All of them drank their tea.

"MEANWHILE they went on chatting in a desultory manner, but the general saw that the young marshal's English adviser had come quietly into the room and was sitting near the marshal. He nudged his leading gunman and whispered, 'Watch it, it smells wrong.'

"The gunman looked at him dully. 'My feet have gone to sleep,' he muttered, 'without any pins and needles.' "

The Baron von Neustadt tapped me on the knee. "At that instant General Yung-feng found that his feet also had gone to sleep, without any pins and needles. He knew quite well he was poisoned and finished and dying and doomed. He did not know how they had done it but he knew it all right."

The baron paused dramatically, and pointed at me with his finger. He went on: "There with death in his body, now aware that his hands and feet and the hands of his men were paralyzed, that the chill of death had caught them and was slowly flowing up to heart and brain . . . at this moment the general became one hundred per cent Chinese.

"Looking straight at Ho-min-cheng, he said, 'My host, I wish to thank you . . . for a splendid entertainment. You are . . . I perceive . . . a young man of unusual gifts. But not, I must say, the equal of your late-lamented parent, that pearl among men. Your father, young sir, was a *man,* like whom there are few in this world.'

"The young marshal looked at him coldly. 'Who are you?' he said, 'to say such things of my father, whom you killed, you pro-Japanese traitor, as you plotted to kill me too?'

"The general's senses were fading. His knees were cold, and he could not move a muscle. 'That's the fault of your education,' he said, 'your barbarous foreign tutor. You have lost your Chinese manners, and you do not understand. I go now from here to your father, to join him . . . over there. Of course you are right, I killed him . . . and you're right, I meant to kill you . . . but somehow you did it first. So now . . . as I'm dying . . . I send him . . . I send to your noble father . . . a message through the skies. I speak my last words in his honor, that we can meet on friendly terms.'

"For a moment his head fell forward, then he rallied and fought for speech. 'When we meet . . .' he gasped, 'I shall tell him . . . that you are his own . . . true son.' "

The baron sat back grin

alley and walked directly
l square toward the flaring lights of the saloon. A string of freight wagons crawled out of the darkness and passed between him and the saloon and somewhere a river boat whistled. Paused at the edge of the square while the freighters rolled by, he observed a man ride up and come to a halt before the string of wagons. He was in high boots and rough clothes, he wore a shaggy beard and he had the stain and the smell of a miner about him.

Pierce said, "Where's gold country around here?"

The man gave him a moment's study. "Upriver. Away up. In Ideeho."

"Just came from the California diggings myself."

"Hear they're played out. You look damp to me. You could stand a drink."

"I am a little shy of company," said Pierce.

He had judged his man rightly. The miner's lawless spirit instantly arose and prompted him to say, "Stay here and I'll get you a drink." The string of freighters had now gone by, whereupon the miner crossed the mud, dismounted before the Oro Fino, and rolled the swinging doors aside with his shoulders.

There seemed to be a sharp dividing line in town. Before him light glowed and warmth moved, regardless of the hour, while behind him in Portland's quieter quarter the solid and respectable citizens slept the sleep of the righteous. At that moment Pierce heard a quick call and turned to find Sitgreaves pointing at him. Behind Sitgreaves were the bosun and two citizens who were undoubtedly police.

"That's him," said Sitgreaves.

Pierce wheeled across the square to the alley's mouth. There was perfect darkness here for the length of a full block. Running down the loose mud, he heard the halloo of voices and a command from one of the police, "Hold up or I'll fire!" The alley played out in the middle of the block, dissipating itself into a series of between-building pathways, and Pierce took one of these in full flight, to arrive at another street all dark except for a corner house whose lights shimmered on wet pools in the street's mud. He swung close to the face of the buildings with the racket of the pursuing gentlemen steadily continuing to his rear. He cut across the mud to the far side of the street; he ran through the beam of light from the corner house, and curved into another street. And heard a woman's voice say:

"Wait!"

HE CAME to a dead stop, he whirled half around to face the dark side of the house. The woman was a shadow against the house, and he saw only the motion of her shoulders in these shadows. "No," he said impatiently. "No, I'm sorry."

She came nearer. "I had a look at you when you came across the light. You're wet." She put a hand against his chest and drew it away. Back on the other street Sitgreaves' dead, calm voice was very distinct: "He went that way."

The woman said, "Come with me."

She went ahead of him at a light run, so that he had to stretch his legs to keep up with her. Half a block onward she darted behind a building and paused to catch his hand. "Careful with your feet," she said, and led him on. Somewhere in the heart of this complete darkness she stopped again, threw open a door and pushed him into a lighted room. She came in after him, closing the door.

It was a bare and worn and unlovely room with a stove in its center, a counter in the corner, a clock on the wall, and a

## Grandpa Goes Modern

**"BACK IN 'SIXTY-FIVE,"** says Grandpa, "I was just a drummer boy. But I remember one thing the old general told me. 'Boy,' he says, 'nothing in the world does a soldier as much good as a real old-fashioned *purge*.'"

**"AND SO, YOUNG LADY,"** says Gramps, "never quibble over a good strong dose. Stick your chin out and drink it down. It makes a man of you!"

**"GRAMPS,"** says I, "you're a hard character. Did it ever occur to you to find and correct the *cause* of your trouble? Come to breakfast; I want to show you something."

**"NOW WHAT?"** says Gramps.

"Just a crisp, delicious breakfast cereal," says I. "KELLOGG'S ALL-BRAN. If your trouble is the common kind of constipation that's due to lack of proper 'bulk' in the diet, ALL-BRAN will go right to the cause of it."

**"WHOA THERE!"** hollers Grandpa. "Why didn't you tell me it *tastes* so good! If vittles like this can make you join the 'regulars,' I'm enlisting right now."

And, bless you, he did—even to following the directions: "Eat it every day and drink plenty of water!"

**Join the "Regulars" with**

"All candy products having the distinctive shape of LIFE SAVERS are manufactured by Life Savers Corp., Port Chester, N. Y.

huge, man-shaped woman sitting unsurprised in a rocking chair. She had iron-gray hair and a tremendous figure and her eyes were thoroughly unsympathetic as she looked at Pierce and read his story. "Jumped ship, didn't you?" she said. Then she turned her attention to the other woman and her expression changed, as though she saw something she didn't understand. "What are you doing in this end of town, Miss Castle?"

Pierce wheeled to have a look at this Miss Castle and met a pair of gray-green eyes dead-on. She had black hair covered by a kind of shawl that women sometimes seized up on the spur of the moment for both hat and cloak. It sat like a cowl on her head and came down about straight shoulders and a strong, rounded bosom. The night had brought color to her cheeks and her glance made a good job of investigating him. For a common woman she was well gotten out in a dark dress which came snug to her throat. A cameo pendant hung from a fine gold chain about her neck.

THE big woman in the rocker said, "Ladies never come here. What kind of menfolk have you got to let you be such an elegant fool? If you were seen you would be compromised."

Miss Castle shrugged her shoulders. "You have two fugitives instead of one, Madame Bessie."

"How would a lady like you know my name?" demanded Madame Bessie in clear displeasure. "And how did you know my door?"

"From my menfolk. You're talked about over Portland's supper tables."

"Is that what the best part of town talks about?" asked Madame Bessie. "In mixed company?" She got up from the rocker and took a lamp from the counter, and trimmed and lighted it. She was, when she faced Pierce, both taller and heavier than he; she was a formidable creature with a square-jowled face and a bit of a mustache. "Your menfolk ought to keep such things out of their houses."

She led them down a dismal hall scarcely wider than her shoulders and flung open a room's door. She put the lamp on a marble-topped dresser and stepped back, again watching Miss Castle with resentment. "I don't understand this. I shouldn't permit it. You're a fool for being something you shouldn't be. Usually it is money or a man that turns a girl. Your people have got money enough. So it must be a man."

"We won't be spending the whole night here," said the girl.

"That makes no difference," said Madame Bessie. "You are compromised now. But I suppose it is no different falling from a high place than from a low place." Thus far ignoring Pierce, she now turned to him: "Be quiet if you hear trouble outside. Get out of those clothes and I'll find some dry ones. All these ship jumpers land here wet to the skin. You'll be getting the last one's clothes. The next one will get yours. I'll take four dollars now."

"Two," said Pierce, "is my stake."

"You think I do this for the fun of it?" asked Madame Bessie sharply. "You can get out now. I won't be cheated."

"It's all right," said the girl. She produced a little purse from somewhere and laid a half-eagle into Madame Bessie's waiting palm. Madame Bessie gave the girl one look of scorn. "To go with him is bad enough. To pay his way is worse. He'll use you and lay you aside. Don't you know you can't buy a man for very long?" She closed the door behind her with a harsh jar; her heavy body went audibly down the narrow hall.

"Fugitives," murmured the girl, "can't be particular."

"Don't spend your money on me," said Pierce. "I have no way of paying you back."

"Perhaps," she answered, present itself. What is your

Diana Castle said, " pened?"

"This man," said M nodding at Pierce, "kil in the fracas."

Diana Castle stood before Madame Bessie and watched the woman with a growing self-reliance. She matched Madame Bessie's stare. She was cool and she was very thoughtful. Madame Bessie said, "You can get that hundred dollars from me, Miss Castle."

"You want to keep out of trouble. Don't you?" asked the girl. "What if I were to step out on the street and start to scream? Suppose I said you had dragged me into your place? I think you'd be in the penitentiary a long while."

Madame Bessie watched her a considerable interval, not so much with anger as with a reluctant admiration. And she said finally, "All right, Miss Castle. I guess you know what you want."

"Now," added Diana Castle, "could you get me some clothes? And he needs a drink, Madame, and we are both hungry. Are we?"

MADAME opened the door and stood through it and turned. "Miss Castle," she said, "you are too calculating for a proper lady. Wherever did you learn to be smart?" With this, she departed.

The girl walked to the open window. Her back to Pierce, and placed her hands on the window's sash. Her shoulders stopped and became round at the points and the she came slowly about and he saw that her face had a shadow on it. Her confidence was momentarily broken. Having her tired or weak or a little afraid. He liked her better for seeing it. It took the calculation and the chill out of her.

"Did you have to do that?" she asked. "When I made for the rail he came almost at me and fired a shot. I knocked him down with a belaying pin and went over the side." He shook his head; he made an odd motion with his hand. "Not to be helped."

She was watching him and he discovered that she was afraid of him for the first time. "What," she asked in a distant voice, "would you like me to do?" "Nothing. You'd better go out of that window now."

She let out a sigh and moved toward him. She was almost smiling, her fear vanished. "For a moment I thought I had made a mistake in you. But I have not. You are not one of those murderous Sydney ducks coming off a ship with your teeth broken in, cunning and half inhuman." She paused, not quite through with her thoughts about him, and added in a softer way, "I can still hope."

He said, "Why should you hope?"

"Because I need a man. That is why I stopped you on the street. You are to help me get out of this town. There are four thousand people in Portland. I can't appear on the street, or get on the California stage, or take a boat without being recognized. A woman traveling alone in this country is under handicaps."

"I do not know about that," he said.

She checked him with a gesture. "You're in trouble and you know nothing of this country. You cannot take any road from Portland without being spotted in the back country. But I know how you can drop from sight."

"How?"

"Do I go with you?"

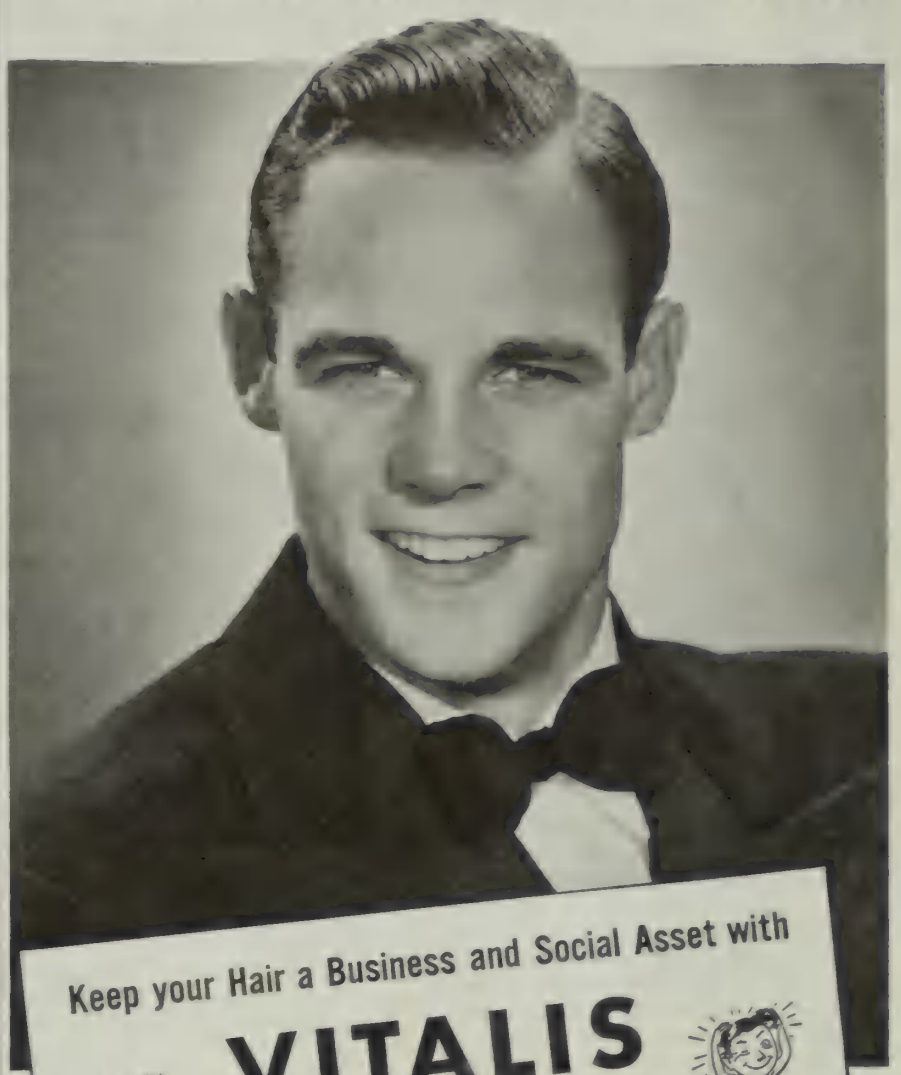
"How do you go with me?" he asked.

She drew a breath and her pleasant lips came momentarily together. She looked down at the floor and so avoided his eyes. "As your wife."

"No," he said. "Not as my wife."

She said: "There will, of course, be no marriage. We must make the best of it before people's eyes until we get to the place we're going. Is it so much to ask? Are you already married?"

"No," he said. He moved back to the window and he stood there watching the yellow lamplight shine in her eyes. She had a fair, smooth skin and a round face pointed by a firm chin; she had an enormous certainty in her, she had a positive will. What confused him was that light in her eyes which seemed to hold back some kind of laughter from him. In a way she liked this touch-and-go business: it had an exciting effect on her. Madame Bessie stirred heavily in the hall and time went on fast and he looked at her and made his decision. "All right," he said.



Madame Bessie came in with a suit of clothes and a pair of boots over one

arm. She had a whisky bottle under the clothes, and carried a pitcher of coffee and a loaf of bread in her other hand. She threw the clothes on the bed and deposited the rest of her burden on the washstand. "There's a miner from the Owyhee dead drunk in one of my rooms," she said. "This is his suit."

"Give him mine in the morning," said Pierce, "and tell him he fell in the river."

Madame Bessie nested both fists against her ample hip line and scanned these people with her dismal experience of the world's worst side. "You're a cool lot," she said, "the both of you, and you want your way and mean to get it."

"Yes," said Diana Castle, "we mean to get it, Madame."

"Mark me," said the madame, "you'll get something else. You will get hurt." She turned out and lifted her shaggy eyebrows in faint surprise when Diana Castle followed her into the hall and closed the door. "You start with modesty," Madame commented in her tart, disbelieving voice. "You will end with something else. You will never keep him."

"I don't want him, Madame. Not for long."

"So you think," retorted the madame. "Cool as you are, you are still a fool. The game you play will make you cry soon or late. He will break your heart and you might break his."

"What game, Madame?"

"For a woman there's only two—money or a man. You have money, so it must be a man."

"There's still another game, Madame."

"Is there?" countered Madame Bessie. She moved her massive shoulders forward and laid her gray-chilled stare on Diana Castle. "I've seen a lot of girls start as you start. You know where they are now? Up on the second floor of places like mine, waiting for trade." She put her face quite close to Diana Castle, darkly murmured, "Women are weaker than they think," and moved heavily down the hall.

Pierce removed the cheap sweater and pants that had come out of the Panama Chief's slop chest and stood stripped in the room's center, drying himself with a towel. He was lank-bodied top and bottom with long, flat muscles; his ribs showed when he lifted his arms and two bullet scars made white nipples above his left hip. He had sandy red hair and a heavy-boned face, and his eyes sat broad and deep in their sockets, and his chin was faintly thrust out. His mouth was full at the center, and habitually held steady. When he had gotten into the miner's clothes—trousers and double-breasted blue shirt and high boots—he said, "You can come in," and took time to wash up at the stand.

SHE came in; she stood against the wall, waiting. When he turned to her she noticed that he had the bluest and darkest eyes a man could possibly own. They were penetrating and reserved rather than friendly, and he had an alertness to his body motion, as though keyed and cocked for the unexpected. He was thinner than he should be and she had not yet seen him smile. She supposed he was around twenty-eight.

He put on the miner's coat and took a water glass from the washstand. He filled it half with coffee and half with whisky; he tipped his glass to Diana Castle and waited a moment. She had that smile somewhere behind her eyes when she said: "Luck." He drank his coffee and whisky straight down.

He had been cold, and presently was warm. He broke the bread with his hands and offered her half the loaf. She shook her head and watched him eat. He had a ring on his small left-hand finger that interested her, since it seemed to be a woman's ring, but she pushed the obvious question away. He put his hands in the miner's coat and pulled out a pipe, a letter, a small bullet mold, and a buckskin pouch. The pouch, when he loosened the pucker string, held three or four ounces of coarse gold nuggets.

She watched him now with complete troubled interest. He looked down at the pouch and hefted it between his hands, and laid it on the washstand beside the other articles. "What's left of a large bust," he commented. "Madame Bessie will probably see that he never gets it." He went to his wet clothes in the corner, retrieved his two dollars and put them in the pocket of the borrowed coat. The girl released a held breath. "You're honest," she said.

"Up to thirty dollars," he answered dryly. "What now?"

"The steamboat Carrie Ladd leaves the foot of Washington Street at five in the morning for Lewiston. A thousand miners come through here every month bound for the mines upriver. When you get there you'll be out of sight."

"Neither you nor I," he pointed out, "will walk up that boat's gangplank at five in the morning without being stopped. The police will watch it."

"I know," she said. "But we have to get on that boat."

"Where's Washington Street?"

"Two blocks south of here. Then turn left and go two blocks to Front."

"I'll go take a look."

SHE came toward him. She had her small purse in her hand. "As long as we're together," she said, "this is yours."

He let the purse lie in his palm, feeling its heaviness. "Maybe my honesty doesn't go beyond thirty dollars."

"I've got to take that chance, haven't I? When I left the house tonight, I left for good. There's six hundred dollars gold in the purse."

He turned to the window and had one leg through it when a thought arrested him. He looked back to her. "You married?"

"No."

"Not that it would have made much difference," he said in the same dry way. "But I have never run off with a married woman."

"Otherwise?" she asked.

He gave her a good and sudden smile. "Or any woman," he said.

The window let him into a pitch-black alley which he pursued to a street bordered by little frame shops long since locked up for the night. He halted on the sidewalk, listening to the thinned-out voices of men drift over h from the water front; and pres crossed the mud and advanced block and saw the flare of l Front. Keeping to the shadow he moved toward the river. C Front he put his back to a salc moment's observation.

Directly across from him s Pioneer Hotel, and beyond th dock to which a steamboat pilothouse and single stack against the night sky. Men trot boat to dock, loading freigh barrel of tar burned on the do its smoky yellow light darkly on the river. A line of waitin bent around the corner of the House as far as the dock.

killed," commented the driver with disinterest. "Well, I guess we seen a lot of boys killed, ain't we, brother?"

"You've got a cover on your wagon," said Pierce. "If my wife and I hid inside they couldn't see us."

The driver revived himself sufficiently to pack and light his pipe. He lowered the match until he caught a clear view of Pierce's face. He laughed easily to himself. "That's one way," he said. But he gave Pierce one more sharp appraisal before he said, "Come later when some of these lights go out."

Sitgreaves and his three partners were fading into the darkness up Washington. Pierce moved back into the first available shadows beyond the saloon and took station there, watching the driver of the canvas-topped wagon with ■ degree of suspicion; the man's gesture with the match was on his mind. The driver settled down inside his big coat for ■ chilly rest and, half an hour later, Pierce made his way across town to Madame Bessie's, let himself through the window to the lodginghouse room, and found Diana Castle sound asleep on the bed.

PIERCE ate the rest of the bread and drank the cold coffee and tilted himself on the room's only chair. He thought of the dead captain with a slow pity but without regret, much as he had once thought of those butternut-clad Confederate infantry who came running out of the summer wheat fields in Virginia and dropped at the crack of his gun. Pity was something he remembered in a far-off boyhood, never since recaptured; it was just a memory.

Long later he got up from the chair, observing that the black night's square at the window began to tremble slightly with gray; and touched the girl on the shoulder. "Time to go," he said.

She was up at once, frightened. She stared at him and her arms came up in a quick, pushing gesture; and then the shock passed and relief softened her and for the first time he saw her smile. "I would have been asleep in another moment. You weren't gone long."

"You have been asleep for three hours," he said irritably.

She said in a little voice, "I don't ever mean to cause you trouble."

"You have a good home. You have people. You have friends and money and nothing much to worry about. You don't know what you're getting into. It is like leaving a warm room and going out into the rain. You'll never get dry again."

"So you have a conscience," she murmured. "But let's not argue. If you hadn't turned the corner of this house a few hours ago some other man would have. I would have taken him."

"All right," he said. "We go out through the window." He gave her a hand through the window, seized a blanket from the bed and followed her. It was still black in the heart of this block but, overhead, the stars had lost some of their electric brightness, and a thin river mist moved against them. Diana Castle took the lead, reaching back for his arm, and in this manner they reached the nearest street and went along it, their footfalls running sharply ahead.

The remnant of a tar-barrel fire guttered crimson and black on the dock and the superstructure of the Carrie Ladd traced a skeleton shape against the night mists. The girl suddenly pulled him to ■ stop before a building's door. She had, he saw, a letter in her hand and now bent and slipped it beneath the door. Looking up, he noticed a sign that said: "Castle and Tipton, Wholesalers." Diana Castle faced the door, and her voice contained the first regret he had so far heard from her: "I am telling my father not to worry. I am telling him that this is my own doing."

Somewhere footsteps made in the town's stillness. The g pered. "That will be them," a his hand and led him down a building gap. Fifty feet from t once more in the sightless h block, he pulled her to a stop. them, at the mouth of the c lantern made its diamond-bri and men were talking:

The girl moved over the farther walk. They passe building's side, thus coming at which the Carrie Ladd la groaned against the piling burned in the purser's cabi

"What do we do now?" as

THE foot of the runway wa and the teamster who had Third Ohio slept soundly or his wagon. Deep in the hull rie Ladd iron fire doors sl wood smoke drifted in the air. Light appeared from a the Pioneer and steam dew-damp housetops and, b the Oregon fir forest beg through, silvered by mist. nobody at this moment visit ington except the sleepir Taking the girl's arm, he m the Ohio man's wagon, pul vas open at the rear and Castle a hand up. Followi himself sprawled on a loa potatoes, with scarcely breathing room between and the canvas top.

The teamster, wakened b of their entrance, put his the front apron and withdr heard the girl say, "You ful," and saw her face dim situation would be uncon in some degree risky, for canvas lay tight-lashed bows, all down to the wag was an opening at the re anyone might look. He t this, and settled himself knees, shifting the potato off that view and also to in which they might be spread down Madame blanket. "Yours," he said her slide into it.

It was light enough so saw her face. She wasn't s effect of excitement was

hough he had far pleasanter thoughts
han she wanted to show. "Thank you,"
he whispered, "for being thoughtful."
"It is the third man I'm wondering
bout," he said.

The teamster left the wagon. Day-
ght came and the odor of coffee drifted
ut of some near-by door and people
egan to stir around the corner of the
ioneer Hotel toward the Carrie Ladd;
nd presently the boat's whistle sent a
reat warning blast bounding back
roug Portland. People tramped
eadil along the gangplank, and a
oman said, half in tears, "Write, won't
ou?" And over and above the growing
onfusion he caught a voice that be-
onged to Sitgreaves: "You've gone
roug the boat, cabin by cabin?"
"He ot on board."
"We ll watch."

THE touched Pierce's arm. She
looked up and her lips moved and he
aw the steady brightness of her eyes;
nd once more he got the idea that this
as all something which pleased her in
way that no other thing could. The
hio man stirred on the wagon seat and
cked the brake; the wagon moved
wngrily and struck the Carrie Ladd's
ck. A boat's officer shouted his con-
ant orders and all around there was
e rising clash of voices on dock and
boat and other wagons groaned
ross the deck.
"Plank s in, sir!"
"Cast off bow and spring!"
The whistle flung out a second warn-
g and bells jingled in the Carrie Ladd's
gine room. "Cast off stern!"
"All clear astern!"
The dock trembled to the thrust of the
arrie Ladd's big Pittmans. The pad-
s slowly threshed and the nose of the
ip swung as it turned into the chan-
l. . . .

Five hours from Portland the boat
ied ashore and the wagon moved off
a rutted piecemeal road. Jeff Pierce
had been sleeping. He stirred and said, "Where are we now?"

"We've left the Carrie. We're driving around the Cascade Portage to the middle river boat—the Oneonta. We'll be in The Dalles tonight."

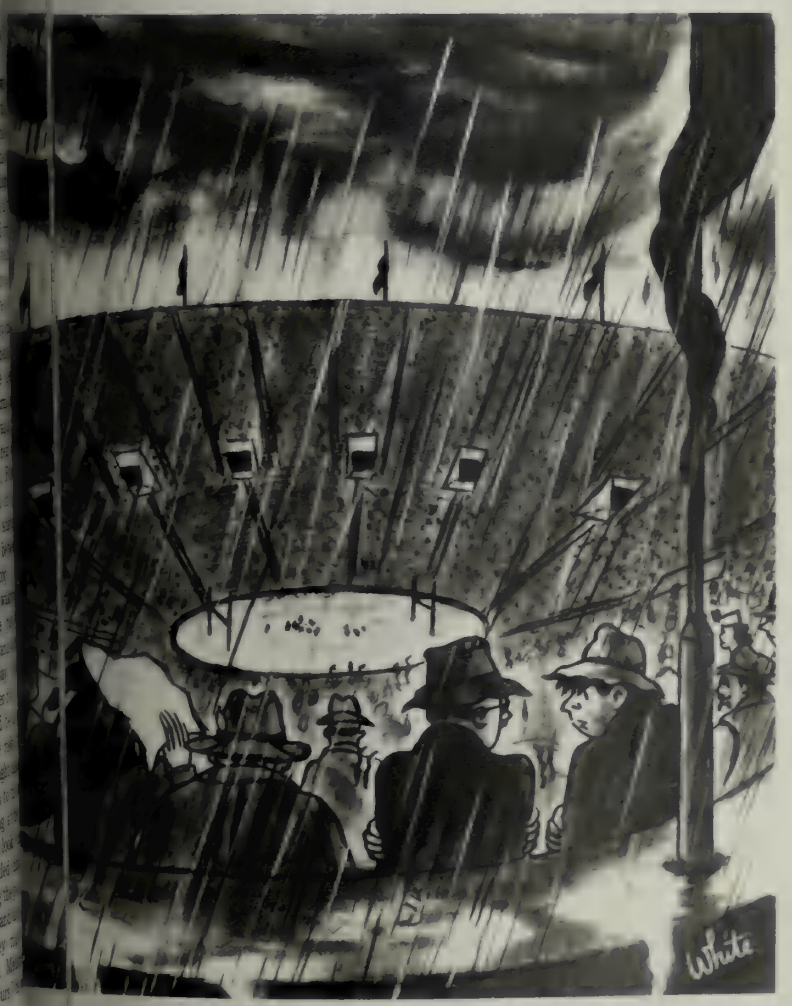
He fell asleep again. The wagon turned down an incline and struck the middle river boat's deck; and in a little while they were underway, steaming through the great Cascade Gorge. . . .

Dusk came and with it the smell of food; and darkness fell. Pierce was awake and now lay silent beside the girl, and somewhere in the early night the Oneonta whistled and turned into The Dalles landing. The wagon moved up a long grade and town lights streaked the side of the canvas and there was music from a saloon and rough voices cheerfully calling. Then the wagon stopped and the Ohio man rapped on the canvas. Pierce crawled out, assisting the girl to the ground. They were, she discovered, on a quiet back street.

The Ohio man said, "Both you folks seemed a little shy, so I thought I'd unload you privately."

"I am grateful," said the girl.

The teamster nodded, and gave his attention to Pierce. "I could make a good guess as to your bein' on my wagon," he said. "But Army men stick together, don't they?" He got back on the wagon, lifted a hand to them and rolled away.



Pierce moved to the street's corner and looked toward the heart of this river town. He said, "What's next?"

"The Umatilla House is on that corner. We are halfway to Lewiston. The upper river boat leaves in the morning."

He gave her a long, straight look. "I'll have to see about space on that boat. Meanwhile, we'll need a room and something to eat. I expect we register as man and wife?"

"Yes," she said. "If you don't mind."

"It is too late to mind now, isn't it?" There was no particular inflection to his

"You mean you'd rather be home having a turkey dinner?"

HUGH WHITE

EMBLEMS OF EXCELLENCE

**AMERICAN SKI TROPHY.** It takes more than a champion to win the American Ski Trophy, shown at the right. It is presented annually to the country's outstanding amateur skier, selected by a committee of experts as having done more for the sport of skiing during the year than any other man. Whether it's for exceptional performance in competition or for making some other important contribution to the sport, you've got to be tops in skiing to merit this award—you've got to be better than good!

**ETHYL EMBLEM.** There is an award for excellence in gasoline too. It is the Ethyl name. Gasoline in a pump which bears the Ethyl trade mark has to be better than good. It must be "tops" in anti-knock (octane number) and all-round quality. "Ethyl" means a cooler-running engine in summer; a quicker-starting engine in cold weather; extra power throughout the year. When you stop to buy gasoline, "Ethyl" tells you which pump contains the best.

# *You invite good talk when you serve folks Wine*

## *When there's wine with food on the table, folks can ease up the moderate way, and enjoy themselves*

SET OUT ANOTHER plate or two on the table. Ask some friends over. Folks are doing that more and more. Because evenings spent in quiet friendship help us to let up—to rest and relax.

Perhaps that's one reason wine has grown so popular lately. People find that when you share wine with a friend you share good talk and fellowship. You draw closer together, over good food and wine.

An interesting new booklet on wine serving is available now. Your copy will be mailed free if you will write the Wine Advisory Board, 85 Second Street, San Francisco. The Board represents every wine grower in California.

You can serve California wines with confidence—they are sound, well-developed and reasonable in price. Connoisseurs will tell you these wines of our own country are good by any standard in the world.

They're worth trying . . . be considerate, serve wine.

Serve wine as simply as tea are served. At dinner-t white or red table variety– California *Rhine Wine* or *Sa* well with chicken. Or rec with roast beef. For betwee refreshment wines like *P catel*. And as an appetize

ntually found himself at the counter. Beside him was the grave and neat man who had lifted his hat to Diana.

"Passage to Lewiston for two," said Pierce to the clerk.

"Thirty dollars," said the clerk.

"My wife is in poor health," added Pierce. "This includes a decent stateroom?"

"All gone," said the clerk. "You are buying deck space, and not much of that. It will be a full list inside of half an hour."

The neat man had been listening. Now he said, "If your wife does not mind sharing a stateroom with my daughter, I should be happy to accommodate you."

"That is handsome," said Pierce. "We will see you in the morning. Pierce is my name."

"Temperton," offered the man. "Will Temperton." He was courteous but he did not extend his hand. Pierce paid for two passages upriver and moved aside, hearing a woman's voice attack the clerk with a good-natured malice: "One upriver. I wouldn't consider it much of a treat to sit in one of your ratty little staterooms. Your bosses are making too much money for their own good. They're greedy, Neall."

"Hello, Lil Shannon," said the clerk. "But what other way could you get to Lewiston?"

"I can walk or I can ride," retorted the woman. "I can do both better than your stuffed Portland capitalists, my friend."

SHE was a woman with a rose-complexioned face, smiling and a little bold, and dressed on the high side of taste. She was his own age, Pierce judged, and knew as much of the world as he did. She turned her head with a rather swift gesture and met his attention. Her eyes were hazel and ready to be amused, and he saw that she was accustomed to meeting the glances of men. She looked at him with a moment's steady interest; he bent his head slightly and left the office. The ticket line had lengthened and now stretched halfway back to the corner of the Umatilla House and a man in the line said, "That Lil Shannon in there?"

**"Mabel, if you don't let Henry go home his mother won't allow him to call again!"** LOUIS PRISCILLA

Pierce returned to the barroom of the Umatilla House and pressed through the thick crowd. All the talk around him concerned the mining camps of Burnt River, the Blue Mountains and the Owyhee, and Elk City and Florence; the smell of gold was in the smoke and whisky reek of the room. He got to the bar and bought a drink. He stood idle and solitary with the crowd moving around him and had hot beef and beans and bread off the steam table and he bought a cigar and got it properly burning, meanwhile, watching the gold scales on the bar tip to the dust poured out of miners' pokes.

"Nothing down Powder River. Elk City's playin' out. There's a new strike on over beyond the Grasshopper diggin's, in Alder Gulch."

"Where's that, Joe?"

"Up the Clearwater, beyond the Bitterroots, other side of Bannack."

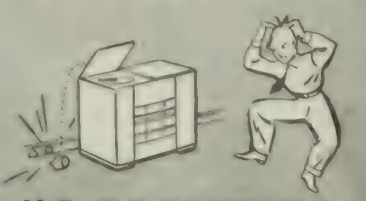
He heard this talk but paid little attention to it, for his mind went back to Portland to review the scene aboard the Panama Chief. The captain had meant to kill him, and the captain's voice had betrayed a tone of pleasure. He remembered the sound of the belaying pin on the captain's skull and the way the captain's mouth sprung wide open, and all during that time the smell of land had rolled over the water, rich and thick and racy with the freedom he had to have. There had been a black streak in the captain.

Somebody said, "You're in my way," and drove a shoulder point hard against his arm. The cigar, lightly held between his teeth, flew from his mouth and hot ashes sifted back to his face. He made a complete turn and came about and saw a man's square, sun-black face stare up from beneath the flat brim of a hat. He looked straight into a pair of mud-gray eyes and noticed temper move in spongelike contractions across this man's full-centered lips.

He waited a moment. Then he said, almost gentle with his words, "An accident?"

"You can do your sleeping somewhere else, can't you?" said the man.

Men crowded behind Pierce. He pushed his shoulders backward to relieve that pressure and he pulled up both arms and batted the man with his open left palm and hit him on the chest with his right fist. The man went backward into the crowd, into the arms of a tall fellow wearing a mustache and goatee. The tall one clenched and showed his big white teeth in a smile as he caught the falling man. He said, wickedly easy with his words, "There's your meat, Rube, go after him."



RUBE struggled out of the arms of the tall one. He was short and broad, and sweat rushed a thin, glistening film over his sun-blackened cheeks. He was speaking to himself as he moved forward; and he lifted the point of one shoulder, as though to cock his fist. Pierce shoved himself clear of the bar. He hit this muscular, slow Rube in the belly and drove the wind out of him. He waited until Rube's head dropped and thereafter caught him fully on the temple. Rube went down to the floor.

Pierce said, "I don't like to be crowded. Keep your hands out of your pocket." Then he looked up to the tall fellow with the goatee who still smiled. He said nothing but he watched that smile as wickedness honed it thin. The tall one had a fresh, light skin and a set of agate eyes in which brightness danced; and small wrinkles deepened at the corners of his temples, and he seemed to be laughing deep in his chest.

Rube rolled and stood up. He shook his head and he looked at the tall fellow with the goatee. "What'll I do, George?"

AMERICA'S SMART SET

CARBURETOR
U. S. Pat. No. 2,082,106
KAYWOODIE $4

Offhand, you might think magic has something to do with it. How else can this Kaywoodie pipe stay cool and serene even when you puff hard and furiously at it? Well, it's not magic, it's science. That tiny carburetor, that air-intake at the bottom of the bowl, lets in air. The harder you draw, the more air you draw in through the Carburetor. So, while other bowls get too hot, when you draw hard on them, this Carburetor Kaywoodie, is no blow-torch, *ever*. Your smoke is always enjoyable, even-tempered, unruffled. The price, four dollars, is even-tempered too.

Kaywoodie briar is dug out of the ground years in advance: so the war has not interfered with our supply.

Here you see a giant imported briar burl cut in cross section to show the "prime cut" segment from which Kaywoodie pipes are made. Only this prime cut produces pipes with the sweet-smoking qualities of Kaywoodie pipes.

Yours for the asking: *The Kaywoodie Pipe Almanac which tells how to get the fullest pleasure from pipe-smoking.*

# The Pied Piper

Continued from page 22

toward the car. "We want petrol," said Howard. "There is, without doubt, a depot for military transport in Angerville?"

The man stared at him. "There are Germans in Angerville."

There was a momentary silence. The old Englishman stared across the farmyard, at the lean pig rooting on the midden, at the scraggy fowls scratching in the dust. So it was closing in on him.

"How long have they been there?" he asked quietly.

"Since early morning. They have come from the north."

There was no more to be said about that. "Have you petrol? I will buy any that you have, at your own price."

The peasant's eyes glowed. "A hundred francs a liter."

"How much have you got?"

The man looked at the gauge upon the battered dashboard of his car. "Seven liters. Seven hundred francs."

Less than a gallon and a half of petrol would not take the ten-ton truck very far. Howard went back to the corporal.

"Not very good news, I'm afraid," he said. "The Germans are in Angerville."

There was a pause. "Bloody 'ell," the corporal said at last. He said it very quietly, as if he were suddenly tired. "How many are there there?"

Howard called back the inquiry to the peasant. "A regiment," he said. "I suppose he means about a thousand men."

"Come down from the north, like," said the driver.

There was nothing much more to be said. The old man told them about the petrol. "That's not much good," the corporal said. "With what we'd got, that wouldn't take us more'n ten miles." He turned to the driver. "Let's 'ave the muckin' map."

TOGETHER they pored over the sheet; the old man got up into the cab and studied it with them. There was no side road between them and the town; behind them there was no road leading to the south for nearly seven miles. "That's right," the driver said. "I didn't see no road on that side when we came along."

The corporal said quietly, "An' if we did go back, we'd meet the Jerries coming along after us, from that other muckin' place. Where he picked up the nipper what they told him was a spy."

"That's right," the driver said.

The corporal said, "Got a fag?"

The driver produced a cigarette; the corporal lit it and blew a long cloud. "Well," he said presently, "this puts the lid on it."

The other two were silent.

"I wanted to get home with that big lathe," the corporal said. "I wanted to get that through okay, as much as I ever wanted anything in all my life." He turned to Howard. "Straight, I did. But I ain't going to."

The old man said gently, "I am very sorry."

The other shook himself. "You can't always do them things you want to most." He stirred. "Well, this won't buy baby a new frock."

He got down from the cab onto the ground. "What are you going to do?" asked Howard.

"I'll show you what I'm going to do." He led the old man to the side of the great lorry, about half way down its length. There was a little handle sticking out through the side chassis member, painted bright red. "I'm going to pull that, and run like bloody 'ell."

"Demolition," said the driver at his elbow. "Pull that out, an' up she goes."

The corporal said, "Come on, now. Get them muckin' kids out of the back. I'm sorry we can't take you any farther, mate, but that's the way it is."

Howard said, "What will you do, yourselves?"

The corporal said, "Mugger off cross country to the south, an' hope to keep in front of the Jerries." He hesitated. "You'll be all right," he said, a little awkwardly. "They won't do nothin' to you, with all them kids."

The old man said, "We'll be all right. Don't worry about us. You've got to get back home, to fight again."

"We got to dodge the muckin' Jerries, first."

Together they got the children down onto the road; then they lifted down the pram from the top of the van. Howard collected his few possessions and stowed them in the pram, took the corporal's address in England, and gave his own.

There was nothing then to wait for.

"So long, mate," said the corporal. "See you one day."

The old man said, "So long."

He gathered the children around him, and set off with them down the road in the direction of Angerville.

They went slowly, as they always did. From time to time Howard glanced back over his shoulder; the men by the lorry seemed to be sorting out their personal belongings. Then one of them, the driver, started off across the field toward the south, carrying a small bundle. The other bent to some task at the lorry.

Then he was up, and runn fr
the road toward the driver. e

# Pick the right time...and save time on your Long Distance calls

Defense calls keep the Long Distance telephone lines pretty crowded these days. The chart above shows the tide of traffic during an average day.

Notice the times when the tide runs low? Early in the business day . . . from noon till two . . . later in the afternoon . . . and mid-evening.

If you pick these times to place your out-of-town calls, you'll be connected more quickly and find folks more free to talk.

You will be helping the defense activities of your country, too, by spreading the telephone load so that everybody gets better service.

**Long Distance** helps unite the nation

n coeris," said the old man. "*A six heures.*" He left the tent, wondering what dark trouble lay in store for him. It could not take an hour to put a dressing on a little cut.

Still there was nothing he could do. He did not dare even to enter into any long conversation with the German; sooner or later his British accent must betray him. He went back to the children, and led them away from the tent.

Earlier in the day—how long it seemed!—Sheila had suffered a sartorial disaster, in that she had lost her knickers. It had not worried her or any of the children, but it had weighed on Howard's mind. Now was the time to rectify that omission. To ease Ronnie's longings they went and had a look at the German tanks in the *Place;* then, ten minutes later, he led them to a draper's shop not far from the hospital.

He pushed open the door of the shop, and a German soldier was at the counter. It was too late to draw back and to do so would have raised suspicion; he stood aside and waited till the German had finished his purchases. Then, as he stood there in the background, he saw that the German was the orderly from the hospital.

A little bundle of clothes lay upon the counter before him, a yellow jersey, a pair of brown children's shorts, socks, and a vest. "*Cinquante quatre, quatre vingt dix,*" said the stout old woman at the counter.

The German did not understand her rapid way of speech. She repeated it several times; then he pushed a little pad of paper toward her, and she wrote the sum upon the pad for him. He took it and studied it. Then he wrote his own name and the unit carefully beneath. He tore off the sheet and gave it to her.

"You will be paid later," he said, in difficult French. He gathered up the garments.

She protested. "I cannot let you take away the clothes unless I have the money. My husband—he would be much annoyed. He would be furious. Truly, monsieur—that is not possible at all."

The German said stolidly, "It is good. You will be paid. That is a good requisition."

She said angrily, "It is not good at all, that. It is necessary that you should pay with money."

The man said, "That is money, good German money. If you do not believe it, I will call the military police. As for your husband, he had better take our German money and be thankful. Perhaps he is a Jew? We have a way with Jews."

THE woman stared at him, dumb. There was a momentary silence in the shop; then the hospital orderly gathered up his purchases and swaggered out. The woman remained staring after him, uncertainly fingering the piece of paper.

Howard went forward and distracted her. She roused herself and showed him children's pants. With much advice from Rose upon the color and design, he chose a pair for Sheila, paid three francs fifty for them, and put them on her in the shop.

The woman stood fingering the money. "You are not German, monsieur?" she said heavily. She glanced down at the money in her hand.

He shook his head.

"I thought perhaps you were. Flemish?"

It would never do to admit his nationality, but at any moment one of the children might betray him. He moved toward the door. "Norwegian," he said at random. "My country has also suffered."

"I thought you were not French," she said. "I do not know what will become of us."

He left the shop and went a little way

*"Is there a doctor in the house? Yes sir! And my house, too! That shingle tells you something new can do a lot for you. And remember: Something new has been added to a favorite cigarette, too, that means a lot to smokers!"*

# Something NEW* has been added!

***It's LATAKIA!** (Pronounced La-ta-kee'-a.) A wonderfully flavorful tobacco from the Eastern Mediterranean stored by Old Gold in America. Now added like a "seasoning" to Old Golds, Latakia creates a delightful, NEW cigarette taste!

**New Experience:** "I've heard of what Latakia does in expensive blends . . . New Old Gold is the first real change in cigarettes in years!" Jack Coble, architect, Greensboro, N. C.

**"Even Better** than I expected," says Millicent Barr, fashion editor, New York. "The new Old Golds have a new fragrance, new distinctive taste. They have 'class.'"

Same familiar pack—but NEW Old Golds, blended with Latakia! Made by P. Lorillard Company, blenders of fine tobaccos since George Washington's day.

Mido
MULTIFORT
SUPER-AUTOMATIC

BOONE...Extra strong stainless steel case, $37.50, with radium dial, $42.50 • MARQUETTE...Stainless steel case, sweep second hand, radium hands and numerals, $57.50 • KITCHENER. Stainless steel case, radium hands and numerals, $47.50 • Willoughby.. not illustrated—same as Marquette in yellow rolled gold plate case, $90 • Other models up to $200. Federal tax included. Prices are slightly higher in Canada.

The nearest thing to perpetual motion! You don't have to wind your Mido—it *winds itself* and runs forever with the natural motion of your arm. SHOCK-PROOF...protected against jars and jolts; unbreakable crystal and mainspring.

Wear Mido under the most trying circumstances—it will never let you down. Ideal for doctors, military men, executives, athletes.

Free ...illustrated descriptive folder showing a large selection of Mido watches. Ask your local jeweler ...or write to Dept. C, Mido, 1225 Empire State Building, New York, 410 St Peter Street Montreal, Canada.

Engraved on the back of every Mido watch are its famous guaranteed features. Sold and serviced in 65 countries throughout the world.

up the Paris road, hoping to avoid the people. German soldiers were still pouring into the town. He walked about for a time in the increasing crowd, tense and fearful of betrayal every moment. At last it was six o'clock; he went back to the hospital.

He left the children by the church. "Keep them beside you," he said to Rose. "I shall only be at the hospital a little while. Stay here until I come back."

He went into the tent, tired and worn with apprehension. The orderly saw him coming. "Wait here," he said. "I will tell the *Herr Oberstabsarzt*."

The man vanished into the tent. The old man stood waiting at the entrance patiently. The warm sun was pleasant now, in the cool of the evening. It would have been pleasant to stay free, to get back to England. But he was tired now, very, very tired. If only he could see the children right, then he could rest.

There was a movement in the tent, and the doctor was there, leading a child by the hand. It was a strange, new child, sucking a sweet. It was spotlessly clean, with short-cropped hair trimmed close to its head with clippers. It was a little boy. He wore a yellow jersey and a pair of brown shorts, socks, and new shoes. The clothes were all brand-new, and all seemed vaguely familiar to the old man. The little boy smelled very strong of yellow soap and disinfectant.

He wore a clean white dressing on his neck. He smiled at the old man.

Howard stared at him, dumfounded. The doctor said genially, "So! My orderly has given him a bath. That is better?"

The old man said, "It is wonderful, *Herr Doktor*. And the clothes, too. And the dressing on his neck. I do not know how to thank you."

The doctor swelled visibly. "It is not me that you must thank, my friend," he said with heavy geniality. "It is Germany! We Germans have come to bring you peace, and cleanliness, and the ordered life that is true happiness. There will be no more war, no more wandering for you now. We Germans are your friends."

"Indeed," the old man said faintly, "we realize that, *Herr Doktor*."

"So," said the man, "what Germany has done for this boy, she will do for France, for all Europe. A new order has begun."

There was rather an awkward silence. Howard was about to say something suitable, but the yellow jersey caught his eye, and the image of the woman in the shop came into his mind and drove the words from his head. He stood hesitant for a minute.

THE doctor gave the child a little push toward him. "What Germany has done for this one litle Dutchman she will do for all the children of the world," he said. "Take him away."

He went back into the tent.

The old man took the little boy by the hand and led him around the church, passing on the other side of the shop that had sold children's clothes. He found Rose standing more or less where he had left her, with Sheila and Pierre. There was no sign of Ronnie.

He said anxiously to her, "Rose, what has become of Ronnie? Where is he?"

She said, "M'sieur, he has been so naughty. He wanted to see the tanks, but I told him it was wrong that he should go. I told him, m'sieur, that he was a very, very naughty little boy and that you would be very cross with him, m'sieur. But he ran off, all alone."

Sheila piped up, loud and clear, in English, "May I go and see the tanks, too, Mr. Howard?"

Mechanically he said in French, "Not this evening. I told you that you were all to stay here."

He looked around, irresolute. He did not know whether to leave the children where they were and go and look for Ronnie, or to take them with him. Either course might bring the other children into danger. If he left them they might get into further trouble. He took hold of the pram, and pushed it ahead of him. "Come this way," he said.

Pierre edged up to him, and whispered, "May I push?"

It was the first time that the old man had heard the little boy volunteer a remark. He surrendered the handle of the pram. "Of course," he said. "Rose, help him push."

HE WALKED beside them toward the parked tanks and lorries, anxiously scanning the crowd. There were German soldiers all about the transport, gray, weary men consciously endeavoring to fraternize with a suspicious population. Some of them were cleaning up their clothes, some tending their machines. Others had little phrase books in their hands, and these were trying to make conversation with the crowd. The French peasants seemed sullen and uncommunicative. The French children, however, impelled by curiosity, clustered about the tanks.

Sheila said suddenly, "There's Ronnie, over there!"

The old man turned, but could not see him. "Where is he?"

Rose said, "I see him—oh, m'sieur, what a naughty little boy. There, m'sieur, right inside the tank, there—with the German soldiers!"

A cold fear entered Howard's heart. His eyesight for long distances was not too good; he screwed his eyes up and peered in the direction Rose was pointing.

True enough, there he was. Howard could see his little head just sticking out of a steel hatch at the top of the gun turret as he chattered eagerly to the German soldier with him. The man seemed to be holding Ronnie in his arms, lifting him up to show him how the captain conned his tank. It was a pretty little picture of fraternization.

The old man thought very quickly. He knew that Ronnie would most probably be talking French; there would be nothing to impel him to break into English. But he knew also that he himself must not go near the little boy, nor must his sister; in his excited state he would at once break out in English to tell them all about the tank. Yet, he must be got away immediately, while he was still thinking of nothi tank. Once he began to thin things, of their journey, or himself, he would inevitat them all in boyish chatter. minutes of his losing interest the Germans would be told t English, that an old Englis strolling around the town.

Sheila plucked his sleeve my supper," she said. "May supper now? Please, Mr. H I have my supper now?"

"In a minute," he saic "We'll all go and have our minute." But that was a Sheila was hungry, Ronnie hungry, too—unless the G given him sweets. He mus There was that soup kitch German at the entrance to t spoken of. Howard could s cookers a hundred yards *Place*.

PROFESSIONAL APPLICATIONS AT YOUR BARBER

flushed and ecstatic. "They took me right inside!" he said in English.

The old man said gently in French, "If you tell us in French, then Pierre can understand, too." He did not think that anyone had noticed. But the town was terribly dangerous for them; at any moment the children might break into English and betray them.

Ronnie said in French, "There was a great big gun, and two little guns, m'sieur, and you steer with two handles and it goes seventy kilos an hour!"

Howard said, "Come on and eat your supper." He gave him a bowl of soup and a piece of bread.

Sheila said enviously, "Did you go for a ride, Ronnie?" The adventurer hesitated. "Not exactly," he said. "But they said I might go with them for a ride tomorrow or one day. They did speak funnily. I could hardly understand what they wanted to say. May I go for a ride with them tomorrow, m'sieur? They say I might."

The old man said, "We'll have to see about that. We may not be here tomorrow."

Sheila said, "Why did they talk funny, Ronnie?"

Rose said, "They are dirty Germans, who come here to murder people."

The old man coughed loudly. "Go on and eat your supper," he said, "all of you. That's enough talking for the present." More than enough, he thought; if the German dishing out the soup had overheard they would all have been in trouble.

Angerville was no place for them; at all costs he must get the children out. It was only a matter of an hour or two before exposure came. He meditated for a moment; there was still some hours of daylight. The children were tired, he knew, yet it would be better to move on, out of the town.

Chartres was the next town on his list, Chartres where he was to have taken train for St. Malo. He could not get to Chartres that night; it was the best part of thirty miles farther to the west. There was little hope now that he would escape the territory occupied by Germans, yet for want of an alternative he would carry on to Chartres. Indeed, it never really occurred to him to do otherwise.

THE children were very slow eaters. It was nearly an hour before Pierre and Sheila, the two smallest, had finished their meal. The old man waited, with the patience of old age. It would do no good to hurry them. When they had finished he wiped their mouths, thanked the German cook politely, collected the pram, and led them out onto the road to Chartres.

The children walked very slowly, languidly. It was after eight o'clock, long past their ordinary bedtime; moreover, they had eaten a full meal. The sun was still warm, though it was dropping toward the horizon; manifestly they could not go very far. Yet he kept them at it, anxious to get as far as possible from the town.

The problem of the little Dutch boy engaged his attention. He had not left him with the Sisters, as he had been minded to; it had not seemed practical when he was in the town to search out a convent. Nor had he yet got rid of Pierre, as he had promised himself that he would do. Pierre was no trouble, but this new little boy was quite a serious responsibility. He could not speak one word of any language that they spoke. Howard did not even know his name. Perhaps it would be marked upon his clothes.

Then with a shock of dismay, the old man realized that the clothes were gone forever. They had been taken by the Germans when the little chap had been deloused; by this time they were probably burned. It might well be that his identity was lost now till the war was over, and inquiries could be made. It might be lost forever.

The thought distressed old Howard very much. It was one thing to hand over to the Sisters a child who could be traced; it seemed to him to be a different matter altogether when the little boy was practically untraceable. As he walked along, the old man revolved this new trouble in his mind. The only link now with his past lay in the fact that he had been found abandoned in Pithiviers upon a certain day in June—lay in the evidence which Howard alone could give. With that evidence, it might one day be possible to find his parents or his relatives. If now he were abandoned to a convent, that evidence might well be lost.

They walked on down the dusty road.

Sheila said, "My feet do hurt."

She was obviously tired out. He picked her up and put her in the pram, and put Pierre in with her.

He stopped at the next farm, left the pram with the children in the road, and went into the courtyard to see if it was possible for them to find a bed. There was a strange stillness in the place. No dog sprang out to bark at him. He called out, and stood expectant in the evening light, but no one answered him. He tried the door to the farmhouse, and it was locked. He went into the cow house, but no animals were there. Two hens scratched upon the midden; otherwise there was no sign of life.

The place was deserted.

As on the previous night, they slept in the hayloft.

Howard woke several times in the night, gasping and breathless with a very tired heart. Each time he sat upright for half an hour and drank a little brandy, presently slipping down again to an uneasy doze. The children also slept uneasily, but did not wake. At five o'clock the old man woke for good, and sitting up against a heap of hay resigned himself to wait till it was time to wake the children.

He would go to Chartres and look up Rougeron. The bad night that he had suffered was a warning; it might well be that his strength was giving out. If that should happen, he must get the children safe with someone else. With Rougeron, if he were there, the children would be safe. Howard could leave money for their keep, English money it was true, but probably negotiable. Rougeron might give him a bed, and let him rest a little till this deathly feeling of fatigue went away.

Pierre woke at about half past six, and lay awake with him. "You must stay quiet," the old man said. "It's not time to get up yet. Go to sl

At seven o'clock Sheila wriggled about, and climbed bed. Her movements woke children. Howard got up sti them all up. He herded t him down the ladder to the and one by one made them faces beneath the pump. T them on biscuits with a li chocolate.

There was a step behin he turned to meet a formida who was the farmer's wif manded crossly what he there.

He said mildly, "I have s hay, madame, with these thousand pardons, but th other place where we could

She eyed him keenly, "W going to?"

"To Chartres," he said.

She said, "By the tram?"

He repeated uncertainly.

"It passes at ten minute There is still half an hour.

He thanked her and went road.

Three hours later they and walked out into th Chartres, still pushing the as easy as that—a complet ful journey.

Chartres, like Angerville Germans.

IN a telephone booth t found the name of Rouge rectory; they lived in an the Rue Vaugiraud. He di feeling the matter to be a for the telephone. Instead way, and walked round still pushing the pram, trailing after him.

## "BETTER BUY BUICK"

GM BUICK EXEMPLAR OF GENERAL MOTORS VALUE

**BUICK BUILDS FOR DEFENSE**

*Our assignment: Building Pratt & Whitney valve-in-head aircraft engines for defense use.*

# Clean Motors Prevent Gas and Oil WASTE

● A clean engine, free of gums and carbon—"tuned-up" for efficient operation, cuts oil and gas consumption—more miles can be covered before oil changes—less shop repair work is needed. Improved efficiency, resulting in saving only one-half gallon of gasoline per week for our 30 million vehicles would conserve 400,000,000 gallons in six months and release more transportation equipment for our Defense needs.

No matter what vehicle you use—motor car, truck, bus or tractor, it is essential as well as patriotic to do your part in the conservation of fuel and oil for the Army, Navy and Air Forces. You can cut your own expenses and get much greater driving satisfaction.

## A "Tune-Up" with KARBOUT and RISLONE

### Absorbs Gums—Cleans Engines

Experienced engineers, car and fleet owners know that gums from oils and fuels form on valve stems, in the guides and piston ring grooves—valves stick and lag causing loss of engine compression and power. You notice a definite sluggishness, a lack of pick-up and power. Such inefficiency leads to fuel and oil wastage and eventually to more serious shop repair work.

The KARBOUT-RISLONE "Tune-up" immediately dissolves gums from valve stems, guides and ring slots and releases carbon particles that stick to the gums. Valves are "freed" and again "seat" firmly—lost compression and power are restored. Further gum and sludge formation is prevented, and a quieter, smoother running engine with "peak" performance is assured.

*A Shaler radio program (48 stations) is on the air daily during this week.*

Join the millions of motorists in oil and gas conservation—put your car in shape for efficient winter driving. Get a KARBOUT-RISLONE "Tune-up" today. No need to lay up your car—a few minutes will do the trick.

To conserve our rubber supply use your tubes longer—Shaler "Hot Patches" will repair them permanently, they are "welded" to the tube—not just stuck on.

★ ★ ★

KARBOUT and RISLONE are made by the makers of world-famous Shaler Vulcanizers and "Hot Patches," the Safest Tube Repairs Known. THE SHALER COMPANY, Waupun, Wisconsin, and Toronto, Canada.

KARBOUT AND RISLONE

**LADIES**—Add your bit in the National oil and gas conservation effort—take your car in for a KARBOUT-RISLONE "Tune-up" this afternoon. Hubby will be pleased when he gets back of the wheel tonight and "feels" the new power and pep.

## Alaska Gets Hot

Continued from page 23

would have a strongly deterring effect likewise on any tendency to trespass on the Philippines, the East Indies, Singapore or Australia. Furthermore, in this thousand-mile Aleutian chain there are at least three harbors—Dutch Harbor, Adak and Kiska—which are larger than any harbors in the South Pacific east of the Philippines. The capacities of Pearl Harbor, Pago Pago and Guam are, respectively, four, seven and eleven first-class ships; the capacity of Adak Harbor alone is 23 ships, Kiska could accommodate 40, and Dutch Harbor could furnish accommodations for the entire fleet.

In other words, when Secretary Seward laid his $7,200,000 on the line in 1867, he got more for his money than a land fabulously rich in minerals and fish and timber and furs. He got a location which, properly developed and fortified, could serve in peacetime as well as war as a powerful offensive position to hold aggressive Oriental powers in check, a sort of midocean police booth, a Bering Sea Gibraltar. The late Mr. Seward—and no one would be more surprised than Mr. Seward himself, save possibly our military experts who have only recently come to realize how right General Billy Mitchell was when he called Alaska the most important strategic spot in the world—bought the key to the whole northern Pacific.

### Ready for Anything

Alaska's role is to keep the peace; but, if war comes to the Pacific, Dutch Harbor is the spot they all figure would be the most logical target for an enemy attack. Not invasion; but a token bombing. "There are three reasons," a Navy official explained, "why this place would be Number One on the list: First is its offensive position; an enemy would naturally wish to remove it, for his own security, before it could strike at him. Second, such a bombing of an Alaskan base would have an immensely stimulating effect on enemy morale at home; and Dutch Harbor is the nearest. Third, and most important, any attack on Alaska would bring our ships rushing from all directions, thereby immobilizing a large portion of our fleet in the North Pacific and leaving the southern waters less adequately protected."

"Could they really knock it off?"

He shrugged. "Figure it out. If a long-range bomber hit the power plant, say, and the radio center and the water supply, this place wouldn't be worth much for another six months, at least."

"And what would we do then?"

"Fall back. You see, our Alaskan naval district—I'm speaking of defense now—is actually like a long, jointed pipe line, feeding out from the main base at Bremerton. If the outermost section of the pipe line at Dutch Harbor is shut off, we fall back on the next section of Kodiak. If that section is shut off, we fall back on Sitka. Meantime, as our pipe line gets shorter, a pursuing enemy would be forced to extend his own pipe line farther and farther from his home base. The longer a pipe line, the more the friction. When it gets too long, the water can't go through it at all. . . . That's why we don't take much stock in an enemy invasion of Alaska. An enemy couldn't stretch out that far. The main danger lies probably in token raids and nuisance attacks. But we're not taking any chances, of course. We're getting ready for anything."

They're getting ready fast. The Navy, working without publicity and against staggering handicaps of distance and tough terrain, has turned miracle in Alaska, one they proud of. A year ago, for ex alaska was a small, disrep smelling collection of native liquor stores—still is, for th and Dutch Harbor, across t literally a ghost town, with and a rusty tin warehouse sagging and deserted build of the gold stampede of th Today that ghost town has the startled streets echo to steam shovels; the famed H tel—you can still see the place where Jack London Service once warmed their been converted into a carpe house; the old Dutch Harb center of activity during winter of '99 when several th waited impatiently for the and the ships to start n Nome's gold-studded beach demurely as a paint shed. getting an impressive ey. Already three per- rracks are completed, l-lighted and well- is an attractive mess n hundred men at a handling 2,000 without ed with the most mod- including soundproof- hall. The commander fectionately over the and aluminum when he showed us the efficient kitchen. The handsome new recreation hall across the way has bowling alleys, gym, movie hall, a swimming pool.

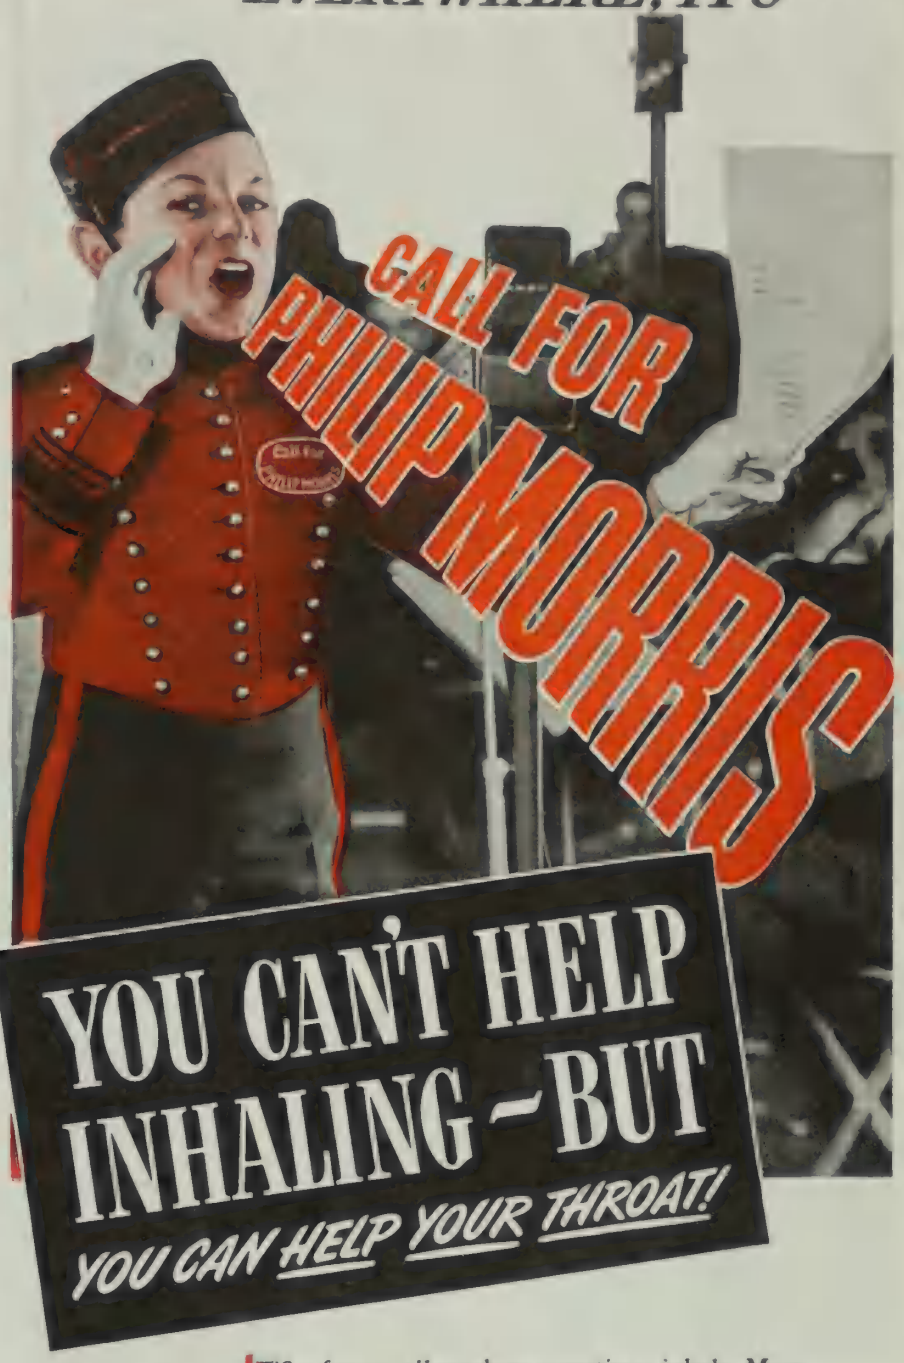
One airplane hangar is already in use, a second is due to be completed this year; when they will finish the others depends on how soon they can get the steel. There are docking facilities to accommodate 600-foot vessels with 30-foot draught—small carriers and destroyers and aircraft tenders, anything short of the big cruisers or battleships. Work on the submarine base is expected to start this year, with an eventual capacity of 18 subs.

They were just finishing paving the two runways when we were there. It wasn't taking long—a paver lays a strip 21 feet by 1,400 feet in a single ten-hour day. Like squeezing toothpaste out of a tube. Next spring, when funds are available, they hope to finish an additional runway.

We asked him a question that had been puzzling us, both at Dutch Harbor and here: "There are soldiers and sailors and marines all mixed together. How do you split the authority up?"

"The Navy's in command of the base, of course," he said. "That is, matters that affect the whole base are under naval jurisdiction. The Naval Air Station also provides facilities for anti-aircraft and sub units, and for any Marine or Army pursuit groups using the field. The Army garrison composes our outer defenses; they're responsible for the protection of the base from attack from without. The Marines are responsible for inner security and police protection. Actually there is no complete detachment here, but a number of small units, each with its special task. That way we have a modern and flexible garrison, working in unison, working swiftly. We've taken a leaf out of Europe's book, you see."

One final question: "And when will you be ready?"



"We can go to war on a limited basis right this minute," he said very deliberately. "Kodiak's ready now."

Sitka—third and last section of the Navy pipe line, located about midway in Alaska's famed panhandle—is ready, too; ready in spite of difficulties. They still recall the objections Washington raised to the cost of removing the spruce stumps from the site of the base, for example. The first bill was steep enough—big spruce stumps yank out

hard—but when they submitted a second bill a month later for clearing the same land all over again, Washington hit the ceiling. Washington was reasonably sure you couldn't grow a whole new crop of spruce stumps in ■ month. It required considerable effort to persuade Washington that when they removed the spruce forest that covered Japonski Island, and dug down a couple of feet they found the remains of an earlier forest, cleared ■ century ago during the Russian occupation. Even below that, they said, they found an old Russian corduroy road, several skulls with bullet holes, some bits of chain, a rusted cannon.

It was the early Russians who gave Japonski Island its name. In 1804, when Sitka was the colorful capital of Russian Alaska and Baranof was its fabulous ruler, it was decided to import as slave labor some odd little yellow men that the fur traders had observed on the islands of Nippon, south of Siberia. An expedition set out from Alaska to capture a boatload of these slaves, and Baranof hastened to prepare a spot near Sitka where they could be kept. But the project fell through, and the Japanese never got to Japonski Island.

And, from the looks of it, they never will, for the base the Navy is building there today appears to be a really impregnable proposition. About a hundred buildings are completed to date; permanent concrete structures for the Navy, temporary wooden structures for the Army. Two concrete hangars are already in use, with full ramps and parking areas, and a third hangar is going up as this is written. Coastal guns bristle from strategic points around the island, protected by the natural rock barriers, screened from air view by heavy camouflage netting. A causeway is being strung around the small islands on the ocean side of the base, in order to improve Whiting Harbor and give it adequate protection as well.

Moving half a million cubic yards of fill is nothing unusual at Sitka. They don't fool. Last year they cleared and leveled seventy acres of the rocky island; a total of a million tons of rock. At least half of that was moved in clearing the site for the Army base alone over on Charcoal Island, now actually part of the main island of Japonski. They shot off the entire top of a mountain in three blasts—eleven and seventeen and twenty-nine tons of dynamite, respectively. Ninety-five days later, a complete Army base stood on the spot.

### Full Speed Ahead

They move fast. "When I came to Alaska," the general superintendent said, "they told me to throw away my wrist watch, and get a calendar. I threw away my wrist watch," he added, "but I got an alarm clock instead." There are between 700 and 1,000 workmen at Sitka today, doing regular ten-hour shifts. To solve the living problem, the Navy purchased the creaky old honeymoon special City of Baltimore, pride of the Chesapeake Bay run, and towed it from Maryland all the way north over the long Pacific rollers to Sitka Harbor. Today she sags alongside the Navy pier, her dowdy gilt paint and gingerbread trim as incongruous amid the snow-capped peaks and glaciers as a colored mammy in an igloo.

Nor are solid rock and soft muskeg their only problems. Here, as elsewhere in Alaska, labor unions tried to prevent the soldiers from aiding in the work of clearing the land. In Sitka, they were equal to the occasion. They explained to the union leaders that the soldiers were getting logs for their own work. "We can't help it," they added naïvely, "if the land happens to get cleared in the process." Not only did the union leaders acquiesce; relations Navy and the union have b ever since.

There is another proble manding officer has had t problem of morale. The t gets pretty much out of ha urday night; so the comma stituted a series of weekly in the first hangar, with ments afterward. On Sunda the men small boats in whi ing; guarding meantime ag destruction of the game-fis imposing rigid restriction and number far below th limits. This same sense o ship has been instrumenta game right around the base large personnel. Recently practicing on the rifle ran ski Island, were startled flag waving from the pit. " came the order, "and chase the range."

## Car Engineers prove AC Spark Plugs on hills that are 12 months long

You'll never drive your car so hard,—or so long. But car engineers do it, day and night. Why? To get for you—among other things—the spark plug that is most reliable, most efficient, most satisfactory.

Out of brutal, killing tests like these comes AC leadership as the spark plugs for new cars and trucks. More AC Spark Plugs are used as factory equipment on new cars and trucks than any other make. And this has been true for the last 14 years.

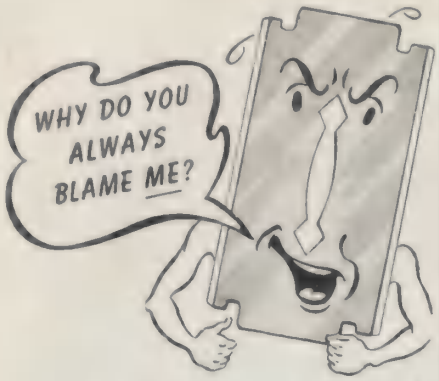
That is why motorists who wisely follow the lead of car engineers say, "Give me AC's," when their service man suggests replacement of worn plugs.

### The Quality Spark Plug

Buick, Cadillac, Chevrolet, Nash, Oldsmobile, and Pontiac motor cars; Chevrolet, Corbitt, Diamond T, Federal, GMC, International, and Sterling trucks; Allis-Chalmers, J. I. Case, Cletrac, and International Harvester tractors . . . these are some of the well-known cars, trucks and tractors which use AC Quality Spark Plugs. Trust your spark plug requirements to the same brand of spark plugs which the leading, big volume manufacturers select.

**New AC's every 10,000 miles will more than pay for themselves**

## How to continue GOOD PLUG PERFORMANCE



Have your Registered AC Cleaning Station check, clean, and regap your spark plugs every 4,000 miles. This service costs only 5c a plug. Clean plugs mean more power—as much as 21% more.

***Get Plugs CLEANED where you see this Sign***

# DON'T BLAME YOUR BLADE

How often do you get a really decent shave? Not very often, if you're like most men. Either your beard doesn't 'come clean', or your face is tender and irritated.

And like most of us, you probably blame the whole business on your blade. Yet most blades today are well made. It might be a simple matter of getting the *right cream.*

● **That's why you ought to try** Listerine Shaving Cream. Just to *prove* to yourself how important good cream is . . . how good *this* cream is . . . try it with the *same blade you were complaining about.* We're positive Listerine Shaving Cream will give you a close, comfortable shave . . . even if your beard is tough, your skin sensitive! And that big economy tube lasts over 3 months.

**But if you don't feel like risking a cent,** just print your name and address, send it to the Lambert Pharmacal Co., Dept. P, St. Louis, Missouri, and we'll *give* you a 15 day tube of Listerine Shaving Cream.

That's how sure we are of what this *different* shaving cream will do for you.

**LISTERINE SHAVING CREAM**

## Lady Makes Good

Continued from page 14

most brilliant in the world but it was a chance to learn stage business and she took advantage of that. The week-end performances were likely to be on the hilarious side because the cast was paid on Friday and the male members invariably carried a load when they hit the boards that night. That got her the only part she was allowed to play on tour.

"Played a corpse, lying in the box and everything. They were afraid the man who ordinarily did it would sit up in the middle of the scene and yell for a brandy."

When she came back to London she got a small acting part in another provincial company but her stage career was halted for a year while she went on a world cruise as companion to an elderly woman. She felt she might as well get that out of her system while she was young.

"We intended to be gone a month, but every time we came to a stopping place we decided to see another continent."

When she got back from the cruise she found it harder to break into the London theater. The few contacts she had picked up seemed to have disappeared and she spent the usual sad months going into little offices where a hard-faced stenographer pulled back a sliding window, looked at her wonderingly and then told her there was nothing today. She managed to get work as a model and liked that all right because it paid a guinea ($5) a sitting, and on good days she worked in as many as four of the things.

### American Little Honeys

But the modeling game began to fall off and she was glad to get work at the studios. She started as an extra with Estelle O'Brien, who later turned out to be Merle Oberon, and worked from that into 'quota' pictures, those monstrosities confected by American film companies in London to surmount legal difficulties. In an effort to stimulate British pictures, the government required that for a certain number of American pictures imported, the American companies were required to make a certain quantity of British films. The way the Americans smacked those out was a thing to behold.

"I think you have a name for them over here," says Miss Lee. "Little honeys?"

She could see that she was never going to get anywhere appearing in such. So she went up to Gaumont-British to get a real job. She had an appointment to see Stevenson, then assistant producer, and arrived swathed in furs.

"Will you be a good fellow and go down and tell my man to be back in an hour?" she asked Stevenson, regally.

He went down and saw a Rolls-Royce, red, and a liveried chauffeur He came back slightly impressed.

"It was years later, when we were married, that she confessed to me she had hired the outfit, furs and all," reports Stevenson.

"I still haven't got a real fur coat," puts in Miss Lee.

"What's that thing you wear?" demands Stevenson.

"That little cut-off rag," retorts Lee promptly. "They'll throw me out of the Screen Actors Guild when they find that's all I have."

Anyhow, she was signed by Gaumont-British and shipped off to Africa immediately to make a desert picture, one of those triumphs where four white men stand off an army of dervishes and save the poor anemic white wench. With Miss Lee on the trip was one other girl, the script girl, who was taken sick the third day on location and had to be lugged off home.

"Forty-two wild men and me," says Lee. "But I was safe enough. Everybody was sick and about to die."

After fourteen weeks the boss in London called Stevenson in and said vaguely:

"Oh-ah . . . that African company. Deuced funny thing about that group; haven't heard a word in five weeks. Perhaps you'd better pop down there and see."

When Stevenson arrived on camel back, he was a sight and they were a sight. The company looked like the Lost Battalion of the Last Foreign Legion. They were scurvy, they were starving, they were bearded and dying.

"Stevenson?" says Miss Lee. "Stevenson at a hundred paces looked like an angel masquerading as a Boy Scout. He wore white shorts, a white shirt, a white helmet . . . and the duckiest little pair of white socks you ever saw. I knew I was going to marry that man even before I knew who he was. What I wanted to see most in the world was a man with a clean neck. That was Stevenson."

Miss Lee's career really started with that adventure, and her personal life as half of the Stevenson-Lee team has been satisfactory. After they had worked together for several years, they both laid off for a year. Miss Lee had a baby and Mr. Stevenson wrote a book, something called Darkness in the Land. This year there is to be another addition to the family.

"And *I'm* writing the book," says Miss Lee pointedly. "Started it four years ago, thought it was wonderful, thought I was a pretty smart girl . . . I might as well finish it now; I'll be out of work anyhow."

When Miss Lee worked under Stevenson's direction in England, they had a plan of operation. He was absolute boss of the production. They never talked about the progress of the film at home; she never complained and never made suggestions; she did her work and kept her face shut.

"And after it was over there was no use discussing the mistakes because by that time everybody in town would be telling us how bad it was," says Stevenson sourly.

# *Like Uncle Sam's Newest Planes*

# Mercury Has More Power Per Pound!

***You'll Thrill To The Style, Economy and Surging Power Of This New And Different Airplane-Engineered Car!***

**1. Mercury Is Airplane-Engineered**—Like the new Army planes it is streamlined from core to outward line, free from excess weight, and has *more power per pound* than most other cars. You instantly notice the difference in flashing pick-up—greater responsiveness at all speeds!

**2. A Truly Beautiful Car**—Mercury's imposing front grille—longer, lower lines, smart colors, distinctive appointments and luxurious fittings—all blend into beauty and grace that will thrill your pride for a long, long time.

**3. Plenty Of Room**—There's no elbow bumping—no leg hunching—no crushing of hats, in today's *big* Mercury. You sink back on deep, wide seats—stretch out and r-e-l-a-x in perfect comfort!

**4. Built To Serve U. S.**—Reconnaissance cars . . . airplane engines . . . complete bombers and tanks . . . constitute only a part of the Ford Motor Company's tremendous contribution to national defense!

TO SEE IT and drive it, you'd never guess the luxurious new Mercury is a stand-out *economy* car. But Mercury is airplane-engineered . . . *streamlined from the inside out* . . . and built of highest-quality materials for long life and unusual "big car" performance at low cost. You get the smooth, brilliant "drive" of a 100-horsepower V-type 8-cylinder engine. You get an all new kind of gentle "sky-ride" made possible by longer, slow-motion springs and improved shock absorbers. And Mercury combines a lower center of gravity with wider tread, for better traction on curves and wet roads. Step up to *Mercury* for 1942 . . . drive a car you'll be proud of in the years to come.

# YOUR PLANES

# YOUR SHIPS

# YOUR TANKS

THE UNITED STATES GOVERNMENT is again using "Prestone" anti-freeze to provide one-shot protection for Army and Navy equipment.

Your planes, your ships, your tanks, squad cars, trucks and torpedo patrol boats will be protected by the anti-freeze that does not boil away. They will be protected by the *guaranteed* anti-freeze that outlaws freeze-up, rust and corrosion . . . the one-shot anti-freeze that protects all winter long.

## If you can't get "PRESTONE" anti-freeze *REMEMBER THIS*—

In addition to Government demands made on the finished product, "Prestone" anti-freeze, thousands of tons of raw materials necessary for its manufacture are now being used in making vital defense equipment of many different kinds.

Some of the uses to which these raw materials are being put were born in the laboratory but a short time ago.

Despite these heavy defense requirements, quantities of "Prestone" anti-freeze were made available to American motorists, but the supply probably will not be sufficient to meet all civilian needs.

# "PRESTONE" ANTI-FREEZE

# Naval Engagement

Continued from page 16

When the Marines played Michigan that year the field judge got mixed up in his time and the teams played about two hours. The Detroit papers fixed that up by headlines:

"Marines Win First Game, 6-0; Michigan Takes Second."

With all this Larson was discovering that all the good men were not in the colleges. Even today he says flatly that the best football man he ever played with was Frank Goettege, great plunger, passer and kicker, who had been a frosh at Ohio State before joining the Marines. Later he was to see a sailor named Ray Fitch run rings around the celebrated Buzz Borries of Navy in a game between the U.S.S. Pennsylvania and the U.S.S. Arizona on the West Coast.

He also learned that anything can happen in football and has operated his system on that principle ever since. In the Vanderbilt game in 1924, the Marines were leading 13-0 and had the ball on Vanderbilt's nine-yard line when Groves the quarterback fumbled and then kicked the ball when he tried to recover. It went straight into the arms of Bomar, the great Vanderbilt end, who ran for a touchdown, one hundred yards. It finally ended in a 13-13 tie.

## Football Round the World

In 1925 when he was playing and coaching at Parris Island, South Carolina, his team and Newberry played a game without time out on either side, the game ending in one hour and seventeen minutes, fastest on record. In 1927 he was in Honolulu, playing in the barefoot league. It was so hot that the teams took off their shoes.

He was moving all the time. From Honolulu he came back to Bremerton, Washington; then to San Diego; and then, in 1937, the Chinese-Japanese war broke out and he was sent to Shanghai with the Sixth Marines, landing there in the middle of the battle of Shanghai. Fighting was raging on Suchow Creek but the Marines had to have their football and were practicing vigorously in City Park when the Japanese started to shell Nantao Wall, the bullets going over City Park in a salvo. Larson wanted to stick it out but one of his players, a sensible fellow said to him:

"Coach . . . just one little announcement from you now: No more workout today." The players were on their way to cover before he could open his mouth.

After that he was recalled and stationed on the Reina Mercedes, the old Spanish ship captured by Dewey at Manila, anchored off Annapolis. This was the headquarters of the Marines who were in charge of the yard at the Academy, and Larson was in charge of it.

"Head traffic cop, to be exact," says Larson.

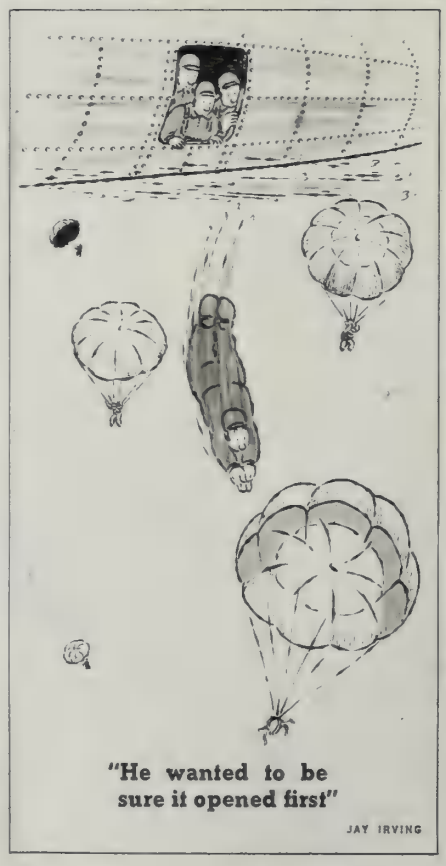
Going back and forth to his duties, he used to pass a lot where young sons of Navy officers were playing football. He took over that aggregation and was shunting the midgets around in lively fashion, glad enough to keep his hand in at the sport, when Capt. W. C. McKee, director of athletics at Annapolis, came around and asked him if he would like to coach Navy. It was really quite an advancement.

"You're not joking, surely, Captain," said Swede, and it was arranged, he seeing the squad for the first time at spring practice in 1939.

In 1939 his team won three, lost five and tied one—but beat Army, 10-0. In 1940 they won six, tied one and lost two—but beat Army, 14-0, which is all that counts. The record this year is well known and writers have spoken of it as the greatest Navy squad since the days of the World War. With Bill Busik, Howie Clark, and half a dozen other whiz-backs scampering all over the landscape and such powerhouses as Gene Flathmann and Bill Chewning messing up the opposition from their tackle spots, it has been a happy season for Swede and his boys.

In appearance Major Larson is tall, straight, still spare and lean. He is six feet and weighs 190 pounds, which is something for him because in his best playing days he never could come up to more than 172 pounds, being a string bean. He has a bronzed look, high cheekbones and nobody takes him for a Swede.

"He looks like old Tecumseh," they say affectionately at the Academy, referring to the old bowsprit figure of the Indian that is a landmark down there at which the young men throw pennies with their left hand, for luck, when they are going to take examinations.



But the solemn, saturnine appearance is merely a front. Swede is a garrulous and humorous gent when he is with his pals, and in the service he was something of a heller. On one maneuver when they were about to take the long thirty-one-day jaunt back from Lisbon to Guantanamo, the crew sent Swede and Battler Cruise into Lisbon to buy extra provisions.

"They got confused and only remembered their errand at the last minute," recalls Mal Hogan, a classmate. "All we got was twelve cans of peanuts, a stinking diet after the first ten days."

Larson was a member of the first landing party at Nicaragua, when we took over that state for a few years, and became the poker champion of the Nicaraguan president and his cabinet.

"He's been trying to get sent back there since," say his pals. "He won a fortune and picked up some splendid Spanish phrases."

Amazing New

90-SECOND CAR HEATER

Guarantees

more heat FASTER!

*Now America's Fastest-Selling Quality Heater*

*Heats Hot While the Motor's Still Cold —Burns Fuel from Carburetor in Patented Sealed Chamber*

HERE'S winter driving comfort no other car heater—*at any price*—can give you! Hot heat *in 90 seconds by the stop watch!* Heat *all the way*—not just on the last leg of a trip! Comfort that millions praise!

This amazing South Wind Car Heater gives more heat faster, *guaranteed,* because it doesn't depend on a cooling system for heat. *It makes its own heat by burning fuel from the carburetor inside a patented sealed chamber, from which all fumes pass out the engine exhaust.* It carries the official seal of Underwriters' Laboratories, Inc.

The South Wind is America's fastest-selling quality heater because it does what even higher-priced ordinary heaters can't do! *It floods your car with quick heat while the engine is still cold*—warms you from the feet up even on short hops—gives an hour of fireside comfort for the cost of a single cigarette!

The South Wind is small, quiet, *fully automatic,* always ready for use—and is easily installed or transferred to a new car *with no hose cutting, no extra thermostats to buy.* New-type defroster attachment provides quick, effective windshield defrosting *under all riding conditions.* You'll find South Wind sales and service coast-to-coast!

## One of We's Own

**Continued from page 18**

"Naw!"

"Yeah. And at ain't all. Quick as dem socks got hyar, I'd th'ow you down and put 'em on you, you good-lookin' heifer. Right hyar in front er ev'y-body!"

A young girl in the springtime can stand only so much ardent love-making. Lou-netty squirmed shyly and giggled. "Lake," she said warmly, "you's a dog! You's jest a natchel dog! Th'owin' me down right hyar in front er ev'ybody and puttin' dem candy-stripe socks on me! You ain't got a shame in dis world!"

"I ain't got no shame about lovin' you like I'm lovin' you now, gal," he declared.

"And efn you keeps on wid dat kind er love tawk," Lou-netty warned him, "I bet I'd *he'p* you put dem candy-stripe socks on me. Cause dat kind er tawk makes me ain't got no shame, too. I can't do nothin' but jest stand hyar and grin at you, you big ole monkey-face dog!"

Lake did not have to buy the stockings, for he and Lou-netty stood before B'r Charlie that evening and gave the answers that made Lou-netty a spring bride, and Lake a sharecropper on Little Bee Bend plantation.

THE Cockle Burr cut was tough, but Lake and Lou-netty went at it cheerfully. "You keep de grass chopped out," he told her "and I'll keep dis ole cultivator turnin' and us'll make a crop for de books, next fall, efn hit don't rain too much and nothin' else happen."

Lou-netty was proud of her husband. He was the first one she ever had, and from where she stood he was the best anybody had ever had.

In a way, Lake was happy, too. Lou-netty was not the most entertaining wife he'd ever had, but he decided she'd "do in a rush." The thing that pleased him most was the fact he was making a crop on Little Bee Bend plantation. He had heard tales of the place, and of the hard-driving foreman, during his ramblings. There was a legend that stretched from the St. Francis River in the North to the sugar country in the South about how hard it was to get on the place and how easy to get off. It had ever been a challenge to his ability to get along anywhere. And here he was, not only making a crop on Little Bee Bend, but getting an occasional nod of approval from Giles! It was something to brag about.

"Dey tells me," Lake confided to Lou-netty, "dat efn a late-come worker kin git along wid Giles, he kin git along in McGee-hee."

"McGee-hee who?" asked Lou-netty.

"McGee-hee ain't nobody, gal. Hit's a place. Hit's a place dat's so hard dat can't nobody, black or white, git along in hit."

Lou-netty was fascinated by her husband's knowledge of far-off places, and she always wanted to know more. Frequently, in her simple, practical way, she asked the wrong questions:

"Efn hit's all dat bad, den what do anybody want to stay dar for?"

Lake had to figure out an answer to that one, it having never before occurred to him. Since he had no personal knowledge about the town and had heard only gossip about it, he did not have to confine his answer to statistics. "Dey don't nobody stay dar," he told Lou-netty. "Ev'ybody jest moved off and left hit flat." He saw another question coming and answered it before it was asked: "But dat didn't do no good. Hit's still jest as bad as hit would be ef a hund'ed people dar, fightin' a lin' and goin' on. McGee-hee' hard to git along in."

Lou-netty thought about i her husband's fantastic tales fired her with admiration, th seemed real. She had been Little Bee Bend as had her pa grandparents. It was the only knew about. She naturally t granted that Little Bee Ben best place in the world and places were neither good nor

"Giles ain't hard to git al Lou-netty said. "Anybody kin git along wid him. Efn good, you git along good wid you works bad, you git alon him. But you git along, one yuther."

The first sign of disaffectio perienced as a sharecropper Bee Bend, came late one Fr noon. He and Lou-netty h working through their crop time in as many weeks. It w tom for a man to be allott land for him and his famil through in five days during t season so they might have and Sundays for holidays. L through in two days and h netty with the hoeing for thr

"Hit looks middlin' fair," that Friday afternoon. "Bu see some Johnson grass spr grass in the Cucker Burr cut good. You ketch yo' team mawnin', Lake, and start pl

"Yassuh," said Lake.

"And efn you wears out y netty," the foreman added, a bran'-new hoe."

Walking across the fie cabin, Lake's mind was far in the middle of a bad towr talked about. Maybe if a the middle of that bad to his pistol—"I wonder is *raley* as bad as folks clain mumbled to himself.

As soon as it was light e next morning, Lake had hi field. Lou-netty joined h hoe when the breakfast cleared and the noon meal quick cooking.

Later in the morning through the field several ti loped away without sayin Lake.

"He keep ridin' in my fi nothin' but a good end- Lake growled. "And ev'y plows in de middle er my as I plows de end whar He was feeling downhear

AN HOUR later, four cu and a dozen women, t tening in the sun, follow the turnrow.

"Widow Duck, you t over yonder wid Lou-ne man said. "And y'all boy vators cut down de fi Mens, plow deep. Anc hard. And us'll git dis g fo' de sun go down."

Lake stopped his team I ain't axed for no he'p,"

"You gittin' he'p, jest gonna rain soon."

"I works my own cro

…s not just a name, any …a reality that challenged every drop of run-around blood in his body. He wondered how a man would set out for McGehee. Was it close to Angleton over in Texas, or was it near Pine Bluff up in Arkansas? He had been to both of those places, but he disremembered in which town he had heard about McGehee. He remembered other places he had been to; recalling their charms made him no happier.

"Hot damn!" he exclaimed. "Hit's so many places whar I'm ain't, I don't see how come I'm whar I'm is!"

"Say which, darlin'?" Lou-netty called from the kitchen.

"Say git me somethin' to eat and quit argyin' wid me!"

Lou-netty almost choked. It was the first short-talk she had heard from Lake. "Darlin', I ain't argyin'," she objected.

"Den don't start," Lake growled.

Monday morning came and, with it, the sunshine. Though the field was far too wet for plowing, Lou-netty got her hoe and began to drain the water trapped in the middles by hurried plowing. She knew that Lake should have been in the field with his team hitched to a middle splitter, making longer ditches to drain the low places. Unless the water was drained, the field wouldn't be dry enough for working in less than a week. A whole week with no work in a cotton field was unthinkable.

"Lake kin git de down-yonders and quar'l and hit ain't no skin off'n nobody's back," Lou-netty told herself. "But he ain't got no call to take hit out on dis crop er cotton."

LAKE had no thought for the cotton. He was at the commissary, sitting around, aimless and thoughtless. After two nights and a day with the uninspiring Lou-netty in his present restlessness, it was a relief to get away. It was a mile or more from his cabin to the commissary, and that was a help. It would be better, he decided, if he were even farther away. Maybe off in some other community altogether, where he didn't know anybody at all.

A place like McGehee, for instance.

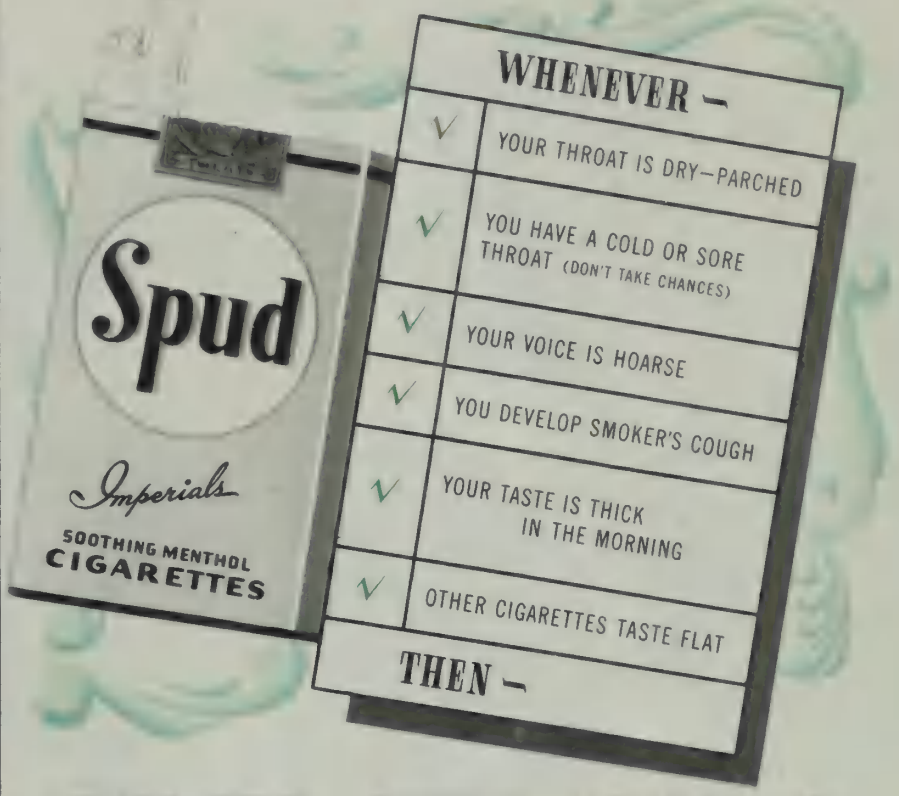
An idea came to him. He grinned, and sauntered inside.

"Mist' Giles," he said forlornly, "I needs me a pair shoes."

"What size?" asked the foreman.

"Tens."

Giles wrote in the book and instructed



". . . and now a few words about today's game"

# THROAT SORE?

*It's time to*

## CHANGE TO SPUDS

## ENJOY THEIR SOOTHING COOLNESS AND *Give Your Throat a Rest!*

Whenever your throat is parched, tired, or sore, there is a definite reason why you should change to a menthol cigarette! And when you change, be sure to call for Spuds. For new, improved Spud Imperials are designed to protect your throat from irritation caused by ordinary cigarettes. Spuds are superior in 3 ways:

GREATER SAFETY—Spud Imperials produce no acrolein—a major throat irritant found in the smoke of nearly *all* cigarettes. In addition, Spuds are made 20% longer to give you a cooler, better filtered smoke.

MILDER MENTHOL—An exclusive, patented process distributes menthol more mildly and evenly throughout Spuds. *No menthol overdosing!*

BETTER QUALITY—Spud Imperials are made of an extremely mild blend of the finest vintage tobaccos—aged to perfect mellowness. No coupons—*just high quality tobaccos!*

Try the new, improved Spud Imperials. Smoke them as long as you like—and by all means change to Spuds when your throat is irritated. It's *safer*—and you'll get real smoking pleasure. The Axton-Fisher Tobacco Co., Inc. "House of Tradition."

NEW IMPROVED SPUD IMPERIALS

ACTUAL SIZE

More for your money—20% longer—equal to 4 extra cigarettes per pack!

MONARCH OF THE MENTHOLS

# BIG TOOLS FOR A BIG JOB

**It takes an organization with long-accumulated skills to produce modern locomotives by the hundreds—to meet the most vital need for motive power in railroad history**

YOU must go back more than a quarter century to find the reasons why General Motors has become the most important locomotive builder in the world.

Take, for example, the vastly more efficient power plant that drives such mighty streamliners as the one poised over the trucks above.

*It has made possible the fastest scheduled passenger runs in America.*

*It has materially reduced operating costs.*

*It has enabled every passenger train using General Motors locomotives to operate at a profit.*

These contributions to railroad transportation trace directly to more than a quarter century of research and engineering experience with internal combustion engines—and to the manufacturing "know how" gained from producing more than 29,000,000 motor vehicles. Out of this knowledge has come

*—the first standardized building of complete locomotives in one self-contained factory—including the fabrication and assembly of Diesel engines, frames and even such electrical equipment as generators, traction motors and control parts.*

Yes, it takes big tools for a big job like this. And thanks to progressive railroad management they're kept working at capacity—producing these GM locomotives for passenger, freight and switching service at a pacemaking rate.

ELECTRO-MOTIVE CORPORATION
Subsidiary of General Motors, La Grange, Illinois

*From General Motors' long experience in quantity production come many of the new processes and machine techniques required to build these modern locomotives in the volume it takes to meet demand today.*

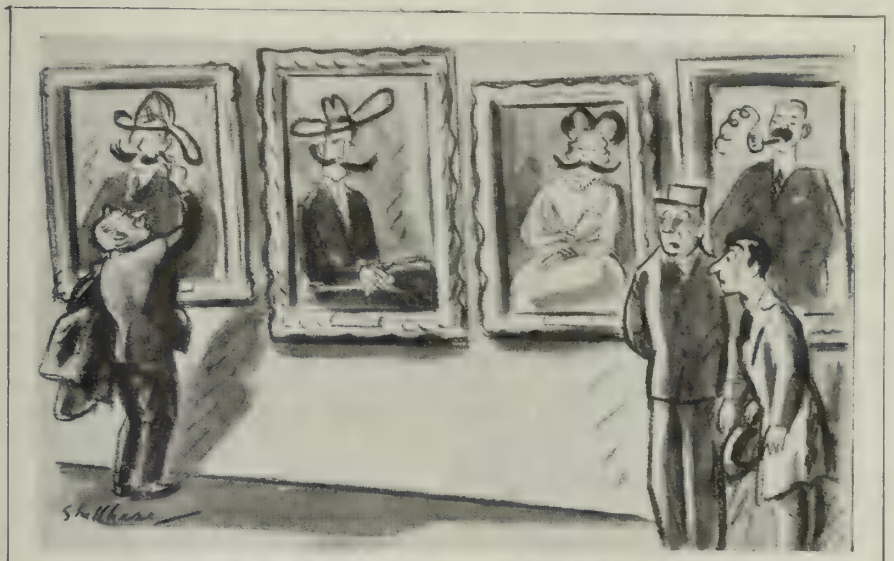
Lou-netty swung her hoe, its goose-neck heel landing close to Lake's left ear. Without looking to estimate the damage done to her husband's supine body, Lou-netty removed the snub from the plow and began to make deep furrows to the drainage ditch.



When she had finished, she went back to Lake, who was sitting in the mud, shaking his head as if trying to dispel a fog.

"I swear to my soul," he said wonderingly, "I didn't know a mule's hind laigs was so long. Dat mule was standin' betwixt his traces on de yuther side er his doubletree and I was standin' betwixt de plow handles."

"Have it yo' way," Lou-netty said, "but put de snub back on and drag de plow back to de barn. Only don't tell nobody I runned out dem ditches, cause Giles is agin ladies plowin' in de fiel'."

Lake took the team to the lot and returned to his house. Lou-netty was preparing dinner. She said nothing by way of greeting and Lake sat in silence, nursing an aching head. "I swear," he said finally, "dat de longest-laigged mule I ever seed."

"We's mules is de best," said Lou-netty proudly. " 'Cause de best ain't too good for Little Bee."

**"There's nothing much we can do about it. This is the Bosworth collection and that's Mr. Bosworth"**

GEORGE SHELLHASE

Lake ate lightly, and spent the afternoon trying to sleep and complaining of his head.

"Efn hit hurt all dat bad," Lou-netty said unsympathetically, "I'll rub some lard on hit."

Lake felt lonesome and abused, "Gittin' treated like a stranger in a far-off land, wid my head hurtin' fit to bus' open."

"Lay quiet," said Lou-netty, rubbing lard on Lake's head. "Us owes fo' half days plowin' and twelve half days hoein'. Efn you lay quiet to sunup, you kin ketch two half days for Buldickie and Nud. And de next day hit'll be dry enough in Uncle Grant's fiel'. Den us bofe'll pitch in wid de hoes and git we's beholdens paid back by de time ole Cucker Burr git dry."

IT ALL sounded vague and distant to Lake. He thought some of explaining what Giles had already told him about the hoeing, but he remembered he had been arguing with Lou-netty when that mule kicked him. It was a solid mile from where he lay to the lot where the mules were. In his confused state it seemed possible, even probable, that if he started another argument with this Little Bee Bend woman, a Little Bee Bend mule would stretch a leg across that mile and kick him again. "Little Bee Bend," he decided, "sho do take keer er dey own."

Lake plowed the next day in the fields of Buldickie and Nud. The day following, in Grant's field, he paid back the labor of Grant's two boys. But that night it rained again. Lou-netty went to the door several times and observed that it fell straight from ■ completely black sky instead of a particular cloud.

"Dis is *raley* a June rain," she said. "Hit'll be a month er Sundays befo' Cucker Burr git dry enough to work in."

"Mo' rain, mo' rest," said Lake.

"YOU mean," asked Lou-netty, "you don't keer how much water git in we's cotton—me and you's cotton dat us worked so hard in?" There was a menacing note in her voice and Lake felt it.

"Dat ain't what I means, darlin'," he said. "Dat what us used to say in de public works, cause when hit rained in de public works us jest laid off." He was lying on the bed, fingers laced behind his head and eyes gazing dreamily on the ceiling. "Hit's ■ good wages in de public works," he continued reminiscently. "You gits paid ev'y Sadday. And you ain't got to work all de year fightin' Johnson grass, and den when fall come maybe you got some money and maybe you ain't."

Lou-netty refused to believe what she heard. "You mean, you'd druther be in de public works den raisin' cotton?"

Lake chuckled. "You knows what de song say, good as me·

*" 'Tell you somethin', let hit bear down on yo' mind:*
*A man gits tired er de same thing all de time,*
*Cause my home ain't hyar,*
*Hit's further down de road.' "*

Stunned, Lou-netty crawled into bed, shut her mind to everything but the fall of rain on the roof, and went to sleep.

The next morning, as Lou-netty went about her domestic duties, Lake, as was his privilege, lazed about the house, grumbling because breakfast was late. He heated a kettle of water for a bath in the washtub and demanded his best clean clothes.

"You fixin' to git dressed up?" Lou-netty demanded.

"Sho," said Lake, standing in the washtub, rubbing soapy water out of his eyes.

"You ain't gittin' no good clothes f'm me in de middle er de week," Lou-netty assured him. "I'm got too much to do to wash for you ev'y time you wants to put on clean clothes."

"Hyar's clean clothes—a whole croker sack full of 'em. Shoes and all," Giles said, getting off his horse and pitching a bundle into the doorway.

"Mist' Giles, I wa'n't expectin' you!" Lou-netty exclaimed. To Lake, she said, "Git some clothes on, fool! Standin' befo' Mist' Giles, buck nekkid!"

Giles dumped the contents of the sack upon the floor. "Put 'em on, long underwears and all," the foreman ordered.

Lake did not appear too surprised, but Lou-netty was astounded. "You credicked all er dat stuff agin we's crop?" she gasped. "Wid all er dis rain?"

Giles laughed. "Hold hit, baby," he said. "I rid all over Cucker Burr befo' I brang dis stuff. You won't be able to git in dar, much befo' cotton-pickin' time, and hit'll be plenty cotton to take keer er dese clothes."

"But he don't need all er dem clothes," Lou-netty said.

"He fixin' to need 'em whar he's goin'," Giles explained. "Cause he fixin' to git along down de road, ain't you, Lake?"

Lake got into the long underwear. "You reads my mind. Mist' Giles," Lake said. "De work was all right but I jest got tired er Lou-netty's grumblin' and quar'lin', so I'm gettin' on down de road."

"You's ■ big ole rusty lie!" Lou-netty yelled indignantly. "You's de one quar'lin'! You quar'l agin me, and you quar'l agin we's crop!"

Lou-netty swung her fist. It landed accurately in the same spot the hoe had got him, three days before. Lake dropped.

Giles grabbed Lou-netty and pinioned her arms. "Take hit easy, chile," he soothed her. "He's leavin', but hit's good like dat. He ain't one er we's own and he never could make hit. He's a rambler and he'll be good ruddance."

"But we's crop?" Lou-netty cried.

"Even efn you don't work hit no mo'," Giles told her, "you'll make enough to pay off yo' credicks and have cash money, too, maybe. And a good-lookin' widow-gal like you, wid cash money—" Giles grinned. "Effn I wa'n't so ole and so married up to Betsy—"

"Aw, Mist Giles, how you goes on!" Lou-netty giggled.

GILES revived Lake by dashing water on him. Lake dressed in silence, collected his belongings and with a pleasant, "Good-by, all," walked out. When he was out of sight, Lou-netty turned to Giles.

"Whar at is McGee-hee?" she wanted to know.

"Never hyared of hit," Giles said. "What about hit?"

"Dat's whar he figgerin' on goin'," Lou-netty explained. "He claim hits a hard place to git along in."

"He won't make hit," Giles prophesied. "He all right, ontwell de goin' git tight, and den he got to ramble. I called his number de day he hit dis place. I wouldn't 'a' let him stay, only I wanted de Cucker Burr cut worked dis year and I didn't ha'dly had de cheeks to give dat stretch to one of we's own."

Lou-netty said proudly, "Us had dat cut whupped to ■ frazzle, ontwell de rain started."

Giles laughed. "Hit's whupped, rain or no rain," he told her. "I ain't never seed hit in such good shape. And dat's on account er you. You held him hyar to hit was whupped. Next year, you git yo'se'f ■ good husband and I'll gi' you some high ground for ■ weddin' present."

When Giles had gone, Lou-netty began to set her house in order again, adjusting things suitably for occupancy by ■ young widow woman.

"Nawp," Lou-netty decided, "he can't make hit in dat McGee-hee." She grinned. "But I bet dat ole scound'el is jest fool enough to try hit."

# A Home for Love

Continued from page 17

"I know. I told him so. I told him that this was 1690—not the black days of 1610. But he was stubborn. My father came from Brittany, you know, and he was remarkably stubborn. He simply did not like the English. He would not, if he were alive, like your having rented the strip of Edouard Belladere's land so close to us—to me. I suspect he might even have made an attempt to have you removed—"

"He couldn't have."

"He might have."

"I think you have a better reason to fear the Spanish."

"I think so too. Yes. But do you see the point that I've been driving toward? You're an Englishman, and you'll remain a stranger until you really attach yourself to our land. Renting one grim, stony little patch of a farm isn't enough."

The girl paused and drew in her breath deeply. "If you had your own land, now, soon the people of the island would say, 'The Englishman is becoming one of us.' And you'd be less a stranger—"

"Of course," John Willis said, with the briefest touch of irritation in his voice. "Yes; I can see that. And I intend to own land in Tortuga one day. But for the present it's a very simple matter of money—"

His gaze returned to the sea. They fell silent. He doesn't understand, the girl thought; or perhaps he doesn't want to understand. She sat up straight in the grass, tensely, and lifted her hand unconsciously to touch her dark hair with her fingers. I've almost said the words to him, she told herself; and she felt the quick warmth rise to her cheeks. I've almost said: "See, my father is dead and I am alone and all this land you're looking at is mine; I have nine hundred hectares of black Tortugan earth: six slaves, horses, oxen, more pigs than I can tell—"

The animation died suddenly from her face; she stood up.

"You're going?" John Willis asked, lifting his head.

"Yes," she said; "yes, I'm going now. I'm going over the ridge to the house that was my father's and is now mine. John Willis, listen to me. I have six slaves and nine hundred hectares of land. I am alone and you are alone—"

But she did not continue. Her voice, drawn tight as a wire, broke as a wire breaks. John Willis stared at her in bewilderment. "What's the matter?" he said. "Is anything the matter? You're crying—have I said something to offend you?" He leaned toward her but did not touch her with his hands. On his face was a look of vast, troubled incomprehension.

She was on her feet, then, and running through the high grass along the ridge with small, quick steps. She did not once look back.

SHE was at breakfast on the tiled veranda when, next morning, John Willis came up the hill toward her house.

He walked rapidly, as if unmindful of the brilliant early sun. The lane, hard-packed, was defined by coconut palms; to the right, toward the sea, lay sloping fields of young tobacco.

Suzanne Chauvet signed the mulatto serving-maid to leave the veranda. She sipped the milk in her glass, then dropped her napkin to the table and turned in her chair. She was aware that her hands were trembling. Be still, she said to herself, sternly.

She faced the lane, across the veranda railing. She tried to have orderly thoughts about John Willis, coming up the lane, coming early, in the breakfast hour, but a kind of numbness possessed her and she stood uncertainly and, after a minute, walked to the broad steps.

There, at the top step, her hand on the white column, she waited for John Willis.

His head was bent thoughtfully and his eyes were on the earth. He did not see her until he was close to the veranda steps. Then he looked up. He seemed a little startled, and the thread of his preoccupation was broken. "Good morning," he said. He smiled, but only fleetingly; and then his brown face was serious again.

"You're walking abroad at an early hour," Suzanne Chauvet said.

"Ah?" he said. "So. I hope I'm not intruding? I must talk with you."

He stood before her, strangely irresolute.

"Come upon the veranda," she said.

He mounted the steps and they placed chairs to look across the fields.

He seemed lost in somber reflection. But after a minute or two he said, "I wish I spoke French better—I'd be able to make myself a lot clearer—"

"You speak French excellently."

He waved this aside. "I mean all the fine shadings," he said, "that enable one to say precisely what one intends. As it is, I'm conscious of a toiling awkwardness."

He paused.

"Yes?" Suzanne Chauvet said.

THEN he launched boldly upon it. "It's this," he said, looking steadily at her. "And I shall ask you to think seriously about it. That is, I don't want you to answer immediately. In strict fairness to yourself—and, I suppose, to me—you must consider it carefully—"

"Come," she said. Her voice was perfectly in control. "Consider what?"

"I am asking if you will agree to marry me."

Nothing changed in the girl's expression. "I thought that was it."

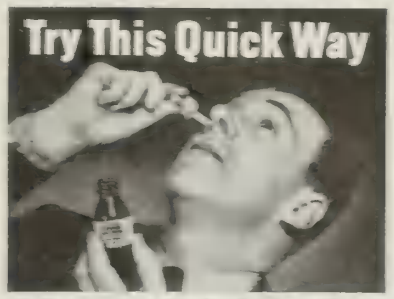
John Willis rushed ahead. The words tumbled recklessly out of him; it was as if a dam had burst, as if a flood had been released. "You must believe," he said, "that I have the greatest admiration for you. You know that; you've seen it. I do not speak of love—not yet—because it's not in my nature to think lightly of love—we've known each other all too briefly—"

"So. But you think love will come in time."

He glanced quickly into the girl's eyes as if to surprise any meaning that might lie behind her words. "Please understand me," he said. "I'm not ashamed that I'm a simple man. I've been a seaman and a farmer since I left England in my twelfth year. I'm not clever and I don't speak cleverly. Love is a difficult word for me—I've observed that it can mean one thing in Paris and another in the colonies. I believe that love in Tortuga must be more than a froth of perfumes and frivolous whisperings—"

"Do you?"

"Yes. Don't you?"



Suzanne Chauvet shrugged. "I am a woman," she said. "Women are notoriously frivolous, even—perhaps especially—in the colonies."

He smiled then. "That isn't true," he said. "I mean, at least it isn't true about you. If it were I should not be here talking with you. We'd have no common ground."

"But you think that as it is we do have a common ground?"

"Of course. We live on the soil. The

For Relief of
HEAD COLD
Misery..

Relieve tormenting head cold stuffiness and breathe easier. Put a few drops of Vicks Va-tro-nol up each nostril and see how fast it (1) shrinks swollen membranes, (2) relieves irritation, (3) helps clear clogged nasal passages . . . And makes breathing easier!

**And remember** . . . used at first sniffle or sneeze, Va-tro-nol helps to *prevent* many colds from developing. Follow complete directions in folder.

that he heard the raised
voices, the excitement of loud speech. He pushed open the door. The room was full of young men of the town, and a few older men—merchants, traders—and a soldier in uniform—the horseman.

John Willis touched the arm of a man beside the door. "What's the matter?"

The man gave him only a moment's glance. "Spaniards," he said. "It's the damned Spaniards from Santo Domingo. Two ships off the headland. One, maybe two more reported going around the north shore—they'll try to make a landing there and come over the mountain and drop from behind us onto the town—"

He breathed heavily, snorting. He turned and, in the lamplight, looked into John Willis' face. "Who are you?"

"John Willis. I live in the hills near—"

"You're a foreigner?"

"I'm an Englishman, yes. But I'm also a farmer of Tortuga. This is my home—"

The soldier seemed to be bellowing orders but his voice was drowned in the babel. "What are you planning to do?" John Willis asked the man beside him.

"Fight, of course! The garrison's small, but we have enough men to hold the town—"

"What of the people in the hill farms?"

The man jerked his shoulders in a shrug. "They'll have to run for it. The alarm's being spread in the hills; they'll have to come into town."

"Where can I get a gun?" John Willis asked. He felt the muscles tighten across his back.

"Stay beside me. You know me, don't you? Jules Marivaux—"

"The coffee merchant—"

"None other. You stay with me, Englishman." He spoke breathlessly, disconnectedly. "A score or so of us here are detailed to get guns at the fort—hold the main road into town from the north—from the hills. Do you see? The cannon at the fort can engage the ships—"

"Will they attack now, in the dark, at night?"

"Certain to," Marivaux said. "Spanish trick."

John Willis shouted to hold his at-

tention. "Listen," John Willis said. "There's a woman—my fiancée—in the convent behind the church—what should I—"

"Don't worry, man. There'll be troops at the convent."

"All right," John Willis said. He rubbed the sweat from his forehead with the back of his hand. The crowd in the hot, smoky taproom of the Tavern of the Three Candlemakers broke, and the soldier from the fort passed through them. He was shouting names—Casimir, Mathon, Buffon, others. John Willis felt a hand on his shoulder; he turned his head. Marivaux, the burly coffee merchant, a tall, swarthy fellow with a shock of dirty white hair, said in his ear, "Come on. Stay with me, Englishman. Now is the time—we're getting guns."

His face was sharp and, at first, uneasily tense. They ran through the dark streets, past doorways where small lights showed, and people called to them; they passed other men, already armed, hurrying in other directions. He stayed close behind Marivaux, the coffee merchant; for though he knew the town he was not, in the dark, certain of all the short cuts, the side alleys.

They were silent as they ran; nobody spoke, and before they reached the fort they were all of them breathing in short, heavy gasps, like fish tossed out of the sea.

A lieutenant of the French garrison gave guns to them as they crowded into a chamber at the top of the fort's ramp. Then, "Who is this man?" he asked, pointing to John Willis.

Marivaux explained curtly. "Englishman," he said. "Willis. He's the Englishman who's rented some of Edouard Belladere's land in the hills."

"He wants to fight?"

"Lieutenant," John Willis said. "I've settled here. This is my home—"

"Give him a gun," the coffee merchant said.

THEY went out of the fort and across the town to the road that dropped from the hills. Marivaux said, "If the Spaniards land on the north shore they'll come down this road. There's no other way. To cut through the forest, through the undergrowth, would be too slow, too difficult—"

"I know these hills," John Willis said.

"They'll be counting strongly on surprise."

"We'll give them surprise," one of the men shouted.

They were beyond the limits of the town, past the last of the outlying houses of Cayona, and the road to the hills sloped sharply upward, a narrow gash, almost a tunnel, through the lofty barrier of black and silent forest.

"We will stop here," said Marivaux. Unconsciously he lowered his voice. The men gathered around him in a tight circle, waiting. "Get behind trees on the side of the road—string out a little—each of you take a position and hold it. I'll be in the lead. If the Spaniards come we'll hear them soon enough. And when I yell out to shoot, start shooting. And while you're shooting, yell."

He paused, as if listening.

"Noise disconcerts them more than bullets." He grinned in the darkness.

Abruptly the deep-throated roar of cannon, a biting, trenchant sound, quivering on the air, lifted out of the town behind them.

"They're firing from the fort," Marivaux said.

"What can they hit in the darkness?" John Willis asked.

"Probably nothing. No lights on the Spanish ships, of course. But it's a declaration that we're not asleep."

Another blast came, hollower, more distant. "The ships have opened up—" Marivaux said.

John Willis fought back an instant's panic. He caught Marivaux's arm. "The convent—" he said. "If the Spaniards hit the convent—"

"Take it easy, man," Marivaux said. "They are already in the cellars in the convent. They won't be sitting in the windows."

THEY stood for a minute, a huddled knot of men, listening to the guns across the town. Then Marivaux said, low, "All right. Take your positions."

It might so easily have been different.

If, as Marivaux said later, speaking to John Willis as the Englishman was carried into town—if the Spaniards had come down the road in a tight and unbroken column of men, if they'd pushed relentlessly ahead, they'd have got through. Beyond doubt. "Like a bayonet through a cheese," Marivaux said, grinning.

They'd had enough men, perhaps two hundred. But they had come slowly, with caution, and the advance guard

**"And they don't even have any white meat on them"**

PERRY BARLOW

was, in a manner of speaking, a disorganized trickle, flowing down the hill. When they encountered the gunfire of the men of Tortuga, they paused. They had no way of knowing what force of arms was concealed in the trees ahead of them along the steep road, in the black and forest-scented tunnel. "That's what lost it for them," Marivaux said reflectively. "Indecision. Blame their numskull officers."

He spat, as if to get the taste of powder smoke from his mouth. He laid a hamlike hand on John Willis' shoulder.

"How's your leg now?" he asked.

"Not bad. Ball went through the calf. Clean through. I think the bleeding's stopped."

Marivaux spoke to the two men carrying John Willis. "Easy with him," he directed sharply. And to John Willis, "You put up a good fight, Englishman." He laughed, and the sound was rather like an empty cart rumbling over stones. "Damn me! The way you whooped and bellowed you sounded like half a regiment of wildcats—"

Did I? John Willis asked himself. Strange. His memory of it was blurred and formless; the Spaniards came and he fired and loaded, fired and loaded, his fingers maddeningly clumsy, his hands moving feverishly, the consciousness of a tight pain in his head, the acrid smoke burning in his eyes and nostrils. It seemed to him that he had been sustained by some tireless, driving demon of force that he had not known existed within him; and he remembered thinking that his voice was cracked and shrill, issuing from him as though he were pulling out the sound by main strength.

And then he was struck in the leg. Perhaps the shock of his wound had been more than he had thought; in any case, his consciousness had played him tricks. He did not remember the end of the firing— He was being carried, not too ungently, and the voice of Marivaux moved beside him like a disembodied sound.

Then they were in the town.

"Take me to the convent," John Willis said.

"Who is this fiancée of yours?" the coffee merchant asked.

"Suzanne Chauvet—"

"Ah, yes," said Marivaux. His voice was weary now; the tension had gone out of him. "I know her. I knew her father. She's a capable girl—and pretty as blue cloth. She had a damned fine farm—"

John Willis said, sharply, "Had a farm?"

"Had," Marivaux repeated. "The news came out of the hills not twenty minutes ago. It's what we all expected. The Spaniards destroyed what they could, retreating. The Chauvet place as well as most of the others. Burned the house, killed the livestock, dragged the slaves off with them."

HE MADE a violent sound in his throat, and, for a moment, swore softly under his breath. John Willis said nothing. He felt the weight of Marivaux's hand on his shoulder.

"I think," Marivaux said, "you might tell her about this yourself, eh? If she hasn't already heard. It might be a little easier, coming from you."

"I'll tell her," John Willis said.

# Books and Saddles

Continued from page 13

In 1915, when he was fourteen and a half years old, Erny drifted north again and joined the Third Infantry, Oregon National Guard, having such an honest face that the bemused recruiting officers believed him when Erny told them he was eighteen. Or so Erny says. He went to the Mexican border with the outfit in '16, returned, went to high school until April, '17, when war broke out and his regiment was called into service. He went to France with the 162d Infantry in the Sunset Division, got to be a sergeant and came back home in February, 1919.

He wrote a few stories, got some encouragement and next summer went to Alaska as a deck hand on a purse seiner out of Ketchikan. This gave him material for his first stories, in which all the men were large hairy fellows with honest blue eyes, and all the waves were forty feet high. Raging seas, in pulp-magazine circles, still are known as "Haycox waves."

### Author Meets Heroine

Coming back to Portland, Haycox heard that the government was offering an education to war veterans, and promptly enrolled at the University of Oregon in journalism and short-story-writing classes. Graduating in 1923, he got a job reporting on the Oregonian and soon was holding down the night police beat. Coming in from the police station early in the morning, he used to climb eight floors to the editorial room and pound out fiction until the dawn. After a while he was making as much from fiction as from reporting.

This looked like a turning point. Haycox decided New York was where you made money, and took a train east in midwinter.

On the train across the aisle was a pretty, red-haired, brown-eyed girl from Baker, Oregon, going east to attend art school. She turned out to be Miss Jill Marie Chord—and the Only Girl for Erny. The courtship started on the train continued in Greenwich Village and ended in the Little Church Around the Corner. It also supplied a plot for a short story—Window Shopping—which was one of Erny's best. . . . Any faithful Haycox reader, incidentally, knows Jill "like a book." She is the prototype of almost all Erny's heroines.

As most good fictionists must, Haycox served a short $2,000-a-week term in Hollywood, pining for his timbered Pacific Northwest, and was finally released with the customary suit of clothes and $5 in cash.

"No matter what you make in Hollywood," he says, "it always costs you $5 a week more to live."

Haycox likes things big. He smokes the biggest cigars he can find, wears a tentlike overcoat in winter, drives a huge car. His dog, a 200-pound St. Bernard, is built along the lines of a lioness. This dog is rather a trial, because every guest asks Erny where the brandy cask is, and the whole thing is a bit repetitious. His friends used to say that the Haycox bedroom contained a badminton court and sleeping nook, but this is exaggerated. The net has never been put up.

The three million words Erny has sold are all stored away in manuscript and print behind the pine paneling of a two-story study and library in Firmont, his home atop the Green Hills, overlooking the Tualatin Valley, west of Portland. Firmont itself is a two-story Georgian Colonial house, one hundred fifty-two feet long—and the library-study includes the largest concealed stairway west of the Rockies. By it, Haycox climbs to the library on the upper level, where his hundreds of source books, volumes of Western history, lore, legend and fact are shelved. When a reader, as sometimes happens, questions some detail of Erny's descriptions, Haycox can always give chapter and verse to prove himself right. In one serial he referred to a cavalry company; many readers wrote in that it should have been a troop. Erny was right, however, and proved it by War Department records.

As most writers do, Haycox writes a bit of himself, unconsciously, into his heroes. They are nearly all lone wolves, with a touch of the rebel, and often they stop and wonder a little about life. This is the sort of hero you'd expect from a guy who was on his own at twelve, who scorned help and fought his way up, through disappointment and near starvation, to the top. Erny's heroes are always human beings—but you never find them sitting around waiting for a government handout. They always battle it through alone.

The paneled walls of the Haycox study are covered with maps of the Old West, with Western Army scenes of the 70's and 80's. There is an unworkmanlike desk, a typewriter with a shiny cover, a big fireplace. But Erny seldom writes amid all this luxury.

Most of his writing still is done in a modest downtown office he has shared with a lawyer friend for years. He writes all his own stuff on a battered typewriter.

"You can tell a dictated story a mile," he says. "It's too easy to dictate—the story always has too many words in it."

Haycox does it the hard way, smiling wanly at the geniuses who just sit down and dash off literary masterpieces in a couple of hours. His first draft he goes over carefully, pruning, altering, adding, rephrasing. A typist copies this and Erny goes to work on the copy. After a while, this version, interlined, scratched out, revised, gets another typing. It may even have a third. Then it goes out to New York—and may come back for still another revision. Erny has written as many as one hundred fifty manuscript pages before turning in an eighteen-page short story.

Rewriting, more than just writing, is so in Erny's blood that he even rewrites business notes. He'll ite grocer, "Enclosed please f tear it up; write, "Please fi check"; dislike that phrasi up with, "Please find chec He has a hard time, he sa from rewriting the checks

Haycox still wants to be a his seven acres he does mo kitchen gardening and is bi a holly plantation in the h ing the estate pay its wa needed water for irrigatio the services of Frank J. Ta writer, who witches wells a Mr. Taylor showed up w fork and marched about place in a trancelike sta finally uttering a deep, es the fork turned down.

When he returned to the hotel he examined the blue envelope for the return address he already knew wasn't there. The only clue was a Station H postmark, and then he astonished himself by getting a brain storm. He looked in the phone book and discovered Station H was on West 104th Street, practically around the corner from the hotel. Breathing heavily with the thrill of the chase and the unaccustomed mental activity, he flipped the pages of the phone book and was floored momentarily when he saw there were a thousand Bakers listed, but no Hobie Baker. There was, however, an H. Baker on West 114th Street, near Columbia. That could be, he supposed, in the Station H district.

He vaguely wondered what he could do with the information now that he had it. He still was wondering the next afternoon at five o'clock when he stood in front of the address in the phone book.

He rocked gently on his heels and said "Hi" to a couple of Columbia kids who recognized him from his picture. That gave him another bright idea. A dame who could tab the mousetrap and Baskin's tip-off from the stands should have no trouble spotting his bulk a block away. He decided to let the dame introduce herself and while he waited he tried to imagine what she looked like.

She might be built like the side of a barn and she might be a toothy, giggling dame. Too many who hung around the clubhouse after games were no bargains. She might even be a high-school kid doing her homework in one of those square patches of light high above him. Or cooking dinner for an ever-loving husband. Thorgens puzzled over that for a while and decided he could take a powder on the dame by dreaming up a dinner date with Lou Little at Columbia if she turned out to be a wet smack or out of his league.

Thorgens idly watched the citizens hurrying home from an honest day of toil and then he saw her coming down the street. Only he didn't know it was she. He only knew the girl he saw was meant to be accompanied by the soft, dreamy music they played in burlesque theaters at frequent and promising intervals, an irreverent thought Thorgens immediately dismissed. She was tall and she carried herself with the controlled, conscious grace a good halfback puts on for the customers after he has run for a touchdown. She was beautiful and she was wonderful.

THEN he realized the girl was approaching him deliberately and he froze up, like the time in his first pro game he had a clear shot for a touchdown with an intercepted pass and he couldn't make his hands and feet work.

"Hello, Minnesota," Hobie said. "Waiting for me?" She wasn't surprised. Her eyes were so large and wide and blue they couldn't possibly open wider without falling out of her face.

"Is this a coincidence or a plot?" she asked, and her throat throbbed with suppressed laughter.

The cat crawled out of Thorgens' mouth: "I—I just wanted to say thanks for that touchdown you tipped me to yesterday."

"That's nice of you, Minnesota." She smiled and her teeth reminded Thorgens of young corn kernels. "I haven't talked football in ages. Come up to my place and tell me all about it."

So they went up to Hobie's place, a two-room apartment very cozy in the dim lamplight. Thorgens sat down in a chair before he discovered a pair of

Vitamin A (Carotene) raises the resistance of mucous membranes of nose and throat to cold infections, when lack of resistance is due to Vitamin A deficiency.

# Uncle Sam's Bread Basket Filled to the Brim

LAST summer the railroads were faced with what might easily have been called an impossible task. With a near-record wheat crop ripening in the field, the elevators were still jammed with the biggest carry-over in history. And, as everybody knew, the railroads had their hands full already with a mountainous pile of defense assignments.

But the railroads refused to call it impossible. They laid their plans to do the job.

Before the first wheat was cut, the railroads had started moving old wheat out of grain-belt elevators. Altogether more than 75,000,000 bushels were shifted to more distant points. And while the loaded cars were rolling out, a reserve army of 30,000 cars was being mobilized in the wheat belt, ready to handle the new harvest.

Result? The railroads were able to move every bushel for whic storag space could be found! Th coul have moved more if there d bee any place to take it, but wi eleva tors filled to the brim, the w eat sti remaining on the farms an b moved only as fast as con mptic and export make space ava ble.

This is just one example ir nany how the American railroad work t gether to do a job – in co eratic with shippers, agricultural epresen tatives and government gencie And it's also a good examp of ho they get the job done!

body bumped you you'd probably fall flat on the floor through sheer force of habit."

Thorgens smiled ruefully. Hobie was in the groove. They sat silently for a few minutes. Hobie leaned across the table and said, "Minnesota," in a husky, tentative voice.

That was a good sign. Whenever Hobie wanted to be nice to him, she called him Minnesota.

"Yeah, what is it, sugar?"

Hobie hesitated. She averted her gaze and imprinted circles on the tablecloth with the bottom of her glass and then, suddenly and swiftly, she said, "I want you to quit playing after this season."

That was it. That's how you must feel when you go for a routine physical examination and the doctor says you have six months to live. One minute you're great. The next minute you're dead. You feel no pain. You just go numb all over.

"Am I that bad?" Thorgens asked after a while. "Don't I earn my money any more?"

"Oh, you're worth what they're paying you," Hobie protested quickly. "You're still a fine tackle, Minnesota. You can take care of the college boys who think they're All-Americas, but I remember the time you could handle the entire side of the line yourself. Next year the college boys will be playing you even and the year after that they'll be pushing you around. It's like a two-way elevator. You're going down and the college boys are coming up. I hate to think of them passing you, and it's got to be like that."

"Are you afraid I'll get hurt, baby?" he asked.

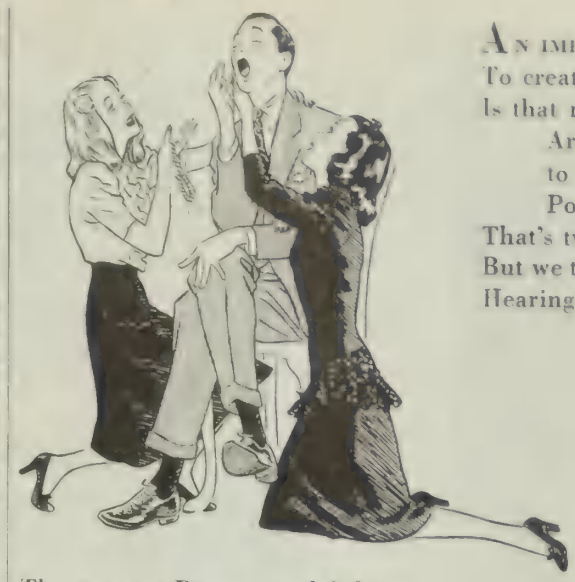
"The scars won't show on you, you big, beautiful hulk," she said softly, "but they'll cut you up inside. They'll twist your spirit out of shape and they'll leave you punch-drunk emotionally. You're the strongest guy in the world, Minnesota, but you're gentle and sweet and you play cleanly. When they start to push you around, you'll try to get by on your strength and you'll get a physical, tough-guy complex. That's what I don't want to see."

"All right, I quit," Thorgens said. "Then what? I ain't got what to eat or where to sleep. I got to play football for a living. This is the only racket I know."

"You've got your college degree in physical ed. You can get a job teaching in high school and coaching the football team. You'd have security and you'd be doing the work you like."

"I'm not a smart guy," he grumbled. "I'd be a lousy coach."

"You'd be a good coach," she retorted. "The kids will love you. You know the fundamentals of football. That's all you need in high school."



THORGENS reached across the table and enfolded her hands in his paws. "There's something more on your mind than me getting punchy inside. What is it, sugar? You fed up with football? I thought you came from a long line of football nuts."

"That's the trouble," Hobie said, pressing hard against his hands. "I like football so much that I want everyone to remember you as I think of you—as the best tackle most of us ever saw. That's what makes me a nut. But there's another side, Minnesota. Every time I look at you I see an enlarged picture of my father, and I don't like what I see."

"The way you talked, I thought you were crazy about your old man," Thorgens said slowly.

Hobie studied the glass. "I was," she said. "My father was a very swell guy, but he never grew up. Football left him breathless all his life. You might say he never got his second wind emotionally."

Thorgens frowned hard. "I must be

There was a Powers model dying
to marry our Hero
(Simply because his bank balance
began with 1 and ended with
many and many a zero.)
But he looked far from the nerts
In his shirts.
The designing model thereupon
broke her piggy bank to bits
And bought Roy some Arrow
Dales and Arrow Hitts.

One night, while dancing at that
famous New York club,
The Stork Club,
Roy met an heiress, who, naturally,
wasn't after his money,
And who, incidentally, was a honey.
He looked mighty good to her in
one of the shirts the model
gave him, and as you were
probably able to predict,
They clicked.

We are pleased to say
The Powers girl caught the bride's
bouquet.

Now, lest you get the idea Arrows
are only for men in Who's Who,
May we remind you that Dale costs
but $2.50 and Hitt costs
merely two.

AN IMPRESSION we hate
To create
Is that merely by wearing
Arrow Shirts you'll get
to marry an heiress or a
Powers model.
That's twaddle.
But we think you might enjoy
Hearing about Roy.

These two shirts have collars that
never wilt—
*Arrow* Collars, you understand, the
handsomest ever built.
Hitt and Dale are fine broadcloth,
cut to the "Mitoga" figure-fit
And Sanforized-Shrunk, guaran-
teed to shrink no more than
the teensiest bit*.
When he wore them, Roy
Was the McCoy.

dumber than I think," he said. "I don't get it."

"My father lived in a dream world marked like a gridiron," Hobie went on. "Everything might have been different had he weighed twenty pounds more. He might have made the team at Princeton and football would have been a reality behind him instead of a romantic illusion to chase all his life."

"What did your old man play?" he asked.

"My father was quarterback on the fourth team for four years," she said dully. "He never played in a real game. His greatest thrill was sitting on the bench in uniform during the Yale game in his senior year. He went through college an animated tackling dummy for the varsity and he was very noble about it. He thought Fate, or something, brought him to Princeton in Hobey Baker's class. You've heard of Hobey Baker, haven't you?"

Thorgens nodded. Back home in Minnesota, though, the kids remembered Hobey Baker as a hockey, rather than a football, player.

HOBIE was like a tightly wound clock trying to recapture time. "Everything important in my life seems mixed up with Princeton, football and a coincidence of names. My own silly name, for instance. I was born two days after the Armistice, in 'eighteen. A few hours before Hobey Baker was killed in France making a test flight in a plane a friend was supposed to take up. My father survived the shock of death and birth quite well, considering I was a girl. He named me for his friend, of course. Hence, Hobie.

"Under other circumstances, my father might have been a useful citizen. He was intelligent. He made money on Wall Street almost in spite of himself. He could have made a lot more, but he thought it was unethical, even dishonest, to make twice as much as the football coach. He was wiped out in October, 'twenty-nine, during the market crash, but he didn't seem to notice it. He had other things on his mind. Princeton was going through its worst season in history.

"Football was my father's life and—and my mother's death. She had the grippe the day Bill Roper put his last Princeton team on the field against Yale. My mother knew my father wouldn't go without her and it would kill him to miss the game. She went and contracted pneumonia. It was a wonderful game, but it wasn't worth my mother's life.

"My father got drunk twice in his life. The first time was the night after the Armistice, but he wasn't celebrating with the rest of the world. He was alone in the Princeton Club, drinking toasts to Hobey Baker. Seventeen years later he got drunk again, the night Princeton finished the 'thirty-five season unbeaten and untied. He ran into a telephone pole driving back to New York. I have one consolation, anyway," she added bitterly. "I know he died happy."

Thorgens wanted to shout above the blare of the orchestra and silence its brassy, mocking requiem. He wanted to crawl into the woodwork for being part of the game that had brought Hobie so much pain. He sat there in an agony of embarrassment, watching Hobie fight to pull herself together, wondering what to say. If there was anything that could be said.

She saw the reflection of her suffering on his face and said it for him: "It wasn't football's fault. It wasn't even my father's fault that he remained a sophomore. But I don't want it to happen to you, Minnesota. I want you to grow up and expand and look ahead, even if it's only teaching kids how to play football. At least, that's a man's job."

"It's a wonder you want to have anything to do with football after all it's done to you," Thorgens said.

Hobie's lashes opened wide, the shutters of her eyes, giving him a giddy vista of the future. "Maybe I figure football owes me something," she said.

"Say the word and I'll quit tomorrow," Thorgens growled.

"No, I want you to tell me you know you're ready to quit," Hobie said. "I don't want you to think back on what might have been, as my father did. I know how you feel about football. It's exciting; it gives you a lift. When it stops doing that to you, tell me. You'll be the first to know."

"You mean that?" he demanded. "Suppose it takes two, three years? I've got a lot of football in me yet."

"I'll wait," she promised, "but you've got to be on the level with yourself. Don't try to please me. Convince yourself."

He was incredulous. "Gee, you trust me that far?"

"I'll go farther. I'll help you keep me dangling on the hook. Remember how I tipped you to that touchdown against the Eagles?" Now she was the brisk efficient young woman who earned thirty bucks a week downtown. "I'll be your personal scout. I'll watch the teams you're going to play and maybe I'll see little things your own scouts haven't the time to notice. I know the game and my father had the most expensive pair of binoculars ever made. I might as well use my inheritance," she finished wryly.

Thorgens slumped back in his chair and gawked. "You're crazy," he said.

"That's right," Hobie nodded. "I come from a long line of football nuts. Let's see, now. You play Cleveland here next Sunday. I didn't see the first game you had with them out there in October, but I gathered from the newspaper accounts that Koshlinski, their end, played rings around you."

"He sure did, but good," Thorgens agreed fervently.

"All right. Cleveland plays in Brooklyn Tuesday night. We'll see what makes Mr. Koshlinski so tough."

THORGENS went to the game with the Giants and sat behind the goal posts, where they could see the plays originate and develop. Hobie sat at midfield in the upper tier equipped with pad, pencil, binoculars and a preoccupied expression. Thorgens watched the game and saw Koshlinski commit interesting atrocities on his counterpart in the Brooklyn line. When Hobie met him after the game, she wasn't quite sure of the score, but she was most certain Thorgens could put Koshlinski in a bag and toss him over his shoulder.

"The oaf gives away the plays by the position of his feet," she reported "When he's going to put a block on the tackle, you, he crouches with his right foot back to get the angle on you. When the play calls for him to go out to his right for a pass, he pushes off the left foot. If he's going straight ahead to cover a kick or block the halfback, he has his feet together. Don't you masterminds in the league watch those things?"

Thorgens spent a thoroughly enjoyable and energetic Sunday frustrating Mr. Koshlinski. Hobie had the guy cold. When the chump's telltale feet tipped a pass, Thorgens bawled the warning before the ball was snapped from center and the Giant secondary batted down the ball and frequently Mr. Koshlinski. When he was going straight down the field, Thorgens played wide and whacked him from the side, upsetting the Clevelands and Mr. Koshlinski no end. When his large and unmistakable right foot indicated a soulful smack for

here and fight, kid," she said

e coach, gave them the same song and dance, only longer and with a different inflection, and then they were rumbling out of the Polo Grounds clubhouse to try contusions with the ton of meat and muscle advertised as the Washington football team. Thorgens dug up divots with his cleats; he felt good. He tried to spot Hobie among the solid wall of faces on the upper shelf but had to be satisfied with a vague wave in her general direction. The mob waved back and roared. He was their boy.

The officials called Hein and Mallory, the captains, to the center of the field and Thorgens went to the bench for his helmet. He grabbed Orson and took him off to one side.

"Do me a favor, pal," he said. "Don't take me out today unless I'm lousy. If I'm going good, let me stay in. I don't want a breather. This game may have to stay with me for a long time."

Orson looked at him quizzically. "Okay, it's your funeral. In a manner of speaking, that is."

Orson wasn't groping for words. It was no afternoon dedicated to light exercise. They kicked off to the 'Skins and somebody knocked Thorgens down. He got up off the floor for the 'Skins' first play from scrimmage and he was knocked down again. They slammed into him again and somebody used the back of his neck as a springboard to first down. The 'Skins punched out another and then they kicked and the Giants banged into the line and got nowhere rapidly.

The Giants were good and tough but the 'Skins were better and no less tough. Thorgens knew after five minutes the 'Skins had them on the hip but it didn't show on the scoreboard. He pushed his face into people's bellies and sometimes the people had the ball and sometimes they pushed his face through his rear collar button, but the Giants did all right until Pellini stepped out of the line and nudged the ball over the sticks from the 37 for a field goal and three points.

THE Giants knocked their brains out against the brick wall the 'Skins used for a line and then the other guys were having another go at them. Mallory, the halfback with a chest like the trunk of a tree and a voice like a buzz saw going through same, was too good for them.

Thorgens didn't like Mallory, a sneering, contemptuous punk and a good football player. Too good. He wondered what Hobie could have told him about the harp. He watched Mallory on the next play, which was a grievous mistake. The tackle and end double-teamed him and the ball carrier went through the hole for fifteen yards. Then Pellini dropped back again, put the boot to the ball and it was 6-0.

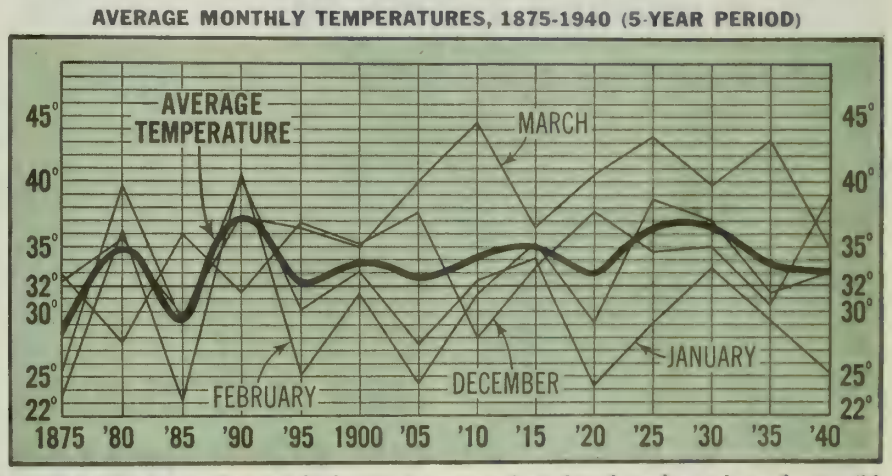
Thorgens was sore. He began to curse steadily and fluently. The Giants couldn't buy two first downs in a row. Mallory tried him with a power play and Thorgens pushed the interference back into Mallory's lap. Maybe that refreshed Hobie's memory of him handling the entire side of the line himself. Thorgens dived over the middle to help on a spinner. He went down into a whirlpool of thrashing, cleated feet and one dug into his knee. The customers groaned when Thorgens didn't get up, but he knew Hobie was taking it calmly. She said they couldn't hurt him. That's what she thought.

The trainer came out and poked inquisitive fingers into Thorgens' left knee. Thorgens clenched his teeth against the flame of pain curling up his leg and pulled away savagely.

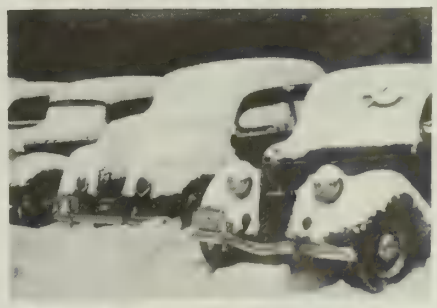
"Work on the other leg, you fool," he rasped. "Make out the good one is hurt. I wanna stay in here."

So Thorgens had two bad legs when

# This May Be the Coldest Winter in History



You may safely disregard that time-worn statement "we don't have the Winters we used to have." Weather Bureau records prove it just isn't so. The only sensible thing for a motorist to do is to prepare for the worst.



Motors today need the best possible protection, particularly in Winter. Oil has a harder job to do, all along the line. To meet stricter requirements, Quaker State has developed a special type of oil . . . an oil that stands up against increased heats, speeds, and pressures.

So, when you're preparing your car for Winter, change to this *better* Winter oil . . . an oil that gives protection against the hazards which threaten your motor at all times, and redouble their attack in Winter. Quaker State Oil Refining Corporation, Oil City, Pennsylvania.

**AVERAGE MONTHLY TEMPERATURES, 1875-1940 (5-YEAR PERIOD)**

**WEATHER BUREAU** records going back over a century show that there have always been mild Winters and hard Winters.

**SCENE IN ATLANTA, GA.** In 1938 the South was paralyzed by severe cold and snow.

Change Now to Stabilized Quaker State Winter Oil

**BLIZZARD OF 1888** may be outdone any year. Lowest temperature ever recorded in New York City was in 1934.

they went off at the half with the 'Skins' big 6 overpowering their fat zero on the scoreboard. They still had a chance, Orson told them between the halves; one touchdown would put them in the ball game. Thorgens wished he knew how they were going to get it. But they did rack it up and it was so ridiculously easy that Thorgens had to laugh. You beat your head against a brick wall for thirty minutes and nothing happens and boom! a pass connects and ten seconds later you're walking on a springy rubber mat and the other bums are dragging their tails on the ground.

Then the 'Skins really went to work on them. They picked them up and threw them down. Mallory stabbed up and down the line seeking a vulnerable spot and found one at right end. He went over standing up and the rubber went out of Thorgens' legs. A hammer was pounding his ribs and a small safe dropped from a height and landed on his back.

Thorgens was pooped; the Giants were through. They tried to keep it a secret. They smacked into the 'Skins and were smacked back, but harder. Mallory came through tackle ahead of the ball and scrambled Thorgens' brains with a high, careless elbow. Thorgens spat blood and tried to free his right arm Mallory had pinned to the ground. Mallory rubbed his rough, grime-caked hand over Thorgens' face and casually walked away.

"I'll get you," Thorgens muttered thickly. "I'll kill you."

Mallory turned and sneered. He called Thorgens a gutless dog, among other things. Hatred choked Thorgens' throat. He went after Mallory on the next play and the 'Skins let him come. They mousetrapped him and Mallory slipped through the hole and went all the way for another touchdown, the clincher.

Thorgens ignored his man on the kickoff. He went for Mallory; he trailed him down the field and exploded into him from the rear, without warning. Thorgens waited for Mallory to say something. Mallory didn't move; he didn't get up. A stretcher came out for Mallory and Thorgens heard a monstrous booing in his inner ear.

He was a dirty louse. For time in his life he had maime deliberately.

He was the strongest guy in and he had used his strengt down Mallory, a better footba Now he understood what Hob Now nausea gnawed at Thorg wasn't exciting, high adventu grinding, demeaning labor.

He crawled on his hands to his position and from a tance he heard the field judge were eighteen seconds to go. left. Thorgens called for ti the blood from his mouth an in the line.

"If you guys want to get on," he told the 'Skins. "T last chance."

THE 'Skins came and someb up the ball park and hit hi head with it. He was slidi dark, winding tunnel and denly, there was a blindi light at the far end and standing there. Her face v and then it was clearly in fo was smiling at him from th white bed. The bed felt goo snuggled down into the bl grinned sheepishly.

"Hello, you big, beaut Hobie said. "You didn't yourself half killed to show you could take it. They dis long ago."

"Nuts to the people," h ably. "I wanted to find ou about us, you and me. Su —"

"Yes?"

"When you said footba something, did you mean a a grown-up husband?"

Hobie tilted her head, s heel and pursed her lips.

"You know, I've drea swellest off-tackle play school team," she said tho can't miss."

"There's one tough pa hospital gag," Thorgens d. "Y have to come all the way you want to be kissed."

It was quite the mos tackle Thorgens ever ma

time when American air observers go to England. One high-ranking American Air Force officer who flew in France in the last war as a lieutenant and who is still an active pilot recently went over as an observer and was invited to go on an observation mission over England on a quiet night to see how the radio and communications were operated. The R.A.F. pilot hadn't been born when the American air officer was flying stick and wire airplanes during the last war, but he was very proud of his distinguished passenger and wanted to give him the best. After working out the communications mission, the youngster announced through the interphones: "Now I'm going to take you over to Brest and let you see the fireworks."

The German antiaircraft over there is reported to be very good, especially at night. The American officer was in a quandary. He most certainly would like to compare it with the last war but here he was in uniform and what if they were shot down and he were taken prisoner? Fine thing for the international situation. Yet, the honor and reputation of the American Air Forces were at stake and what would R.A.F. pilots thing of these American pilots if he declined to go for any reason. He had but one choice.

"Okay," he phoned back They out over the water an appro Brest. The fireworks can up and suddenly the young office up from covered he was running on f had just enough to get b . He it. Whew!

OUT in the Channel spots of the North have established a nu buoylike shelters whe pilots wait until aid comes fr shore. ports brought back her hold half a dozen men at they are stocked with bl artificial stimulation.

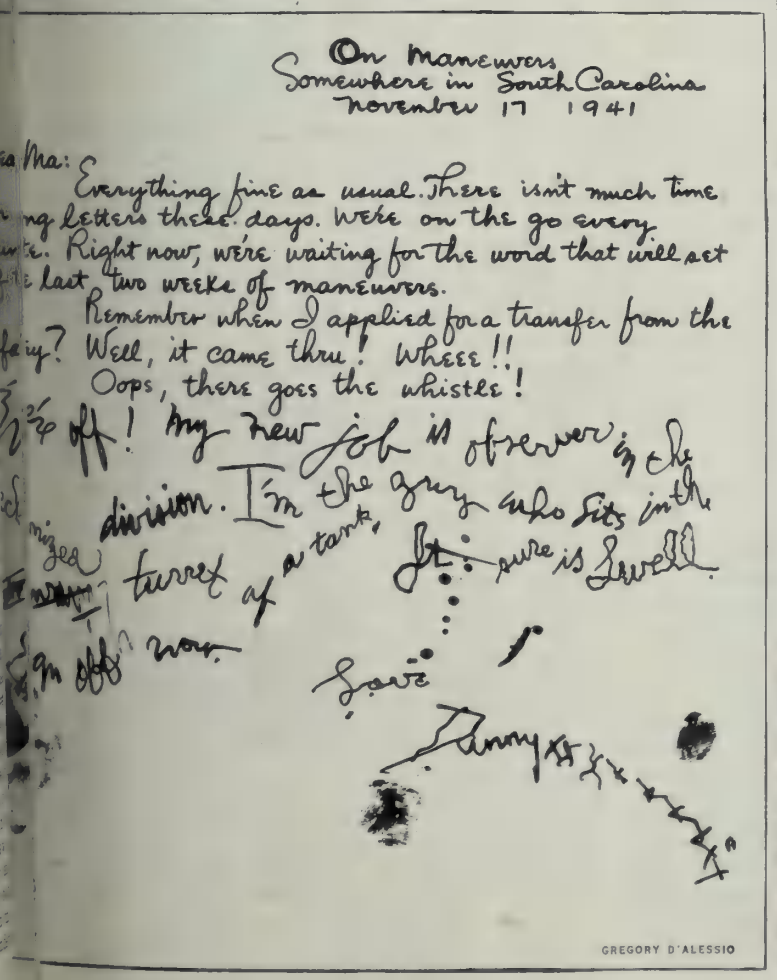
### ARKANSAS



MP ROBINSON, Little ck. The American Legion lying cry, "Where's Elmer?" ne you don't hear around the sion. Every member of his nsas) regiment knows that r Davis will show up in the everything every time, put- ht foot down when the other down the left. Elmer has s of things in the Army, but ep is not one of them, and him from parades and re- roblem that has officers toss- ir sleep. Coincidental with came the news that Elmer hospital. "We want him to officers assured the medicos, u positive Elmer will be in al for the duration of the ?" The docs said yes. With the regiment leaped into the ey had forgotten Elmer's re- bility to show up in any deli- ion that could easily be . For Elmer, having sneaked hospital, was at this point miles from his regiment, grimly marching down the highway, pausing occasionally to flag a passing car with the wrong thumb. There were plenty of vehicles on the road that day and no one has been able to explain why Elmer had to thumb the one flying the three-starred, red flag. The car stopped and Elmer contrived to finish his trip with Lieut. Gen. Ben Lear, generally known as the 35th Division's severest critic. Elmer was delivered, with suitable comments, to regimental headquarters, which promptly shipped him back to Camp Robinson and the hospital. So now, with half the 35th on furlough and nothing going on that could possibly be tossed off base by Elmer, our hero rests quietly, thinking happily of the parades to come, when he's on his feet again.

### TEXAS

1ST CAVALRY DIV.

FORT BLISS. Operating here for the first time in the Army's history is the 16th Veterinary Evacuation Hospital, meaning a battlefield emergency station for man's best friend (or are we thinking of dogs?). You can take a horse's word for it that the most modern equine hospital treatment is the Army's answer to a horse's prayer. On maneuvers the 16th performed military and hospital duties and followed the zigzag course of the 1st Cavalry Division all at the same time. A sick horse goes to the hospital in a veterinary company truck and the record of his condition and recovery is kept as diligently as though he were a brass hat. Some horses don't realize the great benefits to be derived from medicine, but Staff Sgt. Zwierzynski and Pvts. Szaszowski, Zukowski, Sokolowski and Stransky have persuading ways. With a force like that there's nothing for a horse to do but give in.

CAMP WOLTERS, Mineral Wells. For an infantry sergeant with twenty-nine service years behind him,

To Heat Your Car the Best Way

CHOOSE ONE OF THESE

ARVIN

HOT WATER HEATERS

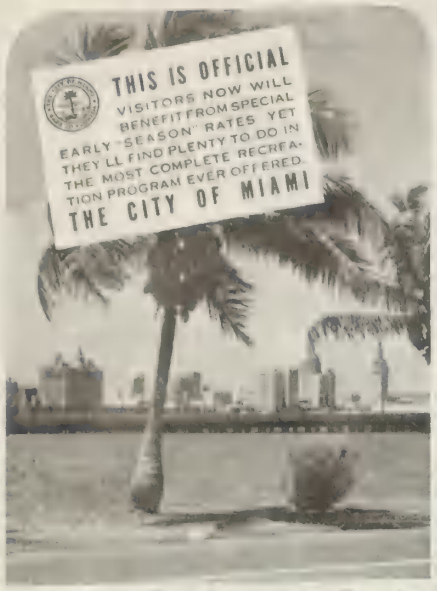
● **THE ARVIN WAY** of heating cars—with safe, healthful, circulating heat from free hot water—is the best and most approved way. Millions agree on this.

**Arvin features** include: Big capacity radiators for plenty of heat. Powerful motor-fan circulation. Special fast warm-up equipment with tailored fittings. Complete control of intensity and direction of heat flow. And many others. All the result of 20 years' experience in building millions of car heaters.

**There's an Arvin built especially for your car,** for your climate, for the needs of your family or the driving you do. One type installs on the floor, under the front seat of most late model cars—fan-forcing equal heat front and rear of car. Other Arvins install on dash, up and out of way—fan-forcing the heat through control doors, circulating it throughout car, and up to the windshield for defrosting. Both types may be installed in series for maximum car heating comfort and windshield defrosting.

**All Arvins** operate on the same safe, dependable hot water heating principle that has won approval from automotive engineers, mechanics and millions of car owners.

**Arvin prices** range from $9.95 for a dash model, up to $27.50 for the complete underseat heater-defroster-foot-warmer system. Sold everywhere—by garages, service stations, accessory stores, wherever you see the Arvin display girl. Be warm in your car this winter with an Arvin Heater. It costs so little.



NOBLITT-SPARKS INDUSTRIES, INC., COLUMBUS, INDIANA

Also makers of Arvin Radios, Bathroom Electric Heaters and All-Metal Furniture.

STOP WHERE YOU SEE THIS DISPLAY FOR CAR HEATING EQUIPMENT—TAILORED TO FIT YOUR CAR AND YOUR DRIVING NEEDS

PRICED FROM $9.95 TO $27.50

MiAMI

THIS YEAR, MAKE IT *Bright* AND EARLY!

More than ever, in times like these—America needs Miami—needs the quiet relaxation of nerve-soothing "ultra violet", the carefree pastimes of sea and sunshine—a tropic tonic to tone-up and tune-up for a long, hard winter ahead.

**EVENTUALLY, WHY NOT NOW!**—Plan early, *come* early—and come right to Miami—where living costs are lower and you're nearer more things to do.

**"BRIGHT" IDEA FOR XMAS**—During the holidays there are scores of added thrills—special events, a new high in fun and gaiety even in gay Miami. A Miami vacation will make a fascinating, *different* present for yourself (family, too). Miami's new official booklet gives full details: costs, color photos, complete recreation calendar from now till Easter. The coupon will bring your copy—mail it now—fun's awastin'!

Warren Givens, Co. C, 54th Btn., has accomplished a feat with his footwear. The pair of shoes issued to him back in 1921 at Camp Sherman, Ohio, still serve as spares for guard duty, furloughs and visits to town. Sgt. Givens has had them repaired only twice during the intervening twenty years.

WHEN camp personnel last spring bulged out of bounds and into nearby Mineral Wells and Weatherford, thirty-some miles away, rents hit and went through the ceiling. In April Capt. W. E. Davis was made billeting officer and in August a civilian Fair Rents Committee pitched in and helped finish the job. Rents charged Army men are now $5,000 per month less than last April's total. One garage apartment, formerly renting for $65 unfurnished, is down to $35, with a cookstove and icebox thrown in. The whole thing was done with diplomacy and a minimum of hard feelings. Landlords were asked to bring down high rents but the recalcitrants weren't blacklisted. "Bad psychology," said Capt. Davis. When the Army and city representatives agreed on a top price of $40 and the landlord held out for $60, Army men were told they could rent the place if they liked it—but for not more than $40. It merely took a succession of would-be tenants all offering the same price to make the landlord surrender.

### UTAH

FORT DOUGLAS, Salt Lake City. If you want to get away from war talk, join the Army. Now in the Reception Center barbershop, Tonsorial Artist Jack Carter, who had become fed up with the war gab of his customers, hasn't heard any for five months. Friends ask him for the inside dope. "Don't know any," says Carter. Selectees generally are too occupied with their immediate welfare to worry about actual combat. As a matter of fact, many of the new ones are switching to the regular three-year hitch upon induction. Some of the reasons: $30 a month right off the bat instead of waiting four months, better opportunities, knowledge of where they are going and what they will be doing.

WHILE practically everybody else was tossing millions around, the 188 soldiers at the Wendover Bombing and Gunnery Range, in the salt-flats and sagebrush country 130 miles from anywhere, up and built their own sidewalks out of cement dust the runway contractor left in the boxcars. The men here are pretty much on their own. When the noncoms decided they needed a clubhouse, four of them set out in a reconnaissance car to size up an old railroad bridge for lumber salvage. They found the lumber. Eventually, a searching party found them—thirty-five miles out in a desert gully, where they had spent the night minus food, water and other stuff like that.

For the fliers the soldiers make giant bull's-eyes out of waste oil. The bombs obliterate the targets with one application but there's lots of room for more—1,800,000 acres. The permanent targets are built by Army engineers, who aren't provided with bombing schedules and have to do some neat dodging now and again.

### CALIFORNIA

CAMP CALLAN, San Diego. "There's good money in it, but I earn every cent I get," is the opinion of Corp. Lowell Harmer, Battery B, 52d Training Btn. He doesn't mean the Army. His side line is operating a recording machine into which Callan soldiers dictate messages, mostly to gals. To get a customer into a sentimental mood Corp. Harmer puts what he calls "a mush record" on a phonograph. "Then," says the corporal, "I tell the guy to pour it in thick and not mind me. Talk about hot records! Nobody'll ever know the agony I go through keeping from passing along some of the stuff I hear."

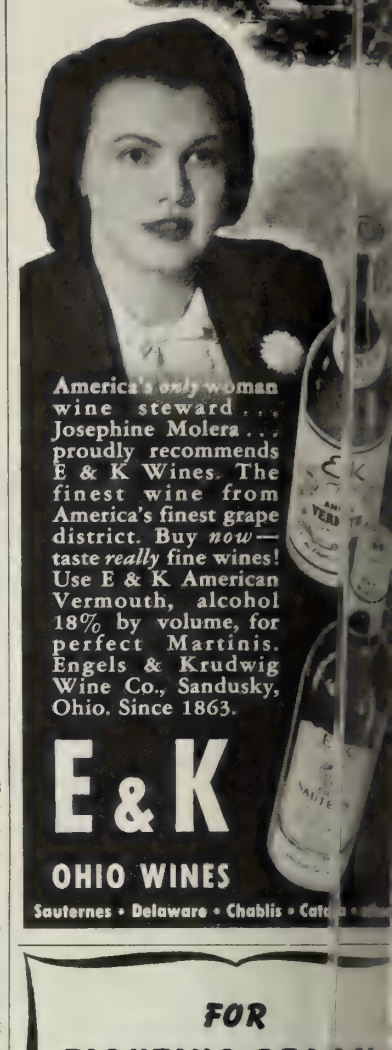
### GENERAL

THAT de-emphasis cry, long directed at college football, seems to be migrating to some Army camp athletics. The mistake being made, according to officers and men here and there, is that too much attention is devoted to turning out one or two top-notch teams, which draws more sports-page publicity but doesn't help the soldier who's not good enough to participate. The question seems to be whether the purpose of the athletic program is to put on a show for the boys or give them a chance to play in the game. We aren't taking sides.

HERE are the names of a few more out-of-the-States soldiers who are pining for a kind word from gals back home. In Co. A, Force A, (A.P.O. 803), Trinidad, British West Indies: First Sgt. John H. McMahan and Sgts. Charles Colburn, George Angel, Bart Sockle and Julis Snider. At Borinquen Field, Puerto Rico: Pvts. Ernest Hanscom and Robert M. Meigs, 305th Signal Co., and Pfc. John C. Carey, Jr., 51st Signal Maintenance Co. At Schofield Barracks, Hawaii: Pvts. Wm. L. Hallberg and Clarence J. Hunt, both of Co. C, 804th Engineers Battalion.

WISCONSIN Selective Service officials were somewhat chagrined the other day when a prospective draftee, after medical examinations showed him fit for Army service, walked out of the local board's office and dropped dead. Minnesota's Hennepin County Board No. 19 experienced the reverse of this situation. A machinist answered the question about illnesses and accidents with the following list: Back injury, scarlet fever, stiff neck; index, middle and ring fingers all broken; nose broken eight times; both arms broken at wrist; dent in skull from football injury. "Do you consider that you are now sound and well?" asked the questionnaire. "Yes," wrote the machinist. He's in Class 1-A.

THE ARMY is getting the boys all set for a cold winter, and at prices civilians wish they could buy stuff. In addition to nearly 2,000,000 more blankets at about $6.65 each the Army has let contracts for 1,350,000 olive-drab overcoats costing between three and four bucks each, and 1,392,000 pairs of woolen gloves at about six bits a pair. A million tons of coal were squeezed in somewhere. For mobility, Uncle Sam bought thousands of pairs of skis and ski shoes, 69,000 pounds of ski wax, 100,000 pairs of skis and snow goggles, plenty of ski pants and a quarter of a million dollars' worth of special winter flying shoes. Not to forget 165,000 parkas at ten bucks per parka.



THE latest and hottest bull session at Fort Douglas was not over football, chow or Christmas leave. No. The topic was whether a man would make a better husband for having served a year or more in the Army. The affirmative said the ex-draftee would get up promptly for breakfast, wouldn't dawdle over dressing, would make his own bed and hang up his pajamas before sprinting for the 7:55, would be in time for all meals, scrape the dishes and wash them occasionally, get along on a small allowance, be polite to his wife and take orders without growling.

WHAT do *you* think? As though we need ask. G. W.

### lough on Rookies

eld regalia the motorcyclist ting. Summertime he wears an his shoes, sox, coveralls hat (wintertime clothing oars). But he carries a pis- holster, a canteen, rounds of , a first-aid pouch, a rain- respirator and a gas mask. ut side of his cycle is the and holster; biggest and ll is the bedding roll in rear

cyclist experiences con- otch chafing and buttocks when first he rides cross- furiously does the seat nd down. Rough though all , it is during winter months that you see cycle soldiers exhibit their fortitude.

You have ridden all day and into the evening on a vehicular march in January. Hardly do you slip into your bedding roll, when someone awakens you and you crawl shivering to a scout car. It is scarcely ten P. M., you've slept perhaps an hour. The column pulls out of bivouac for an all-night march, you learn, to strike the enemy at dawn 200 miles away. And it's cold. The black-out order is issued. It seems to get colder. The metal hulk of the vehicle seems to attract and hold the damp iciness. There's nothing colder than cold steel. All the clothes they issued you aren't enough, you're so frozen you can't sleep and the car heater can't warm itself. Every hour and a half you stop for hot coffee; to your amazement it's worse outside, the wind cuts and there's a bit of sleet or hail in the air. Stiffly you crawl back inside and resume your all-night misery. You admit, grudgingly, the coffee helped some.

### The Column Goes Through

Then you realize, as something roars and passes your scout car, what an abominable, soft, pampered sissy you are. You had forgotten about the motorcyclists. This is too much. Impossible. You see them working, but still. . . . That settles it. Those guys are tough . . . they're the toughest guys you ever saw. Civilian motorcycles during winter are stored away in gobs of grease. Yet here are these cycle soldiers, unstymied, battling inexorably with the elements. Only nuts or experts, you say, would ride on a night like this. You can see by the way they handle themselves on black, icy roads they're not nuts. In your numbness you realize you couldn't begin to do their job.

Occasionally you'll see one spill, pull his cycle out of the way quickly, brush himself off and start again. A green rider once in a while will, in fright, switch on his lights. A veteran will ride up to him, shout something and all will be darkness again.

It's a hellish night, but the column goes through without snarls, thanks to the night riders. Somewhere, sometime, somehow you fall asleep—groggily, perhaps, but you snare some rest. At dawn you awake; the motorcyclists still are working tirelessly, efficiently. You have some new ideas about heroes.

"Never ask your men to do anything you can't do," officers are told. Generally the rule is adhered to, but motorcycle riding makes exceptions.

Young lieutenants and captains ride as well, often better, than their cycle soldiers, but love of security and the preservation of a sound and unified bone structure is uppermost in the minds of older, higher-ranking officers, and the quick co-ordination so vital to safe riding is not for them. As is to be expected, hordes of officers and men could never qualify as Army cycle riders, many more want no part of it. But from the youngest private to the most crochety colonel their respect for the devil riders is on the highest plane.

One colonel, his legs bowed from years in the horse cavalry, stood near an Armored Division command post wistfully watching several riders kick-starting their cycles. One took off in a roar, skidded sharply, showered the colonel with dust and grit and sped away. A lieutenant swore and began dusting his superior's tunic. The colonel glared after the departing motorcyclist.

"Wish I could do that," he growled.

# DEFENSE DEPRESSION

BUSINESS as usual" was a pleasant dream, fostered at Washington till realities exploded it. The realities are that defense priorities are expected to force numerous small businesses to the wall and throw between two and two and a half million people out of work at least temporarily. All this in the middle of an unprecedented boom in the defense industries and in those that can shift over to defense.

It's unavoidable; but must the little businessmen and the new unemployed smile cheerfully and slide quietly into the quicksand? We don't see why they should. Neither do we see why so many Washington thinkers should airily expect these people to take it on the chin, unless, as some charge, said thinkers are Communists and Fascists at heart and want to see the little fellow rubbed out economically.

For the little businessman caught by priorities, there should be some scheme whereby he can be helped along out of the profits of the defense boom—and we don't mean by super-excess taxes piled on industry. ] unemployed, there should be less t: action in the matter of extending a Social Security.

Plans to counteract the defens can be worked out and put in mc gress and the Executive branch r do the job. And they'd better wa is social, political and economic attempting to laugh it off, detour i hollow appeals to patriotism, or ig

## Why High-Hat Hoover?

HERBERT HOOVER again proposes to organize food relief for some of Europe's war destitute if allowed to do so by the governments of Great Britain, the United States and Germany. And again, up to this writing at least, he gets the not too polite brush-off in Washington and London.

Why? There is actual famine in Poland; the Germans are stripping Greece; civil war is intensifying food shortages in Yugoslavia and Croatia; the Low Countries, occupied France, Norway and Finland are on semistarvation rations; 40,000,000 children, according to Mr. Hoover, face hunger, famine and pestilence.

So why not give Hoover a chance to ameliorate the horror? This man fed about 10,000,000 persons in Belgium and France during the other war. No substantial German thefts of that food were detected. Neither was any adverse effect on the Allied war effort.

Hoover thinks that he could get similar agreements from the Germans again, if Great Britain and the United States would consent to pass his food ships through the blockade. The minute any real cheating on the Germans' part was discovered, the whole thing would be called off.

We've heard only one plausible reason for the refusal to let Hoover try it. ] that the Allied strategists hope a hunger will move the conquered volt that much sooner. It is a c best, and it is more than outweig by the fact that undernourished habitually stage successful upri the further fact that German pro fanning European hatred for Eng ing the general belt-tightening o

We think it would be sound A as well as humanitarian decency ver his chance to repeat his m formance of 1914-18.

## The National Health

A LOT of draftees have been rejected because of minor physical defects, so the compulsory repair of as many of them as possible has been ordered. This is all to the good, we think—one of the numerous ways in which the draft can be made to work widespread benefits.

However, when the politicians go on to talk about a national health program to include practically all of us, it sounds to us like hashish. Americans are too fond of gypping such government ukases, as was proved for all time, we thought, by the prohibition experience.

We think the national health can best be improved in the ways in which it has been improved for the last 35 or 40 years. We mean chiefly by individual efforts and health study—don't eat too much; don't eat crazy food combinations; see your dentist at least twice a year; take reasonable exercise; be moderate with your liquor, tobacco and other indulgences; act your age; get a full physical checkup once a year from a reliable doctor; above all, don't worry too much about your health.

These individual efforts should be supplemented by prudently managed group hospital insurance plans, more and more community attention to hospital services, sanitation, parks and playgrounds, care of sch teeth, free school lunches or mi ing of information about venere vention and cure, and so on.

In short, we think the nat doing all right.

And speaking of the draft ar boys are learning things they before about sensible foods anc tions. As they stream back to c mand for fruits, fruit juices, other health foods ought to so self will be an automatic boost health.

## Uncle Sam's Contact Bureau

A RECENT Collier's editorial, Those Defense Commissions, objected to persons claiming to be able, for an appropriate fee, to connect businessmen with government defense contracts. We observed that this seemed a bit noncricket to us; that it was up to the government to make such contacts easy.

We hear now, from Undersecretary of Commerce Wayne C. Taylor, that the Department of Commerce has established such a service. The commission men, says Mr. Taylor, are made largely unnecessary by this new office; so are personal trips by businessmen to Washington in search of contracts; and "that more businessmen have not availed themselves of this service is due entirely to the fact that many of them still do not know it is ava

We're glad to pass on the tainly was news to us, and we h optimism is justified. If you w send a request for full inform contract bureau to Service Office, Room 1060, Departme Washington, D. C.

# D You See a Girl in a Pageant?
# N. I see a Future Star of the Stage.

# Is She Beautiful?
# N, but She has Charm and Personality.

# It' her Smile that's so Appealing—a Smile she
# ha always given the Daily Care of Ipana and Massage.

*A Product of Bristol-Myers Company*

**Your smile is what you make it! Let Ipana and Massage help you to have healthier gums and brighter, more sparkling teeth**

**Q.** *What have healthy gums to do with a brighter smile?*

**A.** Just this: many modern dentists tell us that firm, strong gums are vitally important to sound, sparkling teeth...that weak, sensitive gums tend to make teeth dull and dingy.

**Q.** *What can be done to help gums?*

**A.** Regular, daily gum massage—that is what most dentists recommend. For today's soft, creamy foods do not give our gums sufficient work and stimulation. Gums are apt to become weak, tender...and frequently flash a tinge of "pink" on your tooth brush.

**Q.** *Is "pink tooth brush" a dangerous condition?*

**A.** "Pink tooth brush" is a warning that may or may not mean serious trouble ahead. But only your dentist can decide that. He may merely say that your weakened gums need more work and resistance. And, like thousands of dentists, he may well suggest the helpful stimulation of Ipana and massage.

**Q.** *How should Ipana be used for most effective aid?*

**A.** Every time you brush your teeth, massage a little extra Ipana onto your gums. Do this faithfully, every day! For Ipana not only cleans teeth brilliantly but, with massage, it is specially designed to help make gums firmer and stronger. That is why you'll find the modern dental health routine of Ipana Tooth Paste and massage so effective in helping you to ward off "pink tooth brush"... in helping you to have healthier gums and a brighter, more sparkling smile.

# ANY WEEK

MR. JEFF DAVIS of Hollywood, California, recently sat in at a conference called by a patent-medicine maker. Present too were representatives of the radio chain over which the gentleman's product was to be advertised. The announcers, whose velvet voices would do the selling, sat in. The sponsor said that radio plugs lacked spirit and that he intended to supply it. "We shall open the program with important headlines," said he. "They'll be spoken sharply. Each will arouse this country from coast to coast. For example, we'll start like this: Hitler Takes Over Europe! South America Invades U.S.A.! Tidal Wave Submerges All Japan! Take Paingo-Paingo for That Headache!" The sponsor paused. "Then, gentlemen," he concluded, "I suggest a waltz."

BEFORE he flew to Russia, Quentin Reynolds may have been seen any evening at one of the take-off points from which the R.A.F. flies to drop devastation upon the Nazis. Under Mr. Reynolds' arms was a football, sent to him recently by Brown University, from which Mr. Reynolds was graduated in 1923. As each British flier took off, Mr. Reynolds may have been seen to thrust his hand into the football, extract a small pellet and flip it into the open mouth of the lad at the controls. In the football Brown had poured a large quantity of tablets into each of which had been squeezed vitamins A, B1, B2, C and D plus generous helpings of iron, calcium and phosphorus in case of a tie. Along with the vitaminized football (which Brown needed badly that day she played Columbia) two of Mr. Reynolds' classmates, Mr. Bruce Bigelow and Mr. Ed Place, sent a collaborated cablegram: "Sending gift football from Brown University team to Eagle Squadron. Will recall memories to you and should bring luck. Ball packed full of new vitamin and mineral ration for you and Eagle Squadron. Great All-Americas all." But Mr. Reynolds reported that the Eagle Squadron did not need vitamins. In fact there's no telling what the Eagles might do if anything propelling or extraenergizing were added to their diet. Just to demonstrate to the R.A.F. lads, Mr. Reynolds took several of the tablets himself. The combination of Reynolds and vitamins was rather violent, which is all that the English censors will release on that particular phase of the experiment.

AND while we have no intention of sticking our battle-bruised chin further into the British-American relations controversy, we're compelled to by Dr. E. Black Jeremiah of Carmel, California. Doctor Jeremiah laments that Englishmen coming to our shores officially on war business are not being received with acclaim, that many of these Britons are less than popular, thus failing to promote the kindest feelings on this side. "I am writing to President Roosevelt telling him precisely what to do about this. It's exceedingly simple. All we have to do is to import some Nazi missionaries, giving them all the freedom the British commissioners have. And if that doesn't make the Britishers popular by contrast we may as well give up."

A LETTER from the Reverend Grady (Bulljine) Jones of Driedup, Georgia, asks us to lend a hand to his latest crusade. He calls it Eat By the Wayside and wishes it understood that he isn't plugging for barbecue, hot-dog or hamburger stops. The Reverend Bulljine says that he hasn't eaten a meal indoors in twenty-eight years save once when "the floodwaters of the Lord were so high that fish of the sea drowned of immersion." Otherwise the Reverend (Help Yo'self to Glory, Folks) Bulljine plucks sustenance from field and stream as he strides the Southern plain and highland "hightailin' for heaven whilst hitch-singin' the Psalms." We quote the good man even though we don't quite understand "hitch-singin'." The long-delayed point is, however, that he urges that our armies follow his dietary example, thus saving the taxpayer a great deal of money. "Also," writes he, "it will make retreat from the face of the enemy foolish and vainglorious because there will be nothing left to eat coming back." The Reverend Bulljine has written all this to General Marshall, Chief of Staff, United States Army. One of the general's aides replied saying that the Army was very grateful to Mr. Jones for his interest and that his letter had been forwarded to the Quartermaster Corps.

AND the Honorable George H. Watson, mayor of Romantic Alta, Utah, sends us a report of the latest meeting of the Great American Prospectors' Association of which he is scribe. The meeting was held as usual in Tim's Tavern, Roaring Gulch, 22½ East 1st South Trail, No. 2 Level, Romantic Alta. Between refreshments they adopted resolutions which, somewhat condensed, follow: "Whereas, altogether too many people are getting hit by drunken drivers and whereas if you must take a few shots on such occasions as Congress voting for sound money at fourteen ounces of silver to one ounce gold, or hearing Mr. Morgenthau recommend taking the tax off hard liquor to beat the bootlegger or

"Look folks! I bought these toys with money saved on oil and gas since we put a set of Sealed Power Rings in our car six months ago."

SMOOTH but saving, too!

...so are cars equipped with Sealed Power Piston Rings

WHEN your car starts using too much oil, ask your service man to inspect it. If piston rings are needed, insist on a Sealed Power Set engineered especially for your own make and model of car. Then you will enjoy extra power and pick-up as well as substantial savings in oil and gas. The builders of four-fifths of America's leading cars and trucks have been using Sealed Power Rings for 30 years. This is your assurance of the finest engineering, materials and craftsmanship when you buy Sealed Power Piston Rings. Sealed Power Corporation, Muskegon, Michigan, and Windsor, Ont.

*Piston Rings for all types of Automotive, Airplane, Diesel, Stationary, Marine Engines.*

# WING TALK

**They're in the Army now: Small planes are proving their mili[tary] value**

THERE are many hundreds of middle-aged men in the United States with thinning hair and rotund fuselages who will testify that the greatest airplane ever built was the old Curtiss JN-4 or Jenny. That's because they soloed it back in the days of the last war. Today there are many thousands of young men and women who left the earth for the first time all alone in Aeroncas, Piper Cubs, or Taylorcrafts and similar types, and who will always feel about these ships as the old-timers do about the Jennies. Now something has happened that causes the Puddle-Jumper Alumni Association to burst with pride —their ships have become Army airplanes!

Bearing the official Army designations of YO-57 (Taylorcraft), YO-58 (Aeronca) and YO-59 (Piper Cub), these little jobs are now dressed in the official Army drab camouflage paint, with red, white and blue stars, just like a hot pursuit ship or a terrific bomber. The YO prefix isn't an abbreviation for "Young Observation" plane, as one waggish Air Forces officer suggested. The Y stands for the service order, which means an order of 13 of each has been bought, to be tested, along with other tactical planes, for suitability in the field. The O means observation. The numerals following mean they are the 57th, 58th and 59th types to be acquired by the Army since the present system of designation was adopted nearly two decades ago.

The little putt-putts, or grasshoppers —all sorts of outrageous yet endearing names are hung on them—are to work with troops in general courier and observation operations. Some were used in the Louisiana maneuvers and experienced no difficulty in operating from highways, small fields and other areas not usually associated with aircraft take-offs and landings. What appealed to the troops was the ease with which they could be repaired in the field—any saw-and-hatchet mechanic with some haywire could put them back in operation after they had decapitated a tree or made a hard landing. And in the Army today are hundreds of pilots who were trained on these little 50-horsepower types in the Civilian Pilot Training Program and who can fit right in with their operations, whereas it would wound the pride of a bomber or fighter pilot, used to thousands of horsepow[er] signed to the extremely in[portant] these little ships are cap[able]

OUR modern high-perf[ormance] planes owe a great [debt] to invention and developme[nt] of the trollable-pitch metal prop[eller]. the chief producers of which [is] Standard Propellers of E[ast] Hart Connecticut, and Curtiss [Electric] pellers of Caldwell, New [Jersey.] propeller, which converts [engine] into the thrust that make[s] an airp[lane] fly, must be designed to op[erate] at m[axi]mum efficiency under the [many] conditions of altitude, spe[ed] and en[gine] power. To do this, the p[ro]peller is signed to permit the pitch [to] ting of the blades to [change] manually or automaticall[y] [as] those ing conditions change. A[ll] the che[nges] take place while the blade[s] are whi[rling] at 2,000 r.p.m., or faster.

Before the days of the [controllable] pitch prop, the blade, ma[de] of wo[od] metal and fixed in its pi[tch], had t[o be] designed so that it woul[d] afford performance on take-off. [Or] That n[ecessitated] sacrifices in cruising and t[op] speed, the ship was in the air. [Now] the trollable and constant-sp[eed] props maximum performance f[or] take-off, maximum performance a[t] cruising high speeds, and that's [why] of the portant reasons for the [good] perf[ormance] ance we get out of our pl[anes].

ONE index into the ca[pacities] pilot is his number of [hours of] flight time. That total in [a log bo]the pilot's greatest asset. [Hence] with a low hourage tota[l] re egge[d] by their consciences to [acquire] and more time and tha[t why] awakened early Sunda[y] morning some bird boiling away i[n the sky] head. He's shooting fo[r a legiti]500 or 1,000 hours in his [book. Th]no real double check on [flight] logged in the pilot's boo[k and an] written code exists amon[g] down only the actual tim[e] the air at the controls. [Provisio]made for copilots on ai[rmen] dent instructors to log as [flight] a percentage of the tim[e] actually at the controls [because] are in a responsible capa[city.]

*(Continued on p. 82)*

# What to do when you feel a COLD coming on

WHEN you start to sniffle . . . when you feel a chill . . . or get a dry, rasping irritation in your throat, it's time to a –and act fast! *A cold may be getting you in its grip.* What can y do to ward it off?

Unfortunately, in spite of all the time and money spent on s lying the condition, there is no known positive specific. C ainly, we would not classify Listerine Antiseptic as one. Y tests made during ten years of intensive research have con- v ed us that this safe, pleasant-tasting germicide often has a v marked effect.

Over and over again these tests have shown that those who g led Listerine Antiseptic twice daily had *fewer colds, milder c , and colds of shorter duration than those who did not.*

### *Kills Germs Associated with Colds*

The reason for this success, we believe, must be that Listerine A iseptic kills vast numbers of germs on mouth and throat s aces . . . so called "secondary invaders" which, according t many authorities, are largely responsible for the distressing m ifestations of a cold. Listerine Antiseptic kills these germs b the millions, before they can invade the delicate membrane a aggravate infection.

### *Tests Showed Outstanding Germ Reductions on Tissue Surfaces*

Clinical "bacteria counts" showed germ reductions on mouth a throat surfaces ranging to 96.7% even 15 minutes after g ling with Listerine Antiseptic . . . up to 80% an hour after t gargle.

Isn't it sensible, then, to use Listerine Antiseptic promptly a often to help combat a sore throat and keep a cold from b oming troublesome?

We do not pretend to say that Listerine Antiseptic so used w *always* head off a cold or reduce its severity once started. B we do say that it has had such a fine record in so many test c s that it is entitled to consideration as a reputable first aid.

Get the habit of gargling with full strength Listerine Anti- s ic morning and night; and if you feel a cold coming on, i ease the frequency of the gargle and call your physician.

LAMBERT PHARMACAL COMPANY, *St. Louis, Mo.*

## LISTERINE
## for COLDS and SORE THROAT

**1** **Go to bed** at once, take a mild laxative if your doctor advises it. Drink plenty of water and fruit juices. Eat lightly.

**2** **Gargle with Listerine Antiseptic,** full strength, every three hours. Listerine kills millions of germs on mouth and throat surfaces before they can invade the delicate membrane and aggravate infection.

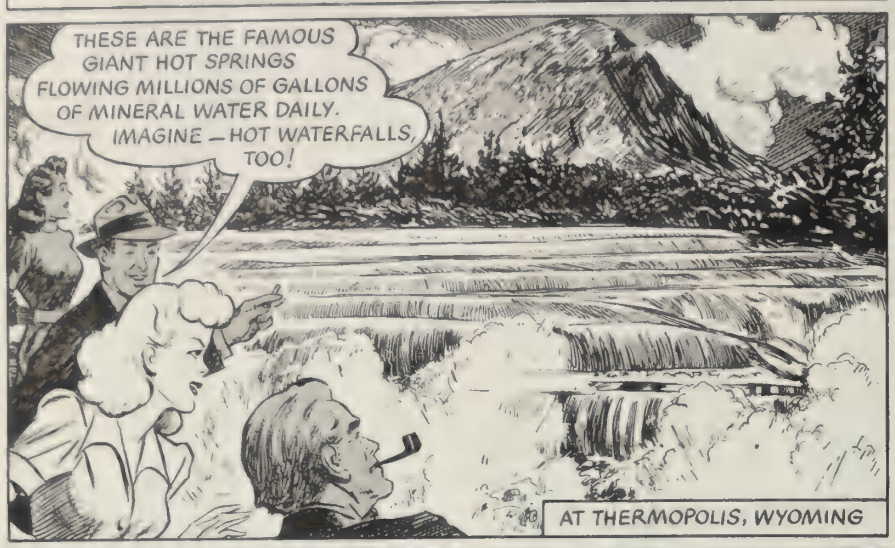
**NOTE HOW LISTERINE GARGLE REDUCED GERMS**

BEFORE

The two drawings illustrate height of range in germ reductions on mouth and throat surfaces in test cases before and after gargling Listerine Antiseptic. Fifteen minutes after gargling, germ reductions up to 96.7% were noted; and even one hour after, germs were still reduced as much as 80%.

AFTER

**3** **At night, take a hot bath,** or at least a hot foot bath, before getting into bed. Cover up with plenty of extra blankets to "sweat the cold out of your system."



**4** **Don't blow your nose too hard.** It may spread infection to other parts of the head. Sterilize used handkerchiefs by boiling. Paper napkins should be burned.

# Beyond the Game

## By Edward Shenton

ILLUSTRATED BY C. C. BEALL

**... make touchdowns ... to influence the ... people you meet ... way to the goal line**

THE excited voice issuing from the radio said, "Fourth down coming up. Eastern's ball on Southern's forty-five yard line, nine to go. Just a little time for one more play. Neither team, as you know, has been able to score. If is is a tie, it will be a moral victory for the boys from below the Mason-Dixon line. Eastern goes back into the huddle This is a big moment, folks, a most important. What will Eastern do? Pass? Run?"

"Eighty-two," Clifford Davis pleaded. "Eighty-two."

It was a beautiful play. It began like many with the tailback fading and faking to spread the secondary defense. Then a good line work and split-second timing, if it was a touchdown play, developed for the desperate minutes near the game's ending.

The radio announcer continued, "Eastern's up on the line. The ball's snapped. The tailback is fading . . ."

"Okay," Clifford said, and breathed deeply.

"He's going to pass. Ends are downfield. There goes the ball . . ."

Clifford stiffened, his eyes distended unbelievingly.

"Here's a receiver in the end zone. He goes up in the air like a jack rabbit. Has it . . . He . . . No, he dropped it. There's the ball bobbling away. And ladies and gentlemen, goes the ball game. Too bad for Southern, but a great day for . . ."

Clifford snapped off the radio with a vicious click and sank back limply.

Eighty-two would have done the trick. Eastern was all set for that pass. Every man covered. Eighty-two was one of the most perfect plays to be used against the least expected, like Columbia's famous K 79. Against a team like Eastern it was a sure bet.

And Great "Flash" Reynolds, Eastern quarterback, was being touted as a brainy field general on the grid-

"Phooey Clifford said aloud.

Julie Wentworth had been hoping to see Reynolds toss away an opening-game setup. Clifford disliked Reynolds particularly, Clifford thought, even if Julie had to have gone off the deep end about him. He knew Julie. She had to share the center of things; share the spotlight. It was a normal human failing. Underneath, she was all wool,

Clifford had come to love these evenings when they planned the strategy for the next week's game

and a yard wide. He had always imagined that some day he would marry her.

His feeling about Reynolds, Clifford decided frankly, was not jealousy but envy. Reynolds had everything—size, speed, durability, yes, and brains, in spite of this afternoon. He had gotten from college all that Clifford had yearned for and missed, just because he never could get his weight over one-forty. Small bones, he thought bitterly. No heft to his substructure. That he stood five feet ten didn't help any. His features were thin and delicate; his face missed being feminine only because of the bold brow and clean jaw line. He couldn't take the physical punishment of football, no matter how bold his spirit. That was the reason he had never risen beyond third-string quarterback at Eastern.

But he loved football. Even now he could spend happy evenings with circles, squares and arrows, building unbeatable paper offensives, defenses to check his own winning strategy.

For what? So he could sit in a deserted office on Saturday afternoons and gripe about the playing of boys out there in the heat of the battle? Not a very generous attitude.

Clifford walked to the window of the office and scowled at the ugly shapes of coal breakers looming on the dull sky, the vast black mountains of slag, the shafts above the mine entrances. Coal country, desolate and depressing. On the bare hillsides, shabby houses hung in precarious huddles. What a landscape to gaze upon for three or four long years, maybe a lifetime. Clifford hated every moment of the three months he had spent there. After he had graduated last June, his father had said:

"If you're going to be head of an anthracite company, you've got to understand all of it—mines, men and business. Especially how to handle the men."

An enlightened philosophy of labor, Clifford thought, in an industry noted for its medieval treatment of workers. He approved of it absolutely, as theory. Practically, it was difficult. The men, he admitted to himself, intimidated him. They growled in a half-dozen Slavic tongues as he passed. They got drunk and fought with knives, feet and shovels. "They're children," his father said. "If they work well, slap them on the back. If they get tough, slug them." His father stood six foot three, weighed two hundred and twenty pounds; he could break a pick handle over his knee.

There it was all over again. He hadn't gotten what he wanted out of college, and now he wasn't fitted to get along with these people.

A KNOCK on the door interrupted his miserable reverie. "Come in," he said, surprised.

The door swung back and the space was completely filled by a huge miner. Clifford strove to fit a name to the broad Slavic face and failed.

"Hello," he said with a lame attempt at heartiness. "What's the trouble?"

The man took off his cap and moved awkwardly into the office. Clifford saw that he was young. Behind him came a small, hard-faced older man wearing a suit with a belted coat and a derby hat.

"Afternoon, Mister Davis," this man said. "You don't know me. I'm Buck Wilson, manager of the 'Moles.' "

"Oh, yes," Clifford said. The "Moles" was a professional football team, its members drawn entirely from the anthracite regions, he recalled vaguely. He'd never had any interest in pro football. "Sit down, won't you?"

The young miner sat on the edge of his chair. He squeezed his enormous hands together and cast a pleading glance at Wilson.

"This here's Stan Polansky," Wilson said; "captain and right end of the Moles. He's got a bee buzzin' round in his noggin. Tell it, kid."

An apologetic expression crossed Stan's face. He spread his hands in a foreign gesture. "We got okay team, Mister Davis. We got beeg guys."

"Line averages two hundred pounds from end to end," Wilson interrupted. "Backfield, one ninety-five."

Clifford whistled.

"Fast, too," Stan said. "An' we don't win no games to speak of last season."

"Dropped the first this year," Wilson said.

"We ain't got no brains," Stan said. "We get the ball up to scoring and loosit."

"Last week," Wilson said, "they was inside the five-yard line eight times and never put it over."

"Pete Maciek's dumb," Stan said.

"He can carry the ball like hell," Wilson said, "but he can't call plays."

"Why don't you get someone else?" Clifford said, wondering where it was all leading to.

"Sure. We gotit. We want to get you, Mister Davis."

Clifford straightened up with a gasp. "Me? Whoever told you I played football?"

"My sister," Stan said.

CLIFFORD stared at him in amazement. An infectious grin lightened up the impassive face.

"Sure. Manya Polansky. She was at college where you was. Now she goes around and sees that people lives good. Everybody's crazy about her, see. She's got yellow hair an' don't talk much."

"I can't recall her," Clifford said. "There were five hundred girls in college."

"Yeah. But Manya knows you. She tells me you was the best quarterback only you was too light."

"If I had no chance in college," Clifford objected, "where would I be among a lot of Goliaths like you?"

Stan leaned forward and tapped emphatically on the desk. "You tell us

BLACK STAR

**Disheartened and forlorn, the prisoners of war are marched to the rear. In this column there were 10,000 Russians, most of them captured in the Kiev fight**

of German-occupied Russia is rags and ruins; huge sweeps of European Soviet territory be systematically destroyed, by the Russians themselves and b the devastation of Stukas, rs, ns and fire. I have trailed mol g whirlwind of war several and iles by car and bus.

lys , perhaps, stands out as the ne t all; you may add the name ci in what was Poland to those terl and Gettysburg. It was there rst eat death struggle between orl two strongest military pow- ok ice. The town, with its 95,- eop lies on the edge of the fine s t he south and east. To the fro which I came, were open anc arklike groves.

ng li s of concrete bunkers, some unfi hed, were backed by shat- art ry emplacements. Already, we grazing peacefully around omb aters. Women and children pee g, still frightened, through oor s of their little straw-cov- hou s. Everything had been d a blasted. Smoke smudges d t loopholes of concrete ram- told ow their defenders had been d o by flame throwers. On a y adow lay the remains of Sov t fighter planes. Near by, a ed sant was cutting grass for gly orse.

a cr sroads on the outskirts of wn o machine gunners sat be- thei weapons, muzzles pointing ear- woods. Wandering Russian stil ere in those woods, coming nig to raid traffic on the dusty ay.

ba efield of Bialystok was a circl hundred miles in diameter. erm pincers came around the and losed in to trap thousands l arm fighters. As we drove down ng rd across the battlefield, we aw rned-out trucks and cars and ere. People from the shat- tow already were salvaging what coul or their own use. Farther can straggling refugees—dirty, ven, arefooted men, little chil- limp along, tired women with ened yes carrying babies with , tea meared faces. All their be- gs we in sacks over their shoul-

ne of e refugees got back to find hom , or the remains of their —on he bomb crater where the home used to be. Deep craters lined the road along which the peasants walked. Every type of war material, twisted, shattered and burned almost beyond recognition, was scattered in the fields and through the woods. Long-barreled guns still pointed skyward. Scores of munitions trucks stood abandoned. There were bales of printed propaganda, field radio sets, rolling kitchens, range finders—everything used in the grim business of killing—some unharmed, some burned to a crisp. Heavy and light tanks crouched in broken and crushed heaps. One fifty-two-tonner had been split wide open by a direct hit and its halves lay on opposite sides of the road. The bodies of artillery horses, still in harness, lay where they had fallen.

### The Price of Defeat

In the forest—into which we were told not to step too far for fear of unexploded mines and uncaptured Soviet soldiers—were smashed barriers of felled trees, blasted tanks, crushed artillery to show where the panzers had passed.

Farther on, the wreckage of defeat stood silent in the wheat fields. White flags still waved from farmhouse windows. A steel bridge hung, a twisted lacework of metal, from its riverbank supports; beside it was the hastily built pontoon bridge the German engineers had thrown across the stream. We rolled through villages—or what had been villages and were now heaps of rubble. In one hamlet I counted nineteen Soviet tanks, some wrecked, others untouched.

In Bialystok itself every building bore a mark of war. Every open space was an army camp, with the soldiers'

# COCK 'N BULL

## By Ruth Carson

**The stars help to serve themselves at Jack Morgan's Hollywood Cock 'n Bull, where the food of old England is eaten with a relish seldom seen in those parts**

FOOD tastes good. It also looks good and smells good. They are on to this at the Cock 'n Bull restaurant in Hollywood—hence the serving table. You don't decide in cold calm between roast beef and roast turkey. You yearn over roast beef, red-rare in the middle and beautiful brown around the edges, dripping delectable juices. You're distracted by turkey, crusty and golden, plump with savory promise. Your dither of indecision mounts with the rising, fragrant aroma of beefsteak and kidney pudding, bubbling in its copper casserole. You glimpse joys to come—bowls of luscious fresh fruit, hunks of mellow-ripe cheeses, the heaped-up richness of English trifle. Before ever you put fork in mouth, you are eagerly and thoroughly enjoying your dinner.

They know another thing, too. That peace and privacy are welcome with a meal—even in Hollywood, even on the neon-bright Sunset Strip. Therefore, no news photographers, no bulletins sent out to gossip columns, no fanfare over celebrities in quest of nourishment. The result is a guest book to make an autograph hound roll over and over in a frenzy of begging.

Shielded in this fashion, the guests expand, very much at home. Eddie Goulding, director, and Miles Mander, actor, carve their own meat and dish up their own dinners, though there are waitresses back of the serving table to do the job, once you've done the pointing.

Leopold Stokowski spies a corner where he would prefer to sit. Hanging on the wall in another part of the room is an etching of Christ Church, London, where he one time played the organ. So he moves the etching over to what henceforth is his corner, tacitly reserved for him, where he lunches every day he is in town. He generally eats alone, savoring his rack of lamb and fresh, thick mint sauce and his crisp green salad, with an air of leisurely contentment that is a pleasure to observe.

The originator of this small and informal, but populous and sophisticated, restaurant is Mr. J. Ainsworth Morgan, whom you might take for a top-drawer Englishman when you first talk with him. His father was English but he is American, born in San Francisco, and better known as Jack Morgan. Educated in California and England, he is a writer given to southern Pacific settings. Universal is even now previewing his recent celluloid opera, called Tahiti, set in the ever-romantic Seas and expected to launch Dorothy Lamour upon Hollywood a glamorous and tropical lady.

FRANK SCHERSCHEL

The Cock 'n Bull started as a gag, Mr. Morgan being an Anglophile devoted to everything English, including food. If your idea is that England before the war gave it any excuse for something terrible, then Mr. Morgan thinks you simply have not tasted the right English food. Found that he set out to remedy this situation.

Finding a suitably small, dark-paneled place, he fitted it out as a proper English tavern. On the walls his own collection of original sporting prints, and framed items of interest—Queen Victoria's royal signature on parchment, letters from Robert Browning, Mark Twain, Lord Kitchener, and old Toby mugs, and 17th-century pewter tankards. The serving table is the idea of the English hunt sideboard, everything kept hot and tempting on chafing dishes, for you to choose.

He searched out the best British cook he could find in Hollywood, an Irish lass named Tiffin, cook, trained in home cooking, with the theory that home cooking is best. He handed her his English grandmother's cookbook, pencile[d] and ruled copybook in her own hand, to use as a family-tested source for Cock 'n Bull recipes. And then he threw open the doors.

Sixty-two invited guests filled the house to capacity. They all came—from Hollywood, Santa Barbara, Pasadena and Los Angeles and Hollywood celebrities. Harpo Marx twanging his harp. The Morgans kept open house for three days till word could get around. Opening night it was a sellout. Instead of a hobby, Morgan had a business on his hands.

### Everything's Booming Now

He fled for a year and a half on a yacht trip around the world while his lawyer handled the business. Gone away with such nonpaying customers as the Morgan office, paneled with mahogany masters, gardenias to the ladies on Sunday and red carnations to the gentlemen. Now everything is smooth and businesslike, as well as relaxed and friendly.

There are no reserved tables. The best tables, and no waiters with snooty noses in the air. Miriam Morgan, the young hostess, will greet you graciously if you are alone as much as she would if you were big party. More so, perhaps, because she appreciates how you feel. Nobody minds where he sits, anyway, the first he totes back from the serving table being his main concern. Even Stokowski isn't unhappy if someone doesn't beat him to his corner.

When the stars don't come in to dinner, sometimes a Cock 'n Bull dinner goes home to them.

When Basil Rathbone gives a dinner party at home, he will call for an English trifle sent in, mountainous and quivering, from the Cock 'n Bull. Just what this confection should be, in addition, is hard to tell, because it is a dessert, a trifle and your waistline. The cookbook could never consider it such, but there are times when the waistline has to be considered than the contents of the purse. The process of preparation is divided into two steps, [illegible] two

FOR ...ost people, now, the names are ...orgten, and the difficulty that aros between Henri Thiers and his ...ghte Amandine in that summer is ...stor...d legend spoken only by a few ... ol West Indian women who re- ...ber...ales their grandparents told. ...as ...t important at the time and ... is ...ss than nothing—a personal ... t...ching only Henri Thiers, his ...ghte Amandine, and the man his ...ghte ...oved. There were, in any sea- ...mo exciting incidents and affairs Tort...a: duels, stabbings, the in- ...able whispering under dark balco- ... A... these have been, for the most ... fo...tten, too.

...he ...rs have changed Tortuga. In ... Thiers' day it was a young place alive with rude energy, rich from its trade with France; planters grew good tobacco and indifferent but valuable sugar, and they lived well, and almost none of them saved any money. Their houses were fine, according to the West Indian understanding of grandeur, which is to say ostentation; and they ate five times a day but rarely drank brandy before noon. Many worked very hard with their hands for long hours in the sun. They spoke of themselves as pioneers, and indeed they were—pioneers with good incomes. Of their labor there is no trace today.

Today Tortuga, rising precipitously from the sea a few miles north of the mainland of Haiti, is dark, wild, alone. The world has passed by it. The high frame warehouses have long since rotted, the gravestones of the colonial Frenchmen have tumbled. Of what was Cayona, the main town, the busy and notorious port, not even foundation stones remain: they are—like the Frenchmen who knew Henri Thiers and his daughter Amandine—buried in the black, hot, tropical earth.

But in 1698, on a certain day in July, there was the usual activity in the harbor, the usual excitement in the streets. Linen shops hummed. Cafés were crowded. The market was a hive of barter. And on stone walls at the deep-guttered street intersections, hand-lettered placards, placed prominently for those who could read, announced the scheduled sailing of the four-hundred-ton ship Duc d'Anvout, Captain Tobie Gautier.

SHE did not say, "I will not go." She was more subtle than that; but in the end her subtleties came to nothing, and she did go.

Amandine Thiers sat tensely in a deep chair in her father's cool library. The light that filtered through the heavy shutters was dim; shadows rippled on the walls, caressing the high shelves of old books. In the pearl-colored half darkness the girl in the chair seemed frail; her face was an unrelieved white, the whiteness accentuated by the shining, intense black of her hair, of her delicate eyebrows. But the illusion of frailty was dispelled when she moved and when she spoke. Her body was slender, yet there was strength in it. And her voice was firm. She was very young—not twenty.

"Yes, Father," she said, her voice low. "I am listening to you."

Henri Thiers stood before her, his barrel legs wide apart, his red beard, cut like a spade, thrust out at a defiant angle. He was a big man, Thiers; and a successful one. His massive, thick-walled house on the green hill above the port offered a material and irrefutable statement of his shrewd industry. It was a matter of doubt whether rugs as rich as his were laid elsewhere in the West Indies; certainly nowhere else in the French island of Tortuga, nor in the growing colony of Saint Domingue across the turbulent channel, was there such a garden. The lanes of hibiscus, the bowers of scarlet flamboyant, the restful expanses of sweet, green grass—these gave Henri Thiers a constant thrill of accomplishment, though a gardener from the château of Fontainebleau

*The Story Thus Far:*

JOHN SIDNEY HOWARD, a retired English barrister, is notified that his son—his only son, whom he idolizes—has been killed while flying with the R.A.F. No longer interested in anything, he leaves England and goes to the placid French village of Cidoton. There, he tries to forget the war.

The Germans drive into France. Feeling that, although he is nearly seventy, he may be of some use to his country, Howard decides to return to England. When he leaves Cidoton, he is accompanied by two children—Ronald and Sheila Cavanagh—whose parents, English, are unable to take them to their homeland.

The journey toward the Channel proves to be both difficult and hazardous. Most of the trains have been, or are being, taken over by the army. The roads—which, from time to time, are bombed—are crowded with troops and refugees. Nevertheless, although the little party is forced to walk part of the way, Howard and his charges finally arrive at Angerville.

But Howard does not escort two children into Angerville—by the time that place is reached, the young people in his care (all of whom he proposes to take to England) number five; they are (in addition to Sheila and "Ronnie") Rose, a little French girl whose father is in London; Pierre, a lad whom Howard had found terrified, speechless, beside a road, following a bombing attack; and a tiny Dutch boy, who, somehow stranded in France, had been in peril because the French suspected him of being a German—and a spy!

Following a series of misadventures, the old man finally leads the children into Chartres, where he has friends: the Rougerons (Colonel Rougeron, of the French army, his wife and his daughter). The Germans have occupied the town. Knowing that if he, an Englishman, is caught, he may be sent to a concentration camp, the old man goes to the Rougerons' address. He finds that they are living in a second-floor flat, on a simple street. He climbs up to the flat, rings the bell.

After a time, he hears women's voices. Then the door opens, and a young woman peers at Howard, in the darkness of the hall. "What is it?" she says, nervously.

"Mademoiselle," the old man replies, "I have come to see your father, M. le Colonel. I do not know if you will remember me. We have met before—at Cidoton."

### VI

THE young woman did not answer for a moment. The old man blinked his eyes; in his fatigue it seemed to him that she was holding tight onto the door. He recognized her very well. She wore her hair in the same close-curled, French manner; she wore a gray cloth skirt and a dark blue jumper, with a black scarf at the neck.

She said at last, "My father is away from home. I—I remember you very well, monsieur."

He said easily in French, "It is very charming of you to say so, mademoiselle. My name is Howard."

"I know that."

"Will Monsieur le Colonel be back today?"

She said, "He has been gone for three months, Monsieur Howard. He was near Metz. That is the last that we have heard."

He had expected as much, but the disappointment was no less keen.

"I am so sorry," he said. "I had hoped to see Monsieur le Colonel, as I was in Chartres. You have my sympathy, mademoiselle."

She drew back from the door. "Will you not come in and sit down?" she said.

He turned and motioned to the children. Then he glanced at the girl, and caught an expression of surprise, bewilderment, upon her face. "There are rather a lot of us, I'm afraid," he said apologetically.

She said, "But I . . . I do not understand, Monsieur Howard. Are these your children?"

He smiled. "I'm looking after them. They aren't really mine." He hesitated, and then said, "I am in a position of some difficulty, mademoiselle."

"Oh . . ."

"I wished to talk it over with you He wrinkled his brows in perplexity. think that it was something different?

She said hastily, "No, m'sieur—nc And then she swung around and called, Come quickly; here is Monsieur How Cidoton!"

The little woman that Howard re came bustling out; the old man greete moniously. Then for a few minutes with the children pressed close round little salon of the flat, trying to mak women understand his presence with was not an easy task.

The mother gave it up. "Well, here she said, content to let the why and pass. "Have they had lunch? Are they

THE children smiled shyly. Hov "Madame, they are always hungr not derange yourself; we can get lu town, perhaps?"

She said that that was not to be t "Nicole, stay with M'sieur for a litt make arrangements." She bustled o kitchen.

The girl turned to the old man. "W down, and rest a little?" she said. to be very tired." She turned to th "And you too, you sit down and s lunch will be ready before long."

The old man looked down at grimed with dirt. He had not washe or shaved, since leaving *(Continued c*

# FUEHRER OF SUGAR CREEK

**By Walter Davenport**

*So you think Hitler's a menace. And you're prepared to fight Japan. Well, while you've not been looking, carpetbagger schoolteachers, with Yankee millions to spend, have been breaking down White Supremacy in the South. And they'd have got away with it, too, had not Gene Talmadge caught them black-handed. It's a tale of pure-white heroism—and how to work up a political issue*

Admirers gather around to shake hands and talk politics with Georgia's Governor Eugene Talmadge as he stops at a small-town gas station

The White Man's champion looks over a cotton crop

PHOTOGRAPHED FOR COLLIER'S BY HANS KNOPF

Just short of nine on an Atlanta morning when Gene came to the governor's huge reception room—big enough, Gene says, to hold a whole faculty of furrin, nigger-loving professors in if he's a mind to—already stale with an indoor smell of man and beast. It was a smell of convention hall, half barnyard. By half past eight they'd been pushing and waiting for Gene. And now he'd arrived. You could hear his flat, mouthy Georgia voice in the rotunda and the crowd stopped down to listen.

"Thankee, ma'am. Thankee kindly." Gene Talmadge, white-haired governor of Georgia, was just outside. The hearty politicians, the job-moochers, the briefless barristers, the busy fountain-pen lawyers with prison pardons in their hands needing Gene's signature, stopped to applaud. The wool-hat folk from Sugar Creek, Rifle Cut, Bulltown Swamp and Shirttail Gap, the women neater than the men but just as numb with shyness, didn't even smile. They merely whispered tips on what they'd brought Gene—fat children, buttermilk, watermelons, peanuts, turtles, witchin' wands, herbs, medicine and a couple of hound dogs. They had dead-pan at the door. They had come bearing gifts but they wanted—pensions mostly, or somebody out of jail or somebody maybe they'd have a bit of luck for Gene—how some Yankee trifling teacher had said something about needin' schoolin'. They'd like to give him a bag of persimmons to show him how to truck with nigger schoolteachers.

"Nawsir, brother, nawsir." Gene was still taking his morning bows. "Nawsir, not while Gene Talmadge is yo' governor, they ain't a-goin' to do it. Black's black and white's white and never shall these twain meet. Nawsir. Not in Georgia anyhow. Thankee kindly, Sister Yewell, and how is ev'thing in good old Shirttail Gap. Glory hallelujah for that, sister. I'm a-standin' up to all the long-hair, furrin' dictionary-swallowin' sociologists from up North who come down to beautiful Georgia wantin' to send our lovely, pure, sweet white young ladies and our fine-lookin', clean white boys to the same schools with the Negrah. Nawsir."

### He Aims for Washington

Gene was inside the reception room now. He came in a-burnin'. His lank, defiant black hair, only wisped with gray despite his fifty-seven years, was wooshed up in back and straggling damply down in front, giving him the appearance of having just finished a hard run after a bad fright. He's always startled-looking anyway—hot, fanatical popeyes behind black-rimmed, thick lenses, a split-the-wind profile, a tight, skinny jaw shooting out at you with every other word—all this on a thin, tough, turkey neck aggressively thrust forward. Down on Sugar Creek, where Gene lives when he isn't running for office, they say that he can't scarcely wait to finish his prayers before runnin' down to the front do' to see is somebody wantin' to say something different. Shrewd, suspicious, daring, swift to pounce, Gene "kin give a jaybird two pecks and beat him to a tick."

"Hya, Jim, yo' ole scoun'rel you. Hya, Chip. Hya, Hell-Fire." This to the politicians, the lawyers, the job hounds, the contractors. "Hell-Fire, what's this you doin' up there in that civil service hearing to all those fine men from the North tryin' to tell us how to run the state of Georgia? They say you like to take somebody outside to settle something. Seems like it's about time I went up there to Washington to see those Social Security folks and began kickin' some chairs around."

The crowd roared its complete approval. They poked stomachs, slapped shoulders, told one another they'd be chawed and bit if ole Gene Talmadge wasn't the doggondest old scoun'rel—always quotin' poetry or sayin' something at the right time. Listen at him.

Gene was almost at the door of his private office, private only in a manner of speaking. A blank-faced woman in cotton cheaps, a thin, incurious baby in her arms, offered Gene a chunk of wild honeycomb. Her man was in a convict camp. She had no money. The county told her there wasn't any relief

# Hunter's Choice

## By Kenneth Gilbert

ILLUSTRATED BY FRANK STREET

**You had to be a lot more than a good shot to stay i Jeff C hunting club. This is the story of a man and a bo who**

THE most exclusive club in the world lies out yonder in the Cascades; but it is no trick at all to get into it if you're among the first six men to reach Jeff Croy when the poplars have yellowed on the smoky hills and the gray bucks of the Turnagain are thrashing the brush with their polished antlers and haunting the mating trails of the ridges.

First come, first served, is Jeff's motto. So you may get into it easily, but as for *staying* in it; well, now, you'll need something more than coronets and Norman blood in your ancestry and a two-letter rating in the financial books. You'll need a different sort of importance, and if you haven't got it you just don't get invited to dump your rucksack into one of Jeff Croy's bunks again. Sounds like a lot of pother over nothing, but not when you get to know Jeff Croy.

Comes goodby time, old Jeff may look at you with steady eyes, wag his head sorrowfully, and allow that likely he'll be so full-up with guests next year that he just can't see how he can take care of you. When that happens, you had best go home and be kinder to your wife and your fellowman, and meditate upon a humbler way of life. You've been weighed in the balance and found wanting.

The story goes that a Western governor with a brilliant future, which included a leg-up on his party's presidential nomination, got the bad news from Jeff Croy and straightway retired to private life and raising chickens and was never heard of again. That is probably exaggeration, if not pure invention, but it gives you the idea. Be sure of this: If Jeff Croy invites you back—hinting that likely next year you'll get a buck that will make your current six-pointer look like a trifling spiker—you may walk freely among the lords of creation, conceding nothing, confidently aware that the fires of ordeal have not only left you unscathed but have brought forth your true gold, which you always knew was there anyway.

You'd understand exactly if you had been along when Jed Filian shot his first blacktail and got lost, with a freak blizzard snoring down from Alaska weeks ahead of time.

MAYBE it wouldn't have happened if the lost man had been anybody save Filian. But it seemed a cinch from the start that Jeff wouldn't invite him back next year. Filian just wouldn't have fitted in with any bunch of deer hunters that ever sat around in their socks of an evening, a jug on the table between them, their mood as mellow and easy as an old moccasin.

Filian was big and blustering and had the tact of a bull elk bogged in a tamarack swamp, and the others had to clamp down on him almost be pack unlashed. To hea shot leopards in Afri Siam and tigers where and the kind of sport th bia offered was pretty stuff. The country was game wasn't tough, an here to keep his hand out where he'd go to g tion. With no effort a to insult everybody, in so many times that ham made the crack th blessing if Filan went self lost, no one smi joke with them at all.

At top: Maintenance men at Mitchel Field service a sleek 400-mile-an-hour pursuit ship. Above: Pilots check routine flight on road map. Right: Flying officer in oxygen mask can climb 1,500 feet a minute (below) to intercept slower and heavier bomber planes

**NEW YORK'S AIR DEFENSE.** An enemy can't be completely prevented from bombing a city but the project can be made a costly one. At New York's Mitchel Field are based some 200 deadly fighter planes of the Seventh Pursuit Wing of the First Air Force, whose sole purpose is to make an attack on New York City so expensive it may never be attempted. Of the 5,000 officers and enlisted men, 2,800 are mechanics and technicians, 2,550 represent services essential to the post, and 250 are topflight pilots of the Army's Curtiss P40's and Bell P39's, whose stub-winged bodies contain all the elements for defense. Here are pictures of some of the Mitchel men and ships

WALL-KERLEE

**Standout among All-Americ is Alonzo Stagg, who is ing out good teams aft a half century of football**

# All-America Makers

## By Grantland Rice

MORE than 500 football stars have marched through the pages of Collier's since the first All-America team was named in 1889. In back of these stars, at least partly responsible for their fame, there has also been a parade of famous coaches who helped to develop teams and individuals effectively enough to bring about All-America consideration.

In looking back through the years we come upon such names as Walter Camp of Yale, Percy Haughton of Harvard, Fielding H. Yost of Michigan, Lonnie Stagg of Chicago, Bill Roper of Princeton, Pop Warner of Carlisle, Pittsburgh and Stanford, Knute Rockne of Notre Dame, Bob Zuppke of Illinois, Lou Little, Gil Dobie, Jock Sutherland, Bob Neyland, Bernie Bierman, Howard Jones, Tad Jones, Jimmy Phelan, Carl Snavely, Fritz Crisler, Wallace Wade, Frank Thomas and a long line of others who have contributed their complete part to the growth of football skill and football interest.

Outside of the needed material and schedule possibilities, what were the leading qualities of these All-America-making coaches?

I'll start with Percy Haughton of Harvard, who leads the field with seventeen All-America players. Haughton in many ways was colder than an iceberg and harder than a hydrant. He was austere, aloof, the only man I ever knew who hadn't the slightest interest in what anyone thought about him, good or bad.

But he was one of the great coaches of all time. Haughton not only knew every phase of football, but he was also a martinet in drilling his teams for almost perfect mechanical perfection. He knew fundamentals and football psychology to the last turn. For example, there was nothing new about the hidden-ball play when Haughton came along. But it was Haughton who developed the art of hiding the ball better than anyone else.

Haughton abhorred waste of any kind. Especially waste of time. Before practice he charted out in advance the exact number of minutes to be alloted each form of practice—seven minutes for blocking—eight minutes for signal drill—nine minutes for scrimmage—eleven minutes for this or that, all depending on what he thought his team needed at that moment. Haughton ended Yale's former domination of Harvard by overwhelming pretty good Yale teams by the murderous margin of 112 points against 5 in 1912, 1913, 1914 and 1915.

Rockne was a coach who developed not only All-America stars and winning teams, but who in addition turned out more coaches than any five rivals in football. Among his old pupils you will find Buck Shaw of Santa Clara, Harry Mehre of Mississippi, Mal Elward of Purdue, Frank Leahy and Elmer Layden of Notre Dame, Jimmy Crowley of Fordham, Hunk Anderson, line coach of the Chicago Bears, Frank Thomas of Alabama, Jimmy Phelan of Washington and at least twenty others who have more than made good. Knute Rockne in many ways was almost the exact opposite of Haughton. Haughton was hard. Rockne was human. sarcasm cut like a knife. R mixed with humor. Rockn football, the value of fu hard blocking, hard tackling

The famous Notre Dam not his main contribution t his was the greatest inspirati ship football has ever known ever lived who could steam to such a frenzy of effort.

**"That is too late," said the man. "I mean to take this boat. It don't look full up to me"**

He crossed the lobby to the stairs, noting that Rube and Ives had disappeared. At the foot of the stairs, he found a redheaded young man idly waiting for him. The redhead smiled. "Ketchum and Ives usually stick together. Those names don't mean anything to you? Well, if you go to Lewiston, don't consider this deal closed." He was high and robust and indolent; he was a character who seemed delighted simply to be alive and a spectator to the odd maneuverings of the world. "One other thing," he added, "close up your guard when you scrap. A trained pug would have knocked your head off whilst you were pullin' that punch forty miles up from your socks." And thereupon he strolled away, whistling between his teeth.

Pierce climbed the stairs and went down a hall to Number Four and knocked, and entered the room on hearing Diana Castle's voice. She stood at the room's window and had apparently been looking into the street. When she came around he saw loneliness on her face. She gave him a glance that he had come to expect from her, long and thoughtful and deeply interested, as though she tried to reassure her faith in him. For his part, he was ill at ease.

"I have the tickets. The boat leaves at five-thirty." He moved around the room, noting the narrow bed and the four walls, and growing more irritated with himself. "I'll stand out in the hall.

# Our Only Hope

## By Therese Bonney

**In captive France, the people patiently watch and wait r th freedom they believe America will eventually return t ther**

EVERYWHERE you go in France today, people pinch their lips together, look at you and say nothing. You understand. Even the simplest peasant will tell you: "We are not free to say what we think."

Stunned by an unexpected defeat, quickly becoming vitamin-deficient and facing starvation, there is reason to believe them. The stronger—the leaders of tomorrow—bide their time, are patient and hope.

The first thing one wants to know about France today is what the French think about Petain. Many, probably the majority, feel that in taking over the helm in the dark days of June, 1940, he saved France from revolution. For this they are grateful. They did not like Laval.

They had no confidence in him, and less in Darlan. An official de luxe photograph of the admiral appeared in May. The shopkeepers, especially in Vichy, were expected to buy and show it in their windows beside that of the Marechal. One rarely saw it.

THE most paralyzing thing in France today is the Demarcation Line that stretches from the Swiss border to the Spanish border. It cuts France literally in two. It is the cleverest, most diabolical thing the Germans could have done. It has literally strangled France, economically, politically, emotionally. Families have been separated for over a year, the father in the interdicted zone, the son in a prison camp in Germany, the mother and daughter in Unoccupied France.

With all the records, and certain ministries with skeleton staffs, in Paris and the government in Vichy, how can things be expected to function properly? Every move is watched, every file removed from Paris is carefully checked. Government officials and plenipotentiary ministers sleep in their offices in Vichy and administer affairs from chaise-longue desks and Louis XVIII dressing tables. Hardly anything under such conditions can be done with efficiency. It is hard to keep up appearances. The only normal thing seems to be the changing of the guard.

THE growing venality of the occupants has surprised the French greatly. They have so often been told how in the new world things are to be so different.

There are everywhere professional guides, who take you across the Demarcation Line at night for from a hundred to several thousand francs. These men sometimes work both ends against the middle, and if you are denounced you are brought to a German post. If you are French, you get three to five days jail. If you're a foreigner, you get three months or more.

The Germans are surprised that most of the French never look at them, never speak to them, treat them as if they were not there, and, they complain, stare right through them. This annoys them more than any one other thing. A young German from the Rhineland at one of the Demarcation Line posts told me: "I've had enough of this business. Always ignored, stared through; I'd rather go home."

During the 1914-18 war twenty years following, the were referred to as the "Bo more frequently as the "Sal After the 1940 defeat, this pet more or less tabooed by the g and a censored press was natu instructions to avoid the term

The French found other them. Ironically, they refer "Our Guests" or "The Other most popular and appropr they have found for them is ' phores," the Potato Bugs. T to be little in the line of pest French peasant hates more tato bug. "This new variety "eats everything in sight ar never catch him at it."

AT THE beginning, the F intrigued, some almost fa the Germans. They seemed from the Germans of 1914. rect," they said. Now they the Germans might have French over to their way of d But the occupants seem to about it in the wrong way a those who were quite "pro" first few months swear toda will never live under a N This is why it seems very d the collaboration pill ca sugared enough to make t Frenchman swallow it.

The people of France ha German way of doing thing and worst, and they don't li prefer the Anglo-Saxon way why they are for an Anglo tory.

Even an anti-English Fre tell you that he prefers to se English colony rather thar protectorate.

To prove it they are re their lives, signing petitions little groups, doing many they hope may snowball thing when the time is ripe. V's all over the walls of shops. They cut them in paint them on milestones. one another with the fore fingers open. To call the w restaurants they tap out V's on their plates or glas genious restaurant keeper the glasses with V's on the ing Vezelay beer, and serve beer in them.

In small hidden towns, v mental authorities probab the gendarmes seldom obli to take the V's off of thei in cities and towns, espe Occupied zone, either the tenant or the concierge a heavy fine. Even the Ho up one morning to find a ' door.

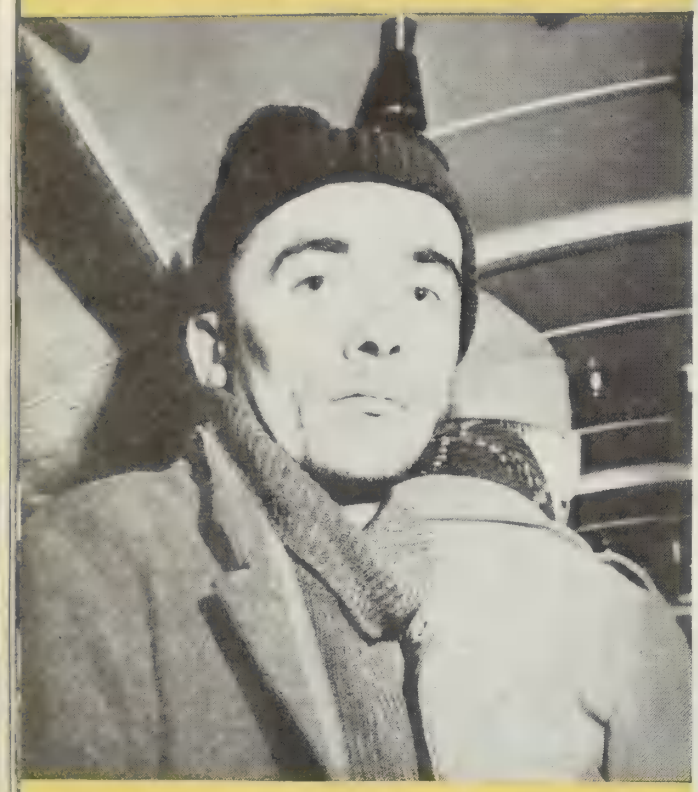
The BBC and the Bost main the *bêtes noires* of t ernment, and through one its spokesmen it is con demning the insidious p these radios. They have do very little to wean the from them. I have driv towns at the English ra found part of the town ga

trangle hold on France is the Demarcation Line. Venal Germans —and others who can pay—across, but sometimes betray them

These were once prosperous, independent peasants. Now they daily see their cattle and grain, basis of their economy, taken under requisition

nd the very young must be cared for. Food has become deration in the lives of those who have always had plenty

Expelled from Lorraine, this woman faces a destitute, homeless old age. "Our only hope," she said, "is that the Americans will come to save us"



In every town the shopkeepers display only signs and, when they have stock, hide it from the requisitioners

Confusion results because France's records are in Paris but officials must administ affairs from the chaise longues and Louis XVIII furniture of Vichy hotel roon

The prisoners of war are forging a new France in their dreams, and some day Vichy will have them to fear, too

Basic disruption in France today is in that backbone of French society, the fam This one awaits the return of those who alone can make it whole—the prisoners of v

**More than money is needed to purchase food— when food is to be had, and people of every degree patiently endure the endless snipping and swapping of ration cards and food tickets**

café window, gendarmes included. They all yearn so for news. I have gone into the simplest peasant home and have been told that they listened regularly to the Boston Radio and that when they said, "Vive la France," they knew it meant America was coming to save them.

ALL this much-heralded Nazi civilization, their new-world conception of things, rolls off the French artists' backs more or less like water off a duck's. The artists do not believe the Germans have come to stay and do not hesitate to tell them so. Many artists have burrowed into some favorite haunt, which fortunately for them they selected years ago, and there they work and wait. Very few return to Paris. The Germans would so like to have them there. They want Paris to flourish under their occupation, especially its art life. There is a Gauleiter for art, who decides who is in the French tradition, and French artists are wooed. Every effort is made to get the artists to return. Emissaries are sent into the Unoccupied zone. The first time they buy or offer to buy at high prices; they know practically every artist must sell to live. They tell him there is a great demand for his work. The Germans are asking for his paintings. To date, the sirens have had no success.

With French writers it is different. know what they write when free opinio sion are again possible. They are sil anguished. No Goncourt Prize this there is no literature.

THERE is nothing more talked about day than food, and the one paramou whether the Germans take food from th zone. The French have plenty of proof places and see for yourself. The story frequently is that it is going to the Occ exchange for food coming down from th

*When you next need tires, it may happen that your Goodyear dealer might not be able to supply you with just your size of Goodyear "G-3" All-Weathers. If this should be the case, we ask you to be patient until he can get them for you. It is not his fault if his stock is temporarily short. There is a reason, which we seek to make clear here.*

**YOU stand before the noble statue of a simple man, and simple words reach from the carven stone to grip your mind and heart.**

**"Of the people, by the people, for the people"—ordinary words, every one.**

**As ordinary as apple pie or a family picnic, as going to a church of your own choice, as arguing politics with a neighbor, or picking up and leaving on job f better one.**

**They are plain as the gaunt gure sits everlastingly above them, a d—as that man, as with family picni and**

**MORE PEOPL RI**

to our own church — we may never know how much they mean to us until they're gone.

Now there is abroad in the world the idea those words are wrong. That the one right idea is government of the masses, by the masters, for the glory of a single race.

The whole concept that so proudly we hail is aggressively challenged, and the brutal fact dawns on us that it is not enough to want to live in peace.

It is not enough to prefer freedom and our own way of doing.

It is not enough even to tend to our own business, when someone else, dedicated to force alone, aims to take it over as *his* business.

No, to hold what we have we must insure that we can keep it—and that can't be done under any easy or usual rules.

It can't be done by confining great factories like Goodyear's to the making of tires for your car, mattresses for your sleeping comfort, cushiony heels for your shoes, a hundred and one useful things of rubber.

Those factories now must make it their first task to build the only things force understands — bulletproof tires, barrage balloons, bomber wings and tails, bullet-puncture-sealing gasoline tanks, treads for mammoth tanks, gas masks and the like.

Certainly Goodyear finds no pleasure in building such things as against good peacetime products for the beneficent use of man. But now there is a limit on the amount of material and time we can devote to peacetime things.

This does not mean there will not be Goodyear tires and tubes for your car. We believe there will be enough for all necessary use. But they may not be as quickly procurable — here and there a dealer may have to ask you to wait for a Goodyear "G-3" All-Weather, for example, in just your size.

But he will have other tires of equal dollar-for-dollar value, ranging from the super-quality Double Eagle down to the lower-priced All-American.

And he will have something you can't get anywhere else — Goodyear's modern safety successor to the inner tube — the LifeGuard.... LifeGuards will let you drive your present tires many miles farther than you normally would and without danger from blowouts. They are the best way we know for you to stretch your tire life safely.

To stretch tire life helps us to make the most of rubber supplies—and rubber is vitally needed now to help insure that we shall always have what so proudly we hail—government of the people, by the people and for the people.

passenger is another fifteen 't it? Your company is in make money, I'd guess. the agent in Portland think that didn't look to the com- rests?"

The captain put his head through the pilothouse window high on the ship and let forth a blast of language: "Mr. Wynkoop, haul up that debate! Let him on or knock him overboard."

The purser meanwhile shrugged his shoulders and retired to the boat, the young man following him aboard. Deck hands hauled in the gangplank, the captain vented a whistle blast into the brightening morning and the Tenino sheered out to midstream.

PIERCE took position under the pilothouse wall. Sunlight moved low out of the east and the day grew moderately warm. Left and right the black walls of the Cascade Range leveled away into dun-colored grasslands; and far ahead the silver surface of the river moved between the emptiness of a

DICK SHAW

sagebrush plain. At noon Diana Castle joined him. "It is time to eat—and now we're free." Then she gave him a quick look. "But you wouldn't understand that because you have always been free." They moved aft toward the dining room. She looked up to him as if to see how he received her remark, and changed the subject: "Lily Beth is a nice child. But some kind of trouble has locked her tongue. She looks at me as though she dared not be herself."

After noon meal they moved to the forward end of the cabin deck and watched the river turn through shallow rapids and straighten again to straight, calm channels. The pulse of the engine was a hard, constant heartbeat through the ship. Far-distant hills showed blue behind the haze. "Over there," said Diana, "is Idaho and the mines. Will you be prospecting?"

"I expect. I put in a year in the California mother-lode country."

"I don't seem able to picture you bending beside a creek with a pan. Your star is a troubled one. You have little faith in the world and almost no trust in any person." She looked up to him.

"People are all better than you think."

"Not where you are heading for," he said.

She said, "I guess I owe you an explanation. It was the third man, Jeff."

"Mr. Wyatt?"

"Mr. Wyatt, who some day will be a very powerful man. In his own way he is harder than you, for he wouldn't lend himself to the weakness of picking a strange woman off the street as you did. He would have said, 'Move on, girl, or I'll have you run in.'" But she added in a distant voice, "Of course he would first have looked to see if she was pretty. Had she been quite pretty—"

Temperton and Lily Beth rounded the forward wall of the cabin deck. Temperton would have continued on with Lily Beth but she paused of her own notion and stood at the rail beside Diana. It was only a small gesture yet Pierce noted a veiled expression of defeat come to Temperton. He said in his grave voice, "You'd like to stay with Mrs. Pierce, Lily Beth?"

"Yes."

TEMPERTON moved away and in a moment Pierce strolled aft and ducked into the saloon for a cigar. The bar was crowded three deep and smoke boiled from wall to wall and all the gaming tables were surrounded. Pierce got his cigar, meanwhile noticing both Ketchum and George Ives in another corner of the saloon; and through a temporary gap in the crowd he discovered Temperton at one of the tables. When he saw that grave face and that immaculate figure thus engaged he knew at once the man's occupation. Temperton was a gambler.

He stepped out of the saloon's reek and fell in step with a giant of a young lad who smiled on him and seemed anxious to talk. "I hear there's plenty of gold," said the young fellow. "I never mined before. Some particular way of going about it, I suppose."

"There's a matter of luck in it," said Pierce. "If you know nothing about it, day-labor work will make you rich a good deal faster."

"Anna said that," agreed the young man. "She said I wasn't the fellow to be lucky. I was the one, she said, to take a sure job. I guess she hated to see me leave Buffalo."

"Who's Anna?"

"The girl I'm going back to marry when I make my stake. I'm Nick Tibault."

"Don't stay away from Anna too long," said Pierce, and drifted on. A crowd stood on the afterdeck, watching a very old man methodically put three shots into a piece of driftwood near the shore. The redhead lay on the deck, soaking up sunlight, and grinned as Pierce arrived. Pierce squatted on his heels and swapped talk for half an hour or more while the paddles churned out a steady roar and the boat ceaselessly swung with the channel, like a hunting dog scenting out a trail. The redhead had an amused flow of conversation, a wry and skeptical view of life. His name, it developed, was Ollie Rounds. Other than that bit of information, he revealed nothing of himself.

THE afternoon wore on and sunset flung a bitter brilliance along the water. At supper Pierce met Diana and ate with her, and stood a while in the twilight. Temperton presently arrived with Lily Beth, and Pierce left her and found a place to sleep behind the bulwark of the pilothouse. He did not see her again until late dusk the following day when, with the journey almost through, they took place at the forward railing of the upper deck and watched settlers' lights wink along the shore.

"What will you do?" he asked.

"I don't know. But you're through with me when we step ashore. I was lucky to find you. I won't forget. What are your plans? Or maybe I shouldn't ask. That's the rule, isn't it, on the frontier? Never ask questions."

"I don't know."

There was the briefest of twilights, so that one moment it was half-dark and one moment thereafter full-dark. He heard her soft laugh. "Well, we're foot-loose. You will not starve. You will always find something and so will I."

"You can pick your ticket. Women are scarce in this country. Whenever you speak there'll be a dozen men to jump."

She said, "I wish you wouldn't be harsh." She gave him a steady look through the darkness. "Why should it matter to you at all?"

"No," he said, "it shouldn't matter at all. Everybody's got a life to live. Root hog or die. Take care of yourself and watch the other fellow to see he doesn't trick you. That's about all of it. I wish you luck."

"No," she said, "you really don't. You think I have thrown everything over. You have your idea of what a good woman should be and you dislike me for spoiling the idea."

Far upriver a cluster of lights broke the black. He was thinking of her with a disappointment that astonished him. It was feeling that had no proper place in him. She should mean nothing to him, yet she did.

She faced him and touched his arm. "I didn't tell you about George Wyatt. I was to have married him. That's why I ran away. Do you understand now?"

"You could have refused him easily enough, couldn't you?"

"I guess you don't understand. My

father wished it, and all the relatives wished it. It would have joined two families and two firms. I liked him, but not enough. And still, I wondered if it wouldn't be sensible to put all strange things out of my head and be what everybody wanted me to be. It was very easy to be agreeable, Jeff. That's what frightened me. It was easier to marry him and be a pleasant lady than to run out in the rain and wait by Madame Bessie's house for help to come along."

She fell silent, watching the outline of his face in the river dark. She held his arm, making him look at her; and he felt the swirl and rush of her feelings, the tempest which was having its way with her. "When a woman does the agreeable thing, halfheartedly for sake of propriety and comfort, she is no better than Madame Bessie," she said. "There's such a thing as feeling that the years are going by, leaving you lost behind. I have never watched a boat go upriver without thinking I should be on it. And so I got on the boat. That's all."

"No," he said, "not all. What will you do?"

She dropped her hand and turned from him; and her hand made a little dismissing gesture and her voice was cooler than the night, and far away: "We're almost in." She turned from the rail and as he followed he had the sense that he had failed her.

They moved to the main deck and stood by as the Tenino blew for Lewiston and drifted half-speed to the landing. Rows of lights lay along a bluff and tar barrels burned at the landing and people came down Lewiston's main street to stand in groups; and voices carried across the water from ship to land and from land to ship, and bells jingled in the Tenino's engine room. The boat jarred softly against the landing piles.

"Where's gold?"

"New one over the Bitterroots! Alder Gulch! You got a long way to go, brother!"

THE gangplank bridged the gap to shore. Pushed by the crowd, Pierce and Diana Castle crossed the landing and moved up an inclined road, passing touts who cried out the names of saloons and dance halls.

"The Luna House should be somewhere near," said Diana.

They went along the glitter and racket of Lewiston's long, irregular street between tents and boarded buildings and rough log huts. This town was lusty, its saloons standing door to door as far as they might see. A sharp wind blew out of the Bitterroots eastward and the boat passengers, stung by the thought of gold, rushed ahead. Pierce and Diana passed a dance hall at whose doorway women stood and beckoned trade, and arrived presently before the Luna House, which was a square two-story building without paint. She stopped here and gave him a smile which, real and generous as it was, still held its shadow.

He said, "Here's your purse."

"You're broke, Jeff. Take what you need."

"I'll get along," he replied. He was troubled by another thought: "Those people on the boat will know you as Mrs. Pierce. I don't see how you'll get around that."

"They'll soon be gone to one place or another. It won't matter."

"We're in a different country. News travels from camp to camp. Wherever you go somebody will recognize you and wonder — and maybe make some guesses about your being with me."

She shrugged her shoulders. "It was something we had to do."

"So long," he said.

One quick crease came to her forehead. She bent nearer to look at him. "Will I ever see you again? Will you be around here?"

"I don't know," he answered. "But I wish you all the luck. I really do."

Temperton and Lily Beth arrived. Lily Beth said with pleased relief, "Are you going to stay here?"

"Yes," said Diana. But she had her eyes still on Pierce as he stepped away and raised his hat and said again, "So long."

She lifted her shoulders and made a gesture with her hands and gave him a swift-vanishing smile.

PIERCE slept in the hayloft of a livery barn and had breakfast in a tent restaurant on Lewiston's rambling main street. Later he bought a razor and a cake of soap, returned to the livery to shave, and presently faced the day.

Like all boom camps, this one had been hurriedly thrown together of cheap lumber, canvas and logs. Fully three quarters of the town consisted of saloons and dance halls; the rest of it was made up of stores, miners' supply houses, livery barns, restaurants—these being surrounded by irregular rows of tents and cabins. At this hour the tide of traffic was at a peak: wagons rolling into Lewiston with supplies, and freight teams moving out toward the mines along the Salmon and Clearwater.

At noon Pierce ate and, being restless, toured the town. Over on the back side he saw men unloading lumber from a long line of freighters and was hailed as he strolled by: "You want a job? Pay's five dollars."

Pierce shucked his coat and moved to a wagon. A length of lumber slid down from the wagon and somebody said, "I'll take the other end," and he looked around and saw before him the blond-headed young man who had argued his way aboard the Tenino. "Name's Ben Scoggins," said he. "You're Pierce. I heard about your run-in with Ives and Ketchum." They moved back and forth between wagon and lumber pile, gently sweating under the sun. Other wagons came up to be loaded, and moved away on the long trip to the mines. Half through the afternoon Scoggins spoke again, as though there had been no gap in the talk: "None of these miners keep what they get. It is the trader that makes the money. That's what I got my eye on—tradin'. But there ain't no use wastin' time. Five dollars is five dollars. my lookin' for the main chanc Ain't thrifty to be idle."

The boss came around at off. Pierce returned to wash livery barn, had his supper tered along the street. Comi Luna House, he saw Diana the porch.

He stopped at once and s pleasure. She watched hi speaking for a moment and to him that she was lonely been listening to the fu echoes of the street with a expression and now as her gla to him he noticed the softe pression. Her smile, delaye turned her clear and ple pretty.

er quick start of feeling for l for the woman who had th. This was what came to ng; and afterward she dis- t she watched the big tent saloon into which Pierce had gone. "You were nice to offer this chance, but I can't accept it."

She expected him to argue. He did not. He took her decision much as he took the turn of an unfavorable card. When the card fell there was never ■ back-turning of it, no question and no argument. "I'm sorry," he said, and turned into the Luna House.

THE following night Pierce stepped into the Gem with two days' pay in his pocket and found elbow room at the hundred-foot bar. Ten barkeeps sweated at their work and housemen scurried and ducked through the restless crowd to serve the packed poker tables, the roulette wheels, the faro layouts, the blackjack games.

Pierce got his drink, meanwhile noting here and there some of his companions on the boat. Rounds patronized a blackjack table, casually testing his luck. Ketchum stood near the doorway and stared at the crowd with his dead, wicked eyes. Ives, Pierce observed, was at the far end of the bar with a group of men he seemed to know.

Pierce paid for his drink and slowly ruffled his remaining nine silver dollars between his fingers. He moved to the blackjack table where Ollie Rounds was, laid his nine dollars before him and signaled the dealer for cards. He looked at his cards and said, "Stand on these." The dealer went around the circle and looked at his own hand, and debated, and took a card. He broke himself and paid off, doubling Pierce's stake. "Play eighteen dollars," said Pierce.

Ollie Rounds said, "Luck."

The cards came around again. Pierce studied his pair and stood pat. Somebody stirred the crowd behind him and pressure pushed Pierce against the blackjack table. The dealer said, "Pay twenty."

"Pay me," said Pierce, and turned to have a look at the cause of the confusion. George Ives had made ■ hole in the crowd with his shoulders and George Ives' face was ruddy red and his green eyes danced. "Friend," he said, "I just remembered we had a conversation."

The blackjack dealer cut in, speaking to Pierce: "What're you playing?"

Pierce turned to Ollie: "Play my stack. Play it straight through." He turned from the table again, watching the crowd give George Ives room. This Ives, Pierce considered, cut ■ figure in his clothes. He had a tremendous diamond ring and when he lifted his hand to adjust the flowing black tie at his throat, the gem flashed like an engine's headlight. But if he was a fop he also had a straight-grained nerve. He wanted trouble; he laughed at the thought of trouble and now stood inviting it.

"I guess we did," admitted Pierce. "You bring a good reason?"

"A fight's a fight," said Ives. "I think I can do you in."

The crowd had backed against the tent walls, sensing violence. The dealer said, "I'll pay eighteen," and Ollie Rounds answered, "Pay here then."

Pierce saw Ketchum poised like a sullen dog near the door, and then his glance returned to Ives' full-blooded face, to the man's high smile and to the dancing deviltry of his eyes. "All right," said Pierce, "here's your fun," and caught him across the mouth with a short, smashing blow.

Ives, making his stand for the crowd's benefit, had not been quite prepared. He fell backward and down, striking the packed-dirt floor with his head; he rolled like a cat and leaped up and his smile came broad and brilliant through a sudden-bleeding cut in his lips. He hallooed a great shout and dropped his head a little and ran in.

He was ■ faster man than Pierce; he had his skill and his complete assurance. He struck Pierce twice on the head as Pierce slid sidewise and his eyes, now small and cool, measured Pierce and he struck again, catching Pierce on the neck.

HURT, Pierce jumped forward, struck Ives a single, sweeping blow on the cheekbone and stunned the man in his tracks. Ives brought up his arms to cover himself. Pierce tore them down. He moved on, step by step, beating Ives backward. He made ■ second jump and seized Ives at the chest and lifted him from his feet and threw him against the tent wall. Ives stumbled and fought for balance, half bent over. Pierce caught him again and at these close quarters he pounded at Ives' face with his left hand until he saw light turn gray in the man's eyes; and he lifted him from his feet and flung him to the hard dirt floor, and stepped back.

Ives was hurt. He lay on his side without wind.

Ollie Rounds cried out, "Stand still, Rube!"

Pierce now remembered the doglike Ketchum and wheeled and found Ketchum frozen in his crouch, one hand gripping the gun at his belt. Ollie Rounds had stopped that draw before completion; he had turned from the blackjack table to fling the muzzle of his revolver dead down on Ketchum. "Stand still, Rube!" he repeated.

Ives came up from the floor and braced himself on spread legs. He scrubbed sweat and dirt and blood from his face with a slow pull of his palm. He lifted his chin and found Pierce. The smile was gone and the assurance was gone, so that for a moment he was dull and voiceless and not in command of himself.

The blackjack dealer said, "How about this stack?"

"Cash in," Pierce said. "We've had fun enough." He never let his eyes leave George Ives, and now watched remembrance come to the man. The dash and daring, Pierce observed, were a thin cover stretched over Ives' character; for what he saw now—coming out through the breaks of that cover—was a ruined pride and ■ cruel, conscience-

in each delicious bite! *Cut out this 2 minute recipe:* Stir ⅓ cup water into Dromedary Gingerbread Mix. Add 7 oz. package semi-sweet chocolate pieces (or cut up 7 oz. bar). Drop by teaspoons on greased pan. Bake 10 to 12 minutes, 350° F. *Try them today.*

# DROMEDARY
## GINGERBREAD MIX

DROMEDARY DEVIL'S FOOD MIX makes the world's grandest dark, rich cake

Rich, wholesome . . . and economical! Look for the famous yellow box.

less greed to repair it. Yet Ives was a dissembling man; now he searched for his smile and found one ragged streak of it, and said, "I thought I might do you in, friend. You're better than I figured. But you're slow. Next time—"

"What next time?" asked Pierce.

"Always ■ next time," said George Ives, and made a sharp turn on his heel and left the saloon. Ketchum followed like an obedient dog.

Ollie Rounds murmured, "Here's your velvet," and slid the blackjack stake into Pierce's pocket. He caught Pierce by the arm and his tone got rougher, "Come on—come on," and he moved with Pierce to the saloon's door. Out in the street Pierce stopped and felt the weight of his pocket. "What's there?"

"I ran it through the deal four times straight. More than five hundred dollars. Let's get out of this. I don't like it."

THEY moved over the street, hearing the hum and boil of talk rise again in the Gem. Ketchum and Ives had vanished and Ollie Rounds seemed in a greater and greater haste. At the stable wherein Pierce had made his lodging, Rounds retreated into the runway's darkness and called Pierce after him. "Where's your gun?"

"Haven't got one."

"Man—man," grumbled Ollie Rounds, "what's the matter with you? Take mine. I'll get another."

"Ollie," said Pierce, "thanks."

But Ollie Rounds was already on his way to the rear entrance of the stable and his voice came back with its overriding urgency: "Think fast. They'll be back." With that final warning he disappeared.

Pierce lifted the gun given to him; he sighted it against the stable's single lantern to check its loads. The hostler, smelling trouble, had drawn away from him and the hostler called from the blackness of a stall: "I don't want ■ fight in here. Move on, friend. Move on."

Pierce advanced to the edge of the archway, thus commanding a view of the street. Men trafficked steadily in and out of the Gem and the other saloons and dance halls sitting side by side; and freighters rolled out of town, and more men came in from the hills to leave their dust on Lewiston's bars. His teeth ached from the beating he had taken around the face and his scarred knuckles steadily throbbed. Another upriver boat had landed and the passengers marched up from the landing and barkers ran out of the saloons and began to call, and a solitary figure paused in front of the Luna House briefly and afterward walked forward. He was for a little while in the shadows but even then the manner of his trudging gait and the swing of his bulky shoulders arrested Pierce's interest; a moment later he crossed a beam of store light and turned over to the Gem and at that instant Pierce identified him. This was Mister Sitgreaves; plodding doggedly upon his errand of retribution.

Pierce had been holding the gun in his hand. Now he tucked it inside his belt and as soon as Sitgreaves entered the saloon Pierce left the stable and walked to the Luna House. He got Diana's room number from the clerk, climbed the stairs and knocked at her door.

The first thing he noticed, when she opened the door, was the quick look of fear that came to her face; and the first thing she said was, "What's wrong, Jeff? What happened?"

"Nothing," he said, and wondered at the impulse that had brought him here. "I thought I'd say goodby. I'm leaving for Alder Gulch."

She wore a long woolen [illegible] she had evidently purchased [illegible] arrival, and her hair had [illegible] high on her head for the [illegible] faced him, holding the lap [illegible] robe together, and for a bri[illegible] she showed him a lost and [illegible] pression. "I thought you [illegible] stay."

"No," he said. Then he [illegible] met you in the middle of [illegible] Now I'm saying goodby in [illegible] of the night." When he [illegible] bitter alum of his spirit va[illegible] left him cheerful. He had, [illegible] quickly, two complete sides [illegible] on which the world had lai[illegible] of distrust and hardness, an[illegible] remained buoyant and fre[illegible] her say with some vehemenc[illegible] you bother to come here at [illegible]?"

"Maybe," he said, "ju[illegible] thanks." Then he gave [illegible] glance. "Or maybe not. I [illegible] know."

She lowered her eyes. [illegible] blackly glistened under th[illegible] her skin was fair and smoo[illegible] colored; she had a woman[illegible] wide and clean-edged lips [illegible] her head and then he saw [illegible] the same alert spirit whic[illegible] with her in Madame Bessie'[illegible] half-hidden sense of enjo[illegible] there. "There's nothing h[illegible] Jeff. Take me with you."

"Why?"

She made expressive tu[illegible] two hands. "Everybody's [illegible] Alder Gulch. I don't want [illegible] in another back eddy as I [illegible] land."

"It is a hard trip."

"I won't complain." She [illegible] and saw his smile go. The [illegible] went through him was c[illegible] turning her heart heavy. "[illegible] softly added, "what you [illegible] I shall be alone with you [illegible] making myself cheaper." [illegible] and she shrugged her sho[illegible] must make the best of it.

"All right," he said. "M[illegible] lobby in half an hour. I'll [illegible] together."

"You'll need my purse [illegible]

"I had a little luck at b[illegible] said. He turned down the [illegible] crossed the street and du[illegible] livery barn. Forty-five m[illegible] ward he brought a hastily [illegible] fit—a horse for each of [illegible] third for a pack animal- [illegible] alley near the Luna House [illegible] the hotel's porch waiting [illegible] once to him. He gave her [illegible] sidesaddle of her horse [illegible] ately turned northwest in [illegible] of Walla Walla. He said, [illegible] a rough trip. I want to pu[illegible]

"What a strange mixture of things I see and hear in you," she murmured.

They followed the St. Regis, through little valleys and between great, dark gorges. They traveled rapidly by a steady stream of traffic moving toward the new gold strike, past wagon trains and solitary riders, past lumbering lines of supply outfits, past graves fresh-cut in the yellow-clay soil; down long mountain grades thick with mud and through little valleys turning green and between the lanes of pine and early spring flowers, red and yellow and white. The smell of everything around them was thin and wild, and everything was new and empty and vast.

At the mouth of the Deer Lodge they swung south, here coming upon three women who traveled with a freight outfit. One of the women was Lil Shannon. She gave them a wave of her hand as they ran on. Ten days from Lewiston they labored over a rough spur of the Rockies and saw the country undulate before them in long, heavy and barren stringers. "Over there," said Pierce, "is Alder Gulch." That night they stopped in a miner's settlement and a miner's squaw wife took Diana into a house while Pierce pitched camp beside a creek.

They were not far from journey's end now, and the sense of ending was with them again, bringing its uncertainty and its strangeness. During the evening Diana came out and joined Pierce over the campfire, to match his silence with her own. When he did speak up it was to ask a question he had asked her before:

"What will you do?"

She shrugged it aside, not thinking of it. All along the route they had dropped little pieces of their individual stories so that now they knew each other better. It was of this that Diana spoke.

"How did you ever come to leave home, Jeff? You never told me."

"Six of us in the family. Four boys

and two girls. My father died and my mother moved to Boston to get work. There never was enough work. One day she called my oldest brother into the house and handed him a dollar. That was about all the money we had. She just said, 'You'll have to go out and make your way. I can't keep you.' He was fifteen at the time. I remember she kissed him and pushed him out and closed the door. We never saw him again. Work was scarce and all of us were starving most of the time. My mother had nothing else she could do. When my next oldest brother was fourteen she sent him away. It went like that until there were my two sisters and myself left.

"One day when I was twelve I came home from school and found her waiting for me at the door. She had tied my clothes in a bundle. She had a loaf of bread and some apples in a sack. There wasn't any dollar. She just said, 'It is your turn.' She had kissed my other brothers when they left. She didn't kiss me. I was the youngest boy. She didn't even take my hand. She just said, 'Goodby.' I went down the road about two hundred yards. When I looked back I saw her in the doorway. That was the hardest moment in my life, nothing like it before or since. I wanted to cry, but she wasn't crying—she had been through so much she couldn't cry any more—and so I couldn't cry. I waved at her. She didn't wave back. She just closed the door and I went down the road."

He bent forward to poke up the fire and she saw the flame of the fire in his eyes, the bitterness on his face, the bare and depthless hurt leaking through him. "I got a job as breaker boy in a mine, and one thing and another, drifting from place to place. Just before the war broke out I came back from St. Louis to find her. I had written a few times but the letters never got to her. She had been moving around from one shack to another. Well, I went back. She was dead. My sisters were married. Never heard from my brothers." He dropped a piece of brush into the fire and added, "It took me ten years to understand why she didn't kiss me when she pushed me out of the house. She couldn't stand to do it. It would have made things that much harder. I have since never been able to feel the troubles of other people very much. When I think of her everything else looks pretty small."

She had said nothing. Turning, he saw that she had tears in her eyes, that she had her fingers tightly together and tried to keep from making a sound. He put a hand on her shoulder. "Shouldn't have mentioned it. It is my life, not yours."

SHE stood up. She pressed the tears from her eyes with the end of a finger. He rose, again speaking: "Never mind. I have gotten along, and so will you. Just remember that the hand of man is raised against the hand of man wherever you go. It will save you a lot of misery."

"I wish you didn't think that," she said. "Everything else about you is good. But you will always be like that until some day you'll see that people are kinder than you think. How lonely you are."

He smiled in a fashion that was for him rather gentle and apologetic, as though he realized what he was and could not help it and wished it otherwise. And his smile was sorry for her tears. "Never let a man make you cry, Diana."

"I can't be like that. I must trust people. I can never lock myself away from them. What is the use of living if you have nothing or nobody to live for?"

She remained before him, watching his face in the close and deeply personal way she had; and the warm light of her eyes grew and her face changed in a manner he could not describe, but suddenly she was a shape and a substance before him and a fragrance and a melody all around him, so that the loneliness that always lived in him grew insupportable. The wall he held up against the world went down; the standards he held concerning women dropped away. She was before him and there was nothing between them—no barrier of his own making and none that he felt from her. He moved ahead and put his long arms around her and, watching her lips lift, he saw that she was smiling; and so he kissed her.

THERE was never any completion to a kiss, never the full giving of those things in him and never the whole receiving of that mystery which lay in a woman. He pulled back, angered at himself and on the point of apologizing. But the apology faded when he saw her smile die. She was fully open to him and silently saying it. In her a great tide moved and washed away her reserve, so that she faced him and read confidently what was in him and waited without embarrassment for him to read what was in her. She touched him with her hand and said, "Jeff," and she was waiting; and that hidden sense of excitement moved into view, as though this moment was a high point of her life for which she had so long prayed.

He dropped his head, he shook his head. He stepped clear and at once the fineness of the moment went away and his earliest doubt of her came back. For a little while she had carried him beyond anything he had experienced; now that was gone and his stubborn and familiar standards moved forward. By these he judged her.

"We have been together too long," he said. "The fault was mine."

She was stone-still and then the change of her expression shocked him. She looked as though he had hit her across the face. She was cold and stunned, the great, fine blaze of light dying from her eyes and leaving her dull. She caught her breath and turned away, half-running back to the miner's cabin.

He kicked out the fire and walked over its coals until the heat scorched his boots. He was in the sharp-winded darkness, let down and bitt

# How high is up?

People sometimes come to us and say something like this: *"I make $40 a week. How much life insurance should I own?"*

We wish we could answer that question. But, frankly, it is a little like asking: "How high is up?" or "How long is a piece of string?" The only answer we know is: "It depends."

The amount of life insurance a man should own depends on a great many things. Each man's case is a strictly individual problem. For example: Is he married? How many children has he? How old are his children? Has he other dependents? Does he own a home? Is it mortgaged? What is his occupation? What are his other assets?

If a man is not married, he may not require so much protection as a man making the same income who is married and has four children. A man who owns a home may want to provide additional insurance to enable his widow to pay off a mortgage. These and a great many other considerations make it impossible to lay down any one rule or set forth statistics governing how much life insurance any particular man should own.

An average figure should never be taken as a guide in determining the insurance needs of any given individual. For instance, one man may find that a certain per cent of his income will buy the kind and amount of life insurance that he should own, under his circumstances. His neighbor, on the other hand, may find that this same per cent of income provides more than adequate protection.

That is why the question: "How much life insurance should I own?" can be answered intelligently only after a trained, experienced life insurance agent has made a conscientious study of each individual problem.

# Including dog-bite . . .

Once there was a man who was knee-deep in insurance policies.

He had life insurance, fire insurance, burglary, hail, theft, flood, hurricane, and accident insurance. He even had a dog-bite policy.

You'd think a man so well protected would have little to worry about. Yet every night when this man went to bed, he would toss and turn for hours. Because . . .

*He forgot to insure sleep!*

This man was like a great many other people: he was affected by the caffein in coffee. It kept him awake. Still, he loved coffee so much he just *couldn't* give it up!

Now, if this insurance-padded gentleman had been *really* wise, he would have taken out sleep insurance—with Sanka Coffee. For Sanka Coffee is 97% caffein-free and just *can't* keep anybody awake!

And not only that: Sanka Coffee is the richest, mellowest, best-tasting sleep insurance a coffee lover ever murmured "Ummmm" over! For so skillfully is 97% of the caffein removed from Sanka Coffee that not one savor of flavor is lost in the process.

Remember—Sanka Coffee is a blend of fine Central and South American coffees. It is *all* coffee . . . *real* coffee . . . mighty *tasty* coffee.

Try Sanka Coffee . . . three times a day! You'll drink it and sleep!

Sanka Coffee

## Beyond the Game

Continued from page 12

what to do, Mister Davis, an' we'll see you don't get smashed up."

"Behind that line," Buck said, "nobody lays a finger on you."

Clifford began to laugh, but a growing excitement beat in his chest. It wasn't like playing for one's college but it would be football at its peak. He'd have an opportunity to prove the plays diagramed in his notebook, his theories of generalship. And, perhaps, to prove himself.

"I'll do it," he said.

Stan's pale eyes glowed.

"Now we go to town lak hell."

SUNDAY morning Clifford decided to make a trip into Pittsburgh and collect his gear. He would also drop in on Miss Julie Wentworth, tell her the big news and find out just how much space Flash Reynolds was occupying in that young lady's affections.

The station platform was deserted except for a girl. His mind, still occupied with pleasurable fancies, discerned absently something familiar about her tall, slender figure. She stood in a shaft of early sunlight that illumined corn-colored hair and clear, pale Slavic eyes, slanting obliquely under straight, dark eyebrows. In her hand, she held a small valise like a doctor's bag.

Clifford stared at her, puzzling over a memory that wouldn't become definite.

She smiled suddenly and came toward him, her hand extended. "I'm Manya Polansky," she said, her voice deep and warm.

"Of course."

Her handclasp was firm and direct. The touch of her long fingers was like a welcome that had been denied him.

"Stan told me you're going to play with the Moles. It will be wonderful."

"I may be an awful flop," Clifford said.

She looked at him, her glance level and serious. Her eyes were silver-gray. She wore no hat. Her corn-gold hair was bound about her head in a coronet of braids.

"I do not think so," she said.

A local train clattered into the station. She smiled again, and went to get aboard. Clifford walked beside her. From the steps, she leaned down and said, enigmatically, "Soon you will be one of us."

Clifford watched the train depart.

Dim recollections of Manya Polansky at college returned to him. She had been a class ahead. He recalled now noticing her solitary figure crossing the campus. She had the reputation of being a grind. She had not mixed or made friends.

His own train arrived and he started toward the smoker, stopped, held by some irrational compulsion. The conductor stared at him, arm raised and waiting. "Well," he said, "are you or aren't you?"

"I'm not," Clifford said. "Sorry."

Perplexed by his inexplicable actions, he walked slowly back to the office, unlocked the door, went in and sat down. He opened his notebook and began to work out a new play. As he arranged the squares and circles, excitement gathered in him. This one wouldn't remain stillborn on white paper. It would be tested by big, strong young men in the heat of conflict. The whole thing was crazy, but suddenly the days ahead had meaning.

THE Moles' practice field was hard as flint. Stubborn clumps of grass growing out of the coal-strained earth only emphasized its bareness. But Clifford didn't notice. He drew lines and said to the players surro "You've got to time that Split seconds. Maciek!"

Pete Maciek's great body ward like a wave about to b

"Yeah?"

"You took four steps inst on that 27 play. That cr dowski as he's blocking out ing tackle."

"What the hell," Macie ain't got time to count. Any twelve yards."

Clifford lifted his head. Out in the open at last, an to face it. At first, due to sky's enthusiasm, the team willing co-operation. But few practices, Clifford ha change of attitude, a subtl opposition. It was the sam he thought: he was an "boss."

His glance found Maciek' growing dusk. What he startled him. Hatred, raw sprang out of the bold, r eyes.

Clifford drew a deep brea frantically what attitude t fore he could speak, Star voice cut in sharply: "Wh goes, Pete."

"Yeah?"

"You heard me."

"We'll try that play once ford said. "And call it quit

ford aiting for the kickoff, tried lif into his numb hands. He care absolutely petrified; he'd be le to move from where he betw n the huge forms of Maciek Bo a, the number-two back.

ng y upfield, he saw the burly s of e Scranton Beavers spread the rty-yard line. The whistle d. e ball arched forward and to J arms.

n ye d. "Drop back, Cliff," and ahe of Bogda. The play swept rd. thered momentum, split apart and ended on the twenty-yard line.

The Moles huddled about Clifford.

"Quick kick," he said. "Ends down fast."

It was an overwhelming surprise. The ball rolled with a frantic Beaver safety man following and the Mole ends after him like cats. It was touched down on the three-yard line. Tumult began in the stands. Stan slapped Clifford joyously on the back as they lined up. The Beavers tried two plays, collected four yards and kicked. Maciek caught the ball on the forty-yard line of their opponents and moved up three.

"Eighteen," Clifford said. "Pass. They're rattled."

BOGDA heaved the ball thirty yards. Stan was completely uncovered. He went over the goal line standing up. The night was riven by howls of glee. Stan came back and kicked the extra point.

The Beavers elected to receive. They were far from beaten. Half their team were ex-college stars.

They received the kick and opened up with everything they had. After scoring, the Moles had momentarily let down. With the pressure on, they couldn't get going again. Pass, tackle slant, pass, line buck, pass, the Beavers worked down to the Moles' thirty-yard line. Here they shook a man loose. He came roaring down the side line, a big high-running back with a broken nose.

Clifford cut over, his heart sinking. Could he stop that two hundred pounds of bone and muscle? Then, with relief, he saw Maciek coming up fast from the safety position. He could worry the ball carrier and make it surer for Pete. The three runners converged. Clifford saw Maciek's face turn and a grin of malice and rage contort his features, as he deliberately missed the tackle.

Cold fury replaced the uncertainty in Clifford's mind. The Beaver back had swung out as Maciek failed. He was only a stride away. Clifford dove under the stiff arm and tackled. They went down and as they sprawled a knee drove viciously into Clifford's stomach. Pain, like a knife, sliced his body. The sky fell on him. When he came to, Buck Wilson and Stan were bending over him.

"You come out." Wilson said.

"I'm okay." Clifford said. "Let me get my wind."

"No chanct," Stan said. "Out you go."

"I'm going to stay," Clifford said stubbornly. He got up, drew a deep breath and walked about. He felt shaken but nothing was wrong. The Moles were watching him. He saw their faces anxious and concerned. Kurnakowiez said, "Nice work, Meester Davis."

"Where the hell do you get that 'Mister', you big ape?" Clifford said.

They all grinned.

"Where's Maciek?" Clifford asked.

"I benched him." Stan said grimly.

"Bring him back, we need him."

"But the dirty louse . . ."

"Do we want this game, or don't we?"

"Sure, but—"

"Get him back."

Maciek returned, his face inscrutable. The whistle blew. Golemski slapped Clifford as he went by.

"Boy, we don't let nothin' like that happen again."

On the next play the broken-nosed back was carried from the game.

Clifford stood behind that array of huge figures, satisfaction singing in his heart. "Gasiorowski, Kurnakowiez, Golemski and Timoleon," he paraphrased "guard the field that I play on."

The Beaver attack had been upset by the happening. They made only three yards in two downs. A pass failed, and they lined up to attempt a field

## How's your "Pep Appeal"? —by Beckhoff

**Mary Jr:** Oh! Hello, Mother . . . I didn't expect you.

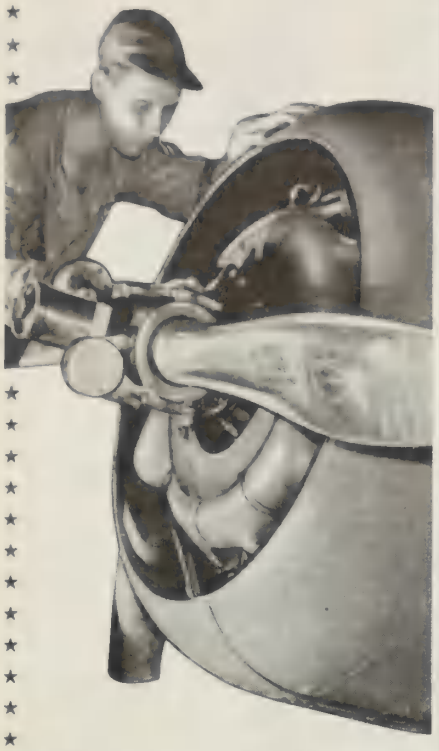
**Mary Sr:** Obviously, darling! But why didn't you *ask* to use my perfume?

**Mary Jr:** I guess it was the name on the bottle that got me: *"Fatal Evening"!* I'm sick of being a wallflower. A girl's *got* to have a *little* appeal—or *something.*

**Mary Sr:** You don't know how right you are! And the "something" *you* need doesn't come in pretty glass bottles! The way you've been eating lately! What can you expect if you don't get your vitamins? Vitamins for pep! A little *"pep appeal"* will do more for you than all the perfumes in the world!

**Mary Sr:** And right here's where you make a start toward getting your vitamins. You must have them *all*, you know, and in this delicious cereal, KELLOGG'S PEP, are extra-good sources of two of the most important ones, $B_1$ and D.

**Mary Jr:** Hey! This is the best cereal I ever tasted! If getting the other vitamins can be as much fun as eating PEP, just watch what a change there's going to be in me!



## Vitamins for pep! *Kellogg's Pep* for vitamins!

*Pep contains per serving: 4/5 to 1/5 the minimum daily need of vitamin $B_1$, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.*

goal. Stan came in like a tornado and blocked the kick. It was the Moles' ball on their own fifteen.

In the huddle, Clifford said, "Twenty-seven. Maciek inside tackle." Pete started to speak, turned away, muttering. Clifford shoved the ball into Pete's arms. He took three steps, four, cut in, and was stopped cold. Clifford said, "Same play." Pete's eyes burned dark with rage. He cut on the third step and made eleven yards. Clifford said, "We're going to shake you loose on the next one."

It was a beautiful play. Clifford could see its neat arrangement on the white paper of his notebook. Now, he'd find out . . . The Beavers were completely fooled. By the time their secondary recovered, Maciek was past midfield with Stan and Bogda ahead of him. He scored without a hand touching him. Clifford said, "You kick it, Pete, it's your baby." The ball sailed firm and true. The stands howled Maciek's name. He looked at Clifford and grinned.

After that it was easy. They won, going away, by three touchdowns.

THE telephone call from his father came as a shocking surprise. The bell rang just as he was preparing to leave the office the next evening. The operator said, "Your father calling, Mr. Davis."

He took up the receiver and said, "Hello, Dad."

His father's voice was abrupt and cold: "What's this nonsense about playing football on a coal miners' team?"

"It's a long story," Clifford said; "I'll tell you all about it when I come home the next time."

"I don't want to know all about it. I want it stopped."

"Stopped? But—I don't see . . ."

"You don't have to. Do you realize who you are? The position you hold?"

"I can't understand how . . ."

"Then let me say, I forbid it."

"Is that," Clifford asked carefully, "an official order?"

"Now look here, Cliff—"

"If it is, I'll stop. I'll also resign."

"I should think you'd be aware—"

"Otherwise, I'm going to keep on playing. I should know whether I'm losing caste, or whatever you call it."

"You're new at this business. It's not a game."

"I know it," Clifford said.

"Julie is furious."

"What about?"

"What . . . I see this is futile. I've warned you."

"Thank you, sir. Good night."

Clifford went out and down the street to a diner for a hasty meal. Two grimy-faced miners were at the counter drinking coffee and munching doughnuts. As he sat down they turned broad, grinning glances upon him.

"Hi yu, Meest' Davus, gonna makit a feetball team of dem Moles, eh?"

"It is a football team," Clifford said.

"De kids don't talk nuthin' else since las' night. We win dat champeenship now, I betcha."

"Oh, I don't know about that."

The cook said, "Joosit eatit some hot cakes, Meest' Davus. Makit beeg mans lak dos odder, mabbe."

"What de hells," a miner said. "Meest Davus tinks wit' de brains. He don't need de beeg muscles."

When Clifford finished his meal, he returned to the hotel where he roomed, and stretched out on the bed. He was still pretty sore. His left side was a great black and red welt.

So Julie was furious, as well as his father. His mother, too, or at least hurt, in her mild way.

The trouble was that they, like himself, had been brought up in the cloister of money. That was ruinous, he had suddenly begun to realize. It atrophied all the common human emotions. Life went on beyond soundproofed walls. None of the tumult reached your consciousness. After a time, you could move amid it and never be touched. It was as though your nerves lost their ability to convey the sensory impressions of the world, of the strife, the sweat, the blood; the sacrifice, humility, compassion and tenderness.

He grinned into the darkness. They never would know what a good feeling it gave you to have a Hunky cook in a diner concerned about your well-being.

Clifford went up the steep road, his stride long and confident. With the season almost over, the Moles had lost only one game and led the league. Miners touched their caps and grinned as he passed. Guttural voices called, "Goot evenin'," out of the dusk. Clifford said, "Hello, Jabbrowski! . . . Hi, Franz." A dozen kids dogged his footsteps.

"Mister Davus, whatit yu do if it's fort down an' six to go?"

"Kick."

"See? That's whatit I say to Mike. Kick, see?"

"On'y you passed against them Packers, Mister Davus."

"We crossed 'em up. Not sound football, though."

He knocked on the door of the Polansky house.

"Hi," said Stan. "Come in, Cliff."

The room was a drab square of plastered wall with an iron stove glowing dully in one corner and a painted shrine above a jewel-like piece of Polish embroidery. The hot air had a spicy odor of herbs and cooking.

Manya came in from the kitchen, her translucent skin ruddy from the heat. She wore a white peasant blouse, the collar and full sleeves patterned with bright wool. Her hair was coiled on the top of her head.

"Manyushka," Stan said fondly. "Little Polish girl tonight."

Buck Wilson arrived, his hard face rosy with cold. "Hi, kids," he said. "Bite in the air tonight."

weighing of his new life against the old. Four years of failure balancing four months of achievement. Somehow Reynolds had become a symbol. Clifford had no feeling about him, now, except as an idea that blocked a clear view of the way ahead. Reynolds was the game, and the game was the solvent. In the fierce hour of its playing lay the key to his future.

The afternoon before the game, the Moles were taken to a country club where they were to remain overnight. They held a final signal practice on the golf links.

"Eastern's coach is drilling the All-Stars," Clifford told the players. "Reynolds will play Eastern's game. Our game is based on the same style. Similar strategy will checkmate each side. We've got to watch every minute for the unexpected."

When the practice was over, Clifford went toward the clubhouse. He saw Stan waving to him.

"You're wanted on the phone."

Clifford entered the booth and took up the receiver.

Julie's voice said, "Hello, hello, Cliff. How's about running out for a little party?"

Clifford hesitated. He could vision the familiar scene—the quiet, lovely rooms, the well-dressed people, the servants, cocktails, the light talk. Julie in the center of it all, animated, easy to look at.

"It's been years," she went on. "You've become almost a legend, Cliff. And just as unreal."

"No," he answered. "Not unreal. . . . I guess not, Julie. I'll have to stay here with the gang. Sorry."

There had been two periods of complete deadlock.

Clifford gave Reynolds grudging admiration. He had diagnosed the Moles' every attack and stopped it cold. And only superb line play had kept the All-Stars from scoring.

"Come on, you mugs," Buck Wilson said, by way of a pep talk. "Let's get started."

The collegiate team opened the second half by kicking to the five-yard line. Two plays failed and Clifford called for a kick. The All-Stars came out of their huddle and Reynolds walked up to the line.

"Anybody understand English?" he asked.

"Whatit you mean, Engleesh?" growled Jo Bogda.

"Oh, you do? Tell your boy wonder we're going to town."

"Tough guy, ain't he?" Stan said, laughing.

But it began to look as though Reynolds' words were not boasting. Out of a razzle-dazzle of laterals and spinners, the ball was advanced to the Moles' eighteen-yard line. Here they held. Reynolds dropped back. His narrow, dark eyes glittered under the thick edge of helmet. He kicked a perfect field goal and the scoreboard registered: All-Stars 3, Moles 0.

THE game bogged down again between the forty-yard lines. The last period opened and the teams struggled through twelve sullen minutes. The play was close and hard; like two boxers working inside, the blows hidden from the spectators.

The All-Stars began to freeze the ball. With a minute to play, the Moles finally got it on their own thirty-four-yard line.

Maciek got six yards over left tackle; Bogda made it first down. Pete lowered his head and pounded toward the same spot, his empty arms folded over his stomach. Clifford was circling the opposite end. It was the first time he had ever carried the ball. Stan blocked out the halfback.

Clifford saw the side line open and remain unguarded to the goal. The white lines flashed under his feet. He was past the All-Stars' forty, the thirty-five . . . Reynolds appeared from nowhere, lunged at him, struck his legs, slid off. . . . Like a tight-rope walker, Clifford teetered on the chalk mark at the field's edge, lost balance, and stepped out of bounds.

"Tough," Stan said.

Reynolds stood with his hands on his hips, laughing.

In the huddle, Clifford called "Eighty-two." His mind had been busy over it from the moment he got to his feet. He figured that Reynolds would expect him to run it, then seeing how obvious it was, would decide the Moles would really pass.

The ball was passed. Pete began to fade. Clifford saw the All-Stars' defense move to the right and come in fast. Reynolds had outguessed him. They were counting on the play being a run. Pete was going back, desperation on his face.

Clifford ran to the left, his arms lifted and swinging. If only Pete could see him—realize . . . The ball came over the line of scrimmage like a bullet, but it was leading him too far. Clifford threw himself forward. The ball seemed to balance on his out-thrust fingers. He squeezed the smooth leather, held it, and ran over the goal line. The gun cracked the game's ending.

CLIFFORD saw his father standing tall and assured by the bus that was to take the team home. Instinctively he drew tight his weary muscles.

"Well, Cliff . . ."

"Hello, Dad."

"Now that this nonsense is ended, I'm going to have you brought back to the main office."

"Have I failed, down there?"

"Failed? No, you've done well, very well."

"Then I'd rather stay."

Mr. Davis moved his broad shoulders impatiently.

"You've got to come back sometime," he said. "You might come home tonight. We could talk it over."

"Thank you. I think I'd better go back."

"If you really want to live among those hunkies and Polacks . . ."

"I like them," Clifford said. He smiled. "We get along toge to do some things, make a fe

"You must unc stand, mademoiselle," he began, "th I was in great trouble early in the yea My only son was killed. He was in t Royal Air Force, you know. He was illed on a bombing raid."

S said, "I know, monsieur. I have the epest sympathy for you."

H hesitated, not quite sure if he had unc stood her correctly. Some idiom had obably misled him. He went on, "It is intolerable to stay in England. I w ed a change of scene, to see new face

H PLUNGED into his story. He told r about the Cavanaghs at Cidoton. He d her of Sheila's illness, of their dele at Dijon. He told her about the chas ermaid, about *la petite* Rose. He told r how they had become stranded at J ny, and touched lightly upon the hors of the Montargis road because Pier was with them in the room. He told er about the Royal Air Force men and about the little Dutch boy they ad found in Pithiviers. Then he ket ed briefly how they had reached Cha es.

It ok about a quarter of an hour to ell, the slow, measured, easy tones f a old man. In the end she turned o h in wonder.

"S really, monsieur, none of these ittle es have anything to do with you st a

"I suppose not," he said, "if you like to look at it that way."

She got to her feet. "You will wish to wash," she said. "Come, I will show you. And then I will see that the little ones also wash."

She led him to an untidy bathroom; manifestly they kept no servant in the flat. He looked around for a man's gear, hoping for a razor, but could find none. He contented himself with a wash, resolved at the first opportunity to see if he could get a shave.

THE girl took the children to a bedroom, and washed them one by one quite thoroughly. Then it was time for lunch. By padding out the midday meal with rice, Madame Rougeron had produced a *risotto;* they sat down to it around the table in the salon and had the first civilized meal that Howard had eaten since Dijon.

And after lunch, sitting around the littered table over coffee, while the children played together in a corner of the salon, he discussed his future with them.

"I wanted to get back to England, of course," he said. "I still want to. But at the moment it seems difficult."

Madame Rougeron said, "There are no boats to England now, m'sieur. The Germans have stopped everything."

He nodded. "I was afraid so," he said quietly. "But I must get the children to England. When I do, I'll send them over to America until the war is over. They will be quite safe there." He explained, "My daughter, who lives in the United States, has a big house on Long Island. She would make a home for them till the war ends, and then we could try to find their parents."

The girl said, "That would be Madame Costello?"

He turned to her, faintly surprised. "Yes, that is her married name. She has a little boy herself, about their age. She would be very good to them."

"I am sure of that, m'sieur."

For the moment the difficulty of getting them to England escaped him. He said, "It's going to be practically impossible to find the little Dutchman's parents, I'm afraid. We don't even know his name."

Beneath his arm, Sheila said, "I know his name."

He stared down at her. "You do?" And then he said, "What do you think he's called?"

She said, "Willem. Not William, just Willem."

Howard said, "Has he got another name?"

"I don't think so. Just Willem."

Ronnie looked up from the floor. "You are a story," he said without heat. "He has got another name, Mr. Howard. He's called Eybe." He explained. "Just like I'm called Ronnie Cavanagh, so he's called Willem Eybe."

"Oh . . ." said Sheila.

Madame said, "But if he can't speak any French or English, how did you find that out?"

The children stared at her, uncomprehending, a little impatient of adult density. "He *told* us," they explained.

Howard said, "Did he tell you anything more about himself?" There was a silence. "Did he say who his daddy or his mummy was, or where he came from?"

The children stared at him, awkward and embarrassed. The old man said, "Suppose you ask him where his daddy is?"

Sheila said, "But we can't understand what he *says*." The others stayed silent.

Howard said, "Never mind, then." He turned to the two women. "They'll probably know all about him in a day or two," he said. "It takes a little time."

The girl nodded. "Perhaps we can find somebody who speaks Dutch."

Her mother said, "That might be dangerous. It is not a thing to be decided lightly, that. One must think of the Germans."

SHE turned to Howard. "So, monsieur," she said, "it is clear that you are in a difficulty. What is it that you want to do?"

He smiled slowly. "I want to get to England with these children, madame," he said. "Only that."

He thought for a minute. "Also," he said gently, "I do not wish to get my friends into trouble." He rose from his chair. "It has been most kind of you to give us lunch," he said. "I am indeed sorry to have missed seeing Monsieur le Colonel. I hope very much that when we meet again you will be reunited."

The girl sprang up. "You must not go," she said. "It is not possible at all, that." She swung around on her mother. "We must devise something, Mother."

The older woman shrugged her shoulders. "It is impossible. The Germans are everywhere."

The girl said, "If father were here, he would devise something."

There was a brief silence.

Howard said, "You must not put yourselves to inconvenience on our account. I assure you, we can get along very well."

The girl said, "But, monsieur—your clothes alone—they are not in the French fashion. One would say at once that you are an Englishman, to look at you."

He glanced down ruefully; it was very true. He had been proud of his taste in tweeds, but now they were quite

TAILORED MAN PAJAMAS by Glover

WITH ADJUSTO-BAND WAIST

undeniably unsuitable for the occasion. "I suppose so," he said. "It would be better if I got some French clothes, for a start."

She said, "My father would be glad to lend you an old suit, if he were here." She turned to her mother. "The brown suit, Mother."

Madame shook her head. "The gray is better. It is less conspicuous." She turned to the old man. "Sit down again," she said quietly. "Nicole is right. We must devise something. Perhaps it will be better if you stay here for the night."

He sat down again. "I will stay," he said. "And I shall be grateful for the clothes."

A few minutes later, in the corner of the settee in the salon, he fell asleep, and slept uneasily until nearly six o'clock. Madame had made soup for the children's supper, and she had prepared a bed in her own room for the two little girls. The three little boys were to sleep in a bed which she had made up on the floor of the corridor; Howard had been given a bedroom to himself. He thanked her for the trouble she had taken.

"One must first get the little ones to bed," she said. "Then we will talk, and devise something."

IN AN hour they were all fed, washed, and in bed, settling for the night. Howard sat down with the two women to a supper of a thick meat broth and bread and cheese, with a little red wine mixed with water. He helped them to clear the table, and accepted a curious, thin, dry, black cigar from a box left by his absent host.

Presently he said, "I have been thinking quietly this afternoon, madame," he said. "I do not think I shall go back to Switzerland. I think it would be better to try and get into Spain."

The woman said, "It is a very long way to go." They discussed the matter for a little time. The difficulties were obvious; when he had made the journey there was no sort of guarantee that he could ever get across the frontier.

The girl said, "I also have been thinking, but in quite the opposite direction." She turned to her mother. "Jean Henri Guinevec," she said, and she ran the two Christian names together to pronounce them Jenri.

Madame said placidly, "Jean Henri may have gone already, *ma petite*."

Howard said, "Who is he?"

The girl said, "He is a fisherman, of le Conquet. In Finisterre. He has a very good boat. He is a great friend of my father, monsieur."

They told him about this man. For thirty years it had been the colonel's habit to go to Brittany each summer. In that he had been unusual for a Frenchman. The sparse, rocky country, the stone cottages, and the wild coast attracted him, and the strong sea winds of the Atlantic refreshed him. Morgat, le Conquet, Brest, Douarnenez, Audierne, Concarneau—these were his haunts, the places that he loved to visit in the summer. He used to dress the part. For going in the fishing boats he had the local costume, faded rust and rose-colored sailcloth overalls and a large, floppy black Breton casque.

"He used to wear the sabots, too, when we were married first," his wife said placidly. "But then when he got corns upon his feet he had to give them up."

His wife and daughter had gone with him, every year. They had stayed in some little pension and had gone for little, bored walks while the colonel went out in the boats with the fishermen, or sat yarning with them in the café.

"It was not very gay," the girl said. "One year we went back t

said. "If there is anything we have forgotten, I am close by. You will call?"

He said, "Mademoiselle, I shall be most comfortable."

She went out and closed the door behind her; he remained for a time staring thoughtfully after her. She was, he thought, a very peculiar young woman. He could not understand her at all. At Cidoton, as he remembered her, she had been an athletic young creature, very shy and reserved, as most middle-class French girls are. He remembered her chiefly for the incongruity of her close-curled, carefully tended hair, her daintily trimmed eyebrows and her carefully manicured hands, in contrast with the terrific speed with which she took the steepest slopes when sliding on a pair of skis. John, who himself was a fine skier, had said that he had his work cut out to keep ahead of her upon a run.

That was, literally, about all the old man could remember of her. He turned from the door, and began slowly to undress. . . .

HE SLEPT all through the night, an unusual feat for a man of his age. He was still sleeping when Nicole came in with coffee and rolls on a tray at about a quarter past eight. He woke easily and sat up in bed, and thanked her.

She was fully dressed. Beyond her, in the corridor, the children stood, dressed and washed, peeping in at the door.

The old man said a little anxiously, "I do hope that they have not been a trouble to you, mademoiselle."

She said, "Children will never trouble me, monsieur."

He thought again, a very odd young woman with a very odd way of expressing herself.

She told him that her mother was already out marketing in the town, and making certain inquiries. She would be back in half an hour or so; then they would make their plans.

The girl brought him the gray suit of her father's, rather worn and shabby, with a pair of old brown canvas shoes, a horrible violet shirt, a celluloid collar rather yellow with age, and an unpleasant tie. "These clothes are not very chic," she said apologetically. "But it will be better for you to wear them, Monsieur Howard, because then you will appear like one of the little bourgeoisie. I assure you, we will keep your own clothes for you very carefully."

Three quarters of an hour later he was up and dressed and standing in the salon with Nicole when Madame Rougeron came in. She put down her basket on the table in the salon. "There is a train for Rennes at noon," she said unemotionally. "There is a German soldier at the ticket window who asks why you must travel, but they do not look at papers. They are very courteous and correct." She paused. "But there is another thing."

SHE took from the pocket of her gown a folded handbill. "A German soldier left this paper with the concierge this morning. There was one for each apartment."

They spread it out upon the table. It was in French, and it read:

CITIZENS OF THE REPUBLIC!

The treacherous English, who have forced this unnecessary war upon us, have been driven in disorderly flight from our country. Now is the time to rise, and root out these plutocratic warmongers wherever they may be hiding, before they have time to plot fresh trouble for France.

These scoundrels who are roaming the country and living in secret in our homes like disgusting parasites will commit acts of sabotage and espionage and make trouble for all of us with the Germans, who are only anxious to build up a peaceful regime in our country. If these cowardly fugitives should commit such acts, the Germans will keep our fathers, our husbands, and our sons in long captivity. Help to bring back your men by driving out these pests!

It is your duty if you know of an Englishman in hiding to tell the gendarmerie, or tell the nearest German soldier. This is a simple thing that anyone can do, which will bring peace and freedom to our beloved land.

Severe penalties await those who shield these rats. *Vive la France.*

Howard read it through quietly twice. Then he said, "It seems that I am one of the rats, madame. After this, I think it would be better that I should go alone, with the children."

She said that it was not to be thought of And then she said Nicole would never agree.

The girl said, "That is very true. It would be impossible for you to go alone, as things are now. I do not think you would get very far before the Germans found that you were not a Frenchman, even in those clothes." She flipped the paper with disgust. "This is a German thing," she said. "You must not think that French people talk like this, Monsieur Howard."

"It is very nearly the truth," he said ruefully.

"It is an enormous lie," she said.

She went out of the room. The old man, grasping the opportunity, turned to her mother. "Your daughter has changed greatly since we were at Cidoton, madame," he said.

The woman looked at him. "She has suffered a great deal, monsieur."

He said, "I am most sorry to hear that. If you could tell me something about it—perhaps I could avoid hurting her in conversation."

She stared at him. "You do not know, then?"

"How should I know anything about her trouble, madame?" he said gently. "It is something that has happened since we met at Cidoton."

She hesitated for a minute. Then she said, "She was in love with a young man. We did not arrange the affair, and she tells me nothing."

"All young people are like that," he said quietly. "My son was the same. The young man is a prisoner in G hands, perhaps?"

Madame said, "No, monsieur dead."

Nicole came bustling into th a little fiber case in her hand. we will carry in your peramb she said. "Now, monsieur, I ar to go."

There was no time for any m versation with Madame Rouge Howard felt he had the gist o deed, it was just what he had e It was hard on the girl, terribl perhaps this journey, dangerous it might be, would not be alto bad thing for her. It might dist mind, serve as an anodyne.

There was a great bustle of under way. They all went dow Madame Rougeron had many of food which they put in the p lator. Then they left the apartm started down the street, Howa ing the loaded pram and Nico herding the children. She had a rather shabby black Homburg the old man, and this with his and brown canvas shoes made very French. They went slowly sake of the children; the girl beside him with a shawl over h ders.

PRESENTLY she said, "Giv pram, monsieur. That is mo for a woman to push, in the c we represent."

He surrendered it to her; t play up to their disguise. "V come to the station," she s nothing at all. I will do all th Do you think you could beh much older man? As one w hardly talk at all?"

He said, "I would do my b want me to behave as a very indeed?"

She nodded. "We have co Arras," she said. "You are n you understand? Our house was destroyed by the British. a brother, my other uncle, wh Landerneau."

"Landerneau," he said. " that, mademoiselle?"

She said, "It is a little cou twenty kilometers this side monsieur. If we can get ther then walk to the coast. And it forty kilometers from the sea they may allow us to go th

# How BIG? How SMART? How COMFORTABLE?

• You will ask a lot of the car you choose in these unusual times. You will ask a lot in what it must have today. You may ask a lot in the length of service that you put it to. On both counts we invite you to see and drive the Ford for 1942. You will find it new in beauty, in its comfort on the road, in its new engine choice of a 90 hp "6" or "8." And under what is new, you will find it good. Defense requirements have brought no cut in its basic excellence. We have never built a better Ford to own or drive.

## How New?

***Stretch Out—in Room to Spare!***

...ple fail to grasp the *bigness* of the Ford today, ... get inside and sit! Seats front or back ride 3 ...le ... room to spare. Leg-room, elbow-room, knee-..., a... generous throughout the line. Big, wide doors ... it ...asy to get in or out!

***New Comfort—in the "New Ford Ride"!***

...der, wider chassis in this year's car . . . with ...ower, softer springs . . . with new dual stabilizers ...eadiness and steering ease along with riding . . . the new Ford ride that won so many friends ...941 softer, smoother, finer today!

***Choose Your Engine—"6" or "8"!***

Both are 90 horsepower, both basically rugged, reliable, low on gas and oil use. Both are fun to drive and built to last. We believe the Ford V-8 engine, now even more responsive, is the finest ever put in a low-price car. The smooth new Six is the *most modern* "6" in America!

***You'll Own a Car Built to Last!***

This is a solid and substantial car. Rugged one-piece, welded steel bodies on a husky, rigid frame give the Ford a long and quiet life. Ford colors, in their super-durable baked-on enamel finish, stay fresh and new for years. This is the *quality* car in the low-price field!

it would be impossible for us to travel directly to the coast."

They approached the station. "Stay with the children," she said quietly. "If anyone asks you anything, be very stupid."

The approach to the station was crowded with German transport lorries; German officers and soldiers thronged around. Nicole pushed the pram through into the booking hall, followed by Howard and the children. The old man, mindful of his part, walked with a shambling tread; his mouth hung open a little, and his head shook rhythmically.

Nicole shot a glance at him. "It is good, that," she said. "Be careful you do not forget your role."

She left the pram with him and pressed forward to the booking office. A German *Feldwebel,* smart and efficient in his gray-green uniform, stopped her and asked a question. Howard, peering through the throng with sagging head and half-closed eyes, saw her launch out into a long, rambling explanation.

She motioned toward him and the children. The *Feldwebel* glanced over them, shabby and inoffensive, their only luggage in an ancient pram. Then he cut short the current of her talk and motioned her to the booking office. Another woman claimed his attention.

Nicole came back to Howard and the children with the tickets. "Only as far as Rennes," she said, in coarse peasant tones. "That is as far as this train goes."

The old man said, "Eh?" and wagged his sagging head.

She shouted in his ear, "Only to Rennes."

He mumbled thickly, "We do not want to go to Rennes."

She made a gesture of irritation, and pushed him ahead of her to the barrier. A German soldier stood by the ticket puncher; the old man checked and turned back to the girl in senile bewilderment. She said something cross, and pushed him through.

Then she apologized to the ticket puncher. "He is my uncle," she said. "He is a good old man, but he is more trouble to me than all these children."

The man said, "Rennes. On the right," and passed them through. The German stared at them indifferently; one set of refugees was very like another. So they passed through onto the platform, and climbed into a very old compartment with hard wooden seats.

Ronnie said, "Is this the train we're going to sleep in, M'sieur Howard?" He spoke in French, however.

Howard said, "Not tonight. We shan't be in this train for very long."

But he was wrong.

From Chartres to Rennes is about two hundred and sixty kilometers; it took them six hours. In the hot summer afternoon the train stopped at every station, and many times between.

AT THE long last, when the fierce heat of the day was dying down, they pulled into Rennes. There the train stopped and everyone got out. There was a German officer by the ticket collector. Howard put on his most senile air, and Nicole went straight up to the collector to consult him about trains to Landerneau.

Through half-closed eyes Howard watched her, the children clustered round him, dirty and fretful from their journey. He waited in an agony of apprehension; at any moment the officer might ask for papers. Then it would all be over. But finally he gave her a little pasteboard slip, shrugged his shoulders, and dismissed her.

She came back to Howard.

"Tomorrow," she said, "at eight in the morning, a train leaves for Brest. We can go on that as far as Landerneau."

She told him that the German officer had given them permission to She produced the ticket he h to her. "We must sleep tonig refugee hostel," she said. "T admits us. It will be better to monsieur, like all the others."

He agreed. "Where is it?" he

"In the Cinema du Monde," "I have never slept in a cinem

He said, "Mademoiselle, I a sorry that my difficulties sho you do so now."

She smiled. "Perhaps as it German management it will We French are not so good like that."

They gave up their cards a trance, pushed their pram ir looked around. The seats ha removed, and around the w mattresses stacked, filled with There were not many peop place; with the growing restric movements as the Germans control the tide of refugees wa it had been. An old Frenchv sued them a mattress and each and showed them a cor they could make a little ca from the others. "The little sleep quiet there," she said.

There was an issue of free table at the end of the hall, by a German cook who show beaming smile of professiona mor.

AN HOUR later, the chil laid down to rest. Howa dare to leave them, and sa back against the wall, tired to not yet ready for sleep. Nicol and came back presently wit of French cigarettes. "I bough you," she said. "I did not English ones; it would not be

mut l advantage? And what better
k th marriage?
Ama ine Thiers touched her tem-
s li ly with her fingers. She con-
lled e trembling of her hands.
"Fat r," she said, "will you permit
to ve a fortnight to think about
h—"
He errupted curtly: "I am not
are t there is anything for you to
ink out. I have conducted a de-
ed rrespondence with Edouard d'Aubigne; nothing pertinent to the union has been overlooked. I may tell you that I have been able to arrange the dowry in a manner entirely satisfactory to me."

He narrowed his eyes. "I suppose the suddenness of this has startled you a little," he went on, somewhat more gently. "It needn't. Edouard d'Aubigne is a good man, a good businessman, intelligent. As his wife you will have a secure and proper place in the society of Martinique."

"I don't know him," the girl said. Her voice was scarcely above a whisper now, and she looked steadily at her father from the depths of the chair. "I've seen him only once—"

"Are you saying that you doubt my judgment?"

"No, Father," the girl said evenly. "It's rather that—"

"There's no need to discuss it further." Henri Thiers crossed the room with heavy steps and sat stiffly in the chair behind his desk. "The Duc d'Anvout of Le Havre sails in six days for St. Pierre in Martinique. I have already applied to Captain Gautier for your passage. Your maid will accompany you, of course."

Then he waved his hand, a sign of dismissal. The girl rose from the chair. In the pale light of the room, her father—had he looked—could have seen nothing of the distress, the cold unhappiness that lay in her eyes.

CAPTAIN TOBIE GAUTIER stood on deck, close to the rope ladder, his brown hands on the rail, and watched the shallop come away from Cayona wharf.

The sky was a lustrous satin blue that obviously would have been very soft if one could have brushed it with one's fingers.

But the water of the harbor leaped up under the pressure of a fresh east wind, and the shallop danced. They'd have trouble coming aboard, Mademoiselle Thiers and her maid. The ship's ladder swayed dizzily. Captain Gautier saw that Henri Thiers was also in the shallop. He soberly stroked his chin and trusted there would be no unseemly delay. He'd like to put the wind to good purpose.

"Ruegger," he said to his mate, "drop a second ladder. You will assist

CALL WESTERN UNION FOR NAME OF YOUR LOCAL DEALER

Whenever this symbol appears in a Collier's advertisement it means that you can easily find out where to buy the advertised products! Just pick up your telephone any time before December 25th, ask the operator for "Western Union." Name the articles you want and Western Union will tell you which stores in your town and in your neighborhood have this merchandise in stock.

the lady and her maid in boarding."

Then he turned away and stared westward toward the Windward Passage and the distant, invisible Cuban shore. He observed the configuration of high clouds above the horizon, and made certain mental calculations touching upon the wind, the tide, currents. He dismissed Mademoiselle Thiers—who was simply another passenger—from his mind.

He was a tall young man of competence and coolness, at home on the sea, uneasy on the land. His shoulders were broad and his waist rather remarkably slim. His face, lean, firm and well-shaped, was burned to the color of good Tortugan mahogany; the tropical sun had graven small wrinkles at the corners of his eyes.

He looked as though he made a careful practice of avoiding surprise.

They said, in the islands, that Tobie Gautier knew every blue-water reef between Havana and the Orinoco. They also said he was an incomprehensible young man, for the precise reason that he was predictable. He had shown himself to be steady, rational, temperate, serious, even grave. He stayed on his ship and out of the taverns. He held to his announced sailing schedule with what amounted to a miraculous surmounting of the vagaries of wind. He had a reputation for cold, unbending aloofness.

In a time when tavern-brawling was the universal relaxation of seamen, Tobie Gautier was thought to be a queer stick. There was even a rumor—unsubstantiated, naturally—that he wrote music in the privacy of his cabin. Many West Indians felt this to be provoking gossip originated by persons who envied Tobie Gautier his command of the Duc d'Anvout at twenty-five.

The shallop from Cayona wharf scraped alongside. Tobie Gautier heard his mate bawling orders to the Negro boatmen. Then Mademoiselle Thiers was handed to the deck. Her father followed her.

"My daughter, Captain Gautier," Henri Thiers said.

Tobie Gautier bowed slightly. And he saw the cold gray malaise in the girl's eyes. It did not occur to him to wonder at it; he observed, and that was all. It was none of his affair. But he was aware that Amandine Thiers was a singularly pretty girl. Aware, and unmoved.

"I hope our cabin accommodations will please you," he said. "We will be under way in ten minutes. If you will make your farewells—"

HENRI THIERS touched his arm. "I give my daughter into your safekeeping, Captain Gautier. Perhaps you have heard that she is to be married in Martinique on August eighth—"

But not happily, Tobie Gautier told himself; plainly not happily. This, too, was none of his affair. "I had not heard," he said.

"I mention it," said Henri Thiers quickly, "only to impress upon you the importance of placing my daughter in St. Pierre before the eighth of August. Unfortunately, due to certain business matters, I cannot accompany her."

"We shall be in St. Pierre not later than the fifth."

Then Henri Thiers kissed his daughter complacently on both cheeks, and she said, "Goodby, Father," and he crossed the deck rapidly and went down the ladder. It was in Tobie Gautier's mind that the girl was relieved to see him go. Some of the strain seemed to slip from her face. She turned away, impassive, without a word.

Captain Gautier, after a moment's hesitation, struck his hands together. He lifted his voice. The crew went in the rigging. The capstan revolved slowly. The ship came alive.

They went westward in Channel, with the wind hard sails, and through the night tac broad zigzag course across the W Passage, to make the most breezes. In the morning, Cub thin line like a finger laid upon zon in the west.

The sun burned in a sky without any cloud. Amandin ordered a chair placed on deck in the shadow of the mainsai she sat. She read a leather-cove of plays. Plays of Scarron. She them unutterably dull. After she let the book fall in her gazed at the sea, a wide blue crossed by white seams; and t Gautier, strolling forward a deck, she seemed to be fight some profoundly moving emot

He paused beside her chair.

"You slept well?" he asked. did not distress you?"

She looked up, startled. " said. "Yes. I slept well."

THOSE were really the first w had spoken to each other. C before, at the time of their me presence of Henri Thiers had a barrier between them. Mor awareness of him had occu their minds to the exclusion o else. Now, in the brilliant sun the calming whisper of the s ears, Amandine Thiers real denly that the bronzed, tall m her chair was, in at least se spects, unusual.

He was young to comman ship as this; and his eyes w and looked as though they mi casion be stubborn, but his m gentle.

She thought she detecte something of that singular s the sea is said to exert on cert natures. And she was lonely h her unhappiness seemed s bond between them.

He spoke to her of the c were following, of the prevai of summer in Caribbean w drew him out—she asked abo and Maracaibo, about Pana she had never seen. He seem to talk with her; he stood ligh against the motion of the sh plied thoughtfully to her que received the impression th Gautier, for all his youth, wa to making any statement trivial, without carefully w words. A staid, serious—eve young man.

She said, "This is, you kn voyage away from Tortuga."

"You've never been in Normandy, to Paris?"

She smiled. "I'm a true col I confess to you that I was b tuga?"

"You'll find that Martini like Tortuga—"

"I could wish it would be think I should like a change less sun."

"I know," he said somberl find myself hating the sun. scarring, brutal force of it. want to go back to a place place of soft rains and gent Normandy. A man can ma fishing there; and not be bu I was born in Normandy—"

He paused, as if embarras ing confided a deeply pers And then he nodded, a kin inclination of his head, and Amandine Thiers sat qui chair; after a little while sh that she had been picturing a place of soft rains and g and it occurred to her that a space, entirely forgotten But only for a space.

hat was the first of a series of small i macies between them. In the after- n n of that day Captain Gautier in- v d her to drink coffee with him in his c n—her maid accompanied her as a m ter of course, to provide chaperon- a they both recognized as proper—and e y next morning he called her on deck t ee the high green wall of Cape San M uel standing out of the sea in the e . That would be their last sight of H i; now the Caribbean stretched s hward to the Spanish Main, and M tinique lay more than nine hundred m s to the southeast.

'he next land we're to see will be M tinique," Tobie Gautier said, watch- in he girl beside him at the rail.

er shining, soft black hair blew fr y in the morning wind. Her body w straight and firm; her hands touched th ail lightly. Only her eyes and the sl st imperceptible quick trembling of he ips told him what she was thinking.

said abruptly, "You aren't happy."

e avoided his eyes. "No," she said. 's not my right to speak to you of th' he said quietly. "I don't want to in le your privacy. Believe me. But I'm listressed to see—"

understand." She turned then and loo d at him. "I'm grateful. But the 's nothing to be said."

ey were silent for a moment.

's your father's friend Aubigne?" To Gautier asked.

es."

ie Gautier's strong, brown hands clo d upon the rail. Then they stood wit ut speaking, watching the forested he of Cape San Miguel retreat into the a.

ER that she perceived that he roided her.

en, passing from his cabin to the aft eck, he encountered her, he spoke cal y, with almost an excess of for- ma ; he gave the appearance of spe ing to her without any actual awi ness of her physical presence—a mut operation of the mind.

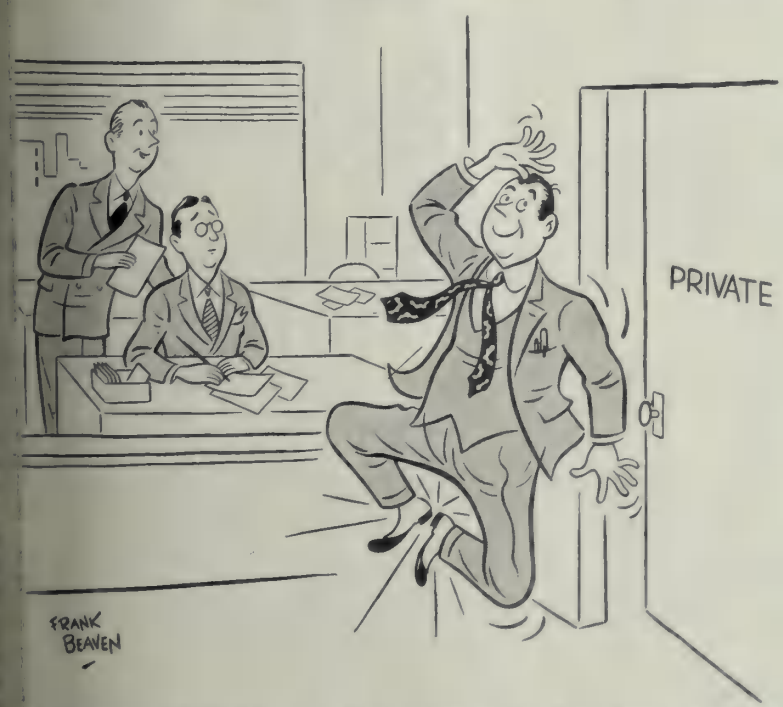
I followed day. The wind stayed per tently in the east and the Duc d'A out progressed slowly, laboring, ligh g for every mile, on a series of on and infinitely complicated tacks. Am dine Thiers, in her chair on deck, gaz at the monotonous indigo sea and shu ut of her mind any thought of the uti , any memory of the past. Finally he hieved, by deliberate and difficult effort, a kind of suspension of all thinking. She knew that this was only a deferment; she knew that she was only half alive. And she was desperately unhappy.

ON THE morning of the day of storm she breakfasted early and alone—her maid was not, had not been, well—and went on deck and sat in her chair. She was conscious of a nervous uneasiness. Her hands were restless. The day was anything but promising: almost no breeze, a leaden and oppressive sky. The sea, pulsing feverishly under the long Caribbean swell, was lead-colored, too. She thought: The sea is oily; there will be rain.

She did not see Tobie Gautier until he was beside her chair. He said, "Good morning." She looked up slowly. His face was constrained and stiff. He nodded his head in a little polite gesture. And he went on, mounting the ladder to the afterdeck. If he had not spoken she would have thought he had not seen her.

She gave herself, then, to watching the slanting sails—observing without curiosity that puffs of wind blew across the ship and died, and came again, fitfully. In time, when the sun was higher, burning callously behind the gray gauze of cloud, the wind swung abruptly into the southeast. Then it came steadily. In a minute it was strong; in five minutes, violent.

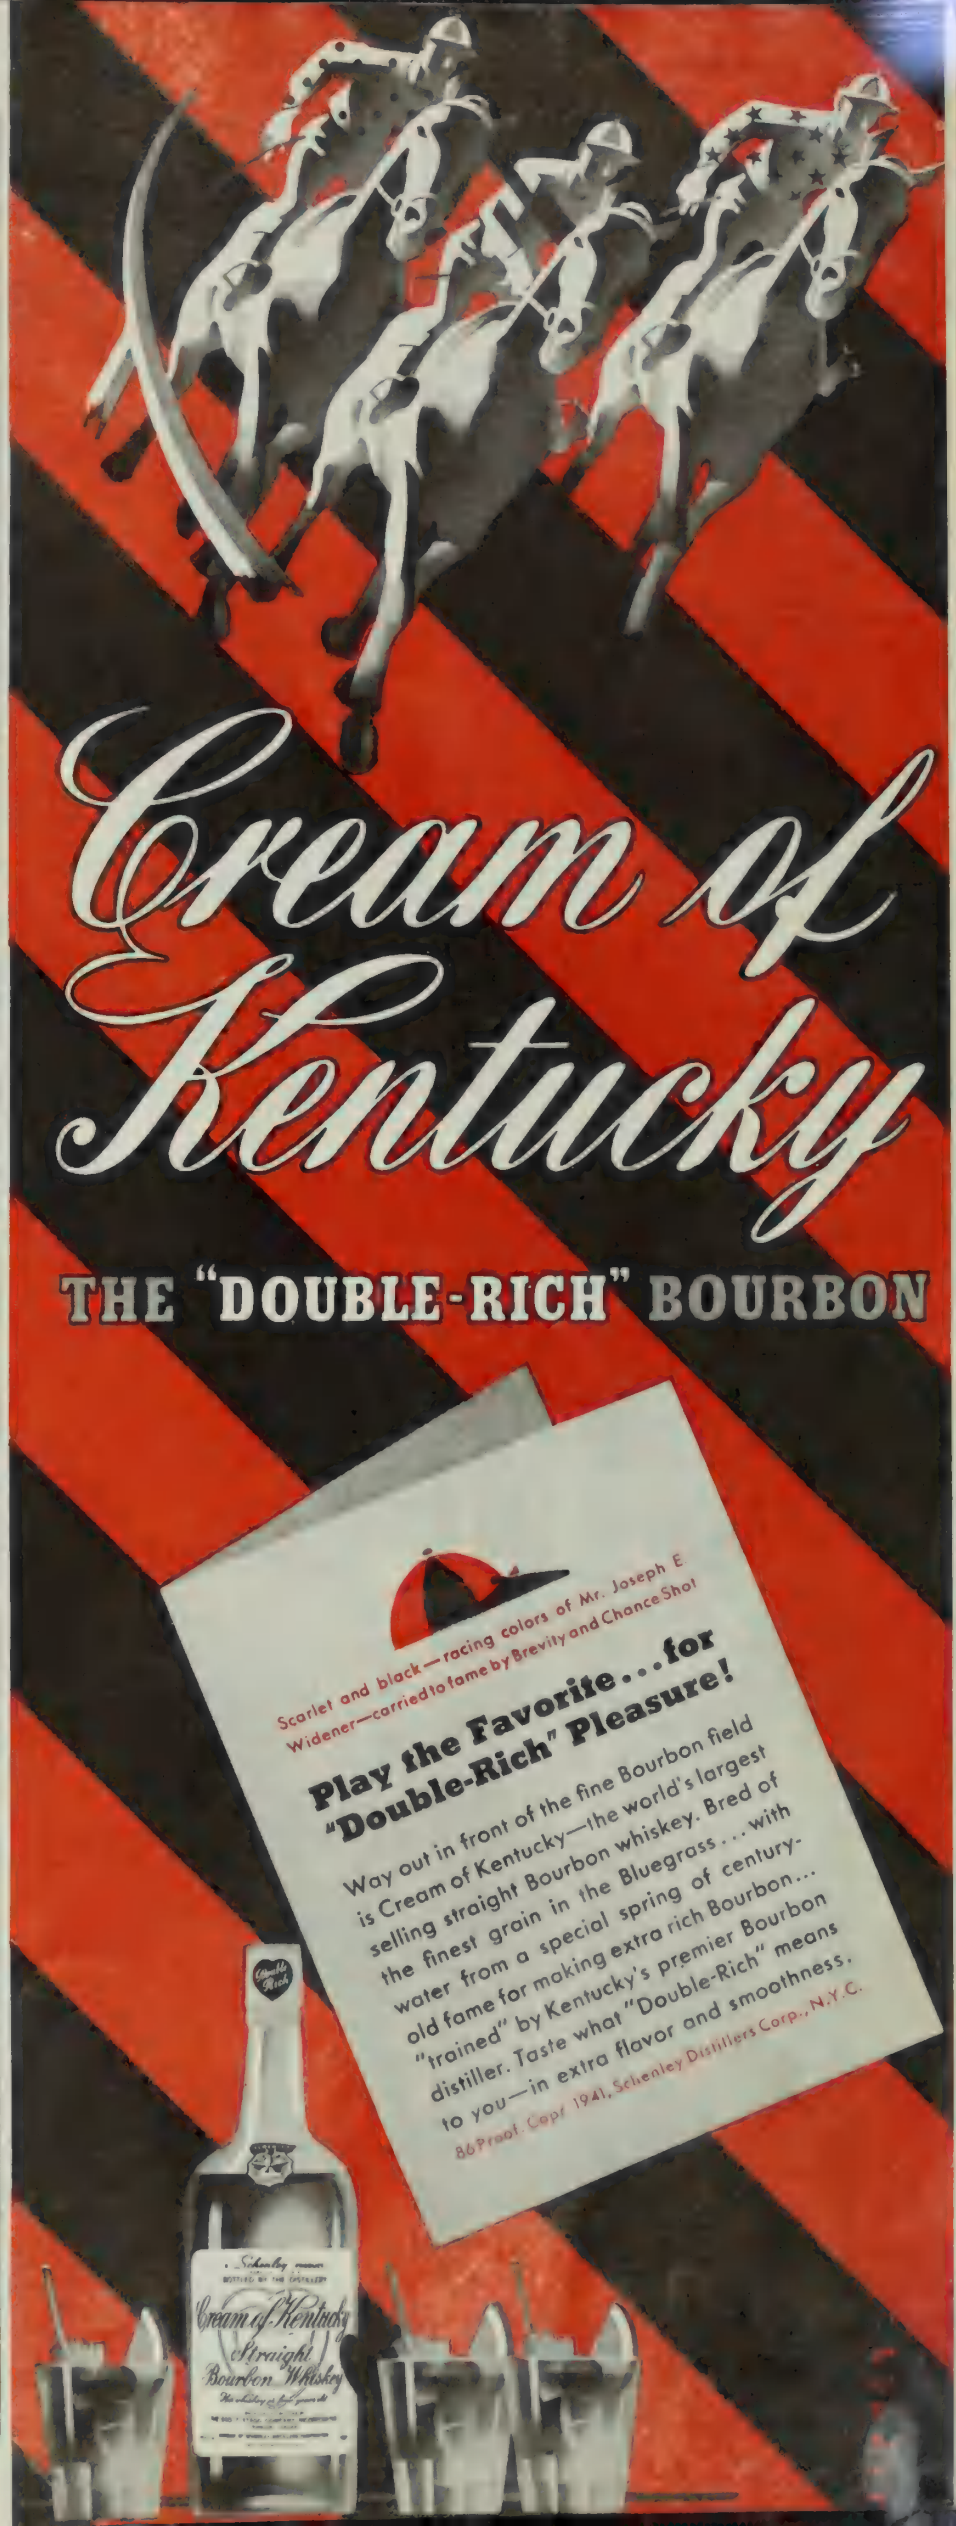
The crew leaped to the rigging and took in sail. Amandine Thiers left her chair; she stood at the rail, clutching it, her hair blowing wildly. The ship yawed and fell off, then got the wind astern of her, with a countering sea lifting her at a crazy angle. And Amandine Thiers saw Tobie Gautier running along the deck toward her—running lightly, easily, with catlike balance against the shifting level of the planking. He stood before her and laid his hand upon her arm. "You must go below," he said.



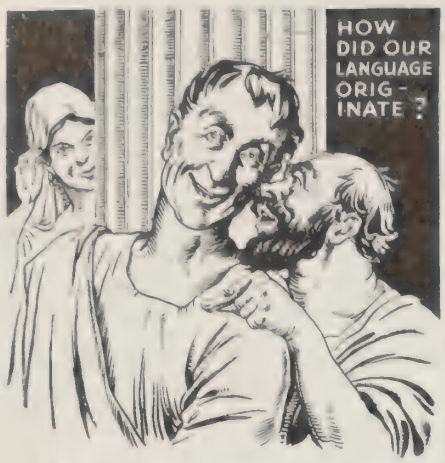
His dry voice frightened her.

"Will it be bad?" she asked.

The wind tore at her words, but he heard her and he nodded.



"Yes," he said. "Bad. This is the season—"



He held her arm and guided her across the deck to the companionway. In the shelter of the deckhouse the wind swirled and eddied; but it was quieter there. The noises of the pounding ship seemed distant, deadened. "Not very

# Anecdote

## an unpublished tale

AMONG the ancient Greeks, a story known only privately was called *anekdotos*, literally meaning "not published." The word was formed by combining *a, an*, "not," and *ekdotos*, "given out." From this source comes our English *anecdote* which originally retained the Greek meaning "unpublished narrative." But many intimate tales are now frequently given out for publication and the word *anecdote* has lost its original meaning.

This is one of the thousands of interesting word origins given in the unabridged Merriam-Webster, WEBSTER'S NEW INTERNATIONAL DICTIONARY, Second Edition. This great reference book provides a wealth of general information. It contains 600,000 entries—122,000 *more entries* than any other dictionary. 12,000 terms illustrated; 3,350 pages. *WARNING:* The only genuine Webster is the MERRIAM-Webster. Look for the Merriam-Webster name and circular trade-mark on the cover. Ask your bookdealer to show it to you. Write for free illustrated booklet of interesting word origins to G. & C. Merriam Company, 730 Federal Street, Springfield, Massachusetts.

bad," Tobie Gautier was saying. "Not too bad. You mustn't worry. We'll ride it out well enough. But you must stay below—"

The ship's bow lifted, then dropped dizzily away. A sea combed over the stern; they saw the rush of water on the leaning starboard deck. Tobie Gautier's fingers held the girl's arm tightly.

"I'll help you below," he said.

She did not move. Her eyes were on his face. "I'm afraid for you," she said. "The sea's washing over—"

He looked as though he had not heard her. His eyes, searching her face, told her nothing. Then, for the first time, he smiled. And the miracle happened with the speed of light; they felt the surge and power of it in the blood of their bodies, and their hands came together and they were, for a brief space, breathless and alone, an entity, insensible of time, of place. The ship leaped beneath them and they felt nothing of it. His arms closed about her and she lifted her face to him.

He felt his senses dimming with the happiness that possessed him—a wild thing burning with the violence of pure light. She knew the strength of his arms—

Then the urgency of the moment flooded back over them and he carried her blindly down the narrow well of the companionway to the door of her cabin. He left her without speaking a word.

Once, an hour later, she heard his voice shouting a savage command on deck. Seas thundered aboard; and time was forgotten in the gray murk of lashing rain. It was late afternoon before the storm abated. At six o'clock a hush descended suddenly upon the sea, as though a blanket had been lowered over it; and there was no more wind.

Amandine Thiers sat in her cabin and tried not to feel the quick beating of her heart. She tried not to think. When Tobie Gautier tapped upon her door she hesitated, catching her breath, before she spoke to him.

IN THE morning the sea was sweetly blue and the sky cloudless; a brisk wind, with a rare touch of coolness in it, fled out of the north. The ship strained forward eagerly, it seemed, almost consciously, as if purposefulness and a knowledge of its destination lay within its beams and cordage. And Amandine Thiers went early out of her cabin and to the deck, where she walked in the long shadows of the sails.

She was inexplicably happy—happy, what is more, in the face of the uncertainty that loomed before her. She was like a young rider feeling the excitement of the first perilous steeplechase; like a wire walker exhilarated by the magic of balance. She stepped lightly on the deck, and her eyes were wide, and she was waiting.

He came after a few minutes.

They stood at the rail. He said, speaking low, "I was mad. I had no right—you understand."

"I was mad, too," she said.

"I went to your cabin, after the storm had passed. I knocked. You didn't hear me."

"I heard you. I spoke to you. But you had gone."

He nodded. "I didn't wait. I suppose I was afraid to say what I surely would have said."

Her heart twisted suddenly. "Why afraid?" she said softly.

He swung round to face her, almost savagely. "Do you want me to say it?" he asked, and his voice was hard and taut. "Do you want me to say I love you, Amandine Thiers? Would it please you to hear me say that, forgetting the impossibility—"

She put a hand on his arm. "I forget nothing."

"Listen to me," Tobie Gautier said harshly. "Edouard d'Aubigne of Martinique owns the cargo in this ship. He has a dozen vessels of his own—and houses. And land. And slaves. He's powerful—full of money. In Martinique it is Edouard d'Aubigne, in Tortuga it is Henri Thiers—"

"Yes," she whispered, meeting his eyes. "They're powerful, Edouard d'Aubigne and my father. But old. And you are young."

He stared and did not answer.

"And I am young," she said.

"But what have I to give you?"

"You've already told me. You've said you love me—and you shall give me that."

"It's not enough," Tobie Gautier said. His eyes held a torturing uncertainty.

"You fool," the girl breathed. Her hands clutched the rail with rigid violence.

It was then that he caught her up in his arms again; though the mate at the wheel had a clear view of them. He pressed her to him with a crushing strength, and he kissed her.

He put her down. He said, "You're not a maiden of much modesty," and he was smiling.

"Because you're a man who must be pushed," she answered him, accusingly. Her eyes were frankly on his face. "I am, you'll come to realize, my father's daughter." She stood straight and firm before him. "There's this to be said for the family Thiers—when we know what we want we go after it."

Abruptly he turned away. He left her there on the deck, and climbed the ladder to stand beside the mate at the wheel. Her eyes followed him, astonished.

THE land came out of the sea in the evening, an hour before dark. Amandine Thiers was in the bow when the lookout cried the shore.

The warm air washed over her. It seemed to her that she could smell the odors of the land—trees, and the pungency of earth. She said, under her breath: "Now is the fourth day of August; and there is Martinique. And nothing is decided. For I clearly the uncertainty in his

ROUND THE CLOCK HAULING IN THE MOUNTAINS!

# TRUCK-TRAILERS HANDLE A TOUGH JOB BETTER AND *Save Money Three Ways!*

WHEN THE F. J. KRESS BOX COMPANY, of Pittsburgh, switched to Truck-Trailers, they (1) saved literally thousands of dollars in equipment costs, (2) increased hauling output 20 percent without increasing handling costs, (3) began saving up to 20 percent in gasoline and oil.

The Kress Company has a tough hauling job. It manufactures cartons, mostly for glass jar and pottery factories in Pennsylvania, Ohio and West Virginia . . and deliveries are generally from 30 to 150 miles, over mountain roads in the Alleghenies. Most of the year, deliveries continue right around the clock. It's a punishing job for transport equipment.

## THREE-WAY SAVING!

About a year ago, the Kress Company bought two 10-ton Fruehauf Trailers . . and, *to pull* them, one inexpensive 2½-ton truck. That was the first big saving, because three powerful trucks, costing thousands of dollars more, would have been required to carry the same load capacity!

Then the second saving . . through the "shuttle system." The truck and driver are constantly busy . . always pulling one Trailer while the other is being loaded or unloaded. No wasted time for men or equipment! 20 percent more hauling output!

And the third saving! Since a *smaller* truck pulls a *bigger* load, it uses up to 20 percent less gasoline and oil for the same tonnage!

## SO . . THEY BUY MORE TRAILERS!

So gratifying were the money-saving and improved service that three months later the Kress Company duplicated their order .. two more Fruehauf Trailers and one inexpensive truck!

There is probably one . . possibly two, three or more ways . . in which Truck-Trailers would save you money, too. A Fruehauf engineer will study your operation and give you the facts. Why not send for him . . today?

**SURE I'M TOUGH**— but I can't win over worms by myself! I had 'em bad, last month. "They're nothing," says the Boss. "Oh yeah?" I groans, and he finally gets wise that they're dangerous.

**"THIS'LL SLAY 'EM,"** he says, bringing out some Sergeant's SURE SHOT CAPSULES. He's right! "You should've learned to read," he grins. "I got the dope from the Sergeant's DOG BOOK!"

**"BIGGER THEY ARE, HARDER THEY FALL,"** is the worms' battle-cry. Don't give them a chance at *your* dog. Get SURE SHOT or PUPPY CAPSULES at any drug or pet store—and be ready to get the worms early!

allied subjects, but he must be thinking plenty. . . . The reason being that the good general recently climbed into the same boat with General Eckfeldt, figuratively speaking. In a potential blitz party comprising some forty men, five armored scout cars, a weapons carrier and a jeep, General Truesdell whipped down a road until he came to a Rocky River bridge near Albemarle. At this precise spot and moment a patrol of 176th Infantry (29th Division) lads opened up with a mess of theoretical fire power that pulverized the mechanized column. General Truesdell bounded from his car, sprinted into the woods and skated over slippery pine needles with extraordinary speed, but the patrol got him. Sgt. P. K. Daniel covered the corps commander with a machine gun and a field judge bawled, "You're out—until midnight." General Eckfeldt should be very happy.

29TH DIV.

A FEW weeks of field maneuvers give a guy's gustatorial discrimination a terrible beating. Look what happened to the members of an antitank company in this same (176th) infantry regiment. Ordered late one night to move into a new position with all possible dispatch, the outfit got out of the bivouac in no time flat. For the sake of speed, the kitchen gang tossed a scrub bucket, some dishrags and a gasoline lantern into a coffee urn—and forgot about them. At their new location the cooks filled the urn with water and coffee and put it—dishrags, lantern, scrub bucket and all—on the fire. The resultant brew should have caused riot and rebellion, but there wasn't even a single complaint.

CAMP DAVIS, Hollyridge. Mimeographed orders and instructions for using equipment are customarily stuffy, but every now and then the military mind goes native—and human. According to the mimeographed directions handed out to men in the 96th Coast Artillery for the handling of the wire cable winch on Army trucks, the setup "is as temperamental as Greta Garbo, and treating it carelessly is like asking Lana Turner to scrub the kitchen floor." The boys are treating the apparatus with due respect.

## MICHIGAN

5TH DIV.

FORT CUSTER, Battle Creek. The Army is versatile enough. Having for months maintained recruiting offices in civilian centers and kept recruiting posters pasted on factory walls, it has now opened civilian employment offices in Army population centers to help smooth the adjustment from military to civil life. Within the next three weeks this fort will be returning more than 1,000 men to reserve status, and Industrial Placement Manager Henry Van Dyke, in the Battle Creek office of the Michigan Employment Service, is trying to find jobs for these soldiers. Mr. Van Dyke is finding a number of men who entered the Army with no industrial training but who have acquired sufficient mechanical knowledge working around Army trucks and such to make them better adapted for defense-industry jobs.

HIS mother was killed when the dive-bombing vanguard of Hitler's invasion forces pounded Poland's Lwów to bits, and his father, believed to be somewhere in occupied Poland, hasn't been heard from since last March—which is why Stanley Czarnopy, Co. A, Reception Center, is glad his third attempt to get into Uncle Sam's Army worked out. Faltering English kept Pvt. Czarnopy out the first two times; after intensive study he tried again under Selective Service and made the grade. What's more, he wants to enlist for three years if his halting English isn't too much of a handicap. There's a soldier for you.

## ILLINOIS

CAMP GRANT, Rockford. While Camp Commander Brig. Gen. John M. Willis was making a routine inspection of the Camp Quartermaster laundry he stopped to ask a question of one of the colored employees. Her answer was, "Yassuh, Cap'n." The general smiled. "Do you know my proper rank?" said he. "I spects," said she, "you is a sergeant maybe."

## GEORGIA

CAMP STEWART, Hinesville. This week's lesson on how to get along in the Army comes from an unidentified private who's not very handy with his dukes but whose brain functions with an enviable amount of steam. "The captain," announced the topkick of his company one morning, "wants somebody to build him a bookcase. Anybody here a carpenter?" Nobody was. Whereat our quick-thinking private, who didn't know the difference between a gimlet and a gimmick, loudly announced that he could bat out an exquisite piece of furniture for the captain. Why, certainly. The sergeant gave him the nod and our friend was detached from duty so he could build the bookcase. Couple of weeks later a buddy dropped around to see how the imitation carpenter was doing. He was doing fine. "It took a week," he reported as he hammered aimlessly away at a ramshackle, cockeyed piece of woodwork, "to get the tools a and another week to get the ri of lumber. The paint ought to any day now." His pal nodde what," asked he, "are you g about that flimsy excuse for case?" "That's easy," our h him. "Soon's I get tired of around with the job I'll cart t thing down to Savannah and g penter to fix it up. Only cost n bucks—and I've practically ha lough."

CEDAR HOPE CHEST

ROMANCE TODAY AND TOMORROW—
Capture a world of romantic dreams for HER with this Caswell-Runyan Cedar Hope Chest! It's the gift every girl wants. To her it is a symbol of future happiness—her dreams come true.

EXQUISITE BEAUTY IN DESIGN AND FINISH—
Beauty to make her catch her breath! Smart, stunning designs . . . rich, lustrous finishes make these Caswell-Runyan Cedar Chests a charming addition to any girl's room.

CEDAR CHESTS ARE NOT ALL ALIKE—
Caswell-Runyan Cedar Hope Chests *are not merely cedar lined.* The entire body is made of ¾" Tennessee Red Cedar. Built by experienced craftsmen—they have exclusive features which assure you extra years of enjoyment and useful service.

EXCLUSIVE CASWELL-RUNYAN FEATURES—
Caswell-Runyan Cedar Hope Chests have features that are characteristic of only fine furniture . . . exclusive tray arrangements . . . construction advantages that give them lifetime durability.

SAFEKEEPING—
A Caswell-Runyan Cedar Hope Chest provides a safe, convenient place for HER personal possessions. She is the only one who has the key to it. Treasures, with romantic memories of the past—hopes for the future, can be safely secluded.

GUARANTEED PROTECTION FROM MOTHS—
These sturdy, practical Cedar Chests offer a safe place for lovely fabrics, soft woolens, cherished furs, and sheerest silks. And if there's a man at camp, his civilian clothes can be effectively safeguarded until his return.

*There's a variety of styles and several sizes. See them at leading furniture dealers today.*

THE CASWELL-RUNYAN COMPANY, HUNTINGTON, INDIANA

it raised "the noise level" of the squadron, which is Major Northrup's way of describing morale-building. His noise-level assistant is Lieut. John Philip Stewart, who, being of Scottish descent, is endowed with a set of bagpipes and a kiltie outfit. The lieutenant made a nightly habit of pacing up and down the runway at Anchorage's Elmendorf Field playing The Caissons Go Rolling Along. It was the first bagpipe music most of the Alaskans had ever heard but none of the natives could be reached for an interview.

Many of the squadron members joined the Alaskan Society of Short Snorters before they came back to the States. Founded by Alaskan commercial pilots, the club's membership rule requires all men to carry with them a folded dollar bill bearing the society's name and the signature of a member with whom he has guzzled. Any member caught in a pub and unable to produce the bill has to buy a buck's worth of liquor for any other member present. The boys found this did wonders toward raising the noise level in bars.

## CALIFORNIA

CAMP SAN LUIS OBISPO. Camouflage is doing wonders here but there's nothing warlike about it. A few soldiers figured a geranium here and a snapdragon there would make the company and battery streets look like something. Citizens of near-by Morro Bay got wind of the plan and began donating plants and shrubs. More came from garden clubs in San Luis Obispo and other towns. But it took Pfc. George Muto, Co. K., 159th Inf., to put things over in a big way. When he told fellow members of the Japanese Nursery Association of Southern California what was going on they loaded 20 camp trucks with about $25,000 worth of rose bushes, flowering cherry trees and stuff—for free. The horticultural barrage buried camp landscapers, who are now digging their way out and evolving a master plan for the whole place, which ought to romp off with all prizes, come spring.

CAMP SEELEY, Imperial Valley. Pvt. Hilaire DeMilner, of Service Unit 1961, lets 11th Cavalry members fire the guns while he shoots with a camera. He specializes in wild life and goes to considerable trouble pictures. One day some of h found him sprawled on t slightly drenched with tor They were concerned but Pvt was only annoyed. ickl for the genuine and the nal his restaurant, but ever f a ofit, Mr. Morgan has been tro led by one thing—the ex- t cc and great scarcity of fine, ed ger beer. By tradition beer; an essential ingredient of t C the best-selling drink of se. ut the cost sheet, indiffer- radi n and concerned only with turning a few pennies, has insisted on the substitution of lemon soda. Now, however, Mr. Morgan is able to remedy this shameful condition. Working for months with chemists, he has had concocted what he modestly assures you is the finest ginger beer ever produced. He had also acquired a carload of what he knows are the best-looking bottles you have ever seen, and he defies you to distinguish them from earthenware. They are actually glass, conforming to sanitary codes for refilling, but their earthenware look pleases him mightily and he is happy to fill them with his ginger beer and stamp them with the Cock 'n Bull label. Now, when your Pimm's comes over the bar, it will be in every detail the authentic Pimm's Cup, pleasing Mr. Morgan—and you—very much indeed.

#### Try It for Yourself

You put a Pimm's together in this fashion: First, take a pewter tankard, preferably old. Put into it a jigger of Pimm's (an alcoholic ingredient bottled in England, and still coming through), add ginger beer, a slice of lemon, a stick of cucumber rind, a lot of ice and a sprig of borage. This small, purple-flowered herb, the final touch to every genuine Pimm's Cup, was first furnished to the Cock 'n Bull by Myrna Loy, out of her own garden. Now Mr. Morgan has become self-sufficient on borage, too, after considerable struggle on his home grounds, and has ten plants producing for daily use.

Jack Morgan has had another trouble, also created by his passion for the genuine. When he furnished the Cock 'n Bull, he put his best British foot forward. He hung his finest English prints on the wall, installed an ancient Welsh dresser that had once traveled around the Horn, history-laden pewter platters, costly old pewter tankards, etc., etc., and ten times over he could have sold all of them out of the place. Their cash offers refused, and their collector instincts getting the better of them, some of his guests finally fell to downright snitching. "We have now," he says, "anchored all the best things with wire and only an occasional knife or fork or pewter tankard walks away without permission."

Preferring, however, not to frustrate his guests, and seeing a way out that would be good for business, Mr. Morgan has recently fixed it so that you can come by fine small things honestly in the Cock 'n Bull. A new department has been added where you may purchase antiques of pewter, copper, porcelain, fine prints and paintings; any of the things you are apt to crave after soaking up a few Pimm's and plenty of English atmosphere in the other room. And, free service to patrons, there's a small library to go with art, wine and food, where you may bolster your reputation as a wit and a connoisseur. The name of this offspring of the Cock 'n Bull is, naturally enough, The Feathered Calf.

Deep in all the ramifications of his business that started as a hobby, Mr. Morgan has not relinquished touch with the South Seas. His novel on Samoa is in the works. So are his papers for naval aviation. An aviator in the last war, he doesn't expect to be handed a plane this time, but he's ready for whatever job they'll give him. We don't know about the novel, but it looks as though the Cock 'n Bull could fend very well for itself if the boss should be away—and take good care of its Feathered Calf

# For Clear-Eyed MORNING FRESHNESS

## Just Do This At Bedtime Tonight

IF your mirror shows you looking tired and listless in the morning—if your freshness and sparkle seem to be slipping away in the stress of these strenuous times, here is important news.

Today, throughout the world, there is a *new idea* of what to do to meet special strain. A revolutionary, *scientific idea* of how to build up increased vitality to stand physical and nervous stress. You've undoubtedly read about it in recent newspapers and magazines—scientists, governments of warring nations, and our own authorities all endorse it—the idea that people need special food in addition to the normal diet *to be at their best*—particularly those under special strain.

*What To Do*

In light of this new knowledge, thousands are taking a cup of *new, improved* Ovaltine each night and morning. For Ovaltine is a special food-concentrate designed to do two important things:

*First:* When taken warm at bedtime, Ovaltine fosters sound sleep, in a safe, natural way, *without* drugs. It has the power to relieve that feeling of "nervous tension," thus helping to condition the mind for rest.

*Second:* Ovaltine supplies a special combination of food factors designed to replenish vitality *while you sleep*—rebuild worn-out muscle, nerve and body cells. It provides—in a food specially processed for easy digestion—the rarer food elements—Vitamins A, $B_1$, D and G, protecting minerals, all the essential amino acids, pyridoxine, pantothenic acid—elements now known to be deficient in many foods. Thus acts as an insurance against strength-sapping food deficiencies which affect more than one-third of all people today.

So by all means, try this "special food" idea modern science is urging. Turn to new, improved Ovaltine at night and in the morning, starting tonight. See if you don't soon begin to look and feel far fresher mornings—with far more sparkle and new zest for life.

*Mail for Free Samples*

his Filian was an unpleasant ger vet he knew his way around; got to a lot of trouble to make cle This wasn't tough country. an ght get far enough from camp so that when darkness came it would be needless hardship to come in; a strong man with matches and a gun could live in this country a week. Jim Markham reached for his glass with finality. Bill Dean stirred and rubbed his chin. Morrie Clymer raised his head and looked at Pete Brill as if a new thought had just come to him.

Young Joe Harrow's chair scraped the rough floor as he got up. "Jeff," he said hopefully, "I'd like to go along." The wind sucked and died along the eaves, and the carbide lamp on Jeff Croy's cap steadied brilliantly. "I'll try not to get underfoot," Harrow went on. "You show me what to do and I'll do it."

Jeff Croy nodded. "Don't bring a thing," he advised. "We'll need to go light." They went out a few minutes later, and young Joe Harrow's face was shining like that lamp on Jeff Croy's cap. When they slammed the door shut, silence clapped down like the stroke of an ax.

After a moment Jim Markham said irritably, "Well, Dean, for Pete's sake pass the bottle! That's *my* liquor, if I'm not mistaken. I brought six quarts!"

**"The moment her divorce became final he sat down and edited her out of his home movies"**

BARBARA SHERMUND

Conversation picked up and there was quite a lot said. As they talked, Jeff Croy and young Joe Harrow were outside in the blizzard, the sleety wind stroking their cheeks as though with sharkskin gloves, and Jeff told his companion, "You walk ahead so that the light will spill around you. Up to the head of the draw, where Dean killed the buck this morning. You see anything of Filian after that?"

HARROW shook his head. His guess was that nobody had seen Filian since then. Croy went on: "Got to find where Dean and Clymer hauled that buck over the logs. Filian left 'em there, and likely went straight north." Jeff wasn't the loquacious sort, but he seemed to want to talk now: "A man never will pick the hardest way for himself. Filian would know that the brush thins out at the head of the draw, and that he could travel along open ridges. I allow he went that way."

Harrow couldn't have told how Jeff Croy was going to find where Dean's buck had been skidded down the slope, because that was going to need a sixth sense and a hound-dog nose. There was a layer of powder snow which blanked all sign and landmarks, and more coming down; it dropped a curtain in front of him which was like floodwater pouring over a cliff.

HARROW knew he was lost after the first hundred yards, but he wasn't worried about it at all. He couldn't see beyond that wavering fringe of light which Jeff's lamp threw ahead, and sometimes he couldn't see at all because the shadow of his legs got in the way, but the light would shift and he would follow it again; and all the while he could hear Jeff's pacs crunching along behind and Jeff's voice coming calm and cheerful.

The wind made Harrow stagger at times and pounded the breath out of his chest; it slapped brittle snow in his face until he winced. He got sort of tired after a time and the heavy going made him sweat, but Jeff didn't seem to think about stopping for a two-minute blow; that light kept creeping on ahead, through snow-beaten brush, over rocks and logs, and Harrow got fascinated with the idea of trying to walk it down, but could never quite catch up. Then he got the whimsical notion that he was a prisoner whom Jeff had captured and was marching along to some unknown doom. After a long while he became aware that the light had stopped and he had stopped, and Jeff was saying, "Should be along here somewhere."

Then Jeff had taken off the cap and was holding the light close to earth. The ice particles struck the hot metal shield of the lamp and made fizzing sounds. Jeff pawed the snow from a log and studied it, but there was no sign that a buck had been dragged here; there was no telltale patch of hair to show that Dean and Clymer had worked the deer downhill in the direction of camp. Jeff held the flame of the lamp close to the wood everywhere, and pretty soon Joe Harrow could smell deer hair burning.

Jeff straightened up and put the cap back on his head. "Bear straight on," he advised. "Soon as we get to the top of the ridge we'll yell. Carry downwind as well as a gunshot. If he's upwind in this breeze he couldn't hear a gun anyway."

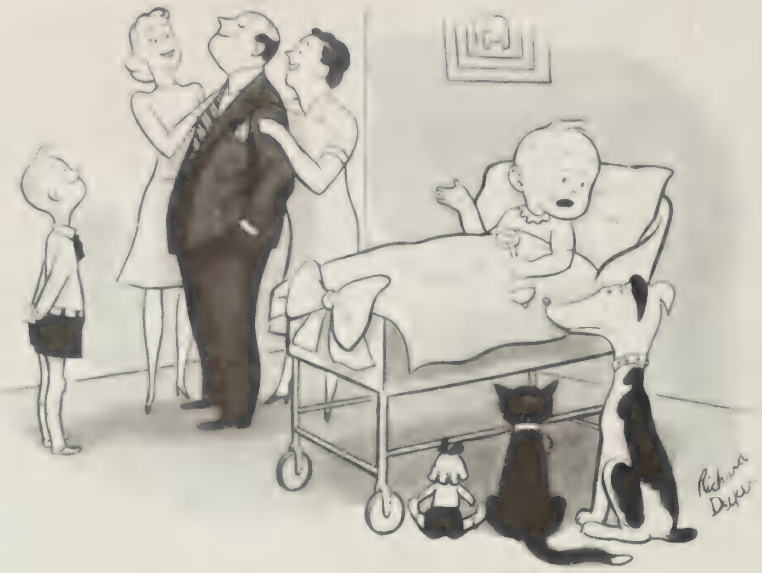
Higher they went until they topped the first hogback, and the storm found them and tried to wipe them off the earth. Jeff Croy came up close to Harrow's shoulder and yelled, "Brush is thicker off to the left. We'll turn right." The carbide lamp flickered and threatened to go out, but Joe Harrow was surer of himself now. He turned right along the ridge and kept his legs spraddled out a bit as he walked so that the light fell between them and ahead. He felt that he was getting the hang of things, and he had enormous confidence in Jeff Croy. But he still didn't understand how a lost man could be found out here at night in a storm, when he might have gone ten miles in any direction.

They went on a little way and Jeff Croy cupped his hands to his mouth as the wind died for a moment and yelled loud enough to be heard a mile. Joe Harrow tried it, too, but they didn't get any reply. The blizzard wailed in mockery and they went on again, still downwind.

"He'd turn here," said Jeff suddenly, "because it's open country."

THEY paused and yelled again, and just before they started off Joe Harrow heard what sounded like the muted snapping of a twig. There was a lapse of three, four seconds, and then another twig snapped.

Jeff cupped his hands and yelled again, and pretty soon two more twigs snapped. Joe Harrow's spine tingled. "There's some blowdowns and a stand of spruce yonder," remarked Jeff. "Seems like he'd head for that." Joe Harrow was impressed that Filian knew his way around in hunting country; he knew the signal a man should give when he was lost, and he'd head for a spruce thicket and windfalls in a storm. A man never picked the hardest way, any more than a gray buck did. Yet Filian hadn't drifted with the storm after all. Young Harrow wondered why Jeff Croy could have known that.



They went on for a few hundred yards almost unerringly, and when Jeff Croy paused again he let the light fall on a snow-covered hump beside an uprooted tree which had gone down in some storm of other years. There was a whopper of a dead buck beside the log, too—Harrow could make out the gleaming horns despite the snow—and he could see a man's arm and a blue-black rifle. The snow hump stirred and he heard Filian's voice, which sounded unnatural because it was so tired.

Jeff Croy came up and bent over, exploring him. "Through my right hip," Filian explained. "The horn went clear through. He was going to spear me again when I killed him . . . You bring a drink, Croy?"

Jeff took out the pint flask and unscrewed the top and handed it over. Filian put it to his lips and looked surprised and grateful. He took a deep swallow and handed it back. "Water!" he exclaimed. "This snow has parched my mouth as though I'd been eating sand!"

"That's a hell-roarer of a buck you got there, Filian," Jeff remarked. "Biggest I've seen for years!"

Filian looked up with a grin of pride, then wagged his head. "I've been a hell of a fool," he admitted. "I took one shot at that buck and figured it was

enough. But he had other ideas, and he hooked me clear over this log and started after me to finish the job. I should have known better." The thought seemed to cling, for he added after a moment. "I've been a hell of a fool!"

He stirred and pain stabbed him so hard that his face screwed up as though he was going to cry. After a moment he went on stubbornly, "But I've never had time to think things out clearly until tonight. Croy, I hope I'm not so much a fool hereafter!" Young Joe Harrow stood there in silence, listening, not having any words to put into the conversation, which seemed naturally to belong to these two seasoned men.

"You stand up and slip your arms around our necks," Croy said to Filian. "I brung Joe Harrow along because I figured I'm too old to do this alone anyway. That buck will keep where he is until daylight. No wolves or cougars abroad tonight. Leave your gun, too!"

Joe Harrow felt Filian's arm tighten around his own neck and it made Harrow feel strong when Filian's weight sagged down onto his shoulders. He knew better than to say anything, Harrow did, but he needed his breath anyway and, moreover, this was a time to listen. A lot of things had happened tonight that were worth remembering.

He knew that if he ever shot a blacktail buck as big as the one Filian had killed he would never take the chance Filian had taken until he was sure that the game was dead, because a wounded buck can be as dangerous as a wounded grizzly; and he thought that if he ever had to find a lost deer hunter in a storm he'd go about it just as Jeff Croy had. There wasn't much that had happened tonight that Joe Harrow would forget; and he was mighty grateful that Jeff Croy had let him come along. So they went on, the three of them, following the path of light that Jeff's carbide lamp threw ahead.

THE going was plenty tough. Sometimes Joe Harrow felt Filian sag on his shoulder, and when that happened they'd stop and let the injured man down gently and rub a little snow on his face and give him a swig of water; and then he'd awaken and look at them strangely, but he didn't say a word because he was no longer the bluff and blustering Filian that he had been. Something had been uprooted from his nature, as though he realized that if he had been sitting there at dawn by the log and the dead buck he would surely have been an icicle, for after all this was a pretty tough country when a freak blizzard came down from the north. Joe Harrow was practically carrying him when they came stumbling down the last draw, because Jeff Croy was an old man and had just about pulle tonight.

But Joe Harrow, although were bulging with the effor making and he could taste b biting his lips, kept on goin

The cabin was dark but Jef the door open; and then th light played around the bu they had been lying down an ing to sleep, and it blinded th they acted like noonday ow they saw Filian drooping on shoulder, they yelled in started to get up. But Jeff ways a mild-spoken man, sto without raising his voice.

He said hoarsely, "Stay r you are! The first man that likely to find a thirty-thirty gizzard. There's three of u have a drink, and then we'r eat a mess of grub, and the r ing to stay in their bunks and keep quiet."

And that's what happene they knew that Jeff Croy w who meant what he said. there and pretended to sleep while Jeff roused up the fi water hot for Filian's leg. that the cabin got smoky deer liver and bacon and all the three men at the ta to notice, there wasn't anyb the place. Joe Harrow got enough to drown a cat, and hit bottom he felt like wall side of the cabin.

Jed Filian laughed at him over and rubbed his ears ir way, because Filian was again; Jeff Croy has the kna up a flesh wound just about a doctor can do it. Joe Har and white with embarra though somebody were pinn on him, but he grinned bac for these two understood Jeff Croy didn't pay any at kept right on with his cookin standing there and listenin although you could tell th what was going on. By three of them turned in night was shot to pieces, about all there was to it.

Young Joe Harrow didn't that trip, which was last hopes to make a real dee himself this year, for Jed F along to show him the rope knows his way around, hav game all over the world, i record blacktail of the Tu and Joe Harrow are goin Croy asked them. There Croy said, for Filian and four newcomers because M the others won't be there.

dot have to take Eddie John- that there is a vast, new, interest in opera. In the which raised more than llars for the Metropolitan, old-fashioned largess in ,000, $5,000 and $1,000. But alf was in donations of $5, ome in coins, even pennies. als brought close to 200,000 h checks, money orders and came from the forty-eight aii, Alaska, Puerto Rico, the Virgin Islands, Canada and merican republics.

nson proposes to remem- onstration. He would have ssed if that many people of appreciation. But when they backed it up with dough, that made the Metropolitan a national institution, with a duty to the country as a whole.

Johnson has discovered that the Metropolitan is an international affair. It gives the great operas of the world in four languages—English, French, German and Italian. There is hard feeling against Germany and Italy. Maybe we are not indignant at the languages themselves. Certainly we have nothing against geniuses like Beethoven, Mozart, Wagner, Verdi, Rossini and Puccini. Yet Eddie Johnson has headaches about this problem of languages and the war.

Aïda is one of the prize operas of all time. The Metropolitan gives it often and sometimes uses it for the hoop-la of opening night. This year Johnson is cautious about Aïda. Why? Well, there is a scene where an officer leads his men off to the wars for king and country. It happens that king and country are Egyptian. But the boys and girls are singing in Italian, and they hail their hero, "Ritorna, vincitor!" which means "Return, a conqueror!" Johnson knows that Italian-Americans attend Aïda. Somebody might yell, "Down with Mussolini!" Somebody might respond, "Evviva Mussolini!" The first thing you'd

# All-America Makers

Continued from page 20

phone every night, with this message—"Hello, Benny. Don't forget. On and over."

Bill Roper, who trained Princeton's forces for so many years, was no believer in any set system. Roper had no hesitation in taking plays from rival teams that seemed to suit his material. He was a great believer in fundamentals, especially in blocking and tackling, and a greater believer in the old "will to win." Jock Sutherland, high up on the list of All-America makers and undoubtedly one of the best that football ever knew, gave most of his work to two important factors—a fast-charging, aggressive line and a fast-moving backfield that was always perfectly drilled in its timing and all needed assignments.

The late Howard Jones of Southern California favored power above everything else. He usually had his full share of big, fast men who were taught to block, tackle and drive hard, the type that could use power more effectively than anything else. Yet his passing attack was always ready when raw power wasn't capable of breaking through.

Bob Neyland, with his brilliant record at Tennessee, must be placed high on the list. As one leading Southern coach told me—"We always find that Tennessee teams seem to know more football than any others we meet, no matter from what section."

Bernie Bierman of Minnesota, quiet, almost shy, looks more like a bank president than a football leader. Yet at Tulane and in the lair of the Golden Gopher he has proved his place.

### Credit Where Credit is Due

Next week Collier's will present its 52d All-America football team, a roll of honor on the gridiron that goes back to the dawn of the game. For the first thirty-five years these selections were made by Walter Camp, still known as the "Father of Football." Since 1924, after Mr. Camp's death, they have been made by Collier's All-America Board, carrying out the Camp-Collier All-America tradition.

But before announcing the new selections, we want to give credit to the coaches who have given these All-America players their chance to know the headlines and to reap their reward. It seems to me that the fairest basis for such selection should start with 1906, for several reasons: (a) That was the year the forward pass and other changes brought in the open game, and (b) it was about this time football began to find a national appeal and the Ivy colleges no longer dominated the game. Here is the record of the leaders:

COACHES PRODUCING MOST ALL-AMERICA PLAYERS

(Those with five or more listed)

**PERCY HAUGHTON (17)**

At Harvard: Fish, *t*, 1908-09; Nourse, *c*, 1908: Minot, *hb*, 1909; McKay, *t*, 1910; Wendell, *hb*, 1910-11; Fisher, *g*, 1910-11; Felton, *e*, 1912; Pennock, *g*, 1912-13-14; Brickley, *hb*, 1912-13; Mahan, *fb*, 1913-14-15; Hardwick, *e*, 1914; Trumbull, *t*, 1914; Bradlee, *hb*, 1914; Gilman, *t*, 1915; King, *hb*, 1915; Dadmun, *g*, 1916.

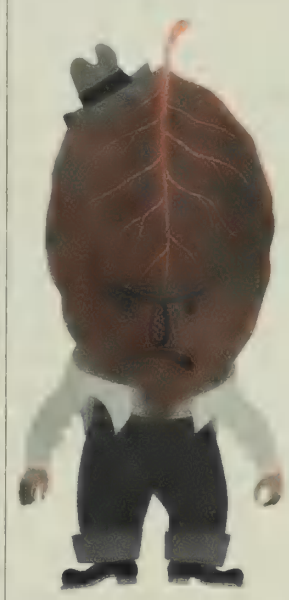
mm al Hoke Smith. And as for
a xer, there is the testimony

of Colonel James A. Colescott, Imperial Wizard of the Ku Klux Klan of Georgia. Colonel Colescott says that the Klan is a right tolerant institution these days and doesn't hold with Gene's method of getting shut of those professors.

We could go on like that for pages. But perhaps you'd be more interested in precisely what happened, and why.

Mr. Talmadge is in the throes of a political comeback. He had served four years as governor just prior to the Rivers administration ending last January. Preferring to hold political office rather than till the sacred soil of Georgia and practice law, he offered himself to his people for the United States Senate. They declined with an enthusiasm which might have discouraged a man of thinner skin than Gene's. But when it came time to choose somebody to succeed Ed Rivers and Gene declared himself eager for this honor, they voted him back into the job on his promise that he'd stop thievery, reduce taxes, increase pensions of all kinds, pay schoolteachers and otherwise restore Georgia to her rightful place in the world.

No sooner had Gene been elected governor last fall than he began to cast about for an issue which would not only elect him to the Senate in 1942, replacing the Honorable Dick Russell, but make him undisputed boss of the state. Politicians elsewhere had but one issue —Defense Against Hitlerism. Both Senators George and Russell were hot for defense and thoroughly opposed to Hitler. Gene could shout louder than either of these gentlemen, but figured that by the fall of 1942 the United States might very likely be in a shooting war and that his voice, powerful as it is, might very well be lost in the din. If only he had something to holler about—something besides defense and Hitler, something even nearer and dearer to rural Georgians.



### Talmadge Gets an Idea

It was while he was thus cudgeling his fertile brain that someone (a number of Georgians claim the honor) told him that Dr. Walter D. Cocking, dean of the College of Education, University of Georgia, and Dr. Marvin S. Pittman, president of the Georgia State Teachers College, had drawn up a plan to mingle whites and blacks on equal footing in the classrooms of their respective schools. Of course they had done nothing of the sort—not that it matters now. Also, it would have been impossible for them to institute such a revolutionary innovation in Georgia's educational system without rewriting Georgia's state constitution. And only the people of Georgia could do that at a general election.

What had happened was this: Drs. Cocking and Pittman, along with their faculties and with the knowledge of the Georgia Board of Regents, wrote a paper outlining their hopes for the progress of education in Georgia. It was a dullish, academic brochure not warranted to hold the interest of anyone except the pedagogue for more than a few paragraphs. Moreover, it was written nearly three years ago.

One of the few mildly interesting suggestions was that a lecture hall be erected on a spot some thirty minutes away from the University of Georgia where graduate students of Georgia's colleges who were about to devote their lives to teaching Georgia's young—black and white—might get together and discuss their problems and listen

# Two tobaccos who flunked . . . and one who didn't

This tobacco leaf wasn't a bad tobacco leaf. But he wasn't nearly aristocratic enough for Briggs Pipe Mixture. He didn't have what it takes—so he couldn't make the grade.

This tobacco leaf was as blue-blooded as they come. But alas, Time hadn't matured and mellowed him enough for Briggs Pipe Mixture! That's why *he* didn't make the grade.

This tobacco leaf was both high born and mellow with years. That's the only kind of tobacco good enough for Briggs!

Yes, finer tobaccos . . . aged for years in fragrant oaken casks . . . aged *longer* than those in many luxury-priced blends . . . give Briggs its extra mellow, bite-free flavor. For a finer pipe treat, try a tin. Only 15¢.

to imported and domestic voices of experience. Naturally, there would be Negroes as well as whites in these gatherings. The Georgia law specifies that black teachers shall teach black pupils and white shall teach white. There was nothing whatever in the plan that advocated the intermingling of the two races in undergraduate halls. Furthermore, the idea won more than considerable applause from teachers of both races, it being their theory that they might conceivably understand each other better if they occasionally made personal exchanges of their educational ideas.

When and if this proposal should become practice, it was the hope of Drs. Cocking and Pittman and their associates that the Rosenwald Fund or the Rockefeller General Education Board, or both, should foot the bill. This would be entirely in accord with the wishes of the Board of Regents, always grateful for any contributions made to the cost of education in Georgia. There are about 16,000 public- or common-school teachers in the state system and approximately 1,500 in the university system. Thus far, the Rosenwald Fund and General Education Board have contributed half a million dollars to education in Georgia, to say nothing of helping to pay the salaries of some of the more expensive professors and administrators in the university. Careful research into the records reveals no previous protest by Gene against this "desperate attempt to declare the Negro to be what he is not and what he can never become—the legal peer and equal of the race which the Divine hand ordained as superior since the dawn of Creation." (We take the quotes hot from the pen of Gene himself in his newspaper, The Statesman—The People, Editor; Gene Talmadge, Associate Editor.)

### Gene Takes Off

Nothing came of the graduate-school plan, its proponents deciding that they had more immediate problems to solve and the Rosenwald Fund's guardians being desirous of looking over something more than a mere theory. And you'd never have heard of it at all if Gene hadn't thirsted for an issue for 1942 and if someone hadn't remembered. A hint is all that Gene needs. Down on Sugar Creek they'll tell you that you can never tell which way Gene's a-goin' to take off a-hollerin'.

Anyway, Gene had a-hold of somethin'. He called to his office a few trusted friends within the faculty. However, if their reports were ever reduced to writing there is no evidence of it. A lady, Mrs. Sylla W. Hamilton, formerly a teacher in the School of Education, came forward with an affidavit that she had attended a meeting of that faculty in the spring of 1939 when Dr. Cocking said that he "wished to build a training school within thirty minutes drive of Athens, Georgia (seat of the university), where the graduates of the school could do their practice teaching —practice teaching being required of all graduates of the School of Education. This school, he said, was to be for both blacks and whites. He turned to me and said, 'What do you think of this plan, Mrs. Hamilton?' I replied: 'That you should propose to do this thing in the state of Georgia is both astounding and amazing.' "

Gene, saying that this was all the evidence any white man could ask for, forthwith demanded that Cocking and Pittman resign. When it was suggested to Gene that he ought to have a little more direct evidence, that others of the faculty had been present but had failed to hear what Mrs. Hamilton had and that some folks might wonder why Mrs. Hamilton had kept silent so long when the state of Georgia was in such a dire peril, Gene got pretty indignant.

"If one person says one thing and somebody else says another you gotta decide who yo' going to believe and stick to it," said he. "And that's what I'm a-doin'. Mrs. Hamilton's got the straight of it."

He demanded again that Cocking and Pittman resign. They refused, demanding a hearing by the Board of Regents. Gene said that they weren't entitled to a hearing, that neither he nor the regents had the time to listen to everybody they wanted to get rid of. Nevertheless, he said he'd be big, call a meeting of the regents and let their decision be a warning to all nigger-loving professors who were undermining Southern civilization with carpetbagger funds. Whereupon the regents voted eight to seven to retain both Cocking and Pittman. While we are not prepared to believe it, we're told that the decision of the regents left Gene speechless for almost ten minutes. Recovering, he said weakly that he was prepared to be knocked over with a feather, that if anybody had told him that there were eight Georgians so blind and deaf to the consequences of keeping men like Pittman and Cocking around he'd have called

**Express Elevator—Up**

that man a liar. For a moment it sure looked like Gene's new furriner-nigger issue had done bust up in his face. And many a lesser politician would have dropped the issue then and there, galloping off in another direction making so much noise that the electorate would soon forget Messrs. Cocking and Pittman. But not Gene Talmadge.

When campaigning, nobody could have been more indignant about That Man Roosevelt's tactics—particularly the Supreme Court Packing Plan. Gene had shuddered so vigorously about the Supreme Court reorganization that "the flo' of the platform done come loose and Aunt Sue Willie Carmichael of Ty Ty done sent him a bottle of ague syrup." But Gene wasn't to be hog-tied by any foolish consistency. He forced three members of the misguided regents to resign—three of the eight dissenters. In their places he appointed three gentlemen on whom Georgia and Gene could depend. And he did some vigorous missionary work amongst the others. Then he ordered another trial.

Fearful that something more substantial than Mrs. Hamilton's affidavit might be required, even by a packed Board of Regents, one of Gene's legmen tried to bribe an Athens photographer to superimpose the head of Cocking on the shoulders of a white man shaking hands with young Negroes who had just been drafted into the United States Army. With such evidence of Cocking's disloyalty to the white race, no board could hesitate. But the photographer wasn't enthusiastic. Anyway, it couldn't be done convincingly. Where fender of White Supremacy colored houseboy and cha worked for Cocking and, tal a tourist camp, telling hir place was the headquarters Klux Klan, commanded h Cocking's desk for letters teachers—letters which dean of the School of Edu pretty sure to have. The bo Then his captors showed him was mighty apt to go off signed something he didn't r released. The boy says tha know what the paper said. matter. Neither the paper r tographs (if any were made duced at the trial, which s conclusive evidence that t very valuable to Gene's side

### "Hit the Chair and H ler"

We shan't go into the sec length. And that's too bad, many volumes of less astor have been written about kin —the Reichstag fire trial, and the Russian purge. Ger ent and in complete comm. his new appointees to the

Jim Peters, conducted the Now and then when Mr. Gene intends to promote should he decide to run f States Senate next year, sh bogging down, Gene wo cigar and cry: "Hit the cha Jim."

Both Cocking and Pittm than somewhat bewildere ceedings, but soon caught o produced two of the sub which had been found o sity library's shelves—Br by Edwin R. Embree of t Fund, and Calling Ameri sium in which the relati and Negroes were incident —the two teachers had th quire how they could be mony of their desire to supremacy. They were books, which incidentally cate racial equality, were ing in the University S defendants denied this, ac didn't know the books w brary—and what of it?

"Is that so?" roared Ge

"Yes, sir," cried Mr. P soon the Negro will be wa the same seats with us, e tables with us and ride train cars with us."

"They ain't a-gonna do

So the reorganized Boa found Cocking and Pittma vocating racial equality and voted ten to five Whereat one of the bet

gents, the Honorable Lawrence Wood Robert, Jr., of Atlanta, better known as Chip, Assistant Secretary of the United States Treasury in the early days of the New Deal, arose to thank Gene for his patriotism. From his pocket Mr. Robert drew a typed set of resolutions lauding Mr. Talmadge's valuable assistance to his alma mater and to the state of Georgia which he read carefully while Gene accepted congratulations, his eyes sheepishly cast down and an "aaaaw pshawww" expression on his face.

That done, Gene took a day off to write in his newspaper, The Statesman, the true account of what had happened. Further, he fired eight more members of the University System faculties. Among them were J. Curtis Dixon, vice-chancellor of the university, a former director of the Rosenwald Fund's Rural Education Program; Professor P. D. Bush of North Georgia College, also mayor of Dahlonega; C. M. Destler, head of the Social Science Department of Georgia Teachers College; Mrs. Mamie Veasey, dean of women at Georgia Teachers, and R. E. Davis of the Animal Husbandry Department, State College of Agriculture.

Had Gene wanted really to awaken Georgia and if it weren't that he insisted that the trial of Cocking and Pittman be free of prejudice, he might have risen to fret before the regents (of which he is one, ex-officio) and tell them of several other horrors that his scouts had reported. He said, however, that he didn't want to confuse the issue. There was Mr. J. R. McCain, president of Agnes Scott College for Women at Decatur, Georgia, for example. Agnes Scott is an independent school, not under the University of Georgia System. Otherwise Mr. McCain would have been fired so fast that he'd have forgotten his name, yes, sir.

Gene said that this McCain, a furriner of the worst sort, and a proved nigger-lover, done carried some of his lovely young lady pupils beyond the borders of beautiful Georgia and right onto the campus of Tuskegee Institute, a Negro school in Alabama. And there this enemy of White Supremacy, without the knowledge and consent of the fine mothers and brave fathers of these pure white Georgia belles, than which there is no finer example of saintly American womanhood, mingled with niggers on the campus, discussed questions of education and stayed overnight in one of those black dormitories. And this was not the only time that white young ladies of Georgia had visited Negro schools, getting their pretty heads filled with doubts about White Supremacy. However, this Agnes Scott-Tuskegee incident was enough to warrant the passage of some crackdown laws and Gene was thinkin' the same over.

### Why Look at the Facts?

Of course, Gene had let his emotions get him down. Mr. McCain, like Messrs. Cocking and Pittman, is a mild man, a nationally known educator, a sane person with no plans for equalizing the two races. In the interests of broad education and at the request of a group of his students, he made a one-day pilgrimage with them to Tuskegee, where they ate and slept quite apart from the Negro dining rooms and dormitories. They went with the full consent of the young ladies' parents, and enjoyed themselves immensely. They shook hands with Dr. George Washington Carver, the great Negro scientist, and listened to the Tuskegee choir, this alone making the trip more than worth while.

But Gene wasn't pausing to discuss facts. Look yere, what these Rosenwalds and Rockefellers, these Cockings and Pittmans, these carpetbagger highbrows, nigger-lovers and anti-Christian furriners are doing to the libraries in our college where the mothers and fathers of Georgia young ladies and their brothers expect them to be educated into fine flowers of America. Look yere at these books found on those shelves: An American history by Albert Bushnell Hart, in which this man Hart, probably a Rosenwalder, says: "The Southern whites have an unfounded and unformulated fear that somehow White Supremacy is in danger." And this book, We Call It Human Nature, a so-called book for children, by Paul Grabbe. In this book there is a "full-page picture of a little Negro boy and a little white boy sitting together at a corner drugstore sipping soda through straws . . . gets them ready for racial intermixing." (We're quoting Gene in his The Statesman.) A shameless book, From Many Lands, by Louis Adamic, who says therein that "He knows a number of Negroes who are not inferior to any white man." And still another volume, Southern Regions of the United States, by Howard Odlum, "carries the idea that Southern people are bound down by the erroneous assumption that the white race is necessarily superior."

### It's Tough on the University

Which goes to show you the insidious methods of these invading enemies of the white race. When we left Georgia twenty-three such subversive devil books had been cast out of Georgia's school libraries. And Gene wasn't through yet with similar lyin' books and nigger-lovin' professors. The Southern University Conference, a nonaccrediting association of forty-odd senior liberal arts colleges in the South, had dropped the University of Georgia from membership, saying that Gene had made it a political racket. The Southern Association of Colleges and Secondary Schools was about to meet and outlaw the university, thereby depriving it of its ability to accredit its graduates. Thus legally no graduate of the University of Georgia could teach or practice a profession in Georgia, the state constitution requiring all such to be accredited graduates of schools in good standing with the SACSS. And students of the university might not transfer to other American colleges that might demand credits.

Gene said, unconvincingly, that he wasn't worried about such nonsense. Georgia would accredit her own schools. It was all a Rosenwald-Rockefeller plot anyway—a plot to discredit him, to prevent him from fighting singlehanded against the encroachments of the Negrah and his Yankee exploiters. Gene had taken his stand in Dixie Land and nobody was a-gonna budge him.

"I'm for a college education for every boy and girl in beautiful Georgia," roared Gene. "And I'm a-gonna see that they get it. How? Nev' mind how. I'm a-gonna do it."

"Negroes too?"

"The Negrah will be taken care of."

For the time being, Gene dropped the discussion. He had to write a flock of editorials and interpretive articles for The Statesman.

Gene dipped his pen in ink. His hard features softened. With a few preliminary flourishes he began to write "something right interestin' to the fine, upstandin' people of Georgia." He wrote:

"Sunday I drove over to Union Baptist Church in Wilcox County to an all-day singing and dinner on the ground. And—would you believe it?—they actually succeeded in getting me to lead two hymns: In the Land Where We Never Grow Old and The Old Rugged Cross. I did so, helped by the beautiful voices of the fine Christian brothers and sisters. . . ."

# The Two Bad Men

## By Louis Paul

ILLUSTRATED BY HAROLD ELDRIDGE

**If you were on the jury, what would you do with the men who killed poor Harold? Detective Sullivan would like to know**

DETECTIVE SERGEANT WILLIAM SULLIVAN twisted an official report form in his ancient portable, stabbing awkwardly with his first two fingers at the elusive typewriter keys. "To Inspector Elliot," he wrote. In sixteen years of filing reports Sergeant Sullivan had mastered neither the keyboard nor any fluency of style in writing upon it. His depositions were terse to the point of affectation. In this instance he wrote: "Apprehended the Cordell brothers in Nevada, June 6th, obtained certificate of extradition, booked in at the 12th precinct station. Evidence and oral report to the district attorney's office. Returned to duty for assignment."

The Cordell brothers, as a matter of fact, had given Sergeant Sullivan a certain amount of trouble. They were a peculiar pair of individuals. Sullivan had made little attempt, even in his oral report to the D. A.'s office, to dwell upon these peculiarities. Sullivan was a detective and a successful one. For sixteen years he had been a member of New York's police force. Sitting now at his old portable with the Cordell report in the machine, he speculated on all the crimes that happen in a great metropolis.

Sullivan had been assigned to work on sex slayings, tong wars, dope cases, gang killings. He had tracked down crazed cultists, homicidal maniacs, moronic racketeers, insurance murder rings. In sixteen years of intimate contact with the mentality of violent criminals Sergeant Sullivan saw them lose their individuality and begin falling into categories. You could cast a practiced eye over the body of a corpse in a city apartment and observe the inner workings of the murderer's mind.

Not so with the Cordell brothers. A New York jury might find it difficult to understand the Cordell brothers. It, too, like Sullivan, would be conversant with racketeer reprisals, political gangsterism, crimes of passion—the dozen and one felonies to which the metropolitan city is heir. The only thing categorical about the Cordell case was its jurisdiction. The offense had been committed in the city and

# The Scorched Red Earth

Continued from page 13

wash hanging out on lines. Down narrow, roughly cobbled streets, cars, motorcycles, trucks and little Russian wagons pulled by small, struggling horses fought for passage. The German commander's headquarters were in a gutted bank building. Outside was a truckload of Soviet soldiers just captured in the near-by forest. I talked to some of them.

Surprisingly, only one of them could speak Russian. They came from different parts of the country and only three could understand one another. The only Russian most of them understood was the commands of their officers. They were very downcast and said they never expected to see their homes again.

"If I got home and the Soviets were still there," said one, "I'd be shot for surrendering."

Down the street a junior college had been gutted by a fire set by the retreating Russians. Hundreds of half-burned books, bales of leaflets littered the courtyard. In the center of the yard stood a headless statue of Stalin—a plaster shell, painted over.

In the Ukraine, Kiev, with its peacetime population of about a million, was an example of the thoroughness with which the Soviets destroyed what they could not defend. Outside the city entire sections of woods had been cut to make tank barriers; rails had been encased in cement to block roads. Wires were strung waist-high through the trees—with a mine attached every few feet.

### Russia's Desperate Defense

South of Kiev in the open fields the Soviets had constructed an intricate system of trenches, barbed-wire entanglements, tank traps and artillery emplacements camouflaged in shacks. These had all been bombed and blasted into ruins. In the city itself were formidable street barricades made of logs, sandbags, cobblestones and dirt. The outskirts showed the desperate measures to which the defenders had resorted. All railway and road bridges had been blown up, factories dynamited or burned. Streetcars stood abandoned where they were left when the power plant was destroyed along with other public facilities. Except where the Germans had managed to make repairs, Kiev was without lights, gas, water or heat. Blocks of the business section still smoked as the result of fires started by hidden mines which exploded four days after the city was surrendered.

When they left, the Soviets took all the city's fire-fighting apparatus as well as the firemen and all expert workmen who might be able to repair the power plant and waterworks. The Germans say it will take four years to rebuild Kiev after the necessary workmen and materials can be assembled.

In the hotel where I stayed, the Russians had even taken the bedclothes. Formerly called The Red Kiev Hotel, the Germans had ironically renamed it "Hotel Liberty"—but that couldn't make the elevator run or put blankets on the hard mattresses.

The citizens who remained in the town seemed friendly enough, going about their own business if they had any or to work if they could find it. Food conditions were bad, the Russians having systematically destroyed all food stores before leaving. Potatoes were generally procurable but such things as meat, coffee, tea, butter and sugar were unheard of. The Germans were issuing rations to people in long bread lines. People waited in other lines to buy newspapers. When the first paper in the Ukrainian language appeared, crowds stood on street corners around one purchaser while he read it aloud. Before this paper appeared, the only reading matter consisted of notices posted in German, Russian and Ukrainian, warning of death penalties for plundering, sabotage and acts against German soldiers.

In Kiev hearses were being used for carrying everything except corpses. They were full of booted, beshawled women with legs hanging over the sides, bumping down cobbled streets. The price of a ride was about one cent but it represented about one dollar to the Ukrainians. There were two typically American things: shoeshine boys and scooters. In the country was another familiar sight: all along the roads women were attempting to thumb rides in our car.

In Kiev and throughout the southern Ukraine the Jews wore no distinctive arm bands or markings as elsewhere. No notices had been posted concerning Jewish labor corps or registrations.

What happened in captured Russian cities long after the Red army left proved the Russians to be the world's best saboteurs. So cleverly were time and incendiary bombs and mines hidden that expert German mine removers couldn't find all of them. In Kiev alone more than 10,000 mines were discovered and removed, but this still did not prevent a large section of the city from being blasted to bits by hidden infernal machines. The commonest type had plungers like hand grenades. They were hidden in stoves, clothes closets, under chair cushions, in beds—any place where a string or wire could be attached to the plunger. When the stove or closet door was opened, the mine exploded. It was the same if you sat on a chair, attempted to sleep in a bed or even raise a window. Other bombs were hooked up with telephones, electric light lines or water pipes. In the first two types the bombs were set off simply by taking the phone off the hook or turning on the light. Sometimes turning on a light on the fourth floor would set off a mine under the basement floor. Those mines hooked up with water pipes were set off by some pressure principle when the tap was opened.

In Odessa, the entire building occupied by the Rumanian General Staff was blown sky-high as a result of someone turning on a water tap. Both in Kiev and Odessa hundreds of bombs went off automatically four days after the Soviets evacuated the town. Most of them were "two-timers," meaning they first blew out the walls and then set fire to the wreckage.

There were even teleignition bombs. The fuses of these were radio-receiving sets set t wave length. These bomt ploded by the Russians mil days later by broadcastin signal to which the set wa mine of this type with thre tons of dynamite inside wa removed from the big new seum in Kiev, but anoth discovered, blew the place t greatest and most comple job I saw was in the huge Ni yards, where 25,000 men us ployed. JEFF KEATE

a city fellow's job and he forms a union, but take away a farmer's land and you will have shotgun trouble." The Germans realized this to a great extent and published certain rules for the Ukraine, although the war still was in progress. Small plots of land which the Soviets had allotted to peasants to plant as they pleased now become their personal property, free from taxation. On the conditions of a good harvest and successful sowing, these individual grants can be doubled. At the same time the Germans told the peasants they will be given a chance to own livestock without the heavy taxes imposed by Russia.

Full freedom of religion also is being restored. I saw many churches being reopened, especially in Kiev. The historic old St. Andrew's Church overlooking the Dneiper River was overflowing with worshipers when it was reopened after twenty years. Other churches were being reopened as quickly as the interiors could be cleared of propaganda posters, cinema screens and even bales of hay.

The most disheartening thing in an occupied country is the prisoners. Whether you see them in prison camps, marching down roads or being trucked around, they tear at your emotions. They all look the same—dirty and unshaven, none with complete uniform, their clothing tattered and torn. I remember particularly one column of about 10,000 marching south from Kiev. Dejectedly, they shuffled down the road under the eyes of a few German guards. When they stopped to eat, they bargained and fought over such choice morsels as green cabbage leaves and slices of raw pumpkin and carrot they had snatched from roadside gardens. A crust of bread thrown among them started a fight; a cigarette caused a riot. I was told they were part of the most desperate Communist fighters that had been captured at Kiev. They looked it. Once assigned to organized camps, they were given sufficient food, chiefly potatoes and some bread, and usually put to work.

Prisoners everywhere are being used to clean up debris in destroyed cities and hundreds of such gangs are visible. When I walked through a devastated sector, they were lunching on boiled potatoes and bread and munching pieces of sugar. Everywhere they can be seen working on roads and in places like German army filling stations where they pump gas and apparently enjoy a certain amount of liberty.

Thousands of former Russian soldiers now are in the service of the German fighting forces. They have been formed into what is called Ukrainian Militia. Most, but not all, still wear Russian uniforms and carry Russian guns. They are used for policing certain sectors in cities, guarding buildings and moving supplies. Other militiamen are actually used in the German army itself. In one long column, I saw them in Russian uniforms driving many of the supply wagons. These men are considered both traitors and lucky by their comrades, but luckiest of all are thousands of other Ukrainian soldiers who have been released.

Everywhere along the roads they can be seen walking back home, a tedious and precarious journey. The Germans are releasing hundreds daily if proof of their identity can be found and authorities are convinced they will return to their homes and go to work. As time goes on, prisoners undoubtedly will be used in many ways, but nowhere did I see any working in the fields.

Russia, except for big new blocks of army barracks, party headquarters and administrative buildings, looks rundown. Undoubtedly, production of every kind was increased through better organization, regardless of the means used. But the fruits of all that went into the mammoth war machine of the Red army. Now that this machine has been almost destroyed, the country will have to start from far worse than scratch.

# Something Old

## By Caroline Clark

ILLUSTRATED BY SAM EDMUND OPPENHEIM

**A SHORT SHORT STORY COMPLETE ON THIS PAGE**

NAN MALLORY, sitting at her desk in the living room, heard the gentle bump *bump* of saddle oxfords on the stairs and puckered her brows to show her daughter that she was deeply engrossed in the task of addressing Christmas cards. Polly had been doing a very convincing job, since her quarrel with Jimmie, of being frantically busy and gay, and it would hardly be sporting to puncture the surface with a mother's anxious glance. In the face of such fine nonchalance it was best to be properly stupid and forget that there had been a time, just a few weeks ago, when the shoulder of her nightie had been wet with a little girl's tears.

"Hey, Miss Long-Legs!" Tom, sitting in his big chair by the fireplace, grabbed his daughter by the hand and pulled her down on his knee. "Looks like you'd be paying a little more attention to me these days—or haven't you found out yet who Santa Claus is?"

Polly laughed in that new way she had that made Nan think of a rabbit hopping across a field. It was cute but a little too carefully worked out.

"Dear Mr. Claus," said Polly. "I am a little girl eighteen years old and I want a radio for my room and a black velvet house coat like Greer Garson's and a convertible coupé with numerous gadgets. Also candy and nuts." She leaned across his lap and rested an elbow on the chair arm. "Do I get the radio?"

Tom ran a finger through her necklace made of hickory-nut faces with yarn hair. "What's this for? To frighten little children?"

"Do I get the radio?" she repeated.

"Oh," said Tom. "Radio. But how do I know you've been a good girl? All I see of you these days is a skirt tail disappearing around a corner." He took his pipe out of his mouth and settled Polly back against his shoulder. "By the way, what's become of young Jimmie Blair?"

Nan shook her head at her husband, but he was looking into the fire. She wished desperately she'd told him Jimmie had said he'd never come around again until Polly sent for him. She might even have told him about the sweater which Polly had started to knit for Jimmie out of wool to match her favorite skirt. It was to be a very significant present, for it said in the language of the younger generation that Polly was Jimmie's girl; and this morning she'd found it, unfinished, in the rag bag. . . .

"He still lives next door," said Polly. "Why?"

"I've been kind of missing him the last few weeks," her father said. "He's been rather constantly underfoot since the days when you used to scrape the cake pans together, with bibs tucked under your chins."

"Polly has a date with Spencer McNeil tonight." Nan spoke so quickly that her words ran together.

"Who's he?"

"A new boy," said Polly eagerly, "and ve-ry glamor-puss. In fact, he's the prize package on my Christmas tree this year. Wait till you see him, Dad!"

Then the doorbell rang, and a moment later the undeniable McNeil glamor was in their midst. He was rather too obviously handsome but Nan reflected

**"Hello, Dog-face," Polly said. "Hi, Ho[rrible]," Jimmie. Her glance rested on Jim[mie] and her eyes were bright and shining**

reasonably that he couldn't help it, a well-bred poise was certainly not the to which parents could object. They a for a few minutes being a trifle too, too one another. Even Polly picked up Neil's sophisticated manner and Nan th a bit oddly with her long, sloppy sweat swinging hair and bare brown legs.

Later, when she and Tom were alone, her elbow on the table and cupped he palm and made neat little ovals across list. Presently she said: "Tom, do y the Christmas when Polly was three?"

Tom leaned his head back and dro in his lap. "Why *that* one?"

"We got her a new doll," said Nan, ' up all the old ones and set them arou tree. She was wild with joy for a few then all of a sudden she straightened u pink bathrobe and said: 'Now I'll go fir

Tom nodded. "And then I found y your apron behind the kitchen door b was a rag doll that hadn't come thro very well and you hadn't thought she ing up."

"But I *did* fix her up," said Nan, plained that Santa was a little behind that year—so everything was all right went over and sat down on a stool a "Funny," she said, "how new thing grand new things—can't take the pla ones. Not with Polly, anyway."

Tom looked at her with deep affec den understanding. "You mean—ev very glamor-puss?"

"Even something very glamor-pus

POLLY'S crowd was increasingly ga days went on. Nan had time to get mas surprises ready because Polly w home, and sometimes she found hersel with a small, anticipatory smile on h went skating and dancing with Spence her poised, sophisticated manner ofte full five minutes after Spencer had bro but Nan always breathed a little sigh her daughter relaxed again into her most unintelligible subdeb talk. It wa course, the way Polly and the other y were always buzzing in and out co meaning under a camouflage of extrava but Nan found it somewhat more b Polly's new personality and the laug hopping across a field.

And then, on Christmas Eve, Ji without bothering to knock, just as N the lights on the Christmas tree.

"Let me help," he said, stepping wi fidence across the room.

"Please do!" said Nan. "I'm get up in these things."

They worked diligently for a few each other all the while just how it s When she heard the familiar bump stairs, Nan closed her eyes and sat d der and began silently to recite the m ble to herself. She had got as far a when Polly spoke.

"Hello, Dog-face," she said.

"Hi, Horrible," said Jimmie.

Polly's saddle shoes bumped the down the stairs and across the floor. beside Jimmie, under the tree.

Nan opened her eyes and look daughter's glance rested a moment o panse of Jimmie's chest, then came her mother, and her eyes were bright the thanks she couldn't speak. The t denly into a blaze of many colors, a she had never seen anything so love

Polly looked at Jimmie again. " some sweater you're wearing," she s

Jimmie kissed her firmly on the foul?" he agreed. "I wouldn't wear it matches my best girl's skirt."

Polly smiled cryptically. "You'd of it," she said. "I broke my heart of knitting—until Mom took a hand finish it."

Jimmie, full of himself, didn't kn talking about. But Nan did.

# The Two Bad Men

Continued from page 74

the was apparently no other course he uld take.

"his is Bill Handy," said the Indian, int lucing him to the lanky store- cer r. "He runs the general store and ai a few cattle on the side."

"owdy," said Bill Handy.

"n we use the back room?"

"re thing, Henry. Welcome."

They seated themselves on kegs of ani in the storeroom. "Do you hap- per know two brothers named Cor- bel asked Sergeant Sullivan.

"ey're mining men, I believe. They loc get down here often. I've seen he once or twice buying supplies. "he've got a place twenty miles or so up canyon. I understand they come ron Colorado. What did they do to wir a New York detective way out

"ey killed a man named Johnson a otel room."

"inson?" The Indian rubbed his lac hair. "Killed him, you say?"

"ooked like a simple enough case s t with," Sullivan explained. "His ep and all identification marks were ere ly removed, but his fingerprints ho l he'd been in the Army during the t war. Once we knew who he was e ned up a safe-deposit box, from Whi we got the rest of the picture. He'd been a mining man in partner- nig ith the Cordell brothers in Colo- ado nd Nevada, that much we learned you is private papers.

"n we did some checking on the ean partners and got positive identi- cat is from the hotel people and the According to our information, orr rated by the railroad, they left th train the morning after the murder and urned to Benbow. Johnson's cor- esp dence showed the men's mining rop ies were somewhere in the vi- nit of Benbow. It looked like a mp matter to come out and pick the ten . But now I'm not so sure."

"N" said the Indian deputy. "This pr ty open country. Even if San- ure were back, which won't be for fur five weeks, I don't suppose he'd re risk having his head blown off yin o enforce a New York warrant."

"I n understand that," Sullivan ad- itte

"I ou can bring the fugitives into uq ne they'll no doubt be glad to ve u all the legal assistance there you quire."

DO YOU know how to get to this Cor- ell place?"

"A ath of sorts goes up the canyon." he lian rubbed his thick hair specu- tiv . "There's something queer ab this business, though. Why ould t these brothers have murdered eir artner right here in Nevada?"

"T t's something we haven't found it y."

"A objection to my making a les

"O the contrary."

"T y may have foreseen the difficul- es ity policeman would have in ef- cti their capture and returning them a stant jurisdiction. If you called th ocal authorities they'd get wind it on enough to take to the high lls.

"Y may be right," said Sergeant ulli n. "Anyway, there's no point in esti time. These hills right here re h enough for me. I'll go up and ave talk with them this afternoon. I app I can get a room in town?"

"W don't have a hotel but I've got an e a cot in my shack—it's half a ile the same direction. I'll take you up the canyon if you like, but—"

"But you'd rather have me serve my own warrant," Sullivan smiled grimly.

"It isn't that. I don't have the authority to work beyond Benbow without instructions from the sheriff. You get these fellows down to Benbow and I'll be happy to help you take them to Duquesne."

"Well, that's something, Mr—"

"Henry. *Mister* is a kind of insult in this country. We might as well take your bag down to the shack. In the meantime I can tell you something about the lay of the canyon. It'll take you a couple or three hours by horse."

"I see," said Sergeant Sullivan, mopping the sweat from his brow with an already damp handkerchief.

THE New York detective, feeling strange and nervous on the back of Whitehead's wiry little pinto pony, sought his way up the canyon behind the Indian, who preceded him on foot. It really got hot in Nevada, he decided. The sun seemed suddenly to have developed claws.

"You carry a gun, I suppose," said the Indian.

"Yes."

"It would be a very sound idea if you left it with me. People out here are much less likely to fire at a man who is unarmed. It's bred in us. Goes back to the frontier days."

"How am I supposed to arrest a couple of murderers and bring them back to town without a gun?"

"I don't know," said the Indian. "Maybe you can't. Myself, I just wouldn't go up there with firearms on me, that's all."

Sullivan's irritation was increasing. The sun was digging into his flesh, the jerky motion of the wiry pinto was loosening up all his bones, and now he was supposed to apprehend a couple of bad men without a gun. He trusted the Indian's instinct in the matter, however, removing his service pistol from its holster under his arm and tossing it down somewhat reluctantly.

"This is where I say goodby," said Whitehead. "The Cordell shack and the diggings lie about a mile ahead. I'll be waiting for you. If I hear any shooting going on I'll come running because shooting at somebody is against the law even in Nevada. Good luck."

"Thanks," said Sullivan. "I'll probably need it."

He urged the pony up the rough road. When he reached the Cordell cabin and dismounted, a very small man who looked like a shopkeeper greeted him.

"Lookin' for somebody?"

"Yes. I'm looking for you," said Sergeant Sullivan.

"Howdy. Come in out o' the sun." Inside the cabin the man said, "This is my brother Winfield. Win, a feller's here to see us."

The second brother was taller but no less insignificant-looking. They had apparently just finished eating. "Like to have you a plate o' bean soup, stranger? It ain't altogether cooled off yet," said the second brother. "Dish up the man a plate o' soup, George."

"No, thanks," said Sergeant Sullivan, swiftly taking in with his trained eye the details of his surroundings. Neither of the two men was armed. A modern high-powered automatic rifle in a beautiful leather case was suspended on nails in the wall. An ornamented cartridge belt with two holstered revolvers hung over the back of the chair on which Winfield sat.

"Interested in mining?" asked George.

"No," said Sergeant Sullivan. He wasn't going to try to think. They probably had pat answers for every verbal subterfuge he might attempt. "No. I'm a police officer from the East." He watched their expressions but they merely sat there, waiting for him to go on. "I've come out here to try to serve a warrant. Sheriff Sanderson is down in San Francisco, I understand."

"Who are you tryin' to serve this warrant on?" asked Winfield. "I don't think I caught your name," he added, leaning the crook of his elbow over the two-gun cartridge belt.

"Sullivan. Detective Sergeant William Sullivan, New York Police Department. According to our investigations we believe you men are implicated in the killing of Harold Johnson in the New Gotham Hotel on May tenth. Anyway, we want you to come back to New York for questioning."

George, the smaller of the two men, got up and took down the automatic rifle. "Ain't New York a kind of a far place to ask people to go back to for questioning?"

SULLIVAN thought the remark was not quite so ingenuous as it sounded. "No, I don't think so. Murder's a serious business. It doesn't depend on how far away it was committed."

George, who was much too complacent to suit Sergeant Sullivan, changed the subject: "Do you happen to have a gun on you?"

"I don't." Sullivan opened his jacket and revealed his empty armpit holster.

"Try this. We bought it in New York." He handed Sullivan the rifle. "Balanced wonderful, ain't it? Go ahead, try it. It's all loaded. It pumps itself. Try it on that tomater can."

Sullivan shouldered the rifle and pointed it through the doorway. Aiming slowly, he suddenly fired with great rapidity, making the tin can dance and bounce crazily as slug after slug tore through the soft metal. Simultaneously his brain was working. "I wouldn't have a chance," he thought. "They want me to know I haven't got a chance even with an automatic rifle in my hands."

"That's a mighty nice piece of shoot-

in', Sergeant," said Winfield, the taller brother.

Then Sergeant Sullivan laughed. "Something's just occurred to me." He handed George back the rifle. "You must know Henry Whitehead, the Indian deputy at Benbow?"

George's eyelids narrowed. "Sure. Why?"

"Well, he showed me the way up here. Said he hadn't any business interfering on his own accord, but if he heard shooting it would be in his province and he'd come running. I guess he thinks you fellows have done it now."

"That's all right," said Winfield imperturbably. "Since we ain't, the joke's on him."

"No. But about Harold Johnson. I'm afraid we still have that business to deal with."

"Johnson. Now there you got a kind of a peculiar problem, Sergeant," said Winfield. "Here, take the good chair and set comfortable," he interrupted himself, offering Sullivan the chair with the gun holsters hanging over it. "There ain't no witnesses around so I guess it'll be all right to tell our side of it."

Sullivan swabbed the perspiration from his damp brow. "I'm an officer of the law. Any statement you make may be—"

"We ain't makin' no statement, Sergeant. You come up and say we're wanted for killin' our pardner, so we'll tell you how it happened. Over Colorado way a few years back we come into pardnerships with Harold. We all been grubstakin' it for years, takin' out enough stuff here and there barely to keep goin'. A feller don't make contracts in a business like this. There ain't no law out here to enforce such things. The way it is, if you take a feller into pardnerships and he inherits a old rowboat from somebody, why he wants to go ahead and saw it in half and divide it with you. Well, we took this Harold into pardnerships and staked him and all, and then he did wrong to us."

"What did he do wrong?" asked Sullivan.

"He come on to pay dirt and he wanted to keep it for himself. He tried to hide this pay-dirt streak and sneak out on us, figurin' that when we left these parts he'd come back and work the diggin's. I don't want to go into details, but when we found out what he done and where he went we follo[wed] there and killed him."

"To New York. You follo[wed] there and killed him," Sergeant [Sulliv]an repeated as though taking d[own] statement in mental shorthand.

"We jest naturally had to k[ill] said Winfield. "And now this [is] the peculiar part of it comes in. [When] we opened up that shaft with [the] dirt streak in it we found it run [out] a few feet and then give plum[b out]. guess we didn't take no more th[an a] hundred dollars of stuff out [of] shaft, did we, George?"

"Mebby three hundred dolla[rs]," said George.

"After that we felt right s[orry] Harold," added Winfield. "G[uess] gettin' himself killed on the st[rength] a faulty pay streak."

"That's about how the wh[ole] happens," George stated wit[h] reasonableness. "We didn't thi[nk] be sendin' warrants out after [us] if they say we got to go all the [way] to New York to explain it ov[er] why I guess we got to. Lon[g as] don't figger to force us to, that [is] and me, we don't like to be fo[rced]."

Just then Henry Whitehead [came] his hands resting nervously on [his] tridge belt above his weapons. [His] black eyes brightened when he [saw] geant Sullivan in the doorway. [He] a rifle being fired."

"It was me," said Sullivan. "[You] know George and Winfield [well] think."

NOW, staring at the official [report] Inspector Elliot, he reread [the] tences he had laboriously ty[ped] "Apprehended the Cordell br[oth]ers Nevada, June 6th, obtained [no]tifica of extradition, booked in at the [Fif]th pr cinct station. Evidence and o[ther] to the district attorney's of[fice]. R turned to duty for assignment."

Then he remembered Winfie[ld's] tion as they made ready to de[part] canyon path to Benbow. "I d[on't] them jury folks in New Yo[rk] much trouble understandin' h[ow] naturally had to go ahead and [kill] Harold, will they, Sergeant?"

He could hardly include the [question] in his report of the capture [of] Nevada bad men. He wished [they] chosen to kill poor Harold [Hen]pla else, that was all.

## Wing Talk

Continued from page 6

All pilots will heartily applaud the latest decision of the Civil Aeronautics Board in suspending for 60 days the private license of a Chicago airman "for falsifying in his log book his solo flying time records."

THE day will never come when our military aircraft manufacturers will be able to go along making more of the same thing without frequent interruptions for changes in the design. The changes will be due chiefly to reports constantly coming back from abroad on what the British and Germans have developed. Of course, no one wants to hold the second-best poker hand; neither do we want a handful of super-airplanes and no quantity. But it irks our manufacturers, all set to get going on daily rates of production heretofore undreamed of, to stop the production lines to make a change because both the R.A.F. and the A.A.F. (Army Air Forces) discover some last-minute necessary improvements.

One prominent aircraft manufacturer, frequently delayed by last-minute changes made necessary by [reports] from abroad, finally lost pa[tience] observed unhappily to the Ar[my] that a German plane were shot [down] found to have a bucket of [Berkra] back in the tail, we would im[mediate]ly order a change to conform. *C'est guerre!*

THE squadron leader of [the] Night Bomber Command [had] pleted his plans for a night ra[id] many and on the operations [board] made this notation: "E.T.R. [10 A.M.] (Estimated Time of Ret[urn].) squadron ran into head wi[nds] on [the] way back; it was out of bom[bs] and [or] of ammunition due to fighti[ng] off Ge man night fighters. It didn't [have] its home airdrome until 2:4[0] Awa ing it were some German fi[ghters] jumped on this helpless grou[p] but su ceeded in knocking down [only] bomber. Coincidence? The B[ritish] not, because they detected [the] overhead exactly at 2 A.M.—t[wo] minute before the estimated time o[f] return posted on the board.

chant of modest means. His
as Irish. Eddie is genial, but
when he gets riled he says, "They'd better not forget that I'm part Irish and that I love a fight." "They" are mostly temperamental prima donnas or tenors.

Eddie grew up as most kids of his day and town. He attended school, did chores around the house, went swimming and skating and tobogganing, played ball, belonged to the cadet corps of the Thirtieth Wellington Rifles. He also liked music, and since his father was a member of the town band Eddie was encouraged to study. He had piano lessons, and learned to play the flute, because his father figured that the town band could use reinforcements.

As for singing, there was the church choir. Eddie was a cute boy soprano. His first recorded appearance as a soloist occurred at Sunday school when he was five. When his voice changed, he discovered he was a tenor. He could sing high C easily. His father thought he ought to study law. Eddie thought that he wanted to be a missionary. He says that he has attained this ambition—he is a missionary of music. The other element of the missionary idea was the urge to travel. Eddie has done that too. He has sung in Europe, North America, South America, Asia, Africa and Australia.

At twenty, Eddie went to New York to try to become a singer. He had a nest egg of $100. In New York he teamed up with three Canadian boys in a tiny apartment. He spent some of his money on singing lessons. With his high C and engaging appearance, he landed a church job. Other jobs followed, with the best in the Brick Presbyterian Church. At first he barely made both ends meet. When he had something extra he put it away. He wanted to go abroad to study opera. But being practical-minded, he needed enough for a two-way ticket.

### It Wasn't the Money

Even the best church jobs pay little and Eddie figured it would be years before he could go to Europe and then it might be too late. But his high C and figure saved the day. A new operetta, The Waltz Dream, by Oscar Straus, was being cast, and they were hunting for a romantic lead who could sing. Somebody who knew someone else who knew the producer mentioned Eddie. He was given an audition and landed the job.

Edward Johnson's name was featured. His salary was $600 a week. He played on Broadway for a season, and the producers begged him to go on the road. The Shuberts, who had a hand in the production, considered Eddie the find of the year. They offered him a long-term contract, starting at $800 a week. Eddie was twenty-eight. In several years, he was assured, he would be the biggest star on Broadway.

To the entreaties and golden promises, the tough-minded young hombre said, "No!" Smart show people said that the man was touched. So he was, he admits. Especially since, after a season's run at $600 a week, he had saved enough for that two-way ticket to Europe.

When Eddie arrived in Paris, he was taken in tow by a chap from his home town. At this friend's studio he met an independent-minded young lady named Beatrix da Veiga d'Arneiro, a Portuguese viscountess. Eddie sang for his friend and the young lady. The friend was ecstatic. The young lady said dryly that Eddie might go far, if he

FIRE!...

AND THINGS HAPPEN FAST!

When fire breaks out, it is the first few minutes that matter most. The quicker the alarm gets through, the less menacing is the fire likely to be.

Behind the efficient municipal alarm systems that in a matter of seconds send the "smoke-eaters" to the scene, there is a source of electric power that is unfailing in emergencies—Exide Batteries. Not only municipalities but private alarm systems as well depend upon Exide for this important service.

You may be one of the millions of motorists who have found Exide Batteries equally dependable. But, whether you're an Exide owner or not, be sure your present battery is worn out before buying a new one. Perhaps it only needs a recharge. You can find out from your Exide Dealer. He is scientifically equipped to tell you the truth about your present battery. The test is free, no obligation—part of his contribution to the nation-wide effort to "Keep America Rolling."

worked. She was his severest critic at the start; she became his wife. But not for a year, because Eddie didn't have the money and he didn't mean to sponge on any titled lady, even if they happened to love each other.

After returning to America to raise another jack pot through concerts, Eddie came back to Paris in the spring of 1909. In New York he got to see Enrico Caruso, and sang for him. The sunny Neapolitan told him he had the makings and wished him well. The two became friends, and when Caruso died in 1921 his widow presented Johnson with his costumes. Of course, Caruso was no sylph, but a tailor fixed that. It was a great moment when Eddie donned the master's mantle.

So Eddie came back to Paris, with two ideas in his head. First he took Bebe, as he called the severest critic, to England, where he made her Mrs. Johnson. Then they moved to Florence, where he began to study for the opera with Caruso's old teacher, Maestro Vincenzo Lombardi. For almost three years Eddie slaved. His daughter, Fiorenzina, now a Canadian Colonel's Lady, was born. Eddie had appendicitis. A straitened budget was a constant worry. But Eddie and his wife managed to save enough to go regularly to the opera, where they would sit in the topmost gallery. They watched and listened as the passionate Italians hissed tenors out of the theater and they shivered.

At last, in the spring of 1912, Eddie sang his first opera. He assumed the *nom de guerre* of Edoardo di Giovanni, because he was assured an Italian name would carry him farther. Edoardo di Giovanni he remained until he joined the Chicago Opera in 1919. His wife continued to be known as Signora Johnson. Strangers who did not know that they were married winked slyly after meeting Signor di Giovanni and Signora Johnson.

### The End of the Claque

Eddie clicked in Italy. His debut was tough, because the tenor whose place he took had arranged for a claque to operate against him. But Eddie, a fighter, sang with such fierce resolution that he won the house. He never forgot the claque, however. His first act, when he ascended to the rule of the Metropolitan, was to banish it.

Eddie sang under all the maestros from Toscanini down, and became one of Italy's high-priced stars. During World War I, he lived in Italy, which was then one of the Allies, and it was possible, if one was willing to chance submarines, to cross the seas. Eddie did that unhesitatingly. He also went about singing The Star-Spangled Banner and God Save the King at scads of benefits.

Tragedy struck him in May, 1919, when his wife died. He never remarried. As she lay dying, Eddie sang a performance. Two weeks later he sang in Beethoven's Ninth Symphony in Turin, under Toscanini. Eddie says the maestro, who can be tougher than the orneriest top sergeant, was as sensitive and understanding as a devoted friend.

In the fall of 1919 Eddie signed with Chicago. In 1922 he joined the Metropolitan. He became the pride of Giulio Gatti-Casazza, general manager of the Metropolitan. Gatti assigned him to glowing, youthful parts, like Romeo, Pelléas, Peter Ibbetson. Eddie did yeoman service for new American operas. After his performance in The King's Henchman, libretto by Edna St. Vincent Millay and music by Deems Taylor, the composer wrote these words: "Dear God, thank you for thinking up Eddie Johnson when you were making tenors."

Gatti became deeply attach to Ec die, because he was a tenor w brain The old man began to groom Ildie fo the succession, almost ins ctivel After the show Eddie would invite into the inner sanctum, an he an Gatti would chat far into nigh Some of the envious singers egan speak of "teacher's pet." O rs wh wanted a friend at court uld a Eddie to say a kind word t the man.

Gatti-Casazza was not the ily p son to discern a potential m ager Eddie Johnson. Louis Eck in. ran the summer opera at I rginia Chicago, invited him to b ome manager. Eddie declined. H elt th you couldn't be a singer an nanag at the same time. He ha watch Mary Garden try it in Chica.

### No Time for Temperar nt

When Gatti-Casazza resign in ly he favored Eddie as his succ or. b cher no longer has meat to sell. ve chop is spoken for weeks in ad- n and belongs to you only if your tc r has so decreed.

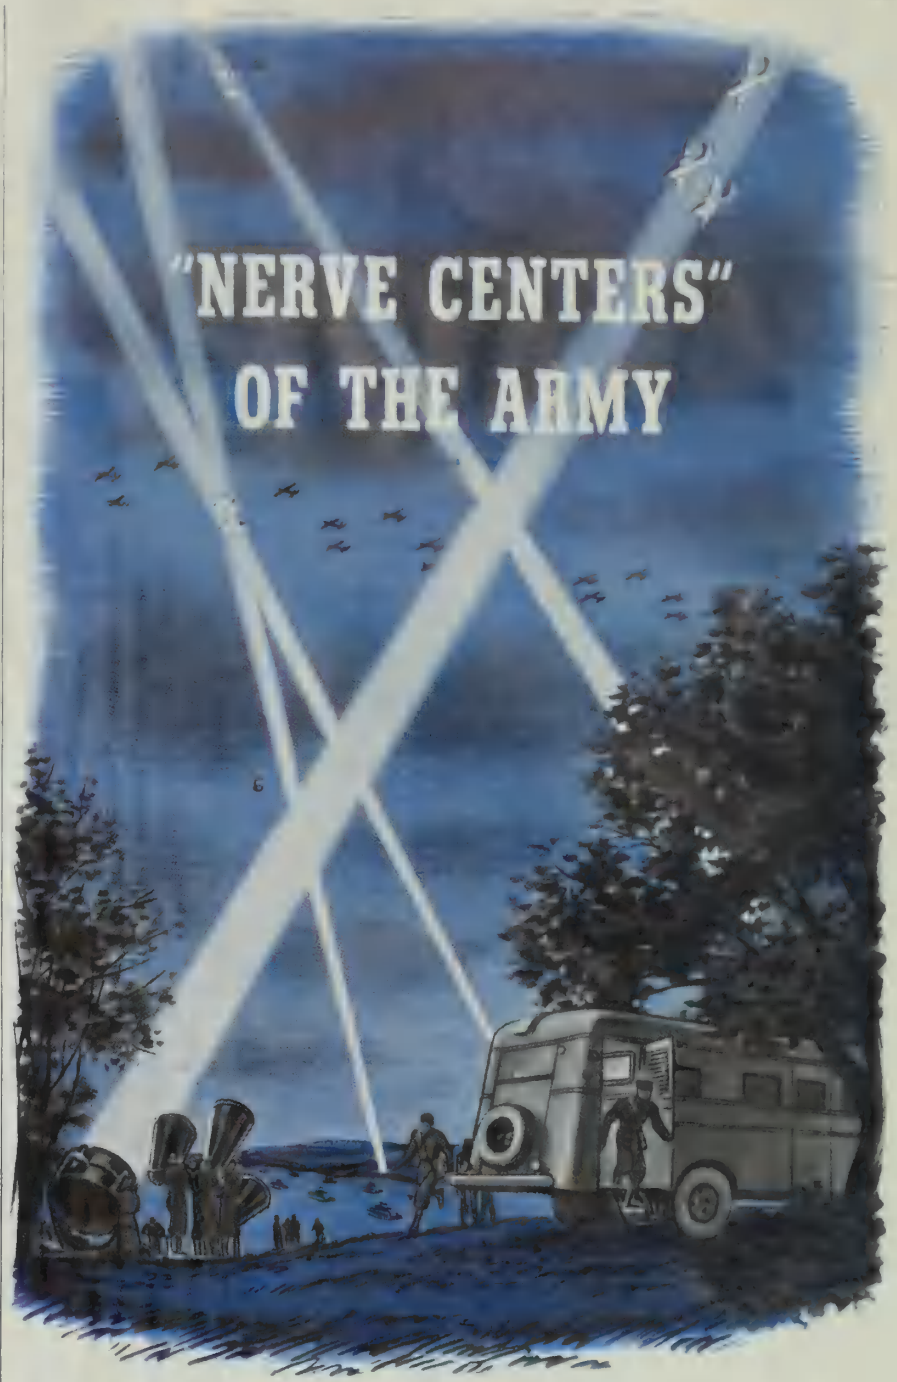
T French, soon facing starvation, no who they have to thank for it. ne ave learned too late not to show ei ocks in their windows, for as the m ice commission delegates pass ro n the villages and see food dis- ay they know where to come next. It ne thing to be entitled to rations, is other to find them. At the end th nonth, in certain regions, the po- to eese and meat tickets have not en ed. Many all over the country ve t eaten potatoes for six months d e had only forty grams of meat si weeks, though entitled to two nd and fifty grams a week. Natu- ly e cities are harder hit than the vi nd villages.

Gra -seed oil takes the place of lin- d, d lichen oil substitutes for olive . C is used for shampoos, and soap be made from bones from the ug rhouse. Grape sugar is the st jectionable of the substitutes. nit soya flour is available and both str and peanut flour are commonly ed biscuits, also casein. The na- al ffee, of which one is allowed a nd month, is made up of 24 per t c ee and 76 per cent of grilled rn d figs. One is allowed to buy gra of pure coffee instead of 150 m the mixture. Dental paste and er tifrices have disappeared. Peo- ar making dental powder out of un ggshells, mixed with chalk. Old sp rs are soaked in water, rolled li e balls, dried in the sun and d itead of coal. Nutshells and ad tato peels are covered with n a used to light fires.



W and cities in Occupied France re tinually being fined millions ra for resistance of one kind or th They tell the story of some ic ly annoying Germans who e ked up in the icebox at the slaughterhouses in Paris, and left there overnight. The city of Paris was fined several millions and deprived of meat for many weeks as punishment. I cannot vouch for the truth of the story.

In a certain town, where the German soldiers drink very heavily, any student who inadvertently pushes a drunken soldier into the canal becomes a local hero and wears a special badge. In a bookstore window recently there were large photographs of Hitler and Goering. These caused a great deal of discussion and that pleased the Germans. They did not notice the small copy of Victor Hugo's Les Miserables between the two pictures. I was in one of the hotels requisitioned by the Armistice commission and rode up in the elevator, arms laden with bouquets tied with *Vive l'Amerique* ribbons. The elevator boy deliberately left the German officers in the elevator and carried the flowers down to my room. The officers said nothing. Maybe they wondered why it was not: *Vive l'Allemagne*."

The French consider America their only hope. An old woman expelled from Lorraine put her head on my shoulder and sobbed: "Our only hope is that the Americans will come and save us. They will, won't they, Mademoiselle?" I often found tiny bits of paper rolled up and slipped into the keyhole of my car with one message or another always ending: "*Vive l'Amerique.*" In restaurants, people hearing English spoken brought children up to tell me to thank the people of America for what they had done. The Youth of France wrote and told me: "My wishes join those of the immense majority of my countrymen, who hope for an English-American victory." Even in youth camps, young fellows begged me to help them get somewhere, anywhere so they could go on fighting for their country. Evidently there was nothing I could do. I had gone to France to see, to listen, to learn what the real France felt, how it reacted. Often, when asked for an opinion, I expressed none.

"I used to jump barrels, make figure eights, write my name and, incidentally, stand up" GARRETT PRICE

WHEN America's great new army deploys in battle formation, instant and accurate communications are vital.

That's why the communication trailers used by the U. S. Signal Corps are often called the "nerve centers" of army field operations. They house the mobile radio units which flash orders all along the front.

These trailers must be built of material both strong and light weight . . . something that can withstand salt air, sand, heat or snow-storm—and still be adaptable to high-speed production.

Tempered Presdwood* — a Masonite* wood-fibre hardboard — has passed all these severe tests and is today being used in the manufacture of army trailers. This modern, durable material takes extremes of temperature, resists moisture . . . is easy to work with, yet hard to wear out!

PRESDWOODS HELP SPEED PRODUCTION

• In literally *thousands* of other ways, Masonite Presdwoods are aiding the nation in this period of unlimited emergency . . . helping manufacturers speed defense production, and do a faster, better job at lower cost.

• In tanks, trucks and trailers . . . in the floors, walls and table tops of cantonment buildings . . . and in shipyards, factories and munitions plants, Presdwood Products are displaying the same versatility that they have in peace-time industries.

• The demand for Masonite Products in National Defense increases daily. Because Masonite Corporation puts the needs of our country first, there will be occasions when normal consumer requirements cannot be filled as promptly as in the past.

# THE KAISER WAS A PIKER

MR. HITLER certainly is not making any easier the job of those of us who are trying to keep alive the hope that this war may end in a peace without hatred or revenge written into the peace treaties.

The Kaiser's men executed Edith Cavell; a great psychological blunder, but it had a shadow of legality nevertheless. Hitler's men grab from two to 100 Frenchmen at random and shoot them down when some member of the army of occupation in northern France is assassinated by a French saboteur or anti-collaborationist.

There is a cold, machinelike brutality about these reprisals that needs no propagandist's help in arousing rage and horror in other countries. Things like that may be done in Oriental countries or by savage tribes in Africa or India, but so far as we know they have not been done in western Europe since the feudal barons began to eat with forks.

The frightening feature of the bloody business is that it is building up hatred for the German people, who don't deserve it, all over the world. For dumb, idiotic cruelty, Hitler is making the Kaiser look like a piker. And the tragedy of it is that, if Hitler loses the war, the peace treaties are all too likely to make the Versailles treaty-makers look like pikers as regards hatred and revenge written on parchment. Which in turn will almost inevitably breed another war that will make this war look like a piker, and the 1914-18 affair like a mere dress rehearsal.

# ANY OLD PAPER TODAY?

THIS is about conserving paper for defense . . . but please read on, because paper conservation isn't expected to turn out like the aluminum thing. You can probably make a little money out of paper conservation, in addition to helping the defense program.

Here's the situation: Defense and lease-lend are making heavy demands on producers of paper, cartons, cardboard, etc. No serious shortage is in prospect; but the increasing demand has put a premium on the salvaging of used paper for reuse. Ordinarily, Americans destroy 72% of all the paper that comes their way, only 28% of it being reclaimed as is used iron, steel, aluminum or felt. It is now proposed to raise the reclaimed 28% to 38% at least.

Waste-paper conservation headquarters have been set up in 34 cities at this writing, with special telephone switchboards in each city to handle calls from people who have 100 pounds or more of old paper on hand. Anything in the paper line is acceptable—newspapers, magazines, books, used stationery. Dealers in old paper come around, collect your collection, and pay for it. Prices range between 25¢ and 40¢ per 100 pounds, with slick-paper magazines such as Collier's bringing the best prices.

You can keep the money; or, if you wish, the Salvation Army, Boy Scouts or kindred organizations will collect the paper, sell it, and use the money for their own charitable purposes.

If the plan isn't yet operating in your city or town, write for full information to Waste Paper Conservation Campaign, 17 E. 49th Street, New York, N. Y., or to its Midwest address—645 Boatman's Bank Bldg., St. Louis, Mo.

# FEATHERS AND FLY-FISHING

WE'RE delighted to report that the National Audubon Society's battle against wild-bird plumage in both women's and men's hats, started about a year ago, is well on the way to complete victory. A lot of the ladies, contrary to cynical expectations, turned out to be public-spirited on this subject rather than narrowly fashion-minded.

We are glad to have endorsed the campaign as vigorously as we knew how when it began. We are now happy to endorse another recommendation of the Audubon Society; namely, that state and federal legislation be enacted promptly to end the selling in this country of fish flies incorporating feathers from rare and valuable birds.

Some of the birds now being driven toward extinction by this practice are the Orillard pheasant, red ibis, Bali duck, bird of paradise, Tragopan pheasant, and snowy egret.

The Audubon Society wants laws flatly prohibiting wild-bird plumage sales after allowing a reasonable time for present holders of such feathers to get their stocks sold and make plans for the future. It also wants the federal tariff law amended so as to prohibit importation of wild-bird feathers from other countries.

New York's new law on the subject, regarded as a model statute, also *authorizes* commercial dealings in feathers from ten kinds of plentiful domesticated fowl. That, with the help of our ingenious dye industries, ought to be sufficient to meet the desires of the most exacting fly fishermen.

The great majority of the ladies l
themselves willing to spare a lot of
useful wild birds, it seems to us that
of the United States can gracefully do
we have every confidence in their pul
common sense.

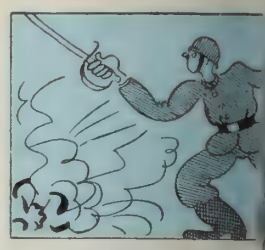
# ANY WEEK

IF THERE is a little more South in this column than you'd prefer, it's merely because we've been wandering through that part of our bemused land lately. It was thus that we met Mr. Bill Mason in Flora, Mississippi. Mr. Mason works for the General Tire and Rubber Company, which is about to operate a munitions plant in Flora. Naturally a great many Mississippians desire work in the new plant and one of them applied to Mr. Mason by the following letter: "I hereby am asking for the job as mortician in chief, undertaker and embalmer of the remains of colored folks who is going to be blowed up to bits in the new powder plant of which us citizens of Flora, Mississippi, are accordingly proud. I understands you will not be making no powder for some little time with no explosions in the meantime. So I hereby asks to take a job sweeping out or maybe taking care of the horses and mules until the fatalities above noted shall take effect."



WE'D prefer, of course, to give you more inspiriting news. But we've got to take it as it comes. However, things could be worse in the family of Mr. Edgar G. Bahreinger of Walla Walla, Washington. At least they've found out what's the matter with Mr. Bahreinger's Aunt Lilly. Aunt Lilly Bahreinger has been in miserable health for three weeks and although the doctors probed, diagnosed and experimented, no appreciable progress was made. Aunt Lilly was of little help, refusing to talk. Finally, however, she broke down, and with no little triumph in her voice told the groping doctors what she'd done. "Aunt Lilly," reports Mr. Bahreinger, "has at last told us that she took every medicine and remedy advocated by radio announcers for a week. There were thirty-nine health preservers and restorers plugged by the bedside-mannered voices and Aunt Lilly, who had been feeling pretty good, took them anyway. She lasted a week before taking to her bed. She is coming along nicely, however, the doctors having decided that all she needs is a good rest."

THE accusation has been made, most unjustly, of course, that some of the names appearing in this space are manufactured. We've denied it until our dignity is imperiled. This dignity thing is a new adventure, too. We've been told that the column lacks that, and that we fiddle instead of whacking the drum. However, it is the charge that we invent our names that forces us to draw ourself up gravely and relay to you a few which we recently noted on an official list in Atlanta, Georgia. We copied just a few and pass them on: Simplee Martha Washington, Lou Twisher Twilly Dewberry, Tommy Lou Huckaby Bunn, Obedience Peet, Queenie Elizabeth Collier Futrelle, Don Cratic, Absalom Rambo Issom, Lula English England, Sidney James Charlie May, Alto Smothers Chick, Babe Weatherbee Nolting, Middlebrooks Walsingham, Wash Dozie, Shorter Banks, Polly House Lowe Good, Womack Good, Mary Good Gordie. We noticed, too, the name of Willie Blue Weevil, Jr., and spoke rather sharply to the custodian of the list. She admitted that an error had been made in printing Mr. Weevil's name. It should have been Willie Blum Weevil, Jr.

HAVING thus answered our critics and assuring them that we've published our last word on the subject, we proceed with the information that Mrs. Hattie Ampleman Hardcastle has died at the honorable age of eighty-eight and a great deal of sincere mourning has ensued in and near by Birmingham, Alabama. Well up on the list of her mourners is Mr. Benjamin Walker Underhill, who knew her well as the wife of the late Rev. Holloway Hardcastle of Tulip. Before becoming Mrs. Hardcastle she was the wife of Foster Ampleman who, on his deathbed whispered: "Hattie woman, I'm a-goin' and I want that you should marry the Reverend Hardcastle." She said: "Why, that's mighty generous and thoughtful of you, Foster. I will." And the departing Mr. Ampleman said: "Don't mention it, Hattie woman. The Reverend Hardcastle beat me in a cow trade once."

A BATTLE is being waged almost singlehanded by Mr. Opie L. Shelton, executive secretary of the Orangeburg, South Carolina, Chamber of Commerce. Mr. Shelton strongly objects to the condensation of the word Christmas into Xmas. He objects to the look of the word with the too prevalent idea that it's a hasty modern abbreviation and that anyway it lacks dignity. It's not a hasty modern abbreviation and it shouldn't lack dignity. We've looked it up. You can do it yourself, going no [illegible] than Webster's [illegible]ionary. On his La[illegible]nstantine carried [illegible] Chi, first letter of Christ's name. The early Christians wrote the magic word of their little day—Xmas—on forbidden walls. Nevertheless, we're watching Mr. Shelton's crusade with the hope that if he does nothing else he will prompt many people to think a little less casually about the word Christmas—particularly this year.

MR. HARRY ARKAW[illegible] Angeles, California, is th[illegible] with us his intentions of s[illegible] in the national House of [illegible] tives next fall. Mr. Arkav[illegible] mention to which party [illegible] legiance. We gather th[illegible] matter because his brie[illegible] understood platform ca[illegible] banner. "I pledge," writ[illegible] wane, "that in the even[illegible] is forced into war, I shall [illegible] islation aimed at makir[illegible] easy on the United S[illegible] Forces as possible. A Personal Advantage . . . A National Asset

**IT PAYS TO BUY THE LEADER AND GET THE LEADING BUY**

So pretty, such good company, yet most of the time she was overlooked when party invitations were going out. It might have been different if she paid just a little bit more attention to the "Double O."

**Look Out For "Double O"**

Competition is just as keen in the social world as it is in business, and a girl who is not careful about "Double O" (Offensive-looking teeth; Offensive breath) is certainly trying to go places the hard way.

Fortunately there is a precaution against this double offense . . . a wonderfully delightful precaution which many popular people insist on daily.

**What To Do About It**

For the teeth, the new Listerine Tooth Paste. Here's a dentifrice made especially to help bring out the natural sparkle, the clean, flashing brilliance of your smile.

**New Tooth Paste . . . New Formula**

The new Listerine Tooth Paste is a delightful new formula that attacks cloudy loose deposits, goes to work on dull, dingy teeth. Many say they can actually see its beautifying effects in a surprisingly short time.

And for the breath—Listerine, of course. It halts food fermentation in the mouth, a frequent cause of halitosis (Offensive breath).

**Delightful Daily Double**

If you want to help your personality, don't neglect the "Double O." Start in today with the delightful Listerine "daily double": the new Listerine Tooth Paste for a clean, attractive smile, and Listerine Antiseptic for a more appealing breath.

**Major Alva L. Har... his round-the-wo... seventeen years ... ing his first start. ... the Army World F... that crashed in Ala...**

IN THE spring of 1924 a stouthearted and highly skilled Army mechanic, Sgt. Alva L. Harvey, climbed into the lead plane of the Army World Flight and took off from Seattle for a trip around the world. Major Frederick L. Martin, now Major General Martin, commanding the Hawaiian Air Force, was at the controls, and a few days later the plane was reported missing. The remainder of the flight continued on to Japan and, as you know, two planes eventually circumnavigated the globe. When Major Martin and Sergeant Harvey fought their way out to civilization ten days later, the world learned that their plane had crashed in a fog near Chignik, Alaska.

Sgt. Harvey accepted the Army's offer to go to Kelly Field and learn to fly, and was promoted to second lieutenant.

Not long ago the War Department revealed that an Army four-engined Consolidated landplane bomber had made a complete circuit of the globe, not as a stunt, but to carry to Europe an important American mission. The return journey was made across Asia and the Pacific at its widest part. Back in Washington, where he started from, the pilot stepped onto Bolling Field and wiped away forever 17 years of bitter disappointment. You see, that pilot was Major Alva L. Harvey.

THE young Britisher over the Dutch coast was flying a new Hurricane that mounted four 20-mm. cannon in the wings, and the two Messerschmitts, knowing of his superior fire power, could afford to make only one pass at him and run. Their aim was not very good.

But the wing commander was quick on the trigger and he gave first one Nazi and then the other a "squirt" from his cannon. One began to burn. The Nazi pilot bailed out and the wing commander flew over to take a look at him as he sat helplessly in his parachute harness with his arms upraised in surrender.

Mounted in the Hurricane in line with the guns is a camera that enables the pilot to snap pictures by pressing the gun-firing button on the control stick. Best proof that the wing commander had brought down another Nazi plane would be a photograph of the enemy descending to earth. So he flipped the switch to turn on the camera the trigger. His cannons roa... as the young British pilot "The poor devil never kne... him." You too would be c... you heard the wing comma... that he was not proud of his...

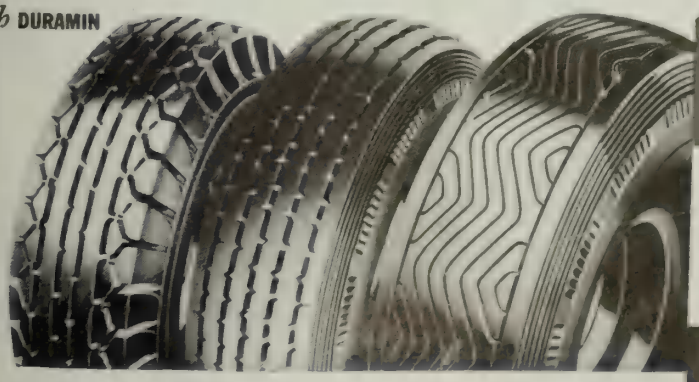
SILV TOWN. Duramin- es t best combination pe, s y, comfort, and ning.



VER VERTOWN. No tod y quicker, or keep fro ids. 20% more th ori l Life-Saver tire. mad

GO AHEAD and tell him, kids! There are plenty of reasons why any smart Santa Claus ought to give his car some new Silvertowns for Christmas. And here's the big Number One reason:

Nobody, not even Santa Claus, knows what the rubber situation may be in a few months. The best way to guess is that tires people buy today will have to last much longer than most folks think. So they ought to be good, tough, hard-wearing Silvertowns.

Every single Silvertown is made with Duramin, the "tire vitamin" that adds miles of wear—keeps the tire safe longer. Always the top tire, Silvertowns are made better than ever now, when Uncle Sam is using thousands of them for defense, and you get the benefit.

Prices are still in line. And you don't have to pay cash, either. All B. F. Goodrich Silvertown Stores, and many Goodrich Dealers, offer the Budget Plan.

B. GOODRICH FIRSTS THAT ARE HELPING TO CONSERVE AMERICA'S VITAL RUBBER SUPPLY

DURAMIN, *the amazing discovery that keeps rubber young, makes tires wear longer, stay safer.*

WHATEVER YOU "DOUSE" WITH... DON'T!

Whether you douse your hair with water or anything else, the result's the same. A flattened-out, unnatural look. To have hair at its handsome, natural best, just comb in a few drops of 'Vaseline' Hair Tonic.

IS *DRY SCALP* ROBBING YOUR HAIR OF SMARTNESS?

SOMETIMES dull, dry hair warns that Dry Scalp has started. Often its beginnings are so gradual they aren't detected. Then itchiness, loose dandruff, and excessive falling hair frequently result . . . yet checking Dry Scalp is easy . . . and better-looking hair your immediate reward. Here's all you do:

**(1) EACH MORNING,** shake a few drops of 'Vaseline' Hair Tonic on your comb and run it through your hair. Make sure you use 'Vaseline' Hair Tonic—its special properties give real protection against Dry Scalp.

**(2) EACH WEEK,** before you shampoo, massage your scalp vigorously with plenty of 'Vaseline' Hair Tonic. Start using it today.

40¢ and 70¢

**'Vaseline' Hair Tonic is different, containing no drying ingredients.**

**By actually supplementing the natural scalp oils, 'Vaseline' Hair Tonic aids in keeping the scalp supple . . . the hair lustrous, well-groomed and natural-looking. Try it!**

THE tom-toms of football fame sound bewildering and ever-changing notes. Their main theme song terminates many of the prepicked champions of September was "Here today and gone tomorrow."

Once again the gridiron champion of 1941 proved to some forty million fans and camp followers how sudden the mental and emotional attitudes of twenty-year-old players can change from week to week.

It is for this reason that so many shifts in national rankings feature the season when so many unbeaten apples tumbled from the pinnacle deep. I mean such overwhelming squads as Texas, Fordham, Stanford and Alabama, which on occasions were sunk without trace by opponents not supposed to be in the class.

Part of mental and emotional origin, at least the reason, the explanation, the alibi offered by coaches for the stunned victims of the upset is that they tell you, "can read a defensive mind on the day of battle."

The present season opened in October as the tom-toms referred to it, noisily for such teams as Texas, Stanford, Fordham, Notre Dame, Alabama, Tulane, Boston College, Santa Clara, Mississippi and a number of others. By the middle of November the only unbeaten teams left were Texas, Duke, Texas A. & M., Stanford and Notre Dame.

There was considerable growling when the new unlimited substitution rule first games were played, but the coaches and officials no longer was lost and the change brought the satisfaction of the majority. This rule took the pressure off slightly injured players, who were given the chance to recover and come in again. There was the usual wailing and teeth-gnashing over the rule that decided more than the contests on decisions that were correctly made or were on the line.

Official mistakes must not be a part of football. It isn't always the fault of those in charge of the game as it is the complications of things brought on by players moving in different directions and tangles where a

**Above, Vincent J. Banonis, center, University of Detroit. Home, Detroit. Banonis was team captain and was a standout rating from all opposing coaches. He is especially fast and alert for a 215-pounder, and is in his third year of starring football**

**Left, Malcolm Kutner, end, University of Texas. Age, 21. Home, Dallas, Texas. A smart diagnostician and a fine receiver of passes, a good defensive end, fast and aggressive, and the unanimous choice of Southwest coaches for All-America selection**

**ON THE COVER OF THIS ISSUE: Frank Albert, quarterback, Stanford University. Home, Glendale, California. Age, 21. A second-year All-America selection, he was Stanford's standout player throughout a season that was even harder than last year's**

penalty could be called on practically every play. The main work ahead of those now handling the destinies of football is to make every possible effort to increase efficiency in this field. It will always be the weak spot of the game, due to the nature of the game itself, but there can be improvement.

There was far less talk about the T formation, featured by Stanford and the Chicago Bears, at the end of this season. A year ago you would have thought it more invincible than the Grecian Phalanx, the British Square and the panzer attack combined. The T formation, to put it briefly, depends more upon quick starting and quick hitting, than on harder blocking. It is nothing new and it still depends upon the type of material at hand.

1941 was a season that brought the attack or the offense back to a new height. Texas ran up 74 points against Rice and S.M.U., two old rivals. Wisconsin's Badgers rushed and passed their way to 68 points against Northwestern, Syracuse and Ohio State, and yet lost all three games. Boston College and Michigan State ran up 77 markers against a Temple team that had won its first five games. It was a sad day for the defense when the offense was allowed to start rolling and get the jump.

There were more than just a normal number of high spots this season. Among the first were the wreaths of wild laurel blossoms that belong to Minnesota and Notre Dame.

In a season loaded with in-and-out play Bernie Bierman's Minnesota Gophers moved along to their seventeenth consecutive victory.

Minnesota again had to be ready for a high-class Washington team on September 27th, and it had to keep on being ready for such blistering attacks as Michigan, Northwestern and Wisconsin had to offer. Fritz Crisler at Michigan with a big, fast line and such stars as Westfall and Kuzma in the backfield, had one of the best teams in Wolverine

SOVFOTO

**Solomon Lozovsky, Vice-Commissar for Foreign Affairs and sole source of news from Russia, greets Harry Hopkins in Moscow. Background, Brig. Gen. McNarney and Mayor Yeaton of the U. S. embassy in Russia**

## By Quentin Reynolds

RADIOED FROM KUIBYSHEV

**Solomon Abramovich Lozovsky, spokesman for the Kremlin, is the main reason you are not hearing much from Russia about her war except that she will fight it out to the bitter end**

THERE are 170,000,000 people in Russia and they speak at least sixty languages and dialects, but today they all speak through one voice—a voice that belongs to a dapper, black-bearded man who once sold matches and lemons on the streets of a small village far from Moscow. Then, a ragged eight-year-old urchin, he was Solomon Abramovich Dridzo. Today, a polished, suave sixty-three, he is vice-commissar for foreign affairs, the spokesman for the Soviet Information Bureau, and is known as Solomon Abramovich Lozovsky. Many years ago he picked his new name from the city of Lozovaya.

The name Lozovsky was hardly known outside of labor circles until the Germans marched into Russia. Then, as spokesman for the Kremlin and as the only official that correspondents have any dealings with, he catapulted into fame and, today, outside of Stalin, Molotov, Voroshilov and Timoshenko, he is probably the best-known Russian in the world. He occupies much the same position in Moscow as Doctor Paul Josef Goebbels occupies in Berlin. There is one difference between them: Goebbels deals in lies. Lozovsky tells the truth. He doesn't tell nearly as much of the truth as we correspondents would wish, but so far none of us have caught the vice-commissar in a lie. He is far too clever and too evasive to resort to the clumsy fabrication of lies in answering questions that policy dictates should be left unanswered. But, unfortunately, correspondents are not inte

# ) FIRE THE WIFE

**eyer Levin**

**She could be a first-rate secretary. Or a wonderful wife. But when she tried to be both at once, you can imagine what happened. Oh, you think you can?**

N Pete and Bennet Pierce : over the Wellington, Cohen Fay agency they had some ringing it back to life. The thers were masters of the al approach. A matter of ance, they agreed, was office So they made some rules: irls must be attractive. tives must engage in no ex- ir activities with the girls. narried man, attached grave to the first rule, because in an office gave the place an ism, and kept the males at est. On their toes. In fact, created a forward and pros- osphere.

Bennet, unmarried, brought hological point that pretty girls sometimes distracted men from their work, but finally agreed that the desire to show cleverness, to excel, which the girls induced, more than compensated for the distraction.

Their second rule was, of course, the generally accepted thing in business offices, in spite of the great American myth about executives and their private secretaries. Any experienced executive would put up all his defenses at the idea of getting involved with a girl in the office. Gives her too much power. Makes her lose respect and efficiency. Also, such an entanglement weakens the boss, in the eyes of the entire force.

Neither Pete nor Bennet found it difficult to keep from getting involved. Pete was quite satisfied at home; and he was also in luck at the office because he drew Miss Mulligan, an efficient and cheerful girl of thirty, still fully within the standards of pulchritude they had set up, and, on the other score, distinctly not interested. She was one of those office workers whose personal lives are a sacrosanct mystery. There was a vague story about a steady arrangement with an interior decorator.

BUT brother Bennet had secretary trouble. He was a difficult man to fit. Probably should have had an academic career instead of going into advertising, though his studious approach was meeting with success.

A secretary for Bennet had to be more than a filing system; she had to be a mind reader. He'd gaze at the ceiling, snap his fingers, trying to remember to whom he wanted to write; the girl would have to know. Also, he had a habit of scribbling notes on the underside of match covers, in a personally invented combination of shorthand and hieroglyphics, which he never could decipher. It was up to his secretary to figure out his notes. Furthermore, a girl for Bennet had to be willing to lead a flexible life in the matter of working hours, because his mind functioned best late in the afternoon; he'd start to dictate campaign projects just before six.

Obviously, the best type of girl for him, in compliance with Rule 2, would have been the secretary that carries a mute love for her boss.

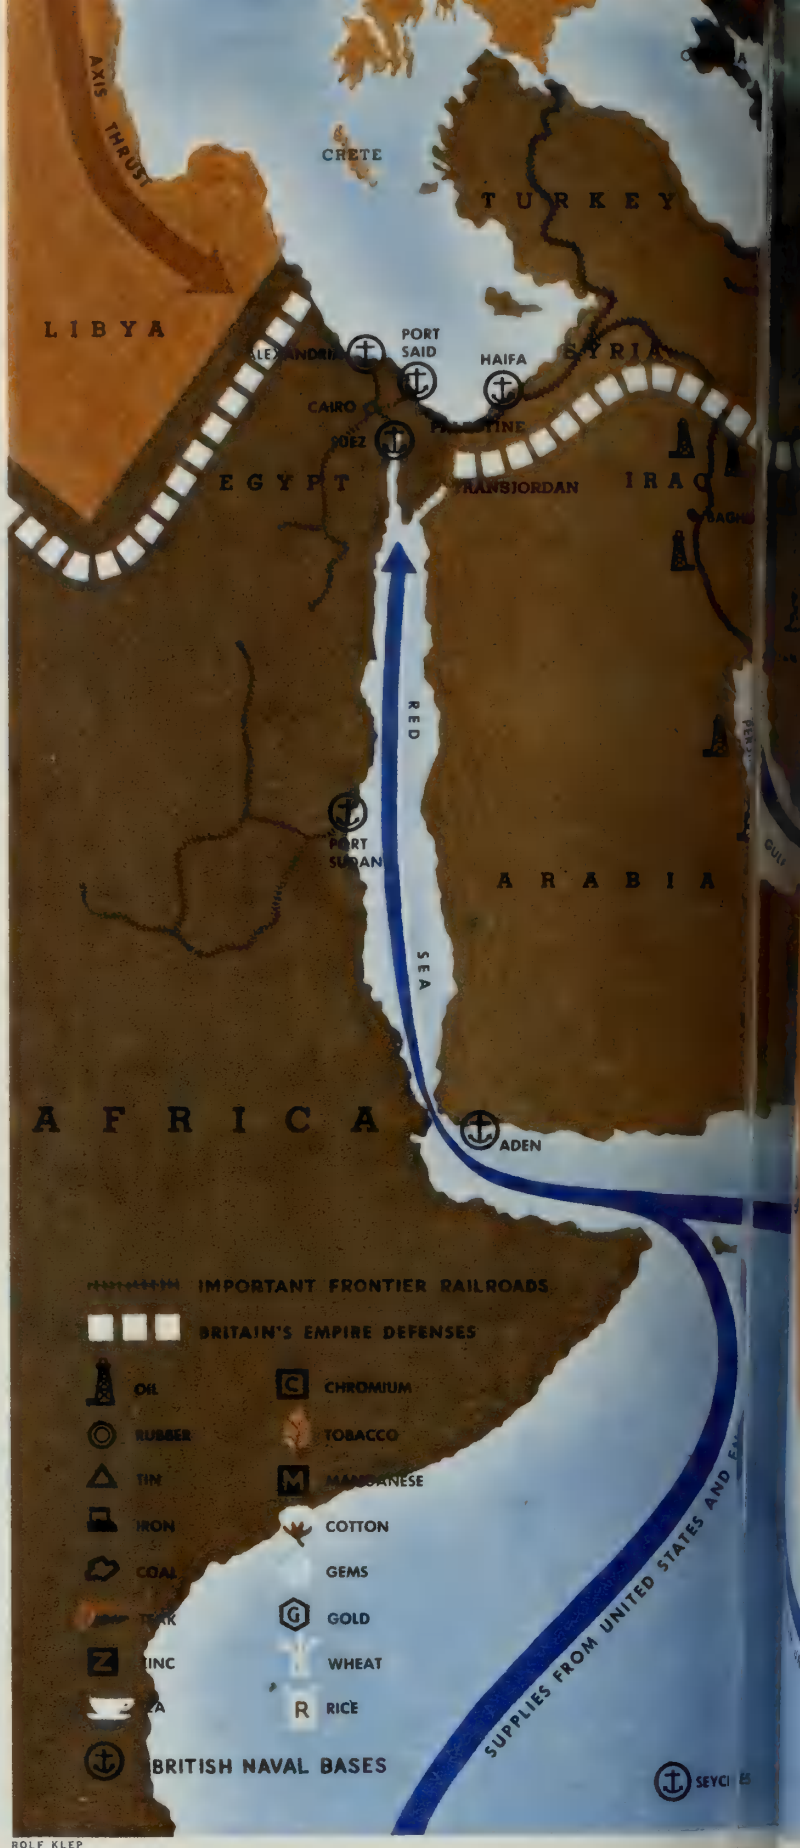
*(Continued on page 47)*

**Time and again, when Bennet needed his secretary, he'd find her on the telephone**

ILLUSTRATED BY EARL CORDREY

WIDE WORLD

**An American tank arrives at Cairo. General Wavell relies specifically on American war materials to enable him to hold the Middle East, India, Burma and Malaya. Below, one of Wavell's native infantry regiments. These men are the tough, bearded Sikhs that form 17 per cent of Britain's Indian army**



BRITISH COMBINE

# The War's Biggest Job

## By Frank Gervasi

**The fabulous lands that supply the world with rubber, tin, teak, jewels—the raw materials of Western civilization—are next on the Nazi list. Wavell's job is to defend them**

ROLF KLEP

THE Wavells have undertaken several jobs of heroic dimensions in their time. One helped to conquer England. Another had a hand in the fashioning of Texas. But it is the contemporary Wavell, an unassuming gentleman with one eye and the benign expression of a blooded spaniel, who has drawn the biggest job fate or man ever assigned any soldier. He has been entrusted with the defense of India, which is to say the defense of the British empire—and more. For India isn't merely the bastion of the empire that Clive built. It's the core of Asia, the Eastern storehouse of the raw stuff of Western wealth.

It's the new battlefield of the war and it reaches from the Mediterranean eastward to the Pacific and from the Urals of Russia southward to Ceylon and the Indies of the East. On this battlefield the destiny of the world may be decided and its defender is General Sir Archibald Percival Wavell. His Tommies call him Archie. His wife calls him Sir Archie.

Back when the Wavells were called De Vauville, after their home town of that name near Cherbourg, in France, there was one called William who marched with a namesake whom history knows as The Conqueror. You can find the name still in the Domesday Book, which is the record of the land surveys of England that The Conqueror ordered in 1085. William De Vauville appears there as a settler and landholder in Devon and Dorset.

Seven hundred and forty years later, in 1825, one Major General Arthur Goodall Wavell received from a grateful Mexican government a grant of several hundred thousand acres lying between the Red River and the Sulphur River. This Wavell had helped Mexico win its independence from Spain and the reward he received was a large piece of what later became Texas. For ten years the region was known as the Wavell Colony and the colonists that Wavell brought into the country were among those who fought for the independence of the state. A Colonel Milam, Major General Wavell's agent, was killed leading a charge of Texans in the battle of San Antonio.

On July 4, 1941, fate and Winston Churchill thrust upon the Texas Wavell's grandson, Archie, an assignment that may raise the name of Wavell to stand with those of Nelson, Clive and Wellington. On that day Archie was ordered to India.

At the time it looked as though Churchill had broken Wavell. Cairo was full of punch-drunk and shell-shocked and Stuka-stupid Aussies and Anzacs who'd survived the hell in Greece and Crete. None blamed Wavell, directly. They just raved about the abysmal orneriness of brass hats. They were loudly candid about wanting to know why only two and a half divisions had been sent to help the Greeks instead of at least ten. Premie Greece had asked for ni vivors of the Balkan can to know why the hundred the British sent with the force were so war-wear down, many of them, befo at the Germans. They lack of guns and the ab sence of any assistance f Air Force. It was the bl Britain's war since Dunk

ter the Crete debacle, we -up was coming. The war ner badly in the western nd the campaign in Syria g along. For days the dn't allow reporters to fact that the Vichyite esisting what was to have march of liberation. And correspondents and of- from the fighting in the knotted around the news by of Shepheard's Hotel the Reuter's teleprinter yellow paper the news as transferred to India. had just returned from series of futile attacks alo-German defenses at Someone, up there, had vo battalions of a certain untry regiment had gotadly. A cerebrally muscle-bound officer had ordered first one and then a second battalion of poorly armed men in Bren gun carriers into action against the enemy's seventy-fives and superior tanks. He'd got his orders mixed, that certain officer. He was to have waited for a signal from the British tanks attacking Fort Capuzzo, when they'd broken the stronghold's defenses.

### Not Directly Responsible

The signal never came. The tanks themselves were turned back by the fort's fire. But the officer commanding the two battalions of tin-plated hay wagons they call Bren gun carriers sent his men in anyhow. It was worse than Balaklava.

Reporters close to events in the Middle East knew that Wavell couldn't be held directly responsible for the series of disasters that befell the British on the Libyan desert and in the Balkans, or for the bungling in Syria. They knew, for instance, that Sir Archie had yielded to advice from London when he about-faced his army after taking Benghazi last winter to send more than half of it to Greece. He wanted to go on to Tripoli.

Italian officers with whom I talked in prison camps told me Wavell could have taken Tripoli, too. There was nothing between Benghazi and Tripoli during the rout of Graziani's Invincibles.

But London had made certain promises to Athens. To have welshed on the Greeks would have raised a storm in the House of Commons at least as violent as the one that followed the defeats in Greece and Crete. And Britain had American "public opinion" to consider. The British High Command and the British government were anxious to preserve the respect of Americans. About 27,000 Australians, New Zealanders and Englishmen—I was not able to obtain reliable figures on how many Greeks—died, or were wounded or captured, as a result.

Reporters knew how poorly armed Wavell's army in the desert really was. They knew that the vaunted British I-tanks weren't worth their sale price as junk. They knew Wavell was undermanned. At one time the British held Egypt with less than 15,000 men and only 87 airplanes. Luckily for the British, the enemy never discovered this.

But Cairo reeled with gossip and

"Sit easy," he said. "Put your hands in your lap. Look down at 'em"

I'M PERFECTLY sure that there are plenty of people who hate to see that evening sun go down, but for me personally the time of day when my troubles seem just almost too much to bear has always come early in the morning, going to work on the 7th Avenue Express. So maybe that was one reason I didn't pay any attention to the man looking at me. My mind was on my troubles. Another reason, of course, was that I was used to having men look at me, because I'm pretty. But mostly I was thinking: Poor me, poor baby, poor little Sue.

Not that there was anything new about my troubles. One thing there'll always be is people in New York, and girls to feel about people the way I felt about Lou. And there'll always be men like Lou, too, with responsibilities back home, and worried about times like these, and not wanting to get married till they are making a million dollars a week, or anyway fifty, and not being willing to have kids till the kids' future is absolutely ironclad guaranteed to the age of ninety-six, and so on. Now no girl believes more than I do in responsibilities, or thinks harder about the times, figuring out where she stands with them, but on the other hand—

I mean, just looking at him did things. That face, all bones and freckles, and hair so close to red it might as well be red, and that walk like he was about to bust somebody in the nose. Wonderful. Vitamins to burn. But a girl can wait just so long, and Lou and I had known each other two years, and almost every time we were together lately we'd had a fight. There'd been an awful one the night before.

SO I guess that was what I was thinking about that morning, whishing and rumbling along on the subway and standing on the platform packed in with a lot of people reading their morning papers. And you know how it is when somebody is looking at you. You finally look at him.

I looked at the man. He was thirty-five or so, and he had on an old tweed suit, and a blue shirt, like a farmer's, very faded, and a black tie he must have tied with his feet, and no hat. He was sort of big and rough-looking, with dark eyes and dark hair, getting thin on top.

The express was coming into 72d Street then, and sometimes I wonder, what if I'd got off and taken the next train? That horrible accident wouldn't have happened to my face—only, of course, it wasn't an accident, but very intentional, and it didn't happen to my *face*, exactly—and there wouldn't have been those pictures in the papers, and, oh, a lot of things.

But I didn't get off, and the train went on, and I looked again and he was still looking and I said, "See anything green, son?"

"Sorry," he said. He moved his hand in the air. "I was admiring the structure of your jaw." Then he smiled and said, "I'm not crazy. Just like to look at people's faces, that's all. Yours is one of the strangest I ever ran into."

"Thanks," I said.

"It's the shape of the jaw, mostly, that makes you smile the way you do. Quite beautiful."

"Oh," I said.

"Nothing personal," he said. "I just happen to be a sculptor."

# Built in a Bathtub

## By Frank D. Morris

**For centuries men have been building ships singly on shipways until this year, when Pete Newell worked out his mass-production building basin. The assembly line has gone to sea at last, to help win the war**

PHOTOGRAPHED FOR COLLIER'S BY W. EUGENE SMITH

**...ips ... the right are nearly completed and ready to be floated out into harbor**

**...rbo...m section of ship is assembled upside down to facilitate welding, then is joined ...ll s...ion in upper part of picture. Note permanent steel keel blocks on basin floor**

YOU don't have to build your ship on an incline, bow high in the air. Your builders don't have to use special "declivity compensation" gauges throughout to allow for that uplift. You needn't spend weeks worrying whether your ship is going to slide down the ways on launching day or refuse to budge and you can forget all about the tons of grease or hordes of bananas, slide accessories. All of these problems vanish if you build your ship in a bathtub.

That's exactly what Pete Newell is doing up in South Portland, Maine; building not one ship but seven simultaneously in his Todd-Bath ship basins. It's one of the most revolutionary steps forward in shipbuilding since steel hulls replaced wooden bottoms. The first chapter of this success story ends with two newborn 10,000-ton freighters floating out on the waters of Portland harbor. Twenty-eight sister ships, born the same way, will follow pronto—on rush order from Britain.

Here's Pete's setup: A concrete sunken bathtub, 750 feet long, about half as wide, has been built on the water front. The bottom of the tub is 16 feet below high tide. One of its long sides is shut off from the harbor by a series of solid-steel gates. Those gates are important—more about them later.

The bathtub (called a building basin) is divided into three compartments. One end section is big enough to handle three of those freighters, and each of the other two sections hold two. All set—let's watch Pete build a ship.

### Lay 'Em Down and Shove 'Em Out

On permanent steel keel blocks the steel backbone of the ship is laid parallel to the basin bottom, as level as a stretch of rail the section hands lay on the main line. Steel ribs are now attached to that backbone and the double bottom takes shape. Gradually ship fitters, welders and riveters, using ordinary builders' gauges, carpenters' levels, etc., add plates, decks and frames until the hull is watertight. Then the scaffolding is removed, the basin is flooded by pumps up to the level of the outside harbor. Traveling cranes lift a pair of the steel gates, a couple of tugs take charge and Pete's ship is not launched, but gently floated out to open water.

Close the steel gates, pump the basin dry and the keel blocks are ready for another built on-the-level freighter.

Now see how the same type of ship is built on ordinary shipways. First the keel is laid on an incline and, from then on, that slope must be reckoned with in every measurement and fitting. Those freakish declivity-compensation gadgets mentioned above are expensive and, in these days of priorities, scarce but they're a must here.

Fitters, riggers and calkers are scrambling all over your ship now, and the raised bow makes every worker feel like a mountain goat. Apparently one leg is shorter than the other.

But soon it's time to get busy with the cradle. This is the toboggan that carries a new ship down the ways for its first splash. The cradle must carry a 10,000-ton vessel smoothly and safely, so it had better be balanced accurately. Or no splash—or much too much splash. Let's explain that.

It takes weeks to design and build that cradle. Yet, occasionally on launching day, when the bottle of triple-sec is given the old heave-o, nothing happens. The ship is a *(Continued on page 29)*

Some of Orn's followers swung up their weapons, and iron clashed hard

# BERSERK

**By Harold Lamb**

ILLUSTRATED BY JAMES E. ALLEN

**Violent courtship of a maid we never heard of by a man who wrote an immortal page in American history**

THAT day Brana heard oars in the firth. She dropped her rake and ran barelegged across the clover fields to her lookout. Here was the place, high up, where she liked to lie and dream and watch the gulls circling over the mist that often hid the bleak coast of Norway.

In this high seat of her own the girl Brana could not easily be found by the people of the homestead. Hiding out here, she could look down at the women of the homestead working among the cattle pens or picking wool, she could listen to the sound of the axes where the men chopped interminably at the timbers in the forest.

For the forest Brana had no love. It was dark, and bears snuffled through it, and in the dimness of the northern nights werewolves might be heard howling there.

She was a Viking's girl, with the colors of gold and fire in her long hair, and the blue of deep water in her eyes. Moreover, she was now fifteen winters of age, and many girls of the coast had gone to their bride bowers after fourteen winters. But she thought that the youths who came in to Orn's Firth had thin beards and a small way of doing things. They brought hewn timbers down from the forest to the water of the inlet, or they fetched in fish from Lofoten.

It pleased her better when warfarers came in from the long ways of the sea, to shelter themselves at the homestead and drink beer with her uncle Orn. These warfarers often gave her bits of bright silk for her garments, and carved ivory, and they had tales to tell, while she poured their beer, of raiding and burning. Although her uncle Orn would shake his head in his stubborn way, saying that she would not be so pleased when she knew more of war or the men who fared forth to it. Wait and learn, he said to her, blinking wisely. Orn, being old, did not know that Brana was waiting for the day when a tall man might come into their gray inlet, to refit his long ship, and would look upon her and demand her for his bride to carry off to his homestead, wherever that might be. . . .

That morning she saw a dragon ship coming out of the mist, into Orn's Firth.

No ordinary Viking long ship this. Painted war shields lined its rails. The dragon's head above its prow gleamed with silver. A good ship, she thought, and it must have on it a man of mark. The blood throbbed in her body when she ran to tell Orn.

"Ho, redhead," he laughed at her, "you have been dreaming again."

"It is you who sleep, Orn," she cried, "here in the hay when you have a great guest to greet."

She ran by the cattle pens to the women's sleeping room of the homestead. She put on the blue cape that matched her eyes, in such a way that the mends did not show. Clasping it with the silver clasp, she wished that she had at least one gold ring for her slender arms. And she persuaded Ingiald the maid to comb her hair smooth, without braiding it. After this, in her excitement, Brana forgot to put on her shoes and ran barelegged down to the landing place.

There she saw that the strangers had come for trading.

The homestead men were carrying down piles of wool, and casks of honey, and bearskins for trading. Brana had eyes only for the man from the dragon ship. Tall he was, with a bold swing to his shoulders, and laughing eyes. Edging closer, she heard his name spoken, Hrolf the Gautlander, the Earl's man, who had made the voyage over from Gothland. His weapon men looked hard as broken ice, coming down the landing plank in their gray iron shirts and wolfskins. Yet their landfall had been friendly enough, with the peace flag flying over them.

NOW Hrolf stood on the shore examining the trade goods Orn set before him. "Have you no wine?" he asked, looking for more than he saw.

"We make only beer," said Orn placidly, as his homesteaders set down more goods—wood carvings and piles of dried Lofoten fish.

"My followers are thirsty [illegible] wine Hrolf smiled. Then he looked [illegible] Bran and looked at her again. Whe[illegible]e lov[illegible]ered her head modestly, she [illegible]overe[illegible] that she had not put on her sl[illegible]s—sh[illegible] a woman of fifteen winters [illegible]od b[illegible] fore a mighty seafarer like a [illegible]elegg[illegible] child. Her face felt hot with s[illegible]ne.

"We make only beer," [illegible]d O[illegible] proudly. "And it is good enou[illegible]."

Brana thought otherwise. [illegible]er a[illegible] bearskins, honey and wool, th[illegible] thin[illegible] of the homestead did not se[illegible] to b[illegible] good enough to lay before sea[illegible]ers.

The smile went out of H[illegible]'s fa[illegible] He stared at Orn.

"If you do not like it, Ga[illegible] ande[illegible] Orn rubbed his beard. "I ca[illegible] ot he[illegible] that. You can drink with me[illegible] not[illegible] seems best to you."

"Do you think yourself," [illegible]oli d[illegible] manded quickly, "as good a [illegible]a as m[illegible] homesteader?"

"Certainly," said Orn, who[illegible]as stu[illegible] born about such matters.

Hrolf grew pale in the fac[illegible] and t[illegible] gold rune ring moved on his [illegible]. "Th[illegible] is bad to hear," he said.

His arm pulled the sword[illegible]om f[illegible] sheath at his hip, and he step[illegible]l towa[illegible] Orn. His arm thrust hard, an[illegible]e swo[illegible] point came through the shi[illegible]at On[illegible] back. Orn laid hold of the sw[illegible] in fro[illegible] of him, and dropped down t[illegible]s kne[illegible] A man howled like a wolf.

The homesteader near[illegible] Bra[illegible] dropped the wool he was carr[illegible]g. "*Berserks-gang!*" he cried.

Berserk rage. Brana saw [illegible]olf's f[illegible] lowers leap high in their wolf[illegible]ns. Th[illegible] caught at their weapons an[illegible] truck[illegible] the startled men in front of t[illegible]m. Th[illegible] howled and they struck. E[illegible]ha co[illegible] not stop looking, nor could sl[illegible]nove [illegible] legs.

Running forward, the gra[illegible]hen fr[illegible] the ship grasped at the h[illegible]steade[illegible]

BILL GORDON walked across the d so that he could get a better view of tourist camp. The sign said:

THREE PINES MOTEL
AIR CONDITIONED CABINS
MEALS — MUSIC

ins were new and white and immacue was a main building, which Old Bill Lodge where Ma Gordon did the fancooking on Route 66. The "music" on the sign was a juke box.

ery late afternoon when the car ar- Bill poked his head inside the kitchen aid, "Hey, Ma, look what we got."

ey had was a bridal couple. You iss it. They had tried to rub out the s on the side of the car, but you could Just Married." . . .

ng man got out. He was medium size built, and with a blond, healthy look ill liked. The girl was nice, too: Big and wavy black hair and the lightest, in he'd ever seen. The young man Old Bill and asked, "Have you got ies?" and Old Bill said, "We sho C'mon into the office."

sat himself down behind the desk l the young man where to register. man signed, MR. AND MRS. STEERTS, and wrote down the name of ey'd evidently got married in. Then ght past Old Bill and said in a tight, e, "We'd like two cabins."

always prided himself on being able retty near anything that came up. e he got caught with his guard down he knew he'd said anything, he reword *"Two?"* in a voice which was with surprise.

berts said, "That's right. *Two* cabOld Bill said, "Gosh . . ." and then Well, of course, son, if that's what . ." and the boy said that was just t he wanted.

Bill went outside to show the young arage to drive into he wanted to get and tell her what was happening. ied his bride's things into one cabin into the other. Old Bill heard him ou have dinner with me?" and her oice saying, "I think I'd rather not,

went inside and told Ma about it, "Land o' Goshen, Bill . . . that ain't

ost dark now. The bridegroom came bled off along the highway.

en o'clock the tourists started drifte Lodge for food. After a while, the in and took a seat at the counter. a sandwich and a cup of coffee and ouched the sandwich.

put a nickel in the juke box, and started to dance.

er, Jimmy Dawson came in. Jimmy ld Bill. He was a nice boy: big and nd full of fun.

ings started, it really wasn't Jimmy ult. Jimmy wasn't shy, but he either. He was even blushing a litidled over to where the lonely little ting and said, "Excuse me, ma'am, nderin' if you maybe might like to

up, sort of startled and said, "No, and Jimmy said, "I didn't mean no ," and then the bride looked out screen door and saw her husband nd she said suddenly, "Well, why fore you could say Jack Robinson ncing.

uld have stopped it if he could, but too late. Steve Roberts came in front door, and you could see that he was mad all through. He walked across the floor and stepped in the way of Jimmy and the girl. He said, "All right, Buddy. That's enough."

Jimmy stopped dancing. He grinned and said. "What's eating on you, feller?" and Steve answered, "You're not dancing with her any more."

Those who knew Jimmy Dawson could tell you that he was never one to enjoy being pushed around. He said. "Get away from me, Mister. I don't like you."

He held out his arms to the girl. She stepped into them. And that was when Steve boiled over. He clenched his fists and let Jimmy Dawson have it.

Jimmy ain't in the habit of taking anything from anybody. He shoved the girl aside, brought his right up from somewhere near China and it exploded against the bridegroom's jaw.

Steve Roberts went down and stayed down. Old Bill grabbed Jimmy and hustled him outside.

Things were happening. The bride was kneeling beside her husband. She was crying and saying silly, foolish, sweet, bridey things. Old Bill pitched in, saying he was awful sorry and for her not to worry because Steve wasn't hurt bad. and she said, "Help me! Help me, please. . . ."

So Old Bill picked Steve up and carried him into his cabin and the girl came in, too. They laid him on the bed, and Old Bill said he'd go get some ice, and when he came back Steve was sitting up and shaking his head and his bride was holding his hands and they were looking at each other sort of like *that*, and Old Bill said, "I reckon he's all right now, Miss," and the girl said she figured he was, and then Old Bill went back to the Lodge to apologize to the other guests for the brawl. . . .

YOU get up awful early when you run a tourist camp. Before the day was real bright, Old Bill was puttering around, when the door of Steve Roberts' cottage opened.

Steve came out of that cottage. So did his bride.

The sun was coming up over the folded hills, and it shone, all rich pink and gold, on the young faces of Mr. and Mrs. Roberts. They said good morning to Old Bill and seemed a little embarrassed and very happy as they stowed their nice, new bridal luggage in the back of the car. Steve backed out onto Highway 66. Then he headed west; headed into the mountains for the honeymoon they'd dreamed about.

Old Bill sighed and walked out toward the gas pumps. Jimmy Dawson was there, waiting for him.

Old Bill told Jimmy off. Good and strong. He said it was all Jimmy's fault. . . .

"But it wasn't," defended Jimmy. "It wasn't my fault at all."

"No? I suppose you couldn't have figured out that there was some tie-up there."

"I didn't have to figure it," said Jimmy. "I knew already she was his wife. You see, that feller Steve—he met me down the road and told me all about it. He said he was desperate. So he asked me as a favor wouldn't I please get in a fight with him and beat him up."

Old Bill had trouble digesting that. Then his lips creased into a smile. After that he laughed and said, "You might have told me that last night, Jimmy. I turned down a chance to rent the cabin they forgot to use."

Old Bill walked away. He was thinking of a new sign he might put up in front of his place, only he decided against it because he figured it wouldn't make sense except to himself and Jimmy Dawson.

The sign he'd thought about would have said:

SERVICE WITH A PUNCH

# Alder Gulch

## By Ernest Haycox

ILLUSTRATED BY
WARREN G. BAUMGARTNER

*The Story Thus Far:*

SHANGHAIED in San Francisco, and taken on board a ship to Portland, Oregon, Jeff Pierce is attacked by the captain of the vessel with a pistol. In self-defense, he strikes the fellow with a belaying pin; after which he swims to shore. The captain, knocked unconscious, dies.

While wandering through the streets of Portland, Pierce is approached by a girl, who tells him that she must get out of the town, undetected; and that she wants him to pose as her husband and take her away—anywhere!

Liking the girl (whose name, she says, is Diana Castle), Pierce succeeds in boarding a vessel with her. It is 1863; a rich "strike" has recently been made at Alder Gulch, where the pioneer town of Virginia City is rapidly rising. Pierce and his "wife" make their way toward Alder Gulch.

In The Dalles, Pierce becomes involved in a fight with a man known as "Rube" Ketchum. While Ketchum's closest friend, George Ives, looks on, Pierce gives the man a terrific beating. . . . As they proceed toward their destination, Pierce and Diana see quite a bit of Will Temperton, a professional gambler, and his young daughter, Lily Beth; and Diana mothers the girl. Others whom they encounter are: Lil Shannon, a flashily garbed, free-and-easy woman of the frontier; Ollie Rounds, an uncommunicative redhead who will not discuss his past; and Ben Scoggins, who hopes to make a fortune as a trader in Alder Gulch.

In Lewiston, Pierce enters a gambling establishment, where he again meets George Ives. Ives, in a belligerent mood, taunts Pierce into a fist fight; and Pierce gives him a drubbing. A short time later, Pierce sees on the street a man whom he recognizes as Sitgreaves—the dead captain's brother. Certain that Sitgreaves is pursuing him, and not wanting to kill another man, Pierce slips out of the town; again, he is accompanied by the girl.

Riding horses that Pierce has acquired, the two young people reach Virginia City in fourteen days. There, surrounded by feverish activity (the place is swarming with prospectors, gambiers and adventurers of all types), Diana feels sure that she can now make her way alone. They part company, and Pierce, turning a corner of the town, sees a saloon's sign on a wall: "Jack Tanner's." Adjoining the saloon is a hurdy-gurdy house. From the house come the strains of music—and the brief, calculated laughter of the dance-hall girls.

### III

BARNEY MORRIS came into the Pantheon during the shank of the evening and placed himself at the bar. Barney, once a merchant in Ohio, was a chunky man whose ruby face was framed in fatherly mutton-chop whiskers. Barney was one of the redoubtables of the Gulch, early arrived on the scene and the possessor of a claim straddling Alder Creek half a mile above discovery.

The Pantheon stood on Wallace Street, newly thrown together from alder logs and brush and mud. A bar skirted the edge of a dance floor on which miners broke the day's work by whirling their favorite girls at a dollar a throw. On a raised platform at the far end of the room the fiddles and guitars pitched into a quadrille with the announcer singsonging the figures through his nose.

Barney weighed out his dollar's dust on the bar scales and got his ticket. The music came to a dead halt, the announcer cried, "Promenade!" and the ladies led their gentlemen promptly toward the refreshments which, at fifty cents a glass, ended every dance set. The miners took their whisky straight, while the ladies, to whom this was a routine part of the night's business, drank ginger beer and moved back to the floor to await the next partner and the next set. Barney at once sought out Lil Shannon, gave her his ticket and squared himself away like a wrestler.

"You've been away," said Barney. "I've missed you."

"I took a trip to Portland," said Lil. "How's things?"

"Fair," said Barney.

"You've got a fortune out of that claim, Barney. Don't tell me"

But Barney was closemouthed about his affairs, and although Lil Shannon was an old friend he only grinned. Lil said, "Written to your wife lately?"

"Sure. She sent me a tintype of Bill the other day. Tall as I am now."

"Barney," said Lil, now completely serious, "you've made your stake stay here too long or the toug knock you over the head some

"Going home," said Barney couple months."

The announcer yelled, "Gen claim your partners!" The music into a waltz tune, and Barney, death about this business, sei Shannon and whirled her around. ing his boots at every second swi room grew warm as all these burned men, stained with the clay of the diggings, shaggy-hai short-tempered, wheeled and and wheeled. The ladies were customed to twenty dances a n deftly maneuvered beyond th feet of their partners. Lil laughed at Barney's dead-set ex and the steady motion of his li counted the waltz rhythm. # The Pied Piper

## By Nevil Shute

ILLUSTRATED BY HARRY BECKHOFF

*The Story Thus Far:*

WHEN his only son, a member of the Royal Air Force, is killed, John Sidney Howard, a retired English barrister, leaves England and goes to France. There, in the placid village of Cidoton, he tries to find peace, forgetfulness.

A few weeks later—while the Germans are driving into France—he begins the difficult trip back to England (difficult, because most of the trains have been commandeered by the army, and the roads—frequently bombed—are congested with soldiers and refugees). When he starts, he is accompanied by two English children: Ronald and Sheila Cavanagh, whose parents, unable to leave France, wish them to be in their homeland. Later—in the course of an arduous journey toward the Channel, he picks up three other young people: Rose, a little French girl whose father is in London; Pierre, a lad whom he finds, terrified, speechless, beside a bomb-shattered road; and Willem Eybe, a seven-year-old Dutch boy who, somehow stranded in France, is suspected by the simple folk around him of being a German—and a spy!

Howard is an old man; he is nearly seventy. When, at last, he and his small charges reach Chartres, he is exhausted. Realizing that he is in peril (the Germans have occupied Chartres), he goes to the flat of the Rougerons—Colonel Rougeron, of the French army, his wife and his daughter—whom he had met while vacationing with his son, John, at Cidoton, before the war.

Nicole, the daughter, and Madame Rougeron give him a warm welcome. They tell him that the colonel is at the front; they make some plans for him—accompanied by Nicole and the children, he is to go to the home of Jean Henri Guinevec, a fisherman who lives in Finisterre and who may assist the little party in slipping aboard an England-bound boat.

The next day they leave Chartres—the old man, Nicole and the little ones. Howard (wearing some old clothes that the girl gives him) pretends to be a stupid old man—Nicole's aged uncle. They reach Rennes, find their way to a refugee hotel. There—after the children have been put to bed—Howard tells Nicole, "I lost my son. He was killed flying—he was a squadron leader with the Royal Air Force. He was shot down—over Helgoland."

"I know," the girl says gently. "They wrote me from the squadron."

### VII

THE cinema was half full of people, moving about and laying down their mattresses for the night. The air was full of the fumes of the cooking stove at the far end, and the smoke of French cigarettes; in the dim light it seemed thick and heavy.

Howard glanced toward the girl. "You knew my son as well as that, mademoiselle?" he said. "I did not know."

In turn, she felt the urge to talk. "We used to write," she said. She went on quickly, "Ever since Cidoton we used to write, almost each week. And we met once, in Paris—just before the war. In June, that was."

She paused, and then said quietly, "Almost a year ago today."

The old man said, "My dear, I never knew anything about this at all."

"No," she said. "Nor did I tell my parents."

There was a silence while he tried to collect his thoughts and readjust his outlook. "You said they wrote to you," he said at last. "But how did they know your address?"

She shrugged her shoulders. "He would have made arrangements," she said. "He was very kind, monsieur, very, very kind. And we were great friends. . . ."

He said quietly, "You must have thought me very different, mademoiselle. Very rude. But I assure you, I knew nothing about this. Nothing at all."

There was a little pause.

"May I ask one question?" he said presently.

"But yes, Monsieur Howard."

He stared ahead of him awkwardly. "Your mother told me that you had had trouble," he said. "That there had been a young man—who was dead. No doubt, that was somebody else?"

"There was nobody else," she said quietly. "Nobody but John."

She shook herself and sat up. "See," she said, "one must put down a mattress or there will be no room left by the wall." She got to her feet, and stirred him, and began to pull down one of the sacks of straw from the pile. He joined her, reluctant and confused, and for a quarter of an hour they worked, making their beds.

"There," she said at last, standing back to survey their work. "It is the best that can be done." She eyed him diffidently. "Will it be possible for you to sleep so, Monsieur Howard?"

He said, "My dear, of course it will."

She laughed shortly. "Then, let us try."

Over the mattress he stood looking at her, blanket in hand. "May I ask one more question?"

She faced him, "Yes, monsieur."

"You have been very good to me," he said quietly. "I think I understand now. That was because of John?"

There was a long silence. She stood looking out across the room, motionless. "No," she said at last. "That was because of the children."

He said nothing, not quite understanding what she meant.

"One loses faith," she said quietly. "One thinks that everything is false, and bad."

HE GLANCED at her, puzzled. "I did not think there could be any one so kind and brave as John," she said. "But I was wrong, monsieur. There was another one. There was his father."

She turned away. "So," she said, "we must sleep." She spoke practically, almost coldly; it seemed to the old man that she had set up a barrier between them. He did not resent that stood the reason for her cu did not want to be questione She did not want to talk.

He lay down on the matt the rough, straw-filled pillow the blanket around him. The down upon her own bed on th of the children.

Howard lay awake, his m mult. He felt that he had there had been something b girl and John, yet that kno not reached the surface of hi looking back, there had bee all the time that he had bee in the flat.

HOW close had their frier then? They had writte each other; on top of that it they had met in Paris just war. No breath of that had previously. hip may take to the water too gain this is not a frequent , but Maine shipbuilders still hen you mention the launch- trawler at Bath. After hitting the trawler snapped her d went on the loose, almost direct hit on the understruc- ant bridge.

a single ship in a basin is w. The Navy has turned out and cruisers that way, and ,000,000 building basin was mpleted at the Philadelphia . In effect a basin is the same ck.

r before has mass production ed to basin building. And in needs plenty of bottoms , speed in building is vital. ish order was more than a Pete Newell, president of ath Iron Shipbuilding Com- so gave him an opportunity a theory he happened on in the first World War.

### Help From Nature

dd years ago Pete Newell him William S. for long) romontory overlooking Port- . The postwar shipbuilding n, but Pete, who had started ater back in 1898, was still r the perfect shipyard. That d it. As his eyes swept the t they widened when the and cape came into focus. housing several small ship- d off into the harbor.

hunch, but a worth-while dings were taken and they nature had formed a large cket of rock at this spot in The pocket was lined with f clay. That proved it was r a building basin. Just offerdam, or earthen dike, site to isolate it from the ge out the clay, pump out ide and there was a sunken tle or no expensive blasting eded. No, simply concrete depression at the South e, install the steel gates -there was a dry-dock- n and nature had supplied r and materials.

p-basin hunch slumbered along until 1938—twenty long years—when it awakened and went on an express-train schedule:

July, 1938—Soviet Naval Commission visits U. S. to order a wow of a battleship built here. Specifications: 80,000 tons, 18-inch guns and apparently to be skippered by Superman himself. Shipbuilders, recalling that our pride, the North Carolina then building, was to be only half that size, shook their heads.

July, 1938—Pete Newell accepts Soviet order; hastens to get $500 option on South Portland cape. Renews option twice at $500 per renewal of his own cash while Moscow dickers.

August, 1939—Russia signs pact with Germany alleging mutual peace. Soviet Naval Commission phones Newell long-distance, same day, to close battleship deal. Newell, having read the headlines, says no thanks, I'm building no ships for Hitler or his pals.

August, 1939, to October, 1940—Just option renewals.

November, 1940—British Purchasing Commission arrives to place orders for sixty cargo ships, delivery in 1942. Commission shops around for six weeks on both coasts, then takes ship for England. Chairman C. L. V. Thompson tells Newell, competing bidder, he'll let him know.

December, 1940—Ship commission sailed on is torpedoed. Chairman Thompson, Newell's contract in his pocket, drifts in a lifeboat for eight hours before being rescued. Contract dry enough for London headquarters to approve and sign.

December 20, 1940—London phones Newell to go ahead.

December 21, 1940—Steam shovels, graders go ahead clearing forty acres of South Portland Cape.

May, 1941—First keel laid.

June, July, 1941—Six remaining keels laid. Basins operating on three daily eight-hour shifts.

November, 1941—First two ships floated out to fitting pier for final tailoring. Basin pumped dry and new keels laid for eight ships.

January, 1942—(Scheduled) First of sixty new ugly ducklings steams out of Portland harbor, eastbound with ten thousand tons of supplies for Britain.

That briefly is the history of a modern shipbuilding miracle performed in less than a year. It's the story of a practical visionary who discovered that you don't necessarily have to build ships the hard way, on stilts, and proved it.

Continued from page 26

place was all astir; there was no chance of any further sleep. He got up and straightened out his clothes as well as he could; he felt dirty and unshaven.

The girl got the children up and, with Howard, helped them to dress. She, too, was feeling dirty and unkempt; her curly hair was draggled, and she had a headache. She would have given a great deal for a bath. But there was no bath in the place, nor even anywhere to wash.

Ronnie said, "I don't like this place. May we sleep in a farm tomorrow?"

Rose said, "He means tonight, m'sieur. He talks a great deal of nonsense, that one."

Howard said, "I'm not quite sure where we shall sleep tonight. We'll see when the time comes."

Sheila, wriggling her shoulders in her bodice, said, "I do *itch*."

There was nothing to be done about that. To distract her mind Howard led her off with the other children to the end of the hall where the German cook was dispensing mugs of coffee. With each mug went a large, unattractive hunk of bread. Howard left the children at a trestle table and went to draw their bread and coffee.

Nicole joined them as he brought it to the table and they all had breakfast together. The bread was hard and tasteless and the coffee bitter stuff with little milk.

PRESENTLY they left the Cinema du Monde and, pushing the pram before them, made their way toward the railway station. The town was full of Germans parading down the streets.

At the station they passed the barrier without difficulty, surrendering their billeting pass to the German officer. They put the pram into the baggage wagon on the train for Brest and climbed up into a third-class carriage.

It was only when the train was well upon the way that Howard discovered that *la petite* Rose was nursing a very dirty black and white kitten.

Nicole was at first inclined to be sharp with her. "We do not want a li she said to Rose. "No, truly v want that cat or any other must put him out at the next

wayside halts they did not seem to worry about passengers leaving the station.

Nicole drew Howard's attention to this feature. "It is good, that," she said. "At Landerneau it may be possible to go through without questioning."

He said, "Where are we going to tonight, mademoiselle? I am entirely in your hands."

She said, "There is a farm, about five miles from Landerneau, to the south. Madame Guinevec, wife of Jean Henri—that was her home before she married. I have been there with my father, at the time of the horse fair, the fete, at Landerneau."

"I see," he said. "What is the name of the people at the farm?"

"Arvers," she said. "Aristide Arvers is the father of Marie. They are in good circumstances, you understand. Aristide is a careful man, my father used to say. He breeds horses a little, too, for our army. Marie was Queen of Beauty at the Landerneau fete one year. It was then that Jean Henri first met her."

He said, "She must have been a very pretty girl."

"She was lovely," Nicole said. "That was ten years ago. She is still beautiful."

It was four o'clock when the train pulled into the little station of Landerneau. They tumbled out of the carriage with relief, Nicole lifting each child down onto the platform except Ronnie, who insisted on getting down himself. They fetched the pram from the baggage car and put the remainder of their lunch in it, with the kitten.

There was no guard at the gate, and they passed through into the town.

LANDERNEAU is a little town of six or seven thousand people, a sleepy little place upon a tidal river running to the Rade de Brest. It is built of gray stone, set in a rolling country dotted round with little woods; it reminded Howard of the Yorkshire wolds.

The town was sparsely held by Germans. Their lorries were parked in the square beneath the plane trees by the river, but there were few of them to be seen.

Unchallenged, Howard and Nicole walked through the town and out into the country beyond, upon the road that led toward the south. They went slowly for the sake of the children; the old man was accustomed now to the slow pace that they could manage. The road was very empty and they straggled all over it at will. It led up onto the open wold.

Rose and Willem were allowed to take their shoes off and go barefoot, rather to the disapproval of Nicole. "I do not think that that is in the part," she said. "The class which we represent would not do that."

The old man said, "There's nobody to see."

She agreed that it did not matter much, and they went sauntering on, Willem pushing the pram with Pierre.

They walked in silence for a time. Pierre and Willem tired of pushing the pram and gave place to Rose, with Sheila trotting at her side. The kitten lay curled up in the pram, sound asleep.

Presently Nicole pointed ahead of them: "That is the house—amongst those trees."

The house that she pointed to lay about a mile ahead of them. It seemed to be a fairly large and prosperous farm, grouped around a modest country house standing among trees as shelter from the wind. About it rolled the open pasture of the wold, as far as could be seen.

In half an hour they were close up to it. A long row of stabling showed the interests of the owner; there were horses running in the paddocks near the farm. The farm buildings were better kept and laid out than the farms that Howard had had dealings with upon his journey; this was a cut above the usual run of things.

They went up to a house that stood beside the entrance, in the manner of a lodge; here Nicole inquired for M. Arvers. They were directed to the stables; leaving the children with the pram at the gate, they went forward together.

They met their man halfway.

Aristide Arvers was a small man of fifty-five or so, thin, with sharp features and a shrewd look. Howard decided at the first glance that this man was no fool. And the second thought that came into his mind was realization that this man could well be the father of Miss Landerneau. The delicate features, sharpening by advancing age, might well be fascinating in a young girl.

He wore a shapeless black suit with a soiled scarf wrapped around his neck in lieu of collar; a black hat was on his head.

Nicole said, "Monsieur Arvers, do you remember me? You were so kind as to invite me here one day, with my father, Colonel Rougeron. You showed my father around your stables. After that you entertained us in your house. That was three years ago—do you remember?"

He nodded. "I remember that very well, mademoiselle. M. le Colonel was very interested in my horses for the army, being himself an artillery officer, if I remember right." He hesitated. "I hope you have good news of M. le Colonel?"

She said, "We have had no news for three months, when he was at Metz."

"I am desolated, mademoiselle."

She nodded, having nothing much to say to that. She said, "If my father had been at home he would, no doubt, have come to see you himself. As he is not, I have come instead."

His brows wrinkled slightly, but he bowed a little. "That is an added pleasure," he said perfunctorily.

"May we, perhaps, go to your office?"

"But certainly."

HE TURNED, and led them to the house. There was a littered, dusty office, full of sad-looking account books and files, with bits of broken harness thrown aside in corners. He closed the door behind them, and gave them rickety chairs; there being no other seats he leaned backward against the edge of the desk.

"First," said the girl, "I wish to introduce you to Monsieur Howard. He is an Englishman."

The horse breeder raised his eyebrows a little, but bowed ceremoniously.

Nicole said, "I will come directly to the point, Monsieur Arvers. Monsieur Howard is a very old friend of my family. He is traveling with several children, and he is trying to return to England in spite of the Ge

# "If I were you," warned Elsie, "I wouldn't be sticking my neck out!"

THE TURKEY stared reproachfully at Elsie, the Cow, and then retorted:

"Overlook your crude choice of words and simply because it is the season when I really get to be appreciated, there's a rising tide in my favor—I can see it in the corners of their mouths," agreed Elsie. "Of course it's a kind of enthusiasm I'm quite familiar with, you know, in connection with my milk."

"Your milk!" scoffed the Turkey. "Surely folks don't get excited about anything very special about *that!*"

"Certainly do, my chesty friend," asserted Elsie. "Not just now—but all the year round. They know in the Army that Borden experts and scientists are making Borden's Milk, as well as the flock of grand products that are made from that milk, is always good for you."

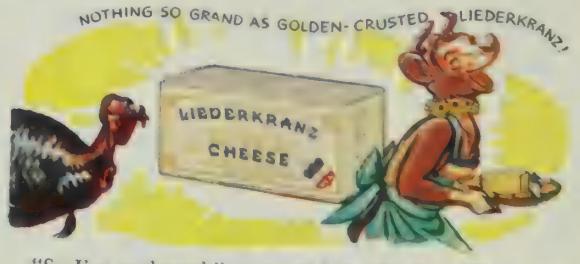
"Indeed, my good woman," gobbled the Turkey sarcastically, "I realize you're more or less useful. But, does anyone actually rate any of your contributions as a matter of importance?"

"You bet your gizzard they do!" Elsie replied enthusiastically, not noticing how the Turkey winced. "Why, *Borden's Ice Cream*—smooth, pure, luscious, because it's made from such grand milk and cream—is hailed with glee by folks from 9 months to 90 years old."

"Probably just a passing fad," pooh-poohed the Turkey. "Nothing permanent, like *my* standing in the community."

"*You* should live so long," remarked Elsie. "There's never any slack season in the popularity of *Borden's Irradiated Evaporated Milk*, either. It's the secret of

elegant cream soups and fluffy mashed potatoes. And it's so digestible and rich in vitamin D that doctors approve it for babies."



"Kid stuff, eh?" sneered the Turkey, getting a little redder in the face.

"Yes," beamed Elsie, "most Borden products do go great with kids—and grownups, too. *Borden's Eagle Brand Sweetened Condensed Milk* helps to make cookies, candies, and marvelous cake frostings that tempt every size of mouth."

"Let me remind you," puffed the Turkey proudly, "that *I'm* an honored American institution!"

"So is Borden's," Elsie pointed out, "and so is one of the most popular of the distinguished family of *Borden's Fine Cheeses*—creamy, golden-crusted, rich-flavored *Liederkranz*. I'm really quite proud of it . . ."

"So I've gathered," sputtered the Turkey. "You seem to take credit for just about everything that's good."

"Don't be so stuffy—you'll be that way soon enough," smiled Elsie. "There are *some* delightful foods that don't happen to be made from my milk."

The Turkey ruffled its feathers smugly: "You're finally going to admit that I really am the holidays' big shot?"

"Oh, you're all right—you're fine, in your place," assured Elsie. "But you've got to admit that topping you even at your star appearance is something that's the result of Borden care and skill. It's the extra luscious, spicy pie that's made with *Borden's None Such Mince Meat*—whose juicy fragrance says 'holidays' like nothing else!"

"You Bordens certainly think a lot of yourselves!" the Turkey gobbled furiously.

"Keep your wattles on, my friend," Elsie soothed. "It's all the people who rely on Borden's that think a lot of us. They're the ones who are first to tell you . . . *'if it's Borden's, it's GOT to be good.'* "

"But how can you possibly know that? Your daughter may find it very inconvenient to have them."

He shook his head. "I don't think so. But if that should be so, then she would make arrangements for them for me. She would engage some kind woman to make a home for them, because that is my wish, that they should have a good home in America—away from all this." He motioned with his hand. "And there is no difficulty over money, you understand."

The Frenchman sat silent for a little time, staring into his glass.

"This is a bad time for children, this filthy war," he said at last. "And now that France is defeated, it is going to be worse. You English now will starve us, as we starved Germany in 1918."

Howard was silent.

"I shall not blame your country if you do that. But it will be bad for children here."

"I am afraid it may be," said the old man. "That is why I want to get these children out of it. One must do what one can."

Arvers shrugged his shoulders. "There are no children in this house, thank God. Or—only one." He paused. "That was a hard case, if you like."

Howard looked at him inquiringly. The Frenchman poured him out another Pernod. "A friend in Paris asked me if I had work for a Pole," he said. "In December, that was—just at Christmas time. A Polish Jew who knew horses, who had escaped into Rumania and so by sea to Marseilles. Well, you will understand, the mobilization had taken five of my eight men, and it was very difficult."

Howard nodded. "You took him on?"

"Assuredly. Simon Estreicher was his name, and he arrived one day with his son, a boy of ten. There had been a wife, but I will not distress you with that story. She had not escaped the Boche, you understand."

The old man nodded.

"Well, this man Estreicher worked here till last week, and he worked well. He was quiet and gave no trouble, and the son worked in the stables too. Then last week the Germans came here, and took him away."

"Took him away?"

"Took him away to Germany, to their forced labor. He was a Pole, you see,

he usher must have found a seat. He didn't come back!"

LAWRENCE LARIAR

## Mary Louise was pretty but . . .

**WAKING** and needing a laxative, Mary Louise thought: "I can't risk taking anything. With that sale at the store today, I can't leave the floor."

So she put off needed relief!

**IRRITABLE** . . . her mind on herself instead of the customers . . . Mary Louise was anything but a prize salesgirl.

She had an excuse—but the kind no girl likes to offer.

## Janet was smart as could be

**JANET NEEDED A LAXATIVE.** And they were having a sale in her department, too. But Janet knew a quick-acting laxative. She took speedy Sal Hepatica!

**SAL HEPATICA** brought gentle relief . . . before she left home. Untroubled by symptoms of constipation, Janet went at work with a smile—and her sales book showed it!

## Whenever you need a laxative —take *speedy* Sal Hepatica

NEVER PUT OFF till tonight the laxative you should take this morning! Discover speedy Sal Hepatica! It usually acts within an hour.

This sparkling saline brings gentle, effective relief. It acts in a natural way by attracting helpful liquid bulk to the intestinal tract—without griping or discomfort.

No wonder 3 out of 5 doctors, recently interviewed, recommend Sal Hepatica.

And, bear in mind, Sal Hepatica is *more* than a laxative: it has a decidedly helpful effect in reducing excess gastric acidity, too; helps turn a sour stomach sweet again. Next time you need a laxative, take *speedy*, sparkling Sal Hepatica.

## SAL HEPATICA

Admiral
AMERICA'S SMART SET

m'sieur, and a Jew as well. One could do nothing for him. Some filthy swine in town had told them about him, because they came straight here and asked for him. They took him in a truck with several others."

"Did they take the son as well?"

"They never asked for him, and he was in the paddock at the time, so I said nothing. One does not help the Germans in their work. But it was very hard on that young boy."

Howard agreed with him. "He is with you still, then?"

"Where else could he go? He is useful in the stables, too. But before long I suppose they will find out about him, and come back for him to take him away also."

Nicole came to them presently, to call them to the kitchen for supper. She had already given the children a meal, and had put them to sleep on beds improvised upstairs by Madame Arvers. They ate together in the kitchen at a long table, together with two men from the farm and a black-haired, Jewish-looking boy whom Madame called Marjan, and who said little or nothing during the meal.

THE meal over, Arvers escorted Nicole and Howard back to the salon; presently he produced a set of dominoes and proposed a game. Howard settled down to it with him. The horse dealer played carelessly, his mind on other things.

Presently he returned to the subject that was on his mind: "Are many children going to America, monsieur? I cannot comprehend how you can be so positive that they will be welcomed. America is very far away. They do not bother about our difficulties here."

Howard shrugged his shoulders. "They are a generous people. These children will be quite all right if I can get them there, because my daughter will look after them. But even without her, there would be many people in America willing to provide for them. Americans are like that."

The other stared at him incredulously. "It would cost a great deal of money to provide for a child, perhaps for years. One does not do that lightly, for a foreign child of which one knows nothing."

"It's just the sort of thing they *do* do," said the old man. "They would pour out their money in a cause like that."

The horse dealer stared at him keenly and thoughtfully. "Would they provide for Marjan Estreicher?" he inquired at last. "No doubt they would not do that for a Jew."

"I don't think it would make the slightest difference, in the case of a child. It certainly would make no difference to my daughter."

Nicole moved impulsively beside him. "Monsieur . . ." she said, but he stopped her with a gesture. She subsided into silence again, watchful.

Howard said steadily, "I would take him with me, if that is what you want. I would send him to the United States with the other children. But before that, I should want help to get them all away."

"Jean Henri?"

"Assuredly, monsieur."

The other got up, displacing the unheeded game of dominoes with his sleeve. He went and fetched the Pernod, the glasses and the water, and poured out a drink for Howard. He offered one to the girl, but she refused.

"The risk is enormous," he said stubbornly. "Think what it would mean to my daughter if you should be caught."

"Think what it would mean to that boy, if he should be caught," the old man said. "They would take him for a slave, put him in the mines and work him till he died. That's what the Germans do with Polish children."

Arvers said, "I know that. That is what troubles me."

Nicole said suddenly, "Does Marjan want to go? You cannot make him if he does not want to. He is old, that one."

"He is only ten," said Arvers.

"Nevertheless," she said, "he is quite grown up. We cannot take him if he does not want to go."

Arvers went out of the room; in a few minutes he returned, followed by the boy. He said to him, "This is the matter, Marjan. This Monsieur here is going to England if he can escape the Germans, and from England the children with him are going to America. In America they will be safe. There are no Germans there. Would you like to go with them?"

The boy stood silent. They explained it to him again. At last he said in almost unintelligible French, "In America, what should I work at?"

Howard said, "For a time you would have to go to school, to learn English and the American way of living. At school they would teach you to earn your living in some trade. What do you want to do when you grow up?"

Without any hesitation the boy said, "I want to kill Germans."

There was a momentary silence. Arvers said, "That is enough about the Germans. Tell Monsieur here what trade you wish to learn in America, if he should be so kind as to take you there."

There was a silence.

Nicole came forward. "Tell us," she said gently. "Would you like to grow up with horses? Or would you rather buy things and sell them for a profit?" After all, she thought, it would be difficult for him to go against the characteristics of his race. "Would you rather do that?"

The boy looked up at her. "I want to learn to shoot with a rifle from a very long way away," he said, "because you can do that from the hills when they are on the road. And I want to learn to throw a knife hard and straight. That is best in the darkness, in the narrow streets, because it does not make a noise."

Arvers smiled, a little ruefully. "I am sorry, monsieur," he said. "I am afraid he is not making a very good impression."

The old man said nothing.

Marjan said, "When do we start?"

Howard hesitated, irresolute.

"Do you want to come with [illegible]?" asked.

The boy nodded his black [illegible]d.

"If you come with us, you [illegible] to forget all this about the G[illegible] said the old man. "You will h[illegible] to school and learn your less[illegible] play baseball, and go fishing, [illegible] boys."

The lad said gravely, "I coul[illegible] a German for another two or th[illegible] because I am not strong eno[illegible] unless I could catch one as[illegible] drive a pitchfork into his be[illegible] slept, and even then he might [illegible] before he died and overcome [illegible] in America I could learn e[illegible] and come back when I am fift[illegible] old, and big and strong."

"That is enough," said Arver[illegible] "Go back to the kitchen and [illegible] till I call you."

The boy left the room. "I do [illegible] what will become of him," [illegible] dealer said morosely.

Howard sat down in the sile[illegible] followed, and took a sip o[illegible] "One of two things will happe[illegible] he said. "One is, that the Ge[illegible] catch him very soon. He may [illegible] one of them, in which case t[illegible] shoot him out of hand. The[illegible] him to their mines. He will [illegible] lious, and before long he will [illegible] to death. That is the one thi[illegible]

THE horse dealer droppe[illegible] chair on the opposite side o[illegible] the bottle of Pernod betw[illegible] There was something in the [illegible] tone that was very familia[illegible] "What is the other thing?"

"He will escape with us to [illegible] said Howard. "He will e[illegible] America, kindly treated and [illegible] for, and in a year or two th[illegible] will have faded from his m[illegible]."

Arvers eyed him keenly. "Which those is going to happen?"

"That is in your hands, [illegible]onsie[illegible] He will never escape the G[illegible]ans u[illegible] less you help him."

There was a long, long sil[illegible]e in [illegible] falling dusk.

Arvers said at last, "I wi[illegible]ee w[illegible] I can do. Tomorrow I will [illegible]ve Ma[illegible] emoiselle to Le Conquêt a[illegible] we [illegible] talk it over with Jean Henri [illegible]ou m[illegible] stay here, with the childre[illegible]nd k[illegible] out of sight."

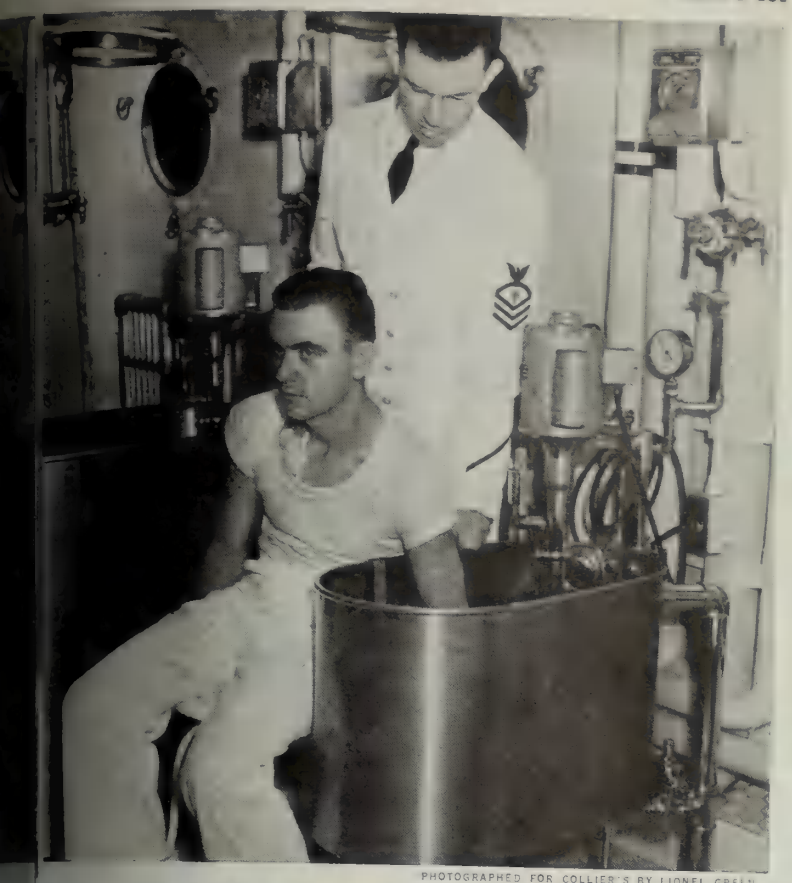
# OUR NEW ARMY

## FLORIDA

31ST DIV.



CAMP BLANDING, Starke. Let's see what goes on when an Army truck develops pneumonia or breaks a leg. Typical of operations throughout the country are those of the Fourth Corps (Southeast) Area—containing a third of all the men and trucks in the Army—where ten motor-maintenance districts have been set up. Typical depot is the one at Blanding, which handles heavy repairs for eighteen Army and Air Force establishments. If a motor vehicle gets beyond the road-repair stage it's up to the unit commander to see that it gets to the nearest maintenance depot, where a technical expert gives it the old eye and fills out a report that makes an income-tax form look simpler than a blank check. His repair-cost estimate and recommendation are passed along to the district motor-maintenance officer, who has the final word on what's to be done. If the job will cost too much, in view of the age and general condition of the vehicle, the wreck is condemned and all parts worth reclaiming are fixed up and put into replacement stock.

Of the 214 enlisted men and three officers of Co. H, 57th Quartermaster Regiment, manning the Blanding shop, only twenty-six were skilled mechanics when inducted. The men, largely from New York, were trained in maintenance schools at Fort McPherson (Georgia) and Camp Lee (Virgin then into a company arou a eighteen Regulars. Ev Com Officer Capt. JACKSONVILLE NAVAL AIR STATION. Everything came to a standstill here when Seaman Michael Thomas Flynn requested leave to observe Yom Kippur, begorra. Suspecting shenanigans, the brass hats turned the problem over to the chaplains, who decided that the proper member of their number to look into the matter was Lieut. Commander Maurice Sheehy. The padre summoned Flynn and asked him if he hadn't attended Mass the day before. Flynn said yes, but here is how it was: His father works for a New York jeweler of the Jewish faith, the store was going to be closed for the holiday and Michael wanted to get up home and spend a day with Pop. "I'm afraid," Lieut. Commander Sheehy told Seaman Flynn, "we'll have to postpone that leave until March 17th."

CADET JOSEPH P. KENNEDY, JR., son of the former ambassador to Britain, has the largest collection of femininely pulchritudinous photos in this or probably any other station. All as a result of a newspaper story. When Kennedy arrived for his pilot-training course, the short-handed public relations officer drafted him temporarily for press work, and Kennedy dug up a story about the R.A.F. cadets in training here as aviation radiomen and gunners. In it one of the Britishers was quoted as expressing the hope that the President would put American gals under the terms of Lend-Lease so the boys could take a flock of them to England—"and you'd have a jolly time getting them back." The yarn was so readable that a press association smeared it over the country with Kennedy's by-line. Since then, pictures of gals have poured in upon young Joe from everywhere, with the request that they be turned over to the cadets.

MACDILL FIELD, Tampa. The late Billy Mitchell, storm center of the Army some years ago because he vehemently advocated development of the Air Corps, hasn't been forgotten by the birdmen. MacDill's flotilla of five rescue (or crash) boats is headed by the Brigadier General William Mitchell, a speedy seventy-two-foot craft supplied with hospital equipment and manned by two medical attendants and a surgeon, in addition to the crew. The could do an emergency operation if necessary. The four other boats are for the shallower w Tampa Bay surrounding the fiel by the way, explains the "Nav

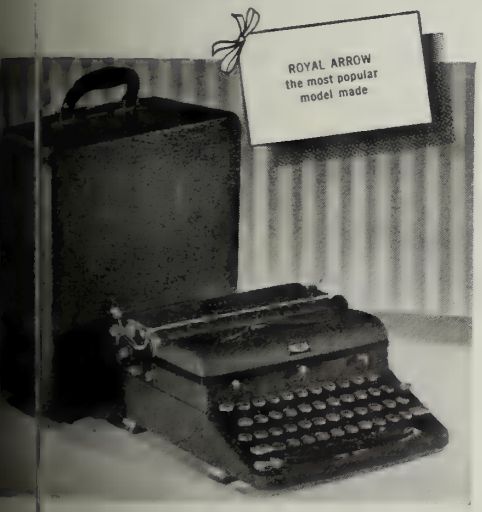
"By the way, how much is your autograph worth?"

# If you are thinking of today's most sensible gift...



**..Th you're thinking** of giving your youngster a por-able typewriter, the one gift whose benefits grow with the years.

For a Portable is not only a stepping-stone to higher grades . . . a key to clearer and faster thinking in school. The knowledge of typing so gained can be a valuable form of job-insurance in later years—and a valuable opener to the *kind* of job that leads to the *top!*

This is particularly true of *Royal* Portables. These great machines have the same keyboard as a regular office machine . . . are really standard typewriters in everything but *size!*

**World's Championship!** This is the model on which the Portable speed championship was won so convincingly in Chicago last June. Last word in Portable perfection, the Royal De Luxe Model is *super*-silent in operation. Engaging feature: the smart, brass-fitted, leather-bound, airplane-luggage case. Machine comes in black or tan (to match case).

**Standard Typewriter in Portable Size!** The Arrow, has these famous features which have helped make the full-sized Royal the World's Number 1 typewriter: famed MAGIC* Margin . . . Segment (the carriage rides smoothly along, doesn't pop and clown when you shift!) . . . Touch Control* (simply move the handy lever to adjust key tension to your particular touch) . . . and many others.

**For about $1 a week,** you can *own* this Royal Portable. Your local dealer is authorized to sell you any Royal on an easy payment plan which includes the small carrying charge. The Companion, too, has Royal's famous accelerating type bar, which permits the operator to type at hitherto unheard-of speeds. Note the over-all, velvety, "*no glare*" finish of the machine itself.

**Its sturdy, "big-machine" touch** comes from the shock-absorber construction throughout, the rubber suction-cup feet which anchor a Royal Portable to the table . . . and eliminate table-top scratches. The Aristocrat has a tabular key, useful in figure work and paragraphing. Finger Comfort keys keep keyboard clean, absorb light glare.

**You can learn to type** by the touch system with Royal's ingenious "Self Teacher," which you see in position on the machine at the left. Even grade-school youngsters learn in a matter of hours with this "Self Teacher," which is included with every Royal at no extra cost!

MAGIC MARGIN

***Greatest typing time-saver in years!***

**Only Royal has MAGIC Margin!** No more groping behind machine to change and set margins on a Royal. Just flick this handy lever to fix the desired margin instantly, automatically! Exclusive with Royal.

## ROYAL PORTABLE

**THE Standard Typewriter in Portable Size**

**And remember, the whole family** will benefit from the Royal Portable you give this Christmas! Mother, in her correspondence and club work. Dad, in his personal business. Write to Royal, 2 Park Ave., N. Y. C., or see your local dealer for a *free home trial* . . . and for information about our easy-payment plan!

managed to locate the missing man skulking between a couple of tanks. "What is this?" the captain demanded. "Beg pardon, sir," said Pvt. Jesse H. Chappa, a full-blooded Indian from Texas, "but my orders were to watch for any suspicious persons. You looked suspicious to me, and all the time you were looking for me I was right behind you watching to see what you were trying to find."

### NORTH CAROLINA

FORT BRAGG, Fayetteville. The Quartermaster Detachment's Pvt. J. H. Horne was sitting in one of the fort's nine movie houses getting a big bang out of Betty Grable when an elderly gentleman in uniform dropped into the seat beside him. Pvt. Horne minded his own business until, wanting to smoke and finding himself bereft of matches, he tapped the stranger on the shoulder and asked if he had a light, bud. Bud did. Fifteen minutes later the lights went on and Pvt. Horne looked into the eyes of—well, yes, a superior officer. In fact, the match donor was George C. Marshall, Chief of Staff and the only four-starred general in the whole U. S. Army. Pvt. Horne's velocity was such that he doesn't recall his exit; and he never did see the large sign nailed to the wall over General Marshall's head and reading: *No smoking allowed.*

### TEXAS

DUNCAN FIELD, San Antonio. Nearly every Air Force pilot considers it pretty dangerous stuff to hit any sort of fowl with his ship's propeller, but at least one lieutenant at this field makes rare sport of biffing buzzards with the wing tips of his airplane. He didn't forbid us to tell his name but maybe we'd better not. Anyway, he's a test pilot with more than 12,000 hours to his credit and his present job is half-hour test flights in each ship that comes out of the repair shop. With nothing much on his mind during this interval in the air the lieutenant flies over a cruising buzzard, flips a wing tip down and literally bats the bird out of the sky. Buzzards are considered pests by ranchers because they attack cattle in foal; at the Moss Ranch near Fredericksburg, more than 100,000 have been trapped. The lieutenant says they fly only five or six miles an hour and at altitudes up to 3,000 feet on clear days. By the way, he also says that if you fly up behind a formation of speedy ducks they'll separate to let you through and then close back in.

### WASHINGTON

FORT LEWIS, Tacoma. A good chunk of the 47,000 soldiers in this prairie camp live within hollering distance of their homes, especially the boys of the 41st Division, most of whose families and friends are near by. Communicating with the boys, though, is a problem. Time was when a gal could pick up a phone in Tacoma, fifteen miles north of the fort, and dial her khaki friend. No more. The operator says, sorry—not allowed to put the call through.

The problem is one for the soldiers, too, who find it difficult to phone outside. Best device is to try to convince the operator the call pertains to maneuvers or an alert, but operators are hep to these items of business and a fake call is pretty easy for them to spot.

THE 3d Division has been going through a siege of alerts, averaging about one a week. In case you hadn't heard, alerts are anti-sleep projects in which a whole outfit—and that means a whole outfit; men, guns, rations, trucks and all—must assemble at a moment's notice at a given point, ready to take to the field for a whole week. Likely as not the C.O., after arousing the boys at two A. M. and giving them time to get set, will just tell them to get unset and go home; you did fine. At other times he'll have them do a couple of miles down the road, to see that everything's in line.

Notifying all outfits in a division of an alert is a job in itself and the Army has found that the chain-letter principle is the best way to combine surprise with due notification. A guy calls up an officer, gives him the dope and instructs him to inform three other officers similarly, etc. Most of the officers live off the post but others—either in protest against high rents or because their civil-life residences aren't too far away—have some traveling to do. There's one who commutes from Des Moines, on Puget Sound, near Seattle. If everything clicks he makes the fort in ninety minutes, which is cutting things pretty close, the alert par for an entire division being two hours. Officially, the Army doesn't seem to care how far away an officer lives, just so he keeps his military appointments, but a few of the brass hats who have been burning up the highways in answer to an early-morning alert think maybe there's a subtle move afoot to make them live closer to the fort. They wouldn't put it past the Army.

FORT LAWTON, Seattle. This post's population seems to consist mostly of Pennsylvanians and Texans who refight the Battle of Gettysburg—with sound—every night in the P-X. The boys from the Keystone State are willing to concede, though, that the Texans can outtalk them, drawl and all. The Lone Star soldiers sometimes affect sombreros and high-heeled boots. None has dared face inspection wearing a ten-gallon hat but some of the Texans line up with their boots on. They maintain that regulations insist only on brown shoes and that nothing has been said about the height of the heels.

Being in the heart of the city the lads consider this fort one of the choice spots in the Army. Those who do the clerking work don't have to pay any attention to taps or reveille; that is, they can go into town at quitting time (four P. M.) and forget all about military affairs until eight o'clock the next morning. Moreover, they can travel in civ-

vies, which a lot of the bo

# "IMAGINE ME LOSING AN ARGUMENT!"

**I finally had to admit all au insurance is NOT alik!"**

**"Years ago** I made up my mind that a man's a fool to risk driving a car without insurance protection. But until now, I'd take a policy from any friendly chap who happened to be handy when my old insurance expired.

**"Then one day** a State Farm man came in to see me. He sure opened my eyes when he explained how the State Farm Membership Plan works—how you pay the acquisition cost of a policy only once. They renew the old policy instead of writing a new one as long as the risk remains the same.

**"Now when we go out** for a spin in the car, it gives me a swell feeling to know that the whole family is getting more protection—at reasonable cost. I'm sure pleased with the State Farm Membership Plan!"

**CAR DRIVERS.. these Facts are important!**

## How State Farm's MEMBERSHIP PLAN Gives You

## MORE AUTO INSURANCE FOR YOUR MONEY

*by* G. J. MECHERLE
Founder and Chairman of the Board
State Farm Mutual Automobile Insurance Company

"The idea started 19 years ago—and to get it started we founded a new insurance company—State Farm Mutual.

"We believed that car owners should be able to buy insurance at the lowest possible price. And to keep that price low, we did away with the expensive practice of writing a new auto insurance policy each year.

"We designed our State Farm policies so they can be *renewed* at regular intervals—just like life insurance policies.

"Thus, under State Farm's Membership Plan you pay the acquisition cost of an auto insurance policy only once. Savings are passed on to policyholders in more auto insurance for your money.

"But this is only one of the many economies we pioneered. We did away with a lot of other red-tape practices. And as a result we have been able to save in excess of $40,000,000 for more than a million policyholders in the cost of their insurance!

"And at the same time we have been able to give them broader protection and better service.

"For full particulars I invite you to mail the coupon at the right. It will bring you an interesting booklet."

# To Fire the Wife

Continued from page 15

six months, Bennet went through changes. One characteristic of t and beautiful office girls which rothers had not sufficiently dis- ed was their aptitude for getting ied. Two of Bennet's secretaries iat, just when he had them broken he third disliked to work after 5:30. ourth simply couldn't learn to read ind, or even his hieroglyphics. He fire her.

net tried a dictograph, but the ne couldn't read his mind either. les were haywire and his projects eloped and he was seriously g of quitting the business and back to write his doctor's thesis. r Pete called Miss Lurie, who e best bureau in town. She called n two hours: "I've got just the ! he's bright and ambitious; I don't she dates—she's taking evening in copy writing. She's in a law now, and wants to get into ad- g."

ISS LURIE sent over Rosamond st, a redheaded whizz. In a cou- eeks she knew Bennet's mind so l he had to do was say et cetera. Guest," he'd begin, "I've got an r that—that—"

ery account?"

That's it. Take a letter to— 's his name?"

ld Sullivan."

Dear Gerald—no. He prob- s always disliked being called al, Dear Sullivan—no. Too for- l."

Gerald Sullivan?"

Dear Gerald Sullivan: We've been discussing your problem and I'd like to suggest an idea—" Then he'd stare at the ceiling, as though the idea had wafted itself away up there and must be brought down again, through the plaster.

"Is that the idea you and Mr. Pete were discussing, about a radio contest for home canning?"

"Yah. I want to tell him— Dear Gerald Sullivan—"

"I think I can fill it out from what you said to Mr. Pete."

"Okay. Dear Gerald Sullivan, et cetera."

And she'd do it. His ideas. His style. She was a wonder. Bennet was so pleased he wished he could sign her up the way the movies sign up actresses, on contracts forbidding marriage during five years, or ten. But he was afraid the mere mention of the subject might put the idea into her mind.

The only trouble with her was over-ambition. Rosamond wanted not only to fill out his ideas for him: she was convinced she could give birth to the ideas herself. And her ideas reeked. It required supreme acts of forgetfulness on Bennet's part to discourage her repeated suggestions. However, he found one favorable thing about Rosamond's ambition: it seemed to keep her aloof from romance.

Bennet felt quite safe about this until the day he was lunching at the Marguery with a piano account. At the far end of the room was the redhead. She sat with an excellent-looking young man: the tanned, sportsman type. By a far stretch of the imagination it could be a rival executive striving to lure her into his service. The greater probability was the greater evil: romance. Consternation struck the soul of Bennet Pierce.

What he was searching for on the ceiling, most of that afternoon, was a way to find out about a secretary's luncheon companion. Finally, almost shamefacedly, he fell back upon a blunt expedient.

"Was that your brother I saw you with this afternoon?" he asked.

"Oh, no." She was amused. "I haven't any brother."

"Oh." He waited. She said nothing. He gave in. "Who was it, then?"

She looked even more amused. "Just a friend." The inflection was unmistakable. He'd lose her in a month. Probably sooner.

He spent a good many hours wrestling with the problem, and finally decided the direct approach was the best, with a person of her type. So, first thing in the morning, he rang for her.

"I suppose I'll be losing you soon?"

"Why, I wasn't thinking of leaving, Mr. Pierce. Isn't my work okay?" And then her eyes lighted with the final possibility—"You're not going to give me a chance at copy writing?"

"I meant, like all the rest of them. You'll be getting married."

Her eager smile faded. "Oh, I don't know," she said.

"Isn't the young man I saw you with at the Marguery after you to get married?"

"Oh, yes," she admitted. "But he wants me to quit work."

"You mean right away?"

"Yes. Get married and quit work."

"Oh." The disaster was even more immediate than he had feared.

"And what did you tell him?"

"Well, maybe I wouldn't mind the marrying part, so much. But can you imagine me sitting around like a harem wife? That's the trouble with Mickey. With anybody else I could do as I liked but with him, I'd have to quit my job."

"You mean," Bennet said, assimilating the idea with relief, "you won't marry him unless he lets you work?"

"Sometimes it's awfully tempting," she said. "He's a nice boy. And, frankly, I don't like living alone."

Bennet had to turn his eyes away. He was afraid he was blushing.

FOR the time being, he felt safe. But there was no telling when she might weaken. So he took up the problem with Brother Pete. "This girl is too good," he said. "I just don't want to lose her. You know how difficult it is for me to find a girl I can get along with."

Pete studied the matter in a practical way. "Why don't you marry her yourself?" he said. "Then you'd be sure of her."

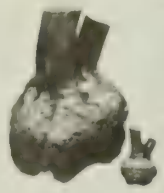
Bennet offered the flustered resistance of a damsel trying to pretend she never thought of wanting an ermine wrap. "But it's against the rules," he said. "No monkeying with the office girls."

"It's okay if you marry them," Pete pointed out.

Bennet had simply never thought of that. Why, it would solve everything! So next time they worked late, he knew what he was going to do. He kept her till after seven, and managed to go out of the office together with her, though he usually let her go out first, alone. They waited in silence for the night elevator to come up for them. They rode down in silence. She said to the elevator man, "Good night, Charlie." So did Bennet. They were still kind of together and not together as they reached the outside of

"They say to try to make the next town— they've got a regular landing field there"

GENE CARR



FLAME GRAIN KAYWOODIE $10

When you hold this magnificent Flame Grain Kaywoodie in your hand, you realize that you are holding something that comes as close to actual perfection as it is possible to come. The rare "Flame Grain" markings of the grain reveal the historic briar from which the pipe is made: briar from 200-to-400 year old briar burls from the last great forest preserve of this, the most ancient rare and costly imported briar in the world. Only Kaywoodie offers you this priceless Flame Grain briar.*

*Kaywoodie briar is dug out of the ground years in advance; so the war has not interfered with our supply.

Observe the difference between the rare old 200-to-400 year old briar burl (the size of a large pumpkin) and the ten year burl (the size of an apple). The sweet-smoking qualities in the briar are in direct ratio to the relative age of the two burls.

Yours for the asking: *The Kaywoodie Pipe Almanac which tells how to get the fullest pleasure from pipe-smoking.*

the building. The critical moment had come. "You might as well have dinner with me," he said.

She said she was in a hurry. She had a class that evening.

Bennet had a brilliant thought. She could learn more about copy writing, he promised her, by spending the evening with him.

MARRIAGE, Bennet realized, required great psychological adjustment. A certain amount of invasion of personal purlieus was to be expected. Therefore, he made no objection when she brought her face creams and eyebrow tweezers down to the office and set the stuff on the one little shelf in his private washroom; he kept the peace, as her objects increased, crowding his razor off the shelf. Usually, he realized, a man's office was his sacred retreat. But as a few extra slips and a dress got in beside the extra suit he kept in his closet, he had to admit, in extenuation, that the case was unusual insomuch as his wife worked in the same office and, therefore, should be entitled to equal privileges. Though he didn't see just why she had to appropriate his trousers hangers for a skirt. And also, one day when he had to get his coat to go out, a client got a glimpse of those female underthings hanging there, and Bennet felt pretty silly. He couldn't always be explaining his secretary was his wife.

He couldn't always be taking his secretary—even if she was his wife—along to business lunches, either. Maybe half of the advertising man's activity is the luncheon consultation. There, men must feel free to talk—free even of the inhibiting influences of an office. The psychological effect of the luncheon, Bennet asserted, was to temper a deal with a certain amount of social trustfulness. Well, now, a man simply did not take his wife along to his business lunches. Or his secretary. No matter how earnestly he tried to explain this to her, Rosamond simply didn't seem to get the basic idea.

"But you haven't any secrets from me. I'll know all you tell each other anyway."

"Of course, dear! But don't you see—it's just the effect of a woman—and a pretty woman—being present. It hampers a man."

"Do I hamper you?"

"No, no, that isn't it at all. What I mean is—the client must feel free to—well, even to tell off-color stories if he likes. And a woman's presence constrains him."

"I see. So I'm just supposed to go off and eat by myself at some lunch counter—"

"But, darling—have lunch with a friend, can't you?"

"I want to have lunch with you."

SO HE'D kiss her, and perhaps be on the point of yielding, when she'd say—"Besides, how do you know I won't have some good ideas to contribute to the discussion?"

And that would stop him. Because Rosamond was having altogether too many ideas. She hadn't got over the copy-writing bug at all; in fact, marriage had only increased her appetite for a career. She was so ambitious, she thought of nothing but the office. Bennet liked to relax when he got away from the place, or to set his mind to work in other channels. He discovered he had a secretary on a 24-hour basis.

At dinner, at a movie, even in bed, Rosamond would prod him with a sudden thought.

"Yes, dear. Remind me at the office," he'd say. But she'd want to discuss her idea, elaborate on it at once. She'd lie awake, thinking up slogans. He could feel the process going on, next to him. And how could a man think her slogans were good, under such conditions?

And as the office spread to the home came into the office and again, when Bennet needed retary, he'd find her busy on tl phone. Now, it is not unheard- private secretary to conduct a f sonal telephone conversations office hours. She might be ta other private secretaries, or—if r ried to her boss—to gentlemen There is an established custor such telephone chats. When t rings, the secretary mutters a "Busy now, call you later," an up.

Not Rosamond. She'd contir she was quite finished. By tl he'd usually have forgotten why and it would take some hea reading to bring back the aln idea.

"For heaven's sake, who are ing to that's so important? W you cut it short when I ring?" once.

"I was talking to the Bosto

"The what?"

"Boston Store. Drapery de The apartment has to get f doesn't it?"

Or, in the midst of the a she'd duck out for a beau treatment.

"What I want to know is, would remonstrate mildly, "h you manage about beauty parl weren't married to me?"

"But I am married to you!' ply, her eyes widening to that exasperating feminine sta seemed to be a comment on alistic nature of the mascul "Besides, we're having the ta ple for dinner. You want me t best, don't you? It might mea tract."

ALL these things, even he notion that people were to to dinner for business rea (isn't that why you invite lunch?) might have been cou adjusted, compromised. Bu girl simply would not realiz was supposed to be the sec he the executive, the thinke tor. So long as she confinec popping off suggestions, ide gans, things were manageable ently Rosamond began maki in Bennet's copy. ? It's not a love letter, is it?"

ishly, Bennet explained. Well, ete suggested, why couldn't he of the other girls in the office to osamond's work? That wouldn't r. He couldn't let any of the such an advantage over Rosa-

Pete meanwhile, was glancing Rosamond's version of the ad- ent. "Oh, why don't you let through?" he said. "All she's hanged a few words."

blew up. "Do you want your hers going around changing f? Would you stand for it?"

ied to laugh it off. "Know what le is between you two?" he "ofessional jealousy, that's all. d is an awfully clever girl. And jealous of you."

sional jealousy!" Bennet had rong key, and was savagely raser. "I call it sabotage!"

the talcum account that finally on their big fight. Bennet was d of the daintiness appeal ad injected into his copy. The words simply floated in froth. nercials were indirect, femi- gestive. Nothing was men- name.

used, by now, to her editing and even, after Pete's inter- ermitted a few word changes ust to humor and flatter his when Bennet picked up her the talcum announcements, othing of his copy left except of the product. He rang, and that she put through his copy, ord.

are sick of that femininity samond announced. "Why don't you just say this powder smells nice and clean, and it's cheaper than the fancy brands with frills on the package?"

He groaned. Why argue with her? What use would it be to cite the entire experience of the cosmetic industry? She responded precisely as he had anticipated: "It doesn't prove a thing. That femininity stuff is passé. Women are ready for a change, and the first outfit that appeals to common sense will cash in."

"Yah. And we'll lose the talcum account."

"Oh, can't you even take a suggestion—!"

"A suggestion? You change the whole thing and call it a suggestion!"

It wound up with a shouting match and a victory on a purely authoritarian basis. "All right, I'll do it!" Rosamond gave in, sullenly, taking the sheets back to her desk. "Just as you say—you're the boss."

And it was a very silent night, when they got home. The next morning, in the office, was strictly and bitterly businesslike.

Bennet went to lunch with Pete. "I can't endure it any longer," he said. "If only I could fire her!"

"Well, why don't you?" Pete seemed to think there was nothing to it.

"Why don't I fire her?"

"Sure. Just like anybody else."

"Listen. Usually when you fire a girl you don't have to go home with her that night."

Pete had another idea. "Send her on a vacation."

"I thought of that. She says it wouldn't be any fun, going without me."

"Uh-huh." Pete was beginning to appreciate the difficulty. "You know, come to think of it, Joe Donnelly was in a fix like yours once. He had a cousin working for him and was stewing all the time. I'll find out what he did."

Bennet insisted that he find out at once. Pete came back from telephoning; he wore an uncertain look.

"Well? Did he get rid of her? What did he do?"

"He married her off."

They frowned into their coffee cups. At last Pete asked, with fraternal deli-

cacy, "Tell me this—as a wife, outside of being your secretary—how is it?"

"Oh, fine," Bennet said, flushing. "Fine! If she'd only forget the office."

Pete stirred his coffee, set down his spoon, decisively. "Then my advice is, once and for all, tell her to stay home. Fire her."

Bennet winced. Yes, he agreed, it had to be faced. A few days, perhaps a week of bitter unpleasantness, and then Rosamond would adjust herself. Pete's Bonnie would get her into bridge clubs, take her around to art exhibitions, teach her how to waste her time. But how was he to commit the act itself? March in and tell her she was fired? Impossible. Perhaps Pete would do it, for him?

It would be unwise, Pete pointed out, to embitter her toward the whole family. Besides, he had never fired anybody, face to face. The few times when he had had occasion to discharge people, he'd done the job by mail. Sent a special delivery, on Sunday, enclosing two weeks' pay and asking the employee not to report for work. That made it easier on all concerned.

"Except," Bennet said, "I'd be home when she got the letter."

"Wait a minute. We ought to be able to figure out some way to get around that."

Concentrating on this detail made them feel, somehow, that they had solved the whole problem. Bennet could go to Philadelphia on Sunday, to attend to some legal matters about their aunt's estate. It would be too dull a trip for Rosamond.

HE GOT her to go to a movie and struggled all evening with that letter. First, he made it a very personal letter. But that, he decided, would be the sort of epistle that invited argument. It would start in a warm friendly way and end in disaster. He wound up with a formal notice, plus a little personal note that said, "Darling, this is terribly tough to do, but we aren't getting along at the office, and it's the only way to fix it that I know."

He mailed it from the station Sunday.

She wasn't home when he returned. Her things were gone, too.

Bennet sat quite still. He ought to call up Pete. He ought to try to stop her from going to Reno. He ought to get drunk. He had been sitting quite still, with his hands limp, for perhaps an hour when the bell rang. After a while he arose, and answered. There was a special-delivery letter for him.

"I will be glad to act as reference in any future connection you may secure," the neatly typed lines said. "Wishing you the best of luck and success." And there was no personal message beyond the dismissal.

BENNET PIERCE had an awful time getting a secretary. He was spoiled. He fired girls after a one-day trial. By the third week he had exhausted Miss Lurie's files, and her patience, and his own patience. He even demanded, from Pete, the right to break office rule Number One, and requested of Miss Lurie "an eighty-year-old hag. I don't care what she looks like, so long as she is reliable." So Miss Lurie sent over a lady who had been thirty years with her last employer. She lasted three days. Bennet complained the sight of her impeded his mental processes.

But getting rid of her failed to remove the impediment. His mind felt alternately stuffed and feverish. He didn't sleep well. At night his brain churned with ideas. He even made notes, which none of the succession of secretaries could decipher. And in the daytime all he could do was stare at the ceiling. Even if one of them had been able to read his mind, she would have transcribed nothing but a blank.

Some of the clients were beginning to kick. The talcum people, among others, complained that they were getting no results from their program lately. Pete took over a few of Bennet's accounts. Still Bennet couldn't get himself organized.

Pete decided maybe Bennet ought to have an assistant for a while—to do some of the copy writing.

That was how things were the day Bennett called the sorely tried Miss Lurie, to admit, rather shamedly, that he was looking for a secretary again. He hadn't fired the last one. She'd quit. Said he depressed her.

Miss Lurie wasn't mad, or cold, as she'd been lately. "Mr. Pierce," she said tentatively, "I do have an excellent girl, a really first-class girl. She has fine recommendations. But I don't know—"

"Don't know what?"

"Well, that trouble you're always having, about girls getting married—"

"You think she'll get married on me?" Bennet asked.

"Oh, no. Not this girl. You see she's just been divorced and she—"

At that point he caught on. Miss Lurie continued, saying this young lady wanted to be sure of an absolutely impersonal relationship, and he said, fine, fine! He wanted nothing else!

And why not? Until things got personal she had been a wonderful secretary. Perfect. "Send her over," he said.

There was one other condition. Miss Guest was ambitious. She was a trained copy writer. And since Mr. Pete had said they needed an assistant in copy writing, wouldn't this be an excellent opportunity for both the agency and the young woman? They could, perhaps, allow her to break in by servicing a few special accounts. Those that required a woman's point of view.

"Okay," Bennet gasped. "Tell her she wins. Send her over."

SHE was absolutely impersonal. And her secretarial work was, of course, impeccable. He didn't have to make a single adjustment. She knew all his ways.

Pete gave her two accounts t —the talcum account, and a c When she managed it, Bennet tell—but she never allowed writing to interfere with her him. And the copy-writing bility worked like a miracle; s entirely offering suggestions rections for his own accounts.

Things were, in fact, go smoothly at the office. Bu found it depressing to eat din So once, having protracted t tion until everyone had left Bennet managed to leave tog her, and go down the elevato with her, and say Good night, the elevator man, as she di hesitate with her, just in fr building.

"What are you doing for di asked.

She looked quite as if sh pected his approach. "Nothin plied. "Unless I'm having it

And the next day, instead to him with a suggestion, sh him for help. She was stuck. help her with her copy?

It was only a minor point whole, he assured her, her very good. Excellent. And admit to himself that it was.

## TEST YOURSELF WITH THESE NEWS PICTURES...

**WHICH IS DIESEL...WHICH IS STEAM?**

**1.** Both products of American Locomotive, these two modern giants of the rails are typical of the power houses on wheels known as ALCO–G.E. Diesel-Liners and ALCO Steam-Liners. Which is which?

One of the gun-mounts built by the American Locomotive Company as part of the Defense Program. In what branch of the U. S. Army will it be used?

**3.** Another weapon now coming off American Locomotive production lines is the medium M-3 tank. How many men comprise the crew of this type tank?

**4.** This is what is called a Scotch boiler. It was built for Britain by American Locomotive far ahead of original schedule. In what is this type boiler used?

The American Army's new standard rifle, built with tools made by American Locomotive, can fire up to 10 shots a minute. By what name is it popularly known?

### HERE ARE THE ANSWERS
*(NO FAIR PEEKING!)*

**1.** On the left is one of the American Locomotive Company's modern Steam Liners; the other is one of its ALCO–G.E. Diesel-Liners. Each is among the finest of its type and both types are serving the different needs of modern railroads today.

**2.** The gun-mount pictured on this page is being built for use in the Field Artillery.

**3.** The usual crew of the medium M-3 tank built by American Locomotive consists of seven men.

**4.** Scotch boilers are used in ships. This one was built for use in the British Merchant Marine.

**5.** This extraordinary rifle is generally known as a Garand, which is the name of its inventor.

# TO THE MAN WHOSE PAY CHECKS ARE LARGER THIS YEAR

***How a simple plan can help you get the most good out of your income***

IT'S great to be making more money—perhaps very much more—than you were a year ago. If you have been getting along on a shoestring, you can now enjoy a few luxuries. If old debts have been worrying you, you can now get them off your mind.

How to get rid of your money is no problem. But how to spend your new income to the greatest advantage—how to get the most good out of every pay check—may not be so easy.

That's where a spending plan can help. Families who keep out of money troubles through ups and downs, families who get the things they really want out of their incomes, nearly always have a spending plan. They may deny that they "budget." Actually they do plan, if only in their minds, to do these three things with each pay check.

1. Get ready to meet large occasional expenses—such as insurance and taxes.
2. Pay debts from the past—instalment payments, for instance.
3. Live on what is left—pay rent, buy food, etc.

A well balanced plan will not allow any of these three, Future, Past or Present spending, to crowd out the others. It will keep you from using so much for everyday living that you can save nothing for the future.

Making a spending plan needn't be difficult. You simply put down all the expenses you expect to have between this pay day and the next. You also decide how much you should set aside for savings and for large future bills. Then you see that your total is in line with your income. If it's bigger than your earnings, you take off your spending list the items you can best do without.

The important thing is to make the plan—and *stick to it.*

Try planning your spending for the next few pay days. Write for a little book which helps you plan your spending. The Budget Calendar makes budgeting easy and simple. No tiresome bookkeeping is required. There are "plan for spending" sheets for every pay day in the year.

Household Finance has published the Budget Calendar as a contribution to better family money management. You are invited to ask for a copy without obligation. There will be no solicitation or follow-up.

**How home money management aids national defense**

*Defense of the nation begins with defense of the home. Home defense means learning how to stretch every dollar till it covers taxes, contributions to charity, defense stamps and bonds, and all the things a family needs for mental and physical health. That's a big job.*

*We hope that this message will encourage and help folks to keep their money affairs on a sound basis—and that it will contribute to a more effective defense effort.*

# The War's Biggest Job

**Continued from page 17**

noise and heat. In a city where vague rumors became news in the distance between Shepheard's bar and the roof garden of the Continental-Savoy Hotel just three blocks up the street, the significance of Wavell's transfer to command the armies in India was blurred. Everyone overlooked what had happened a few days before the news jukes rattled off the communiqué that shifted Wavell to his new job. And that event was Germany's invasion of Russia.

### The Biggest Battle of All

The British had known for some time that the Germans intended invading the U.S.S.R. Two weeks before that certain early morning of June 22d, British Intelligence advised Moscow of the exact day and almost the hour of the invasion. The event of that June morning was an important one to the British. Their empire lay in Asia and the British General Staff knew that with the invasion of Russia would begin what might turn out to be the decisive phase of the Battle of Asia, the biggest battle of them all. That's why Wavell was sent to India.

The battle of Asia began ten years ago, when the Japanese took Manchuria. And until June 22d only Japan menaced Asia, and the Mikado's cry of Asia for the Asiatics wasn't taken too seriously by those who had imperial takings in the Far East. They didn't pay any more attention to that cry than they had to Germany's shout of *Lebensraum* before Munich or, earlier, to the pleas of the republican government in Spain for help against the Fascists, and before that to Italy's demands for that "place in the sun" the boys from Rome burgled in Africa.

At three o'clock one morning early in July, Moscow slept. Cairo was staggering home replete with food and wine. From the Baltic to the Black Sea German panzer divisions drove steel into Russia's hide and the Battle of Asia had begun for keeps. This new fight to have and to hold Asia would make the efforts of Hammurabi and Darius and Alexander the Great look like the amateurish attempts at organized slaughter that they were. At three o'clock that same July morning Sir Archibald Percival Wavell climbed into a Wellington bomber and roared off across the lands of Araby toward India, after handing the keys to his office over to his successor, General Sir Claude J. E. Auchinleck. It all happened so quickly Lady Wavell didn't have time to pack and accompany her husband.

A few days later Sir Archie was on the Northwest frontier, inspecting Britain's defenses in India. He became defender of Britain's largest investment and most lucrative possession. As commander in chief in India the grandson of the Texan soldier of fortune assumed the job of holding the keystone of an arc of British defenses that begins at Salum, on the southern shore of the Mediterranean on the border between Libya and Egypt, and swings across Sinai, Palestine, Syria, Irak, Iran, Afghanistan, Turkestan and Tibet, Burma and Malaysia, and ends in Singapore.

Just outside that arc lie unconquered China and Russia below the Urals. Widen the arc by a few thousand miles and it encompasses Japan and the Philippines, and Dutch East Indies and Australia. Directly and indirectly Wavell stands between 1,500,000,000 people—more than half the population of the world before Germany started reducing the population—and the imperialist marches of the Mikado and the Fu Wavell's new pitch is roughly sev million square miles.

Within it lie the riches Hamr and Darius and Alexander the and a score of kings after them s There is all the rice the world ea all the tea it brews. Most of the rubber and practically all the c come from there. Asia's jungle teak for the decks of the mercha and the battleships of the inc nations of the West. Oil and cott and coal, chrome and mangane rare gems and gold come from th And the billion and a half peop live there represent a vast re potential market for the surplus factured goods of the industria

Specifically, Wavell's comma cludes only Burma and India, v itself larger than all Europe min sia. It includes Afghanistan, troublesome land of warriors w the British busy on the northwe tier and the Khyber Pass. It passes Iran and Irak, two of t important oil producers in the and oil-rich Saudi Arabia, which tween the Persian Gulf and t Sea. These waterways are th that feed the Middle East Anglo-Russian forces with th and airplanes and guns that American production lines. It' Wavell's chore to see that they open.

I talked with Wavell in C before he flew to India and I int his successor in the Midd Neither Wavell nor Auchinle soldiers, both cold practitioner as an exact science, exuded an optimism wishful hopers and chair generals and radio qua bring to this war. Both admitt safety, India's security and Gr ain's survival depended on Russia could hold the Gern how long it would be befo started creeping up on India' flank from Indo-China. Wa dered how long he could keep mains that pour machinery into the Middle East and ove Russia across Iran from the t Persian Gulf.

### How Long Could Russia S

Wavell particularly was about Russia. Sir Archie kn sia. He minimized neither th power nor their courage.

"I tell you," he said, "I w at the achievements of th army. Its advancement wa material but spiritual." He Red army morale was good.

But strictly from the p fighter's point of view, W aware that the U.S.S.R., altho the second-best army in the Germany's, couldn't defeat mans. He wasn't absolutely to how long the Russians c stand the terrific pounding o Germany's superior air pow mentioned the end of Octob first two weeks in November critical period that would dec the first phase of the Russo-G before winter froze the fi northernmost fronts. That wa in July. You can't charge W second-guessing.

As a soldier, too, Wavell pare against the possibility c drive across the Caucasus b Black Sea and the Caspian and Iran. Maybe Germany c

il of Kirkuk, Mosul and Bahrein, he British do. Deprived of the pro- on of the wells in Irak, Iran and i Arabia, oil to maintain the Brit- eet in the Mediterranean and keep oat in the Red Sea, the Persian the Arabian Sea and the Indian n, would have to come from the East Indies—provided Japan had ese strictly alone.

C from the Middle East keeps Brit- American tanks and planes and rolling all the way from "the which is what the Tommies call arbed barricade between Egypt bya, to Syria's confines with Tur- d as far east as India. Without l, Britain would have to abandon iddle East unless supplies could ught in from the Dutch East In- the United States.

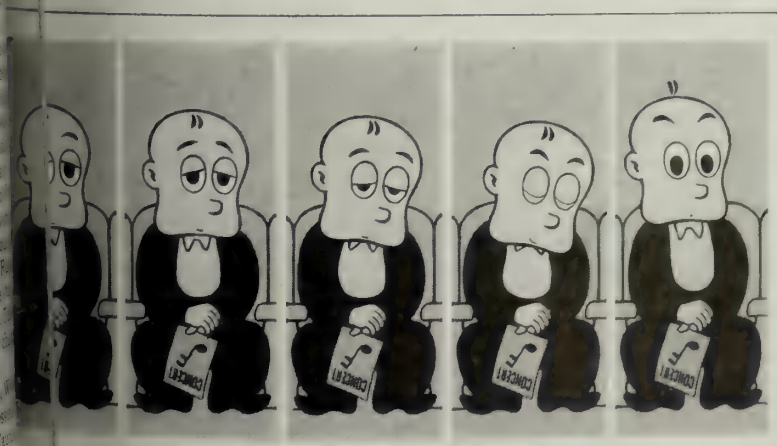
n I visited Suez in July just be- aving for India, the congestion in t was so bad that only one third cargoes was being unloaded by rtaxed port facilities. Stevedores ged tanks and planes and sup- om one ship, and two more had before its holds were empty. At e, American material had only gun reaching Suez. If oil tank- to be unloaded in addition to p transports and freighters al- logging Suez and the new ports ad been opened along the Red st of Africa, the job would be s. Besides, there is already of tankers in both Britain and ted States.

### Winter Doesn't Help Here

Wi r might freeze Germany's pan- rs i eir tracks in the attack on Mos- w. Wavell, however, didn't believe nte would hold up the Germans if ey ided to swing south and east- rd m Kharkov and Rostov on the a o zov. There's a good all-weather ad oss the Caucasus Mountains, avel aid. He said the Russians had ilt wide and handsome. Besides, you draw a weather map of Asia m ypt to the China coast, you'll th the southern limit of the winter d cides roughly with the north- fr iers of Irak, Iran and India.

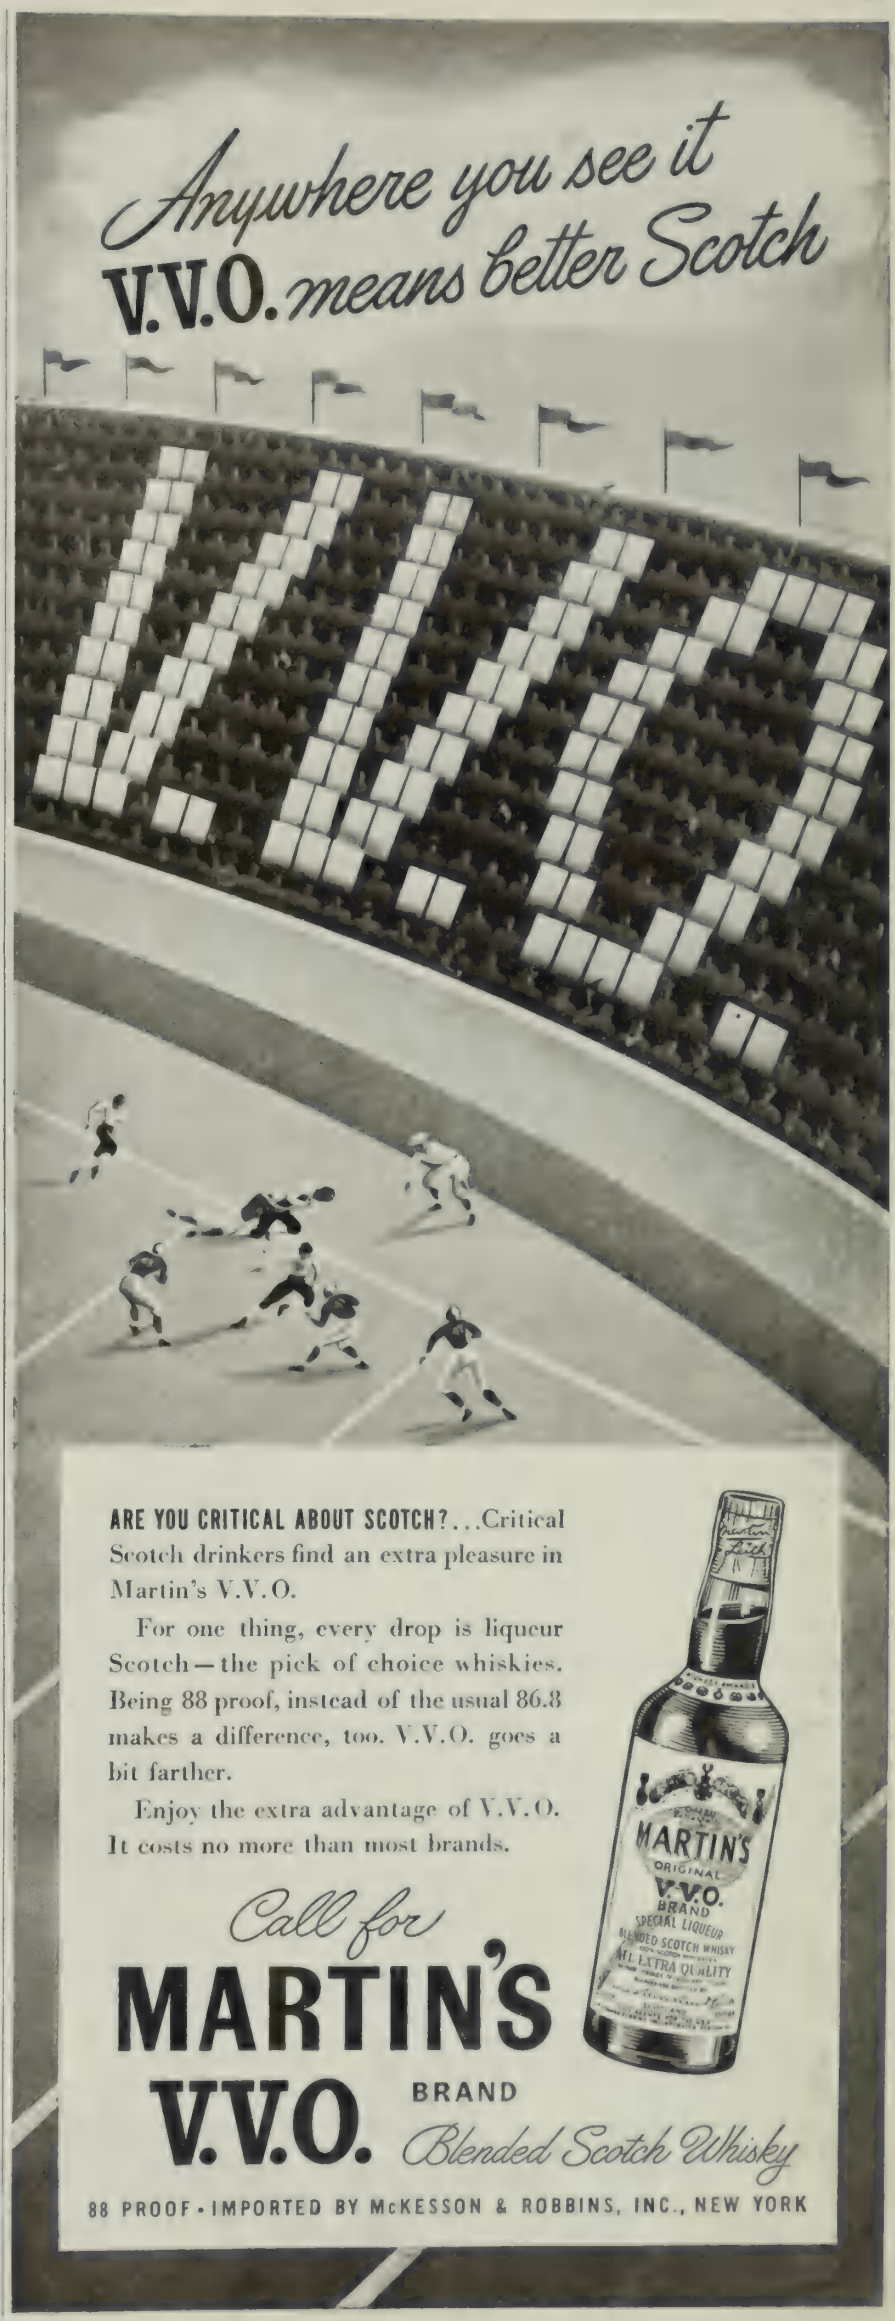
Wavell, last July, foresaw the Ger- n H Command's possible strategy. at's hy he hurried occupation of ia, shed to put down the Rashid rev in Irak, occupied Iran, where Br sh established a common front h th Russians, and asked Afghani- n to pel all German agents and na- nals. That gave Wavell a series of tigu s buffer states defending In- and he Middle East. He accom- hed etty much what a chess player s wh he "castles."

Sir Archie, however, knew how much tain ad in those buffers in the way stop rs against the Germans, and m h it hadn't. He knew suf- ntly ell to look very worried when I saw him again in Simla, several weeks after his departure from Cairo. He'd just returned from his inspection trip to the Khyber Pass. He looked tired, too. He stirred the pale tea in his cup with a slow and deliberate motion. Lady Wavell still hadn't arrived and one of the Wavells' grown daughters had contracted measles in Cairo, but that didn't account for his Gil Dobian gloom.



Neither did the state of Britain's defenses at the Khyber. He said he'd found everything in fine shape. Allowing for British understatement, you could infer that the empire's 750,000 Indian troops and the Australians, New Zealanders and others under his command could hold any enemy at the Khyber. Only the Germans can prove or disprove that inference.

"The danger to the west," he said, "has always been the possibility of a German conquest of Russia. Russia is an inexhaustible storehouse of raw materials. Combined with German industrial power—well, Germany could fight a long, long war . . ." He might as well have said that if Germany is allowed time to rehabilitate Russian industries in the conquered areas and to draw unhindered upon Russia's raw stocks of iron, coal, manganese, chromium, tungsten, grain and hydro-electric power, Germany could break Western civilization's hold on Asia, India and the world. In the Ukraine alone the Germans will find iron, coal and coke and factories and smelters. The Ukraine isn't merely wheat field. It's the Ruhr Valley, the Pittsburgh area of European Russia. And in the Ukraine grows an insignificant seed, the sunflower seed, from which are extracted edible fats the Germans need.



"Now is the time to hit Germany with everything we've got," Wavell said. "Otherwise the war may last beyond the memory of present generations. To prevent Hitler from attaining his ends, the democracies must attack . . ." and he became silent. Up to then, Wavell had been quietly, coldly determined. Now he shook his head. He knew that Britain hadn't the man power needed to launch an offensive against Germany. He said Britain's supply of man power was running thin. He didn't mean, necessarily, men to carry rifles. He meant skilled man power, trained in the operation and care of machinery.

Germany's attack on Russia gave America and Britain a "respite," Sir Archie called it, equal to the length of time the Soviets could hold off the Germans. "It's given us," Sir Archie said, "an advantage in time when time was more important than any other single weapon." Sir Archie knew that the respite wouldn't last forever, that it might not be long enough to permit the factories in the U.S.A. and in England to turn out enough tanks, airplanes, guns and vehicles to organize a major offensive against the Germans.

German morale, Sir Archie said,

**Decrescendo—Fortissimo**

"I'll be hanged if I'll give these away—they're Glover's"

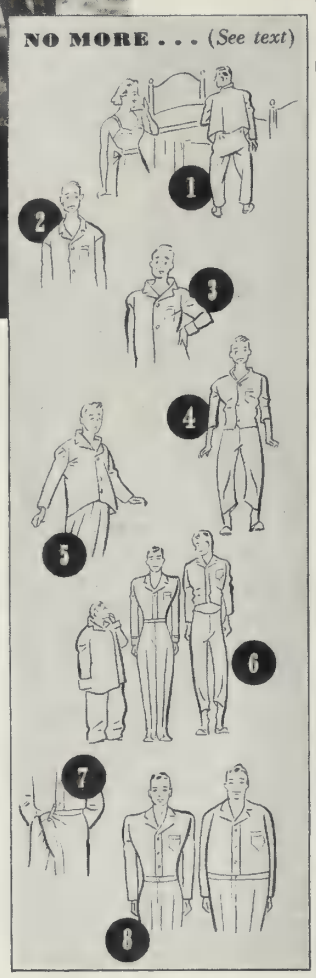
This Christmas...
Give the 8 FREEDOMS
OF PAJAMAS THAT REALLY FIT!

You can see in this actual photograph the finer appearance, the amazing comfort of pajamas made a *revolutionary new way*. Glover Tailored Man Pajamas alone give these 8 great Freedoms:

**1. NO MORE** Bedtime Bow Legs. Tailored Man Pajamas hang straight as an arrow—as all men would like them.

**2. NO MORE** Droopy, Overhanging Shoulders.

**3. NO MORE** Horse Collar Effects. The new Curve Cut collar is shaped to fit the neck.



**4. NO MORE** High Water Sleeves and Trouser Legs.

**5. NO MORE** Hiking-up Coat Fronts.

**6. NO MORE** Hit and Miss Fit. Tailored Man Pajamas are made in 3 heights. What a difference *this* makes!

**7. NO MORE** Overlapping Safety-pinned Trouser Front.

**8. NO MORE** Binding or Slipping Waist Band. Patented Adjusto-Band Waist s-t r-e-t-c-h-e-s as you move and breathe. Easily adjusted, tight or loose—no wrinkles or overlap. This alone is worth the price of admission.

So give him this Gift of Gifts—Glover Tailored Man Pajamas. You will find them at thousands of fine stores where *customer satisfaction* is of first importance. Or a Glover Gift Certificate in a miniature Pajama box would be a happy surprise. H. B. Glover Company, 880E Merchandise Mart, Chicago.

WITH ADJUSTO-BAND WAIST

might be broken down by air bombing. He said, however, that the war couldn't be won in this way. Germany, he said, must be made to feel the impact of invasion. This, he said, would take man power and England's men are held in England, held there by the threat of invasion from the continent.

"But whether you've got the men or the weapons or not," he said, with a trace of a smile, "you've got to keep on fighting. We'll keep on fighting. I wonder, though, what Japan will do?"

### Germany Won't Get the Nile

Sir Archie sat deeply in one corner of a faded chartreuse divan in the drawing room in the commander in chief's residence in Simla. He loosened his medal-heavy tunic and relaxed with his late tea. At that moment he looked all of his fifty-eight years. I sat in front and slightly to the left of him. I had a three-quarter view of the left side of his face. That's his "dead" side. He lost his left eye in France in the second year of the other war. But when he reached to hand around the sandwiches his good eye sparkled and he made you think of Nelson.

He demonstrated none of the taciturnity for which he's famous. He was shy and mild of voice. His politeness had none of the square edges of the usual British public-school-bred general. He had none of that old-school-tie aloofness Winchester could have given him. He talked jerkily, and bore out his reputation for being, like some of the plays of Bernard Shaw, better "read" than "heard."

He is one of England's most literate generals, writing in hard and moving prose. His life of his best friend and commander in Palestine, General Edmund Lord Allenby, with whom Wavell served after his recovery from the wounds he received in France, is a work of literary merit.

"I wonder," he said thoughtfully, "what Japan's going to do. . . ." Present were his military, naval and marine corps aides. Wavell, however, hadn't addressed his question to anyone in particular. He was thinking out loud. He knew that by the time the Germans could move against India's front door, the Northwest frontier and the Khyber Pass, weapons and vehicles would have arrived from the United States in sufficient quantities to give him a fighting chance of holding the enemy. He was specific, by the way, that India and the Middle East would rely—like Burma and Malaya—almost exclusively on the United States for tanks and planes and some guns. India can produce about ninety per cent of the munitions and supplies the empire forces in Wavell's bailiwick need, but the big stuff would have to come through Lend-Lease. England's production was needed at home and for eventual invasion of the Continent.

Wavell was certain that the side door to Britain's empire, the Middle East, was reasonably safe in Auchinleck's hands with the light and medium tanks and the bombers and fighters America had shipped to Suez. There our ships are even unloading beer to relieve the shortage the hard-drinking Aussies created.

In Cairo, Wavell told me that he felt "very secure indeed in the Middle East" and a moment later bolstered that appraisal of the situation there by adding:

"The Germans will never take the Nile. . . ."

At the moment Wavell was concerned about India's back door—southeastern Asia. France's "balcony in the Far East," Indo-China, was occupied by the Japs. From new land and air bases in Annam, Cochin-China and Cambodia, the Japanese threatened Thaila aced the Burma Road that pur plies and weapons into Chir Rangoon to Mandalay and Ch for the armies of Chiang Kai- endangered Singapore. At the the Japanese were training p troops, forty or fifty thousand in Formosa, just north of th pines.

And that wasn't the least vell's worries. He had come active battlefront to find him denly in India. India was tho miles away from the bomb Simla, high in the Himalayan h Sir Archie went to escape the h Punjab plains, there were no b and there was no rationing anc ple simpered at the war as p cities do everywhere when the bombs. at first off. Fast or dead."

Having spent a year in the California diggings, Pierce took time to study this new camp, and on the second day he left Virginia City and walked up the Gulch in the direction of Summit Camp. The trail followed the creek's edge, around piles of gravel and shaft holes and tents and brush shacks. All along this way men crouched with their pans, slowly dipping and slowly rocking. Back from the creek other men had staked the dry bars, here shoveling the soil into buckets and carrying it to the water; farther up the hill men scraped away top soil to reach gold-bearing gravel deposited by some earlier river bed. On every hand were to be seen the various contrivances for extracting gold from rock and dirt—the pan, the rocker, the sluice box with its riffles, the long tom. At one tent ■ string of washing hung on ■ line; before a brush hut somebody had tacked up his particular whimsy: "Mountain Home." A lone man walked down the Gulch, selling single sheets of ■ month-old paper at a dollar ■ sheet.

Half ■ mile from Virginia City, Pierce came before ■ signboard containing the rules of the district, and stopped to read:

"FAIRWEATHER DISTRICT

"The officers of this district shall be President, Recorder, Judge and Sheriff.

"The center of the stream shall be the line.

"Every person may hold, by pre-emption or purchase two creek, bar-hill and lode claims, and no more, but no person can pre-empt more than one kind.

"Creek claims shall be fifty feet on the creek, extending across the creek from base to base, including all old beds of stream.

"Gulch claims shall be 100 feet in length, on the gulch, and extend one foot over on each side.

"Lode claims shall be 100 feet on the lode and twenty-five feet each side."

Pierce was reading when a voice turned him about, and a muscular, middle-aged man with a ruby face stood by: "You're the one that knocked Rube Ketchum down?"

"Yes."

"All this creek's staked, clear up to Bald Knob. There's a little canyon next to my claim, though, that ain't been claimed. Everybody rushes by, lookin' for gold to pop out like sunshine."

Pierce said, "You make a living locating claims for greenhorns?"

"Why, to hell with you. I'm Barney Morris and I'm doin' you a turn. You knocked Rube Ketchum down."

Pierce smiled at that. "Thanks," he said, and walked away from the creek with Barney Morris. A hundred yards onward the Gulch wall opened into a small, dry draw. Morris said, "That's it."

"No water."

"You lug your pay dirt down to the creek. If it shows good color you can bring ■ flume down from the head of the creek."

The draw lay narrow between yellow-gray walls with ■ few dead alders standing fire-blackened on the low side. Pierce said, "Looks like a canyon I ran across down near Hangtown. I found a skeleton in that one."

"None here yet," said Barney Morris. "This is a young camp." He pointed to his own stakes at the edge of the canyon's mouth: "Start from here. You get ■ hundred feet. You go up both slopes to one foot over each ridge." He was aware of Pierce's thoughtful study, and so said, "You're ■ disbelieving young man. You don't know about this."

"Something for nothing is ■ bad bargain," said Pierce.

"You braced Rube Ketchum. That counts."

"Thanks again. I'll stake it."

"One more thing," added Barney. "Keep your mouth shut about what you got in your dust pouch. Always play poor."

Pierce paced a hundred feet up the draw. He built a pile of rocks at this point, climbed the side of the draw and made another rock pile under which he put ■ slip of paper with his name. After that he established the other corners of the claim, and returned to Virginia City.

He had a meal in ■ tent restaurant and moved to a store for his supplies. A shovel and an ax, a pick, a pan, ■ lantern and a gallon of kerosene, and enough staple food for ■ week cost him sixty-five dollars. He paid fifty cents for three small apples, slung his supplies over a shoulder and lugged them down to a stable where he kept his horses.

THERE was no letup in the steady stream of men pouring over the small hill into Virginia. Ox teams and freight strings choked the half-formed streets and goods lay piled everywhere and carpenters flung together boards and two-by-fours and lifted building fronts in the space of an hour. A string of cattle, herded in from across the mountains, milled in half stampede through the congested, cursing traffic, and the owner of the tent restaurant ran out to the street with a rifle, to shout at ■ passing herder, "A hundred dollars for the first cow that runs in front of me."

The herder wheeled around. "Sold," he said. The restaurant man pulled up his rifle and took sight on ■ leggy beast careening around the corner of the Pantheon; he dropped it at his feet with one shot.

Pierce moved on, eating the last of

his three apples, and met Ollie Rounds in front of Tanner's saloon. The redhead had a cheerful smile for him. "Wondered what happened to you. What are you doing?"

"Up the creek on a claim."

Ollie Rounds was amused. "You work too fast. Stop once in a while, my friend, and just loaf."

"Luck," said Jeff Pierce, and moved back to Wallace Street in time to see Diana Castle cross to the tent restaurant. When he came near, she discovered him and stopped. "Have you had luck?" she asked.

"Yes," he said, "I staked a claim."

She nodded and entered the restaurant. Pierce got his supplies from the stable and returned up the Gulch.

THE tent restaurant was nothing but a series of planks set on wooden horses, with dry-goods boxes for chairs. One man served and one other man, sweating and cranky, worked over a stove at the rear. The meal was beans and bacon and bread and coffee and the price was a dollar. Dessert was stewed prunes dipped out of a stone crock. Being hungry, Diana ate without complaint.

Rising from the table, she remembered what her father had once said: "Back East, where everything is settled and hardened into a pattern, people have forgotten how to be resourceful. Out here that's the main thing—to keep a sharp eye for a chance, and to seize that chance at once."

On impulse she turned to the rear of the tent and stood by the cook. "Why don't you make pies? Men like pie."

"Because," said the cook, never ceasing his rapid moving between stove and serving table, "I ain't got eight arms. I never was much good on pie anyhow."

"You've got flour and dried fruits."

He said, "Can you make pies?"

Her father's remark seemed right in her ear, freshly spoken. She said, "I'll come here in the morning after the breakfast rush. I'll make your pies for a dollar apiece."

"Stove's not big enough. I cook all day."

"I'll get another stove and put it outside the tent."

He said, "That's a bargain. You do it."

She left the restaurant happier than she had been for days.

Turning the corner of Wallace Street, she came against Will Temperton. "Where's Lily Beth?"

"In bed. We made a long drive to get here today and she's tired. We're camped outside of town." He gave her a thoughtful appraisal. "You seem contented."

"I have found something to do. Tomorrow I begin making pies for the restaurant."

"You are pleased with that?"

"I'm pleased with anything I can do."

He nodded and seemed to understand. "I had thought to find better quarters. A tent is not much good for a young girl. The town is crowded."

She said, "I have a log house near the foot of the hill. I simply talked a miner out of it. If you propose to stay here let me have Lily Beth for a while."

"You have changed your mind?"

"Yes," she said. "But it will not be quite the same as you suggested. I want nothing for this. We'll see how Lily Beth and I make out together. Perhaps I can teach her to make pies." She was smiling at the thought, and a deep sense of pleasure showed in her eyes. Temperton watched her with his grave, restrained glance. "She would like it a good deal," he said. "I'll bring her to you in the morning." He lifted his hat and added: "I must find some way of making this right with you."

Ollie Rounds stepped into the Pantheon, paused to locate the prettiest woman and bought his ticket. When the new set began he moved to the floor and claimed Lil Shannon. Most of these miners danced with a kind of grim fury but this man, smiling with his detached amusement, took her fashionably through the waltz. Somewhere he had seen better company than this. But, although she recognized background and breeding, she made no remark concerning it, for in this camp were a thousand men whose pasts were made up of sin and error and broken ties from which they fled and of which they wanted no reminding. It was the first thing a woman in a dance hall learned.

He said, "I might tell you how greatly you are wasting your talents here but I think I won't."

"Why not?" asked Lil Shannon.

"There's too much sober advice in the world. I was brought up on duty and steady inculcations of usefulness and virtue. So now I find the world well lost for frivolity. I have no desire to leave monuments behind me. A fine day to live in, a meal to enjoy, a little drink and the pleasure of a pretty woman. What else is to be asked for?"

He was an engaging man, she conceded to herself, but these ready talkers and these smiling men hid much; mostly they hid from themselves. When the dance ended he escorted her to the bar and paid for drinks. "That's a handsome dress," he said. "If I were owner of a well-filled poke I'd scatter dust on it. It would make a pretty glow."

"Don't let it trouble you," Lil Shannon said. "I have made fifty cents from the dance. We're even."

He gave her a sudden intent look. "You don't like me, do you?"

She was a diplomat. She smiled at him and turned away. "I thought you didn't believe in being serious."

He left the dance hall and turned into Jack Tanner's saloon. He ordered up a drink, remembering that he was close to the end of his money; and he watched the game tables.

Rube Ketchum came into the saloon and paused against a wall and at once Ollie Rounds pressed himself inconspicuously into the crowd and laid his glance on the man. Rube was clearly on the hunt and presently Rube's roving eyes settled on a small miner half drunk at the end of the bar. The miner was at the moment shaking dust out of his pouch to the bar scales; and when he had done that he rolled through the crowd and left Tanner's.

Ollie Rounds slipped out of the saloon, knowing that Ketchum would soon be following the miner, to waylay and slug him. He saw the miner t Wallace Street and fade into town scattered with tents. quickened his stride, crossed dust and skirted the tent re back side. through it, loudly calling for "Fair play," and for a new trial. One man broke a trail with his shoulders, swinging his gun in the air. "They won't hang Hayes and Buck while I've got breath!"

Somewhere else a sudden commotion sprang up. Pierce stood upon a pile of lumber in time to see Rube Ketchum make a dive at a miner and swing with his fists. Surrounding men moved in, throwing Ketchum back. Ketchum drew his gun and swept a clean circle with it until he stood alone. "Don't touch me, anybody," he said. "Don't touch me. I'm a friend of those fellows. To hell with you yellow ditch diggers!"

"Rube," called an even voice. "Rube, put up the gun." Lifting his eyes, Pierce found a man lying flat on the scaffolding of an incompleted house with a rifle centered on Ketchum. "Rube," he repeated, "put it down and be civilized or I'll fumigate you."

A party of miners drove a team and wagon forward. Biedler and some others boosted the two sentenced men aboard and made a rank around them. "All right—all right," called Biedler, "clear the way. No use talking all day on this." The miners spread and the wagon pitched slowly down the slope toward the gallows constructed at the foot of the street.

SILENCE moved into the town, through which rose the steady beat of a hammer operated by some industrious man who ignored this high drama. Stinson grasped the side of the wagon, shutting his jaws together so tightly that the hard bone ridges turned white. Women from the dance halls scrambled up the hillside for a fairer view and one man's voice called, "So long, boys. It's a damned shame!"

Hayes Lyons, who had laughed at them all now let out a great, choked cry that went up through the silence like a strangled gasp, and suddenly a woman on the hillside began to scream: "Let them live! Don't hang the poor boys! Don't kill them!"

It set off a tremendous crying and moaning among the women. Men began to grumble. A tall, lithe figure leaped to a wagon wheel and wrenched at it; he threw himself into the wagon and seized the reins, bringing the team to a halt. He waved a piece of paper at the crowd. "Let me read this letter Hayes wrote to his mother!"

"Go ahead!"

"Read it—read it!"

Watching this man closely—for it was George Ives—Pierce saw him show deep emotion as he lifted the letter, and cleared his throat:

"Dearest Mother:

I am writing you on my last day on earth. I have been condemned to be hung for a shooting scrape here—something that God knows I repent with all my heart. I guess I went blind crazy. I know I am causing you the greatest grief of your life and if I have not broken your heart before this with my wild ways I expect this will break it now. Tell my sisters that I love them dearly. Tell my brothers to stay away from cards and liquor. I wish I had it to do over again so that I could follow your dear teachings—"

The dance-hall girls were crying in steady, increasing volume. One of them raced down the slope and fell and got up again and pushed through the crowd. She dropped in the dust by the wagon. "Hayes," she cried, "I'll give my life for you! Hayes—!"

The crowd, slowly flooded by this cataract of tears, found a shamed and half-hearted voice. "Hell," said a man, "let 'em live."

"Give him a horse and let him go to his mother!"

"Let's have another trial!"

"No—no! Don't waste no more time. Let's take another vote."

"Another vote!"

Biedler stood grim and formidable on the wagon tongue. "You voted already!"

"Take another vote!"

Biedler tried to speak, but the gathering sentiment swept him away. All he could do was stand and stare. A man got up on the wagon and asked for silence. "All in favor of hanging, walk up the hill. All in favor of letting them go, walk down the road."

"What the hell's the use of walking up a hill!"

The cries of the women continued on, wild and passionate and hard on the nerves. Men screwed up their faces at the sound of it; and men openly cried. Confusion increased around the wagon. George Ives still faced the crowd, gravely holding up his hands in appeal. A self-appointed committee drew another wagon beside the first and a spokesman stepped before the crowd: "Everybody that wants a hanging, go past the outside wagon to be counted! Those against will go past the inside wagon!"

The crowd found this a simple procedure and moved in mass toward the wagons. Barney Morris pushed his way toward the outside wagon and wigwagged at Pierce to follow. But Pierce stood fast. From his place on the lumber pile he saw the crowd swing heavily past the inside wagon and knew that these two toughs would be free. Men, having voted once, slipped through to be counted a second time. A few minutes later Jack Gallegher, Plummer's deputy in the Gulch, sprang up to a wagon seat and yelled, "They're free! Let 'em go!"

LYONS and Stinson jumped from the wagon and were immediately surrounded by their supporters. The woman who had groveled in the dust now laughingly arose and seized Stinson's arm and the dance-hall girls on the hill ceased their wailing and composedly marched toward town. The play was over. Pierce smiled one dark, short smile and joined Barney Morris. George Ives made his way through the crowd, grinning to himself. He winked at Barney and said cheerfully, "We skinned that cat, old man," and afterward he caught sight of Pierce and instantly the cheerfulness turned cold, and he stopped dead. The memory of a defeat came to this arrogant man and the memory stung him. He put his long stare on Pierce, he said, "You're here," and abruptly he wheeled away to join Stinson and Hayes and Gallegher. These four now marched loosely toward Tanner's saloon, surrounded by their partisans. Meanwhile the crowd, surfeited with drama, slowly moved away.

Biedler came up to Pierce and Barney Morris. Biedler was a stocky Dutchman with a bulldog face and a capacity for black anger. He was full of it now, and savagely exclaimed, "They cried for a pair of scoundrels. I wonder if any of them remembered to cry for Dillingham." He had a shotgun in his hand. He banged the butt of it on the ground and he pointed to the gallows at the foot of the street and ground out his observation, "There stands a monument to defeated justice."

Other men gradually joined this group. A tall fellow with a dense black beard arrived and Barney introduced him to Pierce: "This is A. J. Oliver, Jeff. This is Jeff Pierce."

"The gentleman," commented Oliver, "who knocked down Rube. I heard of that."

Presently W. B. Dance came forward with a man of lesser height. This one wore a short set of chin whiskers on a dark, dreaming, melancholy face; and

but he was, nevertheless, in the grip of fear. It showed on him. "I'm a marked man, Jeff. I can't ride from here to Bannack without being held up. I can't get on a horse and pull out tonight, either. They're watching. I'll have to sneak off afoot. Maybe I can reach Bannack. Maybe I can get beyond Bannack. Then I'd fall in with some freight outfit on the way to Salt Lake and I'd be tolerably safe."

"Want help, Barney?"

"Yes," said Barney Morris, "I do. Whether I make it through or not, I want my dust to get through. The family can be comfortable on what I've dug out of this country. I'll give you a hundred dollars to carry it to Bannack for me. Nobody's watching you yet. You haven't been here long enough to have any money. So you can ride as you please. Take the dust to Bannack and leave it at Oliver's stage office. I'll start walking tonight. I'll pick the dust up at Bannack, if I have the luck to get there."

"All right, Barney. But I don't want your hundred dollars."

"Why, son, I thought you disbelieved in sentiment."

"I don't believe in anything very much, Barney. But you did me a favor."

"That's more sentiment than you figure," said Barney Morris. He moved to the lantern and turned the wick until the room was half dark. He reached into his coat pockets and hefted out six gold pokes and tossed them on Pierce's bunk. "That's my stake, Jeff. About eight thousand. Forty pounds, more or less, of sweat and trouble—and not as much fun as I thought it would be. I been away from my family too long. Now listen to me. You tell Oliver's agent that if I don't show up in Bannack three days from now to send it on to Mary Morris, Centerville, Ohio."

"I'll think of you under your fig tree in Centerville," said Jeff.

"I like people around me," said Barney Morris. "I don't like to be alone. If I had it to do over again I'd never

"Oh, no, dear! This isn't the man I called 'Old Eaglebeak'; this is Mr. Brown, my boss!" WADE MONROE

SIMPLE TRICKS WITH LAMP BULBS

to astound your family and friends

**1. THE BLACK HALLWAY ILLUSION...** Here's the set up: You need a bulb for your reading lamp, so you bulb-snatch the 40 watt bulb out of the stair fixture. But don't try to read under it, or the joke's on you! Better trick: leave the 40-watter in the hall and buy some right size G-E lamps.

**2. THE READING LAMP SUBSTITUTION** ...When an epidemic of bulb-snatching has reduced the supply of bulbs in your house to a scattering of 25 and 40 watters, this will convince even the children that it's time to stock up on the larger sizes. Easier trick: Stop for new G-E MAZDA lamps on your way home tonight.

**3. THE VANISHING KITCHEN BULB...** Now you see it, now you don't! Shows the little woman how *you* feel when you find the bulb missing from your reading lamp—and not a spare 100 watt bulb in the house! Better trick: Keep G-E MAZDA lamps on hand in *all* popular sizes.

**4. THE FULL-SOCKET SURPRISE...** Fun for everybody! With every socket filled and at least 100 watts in every reading lamp, you'll avoid needless eyestrain and get new enjoyment out of life! To make it permanent, keep plenty of *extra* G-E MAZDA lamps on the closet shelf.

**5. THE ANTI-BULBSNATCHING TRICK** ...You can learn this from your G-E dealer. He's the one who has an Anti-Bulbsnatching Chart that shows the right size bulb for every lamp and fixture in your home.

15 and 25 watt .... **10¢** 75 and 100 watt ..... **15¢**

40, 50, and 60 watt ... **13¢** 100-200-300 watt 3-lite **35¢**

said Steele, "they should have

night, Doc," said Barney. He ent, turned between the rows wickiups and tents along the f town, and so arrived at the ch climbed Daylight Grade. he top of the grade he stopped his bearings. Central City, hich this road ran, was a quar- orward, but he struck into the oid the town and at last left entirely. As he climbed the es he had certain inexpres- tful thoughts. He was an ed-out man longing for his om he might never again see. of adventure had gone sour, had turned bitter.

ER was a man in Virginia City as Clubfoot George Lane, a who set up a bench in what- the town afforded and did his ook his rather low spot in the without comment; and this thawking through the town, Morris go into Doc Steele's ater come out. Clubfoot fol- il the latter faded beyond rade, then went limping to- Taber's saloon as rapidly as he found Ketchum and passed formation; ten minutes later Steve Marshland and George over Daylight to the crest. e Gulch steadily downgrade to Stinkingwater. This was the annack, and no matter what rney Morris made he would have to come out of the hills to Stinkingwater or the Beaver-

ly breakfast. Pierce saddled nd turned down the Gulch x heavy gold pouches tight- slicker lashed behind the urteen miles from Virginia, ssed from the Gulch into the ter's small valley, ran past s ranch and reached Baker's Baker's he found Ben Scog- in the shade of a wagon and team.

"Why, now," said Scoggins, "I'm pleased to see you again. Where you at?"

"Up the Gulch, near Virginia."

"Virginia's where I'm going," said Scoggins, equably. "After you left I did some trading around. Got this wagon and these horses. Knew I could sell anything in this country. It was just a matter of what kind of goods I could make the best turn on. I got sardines."

"Whole wagonload?"

"Four thousand cans. Sort of a tasty article a hungry miner would buy any time. No waste space—you can crowd a lot of sardines in a wagon. I'll start up the Gulch and I'll just holler as I go. Dollar a can."

"Luck," said Pierce, preparing to go.

"I never bank much on luck," answered Ben Scoggins. He lifted his gray-blue eyes—his shrewd and humorous eyes. "Your wife—she's here?"

"Yes," said Pierce, and went on.

BEYOND Baker's he forded the Stinkingwater and arrived at Dempsey's, which was a stage relay point. The road, nothing more than a pair of ruts in the hard earth, lifted from the Stinkingwater to low bluffs and ran westward over a series of barren, undulating hills. Fourteen miles from Stinkingwater he skirted Copeland's ranch on the Beaverhead and continued to Stone's. Here he stopped and ate noon meal in the roadhouse bar, loafed a comfortable half-hour, and forded the Beaverhead. At three o'clock he came into Bill Bunton's ranch, another relay point for the stages. This was on the Rattlesnake, and Bunton, a long and slack man, came out of a corral to give Pierce a careful sizing up.

"How's the color at Virginia?" asked Bunton. "I hear it is rich dirt."

"Fair, I guess," answered Pierce. "Just came in, myself. This the road to Bannack?"

"Yeah," said Bunton. "Ten miles down that way." The man's eyes inquisitively rummaged Pierce, his horse, and his gear. "Business in Bannack?"

"Just looking around," offered Pierce and moved on. A quarter mile down the road he swung in the saddle to observe that Bunton was still watching him.

The road, moving southwest, took the easy way through a bare, dry country of shallow gulches and dry stream beds,

A. JOHN KAUNUS

through sage and short grass and scattered rock. Pierce struck a creek marked with prospect holes and gravel pile, and turned with it, so coming into Bannack around five that evening. This town had been a year or so established and once had held a considerable population; now it appeared to have shrunken within itself. Born overnight of a gold strike on Grasshopper Creek, it had recently surrendered its vitality to the newer camps in Alder Gulch.

A sign identified Oliver's stage office but Pierce, not wishing to make his mission too obvious, drew up before Durand's saloon and went in for a drink. A hotel stood next door. Going to it—with eight thousand dollars standing at the curb on the back of the horse—he washed, had supper and came to the street to light and idly nourish a cigar while twilight arrived and the citizens of the town sat along the walks, and Durand's saloon began to grow noisy. One gentleman, nicely dressed and with a round face marked by a well-kept mustache, came past him and looked at him, half sharp and half pleasant, and strolled on.

He finished his smoke and rode back to the stage office, which still remained open. He unfastened the thongs holding the slicker, carried it inside and rolled the six heavy gold pouches on the counter before a clerk.

The clerk's reaction was somewhat odd. First glancing at the open doorway, he quickly hauled the gold pouches from the counter and carried them to a safe.

"I'll take a receipt," said Pierce. "That belongs to Barney Morris. He is to claim it as soon as he arrives. If he doesn't arrive within three days you're to ship it to Mary Morris, Centerville, Ohio. You got that?"

The clerk wrote out a receipt in a flourishing, upright hand. "Barney's on the way now?"

"Started last night."

The clerk gave Pierce the receipt. "You're leaving town soon?"

"I'll wait for Barney. He should be along."

"If I were you—" said the clerk, and closed his mouth upon the rest of his advice. Somebody strolled down the walk and turned in; and the neat, round-faced man who had earlier passed Pierce now came forward. He had black clothes and a white shirt and a string tie carefully put together, and he drew out a cigar and smiled on both men pleasantly. "Nice evening, Harry."

"That's right," said the clerk.

THE man turned to Pierce. "I don't think I have met you. My name's Henry Plummer. I'm sheriff of Bannack and Fairweather."

"Pierce," said Jeff, and offered his hand. The sheriff's grip was light and quick. He found another cigar and presented it to Pierce. "I have been giving these out rather freely the last few days, having just been married. From Alder Gulch?"

"Yes," said Pierce.

"Hear you had trouble over there. Dillingham was a fine boy. Makes it difficult for me to know what to do about Stinson. One of my deputies, you know. Hard to believe he'd do a thing like that unless his hand was forced. Boys over there released him, so I guess they figured he had something on his side."

"Suppose," said Pierce, adding nothing, offering nothing. The sheriff had hazel eyes; they scanned Pierce with a light and searching attention. He was smiling and he was cordial. "If there's ever anything I can help you at, let me know," he said, and left the stage office.

The clerk, writing, looked up. "Something else?"

"No," said Pierce, and left the office.

# Beneath Our Christmas Tree

Every year on Christmas Eve since
I was just a lad,
We've put a package 'neath our
tree—and marked it: "Love—to Dad."
Just a pound of Edgeworth—though the
cost is really small
Of all the gifts that father gets
he likes it best of all.

Now later on when I grew up, that
famous tin of blue
Appeared beneath our Christmas tree—
*but this time there were two.*
For I had learned, from watching
dad, the joy a pipe can bring.
And trial and error taught me, too, that
Edgeworth was the thing.

Again this year, I'm proud to say,
beneath our Christmas tree,
We're putting gifts of Edgeworth, yes,
*but this time there'll be three.*
For my son has grown to manhood
now, and much to my delight,
He wants a pipe for Christmas
and I'm going to start him right.

Edgeworth is on sale at your dealer's in an attractive log cabin Christmas wrapping.

NOTE: For those pipe smokers who haven't yet discovered the joy of EDGEWORTH, America's Finest Pipe Tobacco, we print this coupon, as a means of getting acquainted.

LARUS & BRO. CO.
212 So. 22nd St., Richmond, Virginia
Please send me, *at your expense*, a generous sample of EDGEWORTH Ready-Rubbed—America's Finest Pipe Tobacco.

**The Russian Ballet has been to Hollywood and Hollywood will never be the same place again**

OUT at Warner Brothers there is an assistant director named Wilbur McGaugh, who has had his heart broken. For twenty-five years Mr. McGaugh has been an assistant director, and in that time he has never come off second best. Hundreds of Indians, thousands of cowboys—they have never bothered him. Stars with temperament, stars without temperament, both have been easy. But early this fall he had the misfortune to tangle with the Russian Ballet.

The powers at Warners', in one of those perennial attempts to do something about double billing, decided to make two technicolor short films with the Ballet Russe de Monte Carlo—Capriccio Espagnol and Gaité Parisienne. And since the Massine troupe was dancing at the Hollywood Bowl anyway, it seemed a simple matter to herd them out to Burbank, set them loose on a sound stage, and let fly with a camera. Well, it was a simple matter, in fact it all turned out very well for everybody except Wilbur McGaugh.

The actual director of the pictures—in collaboration with Massine, who attended to the choregraphy—was Jean Negelescu, an easy-mannered gentleman whose thick Rumanian accent blended prettily with the Russian chatter. He moved suavely and undisturbed amid the chaos, for a director is a pampered man; he has only one responsibility, and that is to make a good picture.

But Mr. McGaugh had a thousand responsibilities. Anything that goes wrong on a set is the assistant director's fault. He is accountable for time wasted, money spent, actors absent, in fact there is no mishap you can t[hink of] not be blamed on an a[ssistant]

But he is used, on t[he other] a certain amount of [-opera] motion-picture actor [eds no] from an assistant di[rector to] there and act. Rathe[r he can]

But the ballet, no. [In the f] the dancers were brou[t to th] in a large bus which s[topped ju] the gate. The door [is hard] than open when poof, [like mice] out of a box into st[reet. It] scattered in all directi[ons. It to] hours to round them [.]

He threw himself completely into picture making, worked himself and everybody else to death. Three showers in an afternoon were just barely enough to keep him dry, he drank endless cups of tea, and spoke rapidly in that combination of languages which he fondly believes anyone can understand. "This is a great thing that has happened to the ballet," he said, beating the publicity department to the punch by about ten seconds.

He also managed to transmit his enthusiasm to the other dancers, until in no time at all every ballerina pictured herself a movie star. So much so, in fact, that finally Mr. McGaugh was forced to step in and caution one little girl who in six takes had missed the beat every time but never the smile, "Remember, dear, you're a dancer, not Duse . . ."

Mr. McGaugh's greatest headaches came in keeping the dancers present and presentable. Now it is no great secret that while a movie is shooting there are long stretches of time when the performers are not needed. Lights have to be shifted, props adjusted, and so on,

# ARVIN

*Heats Your Car the Best Way*

WITH FREE HOT WATER

WHEN IT'S COLD OUTSIDE YOU'RE WARM INSIDE

AN ARVIN HEATED CAR

● **YOU MAY CHOOSE** between two types of Arvin Car Heaters—one that installs on the dash, up and out of the way—or one that goes on the floor, under the front seat. And you may have a combination installation if you wish, including both types for maximum heating comfort and windshield defrosting.

**You'll heat your car the best way,** with safe, healthful, circulating heat from free hot water, regardless of the type of Arvin you choose. Here are a few of the many reasons why:

**All Arvins** circulate as they heat. They draw in cold air, heat it, and keep the warm air moving throughout the car, with powerful motor fan recirculation. More heat is available than you usually need, but you may turn it down with the variable volume control. Many other features, such as special fast warm-up equipment and tailored fittings for most cars, are all the result of 20 years' experience in building car heaters.

**There's an Arvin for your car,** built to fit it perfectly—built to give you as much heat as you need, wherever you drive. And any Arvin you choose operates on the same safe, dependable hot water heating principle that has won the approval of millions of car owners, mechanics and engineers.

**Arvin prices** range from $9.95 for a dash model, up to $27.50 for the complete underseat heater-defroster-foot-warmer system. Sold everywhere—by garages, service stations, accessory stores, wherever you see the Arvin display girl. Be warm in your car this winter. Arvin comfort costs but little.

# My Poor Head

Continued from page 19

I was in no mood. It was too early in the morning.

"Sure," I said. "I guess you made the Statue of Liberty, didn't you? Boy! And I guess you saw me on the 7th Avenue Express and I'm just so fascinating you can't wait to make a statue of me. Boy! And it would be the most wonderful statue in the world and win first prize and you'd be famous. Boy, oh, boy!"

He grinned. "It's an idea," he said. "Let me get a couple of sketches, will you?"

"No!" And I'd have said the same even if he hadn't had good teeth, too.

The train was slowing down for Times Square. He grabbed a piece of paper out of one pocket and a stub of a pencil out of another and scribbled. "There," he said, "in case you change your mind, Saturday afternoon would be all right. I'll pay you. Say five dollars for a couple of hours." The grin got wider. "Just the head, you know."

Oh, I thought; and then the train stopped and the door opened and out I went.

But I kept the piece of paper.

AT THE office—Manning & Co., they make patented buttons, I'm on the switchboard—Lou had called, one of the girls said. I called him back. When he came to the phone he said, "Listen, chicken—what I called for a while ago was to see if you were ready to apologize for last night."

"Apologize!"

"Yeah."

"*Me* apologize? How about *yourself?*"

"Look," he said, "I'll be over tonight."

"No."

"Then I'll meet you Saturday. Usual time, usual place."

"I presume," I said, "that what you mean is do I have an engagement for Saturday afternoon."

"I will meet you Saturday afternoon," he said, "at one-fifteen in the P. M. at the elephant cage in Central Park. And don't be late."

"It just so happens, *Mister* Hopper," I said, "that I have an engagement for that particular time of the day Saturday. Maybe next time if you would make your request a few days in advance—Hello? Hello? Hello?"

All right, I thought. All right. Okay.

IF ONE brownstone can possibly be older than another brownstone, then the one I found Saturday afternoon was the great-grandpop of all of them.

Four floors, and dark going, and that old-carpet smell the whole way. But Kelley never turns back, especially not when turning back would be having lied, or when she's still sore about something, or when she could certainly use five bucks toward a new spring suit.

I knocked on the door at the top, and somebody yelled, "It's not locked," and I turned the knob and sure enough it wasn't, and I opened the door. Nobody in sight. The room was big and it had a skylight and it was full of junk. Old pieces of rock and stuff, and platforms, and busted plaster, and buckets, and sacks, and rags, and tools, and I don't know what. And statues. Some of them were just parts of statues, but there was a whole girl standing up, doing nothing, and a woman sitting on a rock staring at nowhere. They didn't even have names scratched in the stuff around the bottom. I mean, if a statue's named Joan of Arc, or Victory Leading General Sherman, you know where you are with it. And the faces: they all looked half asleep, or like they'd just been hit over the head.

While I was standing there he came in from another room. He still had on that same faded blue shirt, and some even older pants, and a pair of dirty sneakers, and he was eating a sandwich the size of a tombstone. I remember noticing then how big and strong his hands were.

"Hello," he said, just as if girls he picked up on the subway walked in every hour, on the hour. "Take off your hat and sit over there." He waved the sandwich at a chair over on a sort of platform.

I did it.

"No. Sit easy. Cross your legs. Put your hands in your lap. Look down at 'em."

So I did, and he walked around me a couple times, eating the sandwich. Then he went and got another straight chair and a folder or something with some paper fixed onto it, and an old box full of odds and ends of pencils. Did it all in one trip, too, by carrying the sandwich in his mouth. Then he sat down and started drawing, of all things.

"What's so special about my face?" I said.

"Sit still."

I did, for as long as I could. Then I asked him again.

"Nothing in particular," he said. "I happened to like it. Fine head. Sit still." He pulled off a drawing and dropped it on the floor, face up.

"Is that supposed to look like me?" I asked.

"Looks more like you than you look like yourself."

"But it's sort of round and thick, and my face is oval. I mean, I hope you don't mind my—"

"Don't you ever sit still without talking?"

I said, "Maybe if *you* talked."

"Oh, all right. What about?"

"Well, for instance, this head—what's it for?"

"For? Nothing. There's a show I might try to get it ready for."

"Think it'll get first prize?"

"Oh, they don't give prizes."

"They *don't?*"

"No. Just show 'em."

"Then what's the point?"

He looked up from his paper. "My dear," he said, "you've got me there."

He made three or four more drawings—"studies" he called them—and dropped them on the floor. When I got too restless he talked to me.

After a while all of a sudden the door opened and a girl came in carrying a couple of big bags of groceries. Now, of course, personally I do not have a maid, and probably never will have if I live to be a trillion, but it doesn't take much experience to tell whether a maid's a good one or a bad one, especially when she doesn't brush her hair—it was black and stringy—and when she weighs a hundred and sixty if she weighs an ounce, and doesn't wear a girdle, and when she's got on a pair of shoes run over at the heels, and you can tell just looking at her that the corners of the rooms never get cleaned, or the bed made right, and—well, I mean nobody but a man, and a man like poor Noel Brown at that, would put up with it for a minute. Pathetic!

But her face was what I didn't like most. It was about the color of old olives, and her eyes were little and black and too close together, and she had a button nose and her lips— the only word I could think of was insolent.

I said very nicely, "Hello,
d she just grunted.
s that was what I was think-
ing about the next day, Sunday, while I stood watching the elephants and waiting for Lou. I was thinking that the next time I saw Noel Brown we would be well enough acquainted for me to mention a thing or two about servants. I didn't notice Lou come up.

"Hey," he said, "what were you thinking about? You weren't even watching for me."

"Oh, nothing."

I put my hand under his arm, and we went over to Fifth and walked up to the zoo.

"Look, chicken," he said, "I've been thinking. I've been thinking a lot in the last few days. And the way I figure it out, maybe, after all, the least people can do right now is show they got confidence, and go ahead living." He sort of gulped. "That is, no matter what happens there've got to be families and—and kids and so on, to take things in hand afterward. That is, if there aren't any kids, who'll be President fifty years from now? I ask you."

He stopped then. He was breathing hard and looking excited, I remembered later, like a man that's just announced he is willing to go over a waterfall in a barrel. He waited for me to say something. And I said something, all right.

"Oh, I don't know, Lou," I said, "maybe at times like this people ought to put their personal affairs off a while."

He looked at me as if I had gone nuts. And as for me, the word for what I was, is "aghast." I couldn't have been more aghast if all of a sudden I had changed into one of the zoo elephants. The silence went on and on. Then Lou stuck his jaw out.

"All right, now," he said. "Let's have it. What's going on behind my back?"

"Lou!"

"Why didn't you meet me last Saturday afternoon? Why didn't you meet me yesterday?"

"I model," I said.

"You *what?*"

"I model."

"What for?"

"If you mean who for, a sculptor named Noel Brown."

He looked at me hard, for a long time. Then he looked at one of the eagles in

"We used to always think he was sick too— but it's just that he says, 'Pur-r-r-r' backwards"

a cage, out by the seals. Then he said:

"All right. I won't ask any questions. And I won't hold it against you. Just never see this guy again, and we'll forget the whole thing."

"Lou! Why, you talk as if . . . as if he was making passes at me, or something!"

"I'm sorry. I take it back. So all right, he's not making passes at you. So he's crazy. So you can just not see him again and that's the end of it."

"Well, Lou," I said, "I can't exactly not see him again, because he needs me to finish the thing he's working on. You don't understand, Lou. All he cares about me is, he thinks my face is very interesting. Why, he's just like a child, Lou."

"Yeah? Is he a good sculptor? Famous?"

"Not really famous, I guess, no."

"Will you not see him again, or not?"

"Lou—"

"Take it or leave it," he said, and from the way he said it there was no doubt. It was one of those things, ultimatums. And I wasn't in the mood.

"All right, Lou! All right, if you insist, yes, it is too bad Noel Brown doesn't make passes at me!" I would have been aghast all over again, at saying that, if I'd stopped to think. I didn't stop. "It's too bad *somebody* doesn't, anyway! Sitting around practically an old maid, year after year! And then when you finally do begin to wake up a little, what do you do? You creep up on it with *reasons!* You're willing to marry me so there'll be somebody to be President in 1990. Boy! Well, it so happens I'm not interested in reasons! And even without reasons, I'm not so sure any more! Once I was sure, but now we'll have to see. And meanwhile, I warn you, I'm going to have other interests in my life, and if you don't like it, *Mister* Hopper, you—"

But he was gone. The last I saw of him he was walking the fastest I ever saw anybody walk, swinging his arms like windmills, going past the seal pool.

FOR a girl who likes to know where she is with herself, the question was, why had I said those wild, wild things? Was it *possible* . . . ?

But of course the first night I just plain cried. About Lou. And the next night. And the night after that, too, not so long—but just as *hard,* you understand, while I was crying.

From then on, the rest of the week, I waited for Saturday, and Saturday at one-thirty I was going up those dark steps.

The door to his apartment was locked. And there was a note thumbtacked on it: "Sue, sorry not in, would you mind leaving a number where I could phone you?"

I did, and went down and over to the bus and took a bus ride. You silly thing, I said to myself on the bus, just because a man calls you "darling" a couple of times, in a very offhand way indeed, and writes you a note in the line of business and starts it "Sue" instead of "Miss Kelley" or "Dear Madam" . . .

If the week before was Cry Week, this one was Wait for the Phone to Ring Week. And it didn't.

Don't ask me how long it went on like that. Forever. Ages. A whole week more, and by that time if you had asked me how much was two and two, I would have broken into little bitty pieces. And at the office I was messing my job all up, and I guess I would have gone gradually crazy, and not even known *that* if the letter hadn't come.

Only it wasn't a letter. It was an envelope, a big square white one made out of thick paper, and inside there was an announcement. The Museum of Today's Art Requests the Honor of Your Presence at the Private Opening of an Exhibition of Contemporary American Painting and Sculpture.

The next Wednesday, eight to eleven. And there were two tickets, too, and in ink at the bottom of the announcement: Compliments of Noel Brown.

I thought: Oh, how sweet, a surprise!

THE extra ticket I sent to Lou. I didn't know whether he'd use it or not, but I wanted him to know once and for all that Noel Brown was a real sculptor, with things in shows. And if he was interested in using the ticket and seeing my face done by a fine artist, he could do that too. I didn't care what he did.

The exhibition was in a big new building, mostly glass, like a factory, just off Fifth Avenue. I walked past a couple of times, trying to look in and size the place up, then I gave my ticket to the man at the door and walked in.

Everybody was in little bunches, talking and smiling and wandering around. Most of them were dressed, lots of the men in tails, and there were corsages all over the place, and they all seemed to know one another and not to want to make any new friends, especially; so I wandered around by myself.

In the middle of the lobby, or whatever you call it, there was a tremendous statue of a man wrestling, only not wrestling *with* anybody. The rest of the room was filled with Who's Who. People you see in the papers all the time, and actresses on the stage, and a lot of men I didn't know, but they must have been somebody to go out in public with such funny faces, and reporters and a couple of photographers. Nobody I knew.

I thought as good a thing as any, till Noel showed up, was to follow that bunch of people around, at a sort of a distance. Maybe I wanted to try to hear what they said when they came to my head. So they straggled into another room, with a lot of paintings on the walls and a couple of statues—one of a dancer and one of a man's head, but not me—and I tagged along, and they stood around looking and talking and then went on to another room. There were lots of rooms, made with movable walls.

After a while they had cleaned up the first floor, and went upstairs. I went too. First there was another hall with a statue in it that wasn't *anything,* unless it was a bunch of brass bananas caught in a trap. But nobody laughed. The photographers took a couple of pictures of everybody not laughing.

THE next room was a biggish one with more paintings on the wall and a statue in the middle. I couldn't see the statue at first because there were so many people, but for a minute I got a glimpse, and I saw it was plaster, and it looked kind of familiar, and then the people moved and I got a good view, and it was me, all right.

My face, life-size, or anyway what Noel Brown thought was my face. And to tell the truth, the way he had finished it up it sure enough did look an awful lot like me. And in spite of a different hair-do, too, though it wasn't a hair-do exactly—just lumps; and in spite of its being still practically round, instead of oval like my real one.

But I guess when you came right down to it he practically *had* to make my face fat, if it was going to fit in with the rest of the statue. I mean, if it was going to go with the body.

Because it wasn't just a head. There was a body attached.

I must have made some kind of a sound because a couple of the people turned and looked at me, and I turned away quick.

Of course it wasn't *my* body. Of course I mean it couldn't have been, not possibly. What it was, only bigger, was that other thing he'd been working on,

and then, because a girl, even when it's me, can stand so much, down I went, and out.

When I came to I was sitting up and there were people around. But there was somebody closer, and his arm was around my shoulders, and it wasn't an arm in black cloth, either, or even midnight blue, it was good old twenty-nine-fifty herringbone, and it had a very nice comfortable, usual feel, and I opened my eyes wider and there it was—Lou's own face, bones and freckles and all, looking like he was about to bust somebody in the nose, but not me.

"Hey, chicken," he said. "Are you okay? Are you okay, chicken?"

"Lou," I said. "Get me up, will you? Get me out of here."

He helped me up, and all the people said, "Are you all right?" and Lou said, "Certainly she's all right. You got eyes, haven't you?"

And he took my arm and we went out of the room and downstairs.

All I could think of was explaining to Lou, quick. "Lou," I said, "only the head—"

"I know," he said. "I got eyes, haven't I?"

"Oh, Lou," I said.

Down in the lobby Lou went to get his hat at the checkroom and I leaned against a big square post trying to make my head stop going around. And while I was leaning there some people passed on the other side of the post.

"Nice work," Noel Brown said.

"My heart was in it," Maria said.

"Means thousands," he said. "Thousands!"

They went on toward the door. I peeked around the post. He held the door open for her, and as she went through ahead of him he gave her a pat, and where he patted her was where no gentleman pats a lady.

But, of course, I knew before that. When she was barging up to smash the head of the statue and I realized where the rest of the statue came from, well, right then I knew it was probably just as well I hadn't got to the point of telling Noel Brown he ought to give Maria the old two weeks' notice, because that was when I saw that Maria was no more a maid around that place than Whirlaway was. She lived there.

I MEAN, some people are just common ordinary heels, and other people there isn't any word for. I guess it was all right for Noel Brown not to tell me the head wasn't just going to be a head. It wasn't any of my business. To him, I wasn't a person. I was just a hunk of stuff sitting on a chair for him to make studies of.

And it was all right having Maria do that act, and give that fake speech about being sent away, and so on. Thousands and thousands of dollars' worth of publicity was what he wanted. It was a smart way to get it, I'll say that for him. Especially when he didn't plan it from the beginning, but only thought of it that day Maria dropped the things in the kitchen, which is the way I figure.

But to drag me into it. To use me the way he did, actually *use* me, a human being—

Lou says we will live on the upper West Side because the air is better there and it's handy for us both to get to work, and, of course, after the way I treated him I would live among the bears in the Bronx Zoo if he said so. So I will simply have to keep on taking 7th Avenue expresses, and maybe after a while I will learn to do it without wincing.

Just one thing, though: If we have any children, which naturally we are going to, and if any of them turn out not to be future Presidents, but a girl, we move. Too many things happen on that line.

EMBLEMS OF EXCELLENCE

**EASTERN ICE YACHTING CHAMPIONSHIP BOWL.** The greatest ambition of any ice boat skipper is to win the silver bowl shown at the right—emblem of the open championship. To win it, he must first become champion of his boat class in the annual regatta held by the Eastern Ice Yachting Association—then outsail all other class champions in the finals. In a sport where speeds of 154 miles an hour have been attained, winning the "Open" calls for a skipper and boat that are both better than good!

**ETHYL EMBLEM.** There is an award for excellence in gasoline too. It is the Ethyl name. Gasoline in a pump which bears the Ethyl trade mark has to be better than good. It must be "tops" in anti-knock (octane number) and all-round quality. "Ethyl" means a cooler-running engine in summer; a quicker-starting engine in cold weather; extra power throughout the year. When you stop to buy gasoline, "Ethyl" tells you which pump contains the best.

**When a fighter is overm the only thing to do is If Joe didn't know th wouldn't be where he i**

JOE was twenty-nine and feeling old whe Marcia. A man shouldn't feel old at twe but the chances are he will if he has bee for ten years and has crawled in and out ropes a couple of hundred times and a lot things have happened to him, such as his running off with all his fresh dough.

Everybody said it was wonderful, the re between Joe and his manager. Just like f son, they said. Well, it was at that, becaus known Johnny Martin since he was a kid s the sidewalks and he never had had anot ager and never wanted another. But Johr gambler and liked the dames and he al broke and this time there was a new dan stuck on. So after Joe fought Eddie Val ir den, Martin and the dame left town and M Joe's money with him.

Joe hadn't looked so good against Val a tough Polish kid with a hard head and a and Joe had almost broken his left hand ho on the chin. And then he had been sticki the belly and a couple of his punches had and he had lost a couple of rounds on foul soaked up his punches and come belting round after round, and he had been lucky a decision. The boxing writers said he c good and was slowing up and one of the piece saying that new blood was needed i dleweight division.

The fellow who wrote the piece was rig knew it and he was feeling old and not ca when he met Marcia and she was stuck c he knew that, too. Well, she wasn't the that was stuck on him. The first rich c Rich dames go for fighters, and Joe had ha of them. None of them had lasted long, wh right with him because they bored him af and he didn't remember half of them.

MARCIA was twenty-two but she didn't cause she was such a little thing ar cheekbones and big eyes made her look l She was with Freddy Gorman, a young had met in the Madison Square Garde night Joe Louis fought Nathan Mann. Sor invited him into the club and he had r there and they had seen each other once since then and had become rather friend

This night Joe had just heard about M ing with his dough and he dropped in club for a drink and Freddy and a girl at the bar. He nodded to Freddy and drink and Freddy called him over and him to the girl and that was Marcia. couple of drinks at the bar and Freddy sa going to have dinner there and asked him eat with them. He said he would becaus had loosened him up a little and he didn plans for the evening, anyway. They mo a table and had two more drinks and a st felt better than he had when he came i

Marcia hadn't said much but she ha him a couple of times across the table said:

"I saw you fight last night."

"I'm sorry," he said.

"Why are you sorry?"

"Because I was lousy."

"I didn't think so."

"Ask him."

"No," Freddy said. "I didn't thin lousy. You were in there with a tough

"He's tough, all right," Joe said. have looked better."

He smiled at Marcia. "I'm getting

Her eyes widened. "Old!" she said look old to me."

"I am old. I'm twenty-nine."

She laughed. "Then I'm getting o said. "I'm twenty-two."

"Twenty-two," he said. "I was twe But that was a long time ago." *(Continue on page*

# Pull Up Your Tights, Kids

Continued from page 67

a thousand causes for delay. The little dancers, catching on to this in no time, found that for the price of a short walk they could see Henry Fonda in the flesh making The Male Animal, James Cagney in the flesh making Captains of the Clouds, or Errol Flynn in a uniform making an epic. Now all that is admittedly fascinating business, and the dancers, while watching, would sit on things, lean against things, and chew their lips, so that when finally they remembered to come home to Mr. McGaugh, their costumes would be dusty and wrinkled, their make-up all to one side. Then when Mr. McGaugh would go into his expected frenzy, they would withdraw in little groups, stare at him intently and gabble in Russian until finally he showed signs of breaking. Then they would fix their lips, brush off their skirts and go into their dance.

The explanation for these antics is fairly simple. Ballet dancers are accustomed to the discipline which an audience—a live audience—demands of them. But a movie set is one of the most informal places in the world, everyone on it down to the last property boy is a gag-man, jokes are obligatory. The holiday air never stops, except—and it is a big except—when the bell rings and the red light goes on for a take; then everybody goes to work and hard to work. It takes a little time for any performer to get used to these sudden shifts. The ballet, of course, got used to it, but at the expense of Mr. McGaugh's nervous system.

### Hollywood Goes Overboard

There was also a second direction from which trouble came to Mr. McGaugh, and that was from the movie people themselves. Hollywood is admittedly the great bastion of glamor; from behind its walls glamor is shot out to the rest of the world as balls of fire, flaming arrows or boiling oil. Well, that satisfies the rest of the world, but how about Hollywood itself? What does Hollywood turn to when it needs to satisfy its own congenital need for glamor, for mystery and romance?

It seems that what it turns to is the Russian Ballet.

During the filming of Gaité Parisienne you couldn't trip over a cable without falling at the feet of at least one $4,000-a-week personality. And, understand, that is an unusual condition. Movie stars do not visit one another's sets. To put it kindly, they wouldn't walk across the street to see a fellow actor break his neck.

But on the ballet set all was different. Eleven pictures were shooting at the time and eleven assistant directors were going quietly out of their minds trying to get their actors—and in some cases even their directors—back to work.

The "King's Row" company waited two hours before they found Ann Sheridan, blissfully oblivious of time, behind a pile of old scenery. Cagney rushed over between every take. Flynn appeared regularly, with his boots on. Bette Davis brought a chair with her. And Charlie Chaplin showed up early and stayed late.

Well, in any case there is a certain confusion on a set. Just the people who have to be around—wardrobe, make-up, property, camera, lights—they make considerable tumult in themselves, but add a few hundred sightseers and you have the nucleus of bedlam. So Mr. McGaugh had to close the set and put policemen at the door.

But of course a closed set is only comparatively closed. You can keep the unimportant people out, but you can't keep Jack Warner out, you can't keep Olivia de Havilland out, nor can you keep Monty Woolley out.

Mr. Woolley was rather a touching case. For ninety-one weeks he had been a star on Broadway in The Man Who Came to Dinner, he was now, at a very fancy figure, repeating his performance before the camera. He liked the ballet and wanted to watch it dance. But to the cops on Stage 18 he was merely a man with a beard. No persuasion would make them pass him.

He tried everything. He sneaked in, he blustered his way in, he got Bette Davis to take him by the hand, but each time he was discovered and boom, out he went, with no apologies.

But Mr. Woolley had not been a professor at Yale for nothing. After some hesitancy, he decided to use his head. So walking boldly past the cops, who naturally stopped him, he pointed to the call sheet.

Now the call sheet is a piece of white paper on which is listed everyone who has legitimate business on a picture. Everyone from the producer to the last extra. Naturally, in a musical picture, the name of the composer is on it. So

Mr. Woolley pointed to the name of the composer, "Offenbach," he said, "see that?" The policeman looked and saw. "Offenbach," said Mr. Woolley, "I'm Offenbach."

From then on he watched the ballet at will and in peace.

By the second week of shooting, Mr. McGaugh was visibly shaken. Ordinarily a spruce, well-combed, well-pressed, shoes-shined type of man, he had begun to wilt. His coat was off, his hair mussed, his suspenders loose, and his voice was so far gone that he had to use a public-address system to make his hoarse whispers heard in the far corners of the set.

Gaité Parisienne was not made in a single scene, but in five sets: the various rooms, anterooms, exteriors, etc., of a Paris restaurant, a change which required rearrangement of the original choreography. Well, in the rearrangement, one sequence was shot in such a way that two of the little ballerinas were cut out of the action. So Mr. McGaugh, who abhors waste, instructed them to stand on a balcony and watch the dancing. "You know," he said, "look interested in what's going on."

Well, the little ballerinas didn't go for that at all. They were dancers. They didn't want to look interested. They explained in purest Russian that the whole thing amounted to a crisis and that Mr. McGaugh might as well face it. But Mr. McGaugh m ly to them by the hand, led them u nto t balcony and left them.

The rehearsals went well. ne ha lerinas looked moderately ereste The scene seemed ready to sh .

### The Man Who Couldn't in

Then came the take. It w a lo take, intricate and beautifu time and it seemed to be going per tly, u til suddenly Mr. McGaugh ha ened look up at the balcony.

There were the ballerina looki interested, very interested, act their parts well. Indeed they are fin except for this one particular n a se ting of a nineteenth-centu Fren restaurant they were drink ; Coc Cola out of bottles.

Mr. McGaugh moans wh he members it. "There were hundr and thirty-five electricians c that s getting ninety-four cents an our. had five hundred dollars' wo of tec nicolor film going through th amer And then he closes his eye "Sab tage, that's what it was, abote They're Reds, they're Russia , they I.W.W.'s."

After that Mr. McGaugh w a beat

man. From then until the sh of picture he moved, wan-face in a d He usually sat in a chair un they ready for a take, then he wo d call "Come on, kids, pull up r tigh That was all the authority dared sume.

But the ballerinas, as is y nat after a triumph, developed ertain fection for Mr. McGaugh. hey c tered around him and pli him candy which they shouldn ave b eating and which he didn ike. just to give the knife a fina urn in wound, they talked to him ncessa in very understandable E ish.

Finally, of course, there as an to it all. The picture was ished the ballet left immediatel or Der to start a tour. Mr. McGau got a night's sleep and rose u r the sumption that he had sha n the Russian out of his hair.

But he was wrong, very ong. haunted him even from D er.

Mr. McGaugh, you see, d exp accounts to check over l app And on one of the sheets, ist tur in by a ballerina who o ously taking no chances, Mr. Mc ugh fo an item he still can't belie But t it was, in black and white: Offering nine masses. Said for the cess o motion pictures made b the B Russe."

### stotle Was Right

France is a philosophical ther than a benefit con- v. The individual is enti- t and, unless he insists on it is his. France believes r race; she approves of no tries to dominate others, hen the domination is said good. The French people e control of their national u and I have little control mething happens to the those who are elected to tle pointed out this peril government. Much power ad.

y of dealing with govern- ecome irresponsible is to get up a revolution. One explanation of her surprising collapse may be that Hitler chose to attack just as the people were preparing to revolt. They were tired of racketeering in politics, in the labor unions, in the departments of national defense. Don't condemn them before you are sure that their condition at the moment was different from our condition now.

Fraternity is a very French word, and the Frenchman gives it a meaning which you understand completely only if you have lived in France. It is closely connected with the French ideal of good manners. Etiquette, the Frenchman believes, is a technique for getting where you want to go; if your purpose in society is to be friendly and brotherly, as befits equals, you'll need a lot of technique.

### What Fraternity Means

The Frenchman knows how to put an idea clearly in words; no one can do it better. He also knows that every moment brings us sentiments, affections, admirations or judgments which should be expressed not in words but in manners.

The French farmer or workman has a richer technique for this complete expression of life than have most members of the upper classes in other lands. Without such an equipment in subtle manners, companionship is impossible. For this reason fraternity among us is only an abstract noun, but in France it is an atmosphere.

Of course, you can't acquire a high technique of good manners unless you understand human nature; you probably won't try to acquire it unless you feel that all men are your equals. Being a gentleman is easy, if to be a gentleman is merely to be a snob, reserving your graciousness for other snobs who, having no range of sensitiveness, won't know whether you are gracious or not, and won't care so long as you are like them. Frenchmen have their faults but they are not snobs. They are trained to appreciate simple joys, which are available to poor and rich; whether rich or poor they are taught the same manners, which are their common language.

You can't acquire this language, you won't try to, unless you have a zest for all the situations likely to arise in life, and unless you are curious about the right key for every problem. French curiosity about life is boundless.

The qualities I have tried to describe are the qualities of the forty-two millions in France and of the two million French captives in Germany, all in bondage. I rejoice that England, by comparison, has suffered little. I'm glad that our aid has saved England from suffering more. But I'm sorry when an occasional Englishman suggests that France, too, is not deserving of sympathy and aid.

With all respect for those British qualities which are excellent, I reject entirely the cruel and ignoble opinion that France in her agony deserves no more pity than Joan got at the Rouen stake.

I am far from alone in believing that the French are still the most civilized and the most intelligent people in our Western world, perhaps the most tenacious and long-enduring. I think we shall sit at their feet again, to learn certain lessons of the mind and heart which no others have mastered so profoundly or can teach so well. If our faith in them, meanwhile, has faltered, or if we have for a moment forgotten them, may we feel ashamed.

# CARBON actually removed!

YES, MISTER! Here is a motor oil which *actually removes carbon!* It actually *cleanses* your engine while it lubricates!

Startling? You bet it's startling, but more and more thousands of motorists are taking it as a matter of course. For they have found that

**MACMILLAN RING-FREE MOTOR-OIL**

saves them from having to have their carbon cracked out every few thousand miles.

Letters on file from fleet owners, car dealers and tractor builders tell their amazing experience with RING-FREE. To the private motorist this freedom from the yoke of carbon-removal may be only a convenience and a satisfaction. But to commercial firms it's a question of dollars and cents, profit and loss.

"But tell me why this RING-FREE Motor Oil does all this," you may be asking.

• • •

It's as simple as this:

RING-FREE is refined by a new and *patented* process which retains in the oil a natural solvent.

This solvent dissolves the "binder" holding carbon particles to the metal parts of your engine — and floats them away.

You can see how it works. For when RING-FREE first goes in, it is clear and light in color. But when you drain a fill of RING-FREE from an engine choked with carbon, especially your *first* fill, it comes out dark, murky—often almost black. That's because it's then full of carbon particles cleansed off your piston-rings, valves and other gunked-up metal parts of your engine.

Get your first fill of RING-FREE from any *independent* filling station or garage. The guarantee below shows how sure we are that you will be thoroughly satisfied.

MACMILLAN RING-FREE MOTOR OIL

Copyright 1941 by Macmillan Petroleum Corporation

**Try it at OUR risk!** Macmillan RING-FREE Motor Oil is *guaranteed* to remove carbon, cleanse your motor, save gasoline, reduce wear and repairs. It makes your motor run smoother, reduces friction by thorough lubrication and adds pep and zip. Try a fill and if you are not satisfied that RING-FREE is doing these things, your money will be refunded by your dealer immediately.

Ask your dealer for "What You Can Expect from Macmillan RING-FREE Motor Oil," our new circular, or write us for it direct.

## Voice of Russia

Continued from page 14

Press conferences with Lozovsky lack the spontaneous humor and gaiety of a White House conference. There is little of the usually good-natured, sometimes acrimonious, discussions of a Brendan Bracken press conference in London.

Usually there are twelve of us seated around a long table. There are three Communist reporters, five Americans, three British and one South American. It is a large, pleasant room with pictures of Lenin and of Stalin looking down upon us. The press conference opens. We can ask any questions we wish. Lozovsky nearly always sticks to Russian and some of our more linguistically talented colleagues translate for us. A typical exchange of questions and answers took place this afternoon.

### Discussion But No News

Thilia Jordan, News Chronicle of London (speaking in French): "Mister Vice-Commissar, yesterday I handed in my daily story at noon. It did not clear the censor until seven hours later. As it takes several hours sometimes for our stories to reach London I think it not unreasonable to ask you either to add more censors or to ask the present ones to hurry with their jobs."

Lozovsky (looking sympathetic and taking off his rimless glasses, answers in Russian): "That's unfortunate. We will try to do something about it."

Jordan (turning to Robert Magidoff, the AP man who knows Russian):

"What did he say?"

Magidoff tells him.

Henry Shapiro of the United Press: "The Russian papers say today that City B, near Leningrad, has been recaptured by the Red army. Will you identify City B?"

Lozovsky: "Please speak Russian."

Shapiro repeats in Russian.

Lozovsky (gently reproving as one talks to a child): "Mister Shapiro, if the papers wanted you to know what town it was they would have named it."

Si Sulzberger of the New York Times (speaking Serbian): "The BBC reports that some Japanese fishing boats were blown up by Russian mines. What about that?"

Lozovsky: "What do the Japanese papers say about it?"

Sulzberger: "I don't know."

Lozovsky: "I don't know either."

Arch Steele of the Chicago Daily News: "The German radio says that the Nazi troops are pouring through the southern front almost to Moscow. Any truth in that?"

Lozovsky (smiling): "Mr. ... know the German radio. Ca... believe it? As for Goebbels... that if loud braying counte... thing the ass would be king ... mal world."

And so it goes. When non... think of any more questions ... answered Lozovsky arises, sa... goodby and the conference i... of that, plus the two brief ... muniqués, correspondents ha... news stories. This is a est and an intelligent ques- n only be answered by tak- o the inner sanctum that lier's method:

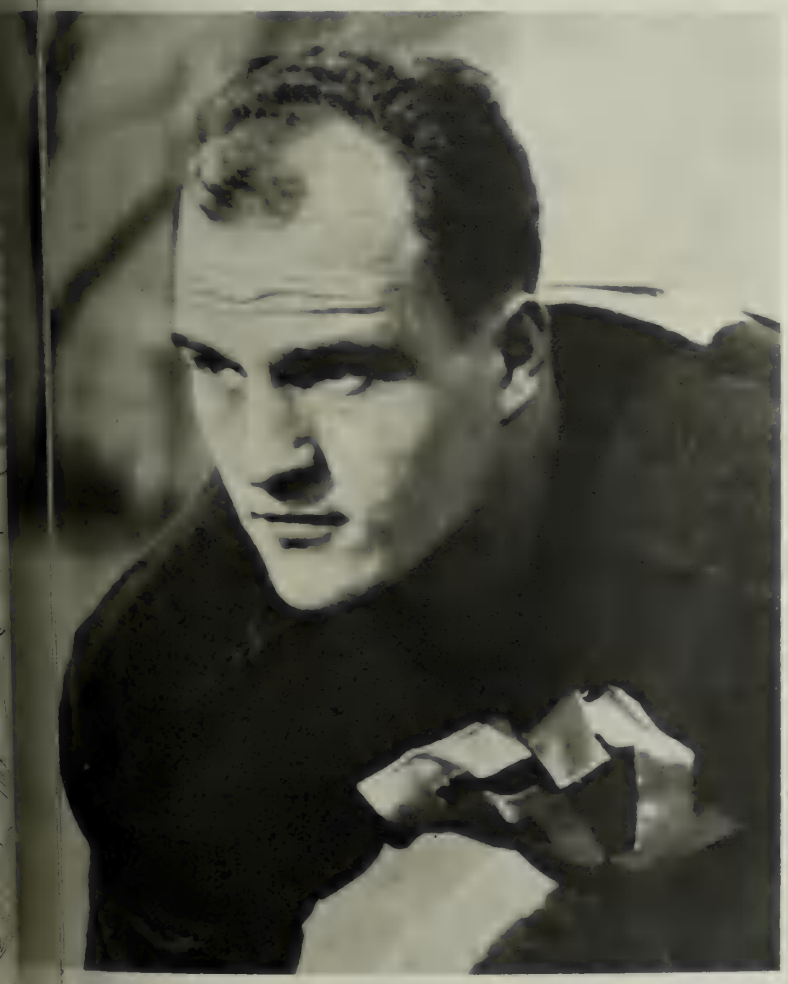
r who has had three good en preference over a junior two good years, and a junior nod over a sophomore who one good year, everything irly equal.

There are two main angles on an All-America selection: First, that he can carry out more than just a few assignments—that he can star beyond his expected job—and, second, that he has been able to prove for more than one year that he has earned his place.



2. The class and the type of competition must always tell a big part of the story.

3. The recommendations of Collier's All-America Board, consisting of veteran football writers who are in close touch with the teams and coaches from every section of the country, play an important part.

4. A final, confidential recheck comes from every coach whose teams have played against the leading stars under consideration.

It has been our policy to give major credit to all-round ability rather than to the specialist. It has also been our policy to give precedence to those who have come through their senior campaigns with fine records in past years. Experience, after all, is a vital football asset. Through this last season the three leading football centers were the Midwest, the South and the Southwest. The East had good but few outstanding teams. This was true of the Far West, which leveled out. The Midwest was on top with such teams as Minnesota, Michigan and Notre Dame, where the South had Duke, Alabama, Mississippi, Georgia, Vanderbilt, Tulane, none of which, however, were better than Missouri.

Play in the strong Southwest was so evenly and so bitterly fought that outstanding stars in one battle were too often brought back to the level of the well-balanced pack at the next start. Injuries cut in heavily. For example, Jack Wilson of Baylor, certainly one of the

greatest backs of Southwest history, was shackled by injuries in many games. This also applies to Jack Russell, Baylor's star end, Bob Brumley of Rice and Joe Pasqua of Southern Methodist. Kyle Gillespie, T.C.U.'s brilliant threat, is another who belongs among the hurt. Pete Layden of Texas, an exceptionally fine back, was unable to help in the Baylor jolt that checked the Texas avalanche for the first time.

### The All-America Squad

Here is the narrowing-down from which the final team was selected:

Centers: Banonis, Detroit University; Ingalls, Michigan; Jenkins, Missouri.

Guards: Peabody, Harvard; Crimmins, Notre Dame; Fife, Pittsburgh; Wyhonic, Alabama; Frankowski, Washington; Ramsey, Southern Methodist; Pregulman, Michigan.

Tackles: Blandin, Tulane; Reinhard, California; Blozis, Georgetown; Wildung, Minnesota; Chewning, Navy; Conley, Washington.

Ends: Rokisky, Duquesne; Kutner, Texas; Dove, Notre Dame; Rast, Alabama; Gentry, Washington State; Blalock, Clemson; Ferguson, Florida; Lansing, Fordham; Schreiner, Wisconsin; Kuczynski, Pennsylvania.

Backs: Westfall, Michigan; Smith, Minnesota; Albert, Stanford; Lach, Duke; Dudley, Virginia; Moser, Texas A. & M.; Jenkins, Vanderbilt; Hapes, Mississippi; Steuber, Missouri; Sinkwich, Georgia; Schwenk, Washington University (St. Louis); Sewell, Washington State; Crain, Texas; Layden, Texas.

The line, from end to end, but especially from tackle to tackle, calls for more inside information than the backfield.

Outstanding centers, guards, tackles and ends are harder to wrap up in blue-ribbon packages. They handle the rough work. They clear the boulevards for the backs. They have the up-front job which too often is hidden in the fogs.

Star centers were scarce this season. So were star guards. There were many good tackles, but few who stood above the others. The same is true of the ends. These must meet so many variations of offense and defense that they face bewildering afternoons.

In the line Banonis at center was a standout from every check made by opposing coaches—215 pounds of football speed and football alertness.

The guard who stood out above the field this season was Endicott Peabody 2d, of Harvard, who might be described in Kipling's "Fuzzy-wuzzy" phrase as an "injia-rubber idiot on the spree" or a big, fast-bounding beggar who broke practically all the hostile squares.

As Major "Swede" Larson of the Navy put it: "Peabody hit you so many times and he hit you so hard you thought he was four or five men." Or, as several officials said: "Peabody wasn't only the best guard of this season. He was the best guard of twenty seasons."

Frank Leahy of Notre Dame rated Bernard Crimmins among the best linemen he had ever seen or coached. The converted back was the star entry of Notre Dame's fast, unwhipped line.

Two-hundred-and-fifty-pound Blandin of Tulane drew the solid support of the South at tackle. In a season that ran shy in end brilliancy Rokisky of Duquesne and Kutner of Texas more than held their own against other challengers.

There were no dissenting voices when the names of Stanford's Albert, Minnesota's Bruce Smith and Michigan's Westfall were called. Their fame and ability had come rolling along from the year before. Frank Albert had remained Stanford's guiding star over

**Bernard Crimmins, guard, Notre Dame. Age, 22. Home Louisville, Kentucky. Coach Frank Leahy rates him a one of the best linemen he has ever seen or coache**

rougher seas than 1940 knew. Bruce Smith is one of the great backs of football, the spark on Bernie Bierman's championship team.

But there were two hairline decisions that called for many troubled hours. One was the nip-and-tuck battle between Reinhard of California and Wildung of Minnesota at the other tackle post. The other was the head-and-head finish between Bill Dudley of Virginia and Steve Lach of Duke at the remaining halfback spot. It must be admitted the margin of selection in both instances was extremely thin.

Both Reinhard and Wildung were magnificent tackles. Wildung had the advantage of being a member of Minnesota's strong, unbreakable line. Reinhard, named last season, had far less support. In addition, he was California's best kicker. Beyond this he was a tackle who could both pass and receive passes. It was by these outside contributions that he received the nomination.

As usual the scramble among the backs was enough to make a mountain dizzy. Outside of the three named before—Albert, Smith and Westfall—there were Dudley of Virginia, Lach of Duke, Jenkins of Vanderbilt, Moser of Texas A. & M., all finishing under a blanket.

Wallace Wade, for exampl alwa the conservative side, rates ach a of the shining stars of D fo history, a history that i ades names as Ace Parker and Afe of the best in pro football lay

The final choice went to for these reasons: At the teen he has been a three-y was not only a fine runne kicker, but also an able de sive although in this respect kin Lach had the edge thr h g physical power. ## Car engineers "turn on the heat"—and the cold in testing spark plugs for equipment use

Those plugs in your automobile took a terrific beating before the car engineers okayed them for equipment. They were scorched in top speed, non-stop runs in the desert in midsummer. They were required to snap frosted engines into instant life in the Arctic chill of "cold rooms." They were made to run the gantlet of proving ground and laboratory torture.

And this goes on all year long,—every year!

So, when you find AC Spark Plugs used more than any others for new car equipment, *it means something*. It means reliability, efficiency, full value for the money. It means, in plain language, that you can be *sure* of best plug satisfaction when you drive with AC's.

*e Quality Spark Plug*

illac, Chevrolet, Nash, , and Pontiac motor cars; Corbitt, Diamond T, MC, International, and ucks; Allis-Chalmers, letrac, and International actors . . . these are some known cars, trucks and h use AC Quality Spark st your spark plug re- to the same brand of which the leading, big nanufacturers select.

Clean plugs save gas

### How to continue Good Plug Performance

Have your spark plugs checked, cleaned, and regapped every 4,000 miles—for the small cost of just 5¢ each. Clean plugs perform better. More engine snap, better gas economy, quicker starting . . . you get all these when your plugs are clean.

Look for this sign

irl," he said, "do not take iron in
hand. Do not anger me."

th her throat choking, Brana stood still. His blue eyes shone down at her. "I searched far for gold," he chanted, "and now I find red gold in my hand." He nodded his head. "It is lovely you are, girl."

His hand stroked down her hair, and he smiled. "Red have I made the ground when I stepped," he chanted, making a song and rain have I drawn from women's eyes. Far have I followed the paths of the sea, to find this gold that holds me fast."

BRANA thought, too, that she was held fast by the blue fire in his eyes, and the music of his voice. "Soft as your words are," she said, her voice trembling, "you shall not put your hand on my hair. You have shed Orn's blood and I say that you shall soon make atonement."

"What his name Orn?" The fit seemed to have left him. "He angered me. As for atonement, you are more beautiful than any maid of these firths. I shall let no harm come to you. Ask for what you wish, and you shall have it."

"Until this hour," Brana cried, "I wanted a bride's bower, with flowers."

Hrolf laughed, taking his hand from her. "A bower, or the jewels of a queen—it is all one to me. But you shall stay with me."

He seemed sure of his words and of himself. That day he kept her close to him, while his men killed an ox and prepared a feast on the fresh meat. Carefully they gathered up the trade goods of the homestead, carrying them into the ship. Seeing this, Brana wondered that Berserks should be so careful of small things. Hrolf understood that she was beginning to be perplexed.

"These matters that you find strange now," he said, "you will understand later." He told her this much: he was the earl's man, and the earl had given command that the unruly Vikings along this Norse coast must be disciplined with fire and sword. And Brana remembered that there had been many outlaws among the Vikings of her coast.

SHE could not get away while the ox meat was cooking, because the Berserks were all about the homestead. When she heard oars in the firth, she went to look at the landing, but saw only a dragon ship, deeply laden, coming in.

This new ship had no shield wall. Its timbers were gray with salt, and the few men in it wore animals' hides. Sighting the smoke from the cook fire, they turned in to the shore above the landing, flying no peace flag or flag of any kind.

"What have you come for, seafarers?" the Berserks hailed them.

"For meat," answered one from the weathered ship. For two summers and winters, he added, they had tasted no cattle meat.

"I find that hard to believe," said Hrolf, "but come you in anyway."

When these newcomers walked along the shore toward the cook fire, Brana saw that their hair had not been cut; their faces were dark and thin. The one of them who carried an ax gripped in his hand bent over the bloodstains on the ground and sniffed like a dog. "More than an ox," he said, "has been slain here."

And when he stepped inside the hall of the homestead, he trod carefully, staring up at the beams overhead. Lank and restless, he was, with scars on his thin hands.

"You act," observed Hrolf, watching him, "as if a house was something strange to you."

"Strange indeed it seems," the dark seafarer agreed, "since I have not entered one for four years."

Hrolf sat down beside him in the high seat, while their followers scattered along the long table below, and he called to Brana to fetch beer in horns for them. As the girl set down the drinking horn by the stranger, he put his fingers on her arm, smiling at her.

"I suppose," said Hrolf, who missed nothing of this, "you have not seen a woman, either, for four years."

"Five." The dark man drank greedily, and coughed. He made Brana sit beside him, and he looked at her slender arms and long hair with great satisfaction, while he tore and swallowed the half-cooked beef hungrily. Sweat came out on his bony face, and muscles worked in his temples as he chewed. But he kept looking at Brana, or down at the long table where his few men were gorging among the Berserks. The girl was surprised to see by his eyes and teeth that this guzzler could not be as old as she thought. His skin seemed lined as an older man's, but something within him was fresh and youthful.

Voiceless she sat, not daring to speak, for fear of Hrolf's anger. The stranger kept his ax between his knees even while he ate.

"All that you say," observed Hrolf, watching out of the corner of his eye, "sounds like a lie to me. I do not believe that man lives who has not seen a woman for five years."

"Well, I live," said the owner of the ax calmly. "It was because of the new land," he explained.

"What new land?"

"I call it Vine-land, and it lies beyond the West voyage."

"Ice-land we know," Brana put in, "and Vikings tell of the Green-land beyond, where the glaciers are. Beyond that, the sea runs over the edge of this world into Hel."

Although she made her voice sharp with disdain, the stranger did not appear to be disturbed. Stretching his long arms, he smiled up at the carved heads of Wotan and Thor on the pillars of the high seat. "So most people think," he said, "and I can't help that. But you two have set good beer and meat before me, so I shall tell you a marvelous thing."

HIS dark eyes shone with a boy's happiness. "From that same Green-land my father, Eric, was once driven by a northeast wind, and instead of going over the edge of the world he sighted a new land, covered with mist."

"A mist of magic, no doubt," quoth Hrolf, "Eric's son."

"Leif is my name. I was young in Ice-land, and I begged my father Eric to take me to this new land of his, that the eyes of common men had not seen. And now I tell you of a strange happening. My father says well enough, but when he rides his horse down to the sea to take ship his horse stumbles and he stops, saying that evidently he is not meant to go farther. So I fare on alone with these shipmates, until a northeast wind carries us on beyond the end of the voyages."

At the long table the Berserks were listening now, with Leif's men.

"First we sight a coast," went on Leif, his mind going away from the hall, out somewhere beyond, "dark with forests—no island at all, but a mighty land, and this I name Mark-land. On we go then with the wind, and make our landfall on a coast sloping gently to the sea, with wide beaches and sand. Up a firth sail we, to fresh water. Yea, we find dew heavy on the long grass, and this dew tastes sweeter than other water."

"A marvelous thing," grunted Hrolf.

"So it is. Yea, no frosts kill that grass—strong it stays through the winter, and cattle would need no fodder there. Deer and fur beasts run free in the woods. And of wine casks we have no need, for wine berries grow on the vines there. So I name it Vine-land. If I live I am going back."

Hrolf emptied his drinking horn. "It is easy to tell of great deeds you have done, out of everyone's sight."

Leif's mind came back from beyond the sea and he looked at Hrolf. "My messmates tasted those grapes," he said. "And the hewn trees of Vine-land we

GIFT SUGGESTION—The Christy Sport Knife fits all gift occasions. Individually packed in attractive gift box. Light, neat, handy . . . a swell gift for the boy in service. DEALERS—Write for interesting offer.

**THE CHRISTY CO., Fremont, Ohio** C-11

• Enclosed is $1.00, for which please send me a Christy Sport Knife. If I am not entirely satisfied with the knife I may return it and my $1.00 will be refunded. This offer good in U. S. A. only.

have brought in our ship's lading, to sell on this coast."

"If you are indeed Leif, Eric's son," said Hrolf, "you will have trouble selling anything on the coast of Norway. Because you are outlaws, whom no man has seen for long years."

"True." Leif nodded indifferently. He seemed to care less about this than about his voyage back. "As you inlaws say, my father was outlawed for manslaughter here. That is why we looked for a new country. We had no other."

"Then why have you ventured back?"

"To trade for a better ship."

Hrolf got up quietly, stepping down to his men at the long table. Brana, watching him, caught Leif's hand impulsively. "Open your eyes, fool," she whispered, "and take care for yourself. These men here are Berserks who kill when their anger is touched."

Leif looked at her with his head on one side. "I have seen Berserks before now, girl. Are you not with them?"

"No," she cried angrily. "Oh, you are simple in mind! This morning they killed Orn, my uncle, because he spoke a quick word to them. Do not cross them, but get you out of here."

NOW Leif seemed to wake to his danger. Glancing down at where his score of followers sat among the greater number of weapon men, he called out: "Leif's men, get you to the long ship. I hear the wind rising and you must take the oars and row up to a safer landing."

Without argument, his shipmates picked up their weapons and began to go out the door. Brana waited for Leif to follow, but he sat still, looking at her. Tears of helpless anger wet her eyes, and she tried to hide her face. Leif bent over to see her better.

"Don't cry, girl," he muttered.

Brana tried to get up from the high seat. His arm held her shoulders, and he frowned as if puzzling over something strange.

Hearing Hrolf's step, she tried to pull away.

"What a mighty thing"—his eyes shone at a new thought—"if you would come with me on the voyage."

Suddenly his arm went away from her, and Brana gasped. Hrolf's hand had caught him and thrust him back against the high seat. Hrolf was scowling at Leif, who looked down the hall. The last of his men had gone out.

"So you think yourself," Hrolf muttered, "to be as good a man as I am."

Hearing these words that had been spoken to Orn, Brana shrank back. Leif shook his head slowly.

"No," he said, "I am a better man."

From the table a tall man with one eye tramped up to his chief—Starkad, the foredeck leader of the Berserks—growling and pulling at his sword. Leif sat still over the empty horn.

"I hear you," Hrolf said between his teeth. "That is easy to say. Look at this!"

Drawing his sword, he tossed it into the air, and reached for Leif's ax. But the seafarer pulled it close to him. When he did not get the ax, Hrolf snatched Starkad's blade and hand ax and tossed them up with his own sword, so that he had three blades going in the air over his head. Fast and well he handled them, saying, "See how I am weapon-fast. Iron obeys me and will do me no harm."

Stopping the weapons, he offered them to Leif. With a shake of his head, the shaggy man refused them. "That was a small trick. I will do a greater one."

Starkad's teeth clashed. "Can you not see we grow strong with *Berserksgang?* At such times we pull trees from the earth."

Leif did not seem disturbed. "It would be a more remarkable feat to pull down this house. Ay, that would be something to boast of."

Hrolf snorted. "Eleven men lie out in the cattle pens because one said a hard, quick word to me."

"Eleven is a small number."

Hrolf stared, voiceless. Around him, the gray men pushed close to Leif and the girl, and still Leif did nothing but watch them, while she waited for the first to howl.

"I will tell you," Leif observed, "something worth hearing. My nature is more than *berserk,* for I am a *hamrammir* man. My guardian spirit is a bear, and in the time of darkness this bear's spirit is apt to enter my body."

He shook his head, glancing at the scars on his hands, and the eyes of the Berserks went to those scars. They listened, breathing heavily.

"So I rise up in the darkness with the bear's strength in me, but I crawl like a beast, seeking something to devour. Ay, at such a time my shape is changed to a beast. After the fit leaves me," Leif went on, "I am in my own shape again, but feeling weak."

While he spoke the light failed in the hall. Outside, the pale night of the north had begun, and some of the Berserks noticed this, whispering to Hrolf, who stared at the shaggy Leif silently. Around the high seat the shadows were closing in, and, wrapped in his bearskin, Leif's outline grew dimmer.

"Easy to say," replied Hrolf slowly, "but I would like well to see this happen."

Crouching on his seat, Leif said nothing.

"Starlight begins," went on Hrolf, "and so now we will go outside the house. We will know that you are indeed a *hamrammir* man if we hear after darkness the growling of a beast and see the shape of a bear come forth. That would be something to see."

He touched the quiet girl on the arm. "Come, Brana. No woman should see a *hamrammir* change his shape."

Some of the Berserks were moving toward the back door of the house, and some out of the front of the hall. They went readily enough, gripping their weapons and looking back.

Brana did not stir.

"Come you on," said Hrolf again.

"Ay," growled Leif. "Better for you to go, girl. I feel strength coming into me."

Stepping away from them, Hrolf looked back once. When Brana did not run after him, he went out the door, closing it behind him.

THE two of them sat together in the empty hall, with the bones scattered along the ground, and the fresh ox hide flung into a corner. Leif sighed, drawing the drinking horn to him and looking into it. She saw his face change in the twilight. He looked thin and tired.

"Well?" she said softly.

"Not well." Leif shook himself restlessly. "Why didn't you go with the warfarers, Brana?"

She could not say why. She wanted to stay here at Leif's side, to feel him near her. Pouring beer from the jug, she offered it to him, but he pushed it away moodily.

"Perhaps a *hamrammir* man may not drink beer," she whispered.

Leif looked at her and went to the opening in the wall by the door. Already the glow of the cooking fire outside picked out the figures of the armed men in mail grouped in a half circle beyond the door, waiting. At the back he saw the same thing, only not so clearly.

"I thought so," he muttered. There was no other way out of the house. He stopped in front of the quiet girl. "Get out," he told her.

"No," Brana whispered. "While I am here, they will not slay you."

gripped his hand tighter, for com-
fort. He was shivering, sweat shining on his face. An ember stung her bare arm and she pressed herself against him.

All at once Leif cried out, as if his body had been wrenched. His shaggy head thrust down between his shoulders, and the wood of his ax haft creaked when he picked it up. Smoke rolled down on them, and Leif hacked with his ax at the window opening. At the second blow of the ax a spear clanged through the opening, past Leif's shoulder.

Then he stopped working at the wall. Crouching, he glared up through the smoke. It seemed to the girl that this was not the flesh-and-blood Leif of a moment ago, but a man gripped by some other strength. Tears flowed out of his staring eyes down his cheeks, and quick groans came from inside his body. He did not seem to know that he was crying.

Embers dropped with black soot along the front of the hall, and the flames hissed overhead. Leif was staring up at the great center beam when he leaped back. Straining, he shoved the long table back against the far wall.

Here, in the smoke, he jumped up on the table and began to chop at the end of the heavy beam where it met the wall. Fast and skillfully, his ax edge bit into the wood, and long chips fell.

"Come here," he croaked, and Brana stepped close behind him.

His ax smashed up into the shaking beam. Bits of burning thatch dropped down around him. The beam cracked loud, and Leif smashed at it with the butt of his ax.

With a splintering sound the end of the beam came down, breaking the table. Leif jumped clear, moving with frantic haste. Catching up the wet oxhide from the ground, he threw it over Brana's head, gripping it close around her.

The roof was falling in now.

Flaming thatch rattled down, and hot air seared Leif's throat. He kept moving. Over one shoulder he swung the roll that was Brana in the bloody oxhide. Holding fast to his ax, he stepped up on the beam's end where it lay in the wreck of the table.

THE beam sloped up to the front wall where fire smoldered. Above that upper end, he could see a dark patch of the sky. At that point the burning thatch had fallen down to the floor of the hall. And up the sloping beam Leif was hurrying, balancing with the ax and Brana, his chest straining not to breathe in the air that would strangle him.

Stepping on the top of the beam, he gave a yell and leaped out.

Now Hrolf and his men, watching with satisfaction, beheld this shaggy figure leaping down in the smoke and the fire glare, with a mass of oxhide upon him. And for a second astonishment held them still. They heard a faint echo of the yell.

The figure landed on its feet and rolled, and the oxhide rolled away from it. They saw then it was Leif, with Brana in the hide.

Starkad, the one-eyed, stepped toward him, swinging high his sword. Leif saw the iron coming down, and whacked with his ax at Starkad's knee joint. The ax blade cut away half Starkad's leg, and Leif rolled to his feet, pulling up his ax.

His face was twisted out of human semblance. Tears streaked his cheeks.

"*Berserks-gang!*" a weapon man shouted, watching him.

"Fools!" Hrolf shouted.

With his shield before him, and his sword point out, Hrolf ran at Leif. And the ax swung low at his knee, as it had done with Starkad. Jumping aside, Hrolf kept clear of it. And the shining ax swung wide.

Gripping it with both hands, Leif let it swing and hurled it at Hrolf. It flashed over the shield into Hrolf's face. It

Vitamin A (Carotene) raises the resistance of mucous membranes of nose and throat to cold infections, when lack of resistance is due to Vitamin A deficiency.

TRADE MARK

smashed the bones in his head, and he dropped there, where he stood.

Leif did not wait for him to fall. He caught up his ax, and rushed at the weapon men, smoking as he was. Beating down their swords, he leaped among them, and they closed their shields together, crouching, afraid of the anger of this lank man. They had seen Starkad and Hrolf smashed down, and they were afraid. So they pushed close their shields, trying to crush him.

Then they heard running feet. Spears and axes struck their backs, while voices shouted Leif's name. Twenty Leifs seemed to have come out of the darkness, in the smoke. Here the weapon men had caught Leif, and he had multiplied himself into twenty maddened fighters. The glare of the flames made it hard for the weapon men to see these new Leifs.

"Peace!" they yelled—those who lived—throwing down weapons and shields.

So they begged for their lives before they realized that Leif's men had come back to the burning homestead. Those shipmates had heard Leif's yell, and they had run to him fast, out of the darkness. . . .

A week later Leif himself was fitting a new steering oar on the aft deck of Hrolf's dragon ship, which he had appropriated because it was better than his own vessel.

Now that he had washed in fresh water, cutting his hair, and putting on new wool garments, Brana, who sat there with him, knew that he looke other boy of the quiet Viking he was making ready to go or voyage toward that unknow his as if it were no more th down to Gothland.

## Hail and Farewell

**Continued from page 72**

"Tell me what you were like when you were twenty-two," she said.

"Well," he said, smiling, "I was better-looking than I am now. I didn't have this bump on my nose and I didn't have this, either."

He fingered the thickened rim of his left ear.

"No," she said. "I didn't mean that. Where were you and what were you doing?"

"Excuse me," Freddy said, getting up. "I know the young man's history and, besides, I want to see a man about a dog."

He went out toward the bar.

"Well?" Marcia said.

"WELL," Joe said, "I had been fighting for three years and I was out around Chicago. I come from here, you know. New York, I mean. The West Side."

He smiled at her.

"Me and Jim Braddock and George Raft and Eddie Brannick and Alice Faye and Margie Regan," he said. "And Owney Madden. We put the West Side on the map."

"Tell me more about when you were twenty-two."

"It's all in the book. All that counts. I had about twenty fights that year. Johnny Martin and I hung out with the fight mob. We had some laughs. We were out there for nearly a year. I was a welterweight then and the welters were going good around Chicago."

He smiled at her again.

"You should have known me then. I was going good myself."

"I'm glad I know you now," she said.

She seemed about to say something else but she didn't.

"What's the matter?" he asked.

"Nothing," she said.

Gorman came back to the table and they had a brandy and Gorman suggested they go somewhere else. They went around the corner and stood at a bar for a little while, but it was crowded and they sat at a table agai

Marcia and Gorman about people they knew looking at Marcia and not attention to what they wer didn't even know her la cause he hadn't caught it had introduced him to he fellow stopped at the tab ment to say hello to Gorr and Gorman said:

"Marcia, this is Charlie Lane."

Miss Lane. Marcia L was Marcia Lane. He her. One of those little pancakes whose names Broadway columns. But something! She looked smiled and said:

"What are you thinking

"About you, probably," "But don't fall for him. girls do."

Joe laughed. "Sure," h

Marcia didn't say a wasn't smiling now but s at him.

"Let's get out of here," then: "Excuse me, Mis people just asked me to and now I am talking as my party."

"Don't be silly," Gorm what do you want to get o Don't you like the joint?

"Yes," Joe said. "Bu take the breeze."

No use sitting around dame like that. He got

"If you'll excuse me,"

"I'd like to go, too," M

"What is this?" "Mutiny?"

"Come on," Marcia sai

"Where do you want t

"I don't know."

crow d. They were eating and
ng, ing or standing around, and
nd th girls put their things in one
be ooms and then joined the
party. Jimmy asked where Freddy Gorman was and Marcia told him and he said he would call him and tell him to come over.

Everybody at the party seemed to know everybody else. Joe had met a couple of the young fellows with Freddy, and Marcia left him with them. He was ill at ease and was sorry he and Marcia had met the girls. He had liked walking with her.

He had been wishing they didn't have to go anywhere else. He'd have liked to have her to himself. And now here he was in this mob, with everybody talking at once and the radio playing and nobody paying any attention to it and a young fellow had him backed up against the fireplace in the living room asking him what sort of fellow Joe Louis was and was he as great a fighter as the newspapers said? He probably was the first prize fighter the young fellow ever had met and the young fellow would go away for a moment and bring somebody else back to meet him and one of the girls he brought back looked at Joe and said:

"I thought all prize fighters were very tough-looking. You aren't tough-looking."

"You should see me in a better light," Joe said.

"Here," the young fellow said. "Have a drink. Excuse me. I didn't notice you didn't have a drink. Have something to eat?"

"No, thanks," Joe said. "I had dinner just a little while ago. But I'll take the drink."

He had a couple of drinks and began to feel a little better about being at the party, but Marcia had got away from him.

He went looking for her, wandering through the crowded rooms, and found her with Freddy, who had come in just a few minutes before. They were seated in a corner of the library and Joe looked in and saw them and was about to go out again when Freddy called him.

"Sit down," Freddy said, getting up. "I've got to move around and see some of these people."

They had been sitting there for a few minutes and suddenly Joe said to her, "What's Freddy to you?"

She didn't seem surprised at the question. "Nothing," she said.

"You're not married to him or engaged to him, are you?"

"No."

"Stuck on him?"

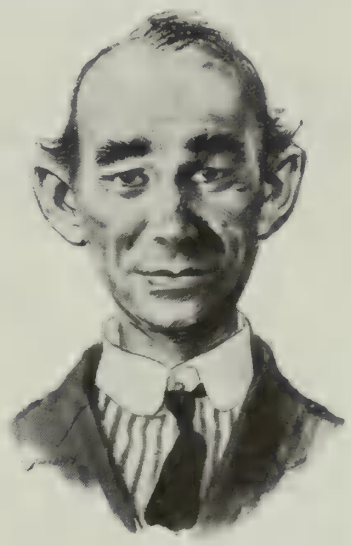
"No."

Then, after a moment, "Let's get out of here," he said.

They got up and he followed her from the room. They got their things and went down the hall and out to the elevator and none of the people saw them go or paid any attention to them if they did.

HE WALKED across town through the early-morning streets. Well, he had been right. She had something. But not for him. It was madness, she had said. It sounded like something she had heard somebody say in the movies. But he knew she meant it.

There was no other way to figure it. He had had a break just to meet this girl and it was over and now it was broad daylight and he was walking down the street and here and there people were coming out of the houses and the stores were beginning to open. Martin would be coming back in a couple of days. The money would run out and Martin would come back and he would go on fighting and some day somebody would ask him if he knew a girl named Marcia Lane and he would say:



"I don't know. I don't remember her."

The hell he wouldn't remember her.

# Cousin Boswell's on the bum again!

WELL, SHUCKS. There's probably one in every family.

Anyway, the minute Aunt Edie's estate was settled up, Cousin Boswell put every penny she'd left him into a new scheme. Something about raising goats, it was, this time. Imagine! *Goats!*

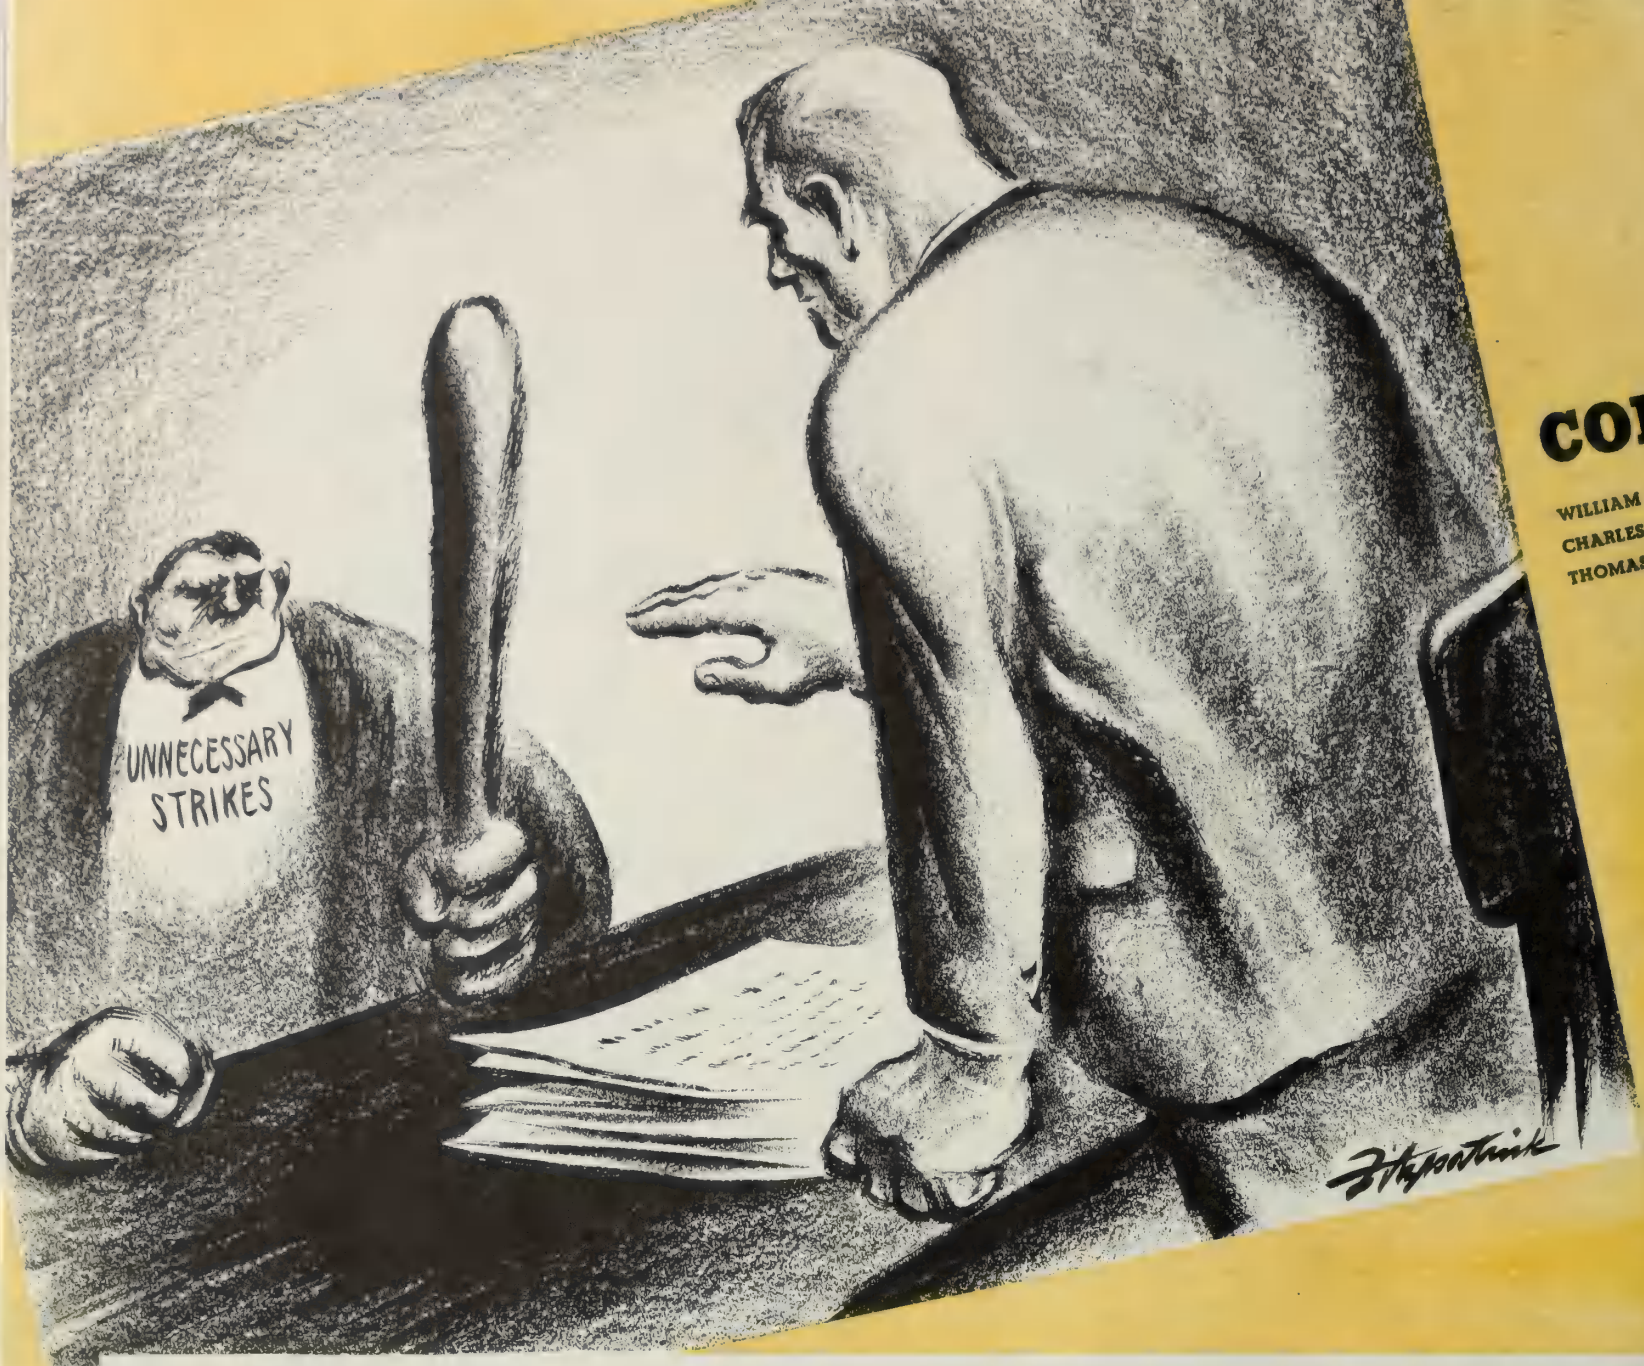
Hell's bells, you'd think Boswell'd know better, by now, than to go off half-cocked again. But not him! He just don't have the brains of a tailor's goose when it comes to business.

Well, that's the way Boswell is, and I guess there's nothing we can do about it, except talk Cousin Luther into giving him a job again, and letting him putter around the factory.

That Luther, now! There's a smart one!

Yes sir, when it comes down to running a business proper and profitable, Luther hasn't never missed a trick. Not a dog-gone trick! I ast him one time, I said: Luther, what makes you so blame lucky whenever there's a nickel at stake?

And he says: That ain't luck, Eph. That's knowing the *facts and figures!* Them Comptometers in my plant ain't just to keep the desks from blowing away. They're there because I got to have *accurate* figures, and I got to have them *fast!* And once I get all the figures, and know what they mean, I'm bound to be right! Only thing lucky about that, Eph, is the fact I was born with enough sense to take advantage of Comptometer adding-calculating *machines*, and modern, money-saving Comptometer *methods!*



---

Boswell is an *extremely* horrible example of what happens to business men who play hunches. Luther, on the other hand, knows that every business decision—if it is to be sound and profitable—must be based on accurate, up-to-the-minute, objectively interpreted facts and figures.

May we demonstrate to you the many exclusive Comptometer features which, taken together, mean *more accurate figure work in less time at lower cost?* Telephone your local Comptometer Co. representative . . . or write to:

*Felt & Tarrant Manufacturing Company, 1714 North Paulina St., Chicago, Illinois.*

# CLOSED-SHOP TYRANNY

PRESIDENT ROOSEVELT'S fight with John L. Lewis over the closed shop in the captive coal mines is only the most dramatic phase to date of a battle which looks as if it is going to be long and tough.

This question of the closed shop is a complicated one, with a lot of human nature mixed up in it.

There is the human nature of the bona fide labor leader, who sees the closed shop with dues checkoff as the solution of all his problems of keeping the union a going, solvent concern. There is also the human nature of the larcenous type of labor leader, who sees in the closed shop a chance to graft, play politics, or shake down employers after the fashion of Willie Bioff and George E. Browne, lately convicted of having tapped the movie industry for more than $1,000,000.

Among the workers, there is the human nature of the man or woman who likes to have his or her thinking and deciding done by others. But there is also the worker, as pointed out by Mme. Secretary of Labor Perkins in a recent astute speech, who simply does not want to join lodges, clubs, unions or anything else; an able, tough-minded cuss, who has to have elbow room in any society which does not want to stagnate.

Messrs. Roosevelt and Lewis, too, are strongly human.

We believe in labor unions, think they are indispensable in our form of society, and that they must have adequate power to negotiate with employers, and the right to strike in proper cases. But we do not believe in tyranny by any labor union over either workers or employers.

The closed shop, we think, is one form of such tyranny. So is the diluted closed-shop arrangement whereby a worker must join the union within a stated time after being hired.

We think the Wagner Act goes far enough, with its provisions requiring employers to deal with labor organizations chosen by a majority of the workers to represent them. We do not see how the government can safely put itself in the position of guaranteeing a closed shop in any industry, to John L. Lewis or anybody else. Public opinion certainly is completely impatient with interruptions to defense production because of jurisdictional issues between labor unions or between unions and employers.

# The Sin of Success

THE Department of Justice's antitrust division, known to some as the Gestapo, has won the first round in its lawsuit against the "Big Three" tobacco companies. A jury at Lexington, Ky., has convicted 13 chiefs of American Tobacco, Liggett & Myers and R. J. Reynolds Tobacco Co., on charges of monopoly, conspiracy and price fixing.

Appeals are being taken, and we wish the tobacco companies luck. They are big advertisers, whose copy we are always glad to run; and they supply Americans with billions of cigarettes per year that Americans like to smoke.

We think, too, that there is something in the tobacco companies' contention that the government's real kick is that they have been "guilty of the unpardonable sin of success."

We believe this antisuccess attitude is to be detected in other government activities; in some of the drives against public utilities and in the attacks on the radio industry.

It is well known that the New Deal, while using the services of many an undoubted expert in his line, has also given government jobs to a lot of gents who were failures or semifailures in private life. Their natural dislike of successful people is likely to boil over and begin to express itself in attacks on successful people.

The New Deal began with the laudable ambition of making it easier for everybody in this country to climb to higher living standards. The reverse of that ambition, though, is the ambition to drag everybody down to a common level of poverty and unhappiness. We much fear this latter ambition afflicts some of the New Dealers.

It's a dangerous development, we think. We never yet knew a successful person whose success hadn't made anywhere from one to 1,000,000 people somehow happier or better off. And we never yet knew a failure whose lack of success had helped the world in any way. It will be pretty tough on all of us if the government goes in for trying to penalize success by law.

# Don't Rush That Divorce

AN INTERESTING and statistic, we think: M third of all divorces obta country are obtained by have been married less tha The other two thirds are through the marriage sp first five years—and the grow smaller with each ye

It lights up again the c give marriage a fair trial a time before you conclude failure.

Necessarily it takes t persons to adjust themse other's personality, no much they were in love ceremony and how sure th life was to be 100% h ward. To call the whole t a month, a year, or even t mistake, we believe, in an one where it is plain to friends as well as to them cannot be a success. Su pretty rare; witness the h of divorced couples who r

You can't build a succes career in a week, or erec house in two weeks, or book in a month. Build and successful marriage i to all of these things. Li worth all the time, patien effort, etc., that it take you win, there isn't any ment in life.

PITYROSPORUM OVALE, the strange "Bottle Bacillus" regarded by many authorities as a causative agent of infectious dandruff.

PUBLIC LIBRARY

# It may be Infectious Dandruff!

## TAKE TODAY WITH THE TESTED LISTERINE TREATMENT THAT HAS HELPED SO MANY

TELL-TALE flakes, itching scalp and inflammation —these "ugly customers" may be a warning that you have the infectious type of dandruff, the type which germs are active on your

They may be a danger sig[n] [of] germs that work on your scalp . . . including Pityros[porum] ovale, the strange "bottle bacillus" recognized by almost authorities as a causative agent of infectious dandruff.

Don't delay. Every day you wait, your condition may get worse, and before long you may have a stubborn infection.

### *Use Medical Treatment**

Your common sense tells you that for a case of infection, a which germs are active, it's wise to use an antiseptic which quickly attacks large numbers of germs. So, for infectious dandruff, use Listerine Antiseptic and massage.

Listerine deals out death by the millions to Pityrosporum ovale and other germs associated with infectious dandruff.

Those ugly, embarrassing flakes and scales begin to disappear. Itching and inflammation are relieved. Your scalp feels fresher, healthier, your hair looks cleaner.

### *76% Improved in Clinical Tests*

And here's impressive scientific evidence of Listerine's effectiveness in combating dandruff symptoms: Under the exacting, severe conditions of a series of clinical tests, 76% of the dandruff sufferers who used Listerine Antiseptic and massage twice daily showed complete disappearance of or marked improvement in the symptoms, within a month.

In addition to that, countless men and women all over America report joyously that this grand, simple treatment has brought them welcome relief from dandruff's distressing symptoms.

Start tonight with the easy, delightful home treatment—Listerine Antiseptic and massage. It has helped *so many* others, it may help *you*. Buy the large, economy-size bottle today and save money.

LAMBERT PHARMACAL CO., *St. Louis, Mo.*

***THE TREATMENT**

**MEN:** Douse full strength Listerine on the scalp morning and night.

**WOMEN:** Part the hair at various places, and apply Listerine Antiseptic.

Always follow with vigorous and persistent massage. Listerine is the same antiseptic that has been famous for more than 50 years as a gargle.

# ANY WEEK

IN TIMES like this we deplore ■ certain distrust in our rulers that is noticeable here and there. We are in possession of two examples. A Missouri citizen, seeking enlightening entertainment, turned on his radio after supper just in time to hear the announcer say that the Missourian's representative in Congress was about to speak on National Unity. For fifteen long minutes the gentleman from Missouri implored all listeners to unite, to set aside prejudices, to banish suspicion, to give, give, give and give. When he had finished exhorting, his constituent turned off the radio and wrote the congressman a brief letter: "I just heard you talk," wrote he. "I heard what you said. What you said about banishing suspicion and getting together behind you and the rest of you makes me want to know by return mail what the hell you have been doing now that you want that I should banish suspicion and get together behind you."

THE second is a letter to The American Wild Life Institute in Washington, D. C. A citizen in Bay City, Michigan, wrote in for a twenty-cent pamphlet. With his letter was ■ bit of cardboard on which he had written: "There are two dimes buried in this cardboard. If you can't dig them out let me know and I will give you the names of some congressmen who won't have any trouble, but stand close to them while they are doing it."

THIS distrust of those who are guiding us with almost supernatural skill through the rapids of disaster toward the calm waters of peace and security is a matter of deep regret in Washington. Amid such cynicism the Administration is finding it more and more difficult to sell England and Russia to the masses. We know this because, so desperate has the situation become, even we have been invited to attend an official inflammatorium and to mingle our wits with others in a slogan sling. We are reminded by those inviting us of the power of the shibboleth in past crises—Give Me Liberty or Give Me Death, Don't Tread on Me, Fifty-four Forty or Fight, Remember the Alamo, Remember the Maine, Make the World Safe for Democracy. We've been walking around in a profound daze ever since receiving the invitation. Suddenly it came to us—by mail. We have nominated for the inflammatorium's most comfortable chair Mr. Herb Drake of Hollywood, California. Mr. Drake's current job is to remind humanity at frequent intervals of how unbearable life would be without Mr. Orson Welles. Mr. Drake has coined ■ slogan which, in our opinion, makes unnecessary any further worry in Washington: Anything Worth Doing Is Worth Doing At All.

REMIND us some time to tell you the story of the West Virginia mountaineer and how he would stop the war. It's the kind of story that we'd like to publish here—and would were it not for a tinge of prudery in the office of the Postmaster General. In the meantime we are wishing that a minimum of success may crown the efforts of the F.B.I. and other police agencies in their quest for an old friend of ours, Mr. Louis Flatwork of New Orleans. Mr. Flatwork, better known, and for reasons unknown to us, as Lobby Lulu, is an opportunist and we're very fond of him. We met him one evening on Canal Street, New Orleans. "Mister," said he, "would you contribute a dollar to a guy who wants to go see his sick wife?" We said yes—and gave him ten cents. "Where is your sick wife?" we asked. "She's home," he said, "about three blocks from here. Say, Mister, you couldn't make that dime two bits, could you?" We said something indignant about his wanting money for a three-block trip, and he replied: "What do you want me to do; walk in on my sick wife cold sober?" We are advised now by Mr. James G. Dustman of St. Louis, Missouri, that Mr. Flatwork has been making a nice couple of dollars selling a pamphlet—Hitler's Secret Love Letters, By Countess ****—and telling possible purchasers that the proceeds will be devoted to "paying the expenses of worthy American boys to England to help lick Hitler." When asked recently how many worthy American boys he had financed, Mr. Flatwork replied: "The English army has asked me not to say nothing."

RECENTLY we published a stirring piece about football—Rational Defense, by Benny Friedman and Bill Davidson. We have received quite a number of letters about it. The Messrs. Friedman and Davidson, the former a former Michigan star quarterback and coach and the latter an upper-brackets sports writer, got so enthusiastic that before concluding they had built up a 5-3-2-2-1 defense strategy which, they agreed, was downright effective. "I don't know why more coaches don't use it," sighs Mr. Walter Dunbar of Brockton, Massachusetts. "Maybe it's because the poor moss-grown saps are under the impression that they can use only eleven men at once." Also Mr. Aage (The Block) Starngaard of St. Paul, Minnesota, speaks on the subject. Mr. Starngaard explains that the Messrs. Friedman and Davidson have merely been caught up [illegible] influence. "In England [illegible] "whole towns, townships [illegible] ties, rotten boroughs ar[illegible] into the game, whole pop[illegible] ing each other, sometim[illegible] two or three hundred o[illegible] good fun although occas[illegible] and everybody—male, [illegible] and small—gets into the [illegible] man and Davidson ar[illegible] mended. # WING TALK

**C.A.A.'s intensive campaign has resulted so far in 13,000 new air markings like the one above on a Bristol, Conn., foundry**

NOW, more than ever, there is a need for complete air-marking of the entire country because of the tremendous increase in flying training of all kinds. This is the driving force behind the C.A.A.'s continuous air-marking campaign. This campaign is under the direction of Mrs. Blanche Noyes of the C.A.A., one of the five women pilots who originally started the national air-marking work back in 1935.

The program has resulted in the marking of 13,000 places. Some states, such as North Carolina, South Carolina and Alabama, keep air-marking crews in action all the time. Others do it through co-operation with their State Aeronautic Commissions and the WPA. Ohio has a law requiring cities and towns to be air-marked. California, New Mexico, Oregon and Utah are being marked by an oil company. Connecticut, Florida, Georgia, Massachusetts, Minnesota, Mississippi, Nebraska, Oklahoma, South Carolina, South Dakota, Tennessee and Virginia are all actively engaged in air-marking work now. Other states have new projects that will start as soon as weather permits. Mrs. Noyes cannot visit each of the 48 at the same time, but she usually sells her important bill of goods.

Mrs. Noyes will tell you that we need markings for the guidance of the thousands of students in training and that these markers will never aid an enemy invader because overnight they can be easily painted out. Those in existence are saving lives by keeping the boys on course.

JUST about the first thing an instructor pounds into the head of his student, be he Army, Navy or civilian, in preparation for the great day when the solo flight is to be made, is that if the engine cuts out on the take-off, keep flying speed and land straight ahead. It is such a simple rule and so easy to remember it shouldn't need emphasis. But human nature and instinct rebel against it more than against any other axiom of aviation, as the accident records show. Most of the pilots, new or old, want to turn and get back into the field. And when they do, invariably they stall and fall off into a spin. Of course, there is not always sufficient landing area ahead, but the argument still holds that it's better to come in horizontally than on your nose.

Test pilots with brand-new airplanes of high value that have not yet gone into production find it particularly difficult to obey the rule. A Navy test pilot friend of ours, with the one and only model of a new bomber, found himself 100 feet in the air with a sputtering engine. Fortunately for him, a river was underneath. So into the wat it, climbed up on a wing a for the crash boat to arrive. that particular model never f both the Navy and the ma had the airplane and cou from there.

VARIOUS figures have be on the life of a type of airp to be confused with the act tional life. A little help on th which might be worrying peo from the C.A.A. It has just t official action indicating that cate of airworthiness held by facturer will be limited to a five years. While this is large from cluttering up the files wit certificates of models which facturers long ago have aba favor of newer ones, it also indication as to how long a survive in competition.

However, what with the wa orities, this may not become fast rule because manufactur planes will not be able to g models with the freedom o Take the well-known Douglas the Lockheed Lodestar, for They're going to be turned ou airline replacement just abou as they were in the past. T panies, plus Boeing and Curt have some new stuff in existe paper but they'll have to Douglas DC-4 and DC-6, the Constellation, and the Cur transport, along with the B engine Stratoliner, would further along and in mu quantities if bombers and tr and fighters were not more at the moment.

AS MUCH as we like to b all airmen are strong, courageous and law-abiding to admit that a bad egg a good dozen every so often about these nonconformists down violations that eventu fatal accidents. The Dep Commerce aeronautical ins cently turned in the followin a commercial pilot whose comes from the license he ho

"Navigated aircraft on c at altitude of 100 feet. Carr ger while performing acroba as 10 feet above an airport; n with parachutes; continued sunset without lights; pilot influence of intoxicating liqu have pilot certificate in his p session and flew closer than another aircraft in flight."

Sure his license was revok

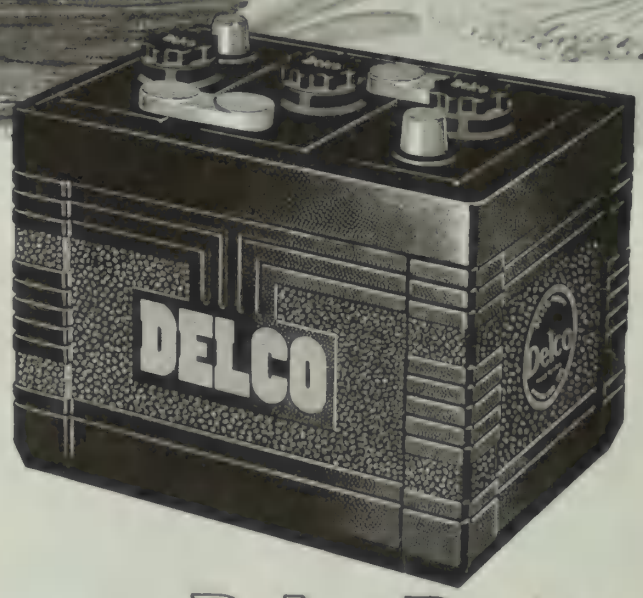
# When the cold waves start...



# You'll start with a DELCO

*Extra starting ability* in cold weather is a particularly outstanding characteristic of all Delco batteries.

It is a characteristic that has been demonstrated in laboratory tests, where batteries are compared under the severest starting conditions. It has been proved in actual service by millions of car owners—on sub-zero days.

With the coming of winter, extra starting power is the one thing you really want—and need—in a battery.

Delco batteries are starting more than six million cars, trucks and buses every day . . . they are used as original equipment in more than 43 per cent of all new cars sold. Your Delco battery dealer will show you one that is the right size and type, whatever the make or model of your car.

PRODUCT OF **Delco-Remy**

*Delco batteries are available through 34,000 Delco battery dealers in every section of the United States. Delco batteries are distributed nationally under the direction of United Motors Service.*

Cost Less to Run

But, beyond all this, you will find lasting pleasure in owning this 25th Anniversary Super-Six. Your first pride in its good looks will continue, as will the enjoyment you get in driving it. As the miles mount up, so will your satisfaction — and savings.

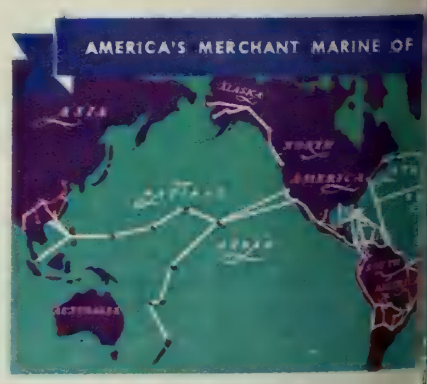
And a final pleasant surprise will be the low price of this and the other 1942 Hudsons — the new Hudson Six, priced among 1942's lowest, and the new Commodore Six and Eight, finest of all Hudsons. Let our nearest dealer show you how easily you can arrange to have a new Hudson delivered to your door Christmas morning — or before if you prefer.

***Don't decide ANYTHING about ANY 1942 car until you have tried the new Hudson DRIVE-MASTER! It's the easiest of ALL ways to drive!***

# AMERICA'S NEW LIFELINE TO AFRICA

ON AUGUST 18 President Roosevelt announced plans for the world's most ambitious airways project.

It called for two things: First, a new air transport service from the U. S. to Africa and on across the Dark Continent to Egypt. Second, a new aerial "ferry service" linked with that system, delivering military planes to the Middle East.



To Pan American was entrusted the building of this airline over 11,898 miles of ocean, jungle and desert. Normally it would have taken years. Pan American got operations going in 60 days!

The White House statement on this undertaking reads in part: *"The ferry system and the transport service provide direct and speedy delivery of aircraft from the 'arsenal of democracy' to a critical point in the front against aggression. The importance of this direct line of communications between our country and strategic outposts in Africa cannot be overestimated."*

Pioneering is an old story to Pan American. A story made familiar through building 75,000 miles of aerial routes throughout Latin America, over the Pacific, up to Alaska and across the North Atlantic.

Cooperating with Uncle Sam and with our neighbor nations is also nothing new. For example, Pan American recently took over thousands of miles of Nazi airlines in South America. Urgent defense needs were also met in linking Singapore and Manila by Clipper.

One thing is sure: America's need of an efficient, strongly welded international air tran ort st will be even greater tomorrow than it oday both commerce and defense. And you be co that "America's Merchant Marine of e Air continue to anticipate the future and l ready the necessary personnel, facilities, an expen

# Delayed Verdict

## By Allan Vaughan Elston

ILLUSTRATED BY ELMORE BROWN

**Evan Keith went to prison. He was not guilty. But he was not stupid—he was fully as clever as the woman who helped him solve the case**

THE tall, pale man hurried ashore by the crew's plank. His cheap, new suit was a trifle too blue and didn't fit very well. The man's eyes were blue too, but steeled with bitterness. He made them look straight ahead as though determined to ignore all such distractions as beach girls and coco palms and liquid sunshine.

In the dock warehouse a telephone directory furnished him with an address. Then he went out and asked a taxi man the fare there. "Two dollar," the Hawaiian taxi man said.

"One dollar," countered the man who had just worked his passage from San Francisco as an engine-room wiper. He could hardly afford more. For there was nothing in the pockets of the shapeless blue suit except some small change and a secondhand .38 revolver.

The gun was in a side coat pocket. The tall, pale man had a hand in that pocket when, twenty minutes later, he knocked at a door in Honolulu's most exclusive suburb.

The door was opened by a brown-skinned butler.

**"Your message found me too late," Evan said coldly. "I've already seen Wharton." Her alarm seemed real. "You went to his house?"**

"Wallace K. Wharton lives here, doesn't he? I'd like to see him."

"Name, please?" the servant demanded.

"Evan Keith. I'm just in on the Matsonia."

"You wait, please?" The servant disappeared. In a little while he returned to say, "You come, please?"

Evan Keith followed him into a garden where spray from a fountain made a musical patter. A cloying, tropic fragrance filled the air. Even had a sense of mellow yellows and flaming magentas, and he saw stately royal palms in a quadrangle around a pool.

A man in trunks on the rim of the pool was drying himself. He slipped on a lounging robe and advanced to meet Evan. His smile was doubtful and his look seemed to say, "Who are you, a gadget salesman?" But it might be only put on, Evan thought. This man had had a few minutes to compose himself after hearing the visitor's name.

Audibly Wallace K. Wharton said, "What may I do for you, Mr. Keith?" He motioned toward deeply cushioned garden chairs. Then he sat down and picked up a box of cigars. "No, thanks," Evan said. He saw that Wharton was a big, rubicund man with a small, tight mouth in a broad face. Not much over forty, Evan judged him.

"I've never met you before, have I?" Wharton murmured.

"Right," Evan said. "And I've never met *you*, either."

"You've a letter of introduction?" Wharton asked.

"Hardly. For the last ten years I've been in—" Evan Keith caught himself. He had almost said "in stir." It was so easy to lapse into the lingo of his late cellmates. And so hard to remember that back of San Quentin, in the life of Evan Keith, there'd been a Stanford and a Menlo Park. Bitterness deepened in Evan's eyes as he amended, "For the last ten years I've been in prison."

Wharton seemed to put a cautious checkrein on response. He was like a man who counts ten, Evan thought, before venturing.

"In prison?" Wharton said at last. "For what?"

"For a murder I didn't commit," Evan said. "They gave me fifteen years and let me out after ten, just a week ago."

Again Wharton waited, as though weighing whether he should listen tolerantly or call servants to eject this prison bird. Then he lighted a cigar and puffed vigorously. It made smoke which partially screened his wide, wine-red face. Out of the smoke came a cautious, "Yes?"

"During my third year of time," Evan said, "I received a gift. It was ten cartons of cigarettes mailed anonymously, in care of the warden. I guessed that some old college classmate felt sorry for me. I supposed he didn't want to get entangled by calling or writing, so he just sent me some cigarettes.

"But during my sixth year in prison, it happened again. An anonymous gift. This time it came in the form of a one-hundred-dollar bill mailed to my mother, who, deprived of my support was ill and on relief.

"It happened a third time during my ninth year there. This time a five-hundred-dollar bill was mailed to my mother. It came too late, because she had died a few weeks earlier. A year after that third anonymous gift, I was released from prison."

WHARTON, after seconds of silence, said, "Interesting, Keith. But why are you telling *me*?"

"By the time I got out," Evan explained, "I'd concluded that the idea of a sympathetic classmate didn't fit. Anyone who liked me well enough to do that would have called to see me. At least he would have written. So it was somebody else. Somebody who didn't dare see me, and yet who couldn't forget me. Only one character seemed to fit a role like that, Wharton."

Wallace Wharton took a silk handkerchief from his robe and daubed his face with it. Then he puffed again, but the cigar had gone out. This time he waited longer before giving a response.

"I'm afraid I don't quite follow you." His voice was edgy.

"My conclusion is," Evan said, "that the gifts were sent by the man who really committed the murder. Does that strike you as logical?"

Again the ten-second pause. Then: "It does not." Wharton answered slowly and precisely. "The real murderer would be the last man in the world to do anything like that."

"The real murderer," Evan maintained, "assuming he has a normal conscience would be th... only man in the world to do it. And he... I've proved it."

Wharton had relighted the cigar. O... screen of his smoke came a startled... "Proved it?"

"During my last year I figured it all out... sender is a wealthy man, judging by the... dred-dollar bill. The three gifts were all p... San Francisco, where my mother lived, I... cluded that the gift sender himself doesn't... If so he would most likely have heard... mother's death and wouldn't have sent... gift to her. So I decided he's a man who o... San Francisco occasionally. By three po... know the dates of three occasions. And... that a rich man would go to one of the bett...

"So on the day of my release I made th... San Francisco's ten leading hotels. I ask... of registrations on three back dates. At the... hotels they turned me down. But at the e... break. The manager there was cordial... I don't know. He dug deep into his files... failed to find what I wanted, he asked if... anything else he could do for me. I expla... was just out of prison and trying to clear... Then he offered to phone the managers of... ing hotels; he suggested that if I went ba... maybe I'd get a more sympathetic receptio...

"In the end I got three lists of names... of ten hotels. What I wanted was a regist... mon to all three dates: A date seven y... date four years ago, a date one year ago. ... lists of the St. Francis Hotel, I found it: ... guest had registered there on the first dat... the second date, and again on the third ... name is Wallace K. Wharton and he live... lulu."

Wharton seemed to relax. This time h... out a pause, "It's true I make a business t... about once every three years, and I always... St. Francis. But it's absurd to say I ser... convict. You're using numbers, Keith, bu... add up."

"I haven't finished adding yet," Evan... next column of figures reads like this: Th... man's name was Ronald Bruce; so I w... Bruce's neighborhood and asked question... one there ever heard of a Wallace K. Wha... a Wallace K. Wharton used to live next... Bruces. Wharton and Bruce had belo... same golf club. I asked what became ... And learned that he had left the countr... years ago. I kept at it till I got the exact ... the day after the Bruce murder."

This time Wharton waited a long te... came to Honolulu," he offered cautiousl... to stay only a month. But I liked it so v... here permanently. If you're charging m... der, why don't you go to the police?"

"I'm short one link—your motive," Evan... mitted frankly. *(Continued ... page ...*

**Somehow, Wharton managed to respond, not too angrily, "The crime was witnessed, you say? By whom? Please don't keep me in suspense"**

# Canyon Christmas

## By Jim Marshall

'N grim canyon in northern New Mexico th is a blaze of light. On the steep hill- sio are illuminated scenes from the Nativ- y of sus. The Star of Bethlehem shines down nd h on a peak stands the tall figure of the hris bringing peace and good will. This is e s ing of one of America's most unusual hris as festivals—a month-long celebration the al miners working in the pits around the tle wn of Madrid, high in the Ortiz Range. In village, where the four hundred miners nd t ir families live, every home is outlined lig s. The baseball park has been converted to yland for the kids, with a miniature ain, Ferris wheel and other amusement de- ces- ll homemade—operating. There are ind s of lighted Christmas trees and on the oun ntops twinkle the little cedar fires to *El into ino,* as they did in the days of Spanish le.

All is started very modestly fifteen years o w n a few miners, perhaps in unconscious volt gainst the dreary, coal-dusty atmos- ere the camp, set out a few evergreens in eir rds and hung them with lights. There re y a scant dozen the first year; next year ere re twenty-seven. This year there are ndr s.

Fro the first years, the fiesta grew and gth ed. Now it lasts from early in Decem- r un after New Year's Day. More than one ndr thousand visitors go up into the moun- n c yon to take part. Everything is free; re ver has been a hint of commercialism. idri Yuletide is just a getting together of p ple of the hills and the people of the ies renew the spirit of Christmas.

Wor on the various displays starts in Octo- ane early everybody in the camp helps. The drie Employees Club organizes the work and pens are paid out of modest monthly dues. For e first five years, Madrid's celebration s a me-town affair, growing a little each ristr s as the competitive spirit got to work ong ne miners. People began to drive up oug he canyon around the holiday season help ne miners and see the show. Last year ge v e 15,000 visitors in one night.

On t hillsides above the village are built elve iblical scenes telling the story of Jesus' th. ere is a tiny village of Bethlehem; the gin d Joseph with the Child; the Shepherds l the tar; the Flight into Egypt.

Kids om camp and city flock into the home- de Tyland, ride the miniature train and the nel all watch the Mother Goose figures, most whi are mechanized. On Christmas Day ery old gets a present at a big community ty.

Alth gh some of the miners tinker around yea with the mechanized displays, most of wor is done just before opening day. The Su ay before this day is a sort of home- ming nd miners who once worked in Madrid ve u to the little town from far and near, p pu up the decorations and wind up in the ual urty. Workers are divided into crews the is great rivalry among them.

dear hile, the women have decorated the nes d the kids have brought in cedar brush m th mountains and piled wood for the fires the ltops. Everything is ready when the it vis rs show up, and from then on it's open se. ou may walk into any home and be com . There is a curious combination of Spa sh and Mexican and Yankee customs he f dango and the modern dance; the eric "party" and the old fiesta. But the rit b nd it all is universal.

Juri the celebration the lights go on early the enings and off at midnight, and after t. the isitors drive away down the canyon, Mad d has only one small hotel. ★★★

PHOTOGRAPHED FOR COLLIER'S BY CHARLES KERLEE

**Obviously enjoying himself, Night Engineer C. M. Clinard holds up one of the tiny passengers that ride on the dolls' Ferris wheel. All the fiesta equipment is built by miners, who display considerable rivalry**

**Older children put the finishing touches on their special project—the colorful manger that is one of the twelve Biblical scenes built into the hillside**

**Toyland is a children's paradise, with wonderful free rides, built from discarded mine equipment, and a real railway, with steam locomotive and cars**

**Designer of Toyland's figures is Pierre Menager, Santa Fe artist, here touching up the Cat and the Fiddle act in preparation for the new fiesta**

**Mother Goose characters parade across the stage to delight the kids of Madrid as the mecha- nized conductor beats time for the fiddling cats**

# Coningham's Cats

## By Quentin Reynolds

BY RADIO FROM CAIRO

**A Collier's correspondent sees American-made tanks go into action, and watches the British planes battle for supremacy over the African desert**

WIDE WORLD

**Potent factors in the British drive in Libya were these American-made tanks, here being tried out on arrival by their British crews**

**British airmen—their plane is the American-made Glenn Martin bomber—nonchalantly play checkers on a live bomb while waiting an assignment**

BRITISH COMBINE

ADVANCE BATTLE HEADQUARTERS, EIGHTH ARMY, WESTERN DESERT: A half cup of water isn't very much, but it is all that we are allowed here in the western desert. We are at the farthest-front airdrome; at the moment the largest and most important airdrome in the world. The white sand stretches bleakly and flatly in all directions and our runways are bounded only by the four horizons.

From dawn until dusk Air Vice-Marshal Coningham, commanding the air force in the western desert, sends his aircraft up to blast Nazi airdromes, to strafe Nazi tanks and motor transport, to bring down Messerschmitts and Junkers. There are several hundreds of "Coningham's Cats" here, fighters and light and heavy bombers, and they spend very little time on the ground. Spend a day with us here in the desert; part of it might be fun but you'll have to start the day with the half cup of cold water.

We sleep in the open, and half a moon and a sky full of stars look down in cold disapproval. In fiction, sleeping on the sand in the desert might provide a setting for adventure and romance; we only huddle deeper into our sleeping bags and curse the numbing cold and the bitter wind. December nights are cold in the desert. Ten days ago I was in the heart of Russia, flying through thick snowstorms in below-zero weather. The nights here seem just as cold. And the sun wakes us each dawn to our half cup of water which is all we have to drink, brush our teeth, shave and wash. We don't shave often.

One day is much like another. Let's run through a day and if you like it get accredited to the Eighth Army, have a uniform made and come out and join us. But bring some canned food, some water, plenty of cigarettes and a sleeping bag. Be prepared for more discomfort than you've ever suffered in your life and there's sure to be a spot of bombing too, for you're at the fighting front.

Breakfast wasn't very elaborate. There was porridge and a small piece of bully beef. There was neither tea nor coffee, for our mess had run out of water. Now walk over to the airport with me—it's only a hundred yards. Three squadrons of Tomahawks are just coming home to roost. They've been out on an early-morning sweep over the tank battle that is raging not far away. The air is filled with the high, happy singing of the Allison motors. One squadron lands, then another and now clouds of sand rise where their feet have skimmed the desert ground.

### When Acrobatics Count

The third squadron circles, waits until the dust settles and then comes down. All except one. One lone Tomahawk circles a bit unsteadily. Its left wing hangs forlornly. At least three feet of it is hanging untidily from the tip. I stand beside the wing commander, a tall, bronzed, curly-haired youngster, wearing khaki shorts. For military security reasons we are not allowed to give the full name of front-line pilots but this wing commander is "Rosie" to everyone.

"Take your time," Rosie breathes, half talking to himself. "Come in fast . . . that's it . . . leave your flaps up . . ."

Two hundred pilots and the ground crew are watching this crippled bird. Each is mentally landing that airplane himself. Landing an aircraft that has only a wing and a half is r

The le b was named Free Wheeling nsor having come upon the scene ghly incident with the automotive ice the same name.

t th moment he was shining the ee of Refugee Smith and they were ne sh s, indeed.

Mist Smith," Free Wheeling d, "I ghtta charge you ten cents for shoe ine."

Refug Smith, standing with his right t on Free Wheeling's box, looked vn. "owcome dat?" he asked.

At fi cents a shoeshine," Free eelin said, grinning, "hit comes to an' alf cents a foot, don't hit?"

Refug thought this over a moment. reezy oy," he said finally, "dat's a chal t."

Dem hoes of yours," Freezy said, ok to e to be at leas' two foot long. mak four foot, an' four times two a hi makes ten centses." Free eelin Johnson laughed immoderly at s own wit, sloshed four drops his *Dizle Gloss Finisher* on each of long oes of Refugee's shoes and pped em up to a mirror finish.

Refug s answer was even longer in ing t s time. "You is a 'rithmeticin' t, Fre y," he said at last, taking a rter t of his pocket and giving it the ba Yes, suh, you is a paper'n cil 'ri meticer right outta your haid. do bu me."

Freezy hoved the quarter in his ragged pocket, looked up at the towering black man with frank adoration. "Mistuh Smith," he said, "is hit a fact you is gonna fight Johnny Revolt for de chance to fight de champeen?"

"Hit's de fact," Refugee said. "Mister Willie signed for de fight two days ago."

"Do you reckon you'll wax him, Mistuh Smith?"

"I keeps my faith in de Lord," Refugee said, "I keeps in shape, an' I does what Mr. Willie tell me to do."

"An' you ain't never lost a fight yet," Freezy said triumphantly.

Refugee Smith stretched his long black arms, yawned. "Mr. Willie," he said, "he do de worryin'. I just has to fight ever' once in a while; but Mr. Willie he worry constant, so I lets him worry for both of us."

"Mistuh Smith . . ."

"Yeah, Freezy."

"If'n I shined your shoes free would . . . do you reckon you could get me . . ."

"Get you a ficket to de fight?"

"You done read my mental mind, Mistuh Smith," Freezy said.

"How long would you go to shine my shoes for nothin'?"

Freezy Johnson's eyes got big and round with the ecstatic prospect of seeing the fight. "Ever' day," Freezy said fervently. "Forever!"

"That," said a voice in the accents of deep south Brooklyn, "is a bad deal, son."

Freezy Johnson looked up, saw a small rotund man in a gaudy double-breasted waistcoat whose blue, fat-creased cheeks were dominated by a bold, hooked nose. "Shine 'em up, Mister?" Freezy said automatically.

Willie Wurtzel spoke to Refugee Smith, bent his head and looked at the 5¢ mark Freezy had scrawled on the side of his box. "You shine shoes for a nickel, son?" Willie Wurtzel asked.

"Yes, suh, but I does a ten-cent job."

"How come you don't charge a dime, then?" Willie asked.

"De natchal truth is," Freezy said, "I don't figger hit's worth more'n a nickel."

"Can you get him a ticket to de Revolt fight?" Refugee asked his manager. "He's a pal of mine."

"I'll see about it," Willie said, "but that ain't what I come up here for. This Revolt is a hell of a tough boy. I seen him fight down to Philly last night. I want you should get yourself down to Stillman's gym this afternoon at two o'clock. I'll see about gettin' you some boys to work with later."

"Yes, suh, Mr. Willie," Refugee Smith said.

THE days passed and from the waistline of Refugee Smith there passed six pounds and four ounces. It left the waistline of Refugee Smith hard and ridged like a washboard and it left Refugee Smith weighing one hundred and fifty-nine pounds and sharp.

The passing days also brought small comfort to Willie Wurtzel. For Willie Wurtzel had come back from Philadelphia—where he had seen Johnny Revolt club a smart, tough boy into insensible submission in three rounds—a worried man.

Johnny Revolt was a man who fought with a controlled but implacable fury,

4TH ARMY CORPS

CAROLINA ROUNDUP. It's all over, but the 300,000 men and officers of the 1st (Blue) Army and the 4th (Red) Army Corps, who fought the last big battle of the year in the 14,000 square miles of pine-clad Carolina hummocks, are still digging the sand out of their shoes and the squirrels out of their pockets. (The furry fauna, in fact, formed a medium of exchange invented by men of the 29th Division's 115th Infantry when genuine U.S. coin became scarce. Squirrels, captured and kept in cages, were bartered back and forth as their owners' finances fluctuated.) As in Louisiana, water was scarce and a bath was as difficult to achieve as a pair of G-I spats—or almost. The field offered no bathing facilities and the best the base camps had to offer was a dribbling, cold water contrivance called a shower by authorities and other things by the men. One of the 1st Division's 16th Infantry lieutenants almost went berserk when he read and reread this excerpt from a letter his anxious gal sent him: "When you go for your bath be sure to wash the tub out first. You never can tell how dirty the last person was who used it. And remember—don't step out into the cold air too soon after taking a hot bath." Our man brooded over this for several days, then journeyed to a nearby city, rented a hotel room, carefully washed out the tub and sat in it for a long time. When he got out of the tub he was very careful not to step out into the cold air, too.

1ST ARMY

TACTICALLY, the Carolina war was undoubtedly a success, a fact that was somewhat undiscernible to many of the natives, who still don't know what was going on. Members of Co. M, 117th Infantry came upon a cotton-field cabin one moonlit night and found a white flag drooping from a pole by the front door. A scout, sent forward to investigate the possibility of occupation by neutral umpires, knocked on the door and was confronted by a cautious, aged and visibly shaken colored mammy. Sho enough, she put the flag out, she said. She warn't doin' no scrappin' and she warn't mad at nobody. She had been prayin' most of the night that she wouldn't be shot and she was goin' to keep right on prayin'. The soldiers did their best to apprise her of the situation but it didn't make sense to her. The flag stayed on the pole and is still there, for all we know.

IF, AS has been advocated, live ammunition is used in next year's maneuvers, citizens in the fighting area are going to be even more confused, with the exception, perhaps, of the old North Carolina Negro, who stood, fingers in ears, watching a 155-mm. battery loading one of the big guns with a dummy shell. The boys stood clear, the officer gave the firing order and the gun gave out with a sharp click. At which the Negro unstuffed his ears and turned to the lieutenant in charge with this remark: "She don't make much noise, do she, Boss?"

### ARKANSAS

AMP ROBINSON, Little ck. The life of the G-2 isn't voted exclusively to getting latest dope on the enemy's et gadget. A couple of G-2 Seventh Corps Area head- t Omaha recently spent three and in St. Louis trying to un- mystery of the Eagle Scout ause of the headache was Pvt. acke, of the 138th Infantry, o be assistant scoutmaster of Boy Scout Troop 228 and had e an Eagle Scout, a rank of n and great accomplishment fit. Late in the summer Pvt. ounced that in his Army work tained ten merit badges for ties as bugling, hiking, marks- and other activities to be nd any Army camp, and that n an Eagle Scout. It made a for the home-town papers Placke was photographed nds with a brigadier general; he St. Louis and Little Rock cils ruled they couldn't ac- badge qualifications given by unauthorized persons, the general did a slow burn. Posing with an illegal Eagle was something he hadn't counted on. Next thing Placke knew he was being grilled by G-2 agents, who finally decided the matter was of no particular importance in the national security scheme. The whole case disintegrated when Placke's parents advised authorities that their boy was only seventeen years old and didn't belong in the Army in the first place. He's back home now and still has no Eagle Scout badge. What he proudly shows everybody, though, is a picture of Pvt. Placke shaking hands with Brig. Gen. Lewis M. Means.

FROM the viewpoint of democracy the induction of wealthy young gents is an inspiring spectacle. To the commanding officers it's often a pain in the neck, as witness a couple of cases reported from the 35th Division. Case No. 1: A Missourian with plenty of dough decided he doesn't like the Army and has been trying to get himself discharged for physical disability, but every time he gets an affidavit from a civilian doctor attesting his incapacity the Army medics look him over again and insist he's okay. Major General Ralph Truman, until recently the division's commander, made it a sort of hobby to keep the man in the Army, despite medical testimony and occasional political pressure. "He's the only man I ever heard of," the general once remarked, "who could get sunstroke in an air-conditioned office. Case No. 2: A Kansas lad popped an MP right in the kisser one night while a number of his astonished fellow soldiers looked on. Two months later, when he emerged from the stockade, the financially unembarrassed soldier explained it all. "I didn't have anything against the guy," said he. "I just didn't want anybody to think I was a sissy."

## THE NAVY'S MARS IS THE WORLD'S LARGEST FLYING BOAT

**To give you an accurate idea of the size of the giant new Martin patrol bomber, Collier's asked the Navy to poise a Piper Cub on each wing of the 140,000-pound, 8,000-horsepower ship. Glenn Martin, builder of this biggest flying boat (official designation XPB2M1) says that the industry is ready for still greater ships. "For instance," he says, "we have a design . . . for a ship weighing 250,000 pounds. It will carry 80,000 pounds of bombs a distance of 3,700 miles, or 40,000 pounds 7,000 miles. As a commercial ship it will compete with surface shipping. We are within striking distance of freight and express by air"**

*The Story Thus Far:*

JOHN Sidney Howard—nearly seventy—is in the French village of Cidoton when the Germans surge into France. An Englishman, he feels that his place is in his homeland, where, old though he is, he may be of some service.

When he leaves Cidoton, he takes with him two English children: Ronald and Sheila Cavanagh, whose parents, unable to accompany them, entrust them to his care—to see them safely through to Oxford. And later (because he is a gentle, kindly man who cannot bear to see others suffer) he picks up three other young people: A little French girl—"*la petite* Rose"—whose father is awaiting her in London; Pierre, a lad whom he finds terrified, speechless, beside the bomb-shattered bodies of a man and a woman on a crowded road; and a small Dutch boy—Willem Eybe—who has, somehow, become stranded in France.

By train, by bus and on foot, the old man and his young friends find their way, at last, to Chartres, which the Germans have occupied. There he has friends—the Rougerons (Colonel Rougeron, of the French army, his wife and his daughter, Nicole) whom he had met while vacationing with his son, John—his adored son who was killed while with the Royal Air Force—before the war, at Cidoton.

He calls on the Rougerons. The colonel is away, at the front. But Madame Rougeron and Nicole (a lovely girl) give the little party a warm welcome; and presently, talking the situation over, they decide to test the friendship of Jean Henri Guinevec, of Finisterre, for the colonel, whom Guinevec has taken on many a fishing expedition. Guinevec has a boat. He can, if he will, help the old man and his charges to reach England. *But will he? . . .*

Through a country filled with Germans, Nicole (who insists on going along) leads the little party to the farm of Guinevec's father-in-law—Aristide Arvers, a horse dealer. On the way, Nicole informs Howard—subtly, diffidently—that she and his son had loved each other! . . . The horse dealer greets them. He is courteous. But he refuses Howard's request—that he visit Guinevec and suggest that he help the old man and the children to escape.

Working for Arvers is a ten-year-old Polish Jew: Marjan Estreicher. The boy—whose father is doing forced labor, in Germany—tells Howard that he hates the Germans; he says that he wants to kill as many Germans as he can!

Arvers, listening, pretends to be shocked. Not so, Howard. He remarks to the Frenchman that the boy is in peril, so long as he remains in France. He offers to take the young fellow across the Channel—*if Jean Henri Guinevec will co-operate.* Arvers says nothing, for a long time. Then: "I will do what I can do. Tomorrow I will drive Mademoiselle to LeConquêt and we will talk it over with Jean Henri. You must stay here, with the children, and keep out of sight."

### VIII

HOWARD spent most of the next day sitting in the paddock in the sun, while the children played around him.

In the late afternoon Nicole returned with Arvers. Both were very dirty, and the girl had a deep cut on the palm of one hand, roughly bandaged. Howard was deeply shocked at her disheveled appearance.

"My dear," he said, "whatever happened? Has there been an accident?"

She laughed, a little shrilly. "It was the British," she said. "It was an air raid. We were caught, in Brest—this afternoon. But it was the British, monsieur, that did this to me."

Madame Arvers came bustling up with a glass of brandy. Then she hustled the girl off into the kitchen. Howard was left in the paddock, staring out toward the west.

The children had understood only half of what had happened. Sheila said, "It was the bad airplanes that did that to Nicole, monsieur, wasn't it?"

"That's right," he said. "Good airplanes don't do that sort of thing."

The child was satisfied with that. "It must have been a very, *very* bad airplane to do that to Nicole."

There was general agreement on that point. Ronnie said, "Bad airplanes are German airplanes. Good airplanes are English ones."

He made no attempt to unravel that one for them.

Presently Nicole came out into the garden, white-faced and with her hand neatly bandaged. Madame hustled the children into the kitchen for their supper.

Howard asked after her hand. "It is nothing," she said. "When a bomb falls, the glass in all the windows flies about. That is what did it."

"I am so sorry."

She turned to him. "I would not have believed that there would be so much glass in the streets," she said. "In heaps it was piled. And the fires—houses on fire everywhere. And dust, thick dust that smothered everything."

She took his arm. "Come in the salon, and we will drink a Pernod together, and I will tell you about Jean Henri."

They went together into the house. Aristide was not about; in the salon Howard sat down with the girl. Nicole poured out a Pernod for him and added a little water. Then she poured a smaller one for herself.

"About Jean Henri," she said. "He is not to appear in this himself. Aristide will not have that, for the sake of Marie. But in Le Conquêt there is a young man, called Simon Focquet, and he will take a boat across with you."

The old man's heart leaped, but all he said was, "How old is this you

erlin the outstanding example of
inlan or unpublicized, raid targets
erm y. So come with me there for a firsthand ground view of Germans under R.A.F. attack.

Experience plus "raid instinct"—a newly developed sensitivity, recognized by psychologists in Europe today—warn you, in late afternoon, whether there will be a raid. I have heard a group of German and American newsmen, on a night seemingly made for bombing—clear, moon-bright, flight conditions perfect—unanimously decide there would be no raid; and there wasn't. Conversely, on nights of poor raid weather I have seen Berliners generally hurrying to get home early to avoid being forced into public shelters.

Nobody can explain this raid instinct. But it counts in your social life.

### Early Night—Early Bombing

In summer it's not too important. In this high latitude—Berlin lies almost twelve degrees (800 miles) north of New York, on a line with Labrador. You can read without lights until ten o'clock, and again, after the brief, hennaed night, at three in the morning.

In winter, however, night comes much earlier than it does in the United States. The bombers follow suit. If you go to a dinner party, you are prepared either to leave with dessert or to spend the night. Shows begin at 7:30 P. M.; the last reeling of pictures at eight, in summer; earlier in the winter.

Foreign correspondents used to call the Propaganda Ministry to learn whether the British were "on the way in." Certain Balkan journalists queered that, when Dr. Goebbels' lads found out they had developed a racket. Air raids are a particular headache to restaurant owners. Absent-minded customers lope off to shelters, forgetting the "*Rechnung.*" Moreover, those who went into the restaurant shelters would sort of look for complimentary snacks as the nights wore on. So the Balkan journalists made arrangements to secure free meals

# Alder Gulch

## By Ernest Haycox

ILLUSTRATED BY WARREN G. BAUMGARTNER

*The Story Thus Far:*

SHANGHAIED in San Francisco, young Jeff Pierce (a veteran of the Civil War, which is still raging) is taken aboard a ship to Portland, Oregon. There, attacked by the captain of the vessel, he kills the fellow, in self-defense, leaps into the water, swims ashore.

On a dark Portland street, he is approached by a girl—Diana Castle—who, obviously in trouble of some sort, implores him to take her away with him, *anywhere!* Accompanied by the girl, who poses as his wife, he finally makes his way to Virginia City, in Alder Gulch, where gold has recently been struck. On the way, Pierce has a series of altercations—and two fist fights—with two rascals who are also en route to Alder Gulch: George Ives and his Man Friday, "Rube" Ketchum.

Among those he meets who are more to his liking are: Will Temperton, a gambler, and his young daughter, Lily Beth (whom Diana takes under her wing); Lil Shannon, a free-and-easy woman who is very kind to Pierce; Ollie Rounds, an uncommunicative redhead, who is reticent concerning his past; and Ben Scoggins, who hopes to make a fortune as a trader in Alder Gulch. Among those he sees, during the long, hazardous trip is *Sitgreaves, the dead captain's brother, who is following him!* Certain that Sitgreaves is pursuing him, and not wanting to kill another man, Pierce slips away; again, he is accompanied by the girl.

In Virginia City, Pierce and Diana part company. Diana is soon making a living by baking pies for a restaurant; and it is not long before Pierce has a claim staked out. . . . Dillingham, a deputy sheriff, is murdered by three toughs: Hayes Lyons, Buck Stinson and Charley Forbes. The killers are caught; but George Ives, who has just arrived, succeeds in obtaining their release!

By this time, Barney Morris—a prospector who has befriended Pierce—has reason to suspect that Ives, Ketchum and other crooks are plotting to kill him and take his gold—eight thousand dollars worth. He plans to slip away (if he can) and go to the town of Bannack. He asks Pierce if he will take the gold to Bannack.

Pierce is fond of Morris. He takes the gold to Bannack—unmolested. There he entrusts the gold to the clerk at the stage office. Then, following a brief, friendly talk with the sheriff—Sheriff Plummer—he leaves the office.

**He saw Diana Castle leaving th with Lily Beth. He drew a sm and fell into step beside Diana good apple pie I had today."**

**se Oregon high-school lassies d more swimming records than all he state's male athletes combined**

RE ON is a land of he-men who fe fir trees and climb mighty m ntains, but the best athletes ece in Oregon since the arrival e c ered wagons are four slen- igh hool girls who prefer movies, po y, chocolate ice-cream sodas he- est rumba to life in the great spa s. They hold more athletic pio hips than all Oregon's male arts ombined.

o in defiance of the classical Ore- radi on, the crowning ambition of gir has been not to stand on the rmo pinnacle of Mount Hood or e G but to dance and watch the critic at the Stork Club in New Cit On a recent transcontinental the ls' coach, Jack Cody, asked rew d they wanted for setting a d to of 61 world, American, re- l ar state swimming records. "A table at the Stork Club!" they cried in unison.

"It's a bargain," he promised, and so a few weeks later four nimble and long-legged lassies from the Far West, who have shown their thrashing feet to some of the outstanding women swimmers in the United States, sat with bright eyes in Manhattan's famous rendezvous, collecting the wages of innumerable swimming victories. "Golly, isn't this keen?" said Brenda Helser, the liveliest rug-cutter among them, to Joyce Macrae, while Nancy Merki and Suzanne Zimmerman nodded in complete agreement.

The aggregate ages of this quartet that dominates the tanks and lakes and pools of the Pacific Coast would just qualify someone for an old-age pension under the laws of the U.S.A. Brenda and Joyce are each 17, Suzanne is 16 and Nancy 15. They enjoy the company of boy friends, think Tyrone Power is simply grand and are normal high-school girls in all respects except that they have proved their superiority in the water over everything but the Pacific Fleet and the fall salmon run.

Their athletic supremacy over Oregon's masculine population was vividly demonstrated last summer during the annual marathon swim at Lake Oswego, nestled in the tree-blanketed hills near Portland. The heftiest male aquastars in the state were lined along the pier ready for their dives when Nancy, Joyce, Susie and Brenda walked up unobtrusively and slipped off their bathrobes. With amused tolerance the big fellows eyed these slim youngsters who presumed to challenge them over three miles of choppy water.

Then the gun barked and the race was on. The contestants, trailed by their boats, settled into a steady pace. One of the favorites, Doug MacQuaig, was surging forward with strong, powerful strokes when something streaked past him. He thought at first it might be a fish, but it turned and said, "Hello." It was Nancy. Soon the same thing happened again. This time it was Brenda. The girls disappeared in the distance like Coast Guard cutters.

When Doug finished the three-mile grind, first of all the men swimmers to do so, Nancy and Brenda had draped towels over their shoulders and were waiting calmly on the dock. To add insult to injury they gave Doug a helping hand out of the lake. Susie came in just behind Doug and far ahead of Spike Paget and other star swimmers. Joyce had what she called a bad day, but finished among the first 10, nevertheless. Besides all this, Nancy's time of 1 hour, 10 minutes and 18 seconds established a new record for an event in which the brawniest athletes in Oregon have competed for years.

Ever since the four girls began swimming together in 1939 they have been about the best aquatic combination ever developed along the Pacific seaboard, where youngsters learn to swim almost as soon as they can toddle. As a team their specialty is the 400-yard relay, which they have reduced to an exact science. Already they have set records for the United States and a long list of its geographic subdivisions, including

WHEN the average American thinks of Broadway he's inclined to think of the fishes on the Wrigley sign, the thunder and lightning of Times Square, the marquee of the Paramount and the second-floor dance halls that boast of 100—Beautiful Hostesses—100. Or the name of Broadway will stir up in his mind the vision of a great lady of the theater, or a hilarious musical-comedy comedian. Or a furtive necktie pitch man.

But when Broadway itself thinks of Broadway, it thinks of a cop named Johnny Broderick. Broderick will give you a long, sincere argument to the effect that he is no different from any other man on the co busiest and most efficie But Broadway knows Because for nearly twer endeared himself to the dents of that garish bo friending the virtuous a left hooks off the jaws

# Two Tunable Tom-Toms

By Hurd Barrett

ILLUSTRATED BY S. EDMUND OPPENHEIM

**"Tunable tom-toms!" breathed Kicks. He dropped to one knee and stroked them with his hands**

**. Nesbitt became ep at. The effects of m ic on a civilized sl ghtly deaf ear**

MR. HENRY NESBITT was accustomed to turmoil; and by parental necessity had learned eal th it. He considered himself e f unate than most fathers, gh, that he was very hard of ing. o that when the radio was d e afternoon to pick up the hine un-punctuated adventures of ptain Mystery," for instance, Mr. bitt s able to turn a small dial is e tric hearing device, and go eadi the Winfield Courier in bliss- silen . And he treated all other urbin juvenile sounds in the same

n thi particular afternoon, however, something was wrong. Despite the fact that the indicator on his Hearophone read "Off," Mr. Nesbitt's cochlea was recording a series of traumatic boomings which were most uncomfortable. . . . He was sitting in the upstairs study, just over the living room, and the combination radio-phonograph and home-recording machine he had purchased in an ill-advised moment, some weeks before, was located in the living room, some twelve feet below his chair. It was separated from him by a one-inch oak floor, ■ one-inch sub-flooring, a six-inch air space, and three coats of plaster —which should have been sufficient material to insulate him from its vibrant cacophony under any conceivable circumstances. This evening, apparently, it was not.

He glanced at the clock on the mantelpiece, and saw that it said twenty-five minutes after five. Puzzled, he frowned. Five P.M., by rights, was Captain Mystery's appointed hour. But these percussions did not sound like machine-gun fire. They went: "Boom-boom-BOOM-boom!" And repeated. Mr. Nesbitt had visual evidence of them. A rose in a vase on the mantel was jumping violently up and down in that precise tempo.

Mr. Nesbitt sighed, put down the Courier, and went downstairs. Just outside the living-room door, he paused and turned the indicator of his Hearophone to "Normal." Immediately, an inconceivable din smote his ears; and he hastily turned it down to "Low." As he did so, the door burst violently open and emitted a tall, scholarly-looking sixteen-year-old by the name of Beezy Edwards.

MR NESBITT stared at him in astonishment. Beezy, as ■ rule, was not given to violence. Beezy was a born organizer and ■ shrewd businessman—one of the type of boys who are always managers of school activities, and whose hobbies usually have ■ cash value. Beezy, for instance, collected valuable foreign coins. . . . Ordinarily, he affected a quizzical expression of quiet superiority; but now he was the victim of baffled rage. "Women!" he said furiously. "Phooey!" . . . Then he saw Mr. Nesbitt, turned beet-red, muttered, "Good evening, sir," and departed hastily by the front door.

Mr. Nesbitt decided that this manifestation denoted ■ continuation of Beezy's recent quarrel with his fifteen-year-old daughter Dorothy, over the matter of the high-school A-10 Class Play. Dorothy had been the ingénue, and Beezy had been stage manager; and Beezy, said Dorothy, had eternally humiliated her by dropping the curtain in the middle of her most dramatic and poignant third-act curtain speech. . . . There had been laughter from the audience, and a certain amount of ribbing later, most of which had come from

that nasty little Pat Engle," from whom Dorothy had won the coveted ingénue role. . . . So there had been a rupture in Beezy and Dorothy's friendship, during which Beezy had telephoned often, and Dorothy had moped and refused to have anything to do with him. . . Mr. Nesbitt sighed and opened the living-room door.

What he saw held him fascinated. His daughter Dorothy was standing in front of the living-room table. In her left hand was a jelly, minced ham, and peanut-butter sandwich of heroic proportions, with several no less heroic bites missing from one side of it. Her right hand was resting on the table top, on an open copy of Lyle's Latin Grammar, which she was presumably studying. The rest of her was in violent and rhythmic motion. Her feet shuffled and tapped. Her blond head bobbed like that of a shaken rag doll. And, at regular intervals, there came from her sandwich-laden mouth a strange, muffled cry of "Ta-teetee-TA-teetaa-TEE-*TAA!*"

Mr. Nesbitt shifted his glance to the corner of the room where stood the radio. In front of the machine was an enormous trap drum; and seated at the trap drum was a boy. He was about sixteen, redheaded and angular, with wild blue eyes, and a lantern jaw which was champing rhythmically at a wad of gum. . . . He was belaboring, with incredible swiftness and dexterity, four cymbals, a snare drum, and a number of other objects which included a cowbell, three hardwood blocks, several things that looked like calabash gourds, and a cagelike contraption that might have passed for the better mousetrap.

MR. NESBITT had a horrible premonition. "Good Lord!" he said, somewhat more loudly than he'd meant to.

Instantly, both the drumming and the dancing stopped, and he found himself confronted with two pairs of eyes. There was an awkward pause. Then Dorothy sprang toward him to administer a rather jammy and peanut-buttered kiss. "Hi-ya, Pop!"

Mr. Nesbitt wiped his face. "Where was Beezy going?" he inquired.

"Oh, *him!*" said Dorothy scathingly. She laughed. "I guess he's gone back to play with his old coin collection." The subject of Beezy having been thus dismissed, she turned gaily toward the boy with the drums and said, "This is Kicks Kennedy, Pops."

"Please-to-meet-you!" said Kicks, with machine-gun rapidity; and Mr. Nesbitt perceived from the look on Dorothy's face that his horrible premonition had been correct. Kicks had become the more or less permanent successor of the late-lamented Beezy. Kicks Kennedy who drummed. . . . Terrible thought! Dorothy's hobbies had a way of changing with her beaux. . . .

Mr. Nesbitt suppressed a groan, and managed a rather lame smile. "Playing a little—er—jazz, eh?" he asked jovially.

Dorothy laughed indulgently. "Oh, you're so old-fashioned, Pops! They call it swing, now. . . . No, I had to study my Latin, and Kicks is just practicing for the Dizzy Darnel Contest!"

"Oh," said Mr. Nesbitt. Cautiously, he turned his Hearophone up a notch. He knew all about the Darnel Contest. Dizzy Darnel was the state's most popular dance-band leader, and Neely Phelps, president of the Winfield Department Store, had recently come into the Winfield National Bank—of which Mr. Nesbitt was loan officer—to borrow five thousand dollars to buy the local sponsorship of the scheme.

The idea was simple: Each week over the radio, Dizzy Darnel was to hold auditions for amateur dance bands of high-school age. Customers of the twelve sponsoring stores throughout the state would be permitted to vote for what they thought was the best amateur band in their city; and from among the three bands which amassed the greatest number of votes, Mr. Darnel would pick one from each city which—during the summer vacation—would be given a contract to tour the first-run movie theaters of the state. It was a scheme to delight the merchandising soul. . . . Business was expected to boom. Mr. Nesbitt, therefore, had loaned Neely Phelps the five thousand. . . .

"Think you'll win?" Mr. Nesbitt asked Kicks.

Kicks looked uncertainly at Dorothy, who had resumed her consumption of the sandwich. "I don't know," he said.

"He needs more stuff for his drums," said Dorothy, matter-of-factly.

"You mean more things to pound on?" asked Mr. Nesbitt. He looked at the trap drum. "It looks—er—awfully complete to me."

"Oh, it's pretty fair," said Kicks, "but a guy isn't in it, these days, unless he's got tunable tom-toms."

"Tunable *what?*" asked Mr. Nesbitt.

"Tom-toms. You know, those little round drums. They go 'boompetty-boom-PAboompetty-boomp' under the basic beat. Gives a *super* effect. Ever hear Krupa?" He mentioned the name with reverence.

Mr. Nesbitt shook his head. "I don't believe so."

"*He* uses 'em. And he wrote the book!"

"Tunable tom-toms," said Dorothy, "cost thirty-five dollars, and they won't let Kicks buy them on time 'cause he's not twenty-one; and his father won't okay the account."

"He says I've got enough drums now," said Kicks.

"He doesn't understand," Dorothy explained. "Tom-toms are a necessity. Not just a here-today thing like some drum gadgets. Tom-toms'll be good ten years from now." She looked at Kicks for confirmation, and Mr. Nesbitt sensed that she had learned these facts but lately.

"I wonder, Dorothy," Mr. Nesbitt said hopefully, "if you couldn't study your Latin better if Kicks were to practice his drums at home? It must be hard for you to concentrate with—"

"Oh, no!" said Dorothy. "Music always makes me concentrate *better*."

MR. NESBITT went upstairs again, settled himself in his chair, and turned himself off. For perhaps two minutes he read the Courier in peace. Then he became aware of a subtle vibration in the soles of his feet. "Damn!" he said. A minute later, the vibrations were playing tag with the ends of his auditory nerves. He looked at the rose in the vase on the mantel. It was weaving and bobbing like an amateur lightweight. . . . "Damn!" he repeated. . . .

**"This year we're saving our Christmas savings to help pay our income tax"**

IRVING ROIR

Mr. Nesbitt was a widower; and the ménage operated under the joint supervision of himself and a colored cook and factotum named Pearl. Pearl was very fat, very black, and a member of the family of ten years' standing.

One morning, about a week after the advent of Mr. Kicks Kennedy and his drums, Mr. Nesbitt descended to breakfast. As he seated himself before his orange juice, Pearl appeared from the kitchen with his eggs and bacon, and without bothering to wish him "good morning" said "Don' you feel good, Mr. Henry?"

"I feel fine!" said Mr. Nesbitt, hastily. "Fit as a fiddle!" Experience had taught him that admitting illness to Pearl brought immediate and unpleasant attempts at remedy. "I—er—just haven't been sleeping awfully well."

"Might be yo' stummick," said Pearl, hopefully. "You don' look good. Maybe yo' needs—"

"All I need," said Mr. Nesbitt grimly, "is to get rid of that Kennedy boy. Those drums are driving me crazy."

"H'm, h'm!" said Pearl triumphantly. "Yo' nervous!"

Mr. Nesbitt fixed her with an exasperated eye. "I'm *not* nervous! The drums just hurt my ears. I like every beat of them, for some reason. I'm simply going to have to tell the Kennedy boy he can't drum any more. . . . Now, stop botherin' me."

"Yes, suh." She turned away, then hesitated. "Mr. Henry, suh, ain't figurin' you could just tell here Kennedy boy a-packin',—"

Mr. Nesbitt recognized her remark as being an admonition, rather than a question. "Why can't I?" he asked in sudden alarm.

"Because, suh," said Pearl, "Mr. Engle's cook says this Kennedy boy is 'bout the most popular boy in the whole of the Winfield High School. If you send him packin', Mr. Henry, he'll have to fin' hisself some other place to live. And de place is gonna be Mr. Engle's cellar room. That snippety little girl done already made the remark, you knows, Mr. Henry, that Mr. Engle's gonna feel mighty bad if you do all de affectations of de Kennedy boy. He have him take up with *her*."

"H'm," said Mr. Nesbitt. He waited for amplification.

Pearl went out into the kitchen and came back with Mr. Nesbitt's toast. "Seem like this Kennedy boy has a good chance of winnin' this here Darnel contes'. If he *do*, he goin' to be gone away all summah; an' it ain't gonna do Miss Dorothy no good to have a beau that ain't here to take her bathin' and swimmin' at the river."

Mr. Nesbitt recognized the beginnings of a plan. Knowing Pearl's love of prowess, his interest quickened. "Yes," he said.

"Miss Dorothy, she done had a little quarrel with this Beezy Edwards boy, true enough. But he's the most popular boy at the Winfield High School, and if the Kennedy boy win the contes' she's gonna make up with the Edwards boy again, right quick."

"Good Lord," groaned Mr. Nesbitt. "Any man who raises a child is storing up jewels for his crown in heaven."

"Yes, suh," agreed Pearl. "But that ain't all. If the Kennedy boy don't win that contes' he's goin' to be mighty mad min' 'round the house all summah. That's bad. But the Beezy boy is different. We's *used* to the Beezy boy. But if we's got to have *any* boy 'round, and we couldn't do no better than Kennedy, I suggests, Mr. Henry, that you fix up some thing so the Kennedy boy will win the contes'."

"But how can I do that?" asked Mr. Nesbitt.

"Mr. Henry, suh," said Pearl, "you know. But it's shoah got to be fixed so us to have any quiet here outs."

Mr. Nesbitt went to the office that morning with no inkling that, by the time the day was out, he would have made the purchase of two tunable toms-toms . . . His acquisition of them was the result of his mature consideration of what Pearl had given him at breakfast. But out of a phone call he made to Mr. Dizzy Darnel, at the field broadcasting station.

MR. DARNEL spoke so strangely that Mr. Nesbitt could barely understand him, but he had age to discover two facts: Darnel admired the work of his own band above all others; and it was his opinion that, with the exception of a five-piece band from River School, he considered every band in the music contest as being of inferior caliber.

"Corny," was Mr. Darnel's way of putting it. "Strictly boom-boom. They all sound like prison band. The horns they picked up in a pawnshop."

"Oh," said Mr. Nesbitt, thoughtfully. Then, "Have you heard an—

## ONCE AGAIN IT'S TIME TO MAKE A BOWL OF

# Merry Christmas!

You've never known the warm glow that fills you when friends stop in for a Four Roses eggnog at Christmas time . . . well, you couldn't pick a better time than right now to start this gracious custom!

**1. Here's what you need**

. . . ¾ cup sugar . . . 1 pint cream . . . 1 pint . . . 1 oz. Jamaica Rum . . . 1 pint Four Roses.

**2. Here's what you do**

Separately yolks and whites of eggs. Add ½ cup sugar to yolks while beating. Add ¼ cup sugar to whites after they have been beaten very stiff. Mix egg whites with yolks. Stir in cream and milk. Add the pint of Four Roses and the rum. Stir thoroughly. Serve very cold, with grated nutmeg.

**3. Here's what you get**

Five pints of the most delicious Egg-Nog that ever fluffed up in a bowl! And no wonder! For the Four Roses that you buy today is the most luxuriously smooth and richly flavorful whiskey we have ever made or known, in all our 76 years!

*a blend of straight whiskies—90 proof. The straight whiskies in Four Roses are 5 years or more old. Frankfort Distilleries, Incorporated, Louisville & Baltimore*

tra called Kennedy's Kongo Kats?"

"*Well,* yes," said Mr. Darnel. This seemed to be his only affirmative.

"How is it?" asked Mr. Nesbitt.

"Awful," said Mr. Darnel. "That's what I was telling some kid this morning. Name of Beezy Edwards."

"*Who?*" asked Mr. Nesbitt, startled.

"Beezy Edwards," repeated Mr. Darnel. "He asked, just like you, which band I thought was going to win. I told him River Falls looked like a cinch. Then he asked about this Kats outfit. I told him the same as I'm telling you. They got no style. No class. That's the trouble with kids. They always think one of them's a Grofé on arrangements."

"I see," said Mr. Nesbitt, thoughtfully—wondering, meanwhile, just where Beezy fitted into the picture.

"Now you take my outfit," said Mr. Darnel, for the fifth or sixth time.

"Yes, yes!" interrupted Mr. Nesbitt, hastily. "Very fine indeed, I'm sure. But tell me something. Does your drummer use tunable tom-toms?"

"*Hell,* yes," said Mr. Daniel. "Four sets of 'em! We got a little novelty number. A terrific break on the toms! Strictly bucket with a boogie-box background! It kills 'em!" To Dizzy Darnel, apparently, a band without toms, was like an egg without salt. . . .

"Thank you," said Mr. Nesbitt. He hung up the phone, and thoughtfully tapped his pencil against his teeth. Then he picked up the phone again, and dialed the number of the Winfield Music Shop. . . .

HE GOT home early that afternoon, and carried his purchases directly upstairs to the study. They consisted of twenty-six recordings of the music of Mr. Dizzy Darnel and a set of tunable tom-toms.

The tom-toms were each about nine inches high, twelve in diameter and made of honey-colored, polished hardwood, inlaid with mother-of-pearl. Their stand was an intricate and sturdy wonder of chromium-plated steel tubing, and the skins shone with a sleek, satin whiteness. Mr. Nesbitt set the outfit up before his chair, took the two padded drumsticks from the packing box, tuned up his Hearophone a notch, and gave the skin of one of the drums an experimental thump. It resounded with a deep, penetrating "Boom!" Mr. Nesbitt shuddered, and turned his Hearophone down to its lowest ebb. With an almost morbid fascination, he thumped at the second tom-tom. Its "Boom!" was somewhat higher than that of the first, though no less penetrating. . . .

Experimentally—watching the petunia blossom that had replaced the rose in the vase on the mantel—he hit both tom-toms simultaneously. The petunia quivered in anguish, and Mr. Nesbitt felt a set of echoes rebound from the top of his skull and smite his diaphragm a mighty blow. "Good Lord!" he said. "They're—they're positively brutal!" Panic-stricken at the implications of what would happen if his scheme went somehow awry, he looked frantically about him for some place to hide the tom-toms. He was too late. There was the sound of a troop of horses coming up the stairs, and Dorothy stood in the doorway. Kicks Kennedy was behind her.

"Hi!" she said, in greeting; and then stopped short. "*Tom-toms!*" she screamed.

"*Tunable* tom-toms!" breathed Kicks. He stood, for a moment, staring at the gleaming wood-nickel-and-white drum skins. Then he dropped to one knee alongside them and stroked the drums with his hands. "Gee!"

Mr. Nesbitt wet his lips. He was not accustomed to the practice of subterfuge; and he tried to think of some logical explanation for his impending generosity. . . . "You told me," he began, "that you thought you could win the Dizzy Darnel contest if you had tom-toms. . . . Is that correct?"

"Why, sure he could!" said Dorothy. "Couldn't you, Kicks?"

"Sure," said Kicks, still staring at the drums. "I'd be a cinch." He thumped the drumheads with the heels of his hands, and the tom-toms muttered awfully. "Boy, oh, boy!" he breathed happily.

"I—er—always admired young men with ambition," temporized Mr. Nesbitt. "I'd like," he added, with great truth, "to see you win that contest. I'm going to make it possible for you to own this set. The down payment on it is made. The weekly payments are one dollar. Does that suit you?"

"Huh?" said Kicks, incredulously. "You mean I can *have* them?"

"Yes," said Mr. Nesbitt.

"Do you really mean it, sir?"

Mr. Nesbitt nodded. "Certainly."

**"Why don't you look where he's going?"** CHON DAY

Kicks drew himself up. His eyes were shining. "Mr. Nesbitt," he said earnestly, "when the trials come off, both I and the Kongo Kats will be in there pitching with everything we've got. And if we win—well, I'd have to ask the other guys in the band—but if I have my way, the band won't be called Kennedy's Kongo Kats, any more. It'll be the *Nesbitt Nite Owls!*"

MR. NESBITT, by now, had ceased to feel like anything as decent as a dog. He drew a deep breath though and smote cleanly. "There is, however, a condition," he said. "I've heard on good authority"—he steeled himself—"that your band is—er—corny. Strictly boom-boom. Something's got to be done about it, or that five-piece band from River Falls will win the contest."

He paused to gather their reaction. Kicks Kennedy had an expression of injured pride on his face; and Dorothy was staring at him with awe and amazement at his erudition. "You have no style," continued Mr. Nesbitt, bravely. "That's the trouble with kids," he added with unction. "They always think they're a—er—Grofé on arrangements. You'll have to do a lot of work. A lot of work." He picked up the package of recordings. "You can rehearse in the living room every afternoon for an hour."

"*Here?*" asked Dorothy, staring at him.

"Of course," he said, firmly. "Every afternoon. The thing to do is to practice with these records until you get an idea of what Mr. Darnel likes. Then we'll buy some of the sheet-music arrangements he has for sale, and go to work on them. He's judging the contest, and it stands to reason he likes his own kind of music. If he didn't, he'd change it."

"Yes, sir," said Kicks, slowly. "I guess he would." He seemed somewhat surprised that the idea had never occurred to him.

"And," said Mr. Nesbitt, "I want you to work up a little novelty number. A sort of solo on toms. Something terrific with a boogie-box background. It'll kill 'em!"

Kicks Kennedy's mouth dropped open. "Yes, sir," he said.

"Fine," said Mr. Nesbitt. "Now—er—get in there and pitch!"

The next three weeks were a nightmare. Each afternoon, Mr. Nesbitt sat in the living room and listened to the ceaseless thumping of two tunable tom-toms; and—when he tuned up his Hearophone—to the squalling of a saxophone and a cornet, the plinking of a guitar, and the twiddling of a not too expertly played piano. . . . At night—in his dreams—he heard the tom-toms alone. The whole of his universe trembled to their echoes; and he soon reached the point where he snapped at his secretary, made no loans at the bank, kept his Hearophone permanently turned off, drank four bottles of beer of an evening instead of his usual two, and jumped whenever anyone spoke to him.

He had long ago taken over the superintending of the Kongo Kats, for it was apparent from the first that they were not going to win the contest without careful guidance. And after two weeks of intensive exposure to Mr. Darnel's recordings, and to the Kats' efforts, Mr. Nesbitt prided himself on knowing more about swing than the next man. He therefore gave up reading the Courier until more peaceful days should come and devoted his afternoo Kats.

He was nothing if not thoro went systematically about the making home recordings of the forts, for instance. These he wo back to them, so that they c wherein they erred.

But it was with the drums really shone. Kicks left his tra Nesbitt living room; and Mr got in the habit of taking off t vas covers, of an evening, and one of the Darnel recordings th gamut of dissonance, so as bet struct Kicks Kennedy in the i of some attractive break. Ev he achieved a remarkable dext although he could not bring h the point of chewing gun drummed, he found that his up an involuntary champing and that his head set up a pe chanical metronomic swingin

One evening, shortly after s ended for the summer, and week before the judging of th he was in the throes of the l of "Juju Jamberoo"—the one "Taddlia-poomp-ah-Ta-ta-ti" it—when he looked up to s face peering at him furtively dining-room doorway.

INSTANTLY he stopped dr feeling somehow a little "Did you want something, l said irritably.

Pearl edged her way into "Mr. Henry," she said, cautio you shuah everything is all "Of course everything's all said irascibly. "As all right be in a madhouse like thi Why?"

Pearl shuffled her feet. drums still hurt yo' ears, Mr.

"Of course they do! I'm al with hearing them."

"Yas, suh," agreed Pearl, him doubtfully. Then, "Mr you sure, Mr. Henry, dat th boy is goin' to win de conte

Mr. Nesbitt suddenly stop ing, and smiled. "He's a— he said, with pride. "Why the best little five-piece o state. All Kicks has to do i the stage, and he's in! We

"Um, h'm," said Pearl Then, "Mr. Henry, I don' thi nedy boy goin' to get votes *appeah* on de stage. Lea Engle's cook say he ain't. S little Engle snip say someb cash money fo' votes; an Dorothy cain't collect enou the Kennedy boy to get int at all."

"Good Lord!" said M "Who's doing it?"

Pearl shook her head. dey don't nobody know."

The next two days were h Nesbitt had an interview thy that same evening, wh from a moving picture with nedy. Dorothy was actin campaign manager. She h a Kongo Kats' Club at the and herself joined the sca haunted the Winfield Depa each afternoon to pick u slips which customers ofte the floor after making the . . . Mr. Nesbitt seized he tered the Nesbitt door. I pale. "Dorothy," he sa "Tell me. How many vo got for Kicks?"

"Oh, lots!" she said b most two thousand."

Mr. Nesbitt went into lightning calculations. He dollar what the cash sales field Department Store ha the contest started. Allo

# GIRL ES BACK TO COLLEGE

AS JANUARY 2, Clare Fisher, her hristmas holiday over, kissed Pap, nd Mama Fisher goodbye, set ut return to her classes at a well- no girls college in New England. H father had planned to drive Clar back. But weather was bad, so e p her on a Pullman, as being the ate surest way for her to travel. lev having taken a Pullman before, he v a bit nervous. But all nervous- ess ded as the porter gave her a ig, ssuring smile, told her to ring he I if she wanted anything.

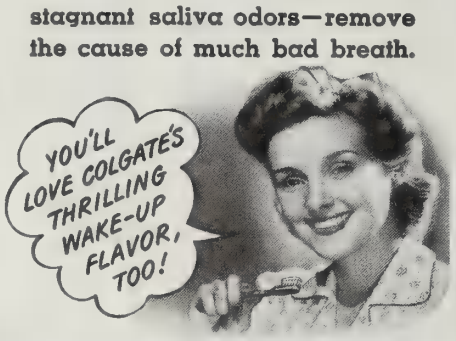
**IO IONER** got settled than another girl came e fo d that her name was Ruth Murphy, that ab going back East to college, and that she up r berth over Clare's lower. They hit it off a once, went up to the dining car to have to her.

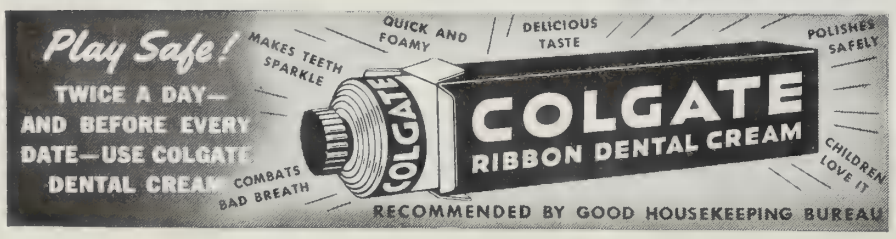
**DINNER OVER,** they wandered back to the lounge car. Here they got their first big kick of the trip; a famous movie actor was there! He left, but they hardly noticed, for they'd struck up an acquaintance and started a lively conversation with two army flyers (whose names you can't have—yet).

**AFTER BRIDGE** and much good talk with the flyers, Clare and Ruth retired to their car, washed faces and scrubbed teeth before bed. Clare discovered (by watching Ruth) that you *pull forward* the water faucets to turn them on, that the small bowl was the tooth-scrubbing bowl. She felt like an old hand!

Ru up above, Clare below. And those berths psh e as a Captain's Cabin! Hangers for ; a mmock and shelf for stockings, etc.; a rea g light; real air-conditioning; and, be- hos crisp, crackly sheets, *the divinest bed you hed toe into!*

**NEXT MORNING,** Clare was writing home: "Dear Dad and Mom . . . There never, never was anything like this Pullman trip for fun . . . I feel like a queen . . . I met the most wonderful people . . . I guess I'm spoiled for any other kind of travel." *Try Pullman. You'll be spoiled, too.*





**Yes, YOURS! For even YOU can have Bad Breath! In fact it's more than likely that you do! Don't run the risk! Use Colgate Dental Cream—the toothpaste that cleans your breath while it cleans your teeth!**

**HERE'S WHY:** Colgate's has an active *penetrating* foam that gets into the hidden crevices between teeth—helps clean out decaying food particles—stop stagnant saliva odors—remove the cause of much bad breath.

**BESIDES,** Colgate's has a soft, safe polishing agent that cleans enamel thoroughly, yet gently . . . makes teeth naturally bright, sparkling! No wonder people everywhere are quitting liquids, powders and other pastes for Colgate Dental Cream!

a fifty per cent margin of lost sales slips there must be at least fifty thousand votes waiting to be cast. "Ye gods and little fishes," he groaned; and picked up the phone to call Neely Phelps at his home.

Neely, it appeared, had heard rumors, too. Certain of his customers had remarked that Winfield Department Store sales slips had a cash currency value, among their younger children, of twenty-five cents for ten dollars' worth. . . . No, he couldn't imagine who would care enough about the outcome of the contest to spend that much money to influence the result. . . . Yes, he *would* try to find out! . . . Who was leading in the contest? Well, as he recalled it, the River Falls band was leading with about ten thousand votes; Linklater's Lulus were second with seventy-two hundred odd, and the Bayou Bearcats were runners-up with four thousand. . . . Kicks Kennedy? Why, he was fifth with twenty-five hundred votes.

Mr. Nesbitt hung up. The election closed the next day; and under the terms of the contest Kicks Kennedy had to place in the first three, even to get a hearing in the finals. Instead, he was fifth; and there were almost twenty-five thousand votes outstanding. Who had them? Mr. Nesbitt didn't know. And he couldn't find out. . . . And by the afternoon of the next day, he was desperate. The ballot-counting and final judging were due to take place that same evening on the stage of the Winfield Theater; and it looked as though whoever was doing the dirty work intended to use his accumulated votes to see that his band was the best of the three that were to be judged.

A truly ingenious scheme, thought Mr. Nesbitt. Worthy of a Tammany boss. . . . But where was the financial interest in winning *this* election? . . . Unless—wait! The band that went on tour would be paid one hundred fifty dollars, plus expenses, for each of its twelve appearances. *That* sum was worth spending money to secure. One of the contestants was buying votes for himself! Which one? Obviously, the band that was leading! The River Falls Band. "Ha, ha!" cried Mr. Nesbitt, aloud and reached for his phone.

Twenty minutes later—dispatched by his high-school principal—a certain fifteen-year-old Jerry Voelter stood in Mr. Nesbitt's office, while Mr. Nesbitt sternly berated him for vote-buying, trying to influence a free election, poor citizenship, and other crimes.

Jerry Voelter, however, proved not to be the guilty man. He had bought no votes. "Besides," he said, "Beezy Edwards says that—"

"*Who?*" shouted Mr. Nesbitt.

"Beezy Edwards," repeated Jerry. "It was his idea. . . . Beezy says that—"

"Never mind!" shouted Mr. Nesbitt. "I see the picture quite clearly." He grabbed his hat, and sailed out the door like a hurricane, muttering as he went.

HE LOCATED Beezy Edwards at the Uptown Drugstore. Beezy was calmly inhaling a Giant-Thick malt. Having by this time recovered control of his temper, Mr. Nesbitt sat down beside him and said, very jovially, "Well, well, young man! Where've you been keeping yourself?"

Beezy's scholarly eyes observed him gravely through their horn-rimmed glasses. "Oh, round and about, sir. Nice to see you again." He waited—the picture of respectful dignity. He might well have passed as a devout and vaguely reproachful clergyman confronted with a wandering member of his flock. This despite the fact that Mr. Nesbitt knew Jerry Voelter had undoubtedly given him the alarm. . . . He mopped his brow and ordered an Alka-Bromo.

"Beezy," Mr. Nesbitt s

anks," said Beezy absently. He d chocolate, and sat for a mo- sipping it. He said, presently, "I about something. There's never any physical trouble between and me. He knows he's behind in ction. I wonder if I went to see ht now, if I could sell him on the leal I did Voelter."

Nesbitt gasped. Then he laughed. he said, slowly. "I suppose *you*

umult and the shouting had died contest was a week over; and the Nite Owls, *nee* Kicks Kennedy's Kats, had won the nod, and were ain headed for their first week's ment in Centerville.

Nesbitt got home quite early, that on. He was jovial—beamingly came into the house, said, "Well, w's everything?" to Pearl, and istling off upstairs to the study. here, he removed his shoes, himself off, and settled himself ably with the Courier.

little while he read in peace. But then, apparently, something commenced to disturb him. He shifted uneasily in his chair and turned up his Hearophone, expecting to hear some violent noise. There was none—only a murmur of voices from the veranda. Something, he sensed, was very wrong. For a second he couldn't determine what it was. Then, suddenly, he knew: The flower in the vase was motionless!

He considered this fact for a moment before its significance struck him. Then he realized that he was also disturbed by the absence of certain vibrations in the soles of his feet, and in the top of his skull. He sat up straight in his chair. "Great Scott!" he said, in horror. . . . For a moment, he meditated on the vagaries of the human mind, and on what he'd read in books of psychology on conditioned reflexes. Then, with a sigh, he selected a record he'd made of Kicks Kennedy's Kongo Kats, went downstairs to the living room, put it on the turntable of the big phonograph, set the machine on "repeat," and returned to the study.

For a moment, he sat in his chair—with his Hearophone turned off. The vibrations were satisfactory, so he settled back in comfort to read the Courier. For perhaps a minute, he perused it in peace, while his head and feet thrummed comfortably, and the flower on the mantel shuddered.

Then the door of the study opened, and his daughter Dorothy came in. She came directly to where he sat, and turned him on slightly.

"Father," she said, in a pathetically pained voice. "We can't *stand* that awful phonograph so loud. Specially, those horrible drums! Beezy and some of us are rehearsing a play on the veranda, and we simply can't hear ourselves think."

Mr. Nesbitt stared at her blankly. "Ye gods!" he said. "Ye gods and little fishes!"

"You never consider anyone but yourself!" GREGORY D'ALESSIO

## How's your "Pep Appeal"? —by Berger

**Bud:** C'mon, now! A big locomotive for the team!

**Sis:** Well! Well! I never knew cheerleaders did homework. But why don't you open up and *give?* That yelp would make any team run the wrong way!

**Bud:** Who asked *you* in here? Cheerleading has to be practiced, like anything else. You have to develop timing—and rhythm—and pep.

**Sis:** Pep, is it? Well, you don't get *that* in front of a mirror! You can't have it unless you *eat* right, and a few more *vitamins* might do wonders for your *oomph*, my lad. Scram down to the kitchen. Here's where we do a favor to dear old Alma Mater.

**Sis:** And right here is where we make a start toward getting more vitamins. You've got to have 'em all, and in this delicious cereal, KELLOGG'S PEP, is an extra-good supply of two of the most important ones—vitamins $B_1$ and D.

**Bud:** Holy cats! Why didn't you tell me it *tastes* so good? If getting the other vitamins can be this much fun, I'm going to be the most vitaminized cheerleader you ever saw.

## Vitamins for pep! *Kellogg's Pep* for vitamins!

*Pep contains per serving: 4/5 to 1/5 the minimum daily need of vitamin $B_1$, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.*

A SHORT SHORT STORY COMPLETE ON THIS PAGE

# Wicked Little Willem

**By Frederick Hazlitt Brennan**

ILLUSTRATED BY HARDIE GRAMATKY

DEAR children, once upon a time—just last month, to be strictly truthful—there lived in Holland a wicked little boy named Willem Kampfeldt. He lived with his father, Jan, and his grandmother, Mrs. Dencker. They had a clean house on a tidy street in the village of Domhelder, which is twenty miles from Rotterdam.

Willem's mother, his sister and his two older brothers were dead. The Kampfeldts had been living in Rotterdam when Mr. Hitler sent his bombing planes to punish that city for defying him. Mr. Hitler's bombing planes killed Mrs. Kampfeldt, Kathie, Paul and Jan, Jr. Mr. Hitler said he was very sorry that the Dutch government had forced him to do this. Of course, that should have ended the matter. But little Willem hated the Germans. As all good children know, it is wrong to hate anyone.

Little Willem hated the Germans so much that he would not smile and wave his hand when Mr. Hitler sent Colonel von Bock and a regiment of soldiers to Domhelder. The Germans moved into barracks that Dutch soldiers once had occupied. Colonel von Bock issued orders that Willem's father, Jan, and other Dutchmen in Domhelder must work fourteen hours every day at the town's one factory. It had been an automobile factory, but now Mr. Hitler wanted the Dutchmen to make tanks for his army.

Old Jan Kampfeldt cursed about this and set a bad example to little Willem. Children tend to copy their elders. Little Willem did not actually say any swear words, but he hated the Germans harder than ever. He talked to Hans and Jon and Peter and Klass and Dirk, his playmates at school, and they began to hate the Germans also. Was not this a wicked thing to do? Worse than that, little Willem had a dog named Storkie. He was named Storkie because his legs were too long for his body. And do you know what little Willem did? He taught Storkie to hate Germans and growl and bark at Colonel von Bock's soldiers.

Now, it became the custom for Colonel von Bock to parade his troops into the public square of Domhelder every Friday morning at seven o'clock. Colonel von Bock marched his soldiers from their barracks down the street where Willem lived and into the public square. The first morning they did this Willem and Hans and Jon and Peter and Klass and Dirk put paper orange flowers in the buttonholes of their jackets and marched along the sidewalk. They mocked the German goose-step.

COLONEL VON BOCK stopped his soldiers and said, "Reduce the bread ration of every family on this block one half!"

The parents of Hans and Jon and Peter and Klass and Dirk were much upset by having their bread ration cut in half. They forbade little Willem's playmates to mock the Germans any more. But old Jan Kampfeldt did not punish little Willem.

"That must have been funny, little Willem," he said. "I wish I had been there to see it."

How sad it is to see parents encouraging their children to be smarty-pants. The next time Colonel von Bock and his soldiers marched toward the public square, little Willem and his dog Storkie were right out there on the sidewalk. Little Willem carried his small Dutch flag. On Storkie's stub of a tail, he had tied a large campaign button with the picture of Mr. Hitler.

Colonel von Bock stopped his soldiers and said, "Catch that boy and that dog!"

**And where do you think she found that wicked little Willem? He was in the street, putting the finishing touches to a snow lady**

Willem and Storkie did not run.

A German soldier collared little Wille other soldier collared Storkie.

"Shoot his dog," Colonel von Bock sai

An officer pulled out his big pistol Storkie down dead.

Little Willem was too far gone in wic cry. He picked Storkie up in his arms, Germans had marched on, and carried Little Willem buried Storkie in the bac put the Dutch flag at the head of Storkie'

But, even now, Jan Kampfeldt neglec ish little Willem.

"Hitler tied to your dog's tail, eh? "Good, good. Storkie died a heroic dea should have had to destroy him anyway here and we cannot spare food for dogs."

THERE was a heavy snowfall that w the next Friday morning, while it wa Grandma Dencker found little Willem's

"Little Willem must not taunt Colon again!" Grandma Dencker said to herself.

Putting on her shawl, Grandma Den into the street. Domhelder was blacked- of British air raids. Poor Grandma De hardly see three feet ahead of her nos floundered along the snow-filled street, k she must find him before daylight and Bock came.

And where do you think she found little Willem? He was in the middle of but down the block near the entrance t square. He was putting the finishing t snow lady. In the first gray light of daw Dencker peered dumfounded at the sno

"Our good Queen Wilhelmina!" she g no, little Willem. It is a sacrilege!"

Wicked little Willem grabbed his by the arm and pulled her away. "We home, Grandma," he said. "Do not as

They left the snow statue of good Q mina standing squarely in the middle and facing the German line of march.

This time, little Willem did not g house when Colonel von Bock and his by. The wicked child had worked half snow and he was suffering severely fro

Poor Grandma Dencker had just p lem's feet to soak in balsam water wh a tremendous explosion. It shook the ho the windmill.

"Dearie me, what has happened Grandma Dencker.

Now, indeed, had little Willem re the final depths of depravity.

"I am not sure, Grandma," he said, Colonel von Bock kicked our dear Q mina."

Of course, dear children, this iniqu continue unpunished.

Wicked little Willem's father, Jan himself with anger when he reache grabbed little Willem by the ear and the woodshed.

"Tell me the truth, son," roared Ja "you stole my bomb out of the attic,

Little Willem did not falter. "Yes, I he admitted, without shame or remorse in Queen Wilhelmina."

Now the wrath of a stern father, a to his son's waywardness, descended on

"Dunderhead!" he bellowed. "Only nel and eighty-seven men dead or wo saving that bomb to blow up the facto bad little boy!"

He spanked Willem good and hard

*by Glen Fleischmann*

# Not "TOO LITTLE

IN four tragic words is written the epitaph of most of the peaceable and freedom-loving countries of Europe.

Because there was "too little too late" there is neither peace nor freedom in Belgium, in Holland, in Norway or in Greece.

Because of "too little too late," the French have neither liberty nor equality; the Serbs are hunted down in their own mountains; the Poles, Czechs and Slovenes are learning that the only alternative to freedom is slavery.

From such bitter lessons America is now seeking to learn.

We propose not to do too little. We are striving not to be too late.

And the first chill fact we must face is that neither can be accomplished in any lax or self-indulgent spirit.

To be specific, we have here at Goodyear adequate facilities for supplying all your normal needs in tires and tubes, and hundreds of other useful rubber products.

It would have been easy, by peaking up our accustomed activities, to add to that peacetime production a considerable volume of military rubber goods.

But Goodyear realized months ago that "considerable" might be too little, and it might come too late.

We recognized that the only sure way to produce enough and to produce in time was to establish the rigid rule, "*Defense First!*" —that both time and materials used in manufacturing peacetime wares must be adjusted to that.

So today Goodyear's first concern is the production of bulletproof tires and bullet-

# not "TOO LATE"

sealing gasoline tanks, half-track and tank treads, barrage balloons and airships, rubber lifeboats and pontoons, and scores of other Army and Navy needs—*in quantities required for America's impregnable defense.*

As things appear now, we do not believe this all-out defense program will interfere seriously with your ability to get tires and tubes. There should be enough in all sizes to meet essential civilian needs.

It may happen at times, that your Goodyear dealer will not be able to supply your particular size instantly. But if you'll be patient, he'll be able to get it for you.

If you do need tires now, you'll be wise to get Goodyear's first-line "G-3" All-Weather — *because tests prove it averages thousands of miles longer tread wear.*

You'll be wise, too, to equip your tires with LifeGuards — Goodyear's modern safety successor to inner tubes. With LifeGuards you can drive your present tires "as is," or retreaded, many months longer than normally, without danger from blowouts.

Putting LifeGuards in new "G-3" All-Weathers, in your present Goodyears or tires of any other make, is the best way we know of stretching out your tires' useful life safely.

And stretching your tires' life right now helps stretch the rubber supply, which in turn helps make sure that in arming America there will not be too little and it will not come too late.

*For your own protection, buy the world's standard of value*

GOODYEAR "G3"

**ALL-WEATHER**

*—the tire with 19 feet of grip in every foot of tread*

*—and put* **LIFEGUARDS** *in them*

*The LifeGuard consists of a reserve safety tire within an extra-sturdy tube. Should casing and tube be injured, the LifeGuard's inner tire carries you to a safe, easy, straight-line stop.*

# Our New Army

Continued from page 17

training before their flight lessons begin. Up to this time, embryo Air Force officers hopped into airplanes almost as soon as they had drawn their uniforms at a Primary Flight School; now at replacement centers they undergo an orientation period plus instruction in everything from physical drill to signal communications. Idea is to prepare cadets mentally and physically for their flight training and to instruct them in the duties of a junior officer.

Now half completed, the center will ultimately take care of 4,700 men. First batch of 1,972 moved in a month ago and 2,000 more are due in a couple of weeks. Originally scheduled to be finished by November 30th, a change in plans added thirty buildings to the project and the completion time has been changed to February 15th. Still in the blueprint stage is a 750-bed hospital group of forty-one buildings. Construction isn't the only activity which is at the feverish point. Officers who will command and instruct are snowed under with work, Mess Officer Capt. L. R. Kemp is faced with the problem of trying to outguess the contractors on completion of the kitchens and mess halls, and Commandant Major Sidney D. Grubbs is sitting on top of the whole works harvesting gray hairs by the handful.

Cadets with any prowess in track and field events have something to work for at any of the Gulf Coast Air Corps Training Center schools. An ornate athletic trophy, donated by Hollywood's Brian Donlevy, who spent some weeks at Randolph Field during the filming of I Wanted Wings, will be awarded every ten weeks to one of the GCACTC outfits. Competition is for cadets only, officers and enlisted men being taboo. Athletes with reputations won't give any one school a particular advantage because the judges don't give a hang about individual records. At least ninety-five per cent of each field's cadets have to try their hands (and feet) at the football throw, seventy-five-yard dash, hop-step-and-jump, spud race and soccer punt. All times and distances will be totaled and averaged and telegraphed to Director of Physical Training Harold L. Berridge at Randolph Field, whose office will compile results and ship the trophy off for a spell at the winning school. The whole project is in line with the Air Corps requirements that cadets take an hour of exercise daily, so there's no danger of its bottlenecking flight training.

## UTAH

WENDOVER BOMBING AND GUNNERY RANGE. We will now go into some detail concerning this unusual 1,800,000-acre spot, briefly touched upon in this page for November 29th and constituting the biggest and best general bombing range in the world. By next spring squadrons from all over the country will sit down on the acres and miles of new concrete runways at this field, a subpost of Fort Douglas, for concentrated practice. The vast, sun-baked range of sand dunes, sagebrush and salt is being used now by Salt Lake and Boise air-base units which fly over loaded with bombs made out of ninety-five pounds of sand and five pounds of black powder in a tin cylinder—just enough to make the hit. Eventually, all practice and real bombs will be loaded on the planes at Wendover itself.

Death Valley was never more treacherous than the salt flats. It takes four weeks to six months to train a range man. The truck drivers—who don't hold pilots' licenses but should—are the pick of the Army, because range crews that have to go seventy-five miles to reach and work on a target in one day can't mosey along. They make their own roads and travel them with the throttles of reconnaissance cars and trucks pushed all the way down. The water level is either a foot under or a few inches over the surface and when a vehicle breaks through the thin salt crust the wheels go out of sight fast unless the gearjammer knows what he's doing and does it in a flash. The ground won't absorb moisture; when water drains off the mountains, brackish lakes miles in area and only a few inches deep form over the flats and the wind moves the lakes around continually.

Even the crack drivers frequently get stuck but "A vehicle isn't stuck," says Staff Sgt. E. S. Gregory, "until the windshield wiper won't work. When only the fenders show, that's just slowing down." Prime object is to keep moving, even though that consists of crawling through soft sand at the rate of a few inches per hour. When a range crew goes out a return time is set. If the time passes, a rescue squad girds up its gear and gets going, fast. Sgt. Gregory learned to respect the desert the hard way. With Sgt. Milton C. Bratley he walked nearly twenty-five miles in eight hours from a stuck truck under a broiling sun without water. It was the first time he had ever gone out without filling the fifteen-gallon emergency water tank, and he isn't going to do it again. When the rescue squad picked them up the sergeants had swollen tongues, blistered feet, nearly paralyzed legs and disturbing delusions. It was on just such a trip into new territory that Sgt. Gregory's truck kept bogging down. "I know we can't go any farther," a priv as he labored to debog the veh truck knows we can't go ar But Sgt. Gregory doesn't kno go any farther."

Job of the range crew is to maintain the uniform-size t outer ring, of waste oil on cin 500 feet across. In the center light target (fifty-foot bull's- put a worn-out tent, which g shreds. Flares light up the ta at night. The crews are sold curacy of the bombing outfi that even from a height of the released bombs rarely la the targets. Crews know i which targets will be bombe that doesn't keep new men fr slight cases of the meemies. tenance reasons the targets a in twos and threes, the indivic being several miles apart. A high altitudes release bomb six miles from the target but to work with a range crew for get over the feeling he's g blasted by a stray egg.

# Private Mullarkey's leave starts at 11:48½ A.M...

*and he isn't going to lose a second of it*

## *. . . he's using that fast-starting Texaco Sky Chief gasoline*

IN these days when Private Mullarkey and all the rest of us are trying to get more from our cars in performance and long life, have you ever realized how a fast-starting gasoline like Texaco *SKY CHIEF* can help?

*SKY CHIEF*'s fast starting is not just a matter of dependable winter service . . . it means the saving of gasoline that slow starting wastes . . . it helps to keep batteries lively and long lived . . . it also helps prevent the excessive crankcase oil dilution that causes engine wear. That, in a nutshell, is the reason this luxury gasoline is no longer a luxury. It *protects* your car.

At a time when, as individuals and as a nation, we are conserving our resources, these things are important.

Try *SKY CHIEF* for its quick winter starting...for its economy. Remember it costs no more than other premium gasolines.

*You're Welcome* AT

**TEXACO DEALERS**

*SKY CHIEF* sells for about half the price you paid in 1920 for the then regular gasoline, illustrating the continued success of the petroleum industry in providing the public with better products at lower prices — *Sky Chief* is available in all 48 States and in every Province in the Dominion of Canada.

three stopped at the shed and leaned against it. "This the place?" asked Marshland.

"Sure," said Ives.

Boots cracked against loose rocks on the other side of the shed and a shape circled the shed's corner, lightly advancing. The shape stood before them, medium and slim—and Henry Plummer's voice said, "All right?"

"No," said Ives. "He had nothing on him but a single eagle."

"He wouldn't leave the country without his dust."

"Maybe he sent it out by express."

"No," said Plummer. "Clubfoot's watched Barney all the time. Barney didn't send it that way." He remained still, doing his own calculating. "But there was a man in here tonight who stopped off at the stage office. He carried a slicker into the stage office. It appeared to be heavy. When I went in, the slicker was open on the counter."

"Tall man?" said Ives.

"Name was Pierce. You know him?"

"Yes," said Ives, "I know him."

"It is probably in the stage office then," said Plummer calmly. "But we can't afford to touch it there. We'll wait and watch. I'll handle that. You boys go back to the Gulch."

"Where's Pierce now?" asked Ives.

"Haven't seen him around," said Plummer. He turned away. A few feet off, he paused to say softly: "About Pierce—"

"I'll take care of him," said Ives.

RISING before daylight, Pierce made the long run into Virginia City by three o'clock. When he reached Wallace Street he saw Steele. The doctor hailed him.

"Where's Barney? I saw him last night and he seemed in trouble."

"Killed on the Bannack road last night."

The doctor showed some amount of shock. "He knew it was coming. Come to my wickiup. I've got something to show you."

Pierce left the horse and returned to Steele's tent. Steele got a huge Bible from a box and opened it, producing a single sheet of paper. "This is what Barney left with me last night," he said.

"I, Barney Morris, sound of mind but uncertain of the future, am about to leave the Gulch and go to my home in Ohio. I ought to be in Bannack tomorrow night. If I am not I can be considered dead. In which event I empower the judge of Fairweather District to make the following disposition of my claim, Number Fourteen above Discovery. This claim is to be given to one Jeff Pierce, he to have it entirely, to work it fitly and in proper season; he to send half of what he pans out to my wife, Mary Morris, Centerville, Ohio.

"BARNEY MORRIS"

THE first shacks and tents in the Gulch began near the junction of Granite and Alder Creek. As soon as Ben Scoggins reached this spot he stood up in the wagon and began to sing out, "Somethin' fancy to go with beans and bacon! Sardines straight from the coast! Dollar a throw! Come and get it!"

As he had shrewdly judged, there was never enough of anything in a new camp. Men came out of the creek at him; they ran down the hill slopes. Tying down the reins to the brake handle—the horses moving and stopping and moving—Ben disbursed sardines from the tail gate all the way up from Junction settlement. He was sold out by the time he topped Daylight's ridge and looked down upon Virginia City. In his pockets and in his pouch he had four thousand dollars more or less in gold and coin and dust. This was the middle of the afternoon with sunlight making a pretty sight of Virginia and the upper Gulch. He was a blond young man standing in the wagon with his hatbrim jiggling as the wagon took the grade, smiling a rawboned smile at a good and just world; and even in smiling, not forgetting to cast a competent glance at the possibilities around him. Coming into Wallace—driving his outfit through the congestion of other wagons and lumber piles and loose horses—he paused by the scaffolding of an incomplete structure. There was a man standing by with the attitude of business about him, whereupon Ben Scoggins, always with a mind to business, hailed him:

"Need any haulin' done?"

The man turned as though struck.

"Up the Gulch on a claim."

He noticed she left off smiling when Pierce was mentioned. There was something out of order here; whereupon he covered up the awkwardness by going easily on to other things: "Nice day—nice year. Well, nice. See you again." He cut around Wallace into another street of tents, heading back toward Bannack. Near the edge of town he passed a blacksmith shop and got a call from a man there.

"Want to sell that outfit?"

"Whoa," said Ben Scoggins. "Whoa." He braked the wagon and settled on the seat. "I'll sell anything, any time. Buyin' and sellin's my trade. What you oferin'?"

"What you want?"

"No," said Scoggins, idle and innocent, "you set a figure."

Fifteen minutes later he had concluded a deal. By this time the open-air

**"I had a big day at the store today. The kids asked me for $293,541 worth of things"** BEN ROTH

"Yes," he said. "There's a whipsaw outfit working over near Bannack. What'll you charge to freight lumber here?"

"How far's Bannack?"

"Seventy miles."

"Two days each way. Four days a round trip." He was mildly thoughtful and he gave the man a swift size-up. "Hundred and fifty dollars."

"Yes?" said the man, then shrugged his shoulders. "Everybody's so crazy about digging they got no time for daywork. All right."

"All right," said Ben Scoggins, and drove on. To himself he added, "Might as well be workin' while I'm lookin' and listenin'. Never hurts to keep busy."

He had turned into Wallace Street and now saw Diana Castle coming out of the tent restaurant. He lifted a strong whoop into the day. "Well, you're here!"

"Yes," said Diana, smiling because he smiled.

Scoggins reached under the wagon seat and pulled out four cans of sardines. "You got a birthday coming?"

"Next December," she said.

He said, "Happy birthday," and presented her with the sardines. "Where's the tall, hungry-looking fellow?"

transaction had attracted half a dozen idle men, one of which was Ollie Rounds. Going inside the stable—which was a log house with a brush roof—to consummate the sale, young Scoggins gravely winked at Ollie Rounds. In a little while he came out of the stable. Rounds joined him and they walked on alone. "You're here, too," commented Scoggins. "Got a claim?"

"Never liked to shovel," said Ollie Rounds. "Every time I see you, you're dickering. Bound to get rich, ain't you?"

"Wouldn't wonder."

Ollie Rounds gave Ben Scoggins a direct look. "Don't pack your money in your hip pocket, Ben. This is a tough camp."

SCOGGINS searched and weighed Ollie with his candid glance. "You always got an ear out for that sort of thing, Ollie. I thank you for the warnin'. But," and he added this in a careful way, "it would be better for you not to take such an interest in the shady side. Some day it might sort of draw you down."

He went on down the road and up over Daylight Grade. Striking through the sinuous and lusty course of the Gulch he reached Junction at twilight and, as he had expected, four newcomers camped beside th picked out a wagon and found "Want to sell?" he asked.

At full dark he had mad Possessed of a new wagon a continued down the Gulch, remembering he had no su day had been good and profit he struck out for Bannack, h whistle making an uneven echo on the narrow rock w lower Gulch.

OLLIE ROUNDS returned saloon and stood at the b his before-supper drink. T now began to fill and the p were all operating. Marshla near the door. **CRUSH-PROOF BOX**...Regent's crush-proof box keeps each cigarette really fresh, fully protected...always in perfect smoking condition

answered. He was rooted in his tracks. His eyes turned blacker and his face grew thin; he held his stiff smile against them. "What for?"

"No harm," said Ives, and stepped beside him. Ketchum was already at Ollie Rounds' other elbow; and the pressure of these two men moved him forward along the walk. They passed through the shuttered lights, they moved out of the heavy crowd. At the foot of Van Buren, in the shadows, Ives turned. "You been flashing a poke in Tanner's, friend. You're no miner. I'd like to see that poke."

"No," answered Ollie Rounds, "I guess not."

George Ives said, "Don't be tough. You recall what happened to Barney Morris? Let's see that poke."

Ollie Rounds knew he was in great, immediate danger. He lifted the poke from his pocket and weighed it in his hand. His thoughts then were swift and calculating; he balanced his life in his mind and suddenly made his choice and gave the poke to Ketchum. As he did so he took a slow, easy step backward. It went unnoticed. Ketchum dropped his head to look at the pouch, and George Ives turned half around, also to look.

"That's the pouch, George. The fellow had it in Tanner's the other night."

Ives said, "How'd you come by this—" and turned, and quit speaking. Ollie Rounds had his gun lifted on both men.

SURPRISE and irritation went in ruffled waves across George Ives' face, and afterward it smoothed carefully out. Ketchum's eyes flared wild instantly and he seemed to strain against his caution.

"I saw Rube watching him in the saloon," said Rounds. "When he went out, Rube started after him. I got there first, Rube. Hand the poke back."

Rube stretched his arm, half length, and his body dropped perceptibly, in the attitude of tension. Rounds murmured, "Pull out of that, Rube. Nobody'd be sorry to see you dead. I'd be glad of the chance to drop you. I'm no easy miner. I haven't got a drop of pity in me and when it comes to rough-and-tumble I know as many tricks as you. Maybe"—and his voice held a dry, swinging tune—"I'd better do it now. I think I'm going to have to watch you. You damned cannibal."

"What's that?" said Ives, now interested.

"You don't know about Rube?" said Rounds. "The man got caught in a blizzard up on the Snake and ate his partner."

Ketchum's eyes glowed and grew dark, and glowed again. His rage remained, furious and inhuman and inburning. But he never spoke. It was Ives who said, "He means what he says, Rube."

Ketchum straightened and extended his arm full length with the poke. Rounds took the poke and put it in his pocket. "All right," he said. "All right."

"Now I'll say my piece," put in Ives, still the calm master of himself. "You've cut in on our game. You're an outsider."

"Always liked it that way," said Ollie Rounds.

"It won't work here," said Ives. "This gulch is for our crowd to work. A man that ain't in our crowd just can't operate."

"So far I'm doing well enough."

Ives held his attitude of amusement. "Listen, friend. There's forty men up and down this gulch I can drop a word to. You don't know who they are and you can't watch 'em. When I drop the word, you're dead before breakfast."

"You're the boss, then?" said Rounds.

"I'm the boss in this gulch," answered Ives.

"All right," said Ollie Rounds.

George Ives gave Rounds a prolonged stare. "You're cool, friend. You might do well with us."

"I do well wherever I find myself," said Ollie Rounds.

"Yes, I think you might do well. Keep the poke. It is chicken feed."

"I'll keep it. I'll keep whatever I take."

"That's all right, too," said George Ives. "A man must look out for himself. But when we move as a bunch you'll do as you're told."

"I don't mind," said Ollie Rounds.

"Then it is settled," said George Ives. "There's a little meeting tonight down the Gulch. We'll all ride down."

"My horse is around on that side street," said Rounds, and turned with Ives. For a moment he had his back to Rube Ketchum, and a stark chill raced up his back, and he turned at one jump and saw Ketchum in the act of drawing. He had not yet put away his own gun, and now brought it down on Ketchum's head in a rapid side blow. Ketchum dropped into the dust, and rolled. Rounds took a full jump toward a building wall, and whirled again, laying the muzzle against George Ives. Ives hadn't moved, had made no gesture of offense.

These two exchanged long, steady stares until at last Ives said, showing his first anger, "What the hell are you about?"

"Watching my hole card, George."

"I said it was all right, didn't I?" flashed out Ives. "If I say it, I mean it. You don't have to watch me, or any of us. I will pass the word along. And I'll meet you down Daylight."

Rounds turned through the tents and got his horse from the stable. He moved rapidly to the bottom of Daylight Gulch and he left the road and watched it closely until he saw Ives and Ketchum come along. When he was certain of them he moved out of the dark. Ives laughed softly at the maneuvering. "You're sure ticklish, friend."

The three of them rode to the summit of Daylight, looking down upon the sinuous glitter of Alder's continuous lights. Ives said, "We'll split and ride on, one by one. Pete Daly's roadhouse is the place. Come right on—we're going to be late." Then he looked at Ketchum, who was a silent lun saddle. "Rube," he said patien have yourself." Then he roc Five minutes later Ketchum after him. A short time la Rounds followed.

Past Junction he fell into the of the Gulch. Now and then a f ing horse struck up sparks stony footing; and now and th man's voice hailed him thr black. Fourteen miles from City he came out of the Gulch horn Creek and reached Dal house, a two-story building riven logs and chinked with m tar. Twenty or more horses st shadows before the place; the closed and three men seemed it. He came up to find Ives Ketchum waiting for him, an troduced him to the third man Red Yeager. Everything's Red. This is Ollie Rounds."

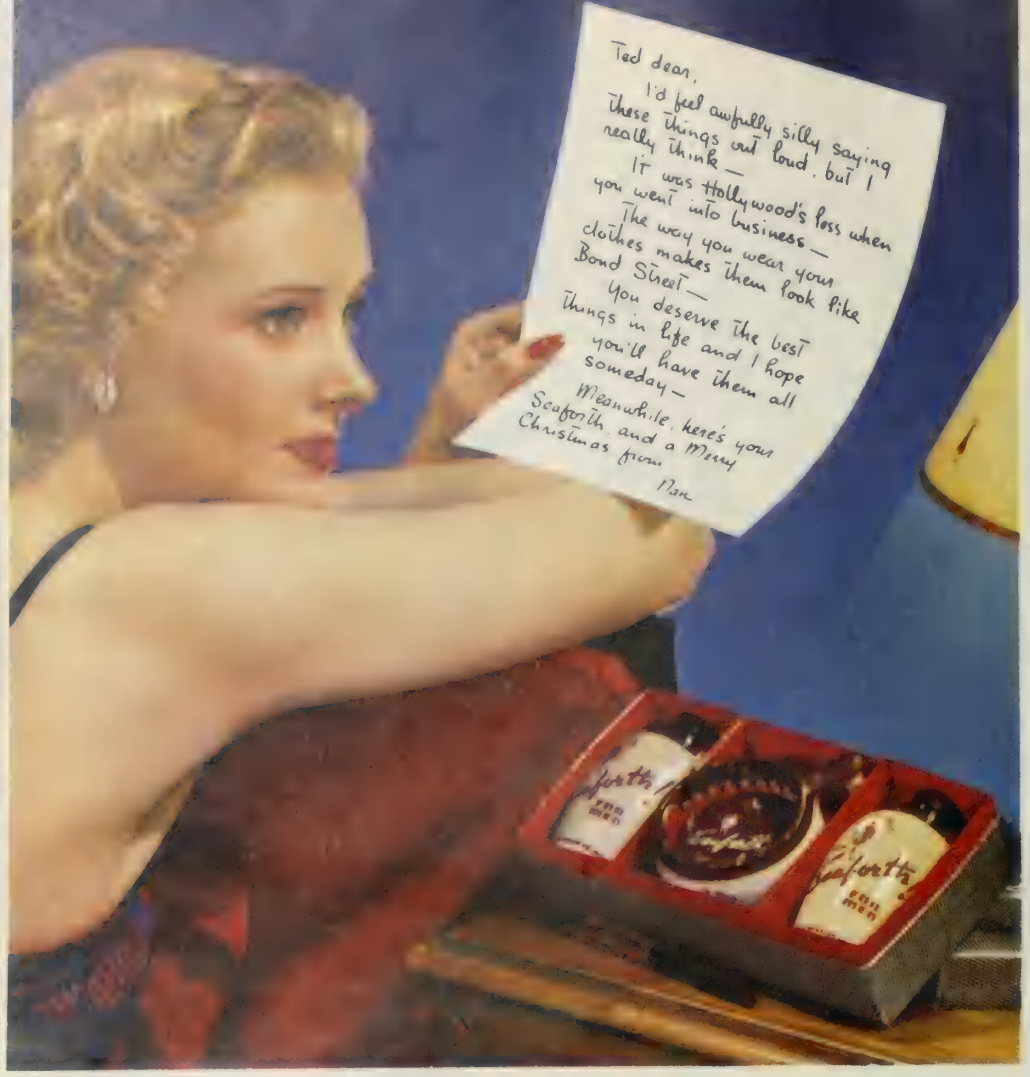
**That's the situation your telephone company faces every Christmas. That's why there may be delays on some Long Distance Christmas calls.**

LAST Christmas Eve and Day the wires were jammed. The switchboards were manned by regular and extra operators working all through the holiday. Long Distance telephone calls were three, five and at some places *eight* times normal.



We're glad so many folks want to exchange friendly greetings across the miles at Christmas — but sorry that, because of it, we can't supply service as good as usual.

We expect the biggest rush of calls we've ever had this coming Christmas. We'll do our human best to prepare for it. But, inevitably, some calls will be slow. Some may not be completed. For these, we ask your patience and understanding.

If you'll call by number wherever possible, and try not to talk too long, you'll be helping us to do a better job for everybody. . . . *Thank you, and Merry Christmas!*

# For the MAN at the top of your list!

relieved. Then Ives called, "All right—all right."

A back door had opened, and silence came to the crowd. Swinging about, Rounds discovered the sheriff, Henry Plummer, at that door. The sheriff came in, closed the door, and gave the room a short and thorough glance; and his eyes stopped on Ollie Rounds and stayed there, civil and speculative and very alert. Ives said, "It's all right, Henry. This is Ollie Rounds."

Plummer had apparently ridden over from Bannack in considerable haste. Dust was on his clothes and at the edges of his dark hair. He wore a fine black suit and white shirt; he had the manners of a gentleman and his voice was very soft. He had a small, trimmed mustache and his face was round and soft. Nothing about him bore the mark of a desperado and Rounds, never to be surprised at the turnings of life, found himself mildly surprised at Plummer.

Plummer said, "I can't stay long. I want you to listen to me."

George Ives tapped the bottom of a whisky bottle on the table: "Order here. Bunton—Sam Bunton—shut up."

Sam Bunton was at the bar, both arms clinging to it; he was drunk and he was angry, and he slowly cursed the bare wall behind the room. Ives moved over to him. Ives dug a thumb in Bunton's ribs. "Shut up, Sam."

Bunton reared and swung. He said, "Where's my brother? He'll stand by me. Where's Bill?"

Bill Bunton came out of a corner, lank and sour and close-eyed. "Sam," he said, "cut it out or I'll break your neck."

"All right," said Sam Bunton, and stopped talking at once.

PLUMMER was cool and smooth in the middle of the room. He studied Sam Bunton and then gently said, "You get drunk too much, Sam. I want you out of this country inside of twenty-four hours. You hear me, Sam?"

"I've got a good claim up the Gulch, Henry. Why should I leave it?"

Plummer intended to speak again, but Ives spoke for him. Ives turned on Sam Bunton with a swift flash of violence: "You heard it. Twenty-four hours."

"Yes," said Sam Bunton. "All right."

The other Bunton — Bill — stepped away from his brother. Plummer turned to face all these men. "Dance and Stuart will be starting a store in Virginia City pretty soon. It will be a place where most of the miners come at one time or another. Probably the express office will have space there, too. It will be a fine place to overhear what's going on, who's got money to be shipped out, who's flush and who's not. Clubfoot, as soon as that store is up you ask Dance for a little corner in it to put up your shoe shop. You can keep your ears open and hear a lot. By the way, I understand you're spending a lot of time in Tanner's saloon. Keep out of it. It pegs you."

"All right," said Clubfoot.

"I don't want you boys to gang up in one spot too much. It makes things too plain to the Gulch. Jack Gallegher will stay in Virginia City, of course. Ned Ray and Stinson will work out of Bannack. Bill Bunton sticks with his ranch on the Rattlesnake. Now we will split our crowd. Ives, Steve Marshland, Johnny Wagner, Alec Carter, Whisky Bill Graves and Rube Ketchum will headquarter in the Gulch." He pointed a finger at Rounds. "You will be there, too. The rest of you men are roadsters, working between the Gulch and Bannack."

He watched these men with his calculating far-off thoughts. "The Gulch is rich. Men will be coming out of it with dust all summer, all year. Keep your ears open, all of you. No d these people will try to g through by fooling us. It h already. We have got to going on. Any man that us we must take care of at things make big things. little things and that's the ones. Pfouts said, "I have seen toughs before who had the whip. But they always used it too hard. And then they got wiped out."

"Not until this Gulch quits voting on tears. The strong and the smart always run things, Pfouts."

"I agree. The strong and the smart—and the honest."

"Maybe."

Pfouts smiled. "I heard you were considerable of a hard one. Don't believe in much, do you?"

"Not too much."

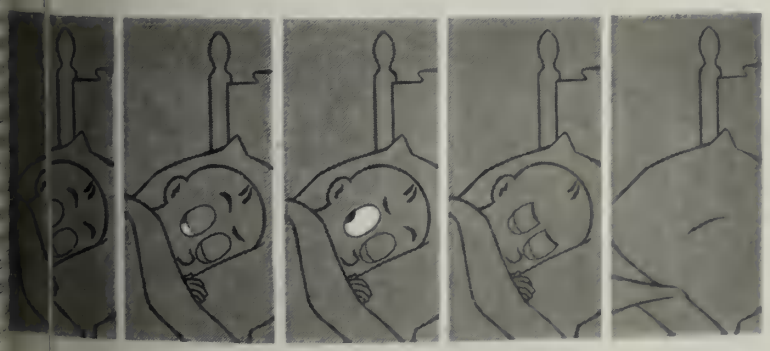
Pfouts moved upgrade to drop a word with Archie Caples on the adjoining claim; and later returned to Virginia City. This was on Thursday. On Friday, moving in much the same casual manner, Jim Williams appeared on a beautiful bay gelding and paused at the sluice box. Williams was near Pierce's age, a broad-chested and muscular young man with a dark and gentle face. His ragged mustache ran down around his mouth and fell into equally ragged chin whiskers and his eyes were a melancholy brown. He rested his arms on the saddle horn and, as Pfouts had done, took his time to estimate Pierce. "That flume," he observed, "saves a lot of work."

"Yes," said Pierce.

"I heard a piece of talk in town this morning," went on Jim Williams. "Ketchum opened his mouth in Tanner's and some brave words fell out. Your name was with the words. It is none of my business, of course."

"Thanks," said Pierce. He stopped his work and met Jim Williams' glance, and for a little while they frankly swapped inspections. This Williams was no talker. Pierce had met him before in Virginia City and had observed that he always kept in the background of a group, and yet he had also observed that Oliver and Pfouts and the substantial men of the district always liked to have Jim Williams' opinion. He was that kind of man, reserved and thoughtful; with an underlying sadness or pessimism strongly influencing his character. Pierce said, "Pfouts came up to drop a hint yesterday. He is too optimistic about law and order."

"There will be no law and order," said Jim Williams in a half-asleep manner, "until things get a good deal worse."



"The pack," said Pierce, "always follows the strong side."

"How many men does it take to make a strong side?" murmured Jim Williams.

"One man is enough," said Pierce. "One man against the whole world—if he's not afraid of dying."

Williams made a brief nod of his head and then he smiled. Pierce answered that smile and at that instant these two knew each other well, and trusted each other completely. Williams reined around and trotted off.

Two days afterward, near twilight, Pierce noticed Rube Ketchum move up the Gulch on the opposite side of the creek and pass by, neither looking toward him nor showing curiosity. Yet

Something
NEW*
has been added!

*IT'S LATAKIA (La-ta-kee'-a) a rare, remarkably flavorful Eastern Mediterranean tobacco! Now added like "seasoning" to Old Golds, Latakia creates a *new*, delightful cigarette flavor . . . *new* smoking pleasure.

Same familiar pack—but NEW Old Golds, blended with Latakia! Made by P. Lorillard Company, blenders of fine tobaccos since George Washington's day.

**Gus Steck,** radio orchestra leader, says: "That 'seasoning' of Latakia gives Old Golds new flavor and fragrance. New Old Golds are a different, more enjoyable smoke."

**Vera Breed,** landscape architect, Wilton, Conn.: "The addition of Latakia in New Old Golds is an inspiration—creates new flavor — sets this cigarette apart."

**THIS YEAR** more people will receive Longines Watches for Christmas than ever before, and this year, also, more people will be disappointed. We are sorry, there will not be enough Longines Watches for all who will want them. Longines, the world's most honored watch, has won 10 world's fair grand prizes, 28 gold medals, and more honors for accuracy than any other timepiece.

The new 75th Anniversary Longines Watches are now shown by Longines jewelers, priced $44.00* upward; see also the Wittnauer Watch, a companion line of moderate price, from $27.50*—products of Longines-Wittnauer Watch Co., Inc., New York, Montreal, Geneva.

*Federal tax included

that lack of curiosity was itself a warning and after he had finished supper he took his shotgun and blankets and climbed the ridge of the side canyon and made camp in the brush. He repeated this the following nights. On Friday of the second week, again near dusk, Ollie Rounds and Ben Scoggins appeared before his small supper fire.

"We were having a drink in the Senate," said Scoggins cheerfully, "and we thought of you. Seemed natural to pay a visit. Ain't seen you for ten days or so."

DAY after day with himself, dawn to dark, he had begun to turn sour. There was a limit to a man's loneliness, a time when cabin fever, or its Gulch equivalent, began to turn his nerves ragged and to canker his disposition. He was genuinely pleased to see them and threw an extra chunk of alder on the fire. Scoggins and Rounds dismounted and settled by the blaze. Rounds said, "You smoke these things," and offered Pierce a cigar. The three men lounged back and let the silence run. All up and down the Gulch firelights burned from claim to claim, and traffic went scratching and gritting along the gravel bars and voices kept calling.

Pierce said, "I heard about that sardine venture, Ben. You're a damned Yankee trader. What's next?"

"Well," said Ben Scoggins, "I hauled lumber from Bannack for couple of days until I got my bearings. Met a fellow over by Bannack last week who was busted down with a load of flour he'd freighted in from Salt Lake. So I made a dicker and brought the flour up the Gulch."

"Sell it?"

Ben Scoggins laughed aloud. "Buyin' and sellin's my business. I sold out before I got to Central. There ain't enough of anything in this country."

Rounds pointed out a possibility: "Population around here doubles every week. If you'd held that flour a month, Ben, you'd gotten more for it."

Scoggins shook his head. "Always take a profit when you see it."

Pierce remarked, "You were in the flour business. Now you're out of it. What's next?"

"I bought a corner on Jackson Street. Puttin' up a store building. Sent to Salt Lake for a stock of general merchandise. Should be open by late July."

OLLIE ROUNDS, never a restful man, seized a stick and worried the coals of the fire around and around. "You have found your spot. Fifty years from now you'll be on Fourth of July platforms, talking about the old days of Alder Gulch."

"No-o," said Scoggins, coolly making his forecast. "I will ride this wave until I see it about to break. Then I will sell and go. You never saw a mining camp live very long. All these fellows in the Gulch are travelers. They don't make a country. They don't stick. If you're bankin' on the future go to a country where men bring their families and take up land and start stringin' fence lines. Where they put up a school and go to tradin'. Traders make towns. Farmers make towns. Grist mills. Boats stoppin' at a landing make towns. This country ain't meant for big towns. It is grass-and-gold country. Gold will go. Grass will stay—and then the cattle will come." He looked at the other two men with his thoughtful eyes. "Maybe that's what I'll do. Take up land for a ranch."

Ollie Rounds grinned. "You leave that life to the tough fellows, like Jeff here. You stick to your last."

Pierce lifted his eyes to appraise Ollie Rounds thoughtfully. Horsemen slashed through the creek's gravel, bound toward Virginia City in haste. A hundred feet beyond this spot another fire burned large and bright, whereby Archie Caples did his laundry in a half barrel, his knuckles drumming on the corrugated washboard. Pierce said, "What are you doing, Ollie?"

"I never do more than I can help," said Ollie.

Pierce said, "Don't let the world make a sucker out of you, Ollie. It tries. That's the only game worth playing—to buck the big tiger trying to destroy us all. Well, buck it. Don't let it push you along."

"Now, now," said Ollie Rounds, half surprised and half resentful, "no use giving me a lot of fatherly advice. Don't tell me to be useful and thrifty. That's Ben's game, not mine."

Ben Scoggins spoke in his amiable way, "Funny how three fellows like us—not the same kind of men in any respect—got thrown together. Does seem a long time ago, too, since we got on the Tenino, bound upriver."

"Willy-nilly," said Ollie Rounds. "The cards fall, nobody knows where. We're the cards. It is all one big joke on us."

"Don't rightly believe that," said Ben quietly. But, true to his manner, he swung the subject to keep the talk pleasant. "I have got no complaint. I have made ten thousand dollars in tradin' around."

Ollie blurted out an immediate warning: "Don't ever say it aloud."

Pierce's glance lifted again and struck across the flame. He watched Ollie Rounds with his lids half shut, with his face pulled together. Ben Scoggins saw this, looked at Ollie, and broke the silence: "Pretty night."

"All nights are pretty," said Ollie. "That's my belief—that's what I live for." He was once more his old casual self. He said to Pierce, "You can't work like a horse without getting ornery. How long since you've had a drink?" He reached into his pocket and pulled out a pint flask. "Ben and I thought this might be a good idea."

He passed it to Pierce, who removed the cap and held the bottle to the light. "Valley Tan," he said.

Pierce watched the bottle turn amber and brown under the firelight. He had something to say, and framed it in his mind carefully, and said it. "It just occurs to me that both you boys, or either of you, may some day need help. I never offer my help, as a rule. But if you need help, just give a shout and I'll be with you." Then he said, "How," and took his drink.

A single horse came up the Gulch and turned against Archie Caples' campfire. The rider got down and spoke in tone at Caples. Caples reared his heels. He looked up at t and shook his head; and then t moved at him and hit him ac face, knocking him against the g

Ollie Rounds looked on, neith ing nor changing expression; i scene to him, nothing more. B gins grumbled, "What's that f was genuinely troubled. It wa who acted. Reaching behind seized up his water bucket and full contents on the fire, killing t at once. He was on his feet, anc "That's for me, Ben, not for hin the water bucket still in his han toward the creek.

"What the hell?" grumbled lifted to his feet. Ollie Roun came out and seized Ben's le down, you fool!"

Ben kicked Rounds' hand aw in trouble, ain't he?"

"You're big as a barn up th down and crawl!"

The stranger at Archie Ca slowly circled Caples as the oth gled up from the ground. Ca to turn and keep his eyes stranger, but the stranger sid steadily and when Caples got t the stranger jumped in again, h a great blow on the back of with his forearm, and dropped Scoggins growled in his throa gan to crawl ahead on his h knees, Ollie Rounds followin Rounds kept murmuring, "W watch it, Ben."

PIERCE suddenly appeared edge of the other campfire a a fresh bucket of water on it, ately quenching the blaze. A g from the near-by Gulch wal bullet scutted on the gravel away. Both Rounds and Scog running on, heard the sudden Pierce's body against the stra stranger let out a harking shou gravel reported the stamp o feet as he rushed toward the G toward the unseen gun. *When all America calls for the best, it's a large order*

America always makes up its mind about quality slowly and carefully. But, once it is certain that a product is the best of its kind, America quickly demands its production on a tremendous scale.

# With more Budweiser than ever before.... there has not been enough to go 'round

NEVER before in history has there been a situation like this:

*A vast expansion program carried on for eight years made it possible for the world's largest brewery to produce more beer in 1941 than ever before has come from single brewery or group of breweries operating under one management – and yet it was impossible for us to fill all orders.*

Such a demand, previously unheard of for any similar product, made it difficult to maintain adequate distribution in all of the 48 states at all times. Through it all, our dealers have shown great patience and for this we are grateful.

America prefers Budweiser. Your own preference for Budweiser is a compliment to your own good taste – proof that you recognize the outstanding quality that has made Budweiser the biggest-selling beer in history.

With the completion of our expansion program, we trust that you now are getting Budweiser whenever you call for it.

with ■ deadly destructiveness such as Refugee had never faced.

THE passing days passed in subglacial tempo for Free Wheeling Johnson. For Free Wheeling Johnson had his ticket for *the* fight, secured in his watchless watch pocket with ■ safety pin where he could reach down and take it out and look at it any time he wanted to.

That's what Free Wheeling was doing when he stepped from behind the car at the curb in front of the cab. Fumbling the ticket out to look at it.

Refugee Smith came into the Eatmor Fish and Chips Shoppe of Senate "Slippery" Ellum the morning of the fight. "Where at Freezy?" he asked. "He ain't between here an' Lenox."

Slippery looked up, came around the counter. "Ain't you heard?" he asked.

"Naw," Refugee said. "Heard what?"

"He done collide with a taxicab," Slippery said. "He layin' in the hospital, dog-sick."

"He bad hurted?"

"He dog-bad hurted," Slippery Ellum said. "His sister lookin' frantic for somebody to give him some blood of what they call the three kind."

"Three kind?"

"Yes, man. That's the kind o' blood little Freezy's got—such as he got left—an' he need some fresh of the same number an' the three kind folks is scarce."

Refugee Smith was running when he hit the door. It took five or six minutes for him to get to the hospital and it took them fifteen minutes more to type his blood. But he was a ty all right, and Freezy was consci ing part of the transfusion.

"Hello, Mistuh Smith," "What you doin' up here?"

"I'se givin' you a little blood gee said.

"Hot dog," Freezy said weak fightin' blood I'm gettin'. I'l right, now."

One of the nurses quieted Freezy managed one more sent sho hated to miss de fight," he

Refugee Smith walked out hall, feeling a little funny. He down to the desk.

"De little colored boy," he s "I'll pay up his bills when dey c He ■ friend of mine."

"And who are you?" the ma the desk asked.

ord," said, "I ain't askin' you to
p me ut don't put no props under
. Rev does I get to him."
Freezy ohnson didn't hear the fight,
cours Freezy Johnson was hover-
some ace where the only thing that
he was apt to hear was Gabriel's trumpet. But a lot of people heard it, and seventeen thousand of them sitting in Madison Square Garden saw it.

Refugee Smith came out of his corner and he carried his hands down, cocked, and he took a left that cut the welt above his right eye, to fire a sucker right from his hip. It was a winging, awkward punch and it caught Johnny Revolt too high to hurt him, but the very impact of it threw him slightly off balance and into the left hook Refugee had sent following the right.

Johnny Revolt was a tough, game boy. He got up and he came in. He didn't know anything to do but to come in and Refugee came in to meet him and they were both swinging and Refugee's head flew back and he was down. But he didn't take a count, he came up swinging, coming in to meet Johnny Revolt and Johnny Revolt came in, too.

They were screaming. Seventeen thousand people can scream, and they were screaming. They weren't seeing anything that remotely resembled the art of self defense, manly or otherwise. They were seeing two men, one black, one white, who wanted to do away with each other in the shortest possible time.

The difference was with the black man. The black man's jaw had an ounce more iron in it, and while the black man's heart may have been pumping a pint less blood than the white man's heart the black man's heart carried a pity for a little boy lying in a hospital, and a pity, channeled into action, is—for a round at least—worth a pint of blood.

Johnny Revolt went down from one of those rights, and he pushed up on his hands and knees but he couldn't make it up inside the count and Refugee bent down to help him to his corner, and Refugee Smith fell down, too.

WILLIE WURTZEL came out of the room and the doctor came out of the room with him. The doctor was smiling. "I think he'll make it now," the doctor said. Willie Wurtzel walked over and got a drink of water and slumped down in a chair.

"How you feel, Mr. Willie?" Refugee asked, his face anxious under his bandages.

"I don't feel like fightin' no Johnny Revolt," Willie said.

A nurse came out of Free Wheeling Johnson's room and nodded to the doctor and the doctor went back in.

"How come," Refugee asked, "you knowed I'd stop that fellow if'n you tol' me you'd give Freezy some blood?"

Willie Wurtzel took a cigar out of his vest. "Aw," he said, "you're just that kind of a big stupid ape."

"But you given him some blood, too. You didn't have to."

"Hell," Willie said. "I'd naturally want to keep a guy alive that'd shine my shoes for a nickel. Blood don't cost nothin'."

Refugee grinned, started to say someing but the doctor came back out of the room.

"He's conscious now," the doctor said. "He talked a little."

"What'd he say?" Refugee asked eagerly. "Did you tell him I won de fight?"

"Yes," the doctor said. "I told him and he was awfully pleased."

"But what'd he say?"

"He said," the doctor went on, smiling, "that this all must cost a lot and that he thought he would raise his price to a dime when he got out. I don't know exactly what he meant."

"He a shoeshine boy. . . ." Refugee began

"Well, I'll go to hell," Willie Wurtzel interrupted, his voice rich with wonder. "That blood of mine has gone to work already."

"Understand you're looking for me," Broderick said. He can talk without moving his lips, and his voice has a low and terrifying sound.

Legs swallowed. "Aw, hell, Johnny—can't you take a joke?"

Johnny's left hook caught Legs exactly right. "Not from you I can't, y'bum," Johnny said. But Legs didn't hear him. Legs didn't hear anything for twenty minutes.

Then there was Johnny's engagement with another product of prohibition—the afternoon in 1931 when 300 policemen cornered Francis "Two Gun" Crowley in his ground-floor apartment hideaway a block off upper Broadway. A lively war was in progress when Johnny arrived. Crowley's citadel was being shelled and tear-gas-bombed, but he was holding out with great fervor.

**"Instead of paying forty grand, why don't we just buy the book? Nobody would ever recognize our picture version anyhow!"**

JEFF KEATE

Broderick knew Crowley well, and asked for permission to try to reason with the trapped rat. When the permission was granted, Broderick walked out from behind a barricade in full view of the dead-eyed sniper. He walked across the open street to the apartment house, banged on Crowley's door and yelled:

"Hey, they got you, Crowley. Why don't you give up?"

Crowley was close to the door. "You know me good enough, Johnny. You know the only way I'll come out of here is shootin'."

"Aw, you're nutty," Johnny observed, impatiently. "Tell you what I'll do: I'll go around the corner for two hours. If you ain't out by then I'll come in and get you." And with his back to Crowley, Broderick strolled off.

Two hours later Broderick returned, and once more the firing and bombing stopped. Broderick went back to Crowley's door, supported now by a few other detectives, and hit it with a splintering football block. The door broke, admitting Broderick more suddenly than he expected. Crowley faced him, his gun aimed at Broderick's belly. Then Crowley began backing out of the room, ready to take his stand in another section of the apartment.

"Drop that gun, y'runt, and keep your hands in the air," Broderick ordered. Crowley hesitated . . . just long enough for Broderick to clip him.

As bouncer emeritus of Madison Square Garden, during the Roaring Twenties and Thirsty Thirties, when fights used to attract the almighty and the scum of the underworld, Johnny engaged in countless bare-knuckle duels with well-heeled mugs. One night stands out particularly. That was the night Broderick brushed aside two bodyguards of the late Vannie Higgins and clouted that perfumed public enemy on the jaw so hard that Higgins arched upward and backward through a telephone booth in the Garden lobby. It was certainly the best punch thrown that night at the Garden.

At the same Garden Johnny protected more than one fighter from armed rascals who were trying to move in on the pug's purse, and came to the rescue of more than one beleaguered sports writer.

Broderick is really a hard man to tag. He actually had a fight with fifteen young toughs one night. One of them called him on the phone and said, "You think you're tough, Broderick? Well, I can lick you." Johnny regarded this as an affront to the police force. He got the address, rushed to Brooklyn, walked into the house and promptly went down under the impact of fifteen waiting hoodlums. Johnny's buddy, Cordes, arrived eventually with a platoon of cops, for Broderick had left a note telling him where he was going. Broderick was nearly unconscious when Cordes arrived, but was still swinging.

His best fight came when he was assigned to find and disperse a gang of plug-uglies who were annoying women en route to an uptown Catholic church.

The devout Broderick rushed to this assignment with great relish. When he came into the pool hall that was their hangout, one of the plugs recognized him, picked up the cue ball and pegged it at Johnny's skull. Johnny barely ducked the bean ball, snatched a cue out of a near-by rack just in time to bunt off another bean ball, and thus bunted or leaned out of the way of the rest of the ivory ammunition that was flung his way. Then he dropped his cue, spit on his hands and cleaned out the nest.

Johnny's fists have held together very well, considering the punishment they've taken. They haven't always been used on jaws, either. Not long ago, while en route to the Polo Grounds, Johnny saw some short-winded citizens giving half-hearted chase to a Negro thief. Johnny joined the chase to the thief's house, unhesitatingly put his fist through the plate glass of the locked front door, opened it, caught the Negro at the top of the stairs and knocked him out with a punch before he could pull his gun. His fists have been taking it like that for a long time. His knuckles and fingers have been broken so many times that X-ray plates of his hands are on file at Bellevue to illustrate how properly set bones will heal.

The paradox of the man is that, withal, he is gentle, shy, sentimental and a good friend to hundreds who can never do anything for him in return. The man who won the Leroy M. Baldwin Medal for disarming a one-man arsenal who was holding up a crowded Childs' Restaurant at Columbus Circle, and who once hit a tough guy so hard that the gorilla's glass eye popped out fiercely and socked Broderick, likes nothing better than an evening at home with his family or a chat with a sports writer.

### Cop Saves Crook

Several years ago Broderick was present in court and heard the testimony that sent a young second-story man to Sing Sing. It was a cut-and-dried case, nevertheless Broderick began to worry. He didn't like it. He decided that the boy was innocent of this particular felony. So Johnny began a private investigation. He worked overtime, day and night, finally nailed the real guilty party and saw to it that he was substituted in Sing Sing for the dazed young second-story man.

Johnny has a horror of talking about his profession, and won't recount any of his adventures, except in formal reports to his superiors. A few years ago when several hundred admirers tendered him a testimonial dinner, Johnny rose to his feet when called on to speak, looked out over an audience that tensely expected to hear something about his life and tough times, and said, "Aw, nuts. I'd rather sing." So he sang Sweet Rosie O'Grady. Without a drink, too, for the man who has worked for years knee-deep in night clubs and saloons, has never had a drink of whisky in his life.

Broderick relaxes at gangster movies. He likes to sit in the dark theaters and chuckle at the tough actors. But now and then he isn't pleased. Not long ago he was off duty and resting in his modest suburban home—where he lives with his good-looking wife and their two 'teen-age daughters—when his phone rang. It was his friend Toots Shor, owner of a popular pub.

"Hey, Duke, can you come over to the joint?" Shor asked. "Edward G. Robinson's here and wants to meet you. You know . . . he played the part of you in Bullets or Ballots."

"Tell him I don't want to meet him," Johnny barked. "Tell him I oughta flatten him."

Shor was struck dumb for one of the few times on record. "What's eating you? Robinson's a fine guy."

"Yeah?" growled New York's toughest cop. "Suppose I had let my kids go to see that picture—and they had seen him, playing the part of me, actually taking a drink and smoking a cigar?"

That's a good reason for giving **KNICKERBOCKER**, a carefree, lovely Colonial design in rich brown wood, with gold-color ornament, **$9.95.**

**ALL with the famous self-starting Telechron motor, sealed in oil for silence and long life. Warren Telechron Co., Ashland, Mass.** ***Prices subject to change without notice.***

# Delayed Verdict

**Continued from page 12**

All this while he had kept a hand in his right coat pocket. Wharton became aware of a bulge there and it made streaks of redness fade from his face. His protest came hoarsely: "You're building it all on a guess. What's that in your pocket?"

"A gun," Evan said.

"You wouldn't dare shoot me! You'd hang for it! It'd make two convictions—"

"Yes, it'd be my second conviction," Evan broke in harshly. "But you and I know the first one was for your own crime. You let me rot in prison ten long years; and you tried to buy off your conscience. Ten cartons of cigarettes; then a hundred dollars; then five hundred. Did it make you feel any better, Wharton?"

Wharton kept staring with a fearful fascination at that pocket bulge. Evan withdrew his hand from the pocket.

"I brought the gun along," he explained, "only to keep you from killing *me*. You *did* kill once, so you might try it again. In the meantime, I'd like to begin life over with a decent job. As an ex-con, I can't get a job except a cheap one like I've got now, wiping engines on a ship. My only chance is to prove in court that you, and not I, killed Ronald Bruce."

ABRUPTLY Evan Keith turned his back and left the garden. A gate admitted him to a side street and he walked briskly down a lane of magnolias toward the business section.

He must report back to his ship, which shortly would be returning to San Francisco. What then? Well, on his day ashore at San Francisco he could dig for a closer tie-up between Bruce and Wharton. And at each successive call of his ship here at Honolulu, he could work on Wharton in person. The man might crack up, if he kept at him.

Evan swung with long strides down a hill and came to a park with public buildings on one side and with a giant banyan tree in the center. The banyan branches dipped down to take root again. A bench was there and Evan paused to rest. He looked curiously at this hundred-legged banyan; and then at a Portuguese boy making love to a Japanese girl on the next bench; and then Evan Keith wrenched his thoughts back to Wallace Wharton—and to Ronald Bruce.

In diamond-sharp detail he remembered the only time he had ever seen Bruce. Ten years ago in San Francisco. Evan, fresh out of college, was driving a shiny new flivver down a residential avenue. Bruce, in a heavy sedan, had come banging out of his driveway to a collision. No one was hurt, but the flivver was scuttled.

The usual heated argument, each driver claiming the other to be at fault. Harsh words drew a crowd which heard Evan demand that Bruce pay the damage; and which heard Bruce refuse; and which heard Evan erupt bitterly, "If you don't pay it, I'll take it out of your hide."

Then Evan had called a wrecker to tow his wreck to a shop. An estimate for repair had come to a hundred and seventy dollars. With this estimate in hand, just after dusk, Evan had returned to the Bruce residence. He would insist on Bruce footing the bill. But crossing Bruce's lawn he had stumbled over murder. Bruce's body lay on the grass there; by it lay the club which had struck him down. Evan, shocked, had picked it up because it looked like a spoke from the front wheel of his wreck. He was standing with it by the body, when two of tl servants found him there.

"Guilty," the jury said.

Evan remembered somebo ing a camera as they led him courtroom. And now he h again. He whirled nervously, it was only a tourist lady. pointing a camera at the legged banyan.

He got up and hurried on post office and to the water shrill whining of winches echoe the dock warehouse as Eva across it to the moored Matso

e Wharton?"

dded. "And before the evening was over, he asked me to marry him. When I said I wouldn't, he went away. That was seven years ago."

"And that started you to thinking?"

"It made me remember that when he lived next door I'd often played golf and tennis with him. And that in an unobtrusive way he'd been attentive. He'd made no advances—but a girl can tell when a man likes her. Then I remembered something else: Wallace Wharton went abroad the next day after Ronald's murder. And he never announced where he was, Mr. Keith, until after your conviction."

"You decided he was guilty, just on that?"

"No. I simply realized he might be, because it suggested a motive. But I wasn't sure enough to accuse him. You, I felt sure, were innocent. So I sent you the cigarettes."

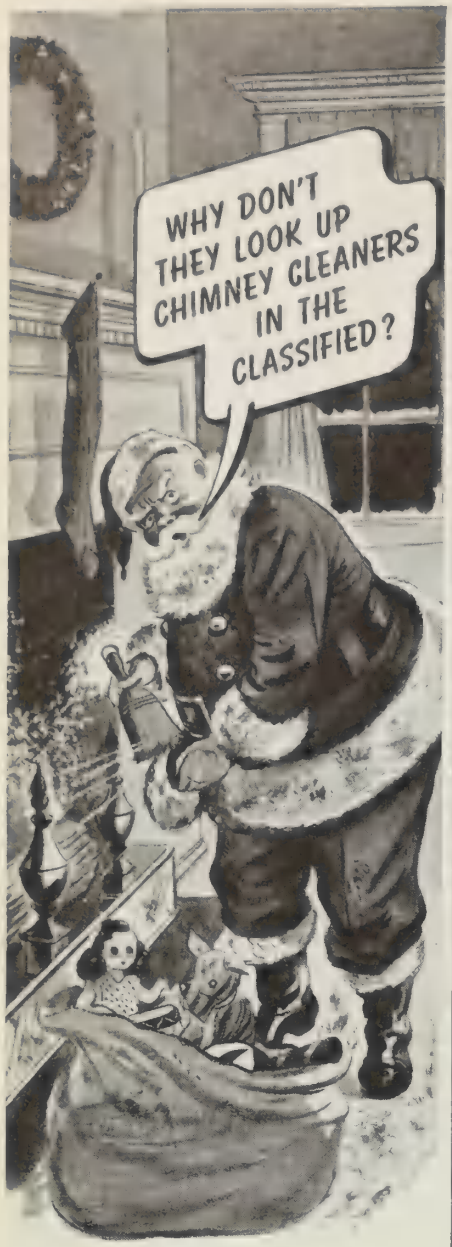
Evan saw instantly that there was no coincidence. The cigarettes had arrived on the first of three dates, but only because Wharton's presence in San Francisco that day had made Pamela think of Evan. "You later sent money to my mother?" he prompted.

She nodded. "I didn't see Wharton again for three years. Then he called again, took me out to dinner and again asked me to marry him. So again it pointed my suspicion of him and made me think in pity of you. By that time I'd learned about your mother. It was the same again three years later. Don't you see?"

EVAN saw it clearly. Three times, at three-year intervals, Wharton had gone to the mainland. Each time he had proposed marriage and been refused. And his approach in each case had brought the same consistent reaction to Pamela.

"That explains the gifts," Evan said. "But it doesn't explain why you're here in Honolulu."

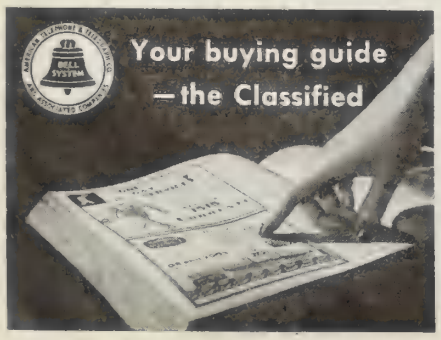
"When you were released a week ago," she said, "I wondered if employers would give you a cold shoulder. If so, maybe I could help. I'm a director in Bruce Industries, you know. So I consulted Sam Wang."



"Who's Sam Wang?"

"An old Chinese servant who prac-

"Go on, Gran'pa—tell us what happened after 1942!" WILLIAM SPAAR



**What a lot of useful information** you'll find in the Classified section of your Telephone Directory—

**The names,** addresses and telephone numbers of local tradespeople. *Helpful facts* about the services which many businesses offer—delivery, charge accounts, hours, terms, etc.

**A typical instance** of this usefulness: when Mrs. T. of Los Angeles needed a chimney repairman she consulted the 'yellow pages' and was attracted by the convenient location of one firm. She called them in.

tically raised me. I talked it over with Wang. He agreed that a young widow can't properly wait at the prison gates to greet the man who was convicted of murdering her husband. So Wang said he would find out your plans, and that we would help you some way while keeping under cover."

Evan looked at her and the bitterness melted from his eyes. He said "Thanks, Mrs. Bruce," and it sounded flat and stupidly inadequate.

"But Wang," she said, "phoned me that you were trying to get a job at a hotel. He said you had called at seven hotels and had been turned down, and now you were cooling your heels at the Presidio. I knew the manager of the Presidio quite well. So I rang him and asked him to give you a job."

Evan stared. "So that's why I got a break there!"

"An hour later he called me back," Pamela said, "and told me you hadn't asked for a job. He said all you wanted was to see his registrations for three old dates. They were the dates I had sent those gifts—"

"So you knew exactly what I was after!" Evan exclaimed. "And that I'd find the name Wallace K. Wharton registered on all three dates."

"So I sent Wang to find out what you'd do about it. He reported that you'd bought a secondhand pistol. And that you had then booked as a wiper to Honolulu. I guessed what for."

"You thought I'd walk in on Wharton, and start shooting? Why didn't you cable the Honolulu police?"

"And say what? That a man who has just served a prison term for the murder of my husband is on the warpath after a third man who, during the prison term, has been trying to marry me? And that the police must stop him, and take away the gun?"

Evan laughed uneasily. "You're right. It couldn't be handled that way."

"So Wang and I clippered over to handle it ourselves."

"And now that you've handled it, what else do you want?"

"Justice," Pamela said, "for both you and Wharton."

"That's exactly my ticket," Evan said. "A cleared name for me and conviction for Wharton."

"You're sure he's guilty?"

"I'd bet my right arm on it."

"So would I," Pamela said.

"So let's nail him," Evan said.

"How?"

A polite voice intruded: "For you, Mrs. Bruce." An attendant was standing there with a telephone. Its long extension cord reached halfway across the garden.

Pamela took it and answered the call: "Hello. This is Mrs. Bruce."

THEN Evan saw her expression change. And uneasy tension was in her voice as he heard her respond, successively:

"How did you know I was in town? . . . The evening paper? Oh, of course; they publish the names of all clipper arrivals. How are you, Mr. Wharton? . . . Dinner tonight? Please, I've hardly unpacked yet. . . . Well, tomorrow, then. Goodby." She hung up and turned troubled eyes to Evan.

"You're right," Evan said grimly. "He hasn't any conscience."

"I detest seeing him," she said. "But we'll have a better chance, don't you think, if he doesn't guess I suspect him?"

Evan approved with decision: "Keep him on the string. Call him Wally. Have him all softened up by the time I get back from San Francisco."

Pamela agreed. She knew, of course, that the Matsonia made a round trip between Hawaii and the mainland once each fortnight.

Exactly two weeks later Wallace Wharton answered the telephone at his Honolulu residence. He brightened at the sound of Pamela's voice.

"Can you drop by this afternoon, Wally? There's something I want to talk about."

Wharton exulted. She was calling him Wally again, just as when they'd been tennis partners ten years ago. And three times during these last two weeks she'd dined with him.

Everything comes, Wharton thought, to him who counts ten. Even if you have to count ten long years while you wait for a woman.

He drove to Pamela's hotel and parked his car in the drive there. At the desk he announced himself and the clerk rang Pamela's suite: "Mr. Wharton calling, Mrs. Bruce."

Pamela's voice said, "Send him right up."

Her second-floor suite consisted of a sitting room, a balcony, a bedroom and a bath.

Sam Wang answered Wharton's knock. Wang bowed, took the caller's hat and cane. Then he ushered Wharton through the sitting room and out upon the balcony.

Pamela stood up to greet him and her face seemed serious. Troubled, rather. "I'm afraid we're in for something unpleasant, Wally," she said. "I'm all upset about it myself."

Her manner confused him. "What's up, Pamela?" Then he decided she was embarrassed rather than troubled.

"You'll promise not to be offended, Wally?" she asked anxiously.

When she spoke to him like that he was willing to promise anything. Wharton sat down on a rattan settee. He brought out a cigar, trimmed it, and a smile creased his broad, pink face. "I like a good mystery, Pamela."

She sat down, facing him, and asked suddenly, "Do you remember a man named Evan Keith?"

He stiffened. One could almost hear the watch in his pocket tick ten times before he answered, "Keith? He was the man who killed Ronnie, wasn't he?"

"He's the man they convicted for it," she said, "and now he's been released from San Quentin. He seems to have a job on the Matsonia."

"He hasn't annoyed you, I hope?"

"He came here," she admitted, "just after his boat docked today. has an obsession, Wally."

"A what?"

recalled that while I waited for mate a shifty little lawyer came saw e wreck and asked me if said no. That disqualified ible client. So he asked other party in the colli- sion and I told him. He left and I forgot all about him. Soon I left myself and went to Bruce's house. I didn't know that Moses Ginsberg, preceding me by ten minutes to inquire if Bruce had been hurt in the collision, and if so would he care to file suit, had arrived on the lawn just in time to witness Bruce's murder by Wharton."

Wharton stood up and his knees almost buckled. "I think this has gone far enough, Pamela. Don't you?"

The fact that she didn't answer him, or even look at him, frightened him more than anything Evan had said.

EVAN went on: "So I looked up Ginsberg's family and got the name of his bank. At the bank I said I was checking up on the Ginsberg murder. I handed them a list of three dates."

"The same three dates?" Pamela asked.

"Only two were the same. The first two. For the date of Ginsberg's murder in 1940 I substituted the date of Bruce's in 1931. I asked the banker to see if any unusually large deposits were made by Moses Ginsberg on those three dates. It wasn't easy. At first the banker wouldn't show me a thing. So I went to the judge who had sentenced me to prison ten years ago. He's retired now —I found him at his club. I told him what I'd uncovered so far. And did I get action! That old judge drove me back to the bank in his own car and he had a heart-to-heart talk with the banker.

"Then the banker looked up the old Ginsberg account. He found that on the day following the Bruce murder, Ginsberg had deposited three thousand dollars in cash. And on the 1934 date, Ginsberg banked one thousand in cash. And on the 1937 date he again banked one thousand in cash."

Evan turned to Wharton and continued: "You got tired of those pay-offs, Wharton. So on your 1940 trip to the mainland you put a stop to it. Yes, there were ■ million other people in town. But of all that million, only one left town on the first of four dates and returned on each of three others."

"A coincidence," Wharton pleaded desperately.

"A triple coincidence," Evan derided, "like having three wild-goose feathers fall in the same chimney on the same day every third year."

Even then Wharton didn't see just how tightly it wove a noose for him. He heard Pamela say, "Tell him where you next took your list of dates, Evan." Pamela's look was different now. Wharton realized that she'd been conniving with Evan Keith all the while.

"With that square-shooting old judge still batting for me," Evan said, "I went to the Trans-Pacific telephone people. What calls from Frisco to Honolulu on or near those three dates? I found that just before the murder of Ginsberg, Ginsberg called Wharton at Honolulu. Wharton immediately clippered to San Francisco."

Wharton said hoarsely, "What are you going to do about it?"

"It's already been done," Evan told him. "The warrant's been issued. Police are waiting at your car now."

Wharton stepped to the balcony railing. He looked down and saw his car parked in the hotel drive. Four policemen stood by it. Three were of the local force; the other wore the uniform of a San Francisco inspector.

Evan Keith moved over to stand by Pamela. Wharton looked at them and counted ten—not ten pulse beats of discretion, but one for every year he'd stolen from Evan's life; and one for each year he'd waited for Pamela.

Then Wharton turned to see Sam Wang holding out his hat and stick. "You go, please," Wang said.

Season's Treatings

*from Gaines to Your Dog!*

● Festive guests at a Soroptimist Club's Christmas Party in Sacramento, Calif., include Dolores Yenick, Lester Davidson, Julius Philipp, W. Richard Porter, Maurine Wingo, Larry Lovett, Arline Johnson, Merrillyn McFarland—and Gaines-fed dogs of Mrs. A. E. Mason's Samoyede sled team.

FREE GIFT PACKAGE OF GAINES *Dry* DOG FOOD!

GIVE your dog a hearty Christmas feast of Gaines Dry Dog Food! If you're now feeding Gaines you know how gleefully your dog relishes it, day in and day out. If you haven't tried Gaines, here's your chance to try it FREE! Just sign and send in the coupon below.

The free gift supply of Gaines we'll rush to you contains Vitamins A, $B_1$, $B_2$ (G), D and E—vitamins your dog needs every day to stay healthy, frisky, contented. And what's more, it provides these vitamins in a sure, safe, enjoyable way.

Since Gaines is a DRY dog food, there is practically no moisture to pay for. This may cut your feeding costs by as much as 50%.

Let the coupon at the bottom of this advertisement bring you proof of all this! Use it now to bring your dog his "Season's Treatings." Yes, get that coupon in the mail *right* away —today!

**MONEY-BACK GUARANTEE**

● *Your dealer sells Gaines in 2- and 5-lb. bags with the distinct understanding that you must be completely satisfied or he is authorized by us to refund every cent of your money. Yes, you may buy and try a supply without risk!*

**NOW USED BY U.S. ARMY!**

*Choice of the U.S. Antarctic Expedition*

● For two years Gaines was fed all dogs of the U. S. Antarctic Expedition—in all kinds of weather. Now that these dogs are back from Antarctica, they've been put to work in the U. S. Army—where they *continue* to eat Gaines! Feed *your* dog Gaines, too. Mail the coupon today.

# SHE LIKES TO COOK

BY HELEN HILCKEN LITTLE

**Friendly Louise runs one of the most unusual restaurants in New York. But don't let the simple, homelike atmosphere fool you. The most glamorous people in New York eat there, and the food is delicious**

THERE is no sign on Louise's place. You'd never know that the brownstone house on East 58th Street is a restaurant unless you walked through the basement door some evening around seven o'clock.

Then you would see a small, intimate room with a bar at one end crowded with friendly groups, tables with red-check covers, and some of the smartest-looking people in New York. Louise with her merry smile and dark eyes circulates among them, stopping to chat with those she knows. When she tells you who dines there regularly you'd think she was reading from the Social Register. Barbara Hutton, Brenda Frazier, and among the band leaders, Pancho, to mention but a few. And the town's most beautiful glamor girls. When the models began to haunt Louise's a few years ago the debs picked up the trail.

So there you have it. A restaurant with the most homelike atmosphere you can imagine, with a distinctly sophisticated clientele who like the food, the informality, the absence of cameramen, but most of all Louise.

No ordinary restaurant proprietor, Louise found herself in the business quite by accident. And she still treats her customers as though they were guests of the house.

Louise used to do embroidering for a large dress shop, but when this kind of handiwork passed out of the picture, she had nothing to do. In the summer of 1933 she and her husband, Nick, rented a bungalow at Long Beach, N. Y. Pancho, who had his band at the Atlantic Beach Club, used to come over to their house to eat. Soon he began bringing friends along, and Louise fixed dinner for them, too.

That winter Louise took a house on East 58th Street and let out some of the rooms. The people who lived there came downstairs to eat with her family. Word traveled fast about her wonderful cooking and she found herself feeding twenty-five and thirty each night.

Across the street was a speak-easy and, with repeal, the owner wanted to retire. The real-estate man who handled her house suggested Louise take over the bigger place and open a restaurant. He offered her a month's concession. She decided to take a chance, rent out the two upper floors and try her luck with a restaurant on the two lower floors.

### No Vacations and No Chef

With a smile Louise says, "I thought with that month's free rent I could afford to go to the country for a rest, but I never got there. The first day forty people came to dinner and every night there were more.

"For a couple of years I cooked for a hundred every night to save the expense of a chef. After closing time, around two or three o'clock in the morning, we'd go down to Washington Market and get all our fresh vegetables for the next day.

"That's a wonderful place." Louise's eyes light up when she te

LOOK FOR THE RED BALL

back in the days before she had five chefs, fifteen waiters and three bartenders, she used to fix them all herself. The recipe for her delicious shrimp salad has always been a secret till now. Louise boils the shrimps with salt until tender and then cleans them. She chops celery, chives and hard-boiled eggs very small, adds a little lemon juice, chili sauce, mayonnaise, a dash of A-1 Sauce and a bit of horse-radish. The shrimps then go into the sauce, and the whole is stirred and chilled.

Another favorite hors d'oeuvre of Louise's is sliced ripe melon or fresh figs wrapped in presciutto, Italian ham.

"Pickled mushrooms make nice hors d'oeuvres too," Louise says. "Take sliced fresh mushrooms, or leave them whole if they're small. Boil five minutes in half vinegar and half water to which sliced onion, bay leaves, a sprig of garlic and some chopped parsley and celery have been added. Strain, pour over the mushrooms a little olive oil, salt and pepper and serve very cold."

And Louise's stuffed celery is really something! Gorgonzola cheese and butter are creamed together, sherry added and the whole mixture used to fill tender celery stalks. Sprinkle paprika over the top as a garnish.

### What is Your Favorite Dish?

After the hors d'oeuvres you proceed to your favorite dish. Maybe it's Chicken Cacciatori, which Louise says is most popular. To prepare it yourself, take a nice frying chicken and cut it into small serving pieces. Brown in olive oil and meanwhile prepare the sauce. Chop onion, green pepper, a garlic sprig and fresh mushrooms. Fry in half olive oil and half butter. Add a wineglass of sherry and some fresh, peeled tomatoes. Pour this sauce over the chicken and simmer slowly for a half-hour. Just before serving add a dash more sherry and some salt and pepper.

Or maybe you'd rather have Veal Scallopini. The veal must be cut very thin and in small pieces. Flour it on both sides and sauté in butter. Add sliced fresh mushrooms and when the meat is brown (about 5 minutes) add a half wineglass of sherry or Marsala. This she always serves with plain, buttered spinach. Louise likes all her vegetables simply cooked with only the addition of butter.

If it's spaghetti you want, try Louise's Spaghetti with Meat Sauce. Chop onion, celery, parsley and carrots very fine and add a little garlic. Fry in pure olive oil and when this is all brown add your chopped beef. (If you have leftover roast, grind that up—it will do just as well.) Then put in ⅔ tomato paste and ⅓ regular peeled tomatoes, salt and pepper. Simmer this slowly for at least an hour and a half. The longer the sauce cooks the better it tastes. Sprinkle grated Parmesan cheese over your spaghetti and sauce after serving.

For those who like spaghetti without a heavy sauce, Louise devised Spaghetti with Green Sauce. Melt some butter in a frying pan and add a sprig of garlic, lots of chopped parsley, salt and pepper. Bring this to a boil, but don't let the butter brown or burn. Pour this over your strained spaghetti, which is always cooked to order, and serve at once.

Louise has some good tips to offer on the preparation of delicious roasts. She says a rump of veal is improved when sprinkled with rosemary and that it adds to the flavor of lamb too. And both should have some kernels of garlic inserted into them before roasting.

For stuffing a pocket in roast veal she takes spinach, a chopped onion, hard-boiled egg, some grated cheese, bread, parsley, a whole carrot and mixes it all with a raw egg. "When you slice this it is very pretty," she says. "But never carve a roast the minute you take it out of the oven. Put it on top of the stove for about fifteen minutes. Then it is never soggy and is also easier to carve."

Louise prefers a simple mixed salad.

Chopped peppers, radishes, chicory, tomato, water cress, escarole, all kinds of lettuce. For the dressing she rubs the bowl with a little garlic, then adds ⅔ olive oil and ⅓ vinegar, a bit of salt and pepper.

Both Louise and her husband say dessert should consist of fresh fruit or cheese, although Louise thinks zabaglione is good. For one serving take a tablespoon of granulated sugar to one yolk of egg and beat it well in a double boiler. Add a little Marsala or sherry just as it thickens. This can be served hot or chilled.

Louise is a shrewd businesswoman. From a neighborhood success she has become the owner of two restaurants within a few blocks of each other, both operating to full capacity every night. She opened Louise, Jr., partly to handle the overflow from Louise's, but also because the city may take over her property on 58th Street to expand the entrance to the Queensborough Bridge. "If they do this, I'll have the other place on East 53d Street, and besides, it gives all of my family work," she adds complacently.

There are seven members of her family helping between Louise's and Louise, Jr. They all know that the harder they work the more they get for themselves. "I could rent my cloakroom concessions," she points out shrewdly, "but I'd rather have my niece and sister as coatroom girls."

Louise was born in France of Italian parents. She came to this country when she was fourteen with her mother, sister and two brothers. But her cooking leans heavily to the Italian side.

Last winter Louise was in Key West managing a big restaurant in Chica that was threatened w She enjoyed her Florida Louise says she wouldn't hav for her son who was ill and n in a warm climate. # Coningham's Cats

Continued from page 14

The sky was full of the swine. But we gave them plenty. Rawley put on a wizard show all right. Hey, Rawley, I saw you drop one. Tell us about it."

"I got on the tail of a Hun and gave him a long burst and he came apart." Rawley was a small slim youngster with curly golden hair. He looked twelve. But he was nineteen. "Then as I watched the Hun go down, I felt something popping around me and damned if a Hun wasn't on my tail. I slipped away and almost ran head-on into another one. I gave it to him good and he went down. Then I saw you were in trouble, sir, and I hustled over but you'd gotten the Hun you were after before I reached you."

The sun was high now and it was time for lunch. I thought I'd try the army mess this time; they might have some water. I went to the public-relations tent where senior officers guide the correspondents away from military subjects which for the moment the army considers "hush-hush." I stayed there until, in resigned discouragement, they asked me to lunch. The lunch was cold bully beef with Worcestershire sauce, but there was tea. The tea tasted as though it had been used to wash down a truck.

"That's the chlorine in the water," the chief military press censor said. "Tastes awful but it keeps you from getting typhoid."

There was news of the tank battle. It was going well because of the amazing efficiency of the American tanks. They had completely routed a Nazi tank force superior in numbers, using tanks superior in armament. The American tanks weighed about twelve tons and carried a thirty-seven-millimeter cannon that plowed through seventeen-ton Nazi cruisers.

During the afternoon the desert lived up to advance notices. The sun poured down and baked the sand to a fiery whiteness. Some German airplanes had been over the night before, dropping flares, and there was some reason to believe that they had located our airdrome. If so they'd be over in force to bomb it, so it was suggested that we dig some slip trenches alongside the truck that we called home. Two other American correspondents, Ken Downs and Bob Low, suggested that the three of us dig a trench. It would afford some protection if the Hun came over. We went to work with pickax and shovel and it wasn't long before I was questioning whether there wasn't some more pleasant way of earning a living than mine. The work went slowly and finally we abandoned it. It wasn't more than two feet deep.

"Deep enough for a grave," I told my two pals. "I'll be happy to bury either or both of you in it."

Low said, "Thanks, sweetheart."

### America's Hand Shows Here

Out on the airdrome things were buzzing. Six huge Bombays dropped very slowly from the sky; they looked slow and leisurely alongside the quick, deft fighters. Bombays are really troop-carrying airplanes. They are of the type used by the Nazi parachute troops. I talked to the squadron leader who had flown one of them. A feature of this desert battle is the amazing co-operation and split-second co-ordination between the army and the air force. As this fight here develops it becomes more and more evident that America is having a big part in it.

Airplanes took off, airplanes landed. At no time during the day was the sky free of them. One Tomahawk came back with its undercarriage smashed by a Nazi cannon. Quite calmly, the young Australian landed the Tommy on its belly. It raised a mountainous cloud of dust as it hit the ground, completely hiding the aircraft. Gradually the dust settled and then we saw the slight figure of the pilot emerge. The airplane was sitting quite unharmed on the sand and the pilot was cursing softly because it might be another twenty-four hours before he could get another one.

I was with the Australian squadron commanded by Rosie when it was ordered up. A road had been observed filled with armored cars rushing up to support the Nazi tanks. The boys hopped into their Tomahawks and away they went—twenty-one of them. They were due back in an hour and a half. The sun began to climb down toward the horizon and then suddenly, as happens in the desert, it plunged below it. Five Tomahawks came out of the semidarkness to land. They had been jumped by a whole wing of Messerschmitts. It had been a dogfight all over the sky. They had knocked down plenty of the Me's all right but the fight had lasted too long. These five had petrol enough to make our home port. The others? By now their gasoline would be exhausted. Somewhere or other, sixteen Tomahawks and sixteen pilots were down in the desert.

### Six Who Didn't Return

At dinner, which was bully beef and, incredibly, a sardine, we didn't talk much about the sixteen who were missing. Cold comes with the night. We had dinner in a tent but the desert night air seeps through the strongest tent and you long for the comparative warmth of your sleeping bag. We sat there smoking and then we heard the sound of airplane motors. The thoughts we'd kept to ourselves tumbled out now. This must be Rosie and his crew. The throb of the motors grew louder. Sound plays queer tricks in the desert. This may have been one airplane; it may have been fifty. The still, cold air was throbbing with the sound of airplane motors. Then two miles away something flashed through the night and for a moment banished the night. It was a flare and we knew that this was a Hun looking for our airport. Soon the sound died away.

Because the sun awakes us when it rises in the morning we go to bed early in the desert. But it was hard to sleep that night, knowing that sixteen pilots were out there beyond the horizon somewhere. Even if they landed safely, they'd be suffering from this same cold. The roar of planes woke us early the next morning. I looked up and against the deep blue saw a dozen flashing shapes —unmistakably Tomahawks. They had come back. It was news good enough to banish any resentment at such an early awakening. The pilots looking a bit blue with cold, hopped out. All of them had run out of petrol and had then made for emergency fields where petrol was stored. In all there were ten pilots. Six were missing. Six are still missing; six pilots who were alive and vital and smiling only yesterday. Perhaps some bailed out on this side of the line. Rosie, who worried so about the pilot with the broken wing, is one who didn't come back. But he may walk in this afternoon or a week from now. I hope so. Anyhow, that's a day in the desert. If you're foolish enough to wish you were here, why, come along.

# Can Berlin Take It?

Continued from page 19

for themselves in choice restaurants by passing on the confidential information they got from the Propaganda Ministry.

If a raid threatened, the restaurants would quietly warn all their customers to rush their kraut, pony up, and *schnell nach Hause gehen.*

Average Berliners don't relish public shelters. They have, for reasons you shall presently note, a fondness for their home *Luftschützräume* like that shown by household pets for familiar mats. Public shelters are plentiful. Seldom in this blacked-out city do you find yourself unable to spot at least one of the special blue lamps that mark their entrances.

### What Shelters Are Really For

The German official view of shelters is realistic. They know that shelters—except those made with especial design, care, reinforcement and depth—are largely pap, if direct hits on them occur. And direct hits on public air-raid shelters have occurred—in Germany, as well as in England. "Yet," a German police authority told me, "they have certain disciplinary, sanitary and protective values. During a raid the whole city's under a hailstorm of our own anti-aircraft shell bits and flying wreckage and bomb fragments. In a shelter you're safe from that. Also, shelters keep people from messing around in the streets, impeding firemen and rescue squads. And they prevent bodies being smeared all over. If a shelter is hit—you can just seal it up until after the war, or whenever it's convenient to clean it out."

The cops, if they catch you roaming, will shoo you into a shelter unless you have a special pass. Thus, in the hour before the "scheduled" time for raids, you find Berliners hurrying along neighborhood streets from car, L and subway lines, while the darkness resounds with "*Ach Gotts*" and "*Donners*" and "*Schrecklichs*" that attest to many collisions with objects animate and inanimate. Downtown, scores are legging it hell-bent on Friedrich Wilhelm and Hermann Goering Strassen or den Linden, toward the central hotels. Most cunning, from all sides hundreds of paired dark shadows are flitting into the Tiergarten and lesser parks where they disappear like holing woodchucks. Love in gloom!

Oddly, you don't see as many hand flashlights, or buttonhole *Gluhwürmchen,* now as in the first and second winters; partly because the novelty has worn off and people have grown used to darkness, but chiefly because batteries and such things can't be got.

Anyhow—this evening you've got a "feeling"! The maid comes in. Mousy, good-hearted, patient Rosa. "*Verdunkeln!*" she explains, then goes about her small part in the sad daily rite of darkening Europe; of shutting the light of civilization indoors, while the world outside goes back to the Middle Ages. She rolls down the closely slatted wood blinds, pulls the heavy draperies together. She pauses at the door and smiles without optimism:

"I hope our English cousins won't pay a call tonight." This is a little nightly joke between you.

All belligerent Europe today is divided into two classes: those who go into air shelters and those who don't. Lest you gain a wrong impression, let this veteran of air raids in China as well as in Europe assure you that courage has nothing to do with the classification.

In Germany, unless you are in the streets, no one will force you into a shelter. For any who have the slightest touch of claustrophobia—that morbid and quite prevalent dread of confinement that is sharpest in small, crowded places—a session in an air-raid shelter is agonizing. German doctors recognize this; recommend that claust kept out of shelters because effect on morale—and be cases might conceivably sta the other hand, for those v phobia the flaming din ab in a raid is unbearable. afflicted either way, decide t to be hit by a bomb than b rather be killed pronto alive.

On surrounding roofs, on the courtyard flags below and in the trees, an uneasy patter begins. It sounds like the first large drops of a summer shower. This is the terrible "dry rain" of the flak-shell fragments. "Flak" is specifically the abbreviation of "*Fliegerabwehr Kanonen*"—cannon warding off fliers. Flak comes down in chunks varying from the size of a penny to that of your closed fist. It may be fused. It certainly will be red-hot, as you'll find if you pick it up too soon. Everybody collects flak souvenirs. But flak can mutilate and kill. So when you hear it beginning to fall close, it's a cue to lose interest in the spectacle and beat it indoors.

It's a good time, moreover, to see what's happening to morale in Berlin under these perils of the night. For this is what it might be like in your home town—when and if—

Examination of morale probabilities in any country involves a large military question, on which this war already has provided much evidence but no conclusion. Some German airmen told me they believed this winter's exchange of *Luftstrafen,* or air punishments, between England and Germany might very well provide a definite answer. Can air power on its own value, by throwing heavy punches into their bodies politic, civil, social and industrial, soften any great nations for easy final knockout by combined military arms?

Specifically applied here, this question is conditioned by two important factors: What are the difficulties, opportunities, advantages and disadvantages facing the attacking force—the R.A.F.? What are the precautions, both military and civil, taken by the defensive side to safeguard its civilian populations, hence its morale.

European airmen say that London and Berlin are the two primary "morale objectives" of this war. As distinguished from industrial and military objectives (although both cities possess certain of these qualities), the capitals are the heart and brains of each nation, from which morale decline would begin. Morale, at least in the opinion of German war psychologists, plays follow the leader; it decays from top to bottom, rather than the other way. Thus, raids on the capitals get most publicity. Of 6,000 British raids over Germany up to this autumn, only one per cent were on Berlin; the rest mostly against the Ruhr-Rhineland industrial, the Hamburg-Bremen sea areas.

**Bombs on Morale Objectives**

Cologne is the most frequently raided German city; it is hit more than twice as often and each time more heavily than Berlin. Kiel has suffered the most casualties; Münster is the German Coventry. Of approximately 10,000 German raids to date over England, little more than two per cent have been against London; the rest chiefly against the Birmingham-Sheffield industrial areas and the Cardiff-Bristol sea areas, plus such ports as Hull, Newcastle, Plymouth, Southampton. All these, German airmen told me, have been hit oftener and more severely than London. But they, like their German equivalents, are "purely" military objectives, and the governments don't talk much about them. It's the morale objectives, London and Berlin, you hear most about; and with regard to which is written what the Germans call "*Kinderwagen,*" or baby carriage, atrocity propaganda.

Therefore, to weaken German morale the R.A.F. must consider Berlin, and possibly such cultural and nationally beloved centers as München and Dresden. It's twice as far, roughly, from

# NOW MORE NECESSARY THAN EVER BEFORE

***The Superb National Encyclopedia Now Offered at a Price that Places it at the Fingertips of Every American Family***

*Now at its low price everyone can afford to own this modern authoritative Encyclopedia!*

Never before has it been so necessary to be *armed with knowledge!* In these tumultuous times the only chance of world salvation, the only assurance of future security can come through understanding, through knowledge! Yet much of what you learned no more than a decade ago is *obsolete!* The need for new, up-to-date knowledge shouts from the housetops. But where can you find the answer?

## HERE IS THE ANSWER

Thousands upon thousands of men and women have discovered that there *is* a key to the solution of the confusion and disturbing mysteries of this frightening world! They have found it in the great National Encyclopedia, which places at your fingertips a library of living, vital facts . . . literally gives you the answers to the maze of questions aroused in your mind by current events.

## SUPREMELY USEFUL

Here is a work so modern and up-to-date that it covers all late world events and political changes, so comprehensive and thorough that it surveys the entire range of human knowledge, so useful that it is found in business offices, radio stations, newspaper offices and in the principal public university and school libraries throughout the country.

It is so universally accepted that its thousands of owners represent a complete cross-section of the American public.

## SYMBOL OF OUR AGE

The National Encyclopedia is a symbol of our age, fresh, alive and supremely useful. It has sold with the rapidity of the best-seller contemporary novel, so perfectly is it in tune with what people want in a reference work. The National Encyclopedia is the ideal work for the American family, for every home with children of school age, and for every man and woman who can ill afford to be satisfied with anything other than the best in reference material.

Send TODAY for the full description of this superbly new Encyclopedia, with details of prices, terms, and types of bindings. This information will be sent you *free* and you will be placed under no obligation to purchase.

## SEND FOR BEAUTIFUL BOOKLET FREE

Name { Mr. / Mrs. / Miss } .....

Address .....

England to Berlin as from England to Cologne and the military-objective western section of Germany. It's 600 miles each way for a bombing of Berlin; more if the longer but safer North Sea route is followed. For the most efficient and latest-type bombers, when heavily loaded and at cruising speeds, that's a three-hour trip each way, not counting the actual time spent above the objective for the purposes of the raid. Bombers should be clear of enemy land before daylight makes attack by fighters easy. That's why British raids on Berlin on and near June 21st, the northern hemisphere's longest day, are scarce. It's barely possible for them, eggs laid and throttles all out, to reach the sea before full dawn. There is approximately fifteen hours of pitch darkness today in northern Germany, as compared with five hours in early summer.

Discussions of the R.A.F.'s ability to meet these conditions is a technical problem that does not belong in this article. We are now just interested in Germany's ability to protect her morale heart.

Fundamental, of course, is her scheme for detecting the approach of raids and their probable destination. So-called "air-raid-alarm networks" are pretty much the same in every country. The reporting organizations set up and the maneuvers held in the United States, especially in the East, this autumn are in general similar to those in Germany. The "Paul Revere Men" and women of the New England hills have counterparts in the "Air Watch Sentries" of Westphalia, Schleswig and Rhenish Prussia. However, the German system offers two novelties:

First, watchers are sent out each night in small power boats, far off the European mainland coast, into the North Sea and the upper Channel. These "avant-guard" boats are equipped with listening devices and radio. Second, other watchers are placed in *Horchgraben,* or secret trenches, along the shore rims. They do not watch the sky. They sit in ditches six feet deep and depend upon their ears, not their eyes; for soil conducts sound more quickly than the air, and approaching planes can be heard sooner in a trench than upon the surface. Practiced *Horchgraben* sentinels, even without mechanical aids, can accurately tell altitude, speed and direction of planes.

Germany has certain natural advantages in building her military defenses against raids—one being spaciousness. England, caught on islands, cannot move her industries or population far out of the way. She must depend on deception and guns. Germany has a whole continent at her back and her left elbow as she faces west.

### The Flight of the Factories

More important to any long-range ideas of this war is the great but completely unpublicized movement of heavy industries from the Ruhr and Rhineland, where the British can get at them, to eastern Germany and Poland, where they can't. Regardless of what else you've read or been told, part of the *first* purpose of the Russian campaign was to make sure the Russians couldn't endanger them, either. Poznan and Cracow, particularly, already have the appearance of Rhineland industrial cities. Moreover, they bulge with German technicians as well as ordinary workers and have a housing problem similar to ours in Washington or in defense mushroom towns. It takes an authentic big shot to get you a seat on a train to Poznan, or a hotel room when you get there.

So Germany's industrial west has been destructively punished, but this is the little-known fact: the blows tonight are falling there on at least some emptiness. Naturally, an entir area cannot be transplante But it is a factor to be c discussion of Germany's morale that *raids on Col Dortmund and Düsseldorf a portant this winter as the* Also that coal from the supplies Germany's steel in east in place of coal from Belgium and France.

lent of Berlin, permanent or is without air-raid shelter. and expectant mothers are ets of the morale builders; es rise each twilight to strik-amatic scenes.

or two before sunset, dozens double-deck busses of Ber-e transportation system are om their regular work and various points in the city's rial areas. On every bus are o social workers or trained appointed stops, parents their children who are be-ges of two and ten. Babies are better off left with their the home shelters, it is as-ildren over ten have in great en permanently evacuated try.

a collection bus will pro-th heartache. Here is a fa-ly a night-shift worker—the nt in daytime on a muni-hugging two children until ment, then running half a ng on the bus window to her kids nor father says a nly the father sniffles. Here shooing three aboard while linging to her fourth child, timid one she won't trust night.

lin's metropolitan area of 300 square miles, from its f five millions, the busses afternoon thousands upon f children to designated r. There are upward of f these children's shelters, m deep underneath great ngs, all of them in the saf-locations and elaborately ly fitted.

k the busses disgorge their s upon the sidewalks out-dings. Here they are lined , double-checked. Each child has a card hanging around its neck, giving name, age, parents' address, bunker. At a signal from the head worker, gates swing open, or hatches rise, and the children break into step and song.

The children pick names for their bunkers. This one, into which we follow, has the name "*Maulwurfshause*" scrawled over its main door. Molesville. It is seventy-five feet below street level, under two garage stories, and several thicknesses of concrete and steel. Inside, everything is carefully regulated. There are separate dormitories for boys and girls, and for age groups. The bunks are two-layer, similar to our camp styles. They were, it is said, designed by Der Fuehrer himself—whose interest in architecture is pursued to the degree that no public building, and no furnishings therefore, can be undertaken without his scrutiny.

Everything is done in singsong and step: before eating their soup, the children must sing that unless they "finish it all up" it will rain tomorrow. The toilets are in long batteries, and the kids march to them, again singing, in numbers equivalent to the accommodations. Air-raid uproar does not penetrate down here; but in the morning the children are warned if there have been casualties or damage in their home districts. A guard against unpleasant surprises.

Another moving experience of twilight in Berlin can be seen at the Chancellery of Hitler and several other places. Here accommodations are provided for expectant mothers from the poor districts. Like a file of grotesque and misshapen bats in reverse process, they flit into the shadows at nightfall and out at dawn. The cloakroom where the fashionable women of European diplomacy once powdered their noses is now a dormitory for women from the humblest circumstances.

More than two hundred children have been born this past year under the Chancellery. Often at night Hitler, when he is in residence, descends into the shelter and inspects this especially favored project. Under certain conditions, he is godfather to babies who enter Reich life in his cellar.

How to play host and win friends — that's what Jack and Claire Woodruff discovered when they adopted Goebel as their party beer. Time was when they didn't pay much attention to the particular brand they served, but on one occasion Jack ordered Goebel — and that settled it! It's a typical case. All over this country folks are adopting Goebel as their beer. The switch to Michigan's *National* Beer is even more amazing when you stop to list the number of fine beers available. Perhaps you, too, will find the Goebel taste more to your liking.

**Good news travels fast.** *Goebel sales are increasing at the almost unbelievable rate of 155,000 bottles a day. A lot of people really know good beer. Goebel Brewing Company, Detroit, Mich.*

Berlin has a raid-proofed cellar. These must have connecting doors, through and around the whole block, for greater safety if one is hit or if water pipes burst. Drowning is an air-raid hazard. Berlin is largely a city of attached housing. However, in districts of detached houses, air-raid shelters are conveniently spaced.

Families in each apartment take weekly turns in charge of shelters; the man as warden, the woman as hygienic caretaker. District party workers see there is no shirking. Sleep being important to morale, preference is rigidly followed where there aren't enough cots to go around. New and expectant mothers; and hard workers; in that order. The cots in most of Berlin's tenement shelters, by the way, are from the Maginot Line.

The home shelter *Luftschützräume,* has become the most important feature of Berlin's wartime social life. It exactly suits the sociable instinct of the German, the comfort he takes in company. This is why he dislikes to be caught in an *öffentlich,* or public, shelter. Talkative, he does not enjoy sitting tongue-tied among strangers. In the home shelter you meet your friends, exchange gossip. It's better than newspapers.

If party workers may "plant" some items for gossip—for example, that England provides no such comfortable shelters for its people; that bodies of women pilots have been found in wrecked British raiding planes—it's also true there are no secrets in the close, warm, friendly quarters of neighbors sharing peril. The official police report can say there were only two casualties in all Berlin; but the folks down here know there were eight killed in their block alone. The British Broadcasting Company says that "Anhalter Station was destroyed, and all our planes returned safely"—but the Berliners know Anhalter Bahnhof wasn't touched and that wreckage of two Britis in the Tiergarten in the mo to see. Then sitters in the *räume* laugh and say the difference between official li

Every time a in Britain or the United States th, his threats are magni- erman press. A third is of the blockade, main- tained for a year by England after Versailles. This is called by the Germans the "hunger blockade," and the Goebbels bureau constantly reminds Germans that hundreds of thousands died of starvation, while England kept German ships from the high seas until she mended her own international commerce fences.

It's an old axiom among militarists that "No great war was ever lost by the cowardice of a whole people, for courage is the commonest human virtue. Only it is expressed in different ways in different races and conditioned by certain things such as climate." It is fashionable to cast doubts upon Italian courage, for example. Yet in the mountains of Ethiopia I saw Italian boys express fortitude and devotion; and British officers, captured in Greece, told me there was nothing wrong with Italian bravery in Libya, only with Italian organizational efficiency. The historical lesson is that Italians—the first to feel the Renaissance, inhabitants of a mild climate, living for centuries side by side with the Vatican, the Christian ideal of peace—long ago had war lust civilized out of them.

For evidence of German ability to take it, here is the famous Englishman, Colonel T. E. Lawrence of Arabia. At the end of the Near East campaign in the last war the Turks were retreating. Lawrence's Arabs, in vengeance for atrocities, were slaughtering them systematically and mercilessly as fast as they could be overtaken. The Turks, commonly acknowledged excellent fighters, were in wild panic. Then, writes Lawrence on page 643, Book Ten, Chapter 117, of The Seven Pillars of Wisdom:

"Exceptions were the German detachments; and here, for the first time, I grew proud of the enemy who had killed my brothers. They were two thousand miles from home, without hope and without guides, in conditions mad enough to break the bravest nerves. Yet their sections held together, in firm rank, sheering through the wrack of Turk and Arab like armored ships, high-faced and silent. When attacked they halted, took position, fired to order. There was no haste, no crying, no hesitation. They were glorious."

# 90-SECOND CAR HEATER

That Guarantees . . .

# more heat FASTER!

*Now America's Fastest-Selling Quality Heater*

*No Waiting for Motor to Warm Up!*
*Burns Fuel from Carburetor in Patented Sealed Chamber*

Now you can enjoy winter driving comfort such as you've never known before—with a car heater *so much faster* that no other heater can compare with it!

The amazing South Wind Car Heater heats hot *in 90 seconds by the stop watch*—floods your car with warmth while your engine is still cold—because it operates an utterly different way. *It burns fuel from the carburetor in a patented sealed chamber,* from which all fumes pass out through the engine exhaust. It carries the official seal of Underwriters' Laboratories, Inc.

The South Wind gives billows of heat within seconds—warms you from the feet up even on short hops—*gives a full hour of fireside comfort for less than the cost of a stick of gum.* Yet it costs no more than a well-built ordinary heater that can't heat at all when the engine is cold!

The South Wind is small, quiet, *always ready for use*—and is easily installed or transferred to a new car *with no hose cutting, no extra thermostats to buy.* New-type defroster attachment provides quick, effective windshield defrosting *under all riding conditions.*

You'll find South Wind sales and service coast-to-coast!

## Water Gals

Continued from page 21

the Pacific Coast, the Far West, the Pacific Northwest and the state of Oregon. Their speediest time was at Buffalo in the spring of this year when they set an American mark of 4 minutes 12.4 seconds. The 400-meter relay being practically a twin event, they also hold the national record for it.

"Say," a rival coach asked Jack Cody, "The four girls on that relay outfit of yours aren't by any chance related to your Columbia River salmon, are they?"

"I don't think so," laughed Jack, "although sometimes I wonder myself."

### Tops on the Coast

The first time he saw Nancy Merki in the Multnomah Club pool he called her a minnow. The comparison has stuck. Nancy is still "Minnow" to a lot of her friends. Carrying the analogy farther Jack says, "If Nancy's a minnow I guess Brenda and Susie are Dolly Vardens and Joyce, being the biggest, is a Royal Chinook. A creel full of them, I tell you, is all any swimming coach could ask."

Today Nancy Merki is one of the greatest swimmers in the world and, far and away, tops on the Pacific Coast. She recently was individual high-point winner in the 1941 national women's swimming championships of the United States, the second time she accomplished such a feat. More than 20 different aquatic records have been credited to her. And she has just been selected the outstanding woman swimmer of 1941 by the National A.A.U., having earned her All-America in three events—the 400- and 800-meter free style and the mile free style. Of the seven final candidates approved by the A.A.U. for the James E. Sullivan award, Nancy is the only woman athlete. National honors also went to her teammate, Brenda Helser, who made the swimming All-America in the 100-yard free style and relay.

Yet seven years ago Nancy was stricken with infantile paralysis. Doctors feared she would have to depend on braces or crutches the rest of her life. At the age of eight she exercised hour after hour in swimming tanks trying to restore stamina and agility to her crippled legs. Her father and mother helped with constant massages. So like President Roosevelt and others who have suffered with the dreaded polio, Nancy gradually found swimming a to health. Now her legs are strong and nimble and the through the water with the of an outboard motor. Child countries write Nancy aski regained her strength and vi letters Nancy painstaking often taking them to loca and language teachers to be

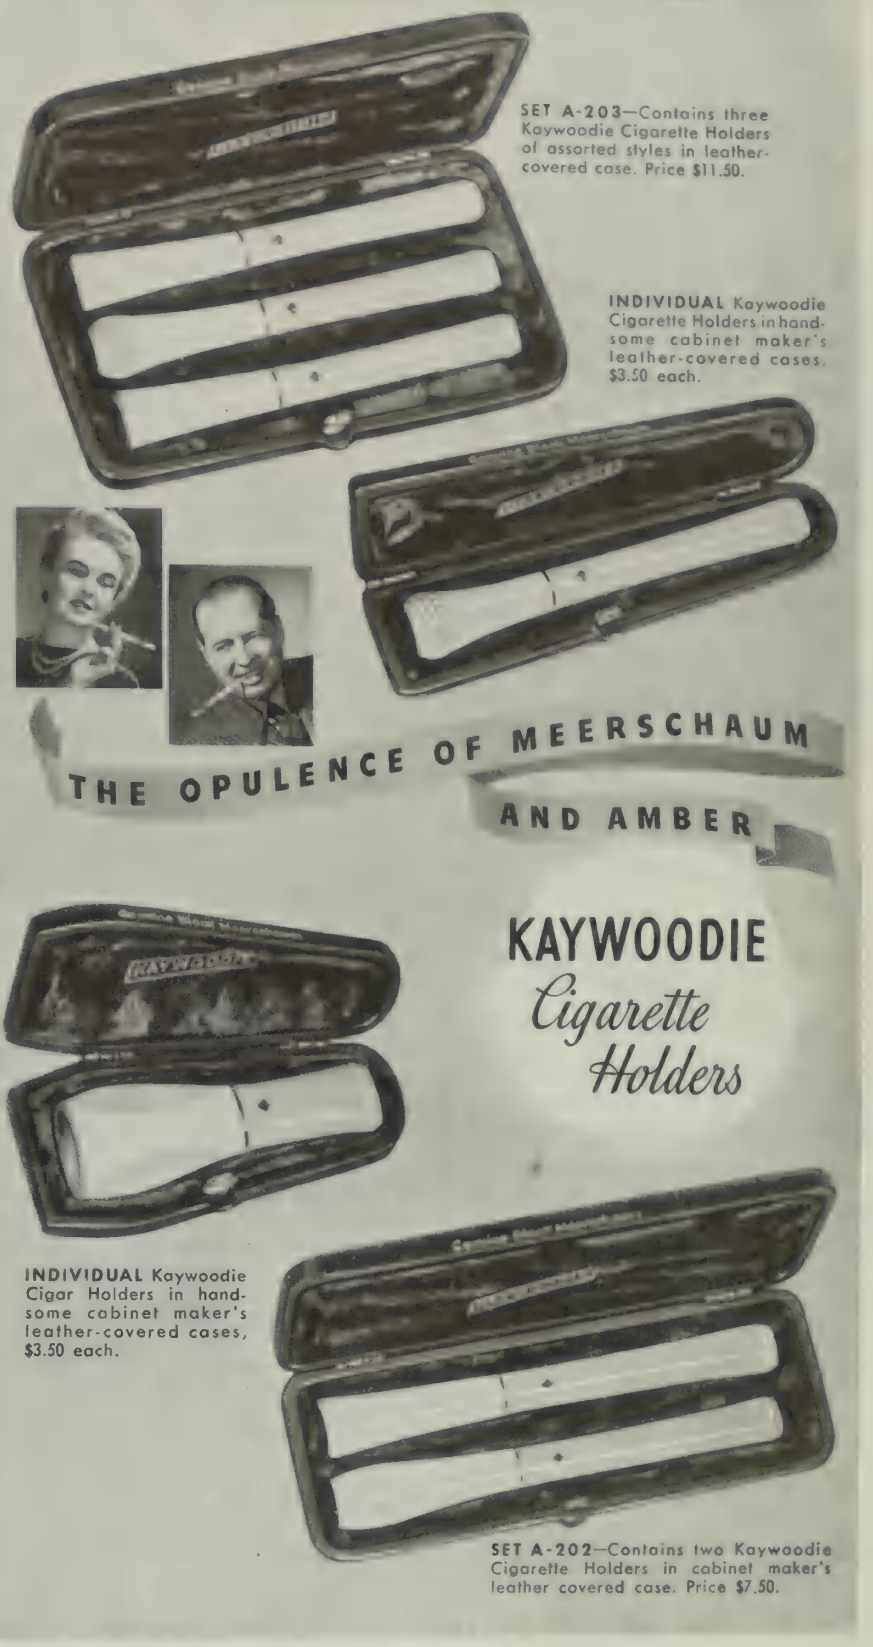
are known in their home he Cody Kids." They are ccessful athletes in Oregon's addition to possessing far appeal than the customary f feats of physical prowess. them prize attractions wher- ever they appear. They wear the colors of the Northwest's oldest athletic organization, the Multnomah Club, which is named for one of the early Indian tribes along the Columbia River. Nancy and Brenda are honorary life members of the club, and Jimmy Richardson announces that Joyce and Susie soon will be, too.

In the winter the girls train in the Multnomah pool; during the spring and summer months they swim at Jantzen Beach, a few miles north of Portland. Jack Cody does not believe in overlong practice sessions. He thinks they are too exhausting. A vital factor in swimming, he declares, is to keep in top physical condition. About four fifths of the average restaurant menu is taboo, says he.

### Watch That Bulge



For breakfast, when the swimming season is under way, Jack prescribes orange or grapefruit juice and toast. The noon meal is the big one—a thick steak, baked potato, carrots and cup custard. A chop and vegetables at supper complete the fare. "This isn't a lot to eat in a land of plenty," explains Jack, "but girls being girls, they're eventually going to bump and bulge, and while it may give them an alluring appearance, those curves are liable to cut down their speed in the water. And don't forget that extra calories add extra curves."

Jack is impressed by the fact that women swimming stars are not only slimmer these days but also younger. None of his four champions are yet 18. Nancy was barely 13 when she sliced more than 13 seconds from the American 800-meter mark set by the Florida nymph, Katherine Rawls Thompson. "Swimmers used to be older and some of them were shaped like dirigibles," comments Jack. "Today swimming records are set by slim high-school girls such as Helen Crlenkovich, Gloria Callen, Nancy Merki and Brenda Helser. And by girls like Anne Cooney, who at seventeen holds the Far Western woman's swimming record for 100-yard and 200-meter back-stroke races. These girls are easier on the eyes, but they're harder on the records. New marks used to be set by a second or so. Now when Nancy Merki breaks a record she frequently knocks off 10 seconds or more."

Although Brenda is a rug-cutter par excellence and Joyce, Nancy and Susie enjoy tripping the light fantastic in the proper company, Jack believes dancing is bad for twinkling young swimmers. His four naiads cannot dance as much as they would like to. "Dancing stiffens the leg muscles," he says. Jack also frowns on tennis. He thinks the racket arm tends to become stronger than the other.

Jack will have his four American relay record holders on hand for at least another year of swimming together. After some of them start college their competition as a team probably will be considerably less frequent. There is no prospect of forestalling this through flunks in school, for despite 25,000 miles of traveling in two years the girls are honor students. Absence from classes has never brought down their grades.

The girls have had a lot of exciting experiences since they started shattering aquatic records two years ago. They have been shown around the national capitol building by Charles L. McNary, Oregon's famous senior senator. They have seen most of the United States. Their names have been in big black headlines. They have been welcomed by thousands on their triumphant return from swimming meets. They have dethroned the queens of America's tanks and ruled in their stead. But girls will be girls, and they are sure that either the Stork Club or Nancy's private Pullman car has been the most exciting of all.

*. . . rich gift to men and women who enjoy smoking through a cigarette holder*

To men and women who regard holders as essential to the civilized enjoyment of smoking, Kaywoodie proudly presents these genuine meerschaum-and-amber holders. The meerschaum is the purest imported "block"; the mouthpiece is made of superfine genuine imported amber. Concealed in the stem is a patented Kaywoodie Attachment, which intercepts and filters volatile impurities from the smoke stream. The holders are in fitted cases, made entirely by hand, and covered with fine quality calfskin or morocco. These opulent holders, in cases, are sumptuous gifts; it is consequently suggested that you save these pictures to make it easy to buy or order them at your tobacconist's.

*(Holders and cases illustrated approximately ½ actual size)*

# The Pied Piper

Continued from page 18

They talked of this for a little time. Then Nicole got up from the table. "I must go and see the children in their beds," she said. "Madame Arvers has been very kind, but one should not leave everything to her."

"I will come too," he said. "They have been very good children all day, and no trouble."

The children were all sleeping in one room, the two girls in the bed and the three little boys upon a mattress on the floor, covered with rough blankets. The peasant woman was tucking them up; she smiled broadly as Nicole and the old man came in.

They went downstairs again and out into the garden until supper was ready. The old man said, "Have you ever been to England, mademoiselle?"

Nicole shook her head. "We had arranged that I should visit John in England in October, when he could get leave again. I think he would have taken me to see you then, perhaps. But the war came, and there was no more leave . . . and traveling was very difficult. I could not get a visa for my passport."

He said gently, "Make that trip to England now, Nicole."

She shook her head. "No, monsieur."

"Why not?"

She said, "Are you going to America with the children?"

He shook his head. "I would like to, but I don't think I shall be able to. I believe that there'll be work for me to do when I get back."

She said, "Nor would I leave France."

He opened his mouth to say that that was quite different, but shut it again, without speaking. She divined something of his thought, because she said: "Either one is French or one is English, and it is not possible that one should be both at the same time. And in times of great trouble, one must stay with one's own country and do what one can to help."

He said slowly, "I suppose so."

Pursuing her train of thought, she said, "If John and I"—she hesitated—"if we had married, I should have been English and then it would be different. But now I am not to be English, ever. I could not learn your different ways, and the new life, alone. This is my place, this I belong to, and I must stay here. You understand?"

He said, "I understand that, Nicole." He paused for a minute and then said, "I am getting to be an old man now. When this war is over I may not find it very easy to get about. Will you come and stay with me in England for a little? Just for a week or two?"

She said, "Of course. Immediately that it is possible to travel, I will come."

THEY walked beside each other in silence for the length of the paddock. Presently she said, "Now for the details of the journey. Focquet will take the boat tonight from Le Conquêt to go fishing up the Chenal as far as Le Four. He will not return to Le Conquêt, but tomorrow night he will put into l'Abervrach to land his fish, or to get bait, or on some pretext such as that. He will sail again at midnight of tomorrow night and you must then be in the boat with him for he will go direct to England. Midnight is the latest time that he can sail, in order that he may be well away from the French coast before the dawn."

Howard asked, "Where is this place l'Abervrach, mademoiselle? Is it far from here?"

She shrugged her shoulders. "Forty kilometers, no more. There is a little town behind it, four miles inland, called Lannilis. We must go there tomorrow."

"Are there many Germans in those parts?"

"I do not know. Aristide is trying to find out the situation there, and to devise something for us."

The boy Marjan passed through the paddock on his way to the house. Howard turned and called to him; he hesitated, and then came to them.

The old man said, "We are leaving here tomorrow, Marjan. Do you still want to come with us?"

The boy said, "To America?"

"First we are going to try to get away to England. If we do that successfully, I will send you to America with Pierre and Willem, to live with my daughter till the war is over. Do you want to go?"

The boy said in his awkward French, "If I stay with M. Arvers the Germans will find me and take me away. Presently they will kill me, as they killed my mother and as my father will be killed, because we are Jews. I would like to come with you."

"All right, Marjan," the old man said. "We start in the morning; be ready to come with us. Now go and have your supper, and go up to bed."

He stood watching the boy as he made his way toward the house. "God knows what sort of world we shall have when this is all over," he said heavily.

Nicole said, "I do not know. But what you are doing now will help us all, I think. To get these children out of Europe must be a good thing."

Presently they were called to the kitchen for their supper. Afterward, in the salon, Arvers talked to them.

"Listen," he said, "and I will tell you what I have arranged."

He paused. "Lannilis is full of Germans. That is four miles

five o'clock," he said. "That will make it reasonable that you should be in l'Abervrach at nightfall, and even that you should spend the night there, with Loudeac."

Nicole said, "What about Loudeac and Quintin, monsieur? Do they know that Monsieur Howard and the children will escape?"

The man said, "Have no fear, mademoiselle. This is not so uncommon, in these times. They know all that they wish to know, and they have been paid. They are good friends of mine."

Howard said, "I must now pay you, monsieur."

They settled down together at the table.

Soon after that they went to bed; refreshed by a restful day Howard slept well. In the morning he went down for coffee feeling better than he had felt for some days.

Aristide said, "We leave after luncheon. That will be time enough. Now, I have borrowed clothes for M'sieur. You will not like them, but they are necessary."

The old man did not like the clothes at all. They were very dirty—a coarse, stained flannel shirt, a pair of torn blue cotton trousers, a dirty canvas pull-over that had once been rusty pink in color, and a black, floppy Breton casque. Wooden sabots were the footgear provided with this outfit, but the old man struck at those, and Arvers produced a torn and loathsome pair of boots.

It was some days since he had shaved. When he came down to the kitchen Nicole smiled broadly. "It is very good," she said. "Now, Monsieur Howard, if you walk with the head hanging down, and your mouth open a little—so. And walk slowly, as if you were a very, very old man. And be very deaf and very stupid. I will talk for you."

Arvers walked around him, studying him critically. "I do not think the Germans will find fault with that," he said.

They spent the rest of the morning studying appearances. Nicole kept her own frock, but Arvers made her dirty it a little, and made her change to a very old pair of low-heeled shoes belonging to his wife. With a shawl belonging to Madame Arvers over her head, he passed her too.

The children needed very little grooming. During the morning they had been playing at the duck pond and were sufficiently dirty to pass muster without any painting of the lily.

THEY started after lunch. Howard and Nicole thanked Madame Arvers for her kindness; she received their thanks with calm, bovine smiles. Then they all got into the little old van that Arvers kept for the farm, and drove off down the road.

Presently the car slowed, turned off the road, and bumped to a standstill. Arvers swung around to them from the driving seat. "This is the place," he said. "Get out quickly; it is not wise to linger here."

They opened the door at the back of the van, and got out. They were in a very small farmyard, the farmhouse itself little more than a workman's cottage of gray stone. The air was fresh and sweet after the van, with a clear savor of the sea. In the warm sun, and looking at the gray stone walls and roofs, Howard could have thought himself in Cornwall.

There was a cart and horse, the cart half loaded with manure, the old gray horse tied to the gate. Nobody was to be seen.

Arvers said, "Now quickly, monsieur, before a German passes on the road. There is the cart. You have everything quite clear? You take the dung to Loudeac, who lives up on the hill above l'Abervrach, half a mile from the port. There you unload it; Mademoiselle Rougeron must bring back the cart tomorrow to this place. Focquet will be in the tavern tonight at nine o'clock, and he will be expecting you. He will ask for Pernod des Anges. It is all clear?"

"One thing," the old man said. "This road leads straight to Lannilis?"

"Assuredly." The horse dealer glanced nervously around.

"How do we get through Lannilis? How do we find the road out of the town, to l'Abervrach?"

Nicole said, "I have been this way before. I think I know the road."

The horse dealer said, "I will not linger, mademoiselle. And you, you must move off from here at once." He turned to Howard: "That is all that I can do for you, monsieur. Good luck. In happier days, we may meet again."

The old man said, "I shall look forward to thanking you again for so much kindness."

ARVERS swung himself into the seat of the old van, reversed out into the road, and vanished in a white cloud of dust. Howard looked around; there was no movement from the house, which stood deserted in the afternoon sun.

Nicole said, "Come, children, up you go."

The children swung themselves up into the cart.

Howard untied the bridle from the gate and led the horse out into the dusty road. He fell into a steady, easy shamble beside the horse, head hanging down.

For an hour and a half they went on like that before they reached the first houses of Lannilis. In the cart Nicole kept the children happy and amused; from time to time the old man heard a little burst of laughter above the clop, clop of the hoofs of the old horse. *La petite* Rose walked on beside him, barefoot, treading lightly.

They passed a good deal of German transport on the road. From time to time lorries would come up behind them and they would pull into the right to let them pass, the gray-faced, stolid soldiers staring at them incuriously.

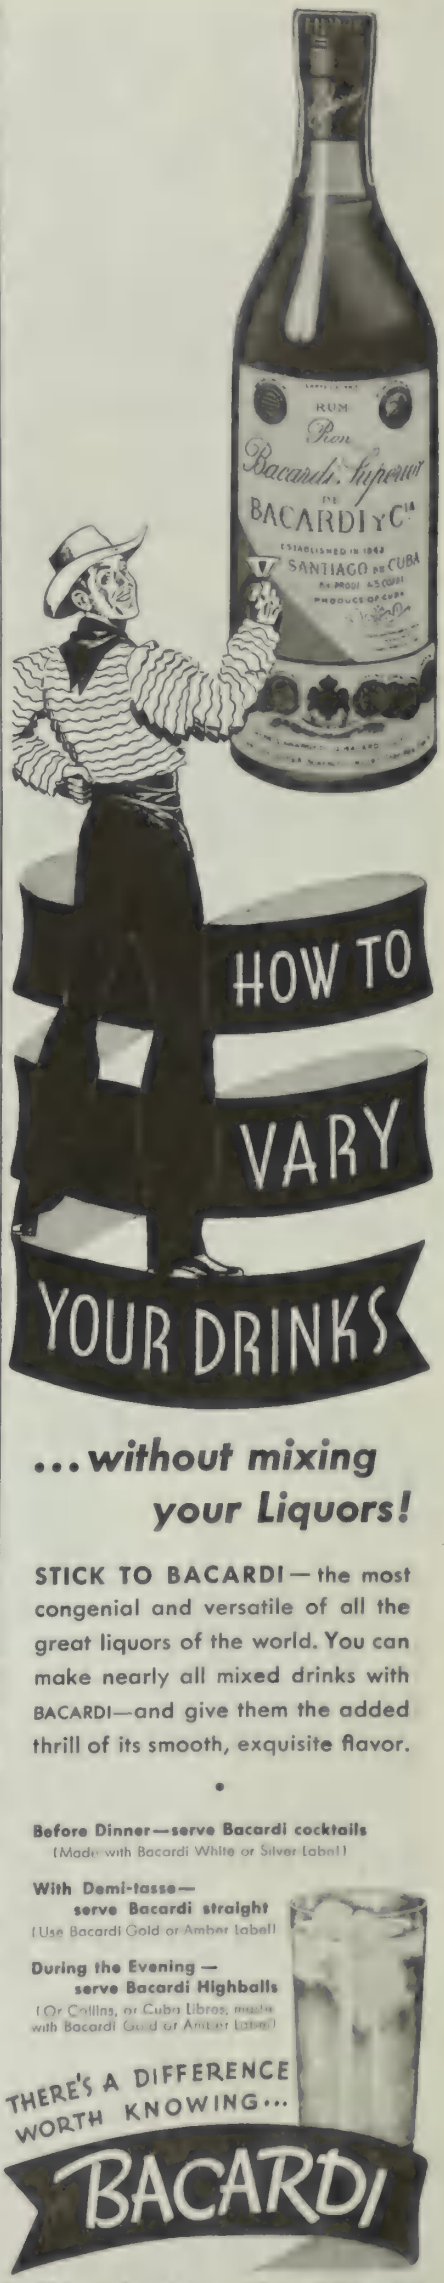
On the outskirts of Lannilis they were stopped. There was a barricade of an elementary nature, of two old motorcars drawn half across the road, leaving only a small passage between. A sentry strolled out sleepily in the hot afternoon, and raised his hand. Howard pulled up the horse and stared at him, and mumbled something with head hanging and mouth open. An *Unteroffizier* came from the guardhouse and looked them over.

He asked in very bad French, "Where are you taking this to?"

The old man raised his head a little and put his hand to one ear. "Eh?"

The German repeated his question in a louder tone.

"Loudeac," the old man said. "Loudeac, outside l'Abervrach."



The *Unteroffizier* looked at Nicole. "And Madame goes too?"

Nicole smiled at him and put her hand upon Pierre's shoulder. "It is the little one's birthday," she said. "It is not easy to make fete these days. But as my uncle has to make this trip this afternoon, and as the load is only half and therefore easy for the horse, we make this little journey for an outing for the children."

The old man nodded. "It is not easy to make a treat for children in times like these."

The *Unteroffizier* smiled. "Proceed," he said lazily. "Many happy returns of the day."

Howard jerked up the old horse and they passed up the street. There was little traffic to be seen, partly because

the French were keeping within doors, partly no doubt because of the heat of the afternoon.

They paced steadily through the town, past shops and residences, past German officers and German soldiers. At the outskirts of the town they took the right fork at the advertisement for Byrrh, and left the last houses behind them. Presently, blue and hazy in a dip between two fields, the old man saw the sea.

His heart leaped when he saw it. All his life he had taken pleasure from the sight and savor of the sea. In its misty blueness between the green fields it seemed to him almost like a portion of his own country; England seemed very close. By tomorrow evening, perhaps, he would have crossed that blue expanse; he would be safe in England with the children. He trudged on stolidly, but his heart was burning with desire to be at home.

Presently *la petite* Rose became tired of walking; he stopped the cart and helped her into it. Nicole got down and walked beside him.

"There is the sea," she said. "You have not very far to go now, monsieur."

"Not very far," he said.

"You are glad?"

He glanced at her. "I should be very, very glad, but for one thing," he said. "I would like you to be coming with us. Would you not do that?"

She shook her head. "No, monsieur."

THEY walked on in silence for a time. At last he said, "I shall never be able to thank you for what you have done for us."

She said, "I have benefited the most."

"What do you mean?" he asked.

She said, "It was a very bad time, when you came. I do not know if I can make you understand." They walked on in the hot sun in silence for a time. "I loved John very much," she said simply. "Above all things, I wanted to be an Englishwoman. And I should have been one but for the war. Because we meant to marry. Would you have minded that very much?"

He shook his head. "I should have welcomed you. Don't you know that?"

She said, "I know that now. But at the time I was terribly afraid of you. We might have been married if I had not been so foolish and delayed." She was silent for a minute. "Then John—John was killed. And at the same time, nothing went right any more. The Germans drove us back, the Belgians surrendered, and the English ran back to their own country from Dunkirk and France was left to fight alone. Then all the papers, and the radio, began to say bad things of the English, that they were treacherous, that they had never really meant to share the battle with us. Horrible things, monsieur."

"Did you believe them?" he asked quietly.

She said, "I was more unhappy than you could believe."

"And now? Do you still believe those things?"

She said, "I believe this, that there was nothing shameful in my love for John. I think that if we had been married, if I had become an Englishwoman, I should have been happy for the remainder of my life."

She paused. "That is a very precious thought, monsieur. For a few weeks it was clouded with doubts, and spoiled. Now it is clear once more; I have regained the thing that I had lost. I shall not lose it again."

They breasted a little rise, and there before them lay the river, winding past the little group of houses that was l'Abervrach, through a long lane of jagged reefs out to the open sea. The girl said, "That is l'Abervrach. Now you are very near the end of your journey, Monsieur Howard."

They walked in silence, leading the horse, down the road to the river and along the water front, past the cement factory, past the few houses of the village, past the lifeboat house and the little quay. Beside the quay there was a German E boat apparently in trouble with her engines, for a portion of her deck amidships was removed and was lying on the quay beside a workshop lorry; men in overalls were busy upon her. A few German soldiers lounged upon the quay, watching the work and smoking.

They went on past the tavern and out into the country again. Presently they turned up the hill in a lane full of sweetbrier, and so came to the little farm of Loudeac.

A peasant in a rusty red canvas pullover met them at the gate.

Howard said, "From Quintin."

The man nodded, and indicated the midden. "Put it there," he said. "And then go away quickly. I wish you good luck, but you must not stay here."

"That is very well understood," Howard said.

The man vanished into the house, nor did they see him again. It was getting toward evening; the time was nearly eight o'clock. They got the children down out of the cart and backed the horse till the load was in the right place to tip; then they tipped the wagon and Howard cleared it with a spade. In a quarter of an hour the job was done.

Nicole said, "There is time enough, and to spare. If we go now to the tavern, we can get supper for the little ones—coffee, perhaps, and some bread and butter."

Howard agreed. They got into the empty cart and he jerked up the horse; they moved out of the stable yard and down the road toward the village. At a turn of the road the whole entrance to the harbor lay before them, sunny and blue in the soft evening light. In the long reach between the jagged rocks there was a fishing boat with a deep brown lug sail coming in from the sea; faintly they heard the putter of an engine.

The old man glanced at the girl. "Focquet," he said.

She nodded. "I think so."

They went on down to the village. At the tavern, under the incurious glances of the German soldiers, they got out of the cart. Howard tied the bridle of the old horse to a rail.

Ronnie said in French, "Is that a torpedo boat? May we go and see it?"

"Not now," said Nicole. "We're going to have supper now."

"What are we going to have for supper?"

THEY went into the tavern. There were a few fishermen there standing by the bar, who looked at him narrowly; it seemed to Howard that they had divined his secret as soon as they set eyes on him. He led the children to a table in a far corner of the room, a little way away from the men. Nicole went through to the kitchen of the place to speak to Madame about supper for the children.

Supper came presently—bread and butter and coffee for the children, red wine mixed with water for Nicole and the old man. They ate uneasily, conscious of the glances at them from the bar, speaking only to assist the children in their meal. It seemed to Howard that this was the real crux of their journey; this was the only time when he had felt his own identity in question. The leaden time crept on, but it was not yet nine o'clock.

Their meal finished, the children became restless. It was still not nine o'clock, and it was necessary to spin out time. Ronnie said, wriggling in his chair, "May we get down and go and look at the sea?"

as better to have them out of the han calling fresh attention to the in the tavern. Howard said, n. You can go just outside the and lean over the harbor wall. go any farther than that."

la went with him; the other chil- tayed quiet in their seats. How- dered another bottle of the thin ne.

n minutes past nine a big, broad- ered young man in fisherman's ncho and sea boots, rolled into ern. One would have said that l visited competitive establish- on the way, because he reeled a t the bar. He took in all the nts of the tavern in one swift, re- glance like a lighthouse.

" he said. "Give me a Pernod ges, and to hell with the *sale*

men at the bar said, "Quietly. re Germans outside."

irl behind the bar wrinkled her "Pernod des Anges? It is a ry, no doubt? Ordinary Pernod eur."

an said, "You have no Pernod es?"

m'sieur. I have never heard

an remained silent, holding to with one hand, swaying a little. d got up and went to him. "If ld like to join us in a glass of le," he said.

edly." The young man left the crossed with him to the table. d said quietly, "Let me intro- t. This is my daughter-in-law. iselle Nicole Rougeron."

ung man stared at him. "You more careful of your French e said softly out of the corner uth. "Keep your mouth shut, le the talking to me."

mped down into a seat beside oward poured him out a glass of the red wine; the young man added water to it, and drank. He said quietly, "Here is the matter. My boat lies at the quay, but I cannot take you on board here, because of the Germans. You must wait here till it is dark, and then take the footpath to the Phare des Vaches—that is an automatic light on the rocks, half a mile toward the sea, that is not now in use. I will meet you there with the boat."

Howard said, "That is clear enough. How do we get onto the footpath from here?"

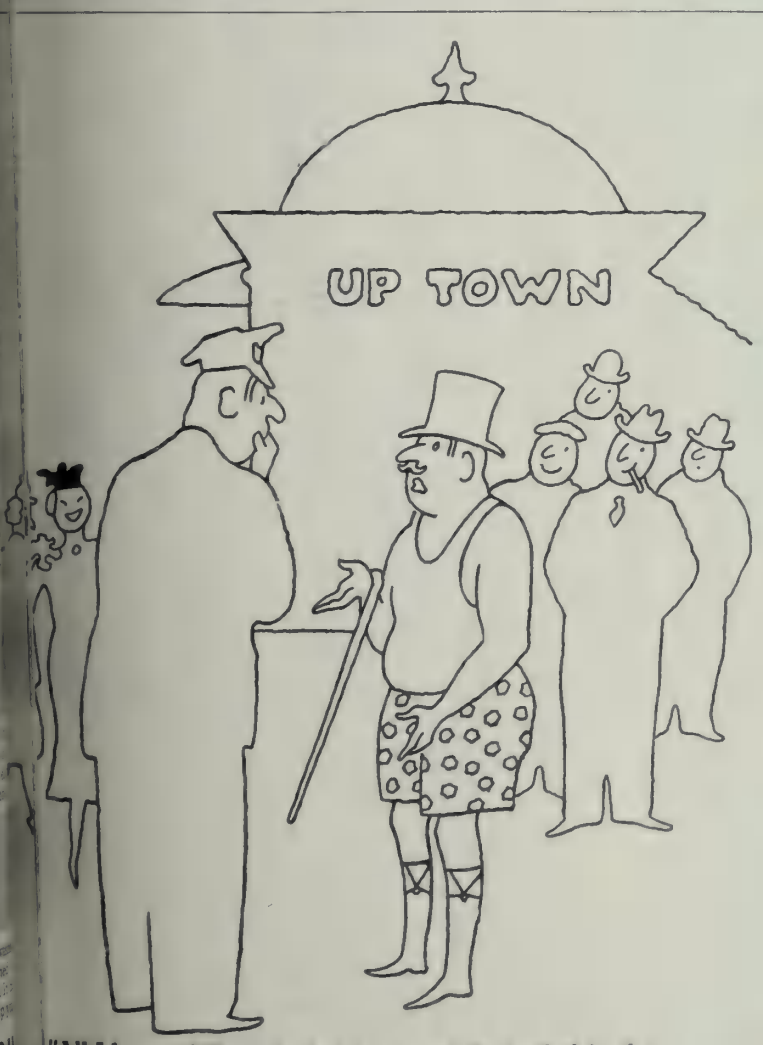
Focquet proceeded to tell him. Howard was sitting with his back to the tavern door, facing Nicole. As he sat listening to the directions his eye fell on the girl's face, strained and anxious.

"Monsieur . . ." she said, and stopped.

THERE was a heavy step behind him, and a few words spoken in German. He swung round in his chair; the young Frenchman by his side did the same. There was a German soldier there, with a rifle. Beside him was one of the engineers from the E-boat by the quay, in stained blue dungarees.

The moment remained etched upon the old man's memory. In the background the fishermen around the bar stood tense and motionless; the girl had paused, cloth in hand, in the act of wiping a glass.

It was the man in dungarees who spoke. He spoke in English with a German-American accent.



"Say," he said. "How many of you guys are Britishers?"

There was no answer from the group.

He said, "Well, we'll all just get along to the guardroom and have a talk with the *Feldwebel*. And don't let any of you start getting fresh, because that ain't going to do you any good."

He repeated himself in very elementary French.

# The Bounding Fathers

WE THINK the nation has now heard enough concerning what hard-shelled provincials the Founding Fathers were —how they spent their lives exhorting their fellow citizens to look in and not out, to forget that Europe existed, and so on.

The fact is that these men were alive to everything that cooked in the Europe, Britain and America of their times; that they changed policies to meet changing conditions; that consistency was among the least of their worries, except that they consistently lent a helping hand to democracy wherever it reared its then ugly head; that, in a word, Bounding Fathers would be a better name for them than Founding.

Washington's advice to Americans against entangling alliances is famous and often quoted. Not so well remembered but fully as significant, is his expressed willingness to form "temporary alliances for extraordinary emergencies."

Thomas Jefferson, too, was against entangling alliances on principle; but he could relax when he saw a chance to win something for his country by so doing. Witness a letter Jefferson wrote in 1802 to Robert Livingston, our minister in Paris:

> The cession of Louisiana and the Floridas by Spain to France works sorely on the United States. . . . It completely reverses all the political relations of the United States, and will form a new epoch in our political course. . . . The day that France takes possession of New Orleans seals the union of the two countries who, in conjunction, can maintain exclusive possession of the ocean. From that moment we must marry ourselves to the British fleet and nation.

The marriage was postponed by the Louisiana Purchase, which was a distress sale by Napoleon Bonaparte of the last of the French empire in North America because Napoleon needed some cash. But in 1803 Jefferson was again seeking some foreign alliances, this time against the Barbary pirates who for centuries had preyed on Mediterranean shipping. Eventually we had to clean them out by ourselves.

George Washington himself was the first Father to sound the proposition that American democrats ought to help other democrats anywhere in the world. In 1796, upon receiving the colors of the new French republic, Washington declared:

> My anxious recollections, my sympathetic feelings and my best wishes are irresistibly excited whensoever in any country I see an oppressed nation unfurl the banners of freedom. . . . In delivering to you these sentiments I express not my own feelings only, but those of my fellow citizens in relation to the commencement, the progress and the issue of the French Revolution.

The first President wasn't talking to enjoy his own voice, either, since France was then at war with England, Austria and Sardinia.

President James Monroe was equally sympathetic with democratic upsurgings in Europe or elsewhere. The post-Napoleonic Holy Alliance of Austria, Russia and Prussia devoted itself to stamping out all such aspirations toward liberty in its domains, and then conceived the idea of crushing Spain's rebellious colonies in South America.

Great Britain offered to join the United States against this New World invasion plot. Monroe consulted Jefferson and Madison on the British proposal.

Jefferson wrote in part:

> By acceding to her (Britain's) proposition, we bring her mighty weight into the scale of free government, and emancipate a government at one stroke. . . . Great Britain is the nation which can do us the most harm of anyone or all on earth, and with her at our side, we need not fear the whole world. . . . With her, then, we should most sedulously cherish a cordial friendship, and nothing would tend more to knit our affections than to be fighting once more, side by side, in the same cause. . . .

James Madison was as enthusia[stic] as ferson over the British offer to help [the U] States keep the Holy Alliance out [of the] World:

> With the British power and navy co[mbined] our own, we have nothing to fear fro[m] the world, and in the great struggle of t[he epoch] tween liberty and despotism, we owe it [ours] to sustain the former.

Daniel Webster, proposing that [we help] Greeks by recognizing their revolt [against] Turks, commented:

> The great political question of this a[ge is the] tween absolute and regulated governm[ent. . . .] side of this question is settled for us [in a] our volition. . . . Our place is on the sid[e of free] tutions.
>
> It may now be required of me to sh[ow that] est we have in resisting this new syst[em (the] Alliance). What is it to us, it may b[e asked. Europe] what principles or what pretenses [may bring] governments assert the right of inte[rference] affairs of their neighbors? The thun[der], said, rolls at a distance. The wide [Atlantic] tween us and danger, and however ot[ers may] fer, we shall remain safe.
>
> I think it is a sufficient answer to t[hat we] we are one of the nations of the earth [that we] an interest, therefore, in the preser[vation] system of international law and natio[nal interest] which has hitherto subsisted so ben[efically] all. . . .

Some of our most convinced [nationalists] Washington, Jefferson, Monroe [and Madison] among them—were willing in thei[r time to be] internationalist if to do so wo[uld help] United States on its own territory [democracy] in the world.

We may be wrong in setting [forth on a] same course a second time in [the] century. But certainly we are [not doing] thing. We've been here before— [and under] leadership of some of our mos[t famous] most quotable men.

"In all the world no job is being better done today than by the American Railroads"

*Hon. Clarence F. Lea of California, Chairman, Committee on Interstate and Foreign Commerce, before the House of Representatives, Sept. 25, 1941*

939 and WAR—and suddenly everybody looked anxiously to the railroads s the life lines of defense. Could they o their part of the job ahead?

hey did it in 1939.

hey did it again in 1940.

nd now the record fo
*nd the railroads ha*
*he biggest transporta* *in*
*istory.*

*he railroads handled more traffic han in the busiest year of the rst World War.*

*- handled more traffic than in he peak year 1929.*

*— handled two-thirds of all the nation's traffic — all the freight they were asked to haul.*

*— hauled more tons more miles than any carrier in the world has ever transported in one year before.*

*The railroads did the job without car shortages — without congestion — for industry — for agriculture — for defense.*

That record gives its own emphatic answer to fearful talk of railroad bottlenecks.

There weren't any. And, with the continued cooperation of the government and shippers, *there won't be any* — provided only that the railroads are permitted to get the materials they must have to keep tracks, locomotives and cars in repair, and to buy new equipment to meet increased defense production.

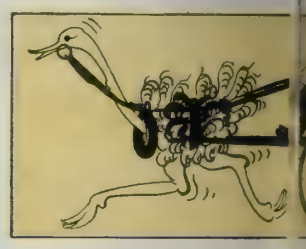
**COVER** RONALD McLEOD

# ANY WEEK

OUR fashion note this week has to do with the hat worn by the slightly cluttered young lady on the cover. Our staff stylists, the Misses Larkin and Carson who chic our women for us, discovered that hat in the hands of Miss Sally Victor, its creator. Combining it with one of the numerous models who daily wander through these offices trying to distract us, they turned them over to Artist Ronald McLeod who fell hard for the hat, which is made of, amongst other materials, two whole Persian lambskins. He wanted to buy the hat for Mrs. McLeod, who was very pleased until she learned that it would set the McLeods back sixty dollars. She said if sixty dollars were spent in her house they were going to buy something more durable than ■ hat.



OUR little profundity of the week is launched by Mr. Jim Jay Rollick of Colorado Springs, Colorado. Mr. Rollick is not sanguine that his observations will have much effect upon our rulers in Washington. It is his opinion that "a word to the wise is worth a smack in the puss and you usually get paid." As we get it Mr. Rollick thinks that this country will be ready to "defend itself, keep England afloat, support Russia and keep South America off the bargain counter just as soon as America's industrial tail begins to wag the Washington political dog." We are in considerable agreement with Mr. Rollick, having surveyed much of the scene from which he derives his opinions. "However," says he, "there are two phenomena that sadden me. If there is anything more dismal than the sight of ■ politician trying to be an industrialist it is an industrialist trying to be a politician. No, I'm wrong. The most disheartening sight is to see the two misfits teamed together, one backing and filling, the other pulling and hauling while the driver stands up on the seat with his back to the team yelling to the crowd for more oats." Toward the end of his twelve-page missive, Mr. Rollick snaps out of allegory long enough to assure you that "Washington is a squirrel cage. No matter what you were at home, the minute you get in that cage you begin to act like a squirrel. After a few weeks of it you think everything outside the cage is nuts. . . ."

IN THE interests of accuracy, for which we are hounds, we announce the arrival of a letter from Mr. Paul S. Seavey, secretary of the Chamber of Commerce of Dunedin, Florida. In Howard Hartley's recent article, Fighting Ferryboats, he placed all of the activity about the development of these troop-landing monsters in the Clearwater area. Mr. Seavey wants it understood that much of the work is being done in "the beautiful little city of Dunedin. We expect to hear from Mr. Seavey again, applauding us for getting the facts straight at last.

SOMETIME ago we published a letter from Mrs. Johanna Marian Duffy of Pittsburgh, Pennsylvania, suggesting that pet dogs should be sent to the lads in our Army training camps. We thought it a nice idea, too. Since then, however, we have been receiving pleas and threats from officers and men imploring us to do what we can to stop what we started. Many of the soldiers demand Mrs. Duffy's address so that they might forward to her several thousands of assorted dogs. So we're calling off the dogs, as we are particularly impressed with ■ letter from an artillery officer who says that it is virtually impossible to hold maneuvers because dozens of dogs, regarding it all as good clean fun, frisk back and forth in front of the tractors, thus bringing training to a halt, the lads refusing to take any chances of running over the mutts.

AND things, we think, are getting out of hand. For example, we have a letter from Mrs. Lucy Y. Osburne of Jenkintown, Pennsylvania, who not only urges women to redouble their lipstick activities but to "save the metal lipstick holders and forward them to Mr. William S. Knudsen, chairman of OPM, for national defense." Until recently, Mrs. Osburne's duties as president of the Pennsylvania chapter and national vice-president of the Unrouged Women of America absorbed all her spare time. She was striving, she says, "toward the day when there would not be a painted face in our country." Mrs. Osburne herself uses the stuff today for patriotic purposes although every time she touches the stuff she bridles. Says so herself.

RECENTLY our Jim Marshall rode the caboose of a Michigan Central Railroad freight train. As a result of this feat, Mr. Marshall has written an article which will eventually turn up in these pages for your delight and edification. But before Mr. was permitted to mount the had to sign a personal-prope relieving the company of re ity for damage to "Property livestock, live wild anima triches" which he might t with him. This caused some Marshall deciding to send h span of ostriches which he a song from a cassowary col had innocently bought a set trich eggs from an untrustw lish remittance man in Sin Ditty City, Washington, Marshall lives it is a famili see him driving his ostriche wheel sulky in the shafts Maud S., a famous trot owned by Mr. Marshall s ago, broke many records. B road dissuaded Mr. Mars tioning the limited quart caboose and further that ostriches would have to same berth. So without hi Mr. Marshall made the tr his berth with two railroad

GEORGE CREEL'S rece cence of his 1917 job as bc mation in Washington has additional thousands that States cannot get throu world war without their ser new Inflammation Bureau be set up. If Americans w tarily leap to arms in the n are volunteering for jobs a there would have to be conscription. We've been ens of letters from ladies men frothingly eager to patriotism of their neighb tleman in Bristol, Tennes us that he's so persuasi friends say that if he had with Hitler the German fighting on the side of dem have forwarded his letter A lady, desiring to be a that somehow she has a w tors. # A defense program against

# Pneumonia

*Avoid exposure to chilling and fatigue*

PNEUMONIA often attacks without warning. Usually, however, it is preceded by a common cold, influenza, or other infection of the breathing passages. So, it is wise to take good care of your health. If whenever you have a common cold, catch these infections early, and do not let them drag along until they become serious.

When a cold hangs on, and you feel generally miserable and feverish, be especially cautious. Avoid exposure to chilling, and particularly fatigue, late hours and overeating. The two safest and sanest steps to take are: 1. *Go to bed;* 2. *Call your doctor.*

*Dress the children warmly*

The first sign of pneumonia is generally a severe chill followed by fever. Even more definite symptoms are coughing, pain in side, thick, rust-colored sputum, and heavy breathing. Usually these signs are not just forerunners. Generally they indicate actual pneumonia.

*If a cold hangs on, go to bed!...*

The pneumonia death rate has been reduced over fifty percent in the past three years. Nevertheless, the first essential for successful treatment still is early diagnosis. This permits the prompt use of the powerful new sulfa drugs when the physician (and only the physician) prescribes them; it makes possible early determination of the type of pneumonia, and use of serums if advisable.

The difference between a quick cure and a long, serious, perhaps fatal, illness depends upon getting a doctor—not tomorrow, but *immediately*. Given the chance to treat more pneumonia cases early, America's doctors and nurses can still further reduce pneumonia fatalities. By calling the doctor early and getting nursing care, you can help him to use more successfully the weapons of modern science.

*... And have the doctor call!*

Metropolitan's free booklet, "Respiratory Diseases," contains many valuable, practical suggestions to help you ward off trouble.

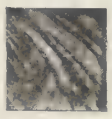
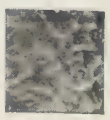
This pipe is called a Shellcraft. It has an inner bowl of imported meerschaum, which makes the pipe uncommonly cool-smoking. The outer bowl is an example of the Thorn finish. $5.



This is a Dublin, one of the most popular pipe-shape families. It has always been a favorite with Kaywoodie smokers. Add one of these Dublins to your Kaywoodie collection. $5.



This pipe belongs to the Billiard family of pipe shapes. It is agreeably proportioned, and produces a pipe with a fine "balance." This shape is one of the traditional pipe shapes. $5.

© 1941, KAYWOODIE CO.

Here are three Kaywoodie Super-Grain pipes that belong, by their own divine right, in your pipe collection. They are incredibly sweet-smoking, and the beauty of the grain proclaims their aristocratic briar heritage—the costlier rare *old* briar imported before the war, aged-in-the-wood-block according to Kaywoodie standards.* These Super-Grain pipes are, accordingly, of connoisseur quality.

*Kaywoodie briar is dug out of the ground years in advance; so the war has not interfered with our supply.

SUPER-GRAIN

REGULAR GRAIN

Observe the distinctive grain markings of the specimen briar from which Super-Grain pipes are made. Only the "prime cut" from the finest *old* briar burls yields briar of this exceptional beauty of marking. This is the clue to the sweet-smoking quality of Super-Grain pipes.

Yours for the asking: *The Kaywoodie Pipe Almanac which tells exactly how to get the fullest pleasure from pipe-smoking.*

**Because of scarcity of new parts, German-operated planes Brazil are easily the world's most carefully coddled shi**

PRIVATE reports from Latin America indicate that commercial planes still operated there by Germany and Italy are being coddled like babes in a crib. Lack of spare parts is the reason. A couple of German boats have sneaked through the British blockade into South American ports with new engines and the necessary airplane spares, and there is a strong belief that the Italian airline connection with Europe is also a carrier of the vital spares. The very highest grade lubricants are used in the planes to minimize wear, and the most scientific care is being applied to their operation. Hitler and Mussolini intend to hold on to those airline franchises down to the last cotter pin.

IT'S not shameful to get lost in the air; pilots both great and small have done it. Once there was a time when the favorite method of orienting yourself was to "shoot a railroad station"—fly right down the tracks and read the name on the building. That is now prohibited. Many airmen regard it as a reflection on their ability as cross-country pilots to admit they don't know where they are at all times. But every so often a real hot pilot will come out and admit he was lost. That is why the following little item will be of great cheer to the thousands of new pilots who have qualified as cross-country navigators but suffer terribly when they do become lost, and will do most anything to change the subject.

Down in the Carolinas during the maneuvers were several British airmen of great renown. One of them, Wing Commander Roland Tuck, twenty-five years old and with more than thirty German scalps on his belt, was invited to make a flight from Charlotte, N. C., to Spartanburg, S. C., in a Republic P-43 Lancer single-seater fighter. Wing Commander Tuck, who thinks nothing of taking off from a fighter base in England in a Spitfire or Hurricane landplane, flying across the Channel and roaring down the main streets of German-held ports, trying to draw fire or combat, was to be accompanied by an Army pilot in another Lancer because the trip was arranged hurriedly and there was not enough time to study maps and landmarks.

The two fighters became separated during a spell of soupy weather and when the Army pilot landed at Spartanburg there was no Wing Commander Tuck. Here was one of Britain's greatest aces missing on a routine flight in safe South Carolina and the Army began to perspire. Just at t that headquarters estimate supply was expiring, the tele It was Wing Commander Tu ing in his gentle English vo "petrol had become exhaust had landed this fast pursui cornfield without incident. owned up that he was s miles below Spartanburg ar lost. That's another reaso a great airman.

THE Army Air Force co effort to get a few days the grueling staff work in went to California to fer Army airplane. He took t the deep Southwest on wha to be the hottest day of t by the time he got to El sunburned lobster red. Ir went and located a novelt asked for a mask and all t produced at that season of one emblematic of the devi and fierce eyebrows. He t covered his face and nose p even fitted his head. Grad came conscious of a rising osity among the clerks. As to depart, one bold clerk might inquire why the co a devil's mask.

"For flying," was his resp disappeared.

In the air again, and i sun the colonel held the s his knees while he donne This was truly comfort an Presently he was aware of off his left wing doing a flying. He turned and look the eyes of the pilot of t and waved a salute. The not quite yet understand pilot didn't return the gre stead suddenly pulled u wing-over and flew in the rection with all speed.

# "YES, MRS. SMITH, I'LL MAKE IT SOUND LIKE NEW

## ...the oscillator is off a few thousand beats a second"

. . . It's another of those cases of normal wear of sensitive radio parts which, although not sufficient to cause the set to stop operating, may result in tuning difficulties, noise, poor tonal quality, weak volume and other inefficiencies. Your radio service man can fix such things promptly—at a modest charge you will be well justified in paying.

For instance, the oscillator in an average radio oscillates almost two million times a second—perhaps ten times that often if it operates on short wave bands. Should this become even slightly out of adjustment, the result may be an inaccuracy of several thousand oscillations a second—a small percentage of error, to be sure, but still enough to cause the set to work far less efficiently than it should. Although conditions of this sort are beyond the comprehension of most radio owners, they are no mystery to the service man. He has both the knowledge and equipment to correct them accurately and well.

Such things clearly indicate the importance of a routine service check-up every year or 18 months — at a probable cost of no more than the service man's minimum charge of $1.50 or $2.00. This means the correction of minor troubles resulting from long hours of daily use. Equally important, it indicates whether additional repairs are advisable to assure the kind of reception to which you are entitled and, perhaps, even to avoid more extensive work later on.

Always a good investment, always important, competent radio service is even more so today when home radios form a valuable link in Defense; when the National Emergency means broadcast messages of vital importance; and when new radios, although finer, will be limited in number.

Call your service man today! Give your radios the attention that any such fine, well-made mechanisms deserve!

## YOU CAN'T GET "LIKE-NEW" RADIO RECEPTION WITH OLD, WORN TUBES!

Tubes are literally the "heart" of any radio. Countless cases of noise, lack of volume, inferior tone, tuning difficulties and similar troubles in old radios can easily and economically be remedied simply by replacing worn tubes. That is why discriminating users have tubes checked at least once a year and, when making replacements, insist on RCA tubes. These tubes, backed by the best-known name in radio—featured by leading dealers and service technicians—are easy to recognize in any of their three distinctive cartons.

*She loves me, YES,*
*She loves me, NO.*
*It's "NO" because*
*of DOUBLE O*

He wondered why girls went out with him a few times and then left him carrying a torch. But there was a good reason . . . they just didn't like going out with a fellow who was careless about the "Double O" (Offensive-looking teeth; Offensive breath).

**What to Do About It**

If *you've* been careless about this double offense, why not get after it with the delightful double precaution that so many wise and popular men and women use?

**For the teeth,** the new Listerine Tooth Paste. It's the result of 8 years' work on the part of experts in the field of oral hygiene. This new paste was created specially to help bring out the natural beauty of your smile. It does a remarkable job on dull, dingy teeth, removing cloudy, loose deposits. Many people say they can see its beautifying effects in a surprisingly short time!

**For a sweeter breath**— Listerine Antiseptic, of course. Listerine quickly halts food fermentation in the mouth, a frequent cause of halitosis (bad breath).

**Delightful Daily Double**

If you want to make a good impression on others, never neglect the "Double O" (Offensive-looking teeth; Offensive breath).

Start in today with the delightful Listerine Daily Double: the new Listerine Tooth Paste for an attractive smile and Listerine Antiseptic for a more agreeable breath.

# What's Inside a Lifeboat?

WHAT DOES A LIFEBOAT CONTAIN? When you know the answer to that question, you know why, time after time, these little boats are able to bring their passengers safely through weeks of hardship on the open sea.

You see, many years ago, seafarers recognized the need of some kind of small boat which they could take to in time of need. But these men soon discovered that simply having the lifeboats aboard was not enough.

To provide the greatest amount of protection, the boats had to be supplied with food and water, in case men were forced to spend many days at sea. They needed a sail, too, so that continuous rowing would not exhaust them.

Gradually, the hard lessons of experience taught seamen just what provisions should always be aboard, for the protection of those who someday might have to entrust their lives to those little boats.

*Bailer, Boathook, Bucket, Compass, Ditty Bag, Flashlight, Hatchets, Life Line, Lanterns, Provisions, Water Breakers*—these are but a few of the things with which every lifeboat is equipped today. And the presence of these items is not left to chance.

The experts in the Bureau of Marine Inspection and Navigation, who carefully select each item, are responsible for seeing that no boat starts on a voyage without its lifeboats properly provisioned and equipped.

If you'll stop and think for a moment, you'll realize that there's a mighty close and interesting parallel between the lifeboats carried by steamships and the kind of protection you, yourself carry, insurance. For instance, few men are unwise enough to embark upon the voyage of life without the protection of insurance.

And, the things that make our insurance policies safe, dependable, and effective in time of nee visions with which they have been sup it takes the experienced judgment of e cide what equipment a lifeboat should car the services of a qualified expert, an ins to determine just what provisions should our insurance policies.

It is not difficult to make sure that you well-provisioned to meet your needs. Th thousands of well-written policies in Travelers is proof of it. In fact, many wi it a practice to have a Travelers agent over their insurance coverage yearly, at have not followed this practice, now is as any to inaugurate it. Any Travelers ager to check your present insurance against and prospective insurance needs.

# SPEND CHRISTMAS WITH US

## BY KATHLEEN NORRIS

**y began with anxi-
isunderstanding,
t ended with the res-
n of love and sym-
—the return of peace
ood will—in the
of a reunited family**

L, you got your box from
en," Mrs. Wilson said inter-
edly, "and I s'pose there was
everything you wanted in it?"
n't opened it," the other old
id, smiling. "I know she's put
ttle things for Em'ly and Joe
ildren, and I thought I'd take
the farm tomorrow and we
open it there."
ilson, forty years experienced
ghouse keeping and the varied
nd moods in which her board-
Christmas, looked up sharply
pper plate of veal stew and
mato sauce.

"You goin' out to Joe's?" she asked, surprised. Mrs. Atkins smiled, a flush of pride and happiness on her fine old face.

"Yes, I'm havin' a real Christmas," she answered simply.

She and her landlady were alone; they could speak freely. There were only three other boarders in "The Buckingham Arms," and two of those, the elderly Clinton girls, worked late in the post office on Christmas Eve. Old Man Judson had been carried off by a granddaughter for a home Christmas; Mrs. Wilson's family had not yet arrived for the holiday.

"Well, I'm glad if Em'ly has finally come to her senses," approved Mrs. Wilson. "But this is the first I've heard of it."

"I didn't get the invitation until an hour ago," the other woman said, a quiet radiance of joy possessing words and manner. "Jim Burke was goin' by with the mail when I come back from church, and he says 'I've got a real love letter for you.' It was all pasted over with bells and wreaths and Santa Clauses and I don't know what all. Yes, Joe and Em'ly want me to come out tomorrow to spend the day, and I don't mind telling you, Alma," Mrs. Atkins went on, with her eyes watering, "that when I took that letter upstairs and read it I went down on my knees and I thanked my God. I've always liked Em'ly White; I used to see her when she was married to Frank Blake, and it's been a real heartscald to me that she got mad at me a year ago. But she's had an awful hard time, her mother dyin' and everything, and I don't know as I've ever blamed her much. Only—and here I am cryin' again!—only to think of seein' them all, and gettin' Baby Harry into my arms, and givin' my boy a Christmas kiss from his mother—" She stopped abruptly.

"Well, you ain't any gladder than I am," Mrs. Wilson said generously. "But if you're goin' off in the mornin' I'm going to fix my turkey dressin' tonight, for I want you to taste it and see that I get in enough salt."

"If boys knew what they could do for their mothers at Christmas," the other woman was saying musingly, "there isn't a woman in the world would feel like I felt only today, before that letter came! It seemed like I simply couldn't bear it, and now I feel so grateful and so happy that I don't believe I'll ever lose faith in God's wisdom and justice again!"

RAIN was falling so violently on Christmas afternoon that to the children looking out of the kitchen window the whole dooryard seemed to be dancing with mud. The children were Margy Blake, aged eight, and Willy Atkins, aged five; Margy's father was dead and Willy's mother, and their remaining parents had married each other, so that the ranch-house kitchen was now home for both. Margy was a scared little picked chicken at eight, with fine-spun pale gold hair; Willy was almost as large as she, dark and curly-headed.

The children looked out at a level of soaked earth pooled and grooved from rains, at bushes whipped by the wind, at straggling fences that shut off a region of shed, chicken house, wired chicken run, paddock and barns. All these were unpainted and leaning

# JAKE AND THE BALLERINA

BY MARJORIE FISCHER

ILLUSTRATED BY MARIO COOPER

**She always said, "You will tell me what to do." The trouble was that she forgot the rule just once**

JAKE sat in the day coach staring glumly at the window, which the night outside had turned into a black shining mirror. He saw nothing, though. It wasn't the first time he'd been broke, but here they get him all the way to Pittsburgh, and he loses his fare out; he's working every night till dawn for a week, trying to fix up the ballet of a hopeless musical, and then all he gets is a ticket in a day coach back to New York. A fine thing.

The train whistle cried long and loud in the night, and then, like a small echo, he heard a sound beside him. He stared harder than ever at the window, but unfortunately it was a mirror as well, and there he saw Tatiana, lately first ballerina of the Pittsburgh flop, fumbling in her pocketbook and crying. Jake took a cautious look around; well, it was clear that he couldn't slide past her and get away to the platform. He turned firmly back to the window, in which he saw her large eyes looking piteously at him out of the night.

"Here," he said, and handed her a handkerchief.

Tatiana took the handkerchief and wept into it. "Thank you, Monsieur Krylin," she said. "I—" But she could not go on. She wept.

"Don't tell me, sweetheart, let me guess," said Jake. "You're fresh out of money."

She looked at him blankly.

"You're broke, what I mean," said Jake. "Well, I could stake you to a ten-cent sandwich. Does that say anything to you?"

"Monsieur Krylin," said Tatiana, "you are so sympat'etic! I do not know even where I shall sleep tonight. I have not one sou!"

"Well, you can't sleep on it," said Jake, "but I don't mind telling you you're one good little dancer."

TATIANA took a powder compact out of her pocketbook and looked at herself seriously in the mirror; then she smiled, also at herself.

"So sympat'etic," she murmured. She directed her large eyes at Jake. "You, Monsieur Krylin, I tell you, never have I known such a choregrapher as you. You will ask Alexei if you do not believing me." She looked about for Alexei, leading—and only—male ballet dancer of the Pittsburgh flop, and pointed to him where he slept uneasily beside a sleeping tenor.

"Do I have to look?" said Jake.

"Alexei, I say it to him," said Tatiana, "Jascha Krylin is a genius, simply."

"I'm good," said Jake. "Still in all, I'd like to get a meal out of it, from time to time. For instance, right now I could go for a thick sirloin with a baked potato at the Gala Club. Maybe a dozen blue points while I'm waiting, and a couple highballs to start."

Tatiana nodded, and tears came into her eyes again.

"Maybe even I would permit myself a baked potato, one little one. It is good, the steak at the Gala Club?"

"Sweetheart, it is good," said Jake. He rapped his fingers on the window ledge, thinking. "What night is this?"

"Naturally Monday," said Tatiana. "The night we should open in Baltimore." She put Jake's handkerchief to her eyes again.

"Well, we may go to jail," said Jake, "but I got an idea. It might work." He looked at Tatiana's bland little face between the wings of shining black hair. "Want to take a chance?"

"You will tell me what to do?" she asked.

"Every move," said Jake. "Either way you get steak and a place to sleep. The hitch is you may be sleeping in jail."

She laughed like a child.

"You got an evening dress with you?" asked Jake. She nodded. "Go on into the Ladies' and put it on."

BY THE time he came back in his dinner coat, she was in his seat by the window, wearing a pretty tulle dress like an elongated ballet costume, with a red shawl over her shoulders, and a spangled red handkerchief over her hair. Alexei was sitting beside her, and they were talking Russian rapidly. Jake had left Russia when he was five years old, and did not remember much more of that language than yes and no. This annoyed him now, since he would have liked to understand the conversation; he considered Alexei a heel, and, being fair, would have liked some facts to justify instinct.

Alexei rose gracefully when he saw Jake.

"Tatiana tells me just now about this steak you will procure for her," said Alexei. "You have understood what we say?"

"*Niet*," said Jake. "Steak was a word we didn't have much use for twenty-five years ago."

The two Russians smiled politely if without comprehension. Jake, the native of Broadway, U.S.A., smiled back, and took his seat with no politeness. Alexei continued to stand in the aisle.

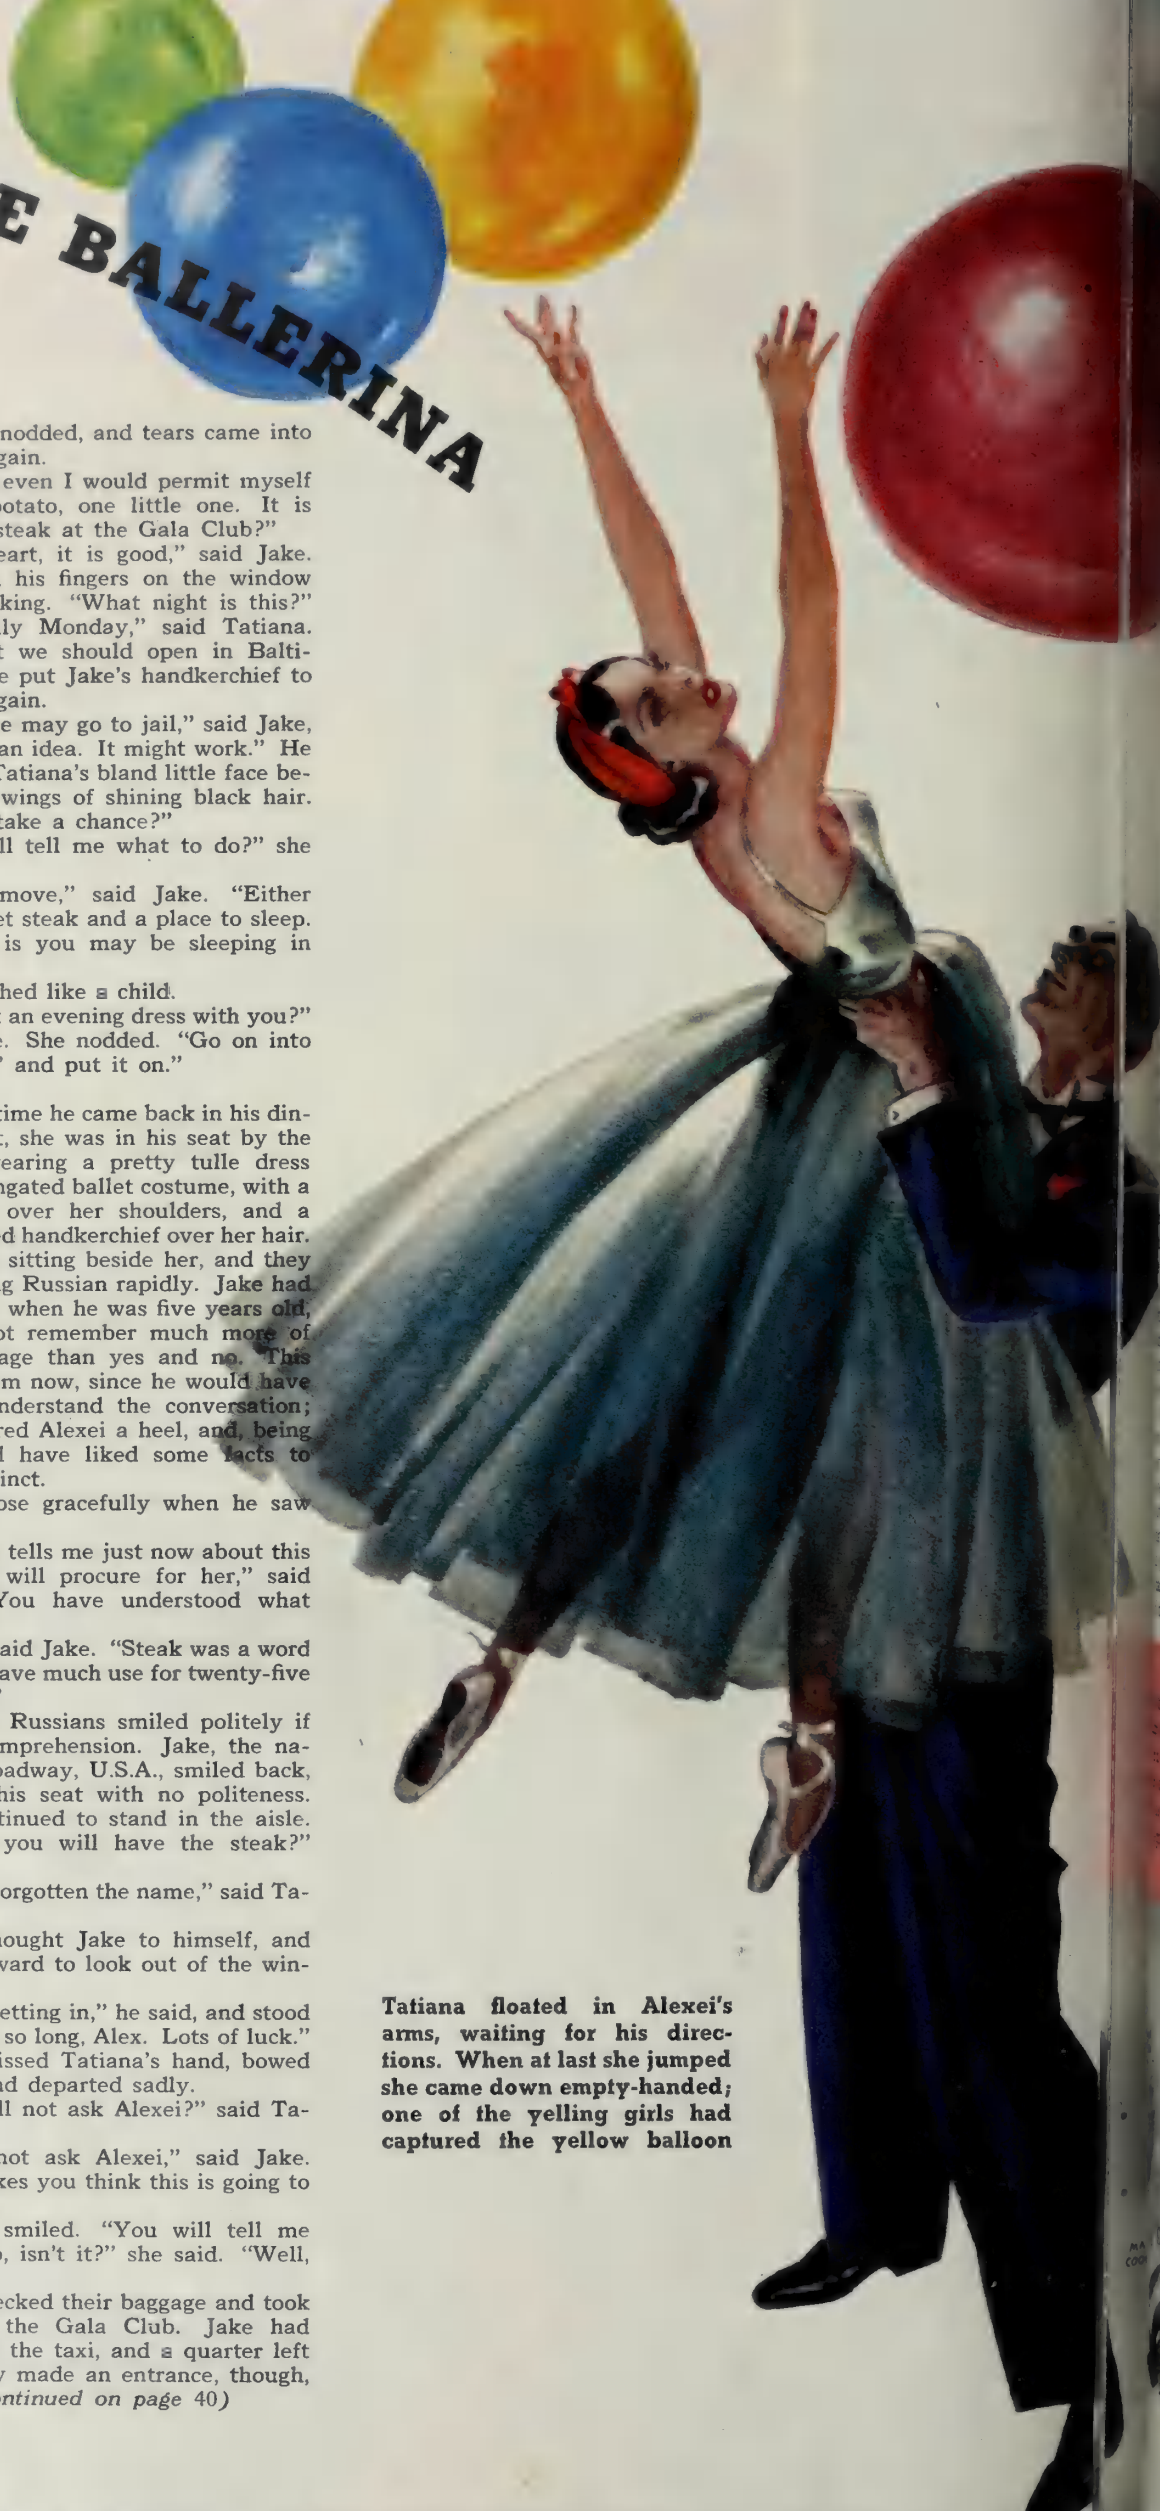
"Where you will have the steak?" he asked.

"I have forgotten the name," said Tatiana.

Good, thought Jake to himself, and leaned forward to look out of the window.

"We're getting in," he said, and stood up. "Well, so long, Alex. Lots of luck."

Alexei kissed Tatiana's hand, bowed to Jake, and departed sadly.



"You will not ask Alexei?" said Tatiana.

"I will not ask Alexei," said Jake. "What makes you think this is going to be easy?"

Tatiana smiled. "You will tell me what to do, isn't it?" she said. "Well, then."

They checked their baggage and took a taxi to the Gala Club. Jake had enough for the taxi, and a quarter left over. They made an entrance, though,

If an armored column ns into a wall of shells laid fro eavy fortifications way off dist ce, beyond the range of its ard ht artillery, the tank gun sh owing valet pull up to the f th road, park, and let fly. A m. ell can soften up a sub- al ch k of masonry.

Also, the powerful contraption can fire at short ranges without bothering to stop. If, for example, troops charging into a town are bothered with snipers, the tank rolls through the streets taking point-blank pot shots at buildings sheltering the sharpshooters. It will leave few buildings and fewer snipers.

### Ordnance Gets Its Chance

The monster may not work; it may, when tested, turn out to be unsound from a mechanical aspect, or it may have too little strategic value to bother about. But either is most unlikely. It looks too good on paper to be a military flop. But failure or not, it is indicative of the state of mind of our Army Ordnance experts. They are—and have been—thinking fast and well. They are turning out for America the greatest ordnance equipment in our history or anybody else's history. From the standpoint of quality, if not quantity, they have given us superb fighting tools. Most of them have so far been kept secret with such success that the Army itself didn't know it had them. A great many still are secret. But the black covers have been taken off some, and we will tell you all it's possible to tell.

We hear so much of the inventive talent of the Germans, of their ingenious weapons and their elastic ability to try anything new, that we forget we have in our Army military scientists who have been tops since an itchy trigger finger let loose the shot heard round the world at Concord.

But we have been careful, as a nation, to give them the fewest possible breaks. During the peaceful 20's and 30's, when a gun barrel was considered a shameful relic of a period of barbarism we

GEORGE DE ZAYAS

Dr. Sanford A. Moss, wh
supercharger for planes e
the 1941 award of the Colli
jointly with the U. S. Army
which tested it and prove

# THE HIGHER THE BETTER

## By W. B. Courtney

**Appropriately, aviation's highest award, the Collier Trophy, goes this year to the men who are making it possible for the planes of war and peace to reach deeper into the great ocean of air**

ON DECEMBER 17TH, just a couple of days ago, there took place at 1600 Pennsylvania Avenue, Washington, as the postman knows the White House, an event of outstanding importance and significance with respect to the current war, and to the present and future of aviation, both commercial and military.

President Roosevelt, on behalf of the National Aeronautic Association, presented the Collier Trophy for the past year's greatest achievement in aeronautics.

It was a joint award. Two men, representing two great organizations, happily faced the President: Dr. Sanford A. Moss, scientist, of General Electric Company; and Major General George H. Brett, chief of the Air Corps.

The citation indicates that the trophy goes to Dr. Moss and the Air Corps for "outstanding success in high-altitude flying through the development of the turbo-supercharger."

You need only turn to daily war communiqués for evidence of the turbo-supercharger's eminent usefulness. It has made possible high-altitude bombing and fighting by some planes of the Royal Air Force. It has made the giant four-engine bombers of the United States Army Air Corps the greatest planes of their type.

Moreover, it is not only a felicitous coincidence but a rather emphatic suggestion of the hold that "altitude" has laid upon the imaginations of the men of the air that last year the National Aeronautic Association's distinguished trophy committee awarded the Collier Trophy to three doctors who developed the oxygen mask that enables pilots and crewmen to fly in the substratosphere.

This year the story behind the award has special elements of drama, human interest, mystery and significance. There is the mystery that surrounds the turbo-supercharger, one of the most hush-hush projects in American aviation. There is the personal vindication of Dr. Moss. There is fruition of the devotion, grit and drudgery of the somewhat lean roster of men within the Air Corps, who conducted the investigations that verified the turbo-supercharger. Among these, paced by Major Rudolph W. Schroeder, were the first of any men ever to penetrate up into the substratosphere, the makers of all first real altitude records, the pioneers who lifted aviation above its own primeval mists.

This year's award marks two anniversaries—the 38th birthday of powered, heavier-than-air flight, midwifed by the Wright brothers at Kitty Hawk, North Carolina, in December, 1903; and the Silver Jubilee of the Collier Trophy.

When Robert J. Collier, amateur early bird, former editor of this magazine and son of its founder, inaugurated his trophy in 1911 no man had yet flown more than a few hundred feet above the ground. M. P. Prier held the world's nonstop flight record for the 250 miles from Paris to London; and in the United States LeBlanc had reached a speed of 66 miles per hour. There were 26 pilots in the United States; C. P. Rodgers made the first transcontinental flight across the United States, taking almost two months.

Bob Collier gave his beloved trophy into the keeping of the Aero Club of America, to hold and bestow. Later it came under the trusteeship of the National Aeronautic Association, a nonpartisan group that is a repository, in brief, of national airmindedness.

I do not know what persuaded the trophy committee. Undoubtedly the news from warring Europe had some effect. Altitude has always b

TRATED BY C. C. BEALL

**eteove O'Neill moved
st, bt he couldn't move
st ough and so the
urd er reached the girl
st moment too soon**

THE met for the first time, Mr. Cas and O'Neill, around five- thin on a breathless August after- on, a dingy bed-sitting room, rd-fl r rear, of the Grosvenor Fur- shed partments on East Madison reet. s soon as Mr. Carnes stepped from he landing, his heart pumping m th tairs, and from something else, , he lt the force of heat compacted that uare room under the roof ex- dle a inst his flesh in savagely tiny ells o erspiration—felt it so intently, only a moment, that the walls and e two haded windows wavered be- e hin while a weakness he could not ntuol gan to quiver in the hollows hind knees.

He t himself what that weakness me f n: only the heat. Still, he pped few steps in from the doorway conce it, nodding at O'Neill, smiling him, eaking rather quickly but with no obvious effect of fright. His name, he said, was Roger Carnes, and he understood that he was wanted here. Even though he could not see why—

"Sit down," O'Neill said. His voice was cross. He had been in that room since four o'clock, a few minutes after the body of Rose Elizabeth Daly had been found there, and he sat behind a littered table now with his coat off, his shirt sleeves rolled up to the elbow and his wilted collar gaping wide at his throat. He didn't look nearly so clever as Mr. Carnes had been afraid he would look; a stout man in middle age, bald-headed, with a solid, rocklike chin, he just appeared determined, irritable and very hot.

He wasted no time at all. He said, as Mr. Carnes seated himself, "We wanted to see you—that's right. We sent a squad car over after you because there was a woman strangled here last night—a woman named Rose Elizabeth Daly. She was found on this sofa in back of me at four o'clock this afternoon. What we want"—he paused and mopped his face, his voice flattening out a bit—"what we want now is to find out what you knew about her."

Mr. Carnes stared at him.

"Strangled?" he said, in a soft, shocked voice. He had a slight advantage then, as it began; he knew what he was fighting for, if he didn't know yet exactly how they had got his name. But the fear he had was not a fear that showed in his voice, his face or in anything about him; it shaped him instead, like an animal fear, an urgent impression of danger, to a state of sharp and desperate alertness. A tall, thin man in a well-cut gabardine suit, staring directly into O'Neill's face with pale blue eyes that were properly shocked, he said quietly, candidly and very gravely, that he had never heard of this Rose Elizabeth Daly in his life.

O'NEILL, his own eyes shaded by heavy dark brows, stared back at him for a matter of seconds. Then, bending forward, he reached out for a telephone book that lay on the corner of the table at his left. When he picked it up it fell open naturally part way in, where a packet of matches had been set between the pages. Halfway up the middle column, on the page nearest him, Mr. Carnes could see that a name had been underscored in pencil.

O'Neill moved his finger down till it rested on that mark.

"We found it like this," he said. "The matches and the pencil mark, understand, as if the number was one she'd looked up before and wanted to remember. Here's the listing: Roger Carnes, 54 Jellicoe Road, Tuxedo 8262. I think that's you?"

"Yes." Mr. Carnes did not hesitate at all. "Yes, it is." But he concealed a savage rush of anger behind the sallow mask of his face in the same way that he had concealed his fear before. Last night he had gone through everything; last night, being a careful man, he had not immediately hurried away. But the telephone book—no, he had not gone through that. Who would have imagined—

It seemed to him, suddenly, that he had taken too long to answer, that in O'Neill's dark eyes there was the glint of a new and more suspicious sharpness. He smiled stiffly. Deny it, he thought—deny it all. If they knew, they knew. But if they had only this—

Mr. Carnes did not lose his head. He simply frowned as if he were puzzled.

"That," he said, "that—I can't understand it. My name—" The frown deepened; he spoke more slowly. "Here,"

*(Continued on page 65)*

**"You'd better get away," she said. "If you're here when my friend comes back he'll punch your nose." "Will he?" the stranger asked softly. He had caught her wrist then**

We had seen the wounded limp into Moscow, and tanks roaring on their way to the faltering Red army

# Retreat from Moscow

## By Quentin Reynolds

RADIOED FROM KUIBYSHEV

**When diplomats and officials fled Moscow, Collier's correspondent went along, willy-nilly, to Kuibyshev. From there he made his way to the new fighting front in Libya. This is the story of the flight from Moscow and what he found in the new Russian capital**

THE time had come to leave Moscow. For weeks we had considered the possibility, and yet when the moment came few of us were prepared. We had watched the red pins on the war maps move closer to the city. We had seen them reaching out gradually like claws encircling the capital. We had seen the wounded limp into Moscow, muddy and half-frozen, and we had seen the railroad stations crowded with refugees from the city waiting for trains to the east. We had seen tanks roaring through the city streets on their way to bolster the faltering Red army.

But Moscow was fairly comfortable. True, the vodka had run out and cigarettes were virtually unobtainable and the Nazi bombers came over every night, but this was routine to those of us who had been in London the past year.

Then one day there was a phone call: "All American correspondents report to the embassy immediately. Urgent."

Laurence Steinhardt, the American Ambassador, said bluntly to us, "The balloon has gone up. Cripps and I were summoned by Molotov this morning. He told us that a train would be waiting at the Kazan station at seven o'clock tonight for the diplomatic corps. He said that you could, in fact must, go along."

"Suppose we want to stay?" I asked Steinhardt.

"You have no discretion in the matter," the ambassador said.

"The government is going, the press bureau and the censors are going. Stay here and you won't be able to send anything. There will be no further communications out of Moscow. Report here at five-thirty with what baggage you can carry and if you have any food bring it along. I don't kno we're going but it will be a long trip."

The huge Kazan station was packed with trying to leave what they thought to be a city. More than 10,000 apathetic-looking grim-faced men and bewildered, sleepy-e dren lay on the cement floors waiting for take them east.

The various ambassadors and ministers in out of the snow. A huge dining room was for the diplomatic and journalistic corps. Atkar, the Turkish ambassador, came in. eyed Vladimir Kot, once a college professor Polish ambassador, appeared. "*Bon soi* lence," we murmured as these exquisite diplomats shook hands quite formally with u Shao Li Tze, one of the best-liked men in th came in, smiling, with his aides. # HOLIDAY SURPRISES—that don't come in a stocking!

**SURPRISE PACKAGE NO. 1. Birds Eye Strawberries!** The miracle of Quick-Freezing makes it possible. Back on a balmy day last summer, we plucked these carefully grown berries, hulled, cleaned, and sliced them—and then, into the Quick Freezer they went, to have every bit of their garden-fresh flavor imprisoned till the moment you pick up the first spoonful!

**SURPRISE PACKAGE NO. 2. Mouth-watering Birds Eye Golden Sweet Corn-on-the-Cob!** A beautiful, unusual dish for holiday table! And this corn is as fresh and flavorful as though you'd just picked it off the stalk! That's because Birds Eye, last summer, preserved all that goodness for you by Quick-Freezing.

**SURPRISE PACKAGE NO. 3. Tender, out-of-season green Asparagus Spears!** You can enjoy the farm-fresh flavor of a dish that's rare in midsummer. We pack only five-inch, all green, tender Spears. (Also, green cuts for budget dishes.) Try asparagus on fried ham and toast, topped with Hollandaise Sauce and a mushroom cap, as illustrated. Melts in your mouth!

**SURPRISE PACKAGE NO. 4. Birds Eye Green** (Spe! Dec. 22-Jan. 3.) They come to ...esh—shelled, washed, ready to ...rk, no waste!) Surprise *your* family with all these out-of-season table-dressing dishes during the holidays. All of them will agree, it's a wonderful way to make every meal as exciting as the night before Christmas!

**MAKE NO MISTAKE!** Not all quick-frozen foods are Birds Eye! So look for the Birds Eye on the window and on the package. It *guarantees* you over 60 first-quality, waste-free Birds Eye Foods. They MUST SATISFY OR MONEY BACK!

**ORDER YOUR BIRDS EYE HOLIDAY TURKEY NOW!**

# Scotland Sends Her Best

Scotland sends her best to you ... one of her rarest treasures ... so that you may give your friends a rare remembrance for Christmas. No man could ask for a more mellow greeting. No good friend deserves less. So have Johnnie Walker delivered to your friends.

# OUR NEW ARMY

ES FOR THE ARMY. No mod- army can carry on a thor- h ground war without the of its highly trained aerial ervers. The only U. S. ad- ced observation school is ted at Brooks Field, near Antonio, where basic fly- school pilots and selected ers from various branches he service study 10 weeks ground and air courses to n observation combat teams. 188 hours of ground work ervers learn photography, igation, radio procedure, reading and allied sub- s. Observation pilots add ut 70 hours to their flying . Brooks is now equipped andle 200 men at one time

Good fun for pilots is flying 18 feet from ground and picking up message strung between two poles. Small bob on rope trailing from plane wraps around message line

## CALIFORNIA

CAMP HAAN, Riverside. One of the training duties foisted upon members of the 121st Coast Artillery (antiaircraft) Battalion when they mosey out to e Mojave Desert firing range is the di ing of five-foot safety pits by the ac ack (antiaircraft) gun emplace- m ts. Instead of measuring or guess- in the depth, the lads put shovel he lles across the tops of the freshly du pits and send Pvt. Frank Turso for a oll through the excavations. Frank is actly five feet tall, so if his dome w ns into a shovel handle the boys ju dig the pit a little deeper at that po t. It's tough on Turso but speeds up ational defense.

FORT ORD. Every time a new road is built in this vicinity the 68th Quartermaster Troop takes ... another detour. The 68th, made up f 66 men and 303 mules, is one of th ew pack troops in the Army, its job be g to transport material over and th gh terrain no other form of loco- mo on could navigate. Lieuts. T. C. An rson and J. R. Kempston, first and se d in command, know more places wh e there aren't any roads than any ot officers in the vast Monterey area an they see to it that the troop tackles th places. On a recent ten-day trek ov mountains and down canyons the 68 s mules, activated by the cus- to ry verbal encouragement, moved 40,000 pounds of Army stuff at an average rate of 2½ miles an hour, practically dive-bomber speed for a mule.

CAMP ROBERTS. Huge stone letters on the hillsides here spell Camp Roberts for the edification of passing motorists and train passengers. Lugging the stones and grunting them into place gave many a trainee a pain in the neck and shoulders. After the first two letters of the 475-foot sign had been planted, one of the laborers had a great idea. "Couldn't we," suggested he to a lieutenant, "conserve rocks by making it 'Camp Bob?'" The lieutenant conserved words. "No," he said.

THE abandoned car problem at Roberts has the California Highway *(Continued on page 30)*

Lt. R. F. Todd, Air Corps, uses a stereoscopic viewer (above, left), giving depth to aerial pictures. At right, Infantry Reserve Lt. W. L. Koob overlaps reconnaissance photos, which are later rephotographed into one complete picture

Five hours of training are spent in tuning radio transmitter mock up, operated below by Lt. G. G. Weston, 116th Inf., Fort Meade, Md. Equipment shown is similar to that carried in the O-47 plane. Men also learn to use Morse code

# German Weapons Are Obsolete

Continued from page 13

hoped was gone for good, Army Ordnance got just enough money from Congress to keep itself together. When we finally blew the whistle a year or so ago, and in a state of horrified jitters demanded that the Army produce forthwith an unlimited collection of mean and modern military weapons, Ordnance was an undernourished, underexercised arm of national defense.

Grinding out a new weapon is a painful job. It involves months of planning, months of constructing pilot models, months of testing the pilot models, and still more months of opening up production. With the skinny appropriations Congress gave it, Army Ordnance could only plan; in many cases the building of one pilot model of a new device would have soaked up an entire annual budget. Which is why the weapons we wanted are only now dropping off the production lines in soothing numbers.

A large percentage were conceived on paper years ago; yet they are today the most advanced in the world. More are being thought up even now—Ordnance is conducting research on more than 600 experimental items, running from fantastic and frightening ideas that would shame the imaginations of comic-strip artists down to such everyday martial materials as shell cases made of steel.

Here, for the first time, is a comprehensive summary of what we have to fight with, including more facts and figures than have ever before been given out:

There is a new 37-mm. antitank gun that spits a tricky armor-piercing shell through more inches of armor plate than I am allowed to mention, even to myself. But I saw it breeze through a chunk of tempered steel plate that would have discouraged an acetylene torch and come out on the other side so hard it ricocheted.

### A Streamlined Killer

The shell is a work of art. The part of an armor-piercing shell that actually does the business is a coating of incredibly hard steel adhered to the metal nose of the bullet. In old-type shells, the bullet had to be surrounded with great gobs of softer metal in order to streamline the shell properly. As an added improvement our Ordnance experts conceived the idea of shaping the shell with lighter, still softer metal—an aluminum windshield—so these shells would have better ballistic properties and have a trajectory similar to other ammunition for this gun. When the shell strikes, the aluminum shatters into dust, leaving the steel coating to break down the face-hardened armor plate and let the bullet travel unhampered, which it does with such abandon that it will wreck any foreign tank ever made. Yet the 37-mm. gun weighs only a *thousand pounds,* and can be toted around with infantry.

The French 75 has been converted by our Ordnance into a blaster perhaps twice as efficient as it was in the first World War. It is considered by ballistics experts a natural size for a gun; it gets a maximum of power for a minimum of weight and cost. It can be used against tanks or infantry. We have put it on a modern carriage, so it can be hauled as fast as our trucks and tractors will go. And by putting it on a split trail, on which it rests when it is fired, its lateral traverse—the distance it can be swung from side to side—has been increased from a stiff seven degrees to 85 degrees, and its vertical movement from 15 degrees to 45 degrees. It no lo

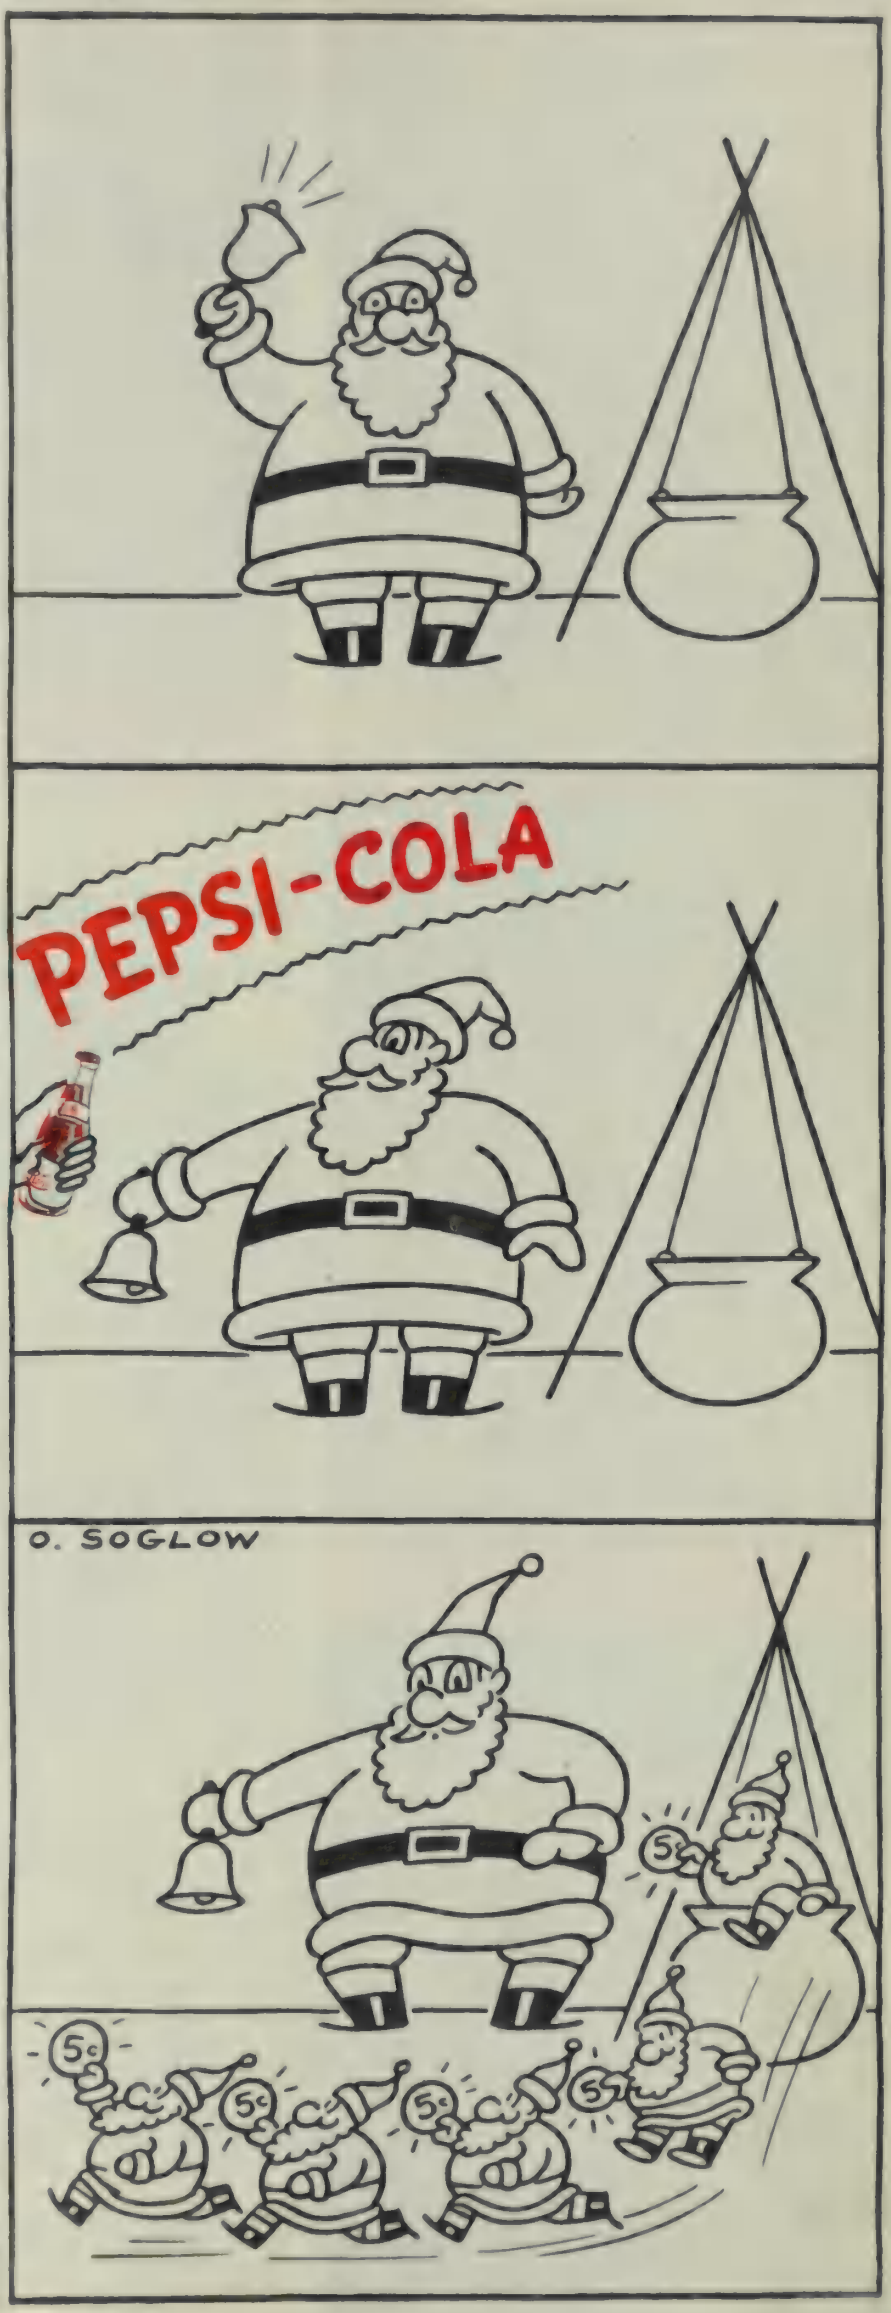
go twice as fast as any other s tanks. Their armor is 30 per nger, even their guns are more The tracks on European tanks t every two hundred or three miles; that's why you find Ger- ances suddenly pulling up short or two—the boys are changing Ours, helped by a rubber tread other country can have because er has the rubber industry, last 0 to 3,000 miles. And European ve to be overhauled every 500 Ours come into the shops for refurbishings about once every es.

We are the only country to have a radial-cooled Diesel engine which can be used in tanks, and it is a honey. It was developed in case we run short of the radial air-cooled motors we consider standard. As another possible substitute, Ordnance also adapted Cadillac automobile motors to tanks, two to a tank.

By way of making life in a tank more pleasant, Ordnance also is experimenting with liquid-coupling drives, the automatic transmissions used in modern cars. They eliminate a surprising lot of the noise which inevitably follows a tank.

The Ordnance Department's 60-ton Goliath just built at the Baldwin Locomotive Works has a supersecret device that makes the gunners' accuracy more than five times better than is possible in any tanks of foreign design. And our tanks, incidentally, will frustrate almost any antitank gun in the world except our own.

Some of the mightiest achievements of Ordnance have been on items lacking the drama necessary to get public appreciation. Our soldiers, for example, no longer have to keep their powder dry—Ordnance long since evolved a waterproof powder. While they were about it, they also made it burn with less heat, so our guns last longer than those in Europe, and took the flash out of it so it won't give away the positions of guns at night.



A big jump in artillery efficiency came when Ordnance worked out a universal fuse system. Instead of having a dozen or so different sizes of fuses for different kinds of shells, each size requiring a different range table, Ordnance has made all types in the same general mold, so they can be substituted for one another without changing the elaborate range figures.

Out of the 600 experimental items now on the active research list will come more and better war materials. Already Ordnance has perfected a steel cartridge case, in case we run out of brass; and if it's plastics you are thinking of they've got those under control, too. We are making some types of fuses out of plastics, and we may make more. They are among the 600.

If you must have brass knuckles to get along in this world, we will have the hardest, heaviest and sharpest. Of that much you can be quite sure.

**The new 105-mm. howitzer is twice as deadly a weapon as the famed French 75. It throws a 23-pound shell a distance just under eight miles and weighs 4,300 pounds, only 500 pounds more than the 75**

Historical remnant of the early theater is the olio, or afterpiece, in which players do specialties. Above, Woodie Wilson and Kark Thomas sing and dance in The Oceana Roll

# Nonstop Show

## By Jim Marshall

**Come look at a stage play that has broken all records by running continuously more than eight years —and looks good for eight more**

WHEN they hear about the long-run records of Abie's Irish Rose, Tobacco Road, Chu Chin Chow or Charley's Aunt, fourteen actors and actresses in Los Angeles just smile wanly. They are playing in a show that started its ninth continuous year July 7, 1941, and it begins to look as if they had lifetime jobs. The show sells out every night, seven nights a week.

The play is a highly moral piece titled The Drunkard, or The Fallen Saved. It is played in five acts and thirteen scenes and how old it is no one knows. Miss Zan Joyce, who sings in the afterpiece, or olio, and has done a lot of research, says it probably goes back to an old English morality play. It was adapted for American audiences about a hundred years ago by a man named Smith, and was made famous by P. T. Barnum.

Mr. Barnum was operating his American Museum in Boston in 1843 and wanted to put on a play. Plays in those days were sinful and play actors outcasts. So Mr. Barnum called his theater a Moral Lecture Hall, and The Drunkard an elevating and mortal-saving exhibit, and packed them in. The show ran one hundred and forty-four performances and legend has it that it made a teetotaler out of the World's Greatest Humbug, which was P.T.B.'s pet description of himself.

Anyway, there was a supply of total abstinence pledges at the door as the customers came out and many a bleary-eyed reformee signed. Early in the run, discovering that some unsaved souls were sneaking across the street to a barroom during intermissions, Barnum refused them readmission, according to Miss Joyce's findings.

The plot is familiar: The wicked squire who is scheming to steal the little vine-clad cottage in which live the lovely heroine and her widowed mot stolen will; the handsome hero who weds th heroine and is then tempted to drink himsel grace in the village grogshop so that the vill get the girl; the hero's descent into a life of d ness while his wife and chee-ild almost sta New York garret . . . and so on. Of course, finds redemption and somebody else finds the will; everybody cheers like mad and the cop off the villain to the gallows. Or worse.

In Barnum's day, this sort of thing ran fo four hours, and had subplots and "comic inte Now it has been reduced to essentials and ru seventy to eighty minutes. It plays so fast th scene the hero and heroine are just married the next, a minute later, they turn up with a f year-old child, which sometimes bewilder phisticated people in the audience—especiall beautiful young mother doesn't look a day ol

The script has been in the public domain f and anyone may use it. Versions of it ha played by scores of professional and amate panies—but these usually gagged it and so s The Los Angeles players, directed by Galt B the piece straight, even to the gestures. I studied a lot of old lithographs and the dra George Cruikshank, who illustrated many books, and insists on copying them faithfully

"Curiously enough," he says, "the compa played The Drunkard in the '20's and early gagged it never could get laughs. We had to all the original 'comedy' and play it at straight to make it funny."

The Los Angeles phenomenon got its sta Depression—remember the Depression?—jus peal came in. A group of actors and artists in the famous California colony near Monterey the piece as a joke. Among the actors was E had had experience on both legitimate and va stages. He wondered if the piece might not few dollars and got together a group of stag in a sort of co-operative setup, to try. Anyth better than waiting for the clouds to roll by. rehearsal or two the play went into the Palace San Francisco for a week—and stayed eight

Then Bell took it to Los Angeles. He cou a theater and in desperation finally rented abandoned studio, far out of town and almos sible for anyone to get to. Taxi drivers got lo to find the place and filling-station attend blocks around were subsidized to tip off pro customers how to get there. *(Continued on*

**The villainous squire, fast approaching his undoing, has sunk so low as to strike a lady as he cries: "She knows too much for my happiness." Players: Ada Lilly, Nestor Paiva, George Stuart**

# Give the gift with the "Happy Blending"

1.

Rex Reindeer's mighty busy
At this season of the year,
Loading up his good plane "North Star"
To deliver Yuletide cheer.

2.

While his loving helpmate, Rosie,
Is charting out their flight.
What is their precious cargo?
Yep, it's CALVERT—you guessed right!

3.

In fact, this famous whiskey
Is quite like these happy mates—
Like Rex and Rosie Reindeer
It's a "marriage" of swell traits.

Yes, every drop of CALVERT
Is a blend of all that's best,
To give your Yuletide Spirits
Extra mellowness and zest.

4.

So think of Rex and Rosie when you make your Christmas list—
Write "CALVERT" after every name; be sure no one is missed.
Your friends will sing your praises when they taste its mellow flavor,
For among luxurious whiskies, CALVERT'S *first** in public favor!

## Use Colgate's—the toothpaste that cleans your breath while it cleans your teeth

***Yes, scientific tests prove conclusively that in 7 out of 10 cases, Colgate Dental Cream instantly stops oral bad breath***

COLGATE DENTAL CREAM, you see, has an active *penetrating* foam that gets into the hidden crevices between teeth—helps clean out decaying food particles and stop the stagnant saliva odors that are the *cause* of much bad breath.

And Colgate's has a soft, safe polishing agent that cleans enamel thoroughly, yet gently—makes teeth naturally bright, sparkling! So next time you buy toothpaste, buy Colgate's—the toothpaste that does *two* jobs for the price of one!

CLEANS YOUR BREATH WHILE IT CLEANS YOUR TEETH

## Our New Army

Continued from page 25

Patrol up to its ears in headaches. After their thirteen weeks of basic training a lot of soldiers figure it's cheaper to ditch their cars and travel at government expense to new posts, the result being that jallopies of assorted types, left standing by various roadsides, have to be identified by the coppers and towed to the nearest garage or junkyard.

### MICHIGAN

FORT CUSTER, Battle Creek. Speaking of jallopies, a hearse has been cruising the streets and service drives of this fort for some weeks now, stopping here and there to make a pick up. Sounds grim but isn't. The ominous buggy is operated by the Post Exchange office and what it picks up is the dough the canteens take in. The P-X office needed a vehicle with a rear compartment big enough to handle a safe and a force of armed M.P.'s, and the 1933 hearse, purchased for $250, does the job. Capt. Robert H. Tavis, detailed from Post Headquarters to do the collecting, says it's like this:

"I don't mind driving down these streets and seeing soldiers hop about a foot in the air and come down saluting, and I don't mind the dogs that come howling and sniffing around. What gets me is the rumor that I'm collecting guys who have been rendered extinct by P-X groceries. Let's get it straight. I am not collecting stiffs. And it's not my fault that Post Exchange Officer Major T. H. Tulley has a tombstone paperweight on his desk. Why don't you move on to something pleasant?"

ALL right, Captain. History is running around in circles at Custer, and succeeded, the other day, in catching up with itself. Twenty-one years ago a Battle Creek gal, employed in the Fort Custer offices, fell for a technical sergeant named John A. McIntyre. They were married Nov. 15, 1920, and had a daughter. McIntyre died three years ago, and when his widow returned to Custer last year to take over a civilian job, daughter Betty went along to work in the P-X office. Six months ago Betty met Staff Sgt. Lee R. English, of the 215th General Hospital Unit and—that's right—they're married now. Betty, of course, followed her mother's footsteps by returning to her job.

THE best we can do for an address is Somewhere In Iceland for Corp. Clyde C. Nelson, erstwhile Custer soldier. Anyway, some of the feminine readers of this department might want to write to him inasmuch as Clyde has notified some of his buddies back home that "silver fox pelts sell for $6 a pelt."

### RHODE ISLAND

NARRAGANSETT BAY HARBOR DEFENSES. From a skeleton crew of 100, these Harbor Defenses have pyramided to a New Army high of 3,800 Regulars, Federalized National Guardsmen and selectees, comprising Rhode Island's 243d and the Regular Army's 10th Coast Artillery Regiments. Five garrisons are working on the job at present: Fort Adams, Harbor Defense headquarters (on Aquidneck Island, original name for the island of Rhode Island); Forts Wetherill and Getty (243d's headquarters), on Jamestown island; Fort Greble, Dutch Island, and Fort Kearny, on the mainland near Providence. Fort Greene, at Point Judith, and Fort Church, at Sakonnet, on opposite extremities of the mainland and covering the ocean approaches to the b when completed, be armed with guns to make belligerent app Narragansett Bay a very disc affair. All of the forts have their 12-, 10-, 6- and 3-inch weapons ing this sizable defense job is B Ralph E. Haines, who seems pretty good soldier morale to task a little less difficult. Any boys realize the magnitude of th according to Pfc. Edward M 243d's regimental headquarters who writes:

"This regiment has its work for it, if the time comes, to de city of Newport, with its Na pedo Station, Naval Training and the base of the Atlantic F defense of the newly comm Quonsett Air Base, largest in t try, and also the entrance to N sett Bay and the city of Provid southern gateway to industr England."

Apparently, the gentle folk port are anxious to get all of tection they can, for they all over for the rededication exe Fort Adams' service club, and tron chucked in two grand to party a success. Incidentally, th one of the niftiest, with gree palms, waxed oak floors, ca silver service, Venetian blinds and tubular-metal furniture, fl lighting, rugs from Newport homes, and so on. In fact, life g pleasant by the day at the Nar forts. Little by little, the Arm placing with civilian workers a soldiers who have been ass switchboard, clerical, hospital manual and warehouse jobs.

Which brings us to Ex-Mas Charlie B. Sides, a native of N. C., who finds things very m taste, indeed. Seems Charlie, years in the Army (26 of them Adams), retired the other day reported back to his supply cle the very next morning as a worker—and at a raise in pay a month. Charlie did the same a total of $192 when he was in and now gets, adding pension a $268.87.

Stegner and Lt. Tru- rd, moving in jeeps along a ad near Cravens, spied a fox. yelled "Tallyho!" and things se. The startled fox took a the roaring jeeps and got aight and fast. Straighter and unced the jeeps, their crews ith Tommy guns poised. When ubled back the men swung at style—but missed. It took a d burst of blanks to finish r, which now stands, neatly n the Reconnaissance Com- derly room, a challenge to the of the rest of the regiment.

### NORTH CAROLINA

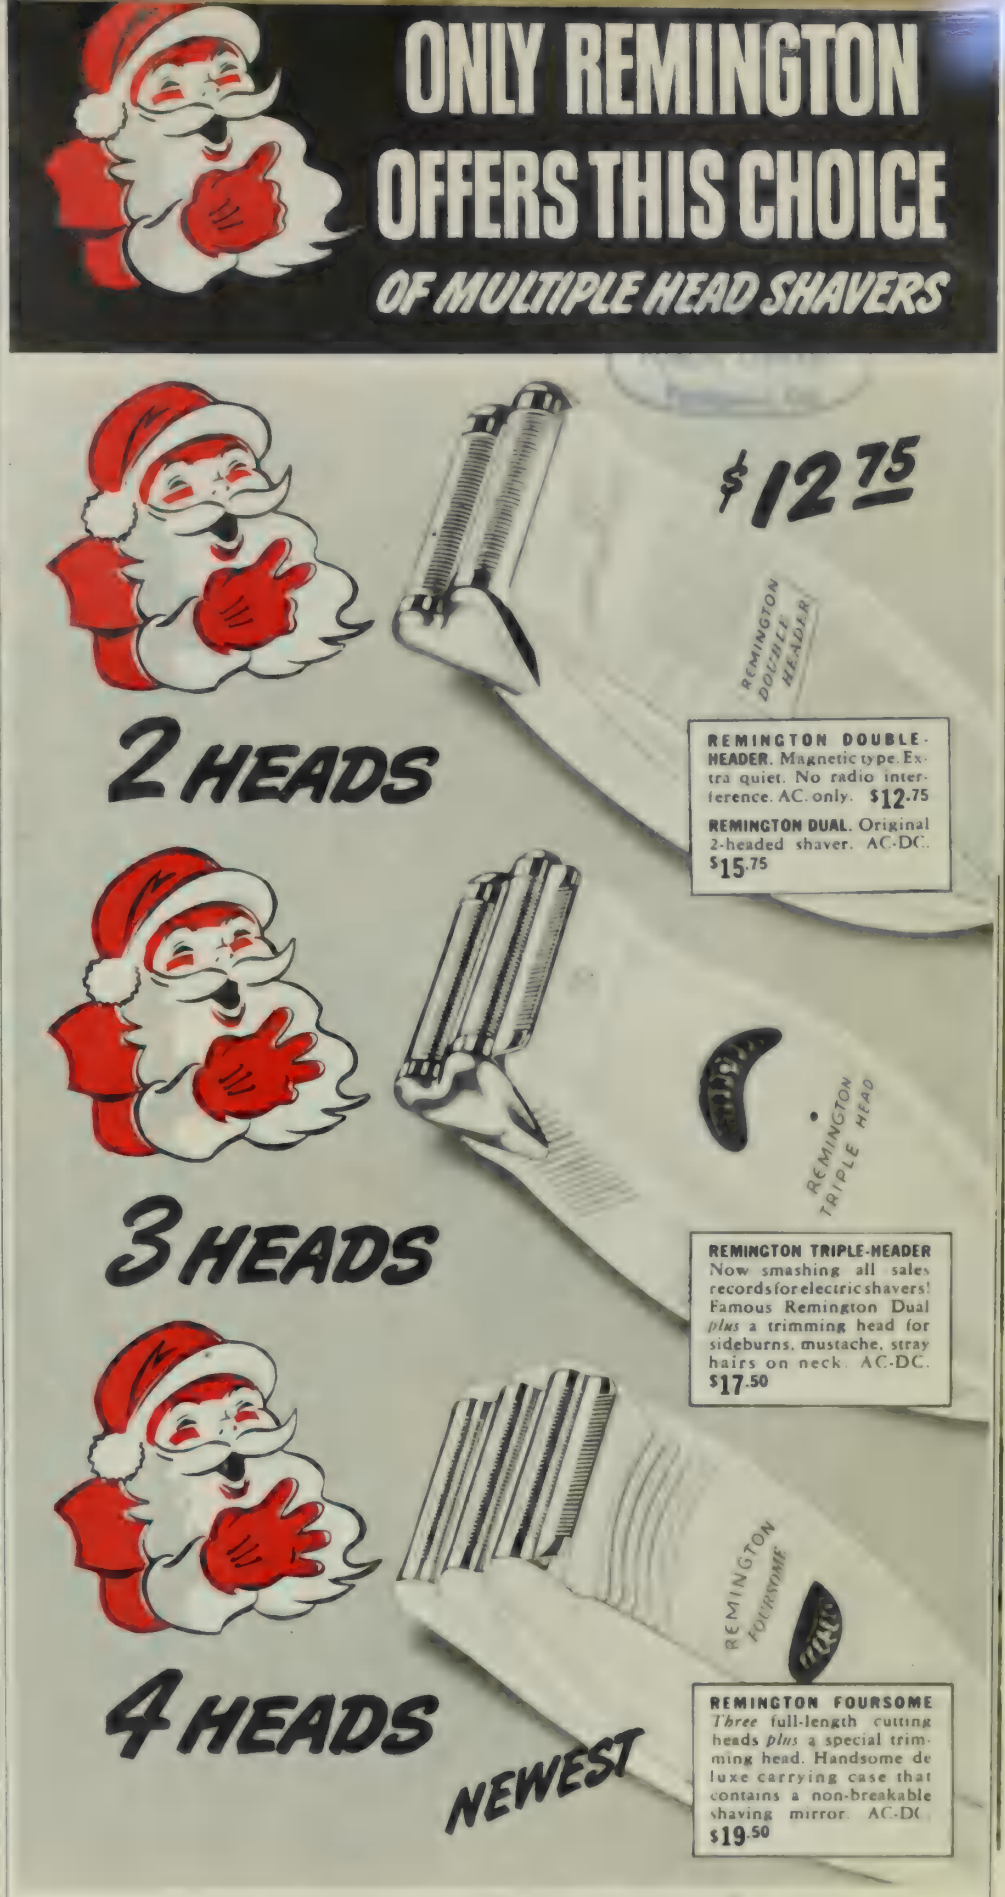
ORT BRAGG. Charley Skin- r's a private in the stream- ned, hard-fighting 9th ivision, but he came across ne, old-world custom recently ed him over. Invited for a ck in Brooklyn while on fur- arley sat down at the table of olid German family and was when the beaming *hausfrau* a large roasted chicken in im. Charley was in the midst the bird and placing selected slices on various plates when he was told that the whole thing was his. Bewildered but game, he began to eat and "every time I showed signs of slowing down," he relates, "the whole family looked sad." It stuffed him something fierce but he finished the chicken. Afterward, Papa told him that it was a custom in old Germany for a family to serve a whole chicken to a soldier on furlough. Pass the ersatz.

### GENERAL

ALL men on Christmas furlough must return to duty by January 11th, at which time all will have had a sixteen-day vacation. Ten days are taken from their supposed thirty-days-off-per-year, and six days are a bonus from the Army. Every post in the country should be at full strength by January 12th.

A FRIEND of ours, bound for Camp Lee to defend us, paused for a night in a Virginia town widely proclaimed by its own Mr. Peavey for its beauty, gallantry, banjo music, honeysuckle, magolias and so forth. After a few hours our friend began to doubt. He spoke to a bellboy. "Ain't there any beautiful girls in this town?" he demanded. "Yassuh, plenty," said the boy. "But they all moved to Washington on a national emergency."

SOLDIERS who attended a dance in Sumter, N. C., during last month's maneuvers claim that when a whistle was blown signifying the start of a Paul Jones, ten members of the special troops swarmed out on the dance floor to see what needed policing up. Reminds us of the day, three weeks ago, when we pulled up alongside a 75-mm. gun guarding a South Carolina road against tanks and asked the boys if they would fire off a shot for our movie camera. They complied so resoundingly that a minor engagement forthwith ensued in the vicinity and the field umpires had a fine time trying to find out what was cooking.



THE movies turned out swell.

G. W.

The sentry prodded him roughly in the back with the butt of his rifle, and Focquet became suddenly silent.

Two more Germans, a private and a *Gefreiter*, came hurrying in; the party were hustled to their feet and herded out of the door. Resistance was obviously useless. The man in dungarees went out ahead of them, but he reappeared in ■ few minutes, bringing with him Ronnie and Sheila. Both were very much alarmed. Sheila was in tears.

"Say," he said to Howard, "I guess these belong to you. They talk English pretty fine, finer'n anyone could learn it."

Howard took one of them hand in hand with him on each side, but said nothing. The man in dungarees stared oddly at him for a minute, and remained standing staring after them as they were shepherded toward the guardroom, in the gathering dusk.

Ronnie said, frightened, "Where are we going to now, Mr. Howard? Have the Germans got us?"

Howard said, "We're just going with them for ■ little business. Don't be afraid; they won't do anything to hurt us."

A couple of hundred yards up the road to Lannilis they were wheeled to the right, and marched into the house that was the guardroom. In ■ bare room the *Feldwebel* was hastily buttoning his tunic as they came in. He sat down behind ■ bare trestle table; their guards ranged them in front of him.

He glanced them up and down scornfully. "So," he said at last. "*Legitimationspapiere.*"

Howard could understand only ■ few words of German; the others, nothing at all. They stared at him uncertainly. "*Cartes d'identité!*" he said sharply.

Focquet and Nicole produced their French identity cards; the man studied them in silence. Then he looked up. Howard put down his British passport on the bare table, in the manner of a man who plays the last card of a losing hand.

The *Feldwebel* smiled faintly, took it up, and studied it with interest. "So!" he said. "*Engländer*, Winston Churchill."

He raised his eyes and studied the children. In difficult French he asked if they had any papers, and appeared satisfied when told that they had not.

Then he gave a few orders in German. The party were searched for weapons, and all they had was taken from them and placed on the table—papers, money, watches and personal articles of every sort, even their handkerchiefs. Then they were taken to another room with a few mattresses laid out upon the floor, given a blanket each, and left. The window was barred over roughly with wooden beams; outside it in the road a sentry stood on guard.

Howard turned to Focquet. "I am very sorry this has happened," he said. He felt that the Frenchman had not even had ■ run for his money.

The young man shrugged his shoulders philosophically. "It was ■ chance to travel and to see the world, with De Gaulle," he said. "Another chance will come." He threw himself down on one of the mattresses, pulled the blanket around him, and composed himself to sleep.

Howard and Nicole arranged the mattresses in two pairs to make a bed for the little boys and the little girls, and got them settled down to sleep. There remained one mattress over.

"You take that," he said. "I shall not sleep tonight."

She shook her head. "Nor I either."

HALF an hour later they were sitting side by side leaning against the wall, staring out of the barred window ahead of them. It was practically dark within the room; outside the harbor showed faintly in the starlight and the last glow of evening. It was still quite warm.

She said, "They will examine us in the morning. What shall we say?"

"There's only one thing we can say. Tell them the exact truth."

She considered this for a moment. "We must not bring in Arvers, nor Loudeac or Quintin if we can avoid it."

He agreed. "They will ask where I got these clothes. Can you say that you gave them to me?"

She nodded. "That will do. Also, I will say that I knew Focquet and arranged with him, myself."

She crossed to the young man, now half asleep, and spoke earnestly to him for a few moments. He grunted in agreement; the girl came back to Howard and sat down again.

"One more thing," he said. "There is Marjan. Shall I say that I picked him up upon the road?"

She nodded. "On the road, before you came to Chartres. I will see that he understands that."

He said doubtfully, "That should be all right so long as they don't cross-examine the children."

They sat in silence for a long time after that. Presently he turned to her in the darkness. "I am so very sorry to have brought you into all this trouble," he said quietly. "I did want to avoid that, and I thought that we were going to."

She shrugged her shoulders. "It does not matter." She hesitated. "I have been thinking about different things to that."

"What things?" he asked.

"When you introduced Focquet—you said I was your daughter-in-law."

"I had to say something," he remarked. "And that's very nearly true."

In the dim light he looked into her eyes, smiling a little. "Isn't it?"

"Is that how you think of me?"

"Yes," he said simply.

THERE was a long silence in the prison. One of the children, probably Willem, stirred and whimpered uneasily in his sleep; outside the guard paced on the dusty road.

At last she said, "What we did was wrong—very wrong." She turned toward him. "Truly, I did not mean to do wrong when I went to Paris, neither did John. We did not go with that in mind at all. I do not want that you should think it was his fault. It was nobody's fault, neither of us. Also, it did not seem wrong at the time."

His mind drifted back fifty years. "I know," he said. "That's how these things happen. But you aren't sorry, are you?"

She did not answer that, but she went on more easily: "He was very, very naughty, monsieur. The understanding was that I was to show him Paris, and it was for that that I went to Paris to meet him. But when the time came, he was not interested in the churches or in the museums, or the picture galleries at all." There was a touch of laughter in her voice. "He was only interested in me."

"Very natural," he said. It seemed the only thing to say.

"It was very embarrassing, I assure you; I did not know what I should do."

He laughed. "Well, you made your mind up in the end."

She said reproachfully, "Monsieur—it is not a matter to laugh over. You are just like John. He also used to laugh at things like that."

He said, "Tell me one thing, Nicole. Did he ask you if you would marry him?"

She said, "He wanted that we should marry in Paris, before he went back to England. He said that under English law that would be possible."

"Why didn't you?" he asked curiously.

She was silent for a minute. Then she said, "I was afraid of you, monsieur."

"Of me?"

She nodded. "I was terrified. It now sounds very silly, but—it was so."

He struggled to understand. "What were you frightened of?" he asked.

She said, "Figure it to yourself. Your son would have brought home a foreign girl, whom he had married very suddenly in Paris. You would have thought that he had been foolish in a foreign city, as young men sometimes are. That he had been trapped by a bad woman into an unhappy marriage. I do not see how you could have thought otherwise."

"If I had thought that at first," he said, "I shouldn't have thought it for long."

They sat there for a long time, practically in silence. The air grew colder as the night went on. Presently the old man heard the girl's breathing grow more regular and knew she was asleep, still sitting up upon the bare wooden floor.

After a time she stirred, and fell half over. He got up stiffly and led her, still practically asleep, to the mattress, made her lie down, and put a blanket ov her. In a short time she was asleep ag

The old man moved back to t wall and, wrapped in a blanket, sat do in a corner. Presently he fell into an easy sleep.

At six o'clock the clumping of t soldiers' boots in the corridor outsid woke him from a doze. He stirred and up- right; Nicole was awake and sitt up, running her fingers through her ir in an endeavor to put it into order about a comb. A German *Oberschütze* and made signs to them to get u ndi- cating the way to the toilet.

Presently a private brought hem china bowls, some hunks of breac nd a large jug of bitter coffee. They eak- fasted, and waited for something nap- pen. They were silent and dep sed; even the children caught the nos- phere and sat about in gloom nac- tivity.

Presently the door was flung pen and the *Feldwebel* was there ch a couple of privates. "*Marchez,*" I said. "*Allez, vite.*"

They were herded out and into gray, camouflaged motor lorry with a osed vanlike body. The two German p ates got into this with them and th oors were shut and locked upon ther The *Feldwebel* got into the seat bes the driver, turned and inspected hem through a little hatchway to the ver's compartment. The lorry started

They were taken to Lannilis a un- loaded at a big house oppos the church, from the window of hich floated the swastika flag. Her they were herded into a corridor b veen their guards. The *Feldwebel* we into a door and closed it behind him.

They waited thus for over f an hour. Then the door opened a the sentries sprang to attention, king their heels. Nicole glanced upw and then stood up, holding Sheila one hand. From the office the *Fe ebel* cried "*Achtung!*" and a young o er, a *Rittmeister* of the tank corps ame out. He was dressed in a black form not unlike the British battle d ; on his head he wore a black beret ga shed with the eagle and swastika, d a wreathlike badge. On his shoulde raps an aluminum skull and cro ones gleamed dull upon the black clo

He had a notebook and a p il in his hand. He spoke to Howa first "*Wie heissen Sie?*" he asked. "*Il ami- liennаme und Taufname? Ihr ui?*"

Somebody translated into inc erent French, and the particulars of the party were written down. As gards nationality, Howard declared self Sheila and Ronnie to be Englis here was no use denying it. He said th Wil- lem and Marjan were of nationa un- known.

THE young officer in black we back into the office. In a few min s the door was flung open again and th party were called to attention. The *Fe ebel* came to the door.

"*Folgen sie mir! Halt! Rührt* ich." They found themselves in the ffice facing a long table. Behind this t the officer who had interrogated ther n the passage. By his side was an old man with a square, close-cropped hea nd a keen, truculent expression. H held himself very straight and stiff if he were in a straight waistcoat, and also wore a black uniform, but more artly cut, and with a shoulder belt i black leather resembling the Sam wne. This man, as Howard subse ently learned, was Major Diessen of t Ges- tapo.

He stared at Howard, looking n up and down, noting the clothes h wore, the Breton casque upon his he , the stained, rust-colored poncho jac , the dirty blue overall trousers.

He said suddenly and sharply, "We captured Charenton. He is to be executed tomorrow, by shooting."

There was a momentary silence. The German eyed the party narrowly, his keen eyes running from one to the other. The girl wrinkled her brows in perplexity. The young *Rittmeister* of the tank corps sat with an impassive face, drawing a pattern on his blotting pad.

Howard said at last, "I am afraid I don't quite understand what you mean. I don't know anybody called Charenton."

"No," said the German. "And you do not know your Major Cochrane, nor Room 212 on the second floor of your War Office in Whitehall."

THE old man could feel the scrutiny of everybody in the room upon him. "I have never been in the War Office," he said, "and I know nothing about the rooms. I used to know Major Cochrane who had a house near Totnes, but he died in 1924. That is the only Cochrane that I ever knew."

The Gestapo officer smiled without mirth. "You expect me to believe that?"

"Yes, I do," the old man said, "because it is the truth."

Nicole interposed, speaking in French: "May I say a word? There is a misunderstanding here, truly there is. Monsieur Howard has come here directly from the Jura, stopping only with us in Chartres. He will tell you himself."

Howard said, "That is so. Would you like to hear how I came to be here?"

The German officer looked ostentatiously at his wrist watch and leaned back in his chair, insolently bored. "If you must," he said indifferently. "I will give you three minutes."

Nicole plucked his arm. "Tell also who the children are, and where they came from," she said urgently.

The old man paused to collect his

"Oh, come, dear, it might not be, what you think it is—maybe it's a blue one"

## There's One in Every Neighborhood!

**1. ONE DAY** Marge and I are having ourselves a cozy little gossip when up strolls this neighbor we call "Mrs. Trouble." You know the kind that is full of conversation—but only about *herself*, and usually about her *ailments?* Well, today it was the irregularities of her intestinal tract.

**2. AFTER SHE HAD GONE,** Marge, the imp, sparks an idea. "These eternal sympathy-seekers!" she says. "Most of them just don't *eat* right. I'll bet a little *'bulk'* of the right kind in her diet would take the *blues* out of her conversation. Let's be her fairy godmothers and send her a letter and a package of KELLOGG'S ALL-BRAN."

**3. "'MADAME,' WE'LL SAY,** 'why *endure* your constipation first, and then try to *"cure"* it with purgatives? Better to get at the *cause*—and *prevent* it! If it's the common kind that's due to lack of "bulk," ALL-BRAN should do the trick. Eat it regularly and drink plenty of water.' "

**4. I FORGOT ABOUT IT,** until one day when Marge and I were together, in waltzes our "Mrs. Trouble" as chipper as a robin on a May morning. "A friend of mine told me," she says to Marge, "that it's to you I'm indebted for a wonderful favor. I've knitted you a little sweater to celebrate my joining the ALL-BRAN 'regulars.' "

thoughts. It was impossible for him, at his age, to compress his story into three minutes; his mind moved too slowly. "I came to France from England in the middle of April," he said. "I stopped in Paris, and then I went on and stayed a night in Dijon. You see, I had arranged to go to a place called Cidoton in the Jura, for a little fishing holiday."

The Gestapo officer sat up suddenly, galvanized into life. "What sort of fish?" he barked. "Answer me—quick!"

Howard stared at him. "Blue trout," he said. "Sometimes you get a grayling, but they aren't very common."

"And what tackle to catch them with —quickly!"

The old man stared at him, nonplused, not knowing where to start. "Well," he said, "you need a nine-foot cast, but the stream is usually very strong so 3X is fine enough. Of course, it's all fishing wet, you understand."

The German relaxed. "And what flies do you use?"

A faint pleasure came to the old man. "Well," he said with relish, "a Dark Olive gets them as well as anything, or a large Blue Dun. I got one or two on a thing called a Jungle Cock, but—"

The German interrupted him. "Go on with your story," he said rudely. "I have no time to listen to your fishing exploits."

HOWARD plunged into his tale, compressing it as much as seemed possible to him. The two German officers listened with growing attention and with growing incredulity. In ten minutes or so the old man had reached the end.

The Gestapo officer, Major Diessen, looked at him scornfully. "And now," he said, "if you had been able to return to England, what would you have done with all these children?"

Howard said, "I meant to send them to America."

"Why?"

"Because it is safe over there. Because this war is bad for children to see. It would be better for them to be out of it."

The German stared at him. "Very fine words. But who was going to pay to send them to America, may I ask?"

The old man said, "Oh, I should have done that."

The other smiled, scornfully amused. "And what would they do in America? Starve?"

"Oh, no. I have a married daughter over there. She would have made a home for them until the war was over."

There was a pause. The young tank officer leaned across and whispered a word or two to the Gestapo officer. Diessen nodded.

"By the dates," he said to the old man, "you could have returned to England if you had traveled straight through Dijon. But you did not do so. That is the weak point of your story. That is where your lies begin in earnest."

He said sharply, "Why did you stay in France? Tell me now quickly, and with no more nonsense. I promise you that you will talk before tonight, in any case. It will be better for you to talk now."

Howard was puzzled and distressed. "The little girl," he turned and indicated Sheila, "fell ill in Dijon. I told you so just now. She was too ill to travel."

The German leaned across the table to him, white with anger. "Listen," he said, "I warn you once again, and this for the last time. I am not to be trifled with. That sort of lie would not deceive a child. If you had wanted to return to England you would have gone."

"These children were in my care," the old man said. "I could not have done that."

The Gestapo officer said, "Lies . . . lies . . . lies." He was about something more, but checked The young man by his side lea ward and whispered deferentiall again.

Major Diessen leaned back chair. "So," he said, "you ref kindness, and you will not talk. wish. Before the evening you talking freely, Mister Englishn by then you will be blind, and rible pain. It will be quite amu my men. Mademoiselle, too, there to see, and the little childr

The young man smiled without mirth. This time he spoke in English, without any trace of accent. "Well," he said, "you'd better come on and sit down. There's a pair of us. I'm English, too."

Howard recoiled a step. "You're *English*?"

"Naturalized," the other said carelessly. "My mother came from Woking, and I spent most of my life in England. My father was a Frenchman, so I started off as French. But he was killed in the last war."

"But what are you doing here?"

The young man motioned to the table. "Come on and sit down."

The old man drew a chair up to the table, and repeated his question. "I did not know there was another Englishman in Lannilis," he said. "Whatever are you doing here?"

The young man said, "I'm waiting to be shot."

There was a stunned, horrible pause. At last Howard said, "Is your name Charenton?"

The young man nodded. "Yes," he said, "I'm Charenton. I see they told you about me."

THERE was a long silence in the little room. Howard sat dumb, not knowing what to say. In his embarrassment his eyes fell upon the table, upon the young man's hands. Sitting with his hands before him on the table, Charenton had formed his fingers in a peculiar grip, the fingers interlaced, the left-hand palm up and the right-hand palm down. The thumbs were crossed. As soon as he observed the old man's scrutiny he glanced at him sharply, then undid the grasp.

He sighed a little.

"How did you come to be here?" he asked.

Howard said, "I was trying to get back to England, with a few children." He rambled into his story. The young man listened to him quietly, appraising him with keen, curious eyes.

In the end he said, "I don't believe

# HAIR-LINE VIEWS OF AN AIRLINE HOSTESS

"Sorry, sir—I'm busy tonight!"

**SLICKER STEVE.** His greasy, varnished hair warns the girls away. He'd be "on the beam" of a real romance if he'd avoid hair goo. Kreml greaselessly grooms your hair, leaves it looking *naturally* neat.

"—a month from Monday—maybe"

**TOUSLED TOM.** Girls give him the air because his hair flies high from frequent water-soaking. That robs it of natural oils—leaves it coarse and wild. Kreml corrects uppity hair by helping overcome dryness.

("Imagine! At his age, too!")

**"CURLY" CARL.** When his hair went with the wind, so did romance. Too bad. Nothing can bring it back now. Kreml and proper care might have helped him keep his hair.

"I'd love to meet you for dinner!"

**KREML KEN.** He uses Kreml—every day. Kreml brings out the *natural* best in his hair. It removes dandruff scales, checks excessive falling hair, relieves itching scalp.

*Ladies!* **Kreml keeps coiffures lovely, lustrous. Conditions your hair both *before* and *after* permanents.**

***Hair-care Combination*: Kreml Hair Tonic *and* gentle Kreml Shampoo (made from an 80% olive oil base) that cleanses thoroughly, leaves your hair more manageable. *At drug counters and barber shops.***

that you've got much to worry about. They'll probably let you live at liberty in some French town."

Howard said, "I'm afraid they won't do that. You see, they think that I'm mixed up with you."

The young man nodded. "I thought that must be it. That is why they've put us together. They're looking for a few more scapegoats, are they?"

Howard said, "I am afraid they are."

The young man got up and walked over to the window. "You'll be all right," he said at last. "They've got no evidence against you—they can't have. Sooner or later you'll get back to England."

There was a tinge of sadness in his voice.

Howard said, "What about you?"

Charenton said, "Me? I'm for the high jump. They got the goods on me all right."

IT SEEMED incredible to Howard. It was as if he had been listening to a play.

"We both seem to be in difficulties," he said at last. "Yours may be more serious than mine; I don't know. But you can do one thing for me." He looked around. "If I could get hold of a piece of paper and a pencil, I would redraft my will. Would you witness it for me?"

The other shook his head. "You must write nothing here without permission from the Germans; they will only take it from you. And no document that had my signature upon it would get back to England. You must find some other witness, Mr. Howard."

The old man sighed. "I suppose that is so," he said. And presently he said, "If I should get out of this and you should not, is there anything I can do? Any message you would like me to take?"

Charenton smiled ironically. "No messages," he said definitely.

"There is nothing I can do?"

The young man glanced at him. "Do you know Oxford?"

"I know Oxford very well," the old man said. "Were you up there?"

Charenton nodded. "I was up at Oriel. There's a place up the river that we used to walk to—a pub by a weir pool, a very old gray stone house beside a little bridge. There is the sound of running water all the time, and fish swimming in the clear pool, and flowers, flowers everywhere."

"You mean the Trout Inn at Godstow?"

"Yes—the Trout. You know it?"

"I know it very well indeed. At least, I used to, forty years ago."

"Go there and drink a pint for me," the young man said, "sitting on the wall and looking at the fish in the pool, on a hot summer day."

Howard said, "If I get back to England, I will do that." He glanced around the shabby, garishly furnished room. "But is there no message I can take to anyone?"

Charenton shook his head. "No messages," he said. "If there were, I would not give them to you. There is almost certainly a microphone in this room, and Diessen listening to every word we say. That is why they have put us here together." He glanced around. "It's probably behind one of those oil paintings."

"Are you sure of that?"

"As sure as I'm sitting here."

He raised his voice and said, speaking in German, "You are wasting your time, Major Diessen. This man knows nothing about my affairs." He paused, and then continued, "But I will tell you this. One day the English and Americans will come, and you will be in their power. They will not be gentle as they were after the last war. If you kill this old man you will be hanged in public on a gallows, and your body will stay there rotting as a warning to all oth murderers."

He turned to Howard. "Tha to fetch him," he said placidly, in English.

The German leaned toward the old man. "Listen," he said softly. "It is a very little thing that will not injure either of you. Nor will it make any difference to the war, because in any case your country now is doomed. If you will tell me how he got the information out of France and back to England, to your Major Cochrane, I will stop this execution."

The old man stared at him. "I cannot tell you," he replied. "Quite truthfully, I do not know. I have not been concerned in his affairs at all." He said it with a sense of relief. If he had had the information things would have been more difficult.

Diessen turned to the window again. "You have not got very much time," he said. "A minute or two, not more. Think again before it is too late."

Howard looked out into the garden. They had put the young man with his back against the wall in front of a plum tree. His hands now were bound behind his back, and the *Feldwebel* was blindfolding him with a red cotton handkerchief.

The German said, "Nobody can ever know. There is still time for you to save him."

"I cannot save him in that way," the old man said. "I have not got the information. But this is a bad, wicked thing that you are going to do. It will not profit you in the long run."

In the garden the *Feldwebel* had left the young man by the wall. The six soldiers were drawn up in a line in front of him, distant about ten yards. The officer had given them a command and they were loading.

"I am not going to delay this matter any longer," said Diessen. "Have you still nothing to say to save his life?"

The old man shook his head.

*(To be concluded next week)*

"If you think this is tough, just wait until you've got to climb down again!"

# Make it a Real Vacation!

## Keep Fit and Have More Fun...with a Schwinn-Built Lightweight!

*Rose Sanders and Lestina Stanley of Atlanta hiked to Parkersville, Tennessee, and home again on their Schwinn-Built Lightweights—260 miles in seven glorious, fun-filled days—and discovered America's thrilling new formula for vacation relaxation.*

Winter or Summer, on long trips or short, the ideal vacation companion, for men or women, is a Schwinn-Built Lightweight Bicycle. You see out-of-the-way places, you are independent of local transportation and time schedules, and you return refreshed from the pleasant, healthful exercise.

Precision workmanship gives Schwinn-Built Lightweights velvet-smooth speed, with the positive safety of quick-acting, exclusive, Schwinn caliper rim brakes—or Schwinn internal expander automobile-type brakes, if you prefer them! Either kind stop you "on a dime!" Built of finest materials—light, yet strong—Schwinn-Built Lightweights are the *world's finest bicycles!* Trim as greyhounds and twice as fast—easy to handle, easy to ride—and, best of all . . .

**GUARANTEED FOR LIFE!**

**It's easy to take your Schwinn-Built Bicycle on your vacation—just check it like a trunk, or your Schwinn dealer will gladly help you.**

# Jake and the Ballerina

Continued from page 12

and even got a pretty good table, what with it being Monday night, and the place half empty. That was why they had put in the balloon performance on Mondays, and it had helped, all right; there were a lot of little debutantes ready to leap for the money.

Jake didn't order anything for Tatiana to drink, since she had her work cut out for her, and she did not seem to mind. But just as the waiter set those beautiful steaks down before them, the drums rolled, and the band leader came out with the balloons. Jake's stomach contracted and his gastric juices failed him. A wooden steak might have been set before him, a wooden steak which cost five dollars he didn't have.

"Listen, sweetheart," said Jake tensely. "See that yellow balloon? There's a one-hundred-dollar bill in that balloon."

The drums rolled again, and the dance music began. Instantly all the long-haired little girls rushed to the dance floor with their beaus. Jake took Tatiana's hand and pulled her to her feet. Then he stood, stricken, staring at her feet.

"Where are your ballet shoes?" he said. "You have to jump!"

Tatiana stepped out of her high-heeled gold slippers.

"Jump?" she said. "Very well." Then she wailed: "But my beautiful steak!"

"Come on," said Jake. He put his arm about her and walked her off toward the balloons. He did not go near the crowd of people clustered at the platform where the band leader stood. He'd done a couple of balloon ballets, and he knew how fast and far they went when they were loosed; he stood opposite the door, which opened now and then, letting in a breeze from the world outside. "You just let me lead you," said Jake. "When I say jump, you jump. Nothing fancy. Just jump high and bring down that yellow balloon. Get it?"

Tatiana nodded. "In the other balloons is what?" she asked.

"Maybe five, ten dollars," said Jake. "Maybe nothing. Sweetheart, don't bother about them. The yellow—"

Tatiana floated in his arms, relaxed and easy, and Jake's stomach contracted like a fist. He must have been crazy.

"You will tell me, Monsieur Krylin," said Tatiana.

"Get going!" said Jake.

THE girls shrieked and rushed about over the floor, pushing one another aside and leaping into the air.

"Now?" asked Tatiana calmly.

The door opened, and a breath of air blew the yellow balloon over their heads.

"*Now!*" said Jake, and Tatiana sprang into the air without leaving the circle of his arms. Once, twice, she leaped, and came down empty-handed. A girl with a bow in her hair pushed Tatiana aside.

"Oh, *petite mal-élevée!*" cried Tatiana, and she kicked the girl out of the way in a rapid move which would have gone well in *Petrouchka*. Then she looked at Jake and he nodded, having no breath left with which to speak; they'd go to jail for sure.

Again Tatiana leaped, higher than ever, and this time she came down with the yellow balloon in her hands.

There was a moan of disappointment from the young ladies in the Gala Club, and Tatiana looked about her in mild surprise. "I may have now my steak?" she asked.

"Baby," said Jake, his breath returning in a rush, "you can have plenty steak. I got a feeling we're going places."

IN FACT, they did go places. Within the week, Jake had a show to do, and he talked Tatiana into the lead of his Sidewalks of New York, a ballet he had long had in mind, and which turned out to be a smash, so gay and tough and easygoing. There was a slight hitch when Tatiana insisted on Alexei's being engaged, but she pointed out for some days that they had trained together, Alexei was for her a sympat'etic support, not all the time pushing her aside or back from the audience, and this was very necessary for her temperament. Jake gave in, since Alex was an all-right dancer, and since there would be no necessity for him to listen to Alex's line of talk.

The show ran a season, and in the course of the season Jake married Tatiana. This did not seem such a good idea to him at the time, but he had fallen in love with her and couldn't very well help himself. He had always intended to marry someone who was not in the profession, say a schoolteacher or a girl whose father had some money.

It was a queer marriage, Jake thought one afternoon, lying in bed and watching Tatiana vault over a chair on her way to the door. Tatiana was famous now, in the role Jake had thought up for her, the role of the little shopgirl which that heel, Alexei, had tried to tell her was beneath her. Jake had a new idea for her next show; this would be a ballet about a first ballerina who married a choregrapher, and it w good. The present show clos week, and Jake was very hap sidering offers for next year. was very happy, and let it go at thought, watching Tatiana. phone rang. She answered, shrieked, and began to chatter Russian. This conversation went on while Jake finished his breakfast, rose, bathed and shaved.

"*Da, da, da!*" said Tatiana, waving Jake nearer to the phone. "Jascha, it is Alexei. He has idea—wonderful!—for a ballet." She hung up. "He comes now here to tell you about."

Jake thought that two-thirty P.M. was too soon after breakfast for a highball, but he had one anyway. Alexei arrived and waited graciously while Tatiana gave his ballet idea a build-up.

"And there is for me such a part!" said Tatiana finally. "This you will love, Jascha. I will be Peace—in mauve, I see it, something very simple."

She rose and stood by the window in a pose at once drooping and noble.

"What are you, Alex?" asked Jake.

"I am naturally the Young Soldier," said Alexei. "For the minor parts we have Love, War, Wice, Fascism, Democracy—"

"Wice?" said Jake.

"Wice—vice—you say vice? And for the music—the Beethoven Ninth, with naturally the voices subdued in the finale. I have thought it all out—"

After a long time he was silent, and then Tatiana rushed to him and kissed him on both cheeks. "Jascha, is it not wonderful?" she cried.

"Wonderful," said Jake. "It's just not my type."

THEY assured him warmly that it was his type, and then Jake told them that he wouldn't touch it with a ten-foot pole, that the idea stank, and that it was their job to dance what he told them to dance, and to leave the rest to him. Tatiana and Alexei discussed this in Russian, and Jake left them to it.

That evening, at the show, he noticed for the first time that Alex was putting too much warmth into his role of the shopgirl's lover. By the third night, he began to wonder what Alex had been to Tatiana in the fond days of the Ballet School, and by the end of the week he was wondering w was to Tatiana right here and

This thought tortured him s came near to giving in about let, which was now entitled and Light. Tatiana rose from his lap a before him, drooping yet not

"Jascha, for the last time I you, will you do this ballet?"

Jake hesitated, wondering was anything he could do to junk presentable, wanting ab please Tatiana, and then Al cuted an *entrechat*, Tatiana ward him in a pirouette *tour* and Alexei caught her and he his arms before Jake.

"Tanyushka," he cried, "you vine. I am inspired!"

"I won't do it," said Jake, able that he sounded angry Tatiana made an exit, fol Alexei, whom she sent back later for her cape.

Jake heard about her. about her from his friends, sympat'etic waiter, from Va Billboard. It was easy enoug tiana, of Sidewalks of New Y a producer. She went into sive musical—with Alexei, o and Darkness and Light wa in the advance publicity. Jak picture everywhere, before th tion; he saw her charming

ir at him from the posters, as on t night she had stared at him n e train window, and then she is d, for the ballet was a flop, and s w with it.

'H N Jake came into the Gala Club. th headwaiter shook hands with d took him to a ringside table. e's iew ballet, Marriage in Three- ar Time, was a hit, and Hollywood t ing to get him, promising him -h dred dancers and an acre of ge. A Hollywood representative was h I tonight.

Li n, Jake," said the Hollywood res tative, "we want something ab- ute big. Now you're the man to it.

'Sv theart," said Jake, "I'm the n t do it. All we got to agree on l i he price."

W 's your proposition?" asked H ywood man.

W I'll be damned!" said Jake, ing p in his chair.

'Yo e surprised?" said the Holly- od n. "Name your figure, is all."

'La , sweetheart, later," said Jake, tch, Tatiana and Alexei follow the adw er to a table behind him. Did y I e a job, or what? He hadn't ard word about them for a whole son So that heel, Alex, was still oun A fine thing. Jake closed his outh mly, feeling sick inside to dis- ver at he still loved her, and he ook s head to a staggering offer m t Hollywood representative.

The the drums rolled, the band der me out with a bunch of col- d l loons, and Jake got it. Ta- na d Alexei pushed past his table the ance floor, and Jake saw that e w ballet shoes under her tulle ess. either of them had seen Jake; y w e watching the yellow balloon. 'Na your figure," said the Holly- od n. "Write your own ticket."

But ke was watching Alexei lead han to the wrong side of the floor, ar th door. The balloons were set se. d they blew to the other side, ay f n the door. Tatiana floated in xei' arms, watching him, waiting his rections. When at last Tatiana spec she came down empty-handed, d on f the yelling girls had captured yel v balloon.

She nped again, and brought down due lloon. Alexei grabbed it from so rcely that it burst in his face, h a ud pop, and there was noth- in i As they passed his table, Jake rd Tiana's furious whisper:

'Wh ou didn't tell me right? I ask o y —why?"

'You on't like my proposition, name me one," said the Hollywood representative.

"Just a minute, sweetheart," said Jake, turning to watch the table where Tatiana and Alexei sat before two large, untasted sirloin steaks. "This is going to be good. I need this."

Alexei stood up and left the table, and then Jake rose from his chair. "Be back," said Jake, departing.

Even when he stood before her, Tatiana did not see him. She was watching the doorway for Alexei's return.

"He isn't coming back," said Jake. "He's going to be washing his hands for a long, long time, what I mean."

"Jascha!" cried Tatiana, and tears came into her large eyes. She stood up and threw her arms around him. "Oh, I have miss you!"

I'll bet you did, thought Jake, looking at the two steaks and feeling miserable. He pushed her, not too gently, back into her chair, and sat down opposite.

"What goes on?" said Jake.

"Jascha, you also are here," said Tatiana. "You have maybe got the yellow balloon?"

"No," said Jake.

"Never mind, darling," said Tatiana. "I have still my wedding ring. We give it for the steaks, isn't it?"

Jake could not answer, being a man of ready emotion, and one not eager to display it. He motioned to the waiter.

"Check," said Jake. He caught Tatiana's hand before she could present her ring to the waiter. He went on holding her hand while he paid the bill. "Now," he said, "how's about you put on that ring and come on home?"

HE WATCHED her for a second, and then gave her his handkerchief. Tatiana wiped her eyes, and spoke happily to the waiter. "My husband," she said. "He is so sympat'etic."

The waiter nodded.

They were at the door of the Gala Club when the Hollywood representative caught up with them.

"What's the idea?" he said.

"Baby," Jake said to Tatiana, "what do you say we take a chance on Hollywood?"

"You will tell me what to do?" said Tatiana. "Well, then."

"Okay, sweetheart," Jake said to the Hollywood representative. "See you tomorrow about arrangements."

Jake shut the door of the cab and they drove away.

"Who he is, this man?" said Tatiana. "I think he suffers."

"Oh, baby," said Jake, putting his arms around her. "*I* suffered."

"I also," said Tatiana softly.

# Spend Christmas with Us

Continued from page 11

against one another, and with each furious buffet of the wind looked as if they would collapse like balanced cards.

"Then why can't we have presents tomorrow if we can't have 'em today?" Margy presently demanded in the tone of a child who has asked the question many times before.

"Ma told you. Becuz Harry's sick," Willy said reprovingly. "She ast that seventy hundred times, di'n't she, Ma?"

"I don't know what she did; I know I'm going crazy," said the only other occupant of the kitchen, a pretty woman of about thirty whose natural prettiness was spoiled by the anxious lines of her face, the disorder of hair and clothes, and the almost violent nervousness of her manner. "Christmas is for folks that have some time for things," she added in an undertone "without a sick baby and a backache all the time!"

The kitchen looked as a ranch-house kitchen must look on a wet afternoon when there are small children in the family and there have been heavy rains. To the usual disorder, a certain amount of Christmas flurry had been added. A large plucked turkey lay across the ragged oilcloth of the table. Cranberries had rolled gay and red from a paper bag that stood near him. A chopping bowl, into which stale bread had been crumbled, was on a chair; pie shells waited on another chair, but the pumpkin mixture that was intended to fill them had been carried no further than the boiling point. Its cut cubes drifted idly in a saucepan of warm water.

OTHER Christmas indications were partially concealed in certain paper bags set high on a shelf. Through their flimsiness the red of a fire engine could be perceived and from the top of one the fluff of a doll's hair protruded. But Em'ly Atkins, whose children and whose kitchen these were, was in no holiday mood, and as she ineffectually gathered up a few dishes here or wiped a table surface there, she carried on a gloomy monologue far from the spirit of the day:

"You'll not have your presents until I can get 'round to wrapping them, and maybe that'll not be until Sunday. And if you cry, Margy, you won't get 'em at all! With Harry so sick and the rain pouring down and Aunt Zoe having a baby I'm at my wit's end, and I don't want to hear any more talk about Christmas! I've got to stuff this turkey, and if it isn't cooked by the time you have to go to bed—"

Her voice droned on and on as she went to and fro. Once a baby cried acidly from an adjoining room and she went in there and could be heard crooning for a moment. Then she came back and lifted the turkey, shifted it a little, measured it to an empty black roasting pan. Finally she got a knife and began to sever the scaled feet from the legs.

Margy and Willy drew near, fascinated. Their mother sighed wearily, handed each a claw as a matter of course. Silently the children flexed the tendons that made the claws shut and spread.

"These are our Christmas presents," said Margy. Em'ly looked at her in a sudden pity that included pity for herself.

"Mamma certainly threw you down this Christmas!" she said.

"But it's still Christmas?" Margy suggested on a hopeful note.

"Oh, sure, it's Christmas. But I'm not going to get through all this. It's three o'clock now!"

"We'd just as soon not have our presents wrapped," the little girl persisted.

"You wait until Papa comes in and we'll see," Em'ly said. But when a man crossed the porch and opened the door to a rush of fresh air and stood hesitating in the doorway she was suddenly all despair again.

"I'm pretty muddy," he said.

"Oh, that doesn't matter," his wife answered, beginning now to saw at the turkey's neck. "They've been tracking it in and out all day."

"How's Harry?"

"I think he's awfully sick." She laid her untidy head against the great cold bird and burst into tears. "I just feel as if I was going crazy, Joe," she sobbed. "I've not got one thing done! He's been fretting ever since lunch; I've not touched the tree—I don't know where the trimmings are—I've got this turkey to dress—the cranb'ries aren't picked over—"

"Well, say, hey, hey, hey, Em," he protested gently. He came in his great clodded boots across the already cluttered floor and patted her bowed head awkwardly. "Don't you let all this get you down," he comforted her. "We don't care when we get our turkey. As for the presents, why not hand 'em to the kids now? I'll get the tree in here and get it started; I know where that box of fixings is—"

"I WAS going to have candles, and fix up wreaths and things around the windows and get the dining-room stove fired up," Em'ly said, looking up angrily. "It isn't my idea of Christmas to be worrying about a sick baby all day and not be able even to get that Mexican woman to help me!"

"She's laid up, Em; it ain't her fault."

"Well, I've a good mind not to give her her present!"

"Now that isn't like you," Joe Atkins said mildly.

"But I'm so worried about Harry, Joe," she faltered, beginning to cry again, "and it's my first Christmas without Mamma, and I've been thinking about her all day, and how she sat in the kitchen chamber here, not able to move hand or foot for seventeen months!"

"She was glad to go." He had brought in a small furled pine from the cold washroom that opened in back of the kitchen, and was shaking it gently to and fro. "We got a real pretty one," he said.

"POP, can we help you trim it?" Margy demanded.

"Yes, sure you can. But first you see if you can't help Mamma clear the kitchen. Can't you take the coaster and some of the blocks into the other room?"

"I wish you'd go in and feel Harry, Joe. He wouldn't touch his lunch and he feels burning hot; he went off about an hour ago but by that time my back was so bad—" Em'ly loaded the turkey over to the sink and flopped it down heavily. "There doesn't seem to be any room for anything else in this kitchen while you're in it!" she muttered.

Joe came up from some lower region with a cobwebby cardboard box of Christmas-tree ornaments.

"Any news from Zoe?" he asked.

"No. I got Chess once and he's just about crazy. But I tried to telephone again and I think the line's down. He says his mother's there, and I guess things'll go all right. But her losing the last one, and then Mamma going—" Em'ly's eyes watered and she busied herself with the dishpan.

"You brood too much, Em'ly," the man said, sympathetically.

"Every time I look into that room, and see her shawl my father gave her that cost fifty dollars, and now to have Harry sick in there, it just seems like it comes over me fresh," Em'ly said.

"That isn't any way to feel on Christmas Day."

O R HOLIDAY TABLES, folks find wine brings an added, genial note. A note of quiet end ip . . . of hospitality and good cheer. Wi comes to dinner d ou guests take more aste in good food d g d company. For lifo ia wines like red rgu dy and golden ater have been made rais o perfection the vor roast turkey . . . de friendly times our hristmas table.

And holiday wine serving, lately, has spread out a bit from the dinner table, too. Sherry with appetizers, for example, now opens many a holiday party. Nutlike and tempting in flavor, Sherry is possibly the world's best-liked prelude to a good meal.

Or in the evening when friends drop in, rich full-bodied Port is brought out with sandwiches or platters of cold sliced turkey and thin buttered bread, or with just a plate of fruit cake.

However you serve it, you'll discover that wine offers a moderate, simple way to be hospitable. It brings a warm-hearted welcome—the kind of welcome that millions find best in times like these.

For an interesting free booklet on serving California wines write the Wine Advisory Board, 85 Second Street, San Francisco. The wines of our native land, connoisseurs will tell you, are excellent by any standard in the world. Sound, well-developed, inexpensive.

AMERICA'S FINEST FOR CAR AND HOME

phone the doctor again, but the wires are down."

"I know they are. I was goin' to phone this mornin' in case Joe was comin' into town. Well, Zoe had her baby yet?"

"Chess phoned early this morning and said things were starting."

"Well, her baby's goin' to have a nice birthday. Poor girl! Those are the minutes that are two hours long, as we used to say. Frank Clute, that used to be Pa's partner, told me one day his wife had had an easy time, only sick four hours. 'Yes,' I says, 'but it don't take that long to pull a tooth and yet I don't see you men lookin' forward to havin' one out!' "

Em'ly laughed unexpectedly at this, and immediately Joe and the children laughed too, and the atmosphere lightened. A certain friendliness and companionship made the kitchen cheerful.

"That about right for cinnamon?" Em'ly asked, over the pumpkin mixture.

"I always put a tablespoonful of molasses in, too, and a pinch of salt. Pumpkin's apt to be kind of meanin'less, and you've got to spice it good—" Mrs. Atkins was beginning, when there was a knock at the door. The early winter dusk was beginning to fall now, and for a moment nobody recognized the visitor.

"COME in, Hank," Joe said then. "It's Hank Carozzi," he told the women.

"Chess Carter just phoned my house. No, thank ye, I won't come in; I'm all mud," the lanky big fellow said apologetically. "Your sister's real sick, Mis' Atkins, and they wanted you should get over there tomorrow if you can."

"Tomorrow!" Em'ly said aghast. "They don't expect she's going to be sick all night! Oh, Joe," she broke off frantically, "I've got to go now! If you'll take me to the five-o'clock stage I'll be there by half past six; I can change at Sierra Vista. Oh, Joe, Christmas or no Christmas, you'll have to help me! She's my only sister, and Mamma died only last August—"

"Don't you fret," old Mrs. Atkins' deep voice broke in reassuringly, "there's lots of girls go two days with a baby. You wrap up good and have Joe take you right over. You'll be there by six."

"But I can't leave everything—Christmas and all—" Em'ly stammered. Even as she spoke she was unbuttoning her cotton kitchen dress; five minutes later she and Joe had returned from an upstairs room, coated and mittened for the trip.

"I don't know when we'll get back, Ma!" Joe said.

"There isn't anything you can do for Harry, Mrs. Atkins," Em'ly put in nervously, "except just keep him quiet."

"Now, you go right ahead and don't worry, Em'ly," the other woman said. "You'll feel better if you see how things are for yourself. Drive careful, Joe, the roads are regular mudholes. Margy and me'll keep house until you get back."

"Me, too!" said Willy, crowding against her.

"Yep. Willy too."

"You know where things are if they get hungry?"

"Yes. I know where things are in this house."

IT WAS dark, it was almost eight o'clock when Joe and Em'ly got back. She was quiet and tearful on the long drive, but they were happy tears, and she rested against Joe's shoulder as he drove in a way that made him in no hurry to get home. Little spitfire Em'ly had her gentle moods, he thought. Poor kid, she'd had more than her share of worry and work this last year, a sick mother, a young baby, the care of a farmer and two small children, added to all the straining and preserving, milking and chicken care, baking and sweeping that were everyday routine.

"I've thought fifty times what a comfort it is it's your mother with the children," she presently said, "instead of Maria. All she thinks of is perfume and boys."

"I'm thinking that, too." But he didn't dare add any more, and they went on in silence.

The kitchen lights shone out at them warmly when they came in, cold and spent; the kitchen shone too, the children's faces shone, and the old eyes behind Gran'ma Atkins' spectacles were shining. Possibly a finicky housekeeper would yet have found much to correct, but the toys had been put away, the table was cleared, and the good odors of boiling onions, roasting turkey, baking pies were rich in the air.

"You didn't get that turkey in!" Em'ly protested, unwrapping.

"That turkey's just about cooked. Why, that ain't the first turkey by a hundred that I've cooked in that stove," the older woman answered. "The children helped me clear up, and they trimmed the tree, and we were just wondering if you were having supper over to Carters'. No good news yet?"

"She's got the prettiest seven-pound baby girl you ever saw!" Em'ly said, sitting down at the table and bursting into tears. Margy and Willy crowded against her.

"Mamma, di'n't you want Aunt Zoe to have a baby?" Margy asked aghast.

Em'ly laughed, still crying, wiped her eyes and kissed her daughter.

"It's because I'm so relieved, dearie. She's been so upset, and a year ago her poor little girl died. And how d'you think Harry is?" Em'ly asked.

"Why, there's nothing the matter with him, Em'ly," Joe's mother answered. "He woke up about five and begun yellin'; he was hot and mad and I brought him out here. I fixed him up some oil with soda and orange juice and put it in his bottle and took the chill off it, and 'Look here, young man,' I says, 'who's boss here, you or me? Now,' I says, 'you put that where it belongs or I'll paddle you good!'

"That's a smart baby, Em'ly," she added, as Em'ly, fascinated, could only meet the narrative with eager attentiveness. "He looked up at me real saucy; I could see he was meditatin' re

O J came back fifteen minutes later
to d everything proceeding with
expe ed speed and energy. The din-
roc had been cleared and brushed,
fire eplenished, the children estab-
hed ere with their Christmas toys.
wi and mother were deep in shy
friedly talk as they went with ex-
fienc ease through the business of
shin up.
Ever while he watched them, as he
see d at the kitchen table and stuff-
his pe, they finished the last glass
spo . The demolished turkey went
ck i to his pan and into the cold
uet; e vegetables were moved into
all cna containers; tomorrow's din-
we all ready tonight, except for
ne cual heating. Not a spoon or
trea of water or a trail of crumbs
vi le in the kitchen. Em'ly sat
wn arily beside her husband, but
old woman kept serenely busy,
ting acked wheat to soak, strain-
gre pails of milk into wide pans
carrying them into the pantry one
one

"Sit down; you must be dead," Em'ly protested.

"I don't know when I've had such a good time. Seems like the old days," her mother-in-law answered. "We used up most of the bread on that dressing," she presently said; "I b'lieve I'll set some biscuits."

It was warm and pleasant in the orderly kitchen. Em'ly yawned undisguisedly and put her elbows on the table, resting her chin on her hands. Gusts of wild air smote the roof; the rain fell steadily.

Presently old Mrs. Atkins finished her activities, put the hot, clean milk pails on the porch shelf outside, sat down and smiled at the others.

"I was thinkin', Em'ly, since it's pourin' so hard and the road's so black at night, that I'd be glad to stay and sleep in there with Harry," she said, somewhat hesitantly. "He wouldn't bother me a bit; I sleep light, and it'd mean you could get a real rest. I boiled some water for him; it's on the window sill outside getting good and cool, and I can manage him easy. I'd be real pleased to do it."

"I'd hate to put it up to you—" Em'ly answered, hesitant in her turn.

"But she wants you to, Ma!" Joe put in. "You don't know what a night's sleep would do for her!"

"He won't stir in the night. But you'd lie awake thinkin' he was cold or feverish or goin' to wake up."

"You'd be awfully kind," Em'ly murmured, a little embarrassed.

"THERE'S something I wanted to say to you two," the older woman began after a moment's silence, during which Joe had pulled on his pipe, Em'ly had stared into space with a somewhat reddened face, and she herself had looked dubiously from one to the other. "I didn't know as I was goin' to mention it, but it might get Margy into trouble, and she's such a confidin', lovin' little soul that I wouldn't want that. I'd rather tell you myself."

"She broke the Santa Cruz pitcher!" Em'ly exclaimed.

"No, she didn't break anythin'," old Mrs. Atkins said smiling. "But when we were out gatherin' the hens' eggs she spoke up and says she, 'Gran'ma, did you get my letter?' 'Yes,' I says, 'I did, dearie, and I thought it was the nicest letter I ever got.' "

"Who wrote you, Ma?" Joe demanded. "I was going to come in and see you," he added on an explanatory note, "and then I had a lot of trouble with my hogs, and I had the vet here, and then this morning our telephone wires came down—"

"I know, Joe. But she wrote me."

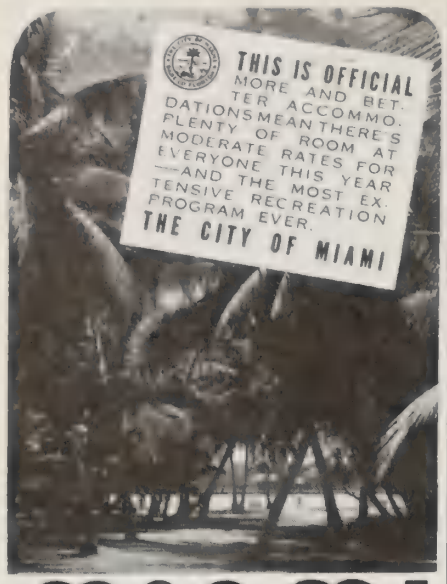
"Margy did!" This was Em'ly, amazed.

"Yes, she wrote me ten days ago, but seems 'twarn't mailed until Tuesday. I only got it yesterday."

"What she say?" Joe demanded, puzzled, his pipe in his hand.

"She ast me would I come here for Christmas dinner," his mother answered simply.

"Margy did?" Em'ly asked quickly.



"Yes, she wrote me a real sweet letter. I thought, of course, you and Joe had put her up to it," Mrs. Atkins said.

Joe looked at his wife. Em'ly flushed, and a faintly hard, stubborn look came about her mouth.

"Joe said something about it," she began defiantly, "but what with Zoe's baby expected and Harry sick and feeling like I did about Mamma— And anyway," Em'ly interrupted herself, "I never said anything to Margy about it."

"Well, I know how you felt." The older woman accepted the explanation simply. "But it never came into my head what had really happened," she went on; "and I didn't want you ever

to blame Margy. It made me real happy all day yesterday. I don't know when I've been so happy."

Joe cleared his throat.

"What did happen, Ma?"

"Well, here's what Margy told me. When we was getting the eggs she piped up and says, 'Gran'ma, did you like my letter?' I says, 'Margy, that was just about the nicest letter I ever got.' She says, 'It was better than all the others.' Of course I asked her what others. 'Oh,' she says, 'we had to write 'em in school, and Miss Miller said that the three best letters she'd put stamps onto 'em and mail 'em herself. She ast was our mothers and fathers alive, and some was and some wasn't, but the ones who lived with their fathers and mothers she says to write to our grandmas or our cousins, a real nice Christmassy letter. She says to tell 'em Mamma and Papa wished they'd come to Christmas dinner.'

"Seems Margy's letter was one of the three best," Mrs. Atkins went on in a silence, her apologetic smile going from one young face to the other, "and Miss Miller promised she'd mail it before Christmas. Well, the young one pasted Santa Clauses and silver stars, and dear knows what all, all over the outside, and I can tell you I was tickled when it come in the mail yesterday. I was going to telephone Joe about gettin' out here in the storm, but Dave Pierce was comin' out to get Mis' Wilson's mother, and I told him if he'd get me out here my son would get me home."

"Yep; that ain't much to do," Joe said gruffly.

Em'ly spoke up quickly and nervously, looking only at Joe.

"Your mother said she'd stay maybe and sleep in Mamma's room with Harry tonight."

"She sure would if you'd like her to," the man said kindly. He gave his mother a look that asked her to be generous.

"The minute I came into this kitchen," the older woman went on with her story, "I saw that something was wrong. It didn't take me a minute to see that I wasn't expected. The children would have known it if you'd expected me, and first thing I thought was, 'I told Em'ly a year ago that I'd not come back until she wanted me, and here I am walking in on her in grief and anxiety, with a sick child in the house!'

"I DIDN'T know just what to say. Seemed as if, gettin' here in such a storm, it'd be kind of silly to say, 'Son, there's some mistake, and if you'll get me back to Mis' Wilson's I'll feel happier.' And beside that," Mrs. Atkins said, her smiling eyes suddenly filling and her strong mouth trembling a little, "you don't know what it meant to me, after livin' in that one room at Mis' Wilson's—the blue paper and the towel across the top of the bureau and the picture of me and Pa on our wedding day—you don't know what it felt like to be back here in the kitchen, with dishes to wash and an oven to watch and the baby sweatin' his fever off in the kitchen chamber. Just thinkin' about wipin' off the children's faces and hands before supper, and huntin' eggs, and gettin' the turkey into the oven seemed heaven to me. Thinks I, 'I *did* get that letter, sayin' I was to come, but Joe and Em'ly don't seem to know anythin' about it.'

"Well, then come the message from Zoe, and you folks left me in charge, and I don't know as I've ever been so happy. I wished the afternoon could go on for a week. The children was angels, helpin' and laughin' and tellin' me this and that. And then Margy asked about her letter and I seen the whole thing. So that's how I come to be here, Joe and Em'ly, and it's made a real Christmas for me and I thank you both."

"You don't have to thank us," Joe protested, clearing his throat after a moment's silence. Em'ly spoke proudly:

"You and I didn't have any quarrel, Mrs. Atkins," she said. "Anyone who says we did is telling a lie. It was just that someone told Mamma that Mrs. Banks over to the store said that you'd said I was lots older than Joe. And that made Mamma mad."

"Well, I may have said that to someone; I don't recall it," the older woman admitted, thoughtfully. "But I certainly didn't to Hetty Banks; she don't need anyone to tell her anything—she knows it all. If I did, Em'ly, it didn't take me long to find out that Joe couldn't have a better wife or a more lovin' one, and I've said that, too, to more than Hetty Banks!"

EM'LY, her face red and her mouth shut firmly, looked into space for a few minutes. Then she suddenly put her head down on the table and burst into a torrent of tears.

"I don't know why everyone treats me so mean!" she sobbed. "Papa always used to call me 'Giggles' becuz I was so happy all the time, but now with Mamma dying and Zoe so sick and Harry in a fever and Frank Blake being spilled off the truck and killed right before my eyes and me left alone with Margy—"

Joe got up and went to pat her shoulder, smiling at his mother.

"You calm down, honey," he said. "You've had a little too much to do. We'll see if we can't get Manuela or Maria."

"I don't want Manuela or Maria, I want someone I can talk to, someone that knows all the folks I know and can make the children stand 'round!" Em'ly protested thickly, her face still buried. "I've wanted her all the time but I didn't have the sense to know it! But becuz I'm a fool don't mean we have all got to be fools!"

"Ma, I guess that's that," Joe said, grinning, his eyes wet.

"No. Now I'll tell you what, children," his mother said. "I'll stay with the baby tonight, and Joe'll run me home tomorrow, and some day if you want me back for a visit—I've got to Ellen for three months in au you know—"

"Mamma, what's the matter?" M alarmed, demanded from the doo She ran to her mother; stood star the others.

Em'ly sat up, wiped her eyes an her nose, and, putting her arm abo child, said rather thickly, but steadily, as she buttoned and str ened Margy's sweater:

"You go over and give Gran'ma and you tell her that Mamma an want her to come here and sta that if she goes to Aunt Ellen to b Tommy and Kate in the fall she's come back here becuz this is hom say it as pretty as you can, Marg maybe she'll say yes."

But Mrs. Atkins, as the child her, her arms about Margy and h hidden, could say nothing. She two attempts; they faltered aw silence.

"Well, Joe—well, son—" she aged finally. Em'ly laughed, got feet.

"Now, you children trot up t she said. "Kiss Papa, kiss Gran'm beat it! You'll have all your thi morrow, vacation isn't over. I'm in to get Gran'ma a nightgown a a look at Harry."

Joe came over and knelt down kitchen floor beside his mother, a put her arms about him and rest cheek against his rough thick hai

"Seems like mothers get kind gry for this, Joe," she said after ment.

WHEN Em'ly came out her h was shaking down the range, mother-in-law was at the open chen door calling the cats in. Th had suddenly grown cold; the r stopped; a white moon was ridi among fleeces of cloud. Good sn rain and earth and woods pen the warm air of indoors.

Em'ly opened a soft old Paisle and put it about the other w shoulders.

"That's my Christmas present Ma," she said.

### The Story Thus Far:

PORTLAND, Oregon, while the Civil War still raging, Diana Castle, an attractive, strong-willed girl, runs away from her father, who is trying to force her to marry a man whom she does not love. With a young man—Jeff Pierce, who, having killed a brutal sea captain, fears the law, feels that he dare not risk a trial in Portland, goes to the new settlement known as Virginia City.

There, in that bustling mining center, they part company. And soon both are making a success—Diana, by baking pies for a restaurant; Pierce, by working a claim that he stakes on the advice of a friendly prospector: Morris.

Some time after he reaches Alder Gulch, Pierce learns that a gang of crooks and bandits is operating in the Virginia City area. He is, therefore, not surprised when Morris—preparing to return to his wife, in Ohio—asks him to take his hard-earned savings (worth eight thousand dollars) to near-by Bannack.

On the understanding that Morris will follow in a week, Pierce goes to Bannack with the money, which he deposits, for safekeeping, at the express office. But Morris never reaches the town alive; he is murdered by the gang, which learns, from Morris, of the disposition Pierce has made of the gold.

Disgusted by the decent element in the community, the sheriff—a man named Plummer—is actually the head of the bandits. His chief lieutenant is George Ives, a clever scoundrel whose reputation Pierce has incurred. At a meeting of the gang attended by most of the members (including Deputy Sheriff Gallegher and Ollie Rounds, who, although he, too, is a thoroughly dishonest man, has been forced against his will to join the band of ruffians) Plummer issues orders that Pierce is to be killed. He intends, he says, to rob—and then murder—the entire Alder Gulch area. . . .

Ollie Rounds (who has traces of decency in him) and Ben Scoggins, a trader, call on Pierce at his cabin in the Gulch. As the three converse, a neighbor—Archie Caples—is attacked by a man who rides up to his campfire out of the dark. Pierce, seeing what is going on, rushes to the rescue. He knocks the attacker down, exchanges shots with someone who is hidden in the darkness. Then, listening but unable to see much, he hears steps on the upper side of a near-by ridge.

She forced him across the room and flung her full anger at him, "Don't come back—don't ever come back!"

### V

PIERCE came back, his breath lifting and falling. He found Scoggins and Ollie Rounds and he said, "It's me," and moved on to Archie Caples' water-damped fire. A few coals still glowed and by that light they saw Caples standing spraddle-legged and alert, both hands clasped around his head. "Fellow got away before my eyes done me back."

Men were running in from all corners of the Gulch; and a lantern swung forward. Pierce stood lank in the growing light, water shining on his hat. "It wasn't for you, Archie. It was for me."

The oncoming lantern touched these men; and then Ollie Rounds turned and stepped back into the dark and waited while Ben Scoggins joined him. The two returned to their horses and started down the gulch for Virginia City.

"A funny thing," said Scoggins.

"No—not funny. They won't let him alone."

"Who are you talking about?" asked Ben Scoggins.

Ollie Rounds made no answer to that. Later, on the edge of Virginia, he mentioned something else: "He knew what was up the minute the fellow hit Archie Caples. He knew it all—and he knew what to do. He's cut out for it. You and I are not. You stick to your trade and let Jeff handle the beasts in the jungle." At Wallace Street Ollie turned from Ben. He said again, "But they'll never leave him alone. Too much for one man, no matter how good he is."

THAT was Friday of the second week of his steady labor; on Saturday he worked steadily through the day, cooked his supper and sat back from his fire and slowly smoked his cigar; and as he smoked it the two weeks of unremitting work caught up with him and he felt the staleness in him, and the taste of the cigar grew unpalatable. This was always the penalty of solitariness. A man fed upon himself until his fat was gone and then he had to have another kind of nourishment. Rising, he killed the fire and struck for town.

Virginia, in two weeks, was a different camp. It crowded against the Gulch walls, it stretched up the Gulch and it spilled down the Gulch. Cruising forward, he came upon new streets which fourteen days before had not existed and, pushed to the edge of the walk by the crowd, he found himself facing a small single-story frame building across the way on which a newly painted sign said: "Diana Castle's Bakery." He threaded the tight-jammed wagon traffic to the bakery door and as he came to a pause before it he heard Diana's voice at his side: "How are you, Jeff?"

He didn't at this first moment turn to look at her. He kept his eyes on the shop's doorway, and he spoke in a tone as indifferent as her own: "This is it?"

"Yes. It is just finished. The stove was set up today. It was supposed to be for a restaurant down in Central but Ben Scoggins dickered the man out of it."

She went into the shop and came about. He stood fast, seeing the lovely

# The Higher the Better

Continued from page 20

operate at maximum efficiency at altitudes of 16,000 feet and higher—but definitely below the substratosphere—by use of superchargers geared to the engine, driven by mechanical power.

The value of the turbo-supercharger is that it carries sea-level efficiency of the plane motors into the substratosphere.

The turbo-supercharger is not geared to the motor. It is on the turbine principle—that is, a rotor turned by a stream of water or steam or gas—in this case by the hot gases of the motor exhaust; an immensely valuable but otherwise wasted source of energy.

The red-hot exhaust, instead of being allowed to escape into the atmosphere, is conducted through a tube and directed against the vanes of an impeller, or turbine wheel. This sucks outside air in, and "hurries" it back to the carburetor.

The metallurgical and engineering principles involved in dealing with turbine speeds of nearly 30,000 revolutions per minute, exhaust fumes at perhaps 1,500 degrees Fahrenheit, and outside air temperatures of lower than 60 degrees below zero are fundamental secrets of the turbo-supercharger. They are part of the reason that aviation circles here believe that even if the Germans have salvaged the turbo-superchargers from the eight Flying Fortresses they are known to have shot down to date, it would take a year or more of analyses and research before they could duplicate them.

And that's all I can tell you.

## The Man

Sanford Alexander Moss, B.S., M.S., University of California, Ph.D., Cornell, makes a curious impact upon any person with an orderly sense of the fitness of things. Inventor of the turbo-supercharger, which makes new degrees of massacre and terror possible for bombing planes, he is shy, gentle, kindly and full of old-fashioned virtues and scruples. One of the world's great scientists—colleague of Steinmetz, Alexanderson, Langmuir, Coolidge, the rest of the famous General Electric group—he is impish, unpredictable, incorrigibly young. Awarded 45 patents for mechanical devices, holder of scientific honors, member of learned societies, in appearance and mannerisms he is a movie director's typical idea of an international detective.

Probably the first thing Dr. Moss will do is ask you to match quarters with him. His associates warn you he uses a two-headed quarter. But he takes a mathematician's refuge in arguing that the law of chance guarantees him an even break—and that in a lifetime of "gambling" he is neither ahead nor behind.

He is small, birdy, quick-eyed, lively—a man whose leg you love to pull. His associates are always doing it. Yet from behind his informality shines boundless dignity and courtliness, upon which no one ever trespasses.

He was born in San Francisco on August 23, 1872, silver-spoonless. From age seventeen, he was entirely on his own. As a machinist's apprentice in San Francisco he earned $4 each 55-hour week, studied drawing and algebra at night school until he earned his credits for the University of California. Once matriculated, he supported himself by cleaning the college machine shop, driving a laundry truck, bookkeeping, reading to a blind student, correcting examination papers. He instructed at California, while getting his master's degree; at Cornell while making his Ph.D. Gas turbines became his passion then; and his researches so interested General Electric he was engaged to continue them. Which he did so well that many of his adaptations became integrated with the company's vast industrial business.

When the United States entered the first World War, he was asked by the government to investigate the problem of superchargers for airplanes—on which some inconclusive work had been done here and abroad. He carted his turbo-supercharger up to Pike's Peak but the work was too late for application in that war. In the early peace years, however, at McCook (now Wright) Field, there were happy practical results: United States Army planes with his turbo led the way into the substratosphere.

Discouragement came, because the Army and industrial people who didn't believe in high flight outnumbered those who did. The turbo went on the shelf; and so, in 1938, after 35 years with General Electric, did Sanford A. Moss.

The war came, with its lessons of altitude, its swift conversion of die-hard minds—and loud yells for Dr. Moss. You know the rest.

At sixty-nine he is the liveliest man in the Lynn works. A speed demon, he is forever arguing with traffic cops—and usually wins because he knows more about the law. He still doesn't like to fly, claiming, reasonably, "What's the use; I can't get out *in the air* to fiddle with the turbo-supercharger!" When the notion seizes him, he will have his beard shaved off without warning. Once he conferred with two colleagues half an hour before they recognized him. Another time, driving home, he waved to his daughter—who promptly ran away. She thought he was trying to pick her up.

He has that blessed faculty of men with untroubled consciences of being able to take a nap at any time or place. When he does so in his office he sits in his chair so arranged that anyone opening the door awakens him. Then he denies he was asleep. Forecasting vocations of children is a hobby. He says he can tell from brief study of any boy of eight what he is fitted to be in life. He can't pick out future inventors, though—because boys of eight don't have Van Dyke beards.

## The Valiant Little Gang

Behind Dr. Moss and General Brett—and both are most insistent in calling this to your attention—stand numerous colleagues, many unnamed to fame, such as those four Army privates who shared the bitter war autumn of 1918 on Pikes Peak. Some we know, at Dr. Moss' elbow notably was Adolph Berger, also Reeves, Jones, Chenoweth, Puffer, Grimes, and others.

The Air Corps adherents of the turbo-supercharger deserve a special word, for they held the thin line against traditionalism.

Within the Air Corps is an organization that has vigilantly followed the changing pace of world aeronautical science and, more often than not, led it. The Matériel Division was founded in 1917 as a "laboratory for aeronautical experiment, testing, and research in order to provide adequate aviation equipment for war purposes." Its modern purpose is approximately the same: its present chief is Brigadier General Oliver P. Echols and Brigadier General George C. Kenney is assistant chief. Just before the present war began, its laboratories represented an i of $10,000,000. Its little grou pilots and engineers stand fo the bravest annals of the a achievements, over 20 yea virtually all major aeronau velopments, commercial as we tary. High-octane gas, a li cooling liquid to replace th water, oil dilution for col starting, night flight, blind fli voice communication betwe and ground, metal propellers lable pitch and geared propel sure cabins, parachutes, all many other aviation steps w born or brought up in the Ma vision.

There, Dr. Moss' turbo-su was first proved, then believe a persistence against odds— against militarists who seeme planes were not here to stay, against airmen who scoffed a possibilities of high-altitude When this war came with its le Matériel Division was ready turbo at a practical stage.

The most spectacular day in tory was February 27, 1920, w Rudolph W. ("Shorty") Schr vice-president of United A alone in an open-cockpit, plane, fought to 38,180 feet a the first human to invade the sphere. There, oxygen exhaus numbed, he lifted his frosted a lookee. Seventy degrees b temperature instantly froze balls. Unconscious, he plu miles before he came to; hel lids open with one hand while plane on the ground with th and was carried to the hosp long stay, with heart and ot toms that gave McCook doct thing to talk about.

Lieutenant Elsey shared Schroeder's work. Captains Stevens took a turbo-su plane to more than 37,000 Lieutenant Macready later m record of 40,800 feet. Irvi Umstead—these and a fistfu brought records and glory Corps with turbo-supercharge

In the hectic controversy Billy Mitchell with ground-die-hards, the turbo playe Mitchell, for his demonstrati ing battleships by aerial bon wanted turbo-equipped plan all told, were prepared for de Mitchel Field, New York, t in Virginia. The crew of the monkeying with it in flight, a got oil into the turbo, and Langley in a state of smoke, confusion which led them t to the commanding officer Field that the turbos were n in turn, wired to Mitchel Fi tions to dismount the other

Whereupon young Lieute Wade, of first round-the-worl tory, wired back from Mitc teeing to deliver personally than 50 remaining bombers, Field would let him. It w matter for a young lie counterproposition a comm ficer thus. But Leigh was He got the permission—and Today Major Wade is in th Intelligence Division, in Was

# Retreat from Moscow

Continued from page 22

the left there was a lighted city. It was a beautiful sight. It is a beautiful sight, of course, only if you have lived month after month in blacked-out cities. This city, Kuibyshev, was so far from the war zone that it was not even blacked-out. The lights twinkled in friendly fashion and the train moved slowly on. We approached the lights and then the train rumbled across a bridge. We looked below into the sluggish waters of the Volga. Its banks were snow-encrusted and masses of ice and snow drifted lazily along with the current.

Morning came quickly and we had coffee which tasted as though it had come from heaven and we had black bread and jam and reveled in the thought that soon we would be in a hotel and in a hot bath and we'd be shaved and separated from these clothes that by now had grown on us. An hour later, of course, we discovered that there was a hotel, sure enough, but a hotel without a bathtub. But we didn't know that, as we stepped from the train into clean, crisp air.

On the station platform there was a signpost telling the mileage to Moscow. It read 630 miles. We had taken exactly 105 hours to make the trip.

---

Kuibyshev is a large, middle-aged city sprawling on the eastern bank of the Volga. The city wore a rather tired look, as though it had been through a lot. Nevertheless, today Kuibyshev is the wartime capital of Soviet Russia, the news center of the German-Russian campaign and headquarters for most of the government figures.

Stalin remains in the Kremlin, but his aides were nearly all here in this city of unpaved streets and ankle-deep mud, where personal hygiene and comfort are at a minimum. There was a time when the city was known as Samara. Samara is a lovely name, hardly suited to the bleak ugliness of this Volga city.

In 1937 it was renamed Kuibyshev. It was named after Valeman Kuibyshev, and his statue stands in the huge city square. This hardy revolutionist was a great engineer and city planner who was the genius behind the recapture of the city from the Czechs, who occupied it in 1918.

In the summer, when the warm breezes from the Volga blow over it, Kuibyshev is undoubtedly a clean, tidy-looking place, but when winter comes and a warm spell melts the snow one realizes that Kuibyshev has only four paved streets and that life here is more primitive than any city or village in the United States. Rivers of mud slopped down the streets into the Volga. Sleighs, ox-drawn wagons and automobiles became mired in the cloying combination of mud and snow; sewers backed up and water refused to run out of sinks and the very few bathtubs in town. Nature grabbed Kuibyshev by the nape of the neck and shook her, and we mortals unfortunate enough to be living here bore the brunt of her fury.

In 1935, when the last census was taken, Kuibyshev had a population of 200,000. But where once there had only been grain elevators, factories appeared, and the population almost doubled. Six weeks ago it was about half a million. Today it is swollen and bloated with the thousands of refugees who came here fleeing from the scream of Nazi bombs and the terror of Nazi guns. At least a million people now live in this dreary city.

There are two hotels in Kuibyshev—the National, which is reserved for Russians, and the Grand, which has been taken over by the correspondents, a few high-ranking Soviet dignitaries and an overflow of refugees. There were no bathtubs at the Grand and, to put it mildly, personal hygiene is almost non-existent. Nor was there any heat in the Grand, and we huddled together in the room of one of us lucky enough to have found a small electric heater. In many ways Kuibyshev (except for the virtual absence of beautiful women) would be a fine setting for an Oppenheim novel. Oumansky, recently deposed ambassador to Washington, lived across the hall from me, sharing his cheerless room with two others. The great Vishinsky lived down the hall, and day and night four NKVD (formerly the OGPU) men mounted guard at his door. Vishinsky smiled readily when we passed in the hall. He looked like a genial dean of freshmen at any small college, except that occasionally one noticed a hint of winter in his eyes. His eyes never smiled, and then one remembers that he was the prosecutor in the state trials that resulted in the execution and imprisonment of close to a hundred thousand Soviet citizens, many of whom, it is true, were traitors—many of whom would have made ideal fifth columnists today.

Secretary of State Molotov commuted between Kuibyshev and Moscow, and his chunky figure and bespectacled face were familiar in the main street of this town. He always looked as though he were watching someone else sucking a lemon. Before he left for America, genial, smiling Litvinoff was a familiar of the Grand. By far the most popular of all Russian diplomats, his appointment as ambassador to Washington was hailed with joy by all of us. The dining room at the Grand was usually filled with correspondents, diplomats and uniforms, all waiting very impatiently for vodka, cabbage soup and the monotonous but filling food we were given. There had been no fresh vegetables for weeks but there was plenty of butter and occasionally a sort of French pastry. We could buy five eggs a week at the local food store, and a half pound of cheese.

In the dining room there were Russian, British, Czech and Polish uniforms. Baldheaded General Vladimir Anders, commander in chief of the Polish army in Russia, usually dined with us, his ready smile and quick wit quite disguising the fact that only three months ago he emerged from a rather horrible two years' imprisonment in Russian concentration camps and prisons.

### Hats Off to the Poles

General Anders has an army of 150,000 Poles, all of whom hate Germans so they are willing to forget the past two years that all of them spent in work camps or prisons. One felt like taking off one's hat in the presence of any Pole there. Such magnificence of spirit, such fortitude under adversity and such insistence upon vengeance against the Nazi spoilers of their home is awe-inspiring. The Poles are wonderful.

In the dingy dining room of this dreary hotel were, usually, three or four ambassadors and smart-looking R.A.F. officers, and sometimes Colonel Faymonville, the brilliant head of the American Military Mission in charge of carrying on the work of the Harriman Mission of last September.

The Soviet insistence that Russians (except officially) should not mingle with foreigners precluded any kind of so-

URBANA WINE CO., Inc., Urbana, Hammondsport, N. Y.

cial life except that which we made ourselves. At least five nights a week we played poker at the Grand or the American embassy. If the expense accounts of foreign correspondents seem high these days it is due chiefly to the skill at cards of Charley Dickerson, first secretary of the American embassy, and Major Joseph Michels, acting military attaché. Lest one think that the embassy staff spends its time in riotous gambling I have to add that we played for the same stakes that the boys around the firehouse in any town play for. If it had not been for poker there is no doubt that many of us would have gone crazy.

The British embassy was the best and by far the most uncomfortable building in town. It is an imposing marble structure with large rooms. They are too large. The embassy staff sleeps eighteen in a room. Ambassador Steinhardt had secured a former schoolhouse for his staff. From the outside it was a drab three-story building facing an unpaved street that was perpetually mud-filled. But there were forty small rooms in the building and no one had to share his room with more than one other. So dependent were we on small bits of gossip to keep from becoming completely intellectually moribund that a new chair or a curtain wangled somehow by an embassy staff member was excuse enough for a party with vodka, salami and bologna to add to our gaiety.

Life was almost normal in Kuibyshev although the streets were filled with uniforms and at dusk each day new recruits drilled in the big square, with searchlights atop the magnificent palace of culture bathing them in pale light. Children, quite unaware that their country is fighting for her life, still learned their A B C's in the elementary schools. One of the most interesting features of Kuibyshev was the *Detsky Saf* on our main street, a nursery kindergarten where children of workingwomen were brought in the morning and where they remained under skilled supervision until the mothers called for them at the end of the day's work. Seen through big plate-glass windows, the sight of fifty clean, happy youngsters playing with dolls or toys was an antidote for less pleasant sights.

### Lining up for a Bath

I have mentioned the virtual lack of bathtubs in Kuibyshev. The British embassy had two and the American embassy four, two of which worked. But there were the public baths. You had to wait in line for a long time to be accommodated there, for 5,000 people a day used them. We never bothered, we found that the daily baths we were once accustomed to, though a pleasant affectation and a rather nice luxury, were neither necessary to health or comfort. One gets quite accustomed to going two weeks without a bath.

The public baths afforded us some amusement. One day I saw three ambassadors (Mohammed Saed of Persia, Haidar Atkar of Turkey, General Tatekawa of Japan) and three ministers (Pipinellis of Greece, Fierlinger of Czechoslovakia and Gavrilovitch of Yugoslavia) standing forlornly in line waiting for their turn to dip into the communal tub.

Kuibyshev was so swollen with unexpected visitors that we walked in the streets as a matter of course, trying hard to keep up a pretense of normality. Twice weekly there was a musical comedy at the local theater, and the Kuibyshev ballet company, inferior to the great Bolshoi Ballet of Moscow but still perhaps better than any ballet in America or Britain, rendered Don Quixote, gayest of all ballets.

Such diversions took our minds off

THURSTON GENTRY

the slaughter going on seven hundred miles west of us; they took our minds off the constant battle with the press bureau, by far the toughest censorship in the world. We tried desperately to get to the front and, failing that, to Moscow, but had no success. We almost made it, though. We persuaded a Russian playwright, Afinogenov, to intercede for us. He obtained permission to go to Moscow, where he was to see military authorities who might grant us permission to get out of what amounts to exile. He left despite the fact that his new play Mashenka was to open here the night after he left. When the curtain went up on Mashenka at eight-thirty that night he had an appointment somewhere else. At eight-thirty that night he was killed by a bomb in Moscow.

The main street of Kuibyshev is pleasant enough. It is wide and well paved and until the black-out was ordered recently it was well lighted. It is Main Street in the only city for fifty miles around. Rather incredibly, a dozen manicure and hairdressing establishments are located on Main Street and they did a land-office business until midnight. Sometimes there was a line of a hundred women waiting for their turns. Even the ancient waitresses who serve us at the Grand had immaculately manicured nails and waved coiffures. Twenty-five years ago only ten per cent of the people of Russia wore shoes. Today, except for refugees from ruined cities, they are warmly and well-enough dressed and they yearn for the minor luxuries denied them for so many generations. The crowded hairdressing rooms reflected this feeling.

Kuibyshev, hitherto obscure, really came into glory last November 7th, on Soviet Russia's most important anniversary. The Soviet Union was twenty-four years old on that day and, although Stalin remained in the Kremlin and reviewed troops in Red Square, the main celebration took place in Kuibyshev. The day was cold. Clouds too numb to move hung low against a dull, sullen sky. Twenty thousand troops massed in Kuibyshev Square and the great men appeared on the platform to review them as they marched by. Little Kalinin, president of the U.S.S.R., was there, plucking at his thin beard with cold hands. Vishinsky, Oumansky and Litvinoff were there, and even the great Marshal Voroshiloff had come from the front to review the Red army.

They paraded by with their tanks and their artillery and you didn't have to be Russian to feel a pride in these grim-faced fighting men. They did not look like men who had been beaten. They did not look like men who would ever be beaten.

The river boats still tie up to the docks on the banks of the Volga. Once they brought grain and traders who bartered shawls and shoes for food or kopeks. Today they unload pitiful groups of refugees and it was difficult to spend more than an hour watching them emerge from the badly overc boats. The misery in the he these elderly men and women w come from destroyed front-line shows in their dull, lusterless Nearly all of them have lost relatives at the front and to th is over. They squatted apathetic their belongings, mud oozing t their broken shoes and when it they neither move nor seek cove

Now and then one would tal who had come from the south little as she told of the nights of ing which preceded the German tion of her village. The bombin her daughter; her two sons had been killed at the front. Her h fire, she rescued what she cou waited outside. She couldn't r was too numb. The Germans can the very old like herself were le Germans had no use for them. ing to their well-established they had immediately searche house in the town for food and h fixed up the biggest house for brothel. By now the front had g ther on toward Moscow, and th second-line village. Then ca miserable Polish and Czech won had been used by the Germa ever since the occupation of tho tries. The Nazi high comman its soldiers to be happy.

### A Story that Persists

It was an old tale heard a times before. Its accuracy ca doubted. Hoping to win favor natives of occupied Russia, t mans have left the Soviet won sonably alone. Invariably they their female prisoners of war t the troops. The stories of refug front-line towns were very se detail. But always, even tho towns were separated by 500 mil was always the story of the women of Poland and Czechos Army morale must be maintain

The stories that recently fre tell are not pretty either. I spok one day: a doctor, a schoolm accountant and an engineer. pitifully thin but each, despite years of Russian prisons, ha teered to join General Ander Only one of them broke down ing his story. The accountant, a man with a thin beard, sudden to cry. I think it was because with a Polish general—gave h rettes and lit them and called ter. Then he wiped his tears a his tattered sleeve and apolog is the first time in more than tw he said, "that I have shown a ness."

"And now?" I asked him.

"And now I hope I will enough to kill some Germans, grimly.

This, then, was Kuibyshe was boredom here among t spondents and the diplomats. almost unbelievable misery a refugees. There were hunger ease, and the great venerated the party and government w There was everything except defeatism. Not even the mo able, numbed refugee waiting hours to get a bowl of soup an bread would admit that the slightest chance of Germany ing this vast country. And nothing but universal admi Stalin, the man who stayed in Timoshenko and Budenny a shiloff were almost household and every man, woman and ch Volga city knew that they wo tually be victorious. This, Kuibyshev, rather magnifice shabbiness.

the pie. He said, "You're a , Diana."

ed to cook when I was a little me thought came to him, its ion showing on his face; when aware of it she dropped her ure of how she should feel toward this man who had so desperately hurt her. But a moment later she brought her eyes back to him; and this was the way they stood over a long moment, no longer smiling, but reading each other until at last memory darkened her expression. She was thinking as he was thinking—of the night he had kissed her.

"You're happy here?"

"Yes," she said. "I'm useful. I'm alive. I am doing something." She shrugged her shoulders and changed the subject: "I suppose you know I have taken Lily Beth for a while. We have a cabin on Wallace Street."

"Where's her mother?"

"I haven't asked. But I suspect Mr. Temperton took Lily Beth away from her."

HE MOVED restlessly around the room. She watched him, knowing him better than he knew himself. He was a man out of joint with himself, with great feeling and great wants imprisoned within the walls of his own black discipline. He was like a boiler with no outlet; one day the boiler would burst and he would destroy himself. The thought of it brought a trace of pity to her face, and then she was startled to hear him speak her name in an odd way. "Diana," he said, and looked as though he wished to crush her, or kiss her. He had his hands behind him and he was so near to her that she saw her own reflection in his eyes. She stood fast, remembering that she had once offered this man everything and that he had misjudged her, yet almost ready to forgive him for all the hurt he had caused her.

Somebody tapped lightly on the door, and Will Temperton pushed it before him. He saw them and he said in his cool voice: "Sorry. Hadn't meant to intrude."

Pierce turned about. "No intrusion,"

"This is nothing. At camp we do this for 20 miles with a full pack on our backs!"

THERE'S

*Real Character*

IN FLEISCHMANN'S GIN

*America's First Gin!*

FLEISCHMANN'S is unlike any other gin. It has real CHARACTER, the result of Shielded Flavor,* thanks to Fleischmann's exclusive processes.

Fleischmann's is America's First Gin. It cannot be duplicated by anyone, anywhere in the world.

**FLEISCHMANN'S GIN**

*One of Fleischmann's 3 Champions of Quality and Shielded Flavor*

**FLEISCHMANN'S BOND**—Bottled in Bond Kentucky Straight Bourbon Whiskey—100 Proof. Five years old.

**FLEISCHMANN'S PREFERRED**—Blended Whiskey. The straight whiskeys in this product are four years or more old; 35 per cent straight whiskeys, 65 per cent neutral spirits distilled from grain. 90 Proof.

**FLEISCHMANN'S GIN**—Distilled from American Grain. 90 Proof.

*SHIELDED FLAVOR—*a definite quality advantage made possible by Fleischmann's exclusive processes—results in flavor that retains its natural vitality and brilliance even in the tallest drinks!

CALL WESTERN UNION FOR NAME OF YOUR LOCAL DEALER

Whenever you see it in a Collier's advertisement it means that you can find out *immediately* where you can buy the advertised products.

Just pick up the telephone, any time before December 25th, ask the operator for "Western Union," and Western Union will tell you what stores in your town sell the advertised merchandise you want.

Good way to save steps—and time!

he said as short and hard as he could speak the words.

Temperton inclined his head. He said, "I only wondered if there was anything you wished me to get for Lily Beth, Diana."

"No," said Diana. "There's nothing in town for her. We'll wait until Dance and Stuart's wagons come over from Salt Lake."

"Yes," said Temperton, "I suppose. Be sure and buy whatever you need." He gave Pierce the straight and sharp look of one who had his judgments but held them back, and turned out of the shop.

Pierce wheeled to Diana and then she saw everything had changed between them and her hope of goodness to come went away. It was in the new way he looked at her. He smiled a little, but it was a smile that came through the risen clouds of that old mistrust. For a moment he had forgotten; now he remembered and she was clearly aware of what he thought and what he felt about her. She waited for him to speak and then had her great shock. He took a step to her and closed her into his long arms and kissed her.

She held herself still until she knew from what terrible frame of mind he had acted; thereafter, more outraged than she had ever known herself to be, more deeply hurt and inexpressibly ashamed, she pushed him away. She lifted both hands and struck his chest and forced him across the room until his shoulders hit the door, and she flung her full anger at him, "Don't come back—don't ever come back!"

Had she been less angry she would have pitied him again for the self-hatred he showed at the moment. He said in a completely dead tone, "I am sorry," and left the room.

HE WENT along Wallace Street with his head lowered, a man furious at his own folly; he used his arms to push a way through the crowd. The Pantheon was across the street and he turned over and entered the dance hall. There was no vacant space at the bar but he made a place by driving his shoulder between a pair of men, sliding them aside. He put both arms on the bar and waited for the bottle to come; and he took his drink. The music stopped and partners promenaded and he heard the laughter of the girls beside him.

"What's wrong, Jeff?"

Lil stood by, smiling at him. She had a partner but she turned her back to the partner and watched Pierce.

"Nothing," he said.

"Nothing," she said, "is everything. How long have you been up the creek working?"

"Two weeks."

"That's what's wrong."

"Why?" he said, and for the first time seemed to take interest in her.

She said, "If men could live alone do you suppose there would be women like me in places like this?"

"Why should you be here, Lil? I always wondered."

"Don't ask foolish questions."

"No," he said. "I won't."

He led her to the bar after the dance. She watched him take his whisky and she watched its effect on him. "But don't drink too much, will you?"

"No," he said, "I won't," and watched her go away with another miner. He helped himself to a final drink and paid for it; as he turned from the bar he discovered Rube Ketchum at the hall's doorway, looking in—looking at him.

Ketchum immediately turned back into the street. Pierce started toward the door and came against a man directly in his path. He pushed the man aside, walked straight through the dancing couples and shoved his way to the door. When he got outside he saw Ketchum at that moment passing into Tanner's, whereupon he left the walk, ducked around a six-horse team and reached Tanner's.

When in Virginia City, George Ives usually held out at Tanner's, invariably standing at the far end of the bar wherefrom he commanded a view of the crowd and the doors. Ketchum, hurrying into the saloon, spotted Ives and shoved through the crowd. "He's on my trail, George. He's coming."

Ives' mind was of the sort that seized upon chance like a trap. He said at once, "Go halfway down the bar. Just stand there. Don't look at him." He pushed Ketchum away with a hand and thereafter wheeled on Steve Marshland and Frank Parrish who were near him. "Move around the room." Then he looked through the crowd until he caught Jack Gallegher's attention, and nodded. Gallegher stepped back against the far wall.

Pierce came into Tanner's and immediately located Ketchum. The man was at the bar, drinking, but he faced the back bar mirror and so had a view of his rear. Pushing forward, Pierce found a spot near Ketchum and signaled for a bottle and glass and meanwhile took time to consider his surroundings. He located Ives and he spotted both Gallegher and Steve Marshland, but at the moment he thought nothing of them. Ollie Rounds, he discovered, was bucking a faro game, and Temperton dealt at a middle table. Ben Scoggins was just then entering the saloon; he discovered Pierce and moved over.

He said, cheerfully, "Shook yourself loose from the diggin's, I notice."

A pair of men left the bar, so that now Pierce and Ketchum were side by side. Ben turned to occupy the vacant place and showed a small surprise when Pierce cut in front of him, crowding against Ketchum. His shoulder rammed Ketchum's shoulder, whereupon Ketchum spread his legs and braced himself against the pressure. Still, he did not look directly at Pierce. He raised his whisky glass and when he did so Pierce gave him a full shove which spilled the liquor; that aggression forced Ketchum against the tight rank of men at the bar and someone down the line said irritably, "What the hell's the matter up there?"

Scoggins asked, "What's up, Jeff?"

"Nothing," said Pierce. "Just pushing a ——," and he used one unmentionable phrase on Ketchum, "out of the way."

Ketchum slid beyond the reach of Pierce's shoulders. He held both arms on the bar and he continued [illegible] the big man through the back-l[illegible] with a cautious and wooden e[illegible] This seemed strange to Ben but as he looked around the [illegible] noticed Ives and certain oth[illegible] now watching the play he th[illegible] knew how things moved. Dutch John started to shout and thresh on the floor. "My shoulder's bleedin'! Where's Steele—get Steele!" Nobody seemed to hear him.

Pierce stopped within arm's reach of Ives. Scoggins, hard-pressed to keep up with the swift onrush of this scene, got to wondering why it was that Ives had not tried to draw, and why it was that Steve Marshland, unguarded at the door, had not entered the play. Again taking his attention from Jack Gallegher, he looked back at the door and saw Jim Williams standing in it, quiet and bulky and very watchful, and freezing Marshland out of action by his presence.

Scoggins heard Pierce say, "You still think this is fun, George? I told you to let me alone." Then he did something that made Scoggins wince. He lifted his gun so rapidly that Ives had no time for defense and he smashed the barrel down on Ives' head and dropped the man senseless to the floor. Immediately he whirled around to face Parrish and Marshland. He saw Gallegher, and called, "What did you start to say, Jack?"

"We've got no quarrel," Gallegher immediately answered.

"Get out of my sight."

Gallegher wheeled in quick obedience toward the door. Scoggins now joined Pierce, and Jim Williams turned, and these three followed Gallegher out; they watched Gallegher fade into Van Buren. Williams said, "You pushed that hard, Jeff."

"Yes," said Pierce. Sound began to rise from Tanner's and Dutch John Wagner shouted, "Get Steele, somebody—"

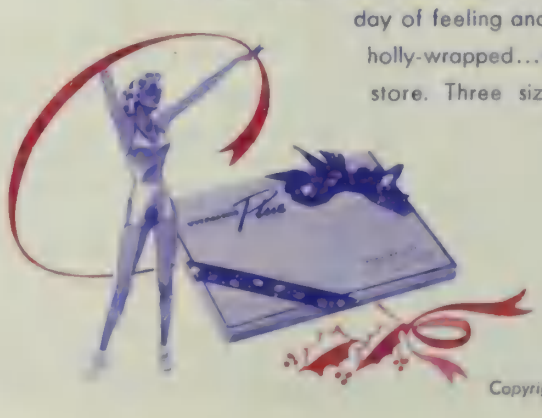
Williams murmured, "Ives will bear it in mind."

"I expect so," agreed Pierce. He said, to both of them, "Thanks," and turned down Wallace.

BY SEPTEMBER Alder Gulch was staked out solidly and the steady stream of newly arrived were pushing into adjoining gulches and deeper into the Rocky Chain. A. J. Oliver and Peabody and Caldwell had their stage lines established from Virginia City through Bannack and on to Salt Lake. Bummer Dan McFadden, living on handouts, was one day ejected from a saloon. Aimlessly wandering, Bummer Dan struck a borrowed pick into a discarded claim and discovered the richest bar in the Gulch. Flour went up to seventy dollars a sack. In the hill cemetery slept a growing company of men violently come to death. Idaho Street appeared in Virginia and the camp jumped Daylight Creek. The Virginia Hotel went up, and Pfouts and Russell's store, Dance and Stuart's store, the Planter's Hotel and the Peoples' Theater. Wood replaced log and canvas here and there and presently Virginia was a solid town.

A man named Fields was killed back of Tanner's for nothing more valuable than a two-dollar nugget on his watch chain. Harry Morphy, a miner with a thousand-dollar stake, set out from Virginia City to Salt Lake and vanished entirely. Two roughs killed a third rough in broad daylight between Daly's and Dempsey's, under view of twenty people, and rode slowly away. Late summer's heat struck the Tobacco Root Mountains and poured into the Gulch and tempers grew hotter all along Alder, and the roughs more openly predatory, and Virginia went into its full swing so that it had its man for breakfast every morning.

A tough stood up two miners at dusk on Daylight Grade and relieved them of a joint thirty dollars. "Gentlemen," said the tough, "next time I brace you, have more money in your possession or I will kill you."



A. J. Oliver came up the Gulch one

Give to others

what Vitamins Plus has given you

**LIFE BEGINS WITH VITAMINS *Plus*.** Give these tiny, modern indispensables and you give one of the few blessings of these times — Vitamins . . . so essential to vitality, to sound nerves, good appetite, teeth, eyes and skin. Give VITAMINS *Plus* and you give the recognized high quality, high potency vitamin preparation containing Vitamins A, B, C, D and G, with liver concentrate and iron. Last Christmas, for many thousands, VITAMINS *Plus* was *the* surprise success gift, thoughtfully given, happily received. And here's pure inspiration . . . give VITAMINS *Plus* as a gift to men in Defense camps. They will thank you through many a day of feeling and looking better. Beautifully holly-wrapped...at your drug or department store. Three sizes — $1.50, $2.75 and $5.

morning in the middle of September to talk to Pierce.

"I need a driver on tomorrow's run. Harry German's sick. You've handled the ribbons, I understand."

"All right," said Pierce.

Oliver said, "Cap Boyd is booked to ride the stage. He's carrying twenty-five-hundred dollars in dust. Nobody knows of it, but it might leak out. Freight outfit left Bannack two days ago for Salt Lake. I had intended sending Barney Morris' money by them but I got word that the Innocents were watching, so I didn't. That wagon train was held up last night."

Pierce said, "Then it won't be held up again. If I drive the stage through tomorrow I'll hit Bannack after dark. I'll eat supper. Now if I could have a horse waiting somewhere on the edge of town, and if I could get that money I'd ride after the freight outfit, hand them the dust—and it would be safe enough."

Oliver said, "I'll go to Bannack tonight. Your horse will be waiting in a shed at the end of the street, that last shed on the road to Horse Prairie. I'll get Barney Morris' money and carry it to the shed. There's some two-by-four stringers that hold the shed rafters together, and some planks thrown on top of the two-by-fours. You get into the shed and reach up and you'll find the bags in a leather cantina on the planks."

"All right."

Oliver said, "Joe Gallup is head man in that freight outfit. Give the money to him."

Oliver had remained outside the range of Pierce's fire and had kept his voice down. Now he looked around him, closely eying the shadows and long listening. "Stage pulls out from the hotel at five," he said, and went away.

PIERCE let his fire die and sat in the darkness, engaged in his practical thoughts; and in a short while he went over to Archie Caples' fire. "Archie," he said, "I'm weary of working and I'm going to take a trip in the Tobacco Roots. If I don't show up on the third day, maybe you'd work my claims."

"Sure," said Caples. But he grinned a little at Pierce, by which Pierce understood Caples' skepticism. In these hills and in this camp nothing was what it seemed to be. Caution was on them all. Pierce returned to his cabin in the side canyon, dug his gold pouches out of a sack of beans, and moved down the Gulch. He slipped between Virginia's tent rows, skirted the black wall of The Pantheon and so came to Dance and Stuart's store. At this hour it was crowded, but he caught W. B. Dance's eye and led him back toward the office.

"Like to leave my dust in your safe," he said.

Dance took Pierce's poke, wrote Pierce's name on a slip of paper and stuffed it into the neck of the poke. The safe stood in a corner, its door ajar. When Dance pulled the door back Pierce saw the layers of other pouches on the safe's bottom. "Young fortune there," he said.

"That gives you the idea," said Dance wryly. "Some day we'll have to run the scoundrels out."

Pierce said, "Who's going to start that?"

"There's enough honest men to do it any time."

"Takes something better than honesty," Pierce answered. "The meek will never inherit Alder." He made his way back through the crowd, through the aisles of sacked goods and kerosene and canned peaches, past the shelves of shirts and trousers and supplies. Clubfoot George sat in one corner, stooped over his shoemaker's last. He looked at Pierce and showed his sharp curiosity. He said, "Evenin', Pierce," and got Pierce's nod.

Pierce had a drink at the Senate and loitered a little while watching a poker game, and turned down Wallace Street. He met Ollie and stopped for a chat. He said, "I'm going to have a little fun tomorrow and drive stage," and moved on. The lights of Diana's bakery fanned through an open door. He saw her standing behind a counter and he stood at the edge of the walk, hard in thought, with the rankling memory of their last scene reviving, with some of its suspicion and its wonder coming back. Then, head down, he plowed his way through the crowd and returned up the Gulch.

CAP BOYD was a jolly man who, having made his stake in the Gulch, now prepared to depart from the scenes of his adventure. He had imposed strict secrecy upon himself and upon his friends, well knowing that any man who rode the stage to Bannack with twenty-five-hundred dollars of gold dust in his belt was powerful bait for the Innocents. But still he was a jolly man and accordingly gathered his few chosen friends around him in the Senate for a last round of drinks.

That last round became an endless circle which, begun in the Senate, moved on to the Pony, thence to the Alcazar and at last near midnight ended in Tanner's. By that time the group of friends had grown into a young crowd and somewhere near the shank of the evening Gallegher joined him for the inevitable "Just one more drink, boys, before I leave." Cap shook hands warmly with Gallegher and mentioned the sorrow he felt upon departing from the Gulch, which had been so good to him; and the last thing he remembered was his friends supporting him through the doorway of the Virginia hotel, all of them singing one of the less respectable versions of John Brown.

Gallegher detached himself from Cap's party at Tanner's and sauntered to the back room, to be presently joined by Ives and Marshland. Clubfoot George later came in. Clubfoot said, "Pierce left his dust in Dance's safe."

"So," said Ives, and drew a long breath of smoke from his cigar. He squinted at the ceiling. "That's a giveaway, I think. Harry German's sick, so he won't be driving. I happen to know Oliver once asked Pierce to drive relief."

"Might be," said Gallegher. "I just found out Cap Boyd's going out on that stage. He's got his dust in a money belt. It'll be around his belly."

"Should be sizable," said Ives, and began to make his plans. "Steve and I will ride down tonight. We'll b somewhere beyond the Beaver a draw, about halfway to We'll stop the stage there." F a careful man, and one who to spike all chances, he impro the idea: "I'll have Bob Zach Dempsey's roadhouse. He'll there as a passenger and ride driver. When Steve and I sho the Gulch, Zachary can throv being scared and put on a nice us. If the driver tries to draw can nudge against him. preten scared, and spoil his aim."

"Might be a crowd inside th put up a fight," suggested Ma

Marshland nodded and went away. Presently he too rode into Van Buren.

"You know what's up?" asked Gallegher.

"Yes."

Gallegher laughed, short and unamused, finding pleasure in the retribution to come. "If Pierce is driving, he'll be a dead man by tomorrow night," and strolled on.

Ollie Rounds lighted a cigar and, as he cupped the match to the cigar's point, he took this opportunity to scan the far walk, where Rube Ketchum had been. Rube was out of sight, but Rube would still be watching. The man had that constant suspicion, that never-forgetting streak of brutal patience. Rounds crushed the match between his fingers and he tipped his head and watched the black night sky. Nick Tibault came by and said, "Hello, Mr. Rounds," and stopped to look in at Tanner's.

"Go in and have some fun," suggested Ollie. "You work too hard."

Young Tibault shook his head. "Anna wouldn't like it," he said, and turned from temptation.

Somewhere Rube Ketchum hid himself and watched with his small red-rimmed eyes. Rounds left his place by the saloon wall and moved along Wallace in pacing slowness. He came to Van Buren, teetered at the walk's edge for a full three minutes as a wholly idle man might, crossed over and returned on the opposite walk of the street, turning into Diana Castle's bakery.

Diana was at the moment waiting on a miner. Rounds waited until the miner had gone, and looked into the rear of the shop to be sure the baker was gone. "I'm in need of a couple doughnuts, Diana," he said.

"How would you like a cup of coffee to go with them?"

She had always liked him, he thought; she had never seen through him. "Just the doughnuts," he said. He brought out a half dollar but Diana shook her head. "We came upriver together, Ollie. So this is on the house."

"Stick by your friends, don't you?"

"Yes."

He said quietly, "Jeff's driving Oliver's stage to Bannack in the morning. It will be held up beyond the Beaverhead. They're laying for him particularly. I can't go to Jeff—I'm being spotted. But I'll find Ben Scoggins. I'll tell him to come here. Have him warn Jeff not to make that trip." He put the doughnuts into his pocket, noticing the flare of real fear in her eyes. As he went out he thought of this. There was something wrong between Diana and Jeff, and it was now odd to find that she had any feeling for the long-legged tough man up the Gulch.

IT WAS near midnight then, with the crowd thinning out and the stores closing one by one. Rounds had meant to cut in behind Scoggins' store and take the rear door, but when he got to Idaho Street he saw Scoggins come out, lock up his store, and walk away. Rounds crossed the street and so moved up behind Scoggins. He murmured, "Go see Diana," and turned across the street, circling back to Tanner's. He put himself at the bar and took a pair of whiskies straight, afterward joining a late game at Will Temperton's table.

Scoggins had a drink and a bite of lunch in the Senate and then went to Diana's, there waiting for her to close shop. They walked along Wallace Street, toward her cabin. "Where's Lily Beth?"

"Sleeping."

"You know," he said, "the only time I ever saw her smile was when she saw you. That little girl was scared of something."

"And starved for something. She's just a little girl. She has needed a lot of love."

"Wonder," he said, "what her mother was like. This fellow Temperton loves her, but he never seems to show it. Mighty strange."

"There are a lot of strange things in the world, Ben."

He was an observant young man and he had a big heart. Now he offered her a piece of advice: "Some day you'll have to give up Lily Beth. That will hurt. Don't get too fond of her."

They were at her cabin. She turned to him, saying, "You're rather wise. But how can you stop being fond of anyone?"

"I guess," he said, "that's right," and looked at her with a great deal of thought. "You get tied up, and that's it. Maybe in Lily Beth, maybe in someone else."

"Ben," she said, her voice going away from him, "don't make too many guesses."

"Ah," he said, and grinned. He was a big bland-tempered man with a shock of blond hair; nothing appeared to trouble him too much. He had a way of hanging on without seeming to hang on. He was a man with always a soft answer; but behind the soft answer was a bulldog tenacity. "What was it you were to tell me? Ollie was mighty secret about it."

"Tell Jeff not to drive the stage tomorrow. It is to be held up beyond the Beaverhead."

"Didn't know he was driving for Oliver," said Scoggins. He had the kind of mind which took first things first, so that now it was the fact of Pierce's driving the stage which interested him. "Must have gotten weary of working like a horse and living like a hermit. Jeff can't do anything by halves. All of everything or nothing of nothing. So he digs until he's sick of it, then he's ready for a bust." He spoke this in his easy, idle way and meanwhile watched her with his shrewd eyes, interested in her expression. She saw it and gently rebuffed him: "Ben—you're not very subtle."

"I can try to be, can't I?" he said. "Can't stop a man from wondering how tough it would be if he tried his own luck."

"It's Jeff we're talking about."

"Not much danger for a driver in a holdup, Diana. It is a kind of road-agent rule—to let the driver alone." his mind, marching methodica point to point, reached a mor tant fact: "But he isn't just The toughs have marked his They'll knock him over."

"Yes," said Diana, "that's it

He gave her another of glances and he saw the way her leaped ahead to that possible Jeff's destruction. She stood worried.

Ben said, "It will do no good him of the holdup. I couldn't from making the ride. You kn don't you?"

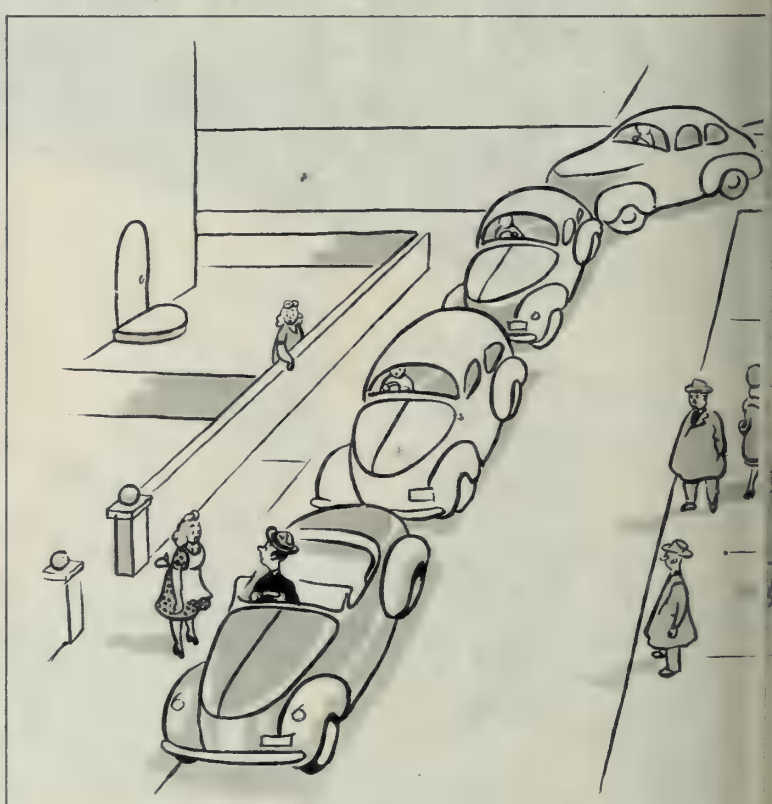
"I know. He would listen He would smile and thank nothing in the world would from going to Bannack."

"That's a streak in him. why?"

"Why," she said, "the thing hates is force. As far as Jeff cerned the world is a brute break him. It is a challenge meet."

"Why should a man be so to it?"

"If you knew his past you stand."



Having patiently plodded through the problem, Scogg reached the last strange part stood with his chin dropped, easy and honest man explorin alleys of human behavior. "F to you, Diana, that it is migh how Ollie should know a holdup?"

"I AM afraid for Ollie," she said nothing more. Lifting he caught her expression; an the two was a common thoug moment. They both had their s and shared them, so that now knew that their suspicions Ben's reaction was to say, " if Jeff didn't know it was told us. He likes Ollie. Hat that."

"We all like Ollie," said Di is what makes it so sad."

"Maybe," said Scoggins, w bottom very kind, "I ought t Ollie."

"Nothing you say would He's like Jeff in that resp

manner. Meanwhile, Cap
ked down on Zachary and
uble. He climbed from the
coach to stamp his feet around the yard. He said, "I'm too damned sick to go any farther."

Bob Zachary was a young man with mustache and goatee. He had a wide mouth and a heavy chest. He stood by, eying Cap Boyd all this while and saying nothing. Boyd looked at Zachary and shook his head. "I'm layin' over until the next coach," he said, and started for Daly's roadhouse. But he pulled up and gave Daly's a sudden glance and reconsidered his decision. "No," he added, "might as well go on," and climbed inside the coach. Scoggins started for the near coach wheel, intending to sit beside Pierce, but Zachary was before him. "I'll ride up," he said, and jumped to the seat.

"All right," Scoggins said, "I don't care. By the way, Jeff, I've got a new shotgun. If you hear me blazin' away at jackrabbits think nothing of it. Want to try this thing out."

He got into the coach and closed the door and Pierce set the horses into a run, now skirting the Stinkingwater and meanwhile wondering why Scoggins, who had never to his knowledge cared much about guns, should be packing the weapon. It was out of the way and accordingly caught Pierce's full interest. He thought about it from Daly's to Cold Springs Ranch.

One mile beyond Cold Springs Ranch he paused at Baker's and sat on the box while the relay man changed horses. He forded the Stinkingwater, came upon Dempsey's ranch and halted for a passenger—a very long and loose-jointed man with a tobacco-stained beard and a pair of bright, close-set eyes. Cap Boyd groaned when the new man crowded into the coach.

The road climbed the yellow ruts from the Stinkingwater valley, arrived at Summit and undulated forward through long, barren miles of rolling country. Day's sun burned down and the thin air fanned dryly against the skin, and the brake handle, when Pierce touched it, was uncomfortably hot. Scoggins, he thought, was not a man for extra conversation and Scoggins had gone out of his way to explain that he wanted to fire the gun from the coach. Scoggins was also sufficiently experienced with the half-tamed brand of horses in the country to know that a gunshot would bolt the team. It was a foolish thing to do; and Scoggins was not a fool.

SUSPICION, never at any time fully asleep in him, now freely fed upon the small things that would not make a reasonable answer. The land before him pitched up and down in bare brown swells, and from his place on the seat he was able to look far out into the trough of those swells, wherein road agents might wait. The man beside him —this Bob Zachary whom he only casually knew—seemed nervous, and kept sliding on the seat, crowding into his, Pierce's, side.

Pierce said, "Where's your horse?"

"Lame," said Zachary.

"Two lame horses," Pierce murmured. "Get over on your own side of the seat."

Zachary moved over. After a while he said, "Well, the horse wasn't lame. Tell you the truth, I'm carrying a little money on me and I was afraid to ride through alone. The damned country is full of road agents." The sun was straight overhead but this Zachary pulled the brim of his hat over his eyes and half rose from his seat to scan the forward country. "What would you do if this thing was held up?"

"Haven't thought about it."

Zachary turned on him. "You wouldn't tough it out, would you?"

"Depends on how the play came up. I've done it before."

Zachary said, "Don't do it. You're up here broad as a barn. So am I."

*(To be continued next week)*

A SHORT SHORT STORY
COMPLETE ON THIS PAG

# The Good Soldier

**By Pat Frank**

ILLUSTRATED BY
GILBERT DARLING

COL. WILLIAM McAVOY, of the War Planning Division, was walking through the lobby of his apartment house, headed for the hospital, when a messenger brought the orders. He would report at the Presidio, San Francisco, at noon Saturday, December 20th. He would sail December 20th. Halfway around the world, on a much-coveted string of islands, there was a delicate, detailed job that needed Col. McAvoy.

The messenger hurriedly saluted and departed, for the colonel's face looked bleak as a guardhouse wall. Outside, the colonel ground the War Department envelope into his hard, square fist and threw the balled paper to the ground so that it bounced. He retrieved the paper, for he was a neat and careful man, swore a bit, and then subsided. In times of national emergency there are things the Army cannot consider, and one of these is the welfare of motherless eight-year-old boys, strapped to a hospital bed at Christmas time.

Bill was on the fifth floor of the hospital, and the colonel caught Dr. Cullen as he stepped out of the elevator. "How's he doing?" the colonel asked.

"Not too good," the doctor admitted. "It's pretty hard on the youngster, being kept on his back constantly. He frets." The doctor looked at his watch. He was a big bone man, and an expensive one, and he didn't have much time to give to one small boy, the colonel knew. "If you could stay here with him all day, every day, and entertain him with Army stories, he'd be happy enough," he continued. "You're his hero, you know."

"I've been ordered away from Washington," the colonel said gloomily. "Far away. I have to leave here on the nineteenth, at the latest, if I go by plane. That's—by golly—that's next Friday."

"Any relative who can come here and be with him?" the doctor asked, suddenly concerned.

"I'm afraid not. There were only"—and the colonel hesitated, because when he spoke of Anne the loneliness returned and throbbed for days inside him—"the two of us."

"You'll have to do something about it," Dr. Cullen said. "You'll have to keep his spirit up. I had hoped he'd be out of here in another month, when that right thigh knits properly. Now, I'm not sure. It's not good for a child to be so alone. It's positively dangerous."

"I'll think of something," the colonel promised. "I'll have to." He marched to Bill's room, and Evans, the day nurse, who was slim and quite pretty, nodded and smiled and slipped down the hall to the nook where she had her cigarettes. Evans, the colonel suspected, wasn't interested in boys—not boys as young as Bill.

HE WAS a small, narrow mound under the covers, his hair astonishingly dark against the twin whiteness of face and pillow. "Hello, son," the colonel began. "What's new today?"

"Well, it won't be long till Christmas," Bill said confidently, and turned his head so that he could see, through the window, the upper floors of the big department store. They were gay with Christmas trappings already, and workmen were erecting a new sign along a cornice. "Do you know what I want for Christmas this year? I want an antiaircraft gun, like the ones we used to put nickels in."

"Well," the colonel said, "it might be arranged." He moved to the chair by the window, and lowered his frame into it. He put his hand on the bed, so that it rested on the boy's thin shoulder. "Bill," he began, "we've got to do some serious talking."

"All right," Bill said.

"You know what it is to be a good soldier, don't you?"

"I guess so."

"You know that you have to obey orders, and you have to keep your chin up and keep on fighting, whatever happens?"

"Sure."

"Well, Bill, we've both got to be good soldiers. I've been ordered to new duty."

The boy's eyes were wide and troubled. "Where?" he asked.

"I suppose it's a military secret," the colonel said, "but I can tell you because you're a soldier. It's the Philippines."

"Can't I go?"

"No, not yet. It's as if you were wounded in action, and couldn't go back to the front until you were well."

"I see," Bill said. He was looking at the red and green garlands draped from the department-store roof. "Of course you're not going until after Christmas. How soon is Christmas, anyway?" To a boy in the hospital the days are not named or numbered. Some are gray and hazy with pain and drugs, and some are bright without pain, but there is no estimating their passage.

The colonel sneezed, and rubbed his nose with his handkerchief to give himself time to think, and the idea sparkled, and the colonel thought, why not? "No, Bill, I'll be here Christmas," the colonel said. "I leave Christmas night. This year," he added firmly, "Christmas comes next Friday."

Organizing a particular, private Christmas for one small boy, the colonel discovered, was an adventure comparable to organizing an attack on a well-fortified position with a minimum force. Everything depended on preparation, timing, and secrecy.

The first thing to do, of course, was inform Evans. He had to be stern with Evans before she'd understand that it was part of a day nurse's duty to change the date of Christmas. Then there was Dr. Cullen, who thought it was a good plan, and promised his co-operation. The night nurse was informed by phone, and then the colonel fled back to the hospital, in panic, to slip dollar bills to

For "DOUBLE-RICH" Holidays give

# Cream of Kentucky

## THE "DOUBLE-RICH" BOURBON

The green and white racing colors of Mr. W. H. Jeffords, carried to fame by "Blaze".

### HERE'S HOW TO MAKE A "DOUBLE-RICH" EGG NOG!

Beat yolks of 6 eggs adding 1/2 cup of sugar as you beat. Whip whites very stiff, then add 1/4 cup sugar. Mix and stir in one pint of heavy cream and one pint of milk. Add pint of "double-rich" CREAM OF KENTUCKY and jigger measure of Jamaica Rum. Stir thoroughly — add dash of grated nutmeg, and serve ice cold. (This recipe covers egg nogs for 12 — add or subtract proportionately.)

86 proof—Schenley Distillers Corp., N. Y. C.

# Better Breads *are baked with* Dextrose

From New York to San Francisco, from Chicago to New Orleans, most of America's biggest-selling, best-known brands of bread are baked with Dextrose. It helps give quality breads superior flavor, color, texture and food value.

# America's Greatest Blessing is Delicious Daily Bread

THE PLENITUDE of America is symbolized by the abundance and low cost of its superior daily bread. Every year, more than 10½ billion loaves* of fresh, fragrant bakery bread are available for the enjoyment and sustenance of everyone, everywhere in the land. This nutritious bread is the finest in the world today; it is rich in flavor and food value; it provides protein, essential vitamins, minerals and carbohydrates.

The energy value of bread is high. One slice yields about 65 calories—sufficient to enable you to walk a mile or to think for an entire day. And in dollars and cents this vital food energy is derived from bread at less cost than any comparable food. Thus should we regard our daily bread as the most important of our basic foods.

★ ★ ★

In seeking to improve the texture, digestibility and general appetite-appeal of bread, leading bakers exhaustively tested each ingredient of their loaves.

It is significant therefore that the baking industry uses millions of pounds of Dextrose sugar every year.

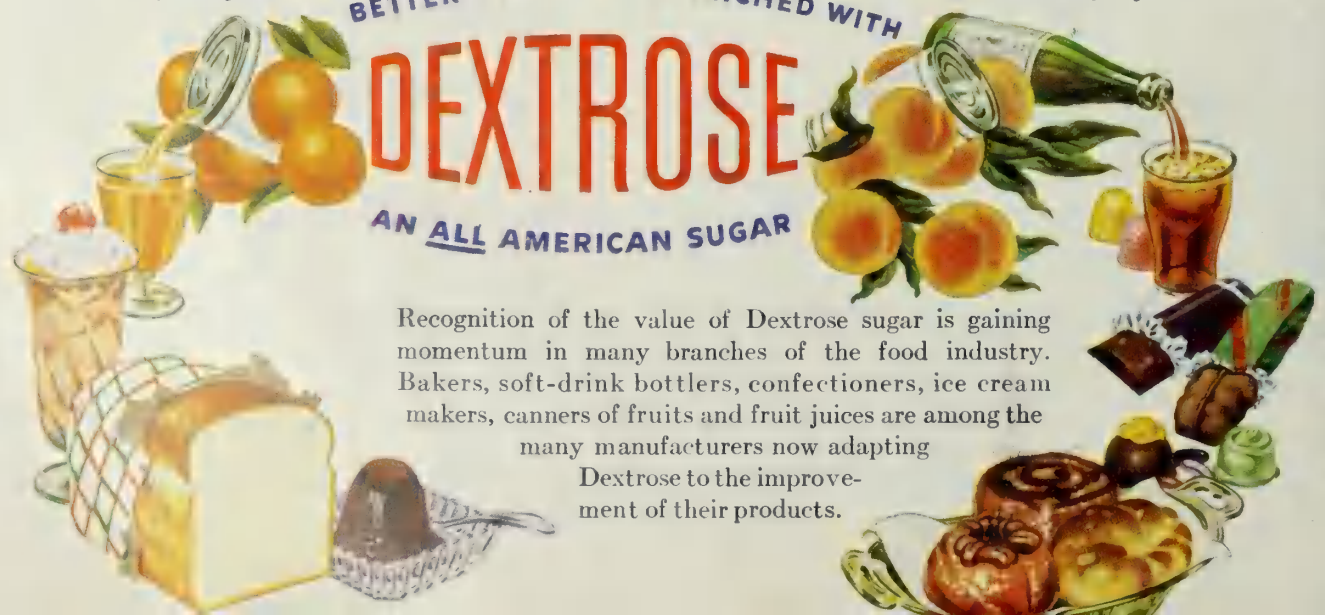
By laboratory tests, thousands of bakers proved that Dextrose sugar helps to give bread the superior color, bloom, texture and fine eating qualities the American public prefers.

Dextrose is a pure, white sparkling sugar in crystalline form, mildly sweet and cooling to taste. Aside from its established food-energy value as the basic "fuel" sugar of the human body, Dextrose possesses certain unique properties which generally improve the flavor and texture of many processed foods.

Wherever you buy, you will find many high-quality products "enriched with Dextrose." They have fine flavor and texture—*true* food value.

CORN PRODUCTS REFINING COMPANY
*One of the Producers of Pure Dextrose*
17 Battery Place New York, N. Y.

★



*While the baking industry ranks second in food processing (by dollars), it is *first* in the number of year-round wage earners, *first* in number of producing plants, *first* in wages paid. The baking business serves a three-fold function—it provides essential foods, it is an important employer of labor and a great buyer of equipment and farm commodities.

BETTER FOODS ARE ENRICHED WITH

## DEXTROSE

AN ALL AMERICAN SUGAR

Recognition of the value of Dextrose sugar is gaining momentum in many branches of the food industry. Bakers, soft-drink bottlers, confectioners, ice cream makers, canners of fruits and fruit juices are among the many manufacturers now adapting Dextrose to the improvement of their products.

e," O'Neill repeated. "Well, I 'll want to talk to them. Would l be out there now?"

" Mr. Carnes told him. "I'm Only Ambrose is with me at the it. The others are with Mrs. , at Seabright; we've a summer here, you know. I can phone to- if you like, and have them here ime tomorrow. Anything at all I to help—"

ill got up.

could do that, maybe. I'd like to em. Tomorrow afternoon, say. me around three?"

ee," Mr. Carnes agreed, not get- o himself until O'Neill looked lly at his watch. Mr. Carnes had raced for something more than or questions, tricky questions, or s even an attempt at bullying. e he got neither of those things began to feel dimly apprehen-

.N came up the hall stairs. arty," this man said, glancing at Mr. Carnes before he turned eill, "here's something, Marty. ndlady tells me—"

f a minute," O'Neill growled at im, iting stolidly then for Mr. Carnes o g A careful man, Mr. Carnes hou , nodding to them both and turn- ng t he door; not clever, just careful. Well Mr. Carnes was careful, too. He went ut to the landing. It was empty ow. he policeman, the one who had een unging there when Mr. Carnes ame p fifteen minutes ago, was gone— own airs, probably, for a breath of air.

Mr Carnes saw instantly what that mean He moved down a few steps, rml but stopped when his head was st low the level of the flooring. 'Ne might get careless now; O'Neill nigh believe the policeman was out here et, so that no one could possibly ster Even careful men sometimes— In e room over him the second man tid. A girl got the front apartment ere, Marty—right next door. The old il wnstairs finally calmed down ou to tell me that. See what that mean She heard what went on in here st r ht—she had to. These walls ain't th er than cardboard."

Mr Carnes, standing very still outside, with the skylight set above him like a great creamy bubble of blistering heat, did not worry himself about the girl. He knew all about her. Last night, on the phone, Rose had told him he needn't be afraid of anyone seeing him when he came; the girl on the floor with her, the only other tenant, would be out. At the hospital, visiting a sick friend.

"Suppose she wasn't in," O'Neill said, putting his finger on that, too. "You thought of that?"

"She was in, Marty—the landlady swears to it. She was gonna go out to City Hospital, to see someone she knew there; but after supper she got a headache, and put it off."

Put it off. Mr. Carnes thought. He did not move at all but his face changed a bit, his flesh whitened slowly around the cheekbones. She couldn't have put it off. Rose had told him, when he asked, that the girl was gone, that—

Perspiration dropped into his eyes. He thought of something else Rose had said bitterly, when she met him on the landing last night. Not like Jellicoe Road, not much like that here, is it, Mr. Roger Carnes? And the door to third-floor front had been open then, not because the girl was out, but because she had a headache, and wanted whatever breeze there was. She had heard that, the girl in the third-floor front—the name, the address, everything they needed.

He began to feel queer, empty and small inside.

O'Neill growled above him. "What's her name? Didn't you try to get hold of her?"

"Wilson. Marty—Carol Wilson. I called up the office where the landlady said she works, but it's closed for the day. And Friday night the landlady says she always stays downtown to have supper with the boy friend and see a movie. It'll be close to twelve before she shows up here again. Unless you want to hunt through the movies downtown for her."

O'Neill must have considered that for a moment. Then he said peevishly, "We might as well hang around here; she may be back early. I'm too hot right now to chase all over town after some little empty-head that won't know nothing at all."

Are you? Mr. Carnes thought, one hand gripped hard on the stair rail. Are you, my friend O'Neill? He moved down quickly and quietly, thinking of Carol Wilson. He knew what he had to do now, and he did not shrink from it.

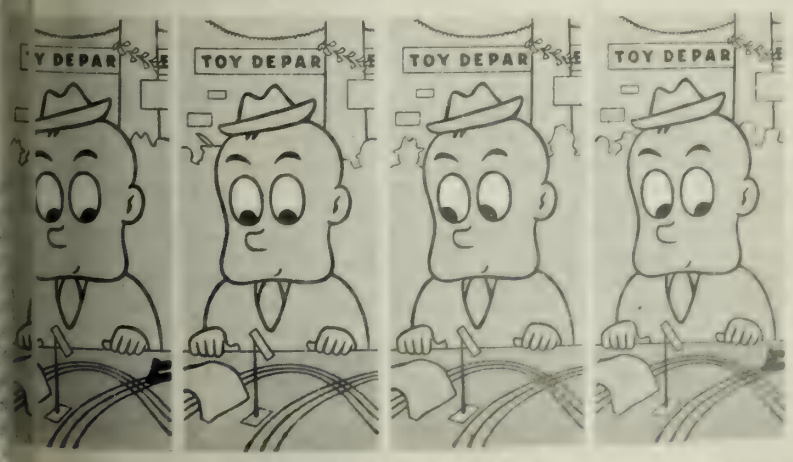
She met Jimmy a little before six, in the crowded drugstore at the corner of Redwood and Pine. She should have been there half an hour before, but she had stopped to do some shopping on the way, and when she appeared now around the perfume counter Jimmy looked down resignedly at his watch.

"Not bad tonight," he said. "Not bad at all. I had a swell time standing here. I've been thinking what you'd do if I didn't wait. I've been thinking that next week—"

She wrinkled up her mouth at him. She wasn't worried about next week, she said; lately she'd had more than a suspicion that she was too good for him anyway. "The glamor girl," he said, and scowled at her, but she could tell he wasn't really angry. He never was on Fridays. That night, pay night, was the special night of all the week, when they decided between the seafood dinner at the Chesapeake Tavern and the blue-plate special at the Roma Spaghetti House; when they picked out the picture they wanted to see and talked over the multitude of things that had happened since Wednesday, the last time they'd been together.

From Wednesday to Friday there were only two days; yet those two days always seemed to them both a very long collection of hours. They had met each other in February, and since June they had been engaged. She was a slim girl, dark and pretty, with the deep blue eyes that are almost black, and the slender, high-placed cheekbones that shape a young face to delicate and rather wistful lines. After they pushed in to the fountain they smiled at each other faintly in the mirror, because it was Friday night now, six o'clock, and nothing else mattered much.

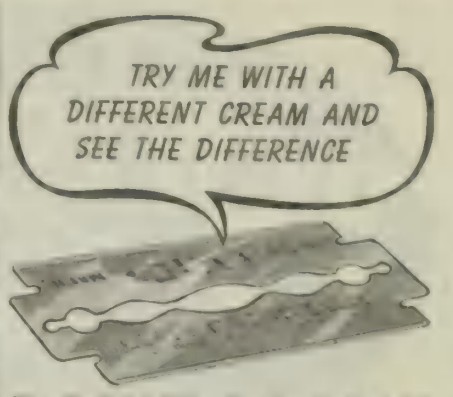
"What a day I put in!" Jimmy told her. "I'll bet it hit ninety in the office." He paused. "Let's see now—you got any ideas? They got a stage show at the Strand, but the picture's not so hot. At the Century—"



They fixed on the Century, and the Roma Spaghetti House, because it was only around the corner.

O'NEILL hung around the house on East Madison Street till after eight, but he didn't find anything there that helped him. Rose Elizabeth Daly had left some things behind her—four dresses, a couple of pairs of cheap shoes, a Confessions magazine, a single traveling bag that had seen a lot of use. But she had left no letters and the labels had been clipped neatly out of her clothes. Rose Elizabeth Daly—all they knew about her was that name. But suppose, O'Neill thought gloomily, it wasn't her right one?

There was no way he could be sure even of that. She had lived on East Madison Street just four days; she had had, so far as the landlady knew, no callers at all. No job, either. No friends. That's all O'Neill had discovered.



It wasn't much. In a tavern around the corner, over a sandwich and a glass of beer, O'Neill went over it doggedly enough, without seeing a spark of light anywhere. At twenty to nine, when he walked back to the house, Stanton met him on the stoop. No dice, he said, the Wilson girl hadn't got back; now they were stuck till twelve.

Settling himself on the stoop, because it seemed like the coolest place around, O'Neill prepared to wait. Very soon a sleek young man came up the steps from the pavement, looked at O'Neill incuriously, and went on to the vestibule; from there he must have seen Danaher, the uniformed cop on duty, talking to the landlady in the lower hall. Quietly, as if he didn't care to be noticed, the

# DON'T BLAME YOUR BLADE

Darn few of us men get decent, comfortable shaves every day. Either your face feels tender and irritated, or your beard doesn't 'come clean'.

Most of us blame the blades we use . . . but actually, blades today are well made. Did you ever realize that it might be just a matter of getting the *right cream* for your face.

● **That's why you ought to try** Listerine Shaving Cream. To *prove* to yourself how important good cream is . . . how good *this* cream is . . . try it with the *same blade you were complaining about.* We're positive that Listerine Shaving Cream will give you a close, comfortable shave . . . even if your beard is tough, your skin sensitive! And that big economy tube lasts over 3 months.

**But if you don't feel like risking a cent,** just print your name and address, send it to the Lambert Pharmacal Co., Dept. T, St. Louis, Missouri, and we'll *give* you a 15 day tube of Listerine Shaving Cream.

That's how certain we are this *different* cream will give you grand, easy shaves!

**LISTERINE SHAVING CREAM**

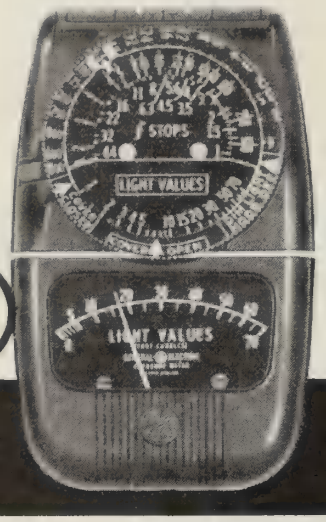
*Brushless and Lather*

**MAGAZINES**

**America's Show Window**

BOY! Daddy'll get good pictures now!

Santa's bringing him a G-E EXPOSURE METER



**Makes thrilling color easy** You just point your G-E meter as you point your camera and get the exact camera setting you need for rich, full-color shots.

**Gets better pictures** every time—movies or snapshots. Sharply directional measurement helps you hold shadow detail and protects you from exposure errors caused by brilliant snow or sky.

**Saves on film** because, with every exposure correct, there's no need to miss a picture.

**Simple to use** One hand operates the G-E meter. Many other features include extreme sensitivity in dim light, sturdiness, and dependability.

*General Electric Company, Schenectady, N. Y.*

# They Contribute Vitally to Your Joy of Living

What do you actually expect to get from life? Success in terms of yachts, motor cars—the material pleasures? These are well enough in their way, but how about the intellectual pleasures—the stimulating, inspiring joys of reading? To read, to grow in mental stature, to walk expectantly with the thinkers—do not these, after all, constitute the real joys of living?

### NOT BY BREAD ALONE

Man does not live by bread alone. It is the intellectual joys that bring him the utmost in life. Nothing has ever given to mankind greater real satisfaction than good reading—the reading that makes a greater measure of a man, that builds a man educationally to an equal basis with his business and social associates. Good reading makes the well-rounded man, but more than that, to him who reads will come a realization of the finest things in life.

### THE MAGIC OF DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

Dr. Charles W. Eliot, forty years President of Harvard University, knew what satisfactions could be had from good reading and he provided such reading in The Harvard Classics. He brought to you and me the pure gold of the world's writings, that we may enjoy and grow and be stimulated and inspired. Men and women!! Don't let yourselves go through life without reading these supreme books. They will mean to you mental growth and they will do much to enable you to achieve the shining goal you have set for yourself and your family.

### OUR FAMOUS BOOK FREE

The famous little book, "Fifteen Minutes a Day," furnishes you with full information about The Harvard Classics. It gives Dr. Eliot's *own plan of reading*—is packed with helpful, practical information! It also contains "Men Behind the Classics," dramatic biographies of men whose immortal writings appear in The Harvard Classics. This book is beautifully illustrated and is a gem of literature. It is a welcome addition to any library. It will be sent you free, postpaid and without obligation. Simply fill out and mail the coupon below.

THIS COUPON ENTITLES YOU TO FREE BOOKLET

*Address* .....

sleek young man moved down again to O'Neill.

He made his second mistake there; but then, shirt-sleeved like the men on the stoops all around him, O'Neill didn't look much like a cop.

"What goes on?" the young man asked him in a rather worried voice. "What's the law inside for, bud?" As soon as he had spoken he licked his lips; he had just found out then that O'Neill looked a whole lot different when he raised his head and stared at you. Not, the young man said, that he cared. He didn't want anybody here; he must have made a mistake in the house. He'd push off now and—

He didn't push off. He went inside with O'Neill. There, his eyes fixed sullenly on the floor, he said he didn't know what this was all about; he'd just noticed the law around and got curious. They couldn't hang him for that.

"Can't we?" O'Neill said, and nodded somberly at Stanton. "Give him a ride, Eddie; take him downtown and lock him up."

"Okay," Stanton said. "Stand up and take the big rap, brother."

IT WORKED with the young man, as it had worked with many others. He got up staring at O'Neill. He whispered:

"The big rap? The big— Murder?" Then ripples of fear broke, jellylike, from the corners of his mouth. "Wait a minute now. You never said anything about that. You never—if it's Rose—"

The young man began to seem like a bit of luck. O'Neill told him to sit down again.

"It's Rose," he said. "What do you know about her?"

The young man knew a good deal. In a broken voice, beads of sweat glittering like glass on his cheeks, he told O'Neill that if Rose was dead he knew who killed her: Harry Daly. He started off as simply as that, before O'Neill had even lit a cigar.

She'd married this Harry Daly, and lived with him for a couple of months, out in Los Angeles the winter of thirty-five. That long ago, the young man said, when this Daly was a bookie out there, handling small bets, and playing the horses himself on the side. But he never got on with her; the first time he'd got hold of some dough, when a filly he'd hocked his shirt for came romping in at forty to one, he just picked up the take and skipped east.

"Five years ago," the young man said, blinking up painfully into O'Neill's stolid face. "I never knew them then, understand; I only met Rose last winter. She told me all this stuff a little while ago, when we began to think of hooking up—that she couldn't, see? because this Harry Daly was still her husband. In the five years since he left she'd only heard from him once, when he sent her five hundred bucks from the East—from this town—to get a divorce. She was hard up then, and she didn't spend the dough on lawyers; she just got hold of some shyster for fifty dollars, and he filled out some forms for her, just like he'd attended to everything proper and legal.

"When she told me all this I figured"—he rubbed his mouth shakily, paused for a moment, and moved his eyes away from O'Neill—"well, that he'd treated her like a rat, and that if he'd pay five hundred bucks to get rid of her we probably had hold of something good here. So we came east, see? and started to hunt him up. She didn't have his address; she'd always written to him General Delivery down here, but after she sent on the fake papers he never called around for any more mail.

"But we figured he was located somewhere around this part of the country—this city, probably, since she'd written to him here—and that he'd never give up the horses, no matter what happer to him. Last Monday, out at Pimlic he spotted him in the clubhouse, and his car number when he left, and out where to locate him through t never thought—"

He began to cry weakly, and O gave him a cigarette.

"I never thought he'd do any like this. All we were looking fo a stake. The way he was set he could have paid her five grand like ing. So I got her to rent this place because if he knew anything abou or found out she wanted the divorc he wouldn't pay out as much for get it."

"He thought she was alone?" C asked. "That none of her friend on the coast knew where she was began to see it. Harry Daly hadn off; he had killed her instead.

"Five thousand," he added s "That's a lot of money. Why wo pay her all that just to divorce

Between sobs, the young ma explained that too: When he'd com five years ago, splurging away the he'd won, he met a rich dame tha stuck on him. He wanted the div marry her. He did marry her, a got those fake papers. And ther Rose showed up again, not divor all, ready to kick up a row and sp fancy setup—

O'Neill put on his yellowed Pa Where would they find this Harr now?

The young man forgot his sorr eyes narrowed venomously. Out high-hat section, he said—out i brick dump his wife owned on Road. Carnes, he called himself Roger Carnes.

"Carnes," O'Neill repeated soft looked at Stanton, and Stanton at him.

Behind them, in the darkened room, a clock struck nine slow

IT WAS a good show at the Cen romantic comedy about a girl boss who quarreled constant couldn't endure each other, a never suspected once, all th through, that they were very n love. Roland Young had a part i Carol always liked Roland You was smiling up at his droll face screen when the usher came d aisle. He was paging somebody, didn't pay much attention to th until Jimmy touched her arm through the wave of laughter t lowed something Roland You she heard the usher's voice:

"Miss Carol Wilson, Miss Ca son, Miss Carol Wilson. . . ."

She thought at once of her sis of the sister's husband who had of driving fast, as with Jimmy's her arm, and her heart poundi ously, she followed the usher ou the lobby to a little office.

The manager was waiting there. They'd just had a call Agnes Hospital, he said; he w to say there'd been an accide mother—

For a moment she was breath the beating in her chest.

"My mother?" she said, her v riously muffled. "But that's—m er's dead. They didn't say m Mrs. Joseph Crane?"

The manager was pretty s hadn't said that.

"Here," Jimmy put in then, "( lyn up. He'll let you use the p

H SAT there a long time, until the arly show was over, and they came ou ith the last of the crowd. Then he go p, and walked out directly behind th . It was still early then, nine tw y-five, and Jimmy suggested Lo out Park

rol was a little uncertain about th

know what you'll do there," she sai "take chances on every single thi , and spend your money like water. If just took that nice bus ride around the ark—"

n pay night?" Jimmy looked pa d. "Act your age, hon. No chances tor ht—I'll promise you that. We'll jus eat some ice cream and dance a litt . Bill Howard's taking Jenny out the later, when she gets off duty. I kind of omised we'd meet them there."

ll, Carol said, if he really meant tha about the chances—

. Carnes stood directly behind the listening.

followed them out to the corner, an got on the same bus they took. The was, after all, no tremendous rush; to be safe he could wait a little longer. O'Neill—he wasn't worried about O'Neill. Back there, on East Madison Street, O'Neill would still be scratching his head.

HE WAS wrong about that. At the moment, the door of 54 Jellicoe Road open before him. O'Neill was showing his badge. "Police," he said laconically. "Mr. Carnes around?"

His brows drew together, rather harshly, when Ambrose told him Mr. Carnes could not be disturbed. He had retired early, with a vile headache, and he had warned Ambrose that under no circumstances was he to be annoyed.

"Nuts," Stanton said, and pushed on into the hall ahead of O'Neill. There were a few words there with Ambrose before the three of them moved together —quietly, O'Neill warned—up the wide curve of the stairway. After they reached the master chamber and turned on the lights that showed an empty bed between the windows, Ambrose seemed to lose the rest of his imperturbable assurance.

This was something he couldn't understand. At half past seven, bringing up some aspirin, he himself had seen Mr. Carnes here in his pajamas. Received his instructions, too. Mr. Carnes would see no one; Mr. Carnes would not even answer a phone call.

O'Neill frowned. "You didn't see him go out? Or hear him?"

"No, sir. I was reading the paper in the kitchen, at the end of the hall. He wanted me to stay up; he said he might want a sandwich later. I wouldn't have heard him on the front stairway from there. Not if he didn't wish me to."

"Scrammed," Stanton said, looking wisely at O'Neill. "Lost his head and lit out. Well—what do we do now, Marty? Phone in an alarm?"

O'Neill took off his Panama and rubbed a handkerchief around the inner band, thinking that over. Then he said:

"He didn't scram. Why should he? He figured that she was a stranger here, this Rose Elizabeth Daly. He figured we'd never find out who she really was, and he was close to being right on that. From his side, not knowing about the

"I've got it fixed, ma'am—everything tastes fine again!"

# POLAROID* Day Glasses

Even if your friends "have everything", they'll be tickled pink with a gift of Polaroid Day Glasses for year-'round wear.

Unlike ordinary sun glasses, Polaroid Day Glasses are almost uncanny the way they choose between dazzling winter reflections and useful light – give you plenty of "seeing" light.

Effective even on brilliant ice and crusted snow, they give you eye-comfort free from blinding glare. Perfect for driving, skating, skiing, all outdoor activities. (P. S. – they tame sunlight in winter vacation spots, too!) Select Polaroid Day Glasses as smart Christmas gifts for anyone, any age (even yourself)! Wherever fine sun glasses are sold . . $1.95 up.

*T. M. Reg. U. S. Pat. Off. by Polaroid Corp.

POLAROID DAY GLASSES *protect* your vision from year-'round glare on land, water or ice. If you wear glasses, ask your ophthalmologist and ophthalmic dispenser; or optometrist about Polaroid Lenses that can be ground to your prescription.

AMERICAN OPTICAL COMPANY
Southbridge, Mass.
World's Largest Makers of Ophthalmic Products

THEY WORK LIKE MAGIC!

**Through POLAROID Day Glasses**
Polaroid Day Glasses employ the sensational Polaroid light control that *filters out* reflected glare. Notice how clearly you see detail!

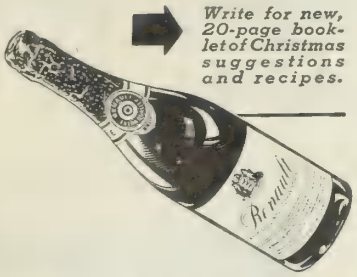
**Through ORDINARY Sun Glasses**
Ordinary sun glasses only dim reflected glare. Notice how details are hidden by reflected glare.

# Catching Cold?

**ACT NOW! This Helps Prevent Many Colds Developing . . .**

Just tilt back your head and put Vicks Va-tro-nol up each nostril at first sniffle or sneeze . . . this aids your natural defenses against colds . . . and helps prevent many colds developing.

**3-Purpose Medicine..** When a head cold stuffs you up, or transient congestion clogs up nose at night, Va-tro-nol does three important things to bring relief . . . (1) shrinks swollen membranes, (2) relieves irritation, (3) helps clear clogged nasal passages...And brings more breathing comfort. Follow directions in folder.



**VICKS VA-TRO-NOL**

**COUGHING COLDS** Relieve coughing spasms and loosen phlegm, ease muscular soreness or tightness with Vicks VapoRub. Its poultice-vapor action brings welcome relief from coughing colds miseries. **VICKS VAPORUB**

bird we picked up back there and the story we got from him, he didn't have a thing to worry about."

"Then what did he sneak out for?"

Taking the handkerchief away from his hat, O'Neill ran it around the rim of his collar.

"Take it this way," he said. "He comes home here, gets into pajamas, goes to bed and calls up—Ambrose, are you?—to see him there. Tells him to stay up, too, that he'll ring later, and then slips out. Ambrose didn't see him go out, and the chances are he wouldn't see him come in. So far as Ambrose knows, he's been here all the while. He didn't expect us till tomorrow, remember, so he wasn't worried about that. He's here in bed at seven-thirty, he's here in bed when he rings for Ambrose again after he gets back. He's got himself an alibi then—not perfect, but good. Only what was that alibi setup to cover?"

He himself couldn't see anything. If Carnes realized that he'd missed something, that he'd left an opening behind him he had to plug up— Doggedly, patiently, O'Neill went back over everything in search of that opening, but in the end it was Stanton who stumbled on it.

"The Wilson girl?" he suggested. "I been thinking about her, Marty; I been thinking that if she really heard something, and that if Carnes got worried about her, he'd knock her off, too. Say he listened to us talking about her—"

"From where?" O'Neill grunted. "Wasn't Danaher out on the landing to keep him moving after he left?"

"Well—" Stanton said. He looked at everything in the room but O'Neill's face. "Not just then he wasn't. When I came up to tell you about her, Danaher was in the kitchen getting himself some water. I been thinking about that quite a while. I—"

O'Neill, who didn't curse often, cursed now. Something tight, a pressing consciousness of lost time and danger, whipped itself around his head. The Wilson girl, the little empty-head he'd called her—

He did what Mr. Carnes had done two hours ago; he began to call the downtown theaters, the Century first because he'd been there himself last night, and it was the one he instinctively thought of. When the manager there told him about the other message O'Neill's fingers tingled coldly.

OF COURSE, he thought. Carnes had her placed now. A call from a near-by drugstore, a cock-and-bull story about the hospital, and then a little wait around the manager's office till the usher came out—Carnes might have tried others; at the Century he'd found her. Now—

O'Neill, not sweating now merely from the heat, did what he could; he had the manager at the Century flash her name and address on the screen, so this time she'd know it wasn't a mistake. Five minutes later, when the manager called back, O'Neill's heart dropped like a stone inside him. She wasn't there now. She'd left. So it ended there; at the Century he hit that last dead stop. He went back with Stanton to the house on East Madison Street and he found what he expected to find in the third-floor front—no one at all.

There was a picture on the dresser, a good-looking young man who might be the boy friend. O'Neill ripped it out of the frame, turned it over, and read the photographer's inscription off the back.

"244 Doane Street," he told Stanton breathlessly. "Make it fast."

At 244 Doane Street the photographer who had taken the picture came down from his apartment over the studio. He remembered it at once; it wasn't a month since he'd taken it. He gave O'Neill the name and the address—a big brick apartment, next to a school, just two blocks east.

There J. J. Martin was one of two names bracketed over the bell of Apartment 3E in the vestibule; the other, Wm. F. Howard, was the one who answered O'Neill's ring. Jimmy? he said. Why he was going to meet Jimmy later, after eleven, when his girl friend—a nurse—finished her stretch of three to eleven at the hospital. They were going to meet Jimmy and his girl at Lookout Park. To dance a bit—

O'Neill got in some phoning, too hasty to be explicit, and then he sat crowded between Stanton and Bill Howard for the longest ride in his life—seven miles, six minutes, through the suburbs to Lookout Park.

The two squad cars he'd phoned for were already by the gate, with four uniformed men gathered around the turnstiles as if they weren't quite certain what to do. O'Neill, sweeping them in with him, was stopped by Bill Howard just as they reached the midway. Jimmy, Bill Howard yelled at him—Jimmy, over there at the stand.

O'Neill didn't turn at once. She's with him, he thought savagely; she's got to be with him. She's safe now. She's— He jerked around, his flesh hanging heavily on him, the blood hammering in his head. Ten feet away, on the left, a young man stood before the frozen custard stand, waiting to be served.

He was the young man of the picture, and O'Neill saw that he was alone.

AT HALF past ten, when the bus let them off at Lookout Park, they wandered slowly up the midway, past the freak show and the House of Fun and the Whip and the Tunnel of Love. Then they began to climb the broad stone steps that went up the hill toward the open-air dance pavilion squatting on a terrace at the top.

Once, some distance behind them, she noticed a man in a gabardine suit. He was a tall man, walking with his head slightly bent.

They paused again in the tiny park just below the pavilion, where stone benches were scattered here and there in pools of shadow beneath the trees. Beyond the stairs, in the velvety-soft darkness of a hedge, they found an empty place—cool and quiet, with the dance music not too loud above them, and the midway lights glittering and winking below.

They sat down there. Jimmy said it was early yet, that Bill and Jenny wouldn't be out for quite a while. So they could take it easy here, or go inside and have a dance. Which would she like?

"It's nice out here," Carol said. "Let's just sit."

There were couples on the other benches—very quiet couples, not too near around them, and somewhere far off, sweetened by distance, a carrousel began to tinkle like a baby's music box.

"I'll say it's nice," Jimmy said, rubbing her cheek gently with his fingers. "Any place would have to be nice with you. Happy?"

"Uh-huh," she said dreamily.

"Anything you want?"

"A million dollars," she said. "And someone like you coming home every night with the evening paper."

"Someone like me?" he murmured in her ear. "You better change that—you better make it only me. Gonna?"

"Gonna," she said. "Cross my heart."

That was better, he told her, lots better; now how about a frozen custard while they waited? He could slip down and get one for her before she knew he'd gone. She didn't protest too much, because of the stairs, and because Jimmy said there was no sense to both of them puffing up those again. She sat there, waiting for him to get back, while a couple on the next bench got up and moved off, and other couples, from other benches, began to straggle after them.

Soon, save for the man in the gabardine suit, she seemed to be alone. He had followed them; now he turned to stare at Carol—so directly that she thought she knew what he was trying to do. Fresh, she thought, with a slight flush, and moved around on the bench so that she wouldn't have to look back at him. Then very softly, quite near her, she heard a shoe scuff gravel. It was that—that fool, of course, the small lady-killer in the gabardine suit. He was nervous then, because she'd had to handle his kind before, she said in a furious low voice as he sat down beside her.

"You'd better get away from here. If you're around when my friend comes back, he'll—he'll punch your nose for you."

"Will he?" the stranger asked. His voice was oddly menacing, not the kind of voice she thought it would be. In the dimness his face glistened like wet low clay. She was frightened when she saw it, and tried to move away from him on the bench.

But he had caught her wrist then, with his left hand; his right, in his hip pocket, was feeling for the scarf. It was a thin silk scarf, and very strong; last night on East Madison Street, it had glimmered against Rose Daly's throat like a shaft of light.

If he could keep her quiet now for just a moment—

"I only want your purse," he said. "Don't be fool enough to scream. And—"

A light flashed across them; Carol had not heard the steps that brought Mr. Carnes hadn't either. He fell above her, his head half turned, his teeth showing between his lips.

She saw a glimmer of gray—the uniform of the private police they had at Lookout Park.

"Break it up," a voice said. "Break it up now. We close the garden here at eleven; you two are the only ones left. You got to get out now. You can go to the pavilion if you want; but you can't—"

"Thank you," Mr. Carnes said. His scarf crumpled up in his palm. "Thank you very much."

He moved out three steps before Carol found her voice. Then she breathed something, and Mr. Carnes began to run. He was twenty years younger than the special cop, and fifty pounds lighter, and he reached the steps a good bit ahead. Reached them and started down them, and tried to stop and stumbled on an edge. He fell forward but not far; Jimmy and a long-legged cop, who were a little faster-moving than O'Neill and the others, grabbed him together.

SHE told Jimmy, while they took the man in the gabardine suit away, that it was nothing, he'd only wanted her purse. The way Jimmy looked when he reached her, so wild and excited, and almost unable to speak, calmed her at once. Her voice grew steady and her breath came once more under control.

"I wasn't worried about that," she said. "One week's pay! I was just afraid that you'd come back too soon, and fight him, and—"

O'Neill came up to her. She had to smile at him, he was such a funny-looking man—fat, soaked with perspiration, breathless, his Panama shaking in his hand. Police, O'Neill croaked—they'd been looking for her. They'd—

He stopped there as if he had to, but she couldn't keep the smile from the corners of her mouth.

"Me?" she said, and almost laughed aloud, that was so silly. "Looking for me? But—why? And whatever

ice people around, the show of- t only The Drunkard, but added oldtime vaudeville, along with r, pretzels, ham-on-rye—and t beer, in case of any conver- othing much happened at first, le with good maps and a sense on, who could find the place by n which side of trees the bark kest, began telling friends to go. ow began to build up and soon ing to capacity, which was, and t a $1.75 top. Show-wise peo- the movies liked to catch the and tourists started to hear In the film colony a sort of tarted to see how many times ould look at the thing.

### Babes Don't Get In

lliam C. Fields, the comedian, every time he felt the urge to ong liquor and needed good, oral support. Since 1933 he his urge no less than twenty- es and has attended that many, d by the fact that babes in not admitted. Mr. Fields' af- babes in arms is conservative. ld days, Will Rogers and Fred ne and took part in the olio. d Johnson harangued each d many a famous stage and me put on an impromptu act. tings-up were all in the olio, as iece came to be called—a relic s when theaters, beside using ons for specialty acts, made mers stay after the main show dance and tell jokes.

fourteen actors and actresses ed with the show, eight still g; others came in soon after ng. Sometimes Bell tries to e olio acts, fearing the regu- ire of them, but the regulars d for it.

es at The Drunkard make s part of the proceedings, hiss- e Cribbs, the villain; crying when Heroine Mary Wilson ed; and cheering lustily the peeches denouncing strong en the villain offers Hero Ed- ddleton a bribe everyone shouts: "Don't take it, boy!" and when Edward spurns the silver, the cheers crack the rafters.

Some of the show's statistics are interesting. Although no visitor ever has offered to sign the pledge, Bell says that the percentage of customers preferring root beer to the regular stuff is steadily increasing, while demand for ham sandwiches and pretzels stays constant. Since it started the show has given away two million, one hundred thousand pints of beer, a million and three quarter ham sandwiches, about six and a half million pretzels and hundreds of candlelit cakes, awarded to couples celebrating birthdays or wedding—and even divorce—anniversaries.

The piece rolled past its three thousandth straight performance early in the fall of '41. This contrasts with 2,327 for Abie's Irish Rose, 1466 for Charley's Aunt, and 2,238 for Chu Chin Chow (in London). It is out ahead of Tobacco Road. When it will close no one knows, but it seems safe for ten years, anyway, which would set an all-time record that probably never would be beaten.

After the stage play, the show becomes a sort of community affair. Customers observed by Song Leader George Stuart not to be singing with sufficient gusto have to do solos. People from St. Louis get introduced to total strangers from Honolulu. Old-time vaudeville acts are dead-panned through with considerable help from the customers and even the waitresses do a song or two.

There is hardly ever any audience trouble, although one aged patron who always tries to make a speech during Act Two has been escorted out seven times and complains he doesn't know how the plot turns out. No one ever was cured of the curse of liquor by seeing the piece, but one customer claims it cured his arthritis.

Nobody knows, including Bell and his players, why The Drunkard goes on and on in the converted studio, now called the Theater Mart. It isn't good drama, it has no intentionally funny lines, there isn't a speck of dirt in it and its situations are hackneyed and unreal. Everybody connected with the show has given up trying to explain it. They're not worrying overmuch, either. They think it may work into something steady, after a while.

"Why, if it isn't Mr. Purdie! And just as I was about to pick up my check!"

Hoot mon!

"Hoot mon, it's a *gift!*" However a man expresses his delight at receiving a gift of Teacher's, there's one basic reason for his pleasure—

"It's the flavour"

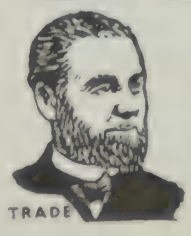
WAKE UP YOUR LIVER BILE— WITHOUT CALOMEL

—And You'll Jump Out of Bed in the Morning Rarin' to Go

The liver should pour out two pints of liquid bile onto the food you swallow every day. If this bile is not flowing freely, your food may not digest. You get constipated. You feel sour, sunk and the world looks punk.

It takes those good, old Carter's Little Liver Pills to get these ▯ pints of bile flowing freely to make you feel "up and up." Get ▪ package today. Take as directed. Effective in making bile flow freely. Ask for Carter's Little Liver Pills. 10¢ and 25¢.

WANT CASH FOR 1942?



WITH the cost of living and taxes going up, do you need extra money now more than ever? Would you like to earn liberal spot-cash commissions AND enough National Defense Stamps to get an $18.75 Defense Bond worth in ten years $25.00?

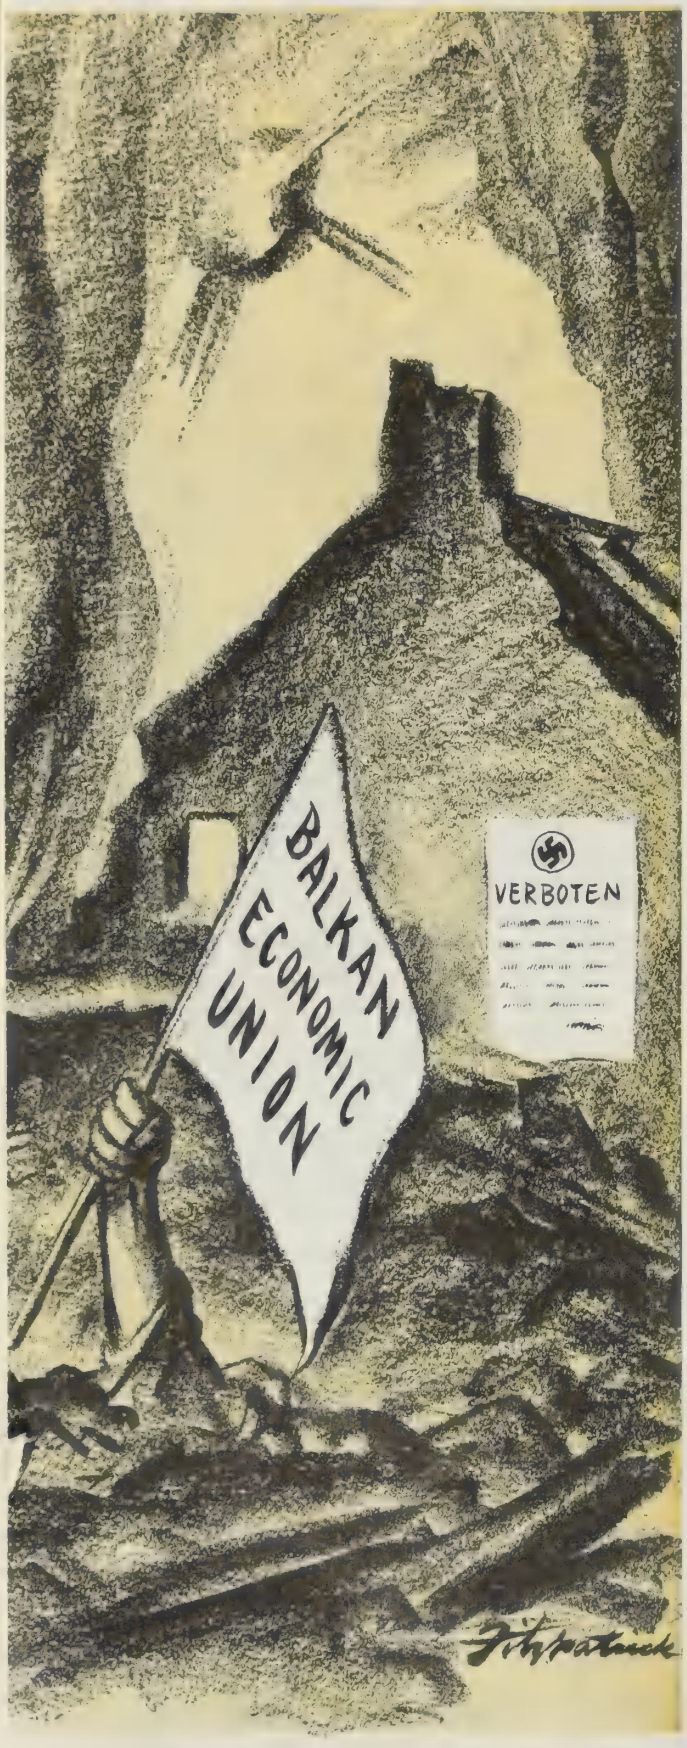
Then, try our profitable plan for looking after subscriptions for COLLIER'S and the other popular Crowell-Collier Magazines. For full details, *just mail a penny postal to—*

*Independent Agency Division, Desk C-20*
*The Crowell-Collier Publishing Company*
*250 Park Avenue, New York, N. Y.*

DON'T BARK

...don't cough! Get pleasant relief from a cough due to a cold with Smith Brothers Cough Drops—Black or Menthol—5¢.

Smith Bros. Cough Drops are the only drops containing VITAMIN A



Vitamin A (Carotene) raises the resistance of mucous membranes of nose and throat to cold infections, when lack of resistance is due to Vitamin A deficiency.

# U. S. E.

AN ACORN that may one day produce an oak was planted at the International Labor Organization's recent New York Conference. Delegates for Czechoslovakia, Greece, Poland and Yugoslavia, with the approval of their London governments in exile, agreed to form a single economic bloc if the war should end in the liberation of their countries from Hitler. Bulgaria, Hungary and Rumania would be asked into this Balkan bloc in due time.

The first problem, of course, is to get these countries free of Hitler's guns and *Gauleiters*. When and if that is done, the proposed Balkan economic union may conceivably lay the foundations for a United States of Europe.

Before Hitler enraged most of the civilized world with the brutalities of his overlordship of the conquered countries, it wa agreed that Europe never could be ous with a network of economic barri ing it a permanent economic jigsaw p this war hadn't butted in, the dr United States of Europe might ha into being peaceably and gradually

In a bloody, debased kind of wa is giving that dream a long shov realization. If he can be pried loose controls somehow, and if the Balka when freed can remember the high they made when enslaved, then a U some type should be off to a good

We hope the various Balkan gov in exile will keep working on this sc will have it ready for instant refe agitation if the war ends in an Allie

## Take It Easier, Please

AS WE go to press, the extreme isolationists and the extreme interventionists are about even-Stephen as regards performances which have hurt their respective causes more than helped them.

Some isolationist ladies (well, call them ladies) greeted Ambassador Halifax in Detroit by tossing eggs at him. Mr. Halifax took it like a sport—and the isolationist cause took on in many people's minds a label of hooliganism which it won't soon live down.

Presently, a Col. Early E. W. Duncan, commanding officer at Lowry Field, Denver, was hitting the headlines with an order forbidding his men to have traffic with preachers, laymen or groups opposing United States' entry into the war. Before Colonel Duncan had finished pulling his cyclone cellar in after him, Civilian Defense Co-ordinator F. H. La Guardia bobbed up with an interventionist sermon which he had mailed to a lot of clergymen with the request that they preach it or something like it the followin

Senator Wheeler, who usually s ter judgment, capped these misadv blunderland by roaring that son manufacturers were using a few sh metal to make toy soldiers.

Which side looked the more foo last of this stick of boob-bombs w don't know; or which had disguste people.

Really, ladies and gents, this ki won't do. The question of whethe go all the way into the war or get out of it is one of the gravest qu country has ever faced. There a patriotic Americans, and a lot o both sides. The question can be se only if both sides will keep that fa cut out the idiotic acts, and deba merits. One of the things these demand of us Americans is that and take to acting like an adult

## Airways Around the World

PAN AMERICAN AIRWAYS' new African line, laid out primarily to speed plane shipments to the Middle East, has been getting plenty of publicity of late, but we thought we'd give it some more. We quote from Capt. Harold E. Gray's statement to the press the day the Capetown Clipper left on its maiden voyage to San Juan, Port-of-Spain, Belem, Natal and the Belgian Congo:

> The new airway constitutes the greatest single project of its kind ever undertaken by civil aviation. The route itself is as long as the Clipper route across the Pacific to China, which required four years to build. That this new route from the American mainland to far-off South Africa is ready for its first transport test just 83 days from President Roosevelt's announcement of the assignment is a splendid testimonial to the organization of America's international air transport system.

That is putting it conservatively, Captain. It is a magnificent achievement. It is also one which gives us a very heartening series of thoughts.

Good news in this third year of the war—news that tells of progress and improving conditions and better outlooks for of people somewhere—is not ple sad time and promises to grow quite a while.

But in this news of Pan Amer of the South Atlantic-Africa air days, isn't there a promise of gr come? Even more encouraging indication that there is some tru that war often shortcuts progress speed up, lops away a lot of de inertia?

It isn't likely that in peacetim the Pacific experience behind it, can, or any other airline, woul this giant job in anything like 8 pressure of war and of the scarcity in the Middle East put steam on the project; and now th is laid for American passenger after the war over most of the c and part of the uncivilized. This enough, but here and there it pensations, and it may conceiv dreamed-of dividends.
